183) a 184) d 185)b 186)a 187)c 188)a,c,d 189)a 190)d 191)c 192)c 193)a

194. An old diabetic male presented with rapidly spreading infection of the external auditory canal with involvement of the bone and presence of granulation tissue. The drug of choice for this condition is -
a) Ciprofloxacin *(AIIMS May 08)*
b) Penicillin
c) Second generation cephalosporin
d) Aminogly cosides

195. A 60 year old diabetic patient presents with extermely painful lesion in the external ear and otorrhea not responding to antibiotics. There is evidence of granulation type tissue in the external ear and bony erosion with facial nerve palsy is noted. The most likely diagnosis is-
a) Malignant Otitis Externa *(AI12)*
b) Nasopharyngeal carcinoma
c) Chronic suppurative otitis media
d) Acute suppurative otitis media

196. Malignant otitis externa is characterized -
a) Caused by pseudomonas aeruginosa
b) Malignancy of external auditory canal
c) Granulation tissue is seen in the floor of extra auditory canal *(PGI Dec. 03, June 06)*
d) Radiotherapy can be given
e) Gallium scan helpful for monitoring treatment

197. Which of the following is not a typical feature of malignant otitis externa? *(AIIMSMay 06)*
a) Caused by Pseudomonas aeruginosa
b) Patients are usually old
c) Mitotic figures are high
d) Patient is immune compromised

198. Facial nerve palsy is seen in - *(Jipmer 03)*
a) Seborrhoeic otitis externa
b) Otomycosis
c) Malignant otitis externa
d) Eczematous otitis externa

199. True statement about malignant otitis externa is -
a) Not painful *(PGI 96)*
b) Common in diabetics and old age
c) Caused by streptococcus
d) All of the above

200. Malignant otitis externa is - *(PGIDec. 99)*
a) Malignancy of external ear
b) Caused by hemophilus influenzae
c) Blackish mass of aspergillus
d) Pseudomonas infection in diabetic patient

201. Regardffig^'b^fii ibti^titsr externa ^alf aie true except - *(NEET/DNB Pattern)*
a) Caused b^pseu^omohSfr^
b) Surgery never done
c) Facial nerve involved
d) Common in diabetics

202. Causes of Otomycosis - *(PGI 08)*
a) Candida b) Aspergillus
c) Thermophylus d) Staphylococcus

203. Fungus causing otomycosis most commonly is -
a) Aspergillus fumigatus *(Delhi 96, NEET/DNB*
b) CandicSI *Pattern)*
c) Mucor
d) Penicillin

204. Otomycosis is caused by - *(PGIDec. 98)*
a) Candida b) Aspergillus
c) Both d)None

205. Keratosis obtu^ahs is - *((TN, 0 7,NEEIYDNB Pattern)*
a) Foreign body Mjextemal auditory canal
b) Desquamated epithelial cell + Cholesterol
c) Cholesterol crystals surrounded
d) Wax in external auditory canal

206. Chondritis of aural cartilage is most commonly due to- *(NIMHANS06)*
a) Staphylococcus b) Pseudomonas
c) Candida d) Both staph & Pseudomonas

207. Cauliflower ear is due to - *(Kerala 93)*
a) Haematoma b) Carcinoma
c) Fungal infection d) Herpes

208. Cauliflower ear is - *(Manipal06)*
a) Keloid
b) Perchondritis in Boxers
c) Squamous cell carcinoma
d) Anaplastic cell carcinoma

209. Direction of water jet while doing syringing of ear should be - *(Mahara02)*
a) Anterior b) Posterior
c) Anterosuperior d) Posteroinferior

210. A new born presents with bilateral microtia and external auditory canal atresia. Corrective surgery is usually performed at - *(AI 07)*
a) < 1 year of age b) 5-7 years of age
c) Puberty d) Adulthood

211. Surfers ear is - *(PGI May 10)*
a) Exostosis b) Otosclerosis
c) Otitis externa d) Squamous cell Ca
e) Fibrous dysplasia

212. Commonest cause of Eustachian tube diseases -
a) Adenoids b) Sinusitis *(Manipal 05)*
c) Otitis media d) Pharyngitis

213. All are tests to check eustachian tube patency except- *(AIIMS 98)*
a) Valsalva manourvere b) Fistula's test
c) Frenzel's maneuver d) Tonybee's maneuver

Otitic barotrauma results due to- *(PGIJune97, NEET/DNB Pattern)*
a) Ascent in air-
b) Descentin;#ffil!S
c) Linear acceleration
d) Sudden acceleration

215. At what atmosphere pressure gradient barotraumatic otitis media occurs - *(DPG 08, Jipmer 02)*
a) 80 mm of Hg b)90mmofHg
c) 100 mm of Hg d) 120 mm of Hg

194)b 195)a 196)a,c,e 197)c 198)c 199)b 200)d 201)b 202)a,b 203)b 204)c 205)b 206)b 207)a 208)b 209)None 210)b 211)a 212)a 213)b 214)b 215)b

216. Features of moderately retracted tympanic membrance are all except - *(MH 05)*
a) Handle of malleus appearance foreshortened
b) Cone of light is absent or interrupted
c) Lateral process of malleus becomes more prominent
d) None

217. Dysfunction of tympanic membrane is characterized by all except - *(AP 2000)*
a) Normal 'cone of light' b) Retracted TM
c) Nonprominent umbo d) Fullness in middle ear

218. Blulrehr drum is seen in - *(NEET/DNB Pattern)*
a) Serous otitis media b) CSOM
c) Perforation d) None

OTITIS MEDIA

219. Ear infection causes throat infection through -
a) Blood spread *(PGI98)*
b) Eustachian tube
c) Nasocranial spread
d) Simultaneous infection

220. Commonest cause of acute otitis media in children is - *(AIMS June 2K, 95, 91; Delhi 06, UP 03)*
a) H. influenza b) Strepto-pneumoniae
c) Staph aureus d) Pseudomonas

221. True statement about ASOM is - *(AI99)*
a) Most frequently it resolves without sequelae
b) Commonly follows painful parotitis
c) Radical mastoidectomy is required for treatment
d) Most common organism is pseudomonas

222. Cart Wheel sign is seen in - *(MP 08)*
a) ASOM b) AOM
c) OME d) CSOM

223. Light house sign is seen in ASOM in which stage -
a) Stage of suppuration *(NEET/DNB; Pattern)*
b) Stage of hyperemia
c) Stage of resolution
d) Stage of pre-suppuration

224. A-7 year child presenting with acute otitis media, does not respond to ampicillin. Examination reveals full and bulging tympanic membrane, the treatment of choice is - *(AI 98)*
a) Systemic steroid b) Ciprofloxacin
c) Myringotomy d) Cortical mastiodectomy

225. A 3 year old child presents with fever and ear ache. On examination there is congested tympanic membrane with slight bulge. The treatment of choice is - *(AI 95)*
a) Myringotomy with penicillin
b) Myringotomy with grommet
c) Only antibiotics
d) Wait and watch

228.^·'|^sC common perforation site in tympanic membrane- *(NEET/DNB Pattern)*
a) Anterinferior b) Posteroinferior
c) Anterosuperior d) Posterosuperior

227. A boy with ASOM undrgoing treatment with penicillin therapy for 7 days now presents with subsidence of pain and persistence of deafness, diagnosis is - *(Kolkata 03)*
a) Ototoxicity b) Secretory otitis media
c) Adhesive otitis media d) Tympanosclerosis

228. Secretory otitis media is diagnosed by- *(PGI June 98)*
a) Impedance audiometry b) Pure tone audiometry
c) X-ray d) Otoscopy

229. Treatment of choice for glue ear is - *(AIMSMay 07)*
a) Myringotomy with cold knife
b) Myringotomy with diode laser
c) Myringotomy with ventilation tube insertion
d) Conservative treatment with analgesics & antibiotics

230. 6 year old child with recurrent URTI with mouth breathing and failure to grow with high arched palate and impaired hearing is - *(AIMSMay 07,12)*
a) Tonsillectomy
b) Grommet insertion
c) Myringotomy with grommet insertion
d) Adenoidectomy with grommet insertion

231. A child presenting with recurrent respiratory tract infection, mouth breathing & decreased hearing treatment is - *(PGI 08)*
a) Tonsillectomy b) Adenoidectomy
c) Grommet insertion d) Myringotomy
e) Myringoplasty

232. A child has Adenoidectomy done but he has effusion in middle ear. What is done next -
a) Gr *n)*
b) Mastoidectomy *rnmmmmmmm* mu
c) Tympanoplasty
d) None

233. Cause of U/L secretory otitis media in an adult is -
a) CSOM *(PGI Dec 99; Ij P, Q.4/NEET/DNB Pattern)*
b) Nasopharyngeal carcinoma
c) Mastoiditis
d) Foreign body of external eat /

234. Acute non suppurative otitis media in adults is due to- *(UP03)*
a) Allergic-rhinitis b)URTI
c) Trauma d) Malignancy

235. Glue ear- *(DNB03)*
a) Is painful
b) Is painless
c) Radical mastoidectomy is required
d) NaF is useful

236. Following statements are true about otitis media with effusion in a child - *(PGIDec 03)*
a) Immediate myringotomy is done
b) Type B tympanogram
c) The effusion of middle ear is sterile
d) Most common cause of deafness in a child in day care patients

216) d 217)a 218) a 219)b 220)b 221)a 222)a 223)c 224)c 225)c 226) a 227)b 228)a 229)c 230) d>c 231)b,c,d 232) a 233) b 234) d 235) b 236)b,c,d

237. In serous otitis media which one of the following statements is true - *(AJ2000)*
a) Sensorineural deafness occurs as a complication in 80% of the cases
b) Intracranial spread of the infection complicates the clinical courses
c) Tympanostomy tubes are usually required for treatement
d) Gram-positive organisms are grown routinely in culture in the aspirate

238. Medical treatment is NOT effective in which type of suppurative otitis media - *(UP 07)*
a) Tuberculous OM
b) Secretory OM
c) Acute suppurative OM
d) Chronic suppurative OM

239. All except one are true in a case of secretory otitis media- *(MAHE 05)*
a) BlueTM
b) B shaped tympanogram
c) Marginal perforation most common
d) Rinne test +ve

240. Cholesteatoma commonly a/w - *(PG1 June 08, AI94)*
a) Attico-antral b) Tubotympanic
c) Tympanosclerosis d) Foreign body in ear
e) Keratosis obturans

241. Cholesteatoma is usually present at - *(Delhi 01)*
a) Anteroinferior quadrant of tympanic membrane
b) Posteroinferior quadrant of tympanic membrane
c) Attic region
d) Cental part

242. Perforation of tympanic membrane with destruction of tymapnic annulus is called - *(Bihar 04)*
a) Attic b) Marginal
c) Subtotal d) Total

243. What is true in case of perforation of pars flaccida -
a) CSOM is a rare cause *(AIIMSMay93)*
b) Associated with cholesteatoma
c) Usually due to trauma
d) All of the above

244. Treatment of choice in central safe perforation is -
a) Modified mastoidectomy *(AJ 94)*
b) Tympanoplasty
c) Myringoplasty
d) Conservative management

245. TVue about C.S.O.M. - *(PG1 Dec 2K)*
a) Etiology is multiple bacteria
b) Oral antibiotics are not effective
c) Ear drops are best
d) Otitic hydrocephalus is a known complication
e) Common in females than males

246. Cholesteatoma is seen *(RJ06, NEET/DNB Pattern)*
a) ASOM b) CSOM
c) Secretory ottitis media d) Osteosclerosis

247. Levinson's criteria for diagnosing congenital cholesateatoma includes - *(PG1 Nov 10)*
a) Whitish mass behind intact TM
b) Normal pars tensa and pars flaccida
c) Recurrent attacks of otorrhea
d) Prior otitis media is not an exclusion criteria

248. Scanty, foul smelling, painless discharge from the ear is characteristic feature of which of the following lesions - *(AIIMS Nov 00, 04)*
a) ASOM b) Cholesteatoma
c) Central perforation d) Otitis externa

249. Cholesteatoma (Atticoantral) true about -
a) Scanty, malodorous discharge *(PG1 June 06)*
b) Otalgia
c) Central perforation
d) Ossicular involvement
e) Eustachian tube dysfunction

250. True about cholesteatoma - *(PG1 June 06)*
a) Benign tumour
b) Bone erosion present
c) MC cause of conductive deafness
d) Found in apex of petrous bone commonly
e) Contains cholesterol

251. True about cholesteatoma is/are - *(PG1 Dec 02, 06)*
a) It is a benign tumour
b) Metastasizes to lymphnode
c) Contains cholesterol
d) Erodes the bone
e) Malignant potential

252. Cholesteatoma commonly perforates - *(PG12K)*
a) Lat. semicircular canal
b) Sup. semicircular canal
c) Promontory
d) Oval window

253. The treatment of choice for atticoantral variety of chronic suppurative otitis media is - *(AIIMS Nov 02)*
a) Mastoidectomy
b) Medical management
c) Underlay myringoplasty
d) Insertion of ventilation tube

254. Treatment of choice for perforation in pars flaccida of the tympanic membrane with cholesteatoma is -
a) Myringoplasty *(A196)*
b) MRM-Modified Radical Mastoidectomy
c) Antibiotics
d) Radical mastoidectomy

255. Primary treatment of middle Ear Cholesteatoma is -
a) Surgery b) Medical and Surgery
c) Radiotherapy d) Chemotherapy *(AJ 03)*

256. In CSOM commonest operation done is - *(PGI97)*
a) Modified radical mastoidectomy
b) Radical mastoidectomy
c) Simple mastoidectomy
d) Tympanoplasty

237) c 238) b 239) c,d 240) a 241) c 242) b 243) b 244) d 245)a,b,c 246) b 247)a,b,c 248) b 249)a,d,e 250) b,d 251) d 252) a 253) a 254) b 255) a 256) a

257. A-30-year old male is having Attic cholesteatoma of left ear with lateral sinus thromboplebitis. Which of the following will be the operation of choice -
a) Intact canal will be the operation of choice *(AI06)*
b) Simple mastoidectomy with tympanoplasty
c) Canal wall down mastoidectomy
d) Mastoididectomy with cavity obliteration

258. Most difficult site to remove cholesteatoma in sinus tympani is related with - *(Kolkata 01)*
a) Anterior facial ridge b) Posterior facial ridge
c) Epitympanum d) Hypotymparum

259. A child presents with ear infection with foul smelling discharge. On further exploration a small perforation is found in the pars flaccida of the tympanic membrance. Most appropriate next step in the management would be - *(AIIMS Nov 07)*
a) Topical antibiotics and decongestants for 4 weeks
b) IV antibiotics and follow up after a month
c) Tympanoplasty
d) Tympano-mastoid exploration

260. A 57 year old boy been diagnosed to have posterior superior retraction pocket cholesteotoma. All would constitute part of the management, except - *(AI03)*
a) Audiometry b) Mastoid exploration
c) Tympanoplasty d) Myringoplasty

261. The postero superior retraction pocket, if allowed to progress, will lead to - *(AI 06)*
a) Sensori-neural hearing loss
b) Secondary cholesteatoma
c) Tympanosclerosis
d) Tertiary cholesteatoma

262. In unsafe CSOM with cholesteatoma and sensorineural deafness treatment of choice is -
a) Simple mastoidectomy *(AIIMS 94)*
b) Modified radical mastoidectomy
c) Radial mastoidectomy
d) Tympanoplasty

263. Treatment of choice in deafness associcated with attico antral perforation- *(AIIMS 92)*
a) Simple mastoidectomy
b) Modified radical mastoidectomy
c) Watch and wait
d) Instillation of antibiotic drops

264. Cholesteatoma commonly associated with - *(PGI08)*
a) Attico-antral b) Tubotympanosclerosis
c) Tympanosclerosis d) Foreign body in ear
e) Keratosis obturans

265. A patient of CSOM has choleastatoma and presents with vertigo. Treatment of choice would be - *(AI 98)*
a) Antibiotics and labyrinthine sedative
b) Myringoplasty
c) Immediate mastoid exploration
d) Labyrinthectomy

266. Treatment of cholesteatoma with facial paresis in child is - *(AIIMS 93)*
a) Antibiotics to dry ear and then mastoidectomy
b) Immediate mastoidectomy
c) Observation
d) Only antibiotic ear drops

267. Extracranial complications of CSOM - *(PGIDec 02)*
a) Epidural abscess b) Facial nerve palsy
c) Hearing loss d) Labyrinthitis
e) Sigmoid sinus thrombosis

268. Extracranial complications of CSOM -*(PGI June 01)*
a) Labyrinthitis b) Otitic hyrocephalus
c) Bezold's abscess d) Facial nerve plasy
e) Lateral sinus thrombophlebitis

269. Most common complication of acute otitis media in children- *(SRMC 02)*
a) Deafness b) Mastoiditis
c) Cholesteatoma d) Facial nerve palsy

270. Commonest complication of CSOM is -
a) Subperiosteal abscess *(Corned 08, DNB 07)*
b) Mastoiditis
c) Brain abscess
d) Meningitis

271. Commonest complication of CSOM is -
a) Conductive deafness *(Karn 96; DPG 09, NEET/*
b) Meningitis *DNB Pattern)*
c) Temporal lobe abscess
d) Cholesteatoma

272. The most common complication of chronic supprative otitis media is - *(UPSC 05)*
a) Meningitis b) Intracerebral abscess
c) Cholesteatoma d) Conductive deafness

273. Most common extra-cranial complication of
ASOB^is*-|||J» J -.{{UP fife; *NEET/DNB Pattern)*
a) Fadialnprve^ralysis // 2 '0
11 * jp b) LateraJ sinus thrpmto|fc^^ ||ggp k I |§g " ^ 1 ,%.
c) Subperiosteal abscess
M K d) Bfaih abscess f 1 pSlfl Hll |lgS|! |§§! 1

274. Most common nerve to be damaged in CSOM is -
a) III b) VII *(NEET/DNB*
c) HI d) VI*Pattern)*

***215.* A case of CSOM presenting with vertigo can have any of the following except-** *(PGI 99)*
a) Dural separation
b) Cerebellar abscess
c) Fistula with semicircular canal
d) Any of the above

276. Ossicle M/C involved in CSOM - *(Kolkatta 04)*
a) Stapes b)Long process of incus
c) Head malleus d) Handle of malleus

***111.* Middle ear infections are known to spread to the brain from all of the following routes, except -** *(AI 12)*
a) Direct Bony Invasion b) Oval / Round window
c) Hematogenous spread d) Lymphatic spread

257) c 258) b 259) d 260) d 261) a 262) b 263) b 264) a 265) c 266) b 267) b,d 268)a,c,d 269) b 270) c
271) c 272) b 273) c 274)b 275)a 276)b 277)d

278. Essential radiological feature of acute mastoiditis is - *(UP 03)*
a) Temporal bone pneumatisation
b) Clouding of air cells of mastoid
c) Rarefaction of petrous
d) Thickening of temporal bone

279. Mastoid reservoir phenomenon is positive in -
a) CSOM *(PGI June 99)*
b) Petrositis
c) Coale scent otitis media
d) Coalescent mastoiditis

280. Bezolds abscess is located in - *(AIIMS 92, DNB 07)*
a) Submandibular region b) Stemomastoid muscle
c) Digastric triangle d) Infratemporal region

281. Mastoid tip is involved in - *(UP 06)*
a) Bezold abscess b) Luc abscess
c) Citelli abscess d) Parapharyngeal abscess

282. Mastoid infection which erodes through the outer cortex of bone results in - *(DPG 10)*
a) Sub-periosteal abscess
b) Epidural abscess
c) Perichondritis
d) Lateral sinus thrombosis

283. Light house sign characterizes - *(RJ 00)*
a) ASOM b) CSOM
c) Menieresdisease d) Cholesteatoma

284. Pulsatile otorrhoea seen in - *(AP 97)*
a) Glomus tumour b) CSF otorrhea
c) ASOM d) Fistula

285. All are true for Gradenigo's syndrome except- *(AI05)*
a) It is associated with conductive hearing loss
b) It is caused by an abscess in the petrous apex
c) It leads to involvement of the cranial nerve V and VI
d) It is characterised by retro-orbital pain

False about gardeitigos syndrome- *(NEET/DNB Pattern)*
a) Retrobulbar pain b) Otitis media
c) Facial palsy d) Petrositis

287. True about Gradenigo's syndrome - *(PGI 08)*
a) Abscess of petrous apex
b) Retro-orbital pain
c) Cranial nerve-V & VI involved
d) Ear discharge
e) Conductive deafness

288. Gradenigo's syndrome characterised by -
a) Retroorbital pain *(PGI Dec 02)*
b) Profuse discharge from the ear
c) VII nerve palsy
d) Diplopia

289. The diagnosis in a patient with 6th nerve palsy, retro orbital pain and persistent ear discharge is -
a) Gradenigo's syndrome *(PGI June 99)*
b) Sjogrens syndrome
c) Frey's syndrome
d) Rendu osier weber disease

290. Lateral sinus thrombosis is associated with all except- *(AI08)*
a) Greisinger sign b) Gradenigo sign
c) Crowe-Beck test d) Tobey Ayer test

291. Tober Ayer test is positive in - *(DNB 05)*
a) Lateral sinus thrombosis
b) Petrositis
c) Cerebral abscess
d) Subarachnoid hemorrage

292. Tobey Ayer test is used for - *(AMU 95)*
a) Lateral Sinus b) Spinal cord injury
c) Pontine injury d)None

293. Griesinger's sign is seen in - *(DPG 08, TN03)*
a) Lateral sinus thrombosis b) Meningitis
c) Brain abscess d) Cerebellar abscess

294. Commonest cause of brain abscess - *(PGI June 2K)*
a) CSOM b) Pyogenic meningitis
c) Trauma d) Chr. sinusitis

295. Patient presents with high fever, Signs of raised ICT and a past history of chronic otitis media likely diagnosis is - *(DPG Feb. 09)*
a) Brain abscess
b) Pyogenic meningitis
c) Acute subarachnoid hemorrhage
d) Acute osteomyelitis of skull bone

296. Tuberculous otitis media is characterized by all except - *(AP 04, PGI Dec 99)*
a) Multiple perforations b) Pale granulations
c) Pain d) Thin odourless fluid

297. Which of the following is characteristic of T.B. otitis media - *(AIIMS May 95)*
a) Marginal perforation b) Attic perforation
c) Large central perforation d) Multiple perforation

OTOSCLEROSIS & MENIERE'S DISEASE

298. True about otosclerosis - *(PGI June 03)*
a) 50% have family history
b) Males are affected twice than females
c) More common in Negro's and African's
d) Deafness occurs in 20-30 yrs but less in before 10 yrs and after 40 yrs
e) Pregnancy has bearing on it

299. Otospongiosis is inherited as - *(AI 95)*
a) Autosomal dominant b) Autosomal recessive
c) X-linked dominant d) X-linked recessive

300. Common age for otosclerosis is - *(UP 06)*
a) 5-10yrs b)10-20yrs
c) 20-30 yrs d) 30-45 yrs

301. Commonest site of otosclerosis is - *(Corned 07)*
a) Round window b) Oval window
c) Utricle d) Ossicles

302. The part most commonly involved Otosclerosis is - *(PGI June 99, Rohtak 98, UP 08)*
a) Oval window b) Round window
c) Tympanic membranes d) Malleus
e) Ossicles

278) b 279) d 280) b 281) a 282) a 283) a 284) c 285) a 286) c 287)a,b,c,d 288)a,b,d 289) a 290) b

303. Most common site for the initiation of otosclerosis is - *(Karri. 06)*
a) Foot plate of stapes b) Margins of stapes
c) Fissula antefenestrum d) Fissula post fenestrum

304. In otosclerosis, tinnitus is due to - *(Bihar 05)*
a) Cochlear otosclerosis
b) Increased vascularity in lesion
c) Conductive deafness
d) All

305. True about cochlear otosclerosis - *(PGIMay 10)*
a) Also known fenesterate otosclerosis
b) Mixed hearing loss occurs
c) MRI show decreased signal on T_2 images
d) CT show pericochlear hypodense double ring
e) Necrotic mass is present

306. Otospongiosis causes - *(AI96)*
a) U/L conductive deafness
b) B/L conductive deafness
c) U/L sensorineural deafness
d) B/L sensorineural deafness

307. Paracusis willis is feature of - *(MHPGMCET02,*
a) Tympanosclerosis *JlPMERMar. 2000, MH 05)*
b) Otosclerosis
c) Meniere's disease
d) Presbyaccusis

®O$a

Schwartze sign seen in- *(MAHE 05, PGI 98, NEET/DNB Pattern)*
ua> Glomus Jugulare b) Otosclerosis
c) Meniere's diseases d) Acoustic neuroma

309. Carharts notch in audiogram is deepest frequency of-
a) 0.5 KHz b) 2 KHz *(AI 03; IN 03)*
c) 4KHz d)8KHz

310. Gelle's phenomenon is absent in - *(DPGEE 08)*
a) CSOM b) Tympanosclerosis
c) Meniere's disease d) Otosclerosis

311. Gelle's test is for- *(Bihar 06)*
a) Otosclerosis b)NIHL
c) Sensorineural deafness d) None

312. Carhart's notch in audiometery is seen \n-(MAHE 05)
a) Ossicular discontinuity b) Haemotympanum
c) Otomycosis d) Otosclerosis

313. A pure tone audiogram with a dip at 2000Hz is characteristic of - *(NEET/DNB. Pattern)*
a) Presbyacusis b) Ototoxicity
c) Otosclerosis d) Noise induced hearing loss

314. Otosclerosis treatment includes all except - *(NEET/DNB Pattern)*
a) Sodium fluoride
b) Hearing Aids
c) Stapedectomy
d) Radical mastoidectomy

315. All of the following statements about sodium fluoride in otosclerosis are true, except - *(AI 11, 10)*
a) Acts by inhibiting proteolytic enzymes in cochlea
b) Acts by inhibiting osteoblastic activity
c) Is contraindicated in chronic nephritis
d) Is indicated in patients with a positive schwartze sign

316. Following operations are done in case of otosclerosis
a) Stapedectomy b) Fenestration *(PGIDec. 03)*
c) Stapedotomy d) Sacculotomy
e) Mastoidectomy

317. In otosclerosis during stapedectomy surgery, prosthesis used is - *(UP 06)*
a) Teflon biston b) Grommet
c) Total ossicular replacement d)All

318. A 31 year old female patient complainsts of bilateral impairment of hearing for the 5 year.On examination, tympanic membrane is normal and audiomgram shows a bilateral conductive deafness. Impedance audiometry shows As type of curve and acoustic reflexes are absent. All constitute part of treatment, except- *(DPG 09)*
a) Hearing aid b) Stapedectomy
c) Sodium fluoride d) Gentamycin

319. A 30- year old woman with family history of hearing loss from her mother's side developed hearing loss which is bilateral, slowly progressive, Pure tone audiometry bone conduction hearing loss with an apparent bone conduction hearing loss at 2000 Hz. What is the most likely diagnosis? *(AIIMSMay 06)*
a) Otosclerosis
b) Acoustic neuroma
c) Otitis media with effusion
d) Sigmoid sinus thrombosis

320. Lady has B/L hearing loss since 4 years which worsened during pregnancy. Type of impedence auditometry graph will be - *(AIIMSMay 07, Nov 06)*
a) Ad b) As
c) B d)C

321. A patient has bilateral conductive deafness, tinnitus with positive family history. The diagnosis is -
a) Otospongiosis *(AIIMS Nov 09, AIIMS 93)*
b) Tympanosclerosis
c) Meniere's disease
d) B/L otitis media

322. A 30 years woman presents with progressive conductive deafness bilaterally. The most common cause is - *(AP 05)*
a) Tympanosclerosis
b) Otospongiosis
c) Meniere's disease
d) Bilateral wax in external ears

323. Feature in otosclerosis include - *(AP 03)*
a) Sounds not heard in noisy environment
b) Normal tympanum
c) More common in males
d) Malleus is most commonly affected

324. All are true about otosclerosis except-(PG7 *June 06)*
a) Increased incidence in female
b) Sensorineural deafness
c) Irreversible loss of hearing
d) Carhart's notch at 2000 Hz
e) Family history positive

303)c 304)a 305)b,d 306)b 307)b 308)b 309)b 310)d 311)a 312)d 313)c 314)d 315)b
316)a,b,c 317)a 318)d 319)a 320)b 321)a 322)b 323)b 324)b,c

325. Characteristic feature of Otosclerosis are all except - *(AIIMS June 97)*
a) Conductive deafness b) Positive rinne's test
c) Paracusis willisii d) Mobile ear drum

326. Ture statements about otosclerosis - *(PGI June 05)*
a) Unilateral b) Carhart's notch seen
c) Fluctuating headache d) Deafness
e) Male are commonly affected

327. Not true about hearing loss in otosclerosis?
a) Common in male of age > 40 yrs *(Maharashtra 10)*
b) Vertigo +
c) Paracusis Willisi
d) Schwartz sign

328. Meniere's disease is characterized by - *(AI04)*
a) Conductive hearing loss and tinnitus
b) Vertigo, ear discharge, tinnitus and headache
c) Vertigo, tinnitus, hearing loss and headache
d) Vertigo, tinnitus and hearing loss

329. Meniere's disease is - *(PGI June 99)*
a) Perilymphatic hydrops
b) Endolymphatic hydrops
c) Otospongiosis
d) Coalescent mastoiditis

330. True about Meniere's disease - *(PGI June 03)*
a) Tinnitus b) Episodic vertigo
c) Deafness d) Diarrhoea
e) Vomiting

331. Which of the following is not a typical feature of menieres disease? *(AIIMS May 06)*
a) Sensorineural deafness b) Pulsatile tinnitus
c) Vertigo d) Fluctuating deafness

332. In a classical case of Meniere's disease which one of the following statement is true - *(Karn 01)*
a) Carhart's Notch is a characteristic feature in puretone audiogram
b) Schwartz's sign is usually present in the tympanic membrane
c) Low frequency sensorineural deafness is often seen in pure tone audiogram
d) Decompression of fallopian canal is the treatment of choice

333. Recruitment phenomenon is seen in?
a) Otosclerosis *(DNB 07, Kolkatta 02)*
b) Meniere's disease
c) Acoustic nerve schwannoma
d) Otitis media with effusion

334. Episodic vertigo, tinnitus and normal hearing is characteristic feature of - *(Bihar 04)*
a) Acoustic neuroma b) Meniere's disease
c) Vestibular neuritis d) All of the above

335. Glycerol test is done in - *(AP 95, TN00)*
a) Otosclerosis b) Lateral sinus thrombosis
c) Meniere's disease d) None of the above

336. Destructive procedures for Meniere's disease are -
a) Fick's procedure *(PGI Nov 09)*
b) Cody tack procedure
c) Vestibular neuronectomy
d) Trans-labyrinthine neuronectomy
e) Labyrinthectomy

337. Endolymphatic decompression is done in -
a) Tinnitus *(Delhi 06, PGI June 05)*
b) Acoustic neuroma
c) Meniere's disease
d) Endolymphatic fistula

338. Endolymphatic hydrops is seen in - *(AI 11)*
a) Meniere's disease b) Otosclerosis
c) Acoustic neuroma d) Glomus tumor

339. A 55 years old female presents with tinnitus, dizziness and h/o progressive deafness, differential diagnosis includes all except - *(AIIMS Nov. 01)*
a) Acoustic neuroma b) Endolymphatic hydrops
c) Meningioma d) Histiocytosis - X

340. Differential diagnosis of Meniere's disease are all expect- *(UP 07)*
a) Acoustic neuroma b) CNS disease
c) Labyrinthitis d) Suppurative otitis media

341. Meniere's disease is characterised by all except -
a) Diplopia b) Tinnitus *(AIIMS Dec. 98)*
c) Vertigo d) Fullness of pressure in ear

342. True about Endolymphatic hydrops - *(PGI June 06)*
a) B/L Condition b) Females more common
c) 3 rd to 4th decades d) Conductive deafness

343. All are manifestations of Meniere's disease except -
a) Tinnitus *(AI 97)*
b) Vertigo
c) Sensorineural deafness
d) Loss of consciousness

344. Meniere's disease is characterized by all except -
a) Conductive deafness *(UP 08)*
b) Sensorineural deafness
c) Vertigo
d) Tinnitus

345. Meniere's disease is characterised by -
a) Fluctuating hearing loss *(PGI Dec 03)*
b) Also called endolymphatic hydrops
c) Tinnitus and vertigo most common symptom
d) It is a disease of inner ear
e) Endolymphatic decompression is done

FACIAL NERVE AND ITS DISORDERS

346. First branch of the facial nerve is - *(UP 04, NEET/DNB Pattern)*
a) Greater petrosal nerve
b) Lesser petrosal nerve
c) Chorda-tympani nerve
d) Nerve to the stapedius

325) b 326) b,d 327) a 328) d 329) b 330)All 331)b 332) c 333) b 334) b 335) c 336) e 337) a 338) a>c
339) d 340) d 341) a 342) c 343) d 344) a 345)All 346) a

347. Lacrimation is affected when facial nerve injury is at- *(AI98)*
a) Geniculate ganglion
b) In semicircular canal
c) At sphenopalatine gangila
d) None

348. A patient presents with hyperacusis, loss of lacrimation and loss of taste sensation in the anterior 2/3rd of the tongue. Oedema extends up to which level of facial nerve - *(2001)*
a) Vertical part
b) Vertical part proximal to nerve to stapedius
c) Vertical part and beyond nerve to stapedius
d) Proximal to geniculate ganglion

349. Dryness of eye is caused by inj ury to facial nerve at-
a) Chorda tympani *(AI 96)*
b) Cerebellopontine angle
c) Tympanic canal
d) Geniculate ganglion

350. Intratemporal lesion of chorda tympani nerve result in - *(AIIMS dec 94)*
a) Loss of taste sensations from papilla of tongue
b) Loss of taste sensations from anterior 2/3^ of tongue
c) Loss of taste sensations from posterior 1/3"* of tongue
d) Loss of secretomotor fibres to the submandibular salivery gland

351. Dryness of mouth with facial N.injury-site of lesion is at- *(UP 08)*
a) Chorda tympani N
b) Cerebellopontine angle
c) Geniculate ganglion
d) Concussion of tympanic membrane

352. Facial nerve palsy at stemomastoid canal can cause-
a) Loss of corneal reflex at side of lesion
b) Loss of taste sensation anterior 2/3 of ipsilateral tongue
c) Loss of lacrimation at side of lesion
d) Hyperacusis

353. All the following muscles are innervated by the facial nerve except - *(AIIMS May 03)*
a) Occipito-fontalis b) Anterior belly of digastric
c) Risorius d) Procerus

354. Right upper motor neuron lesion of facial nerve causes - *(AIIMS 95)*
a) Loss of taste sensation in right anterior part of tongue
b) Loss of corneal reflex on right side
c) Loss of wrinkling of forehead on left side
d) Paralysis of lower facial muscles on left side

355. Which one of the following statements is correct in facial paralysis - *(MP 09)*
a) The nasolabial fold is obliterated on same side
b) The nasolabial fold is obliterated on opposite side
c) The face deviates to the same side
d) The face deviates to the opposite side

356. Which test can detect facial nerve palsy occurring due to lesion at the outlet of stylomastoid foramen - *(AIIMS Nov 93)*
a) Deviation of angle of mouth towards opposite side
b) Loss of taste sensation in anterior 2/3 of tongue
c) Loss of sensation over right cheek
d) Deviation of tongue towards opposite side

357. Hyperacusis in Bell's palsy is due to the paralysis of the following muscle - *(AIIMS May 06)*
a) Tensor tympani b) Levator palatii
c) Tensor veli palatii d) Stapedius

358. Hyperacusis is caused by damage *to?* *(MH01, NEEI7 DNB Pattern)*
a) Stapedius b)T. Palate
c) T. tympani d)All

359. Which of the following is not true about bell's palsy-
a) Acute onset *(Delhi 08)*
b) Always recurrent
c) Spontaneous remission
d) Increased predisposition in Diabetes Mellitus

360. Which one of the following statements truly represents bed's paralysis - *(AIIMSMay 05; AI 04)*
a) Hemiparesis and contralateral facial nerve paralysis
b) Combined paralysis of the facial, trigeminal, and abducens nerves
c) Idiopathic ipsilateral paralysis of the facial nerve
d) Facial nerve paralysis with a dry eye

361. All of the following are seen in bell's palsy except - *(SGPGI 05, NEET/DNB*
a) Ipsilateral facial palsy
b) Ipsilateral loss oftaste^tpsatiqi^f - *^%g&iiern)*
c) Hyperacusis
d)p§4laj:efaf,ptqsis

362. Bed's palsy patient comes on day 3. Treatment given would be - *(AIIMS Nov 09)*
a) Intratympanic steroids
b) Oral steroids+Vitamin B
c) Oral steroids + Acyclovir
d) Vitamin B vasodilator

363. True about Beds palsy - *(NEET/DNB Pattern)*
h) Spdntafcdhs 'recdyqrf; ||§|||||| '?
b) Steroid contraindicated
c) 25% have resolved
d) Antibiotics mainstay of treatment

364. TVue about lower motor neuron palsy ofVHth nerve-
a) Other motor cranial nerves also involves
b) Melkersson's syndrome cause recurrent paralysis
c) Eye protection done *(PGI Nov 09)*
d) Prognois can be predicted by serial electrical studies
e) Bell's palsy is commonest cause

365. Bed's palsy is paralysis of - *(Corned 07)*
a) UMNV nerve b) UMN VII nerve
c) LMNV nerve d) LMN VII nerve

366. Most common cause of lower motor neuron facial palsy is - *(MP 04)*
a) Cholesteatoma b) Cerebello-pontine angle tumors
c) Bell's palsy d) Postoperative (ear surgery)

347)a 348)d 349)d 350)d 351)a 352)a 353)b 354)d 355)a,d 356)a 357)d 358)a 359)b 360)c
361) d 362) c 363) a 364)b,c,d,e 365) d 366) c

367. True about bell's palsy is/are - *(PG12000)*
a) Most common cause of facial palsy
b) Associated with tinnitus & vertigo
c) Crocodile tears & synkinesis
d) No role of steroids

368. Most common cause of facial palsy -
a) Post operative b) Trauma
c) Ramsay hunt syndrome d) Bell's palsy

369. Bell's palsy not responding to steroid. What will be the further line of managment - *(MP 2K)*
a) Increase the dose of steroid
b) Vasodilators and ACTH
c) Surgical decompression
d) Electrophysiological nerve testing

370. A case of Bell's palsy on steroids, shows no improvement after two weeks. Next step in manangement is -
a) Vasodilators and ACTH
b) Physiotherapy
c) i Steroids dose
d) Electrophysiological nerve testings

371. Ramsay hunt syndrome is caused by- *(PGIDec98)*
a) H. simplex b)H.zoster
c) Influenza d) Adenovirus

372. Ramsay hunt syndrome all are true except -
a) VII Nerve is involved *(SGPGI05)*
b) Facial muscle are involved
c) Facial vesicles is seen
d) Herpes zoster is etiologic agent

373. In Ramsay Hunt syndrome, all nerves are involved except-
a) 5 b)7 *(RJ 02)*
c) 8 d)9

374. All of the following are true for Ramsay hunt syndrome except - *(AI 02)*
a) It has viral etiology
b) Involves Vllth nerve
c) May involve VUIth nerve
d) Results of spontaneous recovery are excellent

375. True about Ramsay-hunt syndrome except - *(JJP2K)*
a) Involves VII nerve
b) May involves VIII nerve
c) Surgical removal gives excellent prognosis
d) Causative agent is virus

376. A man presents with vesicles over external acoustic meatus with ipsilateral facial palsy of LMN **type. The cause is -** *(AP 05)*
a) Herpes zoster b) Herpes simplex virus-I
c) Varicella d)None

377. Which fracture of the petrous bone will cause facial nerve palsy - *(AI0 7)*
a) Longitudinal fractures
b) Transverse fractures
c) Mastoid
d) Facial nerve injury is always complete

378. Which is the correct statement regarding facial nerve palsy in temporal bone fractures? *(AI 08, AIIMSMay 08)*
a) More common with transverse fractures
b) More common with longitudinal fractures
c) Facial palsy is of immediate onset
d) It is always associated with CSF leakage

379. Iatrogenic traumatic facial nerve palsy is most commonly caused during -
a) Myringoplasty b) Stapedectomy
c) Mastoidectomy d) Ossiculoplasty

380. A patient presents with facial nerve palsy following head trauma with fracture of the mastoid; best intervention here is - *(AI 01)*
a) Immediate decompression b) Wait and watch
c) Facial sling d) Steroids

381. Treatment of choice in traumatic facial nerve inj ury is - *(ARMS Sep 96)*
a) Masterly inactivity b) Facialsling
c) Facial decompression d) Systemic corticosteroid

382. Treatment of choice for mastoid # with facial nerve palsy is - *(ARMS June 99)*
a) Nerve decompression
b) High dose of steroid
c) Sling operation
d) Repair the # and wait and watch

383. Facial nerve palsy is seen in - *(NEET/DNB Pattern)*
a) Sarcoidosis b) VZV
c) Acoustic neuroma d) All

384. Crocodile tears is due to - *(Delhi 05)*
a) Cross innervation of facial nerve fibers
b) Cross innervation of trigeminal nerve fibers
c) Improper regeneration of trigeminal nerve
d) Improper regeneration of facial nerve

3 85. Gustatory sweating and flushing (Frey's syndrome) follows damage to the - *(Jipmer 80, DNB 91)*
a) Trigeminal nerve b) Facial nerve
c) Glossopharynegeal nerve d) Vagus nerve
e) Auriculotemporal nerve

3J8f6. Frey's syndrome is caused *by -(NEET/DNB Pattern)*
a) Post traumatic nerve fibres of facial nerve with parasympathetic of auriculotemporal nerve
b) Greater auricular with auriculotemporal nerve
?7 c) Facial nerve with greater auriculkf nerve
d) None

387. Frey's syndrome is due to involvement of- *(Bihar 03)*
a) Auriculotemporal nerve b) Glosopharyngeal nerve
c) Vagus nerve d)All

688. Nerve of the pterygoid canal is also known as -
a) Arnolds nerve b) Vidian nerve
c) Nerve of Kuntz d) Criminal nerve of grassi

389. Etiology of facial nerve paralysis include all of the following EXCEPT- *(Karn 11)*
a) Mumps
b) Bell's palsy
c) Acoustic neuroma
d) Modified Radical Mastoidectomy

367) a,c 368) d 369) d 370) d 371)b 372) c 373)None 374) d 375) c 376) a 377) b 378) a 379) c 380) a
381)c 382)a 383)d 384)d 385) b,e 386)a 387)a 388)b 389)None

TUMOURS

390. Acoustic neuroma commonly arises from -
a) Superior division of vestibular nerve
b) Inferior division of vestibular nerve
c) Cochlear nerve *(AI11, 10, ARMS Nov 09, A11MS*
d) VIIth nerve *98, J & K 05)*

391. Schwannoma involves the - *(AI 99)*
a) Vestibular part of VUIth nerve
b) Cochlear part of VHIth nerve
c) Vagus nerve
d) Hypoglossal nerve

392. True about Acoustic neuroma - *(PGI June 04)*
a) Malignant tumor
b) Arises from vestibular nerve
c) Upper pole displaces IX,X,XI nerves
d) Lower pole displaces trigeminal cranial nerve

393. The earliest symptom of acoustic nerve tumor is -
a) Sensorineural hearing loss *(AI 95, Delhi-05,*
b) Tinnitus *Karnatak-09)*
c) Vertigo
d) Otorrhea

394. Earliest sign seen in Acoustic neuroma is-*(UPSC05)*
a) Facial weakness b) Unilateral deafness
c) Reduced corneal reflex d) Cerebellar signs

395. In acoustic neuroma, cranial nerve to be involved earliest is - *(AI07i UP 08; NEET/DNB Pattern)*
a) 5 b)7
c) 10 d)9

396. Acoustic neuroma causes - *(PGI June 99)*
a) Cochlear deafness b) Retrocochlear deafness
c) Conductive deafness d) Any of the above

397. A 70 year old male presents with loss of sensation in external auditory meatus (Hitzelberg's sign positive). The likely diagnosis is - *(AI 08)*
a) Vestibular schwannoma
b) Mastoiditis
c) Bells palsy
d) Middle ear cholesteatoma

398. In acoustic neuroma all are seen except - *(MP2000)*
a) Loss of corneal reflex b) Tinnitus
c) Facial palsy d) Diplopia

399. In a patient with acoustic neuroma all are seen except- *(SGPGI07)*
a) Facial nerve may be involved
b) Reduced corneal reflex
c) Cerebellar signs
d) Acute episode of vertigo

400. In acoustic neuroma, the earliest ocular finding is -
a) Diplopia *(Delhi 06, Kerala 04, PGI*
b) Ptosis *00, NEET/DNB Pattern)*
c) Loss of pupillary reflex
d) Loss of corneal reflex

401. Acoustic neuroma causes the following except-fPG/
a) Ptosis b) Nystagmus *97)*
c) Unilateral deafness d) Loss of corneal reflex

402. Vestibular neuroma - not correct - *(AP 05)*
a) Nystagmus
b) High frequency sensorineural deafness
c) Absence of caloric response
d) Normal corneal reflex

403. TVue about CPangle tumour - *(AIIMS 9 7)*
a) Absent corenal reflex b) I/L rectus palsy
c) pupillary dilatation d) Medial rectus palsy

404* Acoustic schwannoma most common site is -
a) CP angle *(NEET/DNB Pattern)*
b) Fossa of Rosenmuller
c) Retropharyngeal space
d) None

405. Progressive loss of hearing, tinnitus and ataxia are commonly seen in a case of - *(SGPGI05)*
a) Otitis media b) Cerebral glioma
c) Acoustic neuroma d) Ependymoma

406. True about cerebello pontine angle tumor - *(PGI 01)*
a) Tinnitus b) Diplopia
c) Lost comeal reflex d) Conductive deafness

407. A patient is suspected to have vestibular shwanomma the investigation of choice for its diagnosis is -
a) Contrast enhanced CT scan *(ARMS 04)*
b) Gadolinium enhanced MRI
c) SPECT
d) PET scan

408. Treatment of choice for acoustic neuroma-(Xera/a *08)*
a) Steroid b) Radiotherapy
c) Anti-neoplastic chugs d) Surgery

409. Acoustic neuroma of 1 cm diameter, the investigation of choice- *(Kerala 97)*
a) CTScan b) MRI Scan
c) Plain X-ray skull d) Air encephalography

410. Which of the following would be the most appropriate treatment for rehabilitation of a patient who has bilateral profound deafness following surgery for bilateral acoustic schwanoma - *(DPGFeh. 09)*
a) Bilateral with powered digital hearing AID
b) Bilateral cochlear implants
c) Unilateral cochlear implant
d) Brain stem implant

411; Investigation of choice in vestibular schwannoma -
a) MRI b) CT *(NEET/DNB Pattern)*
c) USG d) X-ray ,

412. The usual location of glomus jugulare tumor is -
a) Epitympanum *(DPG10)*
b) Hypotympanum
c) Mastoid tip cells
d) Internal auditory meatus

413. FISCH classification is used for-
a) Juvenile nasopharyngeal angiofibroma
b) Nasopharyngeal ca *(NEET/DNB Pattern)*
c) Vestibular schwannoma
d) Glomus tumor

414. Earliest symptom of glomus tumor is - *(UP 06)*
a) Pulsatile tinnitus b) Deafness
c) Headache d) Vertigo

390) a 391) a 392)b 393)a 394)c 395)a 396)b 397)a 398)c 399)d 400)d 401) a 402)d 403)a
404)a 405)c 406)a,b,c 407)b 408)d 409)b 410)d 411)a 412)b 413)d 414)a

415. Brown sign is seen in - *(AI07, NEET/DNB Pattern)*
a) Glomus tumor b) Meniere's desease
c) Acoustic neuroma d) Otoscleorsis

416. Phelps sign is seen in - *(A1IMS May 02, NEET/DNB Pattern)*
a) Glomus jugulare
b) Vestibular Schwannoma
c) Menniers disease
d) Neurofibromatosis

417. The glomus tumor invasion of Jugular bulb is diagnosed by- *(UP 05)*
a) Carotid angiography
b) Vertebral venous venography
c) X-ray
d) Jugular venography

418. A patient presents with bleeding from the ear pain tinnitus and progressive deafness. On examination there is a red swelling behind the intact tympanic membrane which blanches on pressure with pneumatic speculum. Management includes all except- *(AIIMSNov. 01)*
a) Radiotherapy b) Surgery
c) Interferons d) Preoperative embolization

419. Condition where pulsatile tumor is found in external auditory meatus which bleed on touch - *(DPG10,*
a) Cholesteatoma b) Polyp *AIIMS 95)*
c) Glomus tumor d) Malignancy middle ear

420. True about Glomus- jugulare tumour -
a) Most common in male *(PGI June 04)*
b) Aries from non- chromaffin cells
c) Lymph node metastasis seen
d) Multicentric
e) Fluctuating tinnitus and conductive type of hearing loss seen

421. Pulsatile tinnitus in ear is due to - *(IN 01)*
a) Malignant otitis media
b) Osteoma
c) Mastoid reservoirs
d) Glomus jugulare tumour

422. Mass in ear, on touch bleeding heavily, cause is -
a) Glomus Jugulare b) Ca mastoid *(DNB 01)*
c) Acoustic neuroma d) Angiofibroma

423. Most common bony tumour of middle ear is -*(UP 07)*
a) Adenocarcinoma
b) Squamous cell carcinoma
c) Glomous tumour
d) Acoustic neuroma

424. Treatment of middle ear malignancy includes -
a) Excision of petrous part of temporal bone
b) Subcortical excision *(Make 07)*
c) Modified radical mastoidectomy
d) None

MISCELLANEOUS EAR

425. Cochlear implant is done in - *(Bihar 05)*
a) Scala vestibuli b) Scala tympani
c) Cochlear duct d) Endolymphatic duct

426. A child aged 3 years, presented with severe sensorineural deafness was prescribed hearing aids, but showed no improvement What is the next line of management - *(AIIMS May 01)*
a) Fenestration surgery b) Stapes mobilisation
c) Cochlear implant d) Conservative

427. Regarding cochlear implant, which of the following is true - *(AIIMS Nov 10)*
a) Not contraindicated in cochlear malformation
b) Contraindicated in < 5 yrs
c) Indicated in mild to moderate hearing loss
d) Implanted through oval window

428. All of the following statements about cochlear implants are true, except - *(AI12)*
a) Improved speech and sound perception
b) Better chance of acquiring normal or near normal verbal skills
c) Improved sound localization and discrimination is possible
d) Tinnitus enhancement in patients with tinnitus prior to implantation

429. Which of the following would be the most appropriate treatment for rehabilitation of a patient, who has bilateral profound deafness following surgery for bilateral acoustic schwannoma - *(AIIMS Nov 03)*
a) Bilateral high powered digital hearing aid
b) Bilateral cochlear implants
c) Unilateral cochlear implant
d) Brain stem implant

430. In cochlear implants electrodes are most commonly placed at -
a) Oval window b) Round window
c) Horizontal semicircular canal d) Cochlea

431. In a case of bilateral hearing loss, what should be done - *(PGI June 99)*
a) Stapedectomy b) Cochlear implant
c) Hearing aid bone implant d) Sodium fluoride

432. A child was treated for H.influenza menigitis for 6 month. Most important investigation to be done before discharging the patient is - *(AI 99)*
a) MRI
b) Brainstem evoked auditory response
c) Growth screening test
d) Psychotherapy

433. All of the following diseases have consistent symptom of tinnitus, except - *(AP 08)*
a) Meniere's disease b) CSOM
c) Otosclerosis d) Mastoiditis

434. Pulsatile tinnitus in ear is due to - *(TN 01)*
a) Malignant otitis media b) Osteoma
c) Mastoid resevoirs d) Glomus jugulare tumour

435. A man Rajan, age 70 yrs, presents with tinnitus. Most probable diagnosis is - *(AIIMS Nov 2K)*
a) Acoustic neuroma b) ASOM
c) Labyrynthitis d) Acoustic trauma

415)a 416)a 417)d 418)c 419)c 420)b,d,e 421)d 422)a 423)b 424)a,c 425)b 426)c 427)a 428)d 429) d 430) d 431)a,b,c,d 432) b 433) d 434) d 435) a

436. CSF otorrhoea is caused by - *(ARMS 92)*
a) Rupture of tympanic membrane
b) Fracture of cribriform plate
c) Fracture of parietal bone
d) Fracture of petrous temporal bone

437. The most common cause of cerebrospinal otorrhoea is-
a) Rupture of tympanic membrance *(UP 97)*
b) Fracture of petrous ridge
c) Fracture of mastoid air cells
d) Fracture of parietal bone

438. Two months after tonsillectomy the patient has referred pain to ear, cause is - *(ARMS 92)*
a) Temporomandibular joint dislocation
b) Injury to glossopharyngeal (9th cranial) nerve
c) Injury to vagus nerve
d) Infection of tonsillar bed

439. Which nerve is responsible for reffered pain of the ear - *(NEET/DNB Pattern)*
a) IX N. b) III N
c)'XTN. d)XnN

440. Features of superior canal dehiscence are -
a) Positive romberg's sign *(PGI Nov 10)*
b) Positive tullio's phenomenon
c) Positive hennerbert's sign
d) oscillopsia
e) Positive Dix-Hallpike maneuver

441. Chalky white tympanic membrane is seen in- *(RJ01)*
a) ASOM b) Otosclerosis
c) Tympanosclerosis d) Cholesteotoma

442. Fluctuating recurring variable sensorineural deafness is seen in - *(APPGI06)*
a) Serous otitis media b) Heamotympanum
c) Perilabyrinthine fistula d) Labrinthine concussion

443. Bone which is Pneumatic - *(PGI June 0 7)*
a) Maxillary b) Parietal
c) Temporal d) Frontal
e) Ethmoidal

444. Use of seigel's speculum during examination of the ear provides all except - *(AI05)*
a) Magnification
b) Assessment of movement of the tympanic membrane
c) Removal of foreign body from the ear
d) As applicator for the powdered antibiotic of ear

445. The focal length of the mirror used in head lamp -
a) 85mm b) 150mm
c) 250mm d) 400 mm

446. Focal length of head mirror used in ENT-OPD -
a) 9 inch b) 10 inch (25 cm) *(Bihar 05,*
c) 11 inch d) 12 inch *NEET/DNB Pattern)*

447. Diameter of head mirror in ENT is - *(Bihar 05)*
a) 20 cm b)22cm
c) 10cm d)26cm

448. 40 db compared to 20 db is - *(DNB01)*
a) Double b) 10 times
c) 100 times d) 1000 times

ANATOMY OF NOSE

449. Choanais- *(TN 03)*
a) Anterior nares b) Posterior nares
c) Tonsils d) Larynx

450. Inferior turbinate is a - *(Jipmer 04)*
a) Part of maxilla b) Part of sphenoid
c) Separate bone d) Part of ethmoid

451. Which of the following is known as fourth tubrinate-
a) Posterior ethmoid cells *(UP 01)*
b) Anterior ethmoid cells (Agger-nasi)
c) Medial ethmoid cells
d) Lateral ethmoid cells

452. Osteomeatal complex (OMC) connects- *(MH 02)*
a) Nasal cavity with maxillary sinus
b) Nasal cavity with sphenoid sinus
c) The two nasal cavities
d) Ethmoidal sinus with ethmoidal bulla

453. Nasal valve is formed by - *(MP 08)*
a) Upper lateral cartilage
b) Lower lateral cartilage
c) Lower end of upper lateral cartilage
d) Upper end of lower lateral cartilage

454. Ethmoid bone forms A/E- *(Bihar 05)*
a) Superior turbinate b) Middle turbinate
c) Interior turbinate d) Uncinate process

455. Tubinate that articulates with ethmoid is- *(AP02)*
a) Superior b) Middle
c) Inferior d) All of the above

456. Hiatus semilunaris is present in - *(CUPGEE 02)*
a) Superior meatus b) Middle meatus
c) Inferior meatus d) Spenoethmoidal recess

457. Paranasal sinus opening in middle meatus-
a) Maxillary *(PGI 03, 98)*
b) Anterior ethmoid c) Posterior ethmoid
d) Frontal e) Sphenoid

458. Which of the following bones do not contribute the nasal septum- *(AI 03)*
a) Sphenoid b) Lacrimal
c) Palatine d) Ethmoid

459. Quadrilateral cartilage is attached to all except -
a) Ethmoid b) Vomer *(DNB 01)*
c) Sphenoid d) Maxilla

460. All these structure are found in the lateral nasal wall except - *(MP 07)*
a) Superior Turbinate b) Vomer
c) Agger nasi d) Hasner's vale

461. Direction of nasolacrimal duct is - *(AI 99)*
a) Downwards, backwards and medially
b) Downwards, backwards and laterally
c) Downwards, forwards and medially
d) Downwards, forwards and laterally

i46;2. Frontonasal du^p^ii5;int0,^^p'i'^i *NEET/DNB*
a)^Inferior meatus * , " -\y) Middle p^eatus *Pattern)*
c) Superior meatus d) Inferior turbinate

436)d 437)b 438)b 439)a 440)b,d 441)c 442)c 443)a,c,d,e 444)c 445)c 446)b 447)c 448)c 449)b

463. The maxillary sinus opens into middle meatus at the level of- *(DNB02)*
a) Hiatus semilunaris b) Bulla ethmoides
c) Infundibulum d) None of the above

464. Frontal sinus drain into - *(PGI98, 97)*
a) Superior meatus b) Inf. meatus
c) Middle meatus d) Ethmoid recess

465. All drains into middle meatus except -
a) Lacrimal duct *(DNB 02, NEET/DNB Pattern)*
b) Maxillary sinus
c) Frontal sinus,
d) Ethmoidal sinus

466. Opening of posterior ethmoid sinus in -
a) Middle turbinate *(Jharkhand 06, Punjab 11)*
b) Superior turbinate
c) Inferior turbinate
d) None

467. Nasolacrimal duct opens into - *(MAHE 05, Kam. 11)*
a) Superior meatus b) Middle meatus
c) Inferior meatus d) Sphenopalatine recess

DISEASE OF EXTERNAL NOSE & NASAL SEPTUM

468. True about rhinophyma - *(PGI 01)*
a) Premalignant b) Common in alcoholics
c) Acne rosacea d) Fungal etiology
e) Treatment is shaving, dermabrasion and skin grafting

469. Rhinophyma is associated with- *(AI07, AP 96, UP 01)*
a) Hypertrophy of the sebaceous glands
b) Hypertrophy of sweat glands
c) Hyperplasia of endothelial cells
d) Hyperplasia of epithelial cells

470. Commonest presentation of infant with bilateral choanal atresia - *(AIIMS06)*
a) Difficulty inbreathing b) Dysphagia
c) Smiling d) Difficulty in walking

471. Choanal atresia is associated with - *(PGI Dec 08)*
a) Colobomatous blindness
b) Heart disorder c) Renal anomaly
d) Ear disorder e) CNS lesion

472. Percentage of newborn with deviation of nasal septum - *(PGI93)*
a) 2% b) 10%
c) 20% d) 50 %

473. Features associated with DNS include all of the following except - *(AI98)*
a) Epistaxis
b) Atrophy of turbinate
c) Hypertrophy of turbinate
d) Recurrent sinusitis

474. For deviated nasal septum, surgery is required for -
a) Septal spur with epistaxis *(PGI01)*
b) Marked septal deviation
c) Persistent rhinorrhea
d) Recurrent sinusitis
e) Prolonged DNS

475. DNS may be associated with all the following except-
a) Recurrent sphenoiditis *(AI 95, AIIMS 93)*
b) Bilateral septal spur
c) Hypertrophy of the inferior turbinate
d) Recurrent maxillary sinusitis

476. Cottel[9]s test tests the patency of the nares in -
a) Atrophic rhinitis *(Jipmer 2K)*
b) Rhinosporidiosis
c) Deviated nasal septum
d) Hypertrophied inferior turbinate

477. Improvement in nasal patency by retracting the lateral part of the cheek and thus testing the vestibular component of nose is - *(MH 08)*
a) Epley's maneuver b) Cottle's test
c) Schwartz maneuverd) Helmich maneuver

478. Nasal septum perforation occurs in all the following except- *(UP 04, NEET/DNB Pattern)*
a) Tuberculosis b) Nasal surgery
c) Syphilis d) Rhinosporidiosis

479. Most common cause of perforation of cartilaginous part of nasal septum- *(Kolkata 06)*
a) Syphilis b) Tuberculosis
c) Wegener's granulomatosis d) Septal abscess

480. Septal perforation is not seen in - *(DNB 02)*
a) Septal abscess b) Leprosy
c) Rhinophyma d) Trauma

481. Nasal septal perforation is characteristically seen in - *(IN 04)*
a) Wegener's granulomatosis
b) Polymorphic reticulosis
c) Sarcoidosis
d) Tuberculosis

482. True about septal hematoma is - *(PGI 02)*
a) Occurs due to trauma
b) Can lead to saddle-nose deformity
c) Conservative treatment
d) May lead to abscess formation

483. The etiology of anterior ethmoidal neuralgia is- *(AIIMS May 03)*
a) Inferior turbinate pressing on the nasal septum
b) Middle turbinate pressing on the nasal septum
c) Superior turbinate pressing on the nasal septum
d) Causing obstruction of sphenoid opening

GRANULOMATOUS DISORDERS OF NOSE. NASAL POLYP AND FOREIGN BODY

484. True statement about Rhinosporidiosis is - *(AI99)*
a) Most common organism is klebsiella rhinoscleromatis
b) Seen only in immunocompromised patients
c) Present as a nasal polyp
d) Can be diagnosed by isolation of organism

485. Rhinosporidiosis is caused by - *(PGI99, UP 2K, NEET/DNB Pattern)*
a) Fungus b) Virus
c) Bacteria d) Protozoa

463)a 464)c 465)a 466)b 467)c 468)c,e 469)a 470)a 471)a,b,d,e 472)b 473)b 474)a,b,c,d 475)b 476) c 477) b 478) d 479) None 480) c 481)a,c,d 482)a,b,d 483) b 484) c 485) c

486. Which of the following is not a feature of rhinosporidiosis - *(JIPMER 00)*
a) Bleeding polyp
b) Russel bodies are seen
c) Oral dapsone is useful in treatment
d) Excision with the knife is the treatment

487. Ideal treatment of rhinosporidiosis is - *(A1IMS 97)*
a) Rifampicin b) Excision with cautery at base
c) Dapasone d) Laser

488. In rhinosporidiosis, the following is true - *(PGI99)*
a) Fungal granuloma
b) Grayish mass
c) Surgery is the treatment
d) Radiotherapy is treatment

489. Nasal polyps with subcutaneous nodules are seen in- *(MP 01)*
a) Zygomycosis b) Rhinosporidiosis
c) Sporotrichosis d) Aspergilosis

490. Which of the following is/are true about Rhinoscleroma except - *(PGI June 09)*
a) Biopsy is diagnostic
b) Causative organism can be cultured
c) Occur in endemic areas
d) Conservative management is done
e) Surgical intervention is treatment of choice

491. Atrophic dry nasal mucosa, extensive encrustations with, woody' hard external nose; is suggestive of -
a) Rhinosporidiasisb) Rhinoscleroma *(MH05)*
c) Atrophic rhinitis d) Carcinoma of nose

492. Rhinoscleromatis is caused by » *(PGI 99)*
a) Klebseilla b) Autoimmune
c) Spirochetes d) Rhinosporidium.

493. Rhinoscleroma is due to which infection -
a) Viral b) Bacterial *(NEET/DNB Pattern)*
c) Fungal d) None

494. Mikulicz and russel bodies are characteristic of -
a) Rhinoscleroma *(JIPMER 02,NEET/DNB Pattern)*
b) Rhinosporidiosis
c) Plasma cell disorder
d) Lethal midling granuloma

495. Russell body is found in - *(Bihar 06)*
a) Rhinospordisosis b) Rhinoscleroma
c) Muromycosis d)All

496. Apple jelly nodules on the nasal septum are found in cases of - *(MP 05)*
a) Tuberculosis b) Syphilis
c) Lupus Vulgaris d) Rhinoscleroma

497. 68 year old chandu is a diabetic and presented with black, foul, smelling dicharge from the nose Examination reveraled blackish discoloration of the inferior turbinate. The diagnosis is - *(AIIMS 99)*
a) Mucormycosis b) Aspergillosis
c) Infarct of inferior turbinnate d) Foreign body

498. IDDM patient presents with septa perforation of nose with brownish black discharge probable diagnosis is- *(AI97, RJ06)*
a) Rhinosporidiosis b) Aspergillus
c) Leprosy d) Mucormyocis

499. All of the following are true about antrochonal polyp, except- *(IN 07)*
a) Single b) Unilateral
c) Premalignant d) Arises from medullary antrum

500. All of the following are true of antrochoanal polyp except- *(AI 94)*
a) Common in children
b) Single & Unilateral
c) Bleeds on touch
d) Treatment involves Avulsion

501. The current treatment of choice for a large antrochoanal polyp in a 30 year old man is -
a) Intranasal polypectomy *(AIIMSNov. 05)*
b) Caldwell luc operation
c) F.E.S.S. (Endoscopic Sinus Surgery)
d) Lateral Rhinotomy and excision

502. The most appropriate management for antrochoanal polyp in children is - *(AIIMS 02)*
a) Caldwell-Luc operation
b) Intranasal polypectomy
c) Corticosteroids
d) Wait and watch

503. Treatment of choice for antrochoanal polyp in a 10 yr. old child- *(PGI 96)*
a) Caldwell luc's
b) Intranasal polypectomy
c) Conservative treatment till 16 years
d) Exploratory rhinotomy

504. TVeatment for recurrent Atrochoanal polyp -*(MP07)*
a) Caldwell Luc operation b)FESS
c) Simple polypectomy d)BothA&B

505. Antrochoanal polyp is characterized by -*(PGIDec.03)*
a) Usually bilateral
b) It is of allergic origin
c) It arises from maxillary antrum
d) Caldwell luc operation is treatment of choice in recurrent cases
e) Recurence is common

506. Regarding antrochonal polyp which one is true -
a) Origin from maxillary sinus and goes to nasopharynx
b) Present with severe bleeding *(Kolkota 05)*
c) Bilateral
d) Seen in elderly person

507. Antrochoanal polyp - *(NEET/DNB Pattern)*
a) Single & grows posteriorly b) Multiple
c) Bleeding d) None

508. Which of the following statements is not correct for Ethmoidal polyp- *(AIIMS 02)*
a) Allergy is an etiological factor
b) Occur in the first decade of life
c) Are bilateral
d) Are often associated with bronchial asthma

509. Regarding ethmoidal polyp, which one of the following is true - *(Kolkata 05)*
a) Epistaxis b) Unilateral
c) < 10 years d) Associated with bronchial asthma

---

486) b 487) b 488) c 489) b 490) e 491)b 492) a 493) b 494) a 495) b 496) c 497) a 498) d 499) c
500)c 501)c 502)b 503)b 504)d 505)c,d 506)a 507)a 508)b 509)d

510. In a patient with multiple bilateral nasal polyps with X-ray showing opacity in the Paranasal sinuses. The treatment consists of all of the following except- *(AIIMS02)*
a) Epinephrine b) Corticosteroids
c) Amphoterecin B d) Antihistamines

511. Patient with ethmoidal polyp undergoes polypectomy. Presents 6 months later with ethmoidal polyp. Correct Rx- *(AIIMS95)*
a) Intranasal ethmoidectomy
b) Extranasal ethmoidectomy
c) Caldwel luc procedure
d) Polypectomy

512. Recurrent polyp are seen in - *(UP07)*
a) Antrochoanalpolyp b) Ethmoidal polyp
c) Nasal polyp d) Hypertrophic turbinate

513. Which of the following best differentiates antrochoanal polyp from ethmoidal polyp? *(MH08)*
a) They are multiple
b) Best seen on posterior rhinoscopy
c) They are bilateral
d) Reurrence on polypectomy

514. Sampters triad includes - *(PGI May 10)*
a) Bronchiectasis b) Asthma
c) Aspirin sensitivity d) Nasal polyposis
e) Tinnitus

515. "Bernoulli's theorem" explains - *(UP07)*
a) Nasal polyp b) Thyroglossal cyst
c) Zenker's diverticulum d) Laryngomalacia

516. About foreign body in a child true is - *(PGI June 03)*
a) Unilateral fetid discharge
b) Presents with unilateral nasal obstruction
c) Has torrential expistaxis
d) Inanimate is more common than animate
e) Always removed under G A

517. The commonest cause of U/L mucopurulent rhinorrhoea in a child is - *(Kolkatta 01)*
a) Foreign body
b) Adenoids which are blocking the airways
c) Deviated nasal septum
d) Inadequately treated acute frontal sinusitis

518. A child presented with history of unilateral purulent nasal discharge with occasional bloody discharge from the same side, The diagnosis is - *(SGPGI05)*
a) Antrochoanal polyp b) Foreign body
c) Angiofibroma d) Rhinosporidiosis

519. Maggots in nasal cavity are most commonly treated by- *(AI98, 96)*
a) Chloroform diluted with water
b) Liquid paraffin
c) Systemic antibiotics
d) Lignocaine spray

EPITAXIS AND RHINITIS

520. Nasal mucosa is supplied by- *(AI92)*
a) Only external carotid atery
b) Only internal carotid
c) Mainly external carotid artery
d) Mainly internal carotid artery

521. Which artery does not contribute to little's area-
a) Septal branch of facial artery *(PGI 97)*
b) Anterior ethmoidal artery *(NEET/DNB Pattern)*
c) Sphenppalantine A a
d) Posterior ethmoidal A '

522. WootfrtlfFs plexus is seen at - *(AP 03, 95, 77199)*
a) ^Sfeibinferior part of superior turbinate
b) Middle turbinate *(NEET/DNB Pattern)*
c) Posterior part of inferior turbinate
d) Anterior part of inferior turbinate

523. Little area is situated in nasal cavity in - *Kerala 00)*
a) Anterior inferior b) Anterior superior
c) Posterior inferior d) Posterior superior

524. Main vascular supply of Little's area is all, except- *(DPGFeb. 09)*
a) Septal branch of superior labial artery
b) Nasal branch of sphenopalatine artery
c) Anterior ethmoidal artery
d) Palatal branch of sphenopalatine

525. Kiesselbach's plexus is formed by - *(PGIDec 08)*
a) Greater palatine artery
b) Septal branch of sphenopalatine artery
c) Posterior ethmoidal artery
d) Septal branch of superior labial artery
e) Anterior ethmoidal artery

526. Kisselbach's plexus is formed by septal branches of all except - *(Manipal 08)*
a) Posterior ethmoidal artery
b) Anterior ethamoidal artery
c) Sphenopalatine artery
d) Greater palatine artery

527. Common sites of bleeding - *(PGI 08)*
a) Woodruff plexus b) Brown area
c) Littles area d) Vestibular area

528. Site of epistaxis are all except - *(Kolkata 08)*
a) Little's area
b) Woodruff's area
c) Middle meatus
d) Posterosuperior aspect above superior turbinate

529. Cause of epistaxis aire all *except-(NEET/DNB Pattern)*
a) Allergic rhinitis b) Foreign body
c) Tumor *y:r;h* d) Hypertension

530. Diagnosis in a ten year old boy with recurrent epistaxis and a unilateral nasal mass is -*(SGPGI 05)*
a) Antrochoanal polyp b) Hemangioma
c) Angiofibroma d)Rhinolith

510)c 511)b 512)b 513)b 514)b,c,d 515)a 516)a,b,d 517)a 518)b 519)a 520)c 521)d 522)c 523)a
524) d 525)a,b,d,e 526) a 527) a,c 528) d 529) a 530) c

531. Recurrent epistaxis in a 15 year old female the most common cause is - *(Jipmer 90, NEET/DNB Pattern)*
a) Juvenile nasopharyngeal fibroma
b) Rhinosporiodiosis
c) Foreign body'
d) Hematological disorder

532. Commonest cause of epistaxis in children is -
a) Trauma *(UP 07, NEET/DNB Pattern)*
b) Foreign body
c) Nasal diphtheria
d) Enlarged adenosis

533. Most common cause for nose bleeding *(AIIMS95)*
a) Trauma to little's area
b) A.V. aneurysm
c) Postero superior part of nasal septum
d) Hiatus - semilunaris

534. TMost common sit^f,npse bleed machfld^gc^
a) Woodruff area *(NEET/DNB Pattern)*
b) Brown area
c) Little's area
d) None

535. MC cause of epistaxis in 3 years old child - *(PGI98)*
a) Nasal polyp b) Foreign body
c) Upper respiratory catarrh d) Atrophic rhinitis

536. In a 5 year old child, most common cause of unilateral epistaxis is - *(PGI97)*
a) Foreign body b) Polyp
c) Atrophic rhinitis d) Magoot's

537. Most common cause of bleeding in children-
a) Nose picking *(NEET/DNB Pattern)*
b) Hypertension
c) Tumor
d) None

538. Epistaxis in elderly patient is commonest in - *(PGI 90)*
a) Nasapharyngeal carcinoma b) Foreign body
c) Bleeding disorder d) Hypertension

539. Epistaxis in elderly person is common in- *(Kerala 04)*
a) Foreign body b) Allergic rhinitis
c) Hypertension d) Nasopharyngeal carcinoma

540. Posterior epistaxis is commonly seen in -
a) Children with ethmoidal polyps *(NEET/DNB*
b) Foreign bodies of the nose *Pattern)*
c) Hypertension
d) Nose,picking

541. Recurrent epistaxis is not a common feature of- *(AI96)*
a) DNS b) Atrophic rhinitis
c) Nasal polypi d) Maxillary carcinoma

542. If posterior epistaxis cannot be controlled, which artery is ligated - *(Kolkata 2K)*
a) Posterior ethmoidal artery
b) Maxillary artery
c) Sphenopalatine artery
d) External carotid artery

543. In case of uncontrolled epistaxis, ligation of internal maxillary artery is to be done in the - *(Kolkata 01)*
a) Maxillary antrum b) Pterygopalatine fossa
c) At the neck d) Medial wall of orbit

544. Source of epistaxis after ligation of external carotid artery is - *(AIIMS93)*
a) Maxillary artery b) Greater palatine artery
c) Superior labial artery d) Ethmoidal artery

545. Treatment of choice in recurrent epistaxis in a patient with hereditary hemotelangiectasis -
a) Anterior ethmoidal artery ligation *(Kolkata 05)*
b) Septal dermatoplasty
c) External carotid artery ligation
d) Internal carotid artery ligation

546. Which of the following organisms is known to cause Atrophic Rhinitis - *(MP07)*
a) Klebsiella pneumoniae
b) Klebsiella Ozaena
c) Streptococcus pneumoniae
d) Streptococcus foetidis

547. All are true about ozaena except - *(UP 03)*
a) Common in female
b) It is usually unilateral
c) Nasal cavity is filled with greenish crusts
d) Atrophic pharyngitis

548. Most comon cause of obstruction in atrophic rhinitis is- *(PGI97, 2K)*
a) Excessive formation of crust
b) Polyp
c) Synechiae
d) Hypertrophy of turbinate

549. Young's operation is done for - *(Jipmer 02, MP03 Jharkhand 06, MAHE05)*
a) Allergic rhinitis
b) Atropic rhinitis
c) Vasomotor rhinitis
d) Idiopathic rhinitis

550. Regarding atrophic rhinitis which is incorrent -
a) Common in females *(AP 98)*
b) Seen at 50-60 years of life
c) Due to chronic nasal drops
d) Anosmia

551. All are true regarding atrophic rhinitis except -
a) More common in males *(AP 04)*
b) Crusts are seen
c) Anosmia is notice
d) Young's operation is useful

552.; Ozaena is also^knowi^ as"- *0E£T/D^ Pattern)*
NIL
a) Hypertrophic rhinitis b) Vasomotor rninitis
c) Allergic rhinitis d) Atrophic rhinitis

553. Early mediators of allergic rhinitis are - *(PGI 03)*
a) Leukotriene b)IL-4
c) ID5 d)Bradykinin
e) PAF

554. In Allergic rhinitis nasal mucosa is - *(MP 03)*
a) Pale & swollen b) Pink & swollen
c) Atrophied d) Bluish & atrophied

555. Allergic rhinitis treatment: include all except - *(NEET/DNB Pattern)*
a) Antibiotics
b) Avoiding allergen
c) Corticosteroids
d) Surgery

531) d 532) a 533)a 534)c 535)c 536)a 537)a 538)d 539)c 540)c 541)c 542)c 543)b 544)d
545)b 546)a 547)b 548)a 549)b 550)c 551)a 552)d 553)a,b 554)a 555)a

556. All of the following surgical procedure are used for allergic Rhinitis, except - *(AIIMS 04)*
a) Radiofrequency ablation of the inferior turbinate
b) Laser ablation of the inferior turbinate
c) Submucosal placement of silastic in inferior turbinate
d) Inferior turbinectomy

557. 5yr .old child with recurrent cold cai use is -
:*§ aJIAiieridids *hV* *(NEET/DNB Pattern)*
b) Angiofibroma
c) Carcinoma
d) None

558. "Mulberry" mucosa is seen in - ^*(belKits)*
a) Irritative rhinitis
b) Chronic atrophic arhinitis
c) Hypertrophic rhinitis
d) All of the above

PARANASAL SINUSES

559. First paranasal sinus to develop at birth *is-(AIIMS 98,*
a) Maxillary b) Ethmoidal *NEET/DNB Pattern)*
c) Frontal d) Sphenoidal

560. Onodi cells and Haller cells are seen in relation to following respectively - *(AI11, AIIMS Nov 09)*
a) Optic nerve and floor of the orbit
b) Optic nerve and internal carotid artery
c) Optic nerve and nasolacrimal duct
d) Orbital floor and nasolacrimal duct

561. Frontal sinuses may not be developed normally maximum up to what years of age ? *(MH 02)*
a) 2 b)4
c) 8 d) 12

562. Sinus not present at birth is - *(Maharashtra 02)*
a) Ethmoid b) Maxillary
c) Sphenoid d) None

563. Sinus not present at birth is-*(UPSC 86,J1PMER 86)*
a) Ethmoid b)Sphenoid
c) Maxillary d) Frontal

564. True about sphenoid sinus - *(PGI May 10)*
a) Lined by stratified squamous epithelium
b) Duct open in middle meatus
c) Open in sphenoethmoid recess
d) Present at birth
e) Present in greater wing of sphenoid

565. Pain sensations from the ethmoidal sinus are carried by- *(AI 11)*
a) Frontal Nerveb) Lacrimal Nerve
c) Nasocilliary Nerve d) Infra orbital Nerve

566>. Antrum of Highmore is - *(NEET/DNB Pattern)*
a) Maxillary b) Ethmoid
c) Sphenoid d) Frontal

567. Common organisms causing sinustitis - *(PGI01)*
a) Pseudomonas
b) Moraxella catarrhalis
c) Streptococcus pnenumoniae
d) Staph epidermidis
e) H. Influenzae

568. Which among the following sinuses is most commonly affected in a child - *(UPSC 07, PGI 99)*
a) Sphenoid b) Frontal
c) Ethmoid d) Maxillary

569. Sinusitis is least involved in - *(UP 08, NEET/DNB*
a) Maxillary b) Ethmoid *Pattern)*
c) Frontal d) Sphenoid

570. Symptoms of sinusitis are all except - *(MP 2000)*
a) Blood stained rhinorrhea b) Facial edema
c) Nasal blockage d) Diplopia

571. Pathognomic features of Maxillary sinusitis is -
a) Mucopus in the middle meatus *(UP07)*
b) Inferior turbinate hypertrophy
c) Purulent nasal discharge
d) Atrophic sinusitis

572. Periodicity is a characteristic feature in which sinus infection - *(COMED06)*
a) Maxillary sinus infection
b) Frontal sinus infection
c) Sphenoid sinus infection
d) Ethmoid sinus infection

573. Sphenoid sinusitis pain is referred most commonly to- *(Manipal08)*
a) Occiput b) Vertex
c) Frontal d) Temporal region

574. Most definitive diagnosis of sinusitis is -*(AIIMS 92)*
a) X- ray PNS b) Proof puncture
c) Sinuscopy d) Transillumination test

575. Definitive diagnosis of sinusitis is by- *(Manipal 01)*
a) Transilluminationb) Endoscopy
c) X - ray d) Proof puncture

576. A 35 year old male presented with nasal discharge, facial pain and fever which subsided with a course of antibiotics and antihistaminics, which recurred again after 2 months. O/E mucopurulent discharge from middle meatus, and inflammed sinus openings, investigation of choice - *(AIIMS Nov 07)*
a) X-ray PNS b)NCCTPNS
c) MRI of the face d) Inferior meatal puncture

577. Sinusitis most tonimdn *comp)ication-(NEET/DNB*
a) Orbital cellulitis b) Meningitis *Pattern)*
c) Brain abscess d) Septicemia

578. Complications of acute sinusitis - *(PGI 03)*
a) Orbital cellulitis b) Pott's puffy tumour
c) Conjunctival chemosis d) Subdural abscess

579. A two year old child with a long history of purulent nasal discharge & fever now presents with conjunctival congestion and edema. His fever is 102°/103°F and WBC count 12000. The culture of eye discharge was negative. X-ray show opacification of ethmoid sinus. Which of the following should be the next step in evaluating this patient - *(AI 10)*
a) CT scan b) Urine culture
c) Blood culture d) Repeat culture of eye discharge

580. Mucocele is commonly seen is sinus - *(DNB07,*
a) Frontal b) Maxillary *MH 11)*
c) Ethmoid d) Sphenoid

556) c 557) a 558) c 559) a 560) a 561)d 562) c 563) b,d 564) c 565) c 566) a 567)b,c,e 568) c 569) d

581. A patient with sinus infection develops chemosis, B/L proptosis and fever, the diagnosis goes in favour of- *(PGI99)*
a) Lateral sinus thrombosis
b) Frontal lobe abscess
c) Cavernous sinus thrombosis
d) Meningtitis.....

582. Unilateral proptosis & bilateral 6th nerve palsy is seen in - *(NEET/DNB Pattern)*
a) Cavernous sinus thrombosis
b) Meningitis
c) Hydrocephalus
d) None

583. Complication of sinus disease include - *(AIIMS 93)*
a) Retrobulbar neuritis
b) Orbital cellulitis
c) Cavernous sinus thrombosis
d) Superior orbital fissure syndrome
e) All of the above

584. Sinusitis can be a/w - *(PGI June 08)*
a) Menigitis b) Brain abscess
c) Pott's puffy tumour d) Proptosis
e) Cavernous sinus thrombosis

585. Which of the following is the most common etiological agent in paranasal sinus mycoses? *(AIIMS May 06)*
a) Aspergillus sp b) Histoplasma
c) Conidiobolus coronatus d) Candida albicans

586. Which among the following is true regarding fungal sinusitis - *(PGI 01)*
a) Surgery is required for treatment
b) Most common organism is Aspergillus niger
c) Amphoterecin B i.v is used for invasive fungal sinusitis
d) Hazy appearance on X-ray with radio-opaque
e) Seen only in immunodeficient conditions

587. All of the following are diagnostic criteria of allergic Fungal sinusitis (AFS) Except - *(AI 08)*
a) Areas of High attuenuation on CT scan
b) Orbital invasion
c) Allergic epsinophilic mucin
d) Type 1 Hypersensitivity

588. Allergic fungal sinusitis - *(NEET/DNB Pattern)*
a) Immunocompetent Pt b) Immunqcopromized Pt
c) Diabetic Pt d) None

589. Pneumatocele is seen in fracture of - *(ASSAM 95)*
a) Maxillary sinus b) Frontal sinus
c) Ethmoid sinus d) Sphenoid sinus

590. Most common site for osteoma is - *(MP 08)*
a) Maxillary sinus b) Ethmoid sinus
c) Frontal sinus d) Sphenoid sinus

591. Most common malignancy in maxillary antrum is -
a) Muco-epidermoid Carcinoma *(PGI 93)*
b) Adeno cystic Ca
c) Adenocarcinoma
d) Squamous cell Ca

592. Wood workers are associated sinus Ca-
a) Adeno Ca *(PGI Dec.06, NEET/DNB Pattern)*
b) Sq. cell Ca
c) Anaplastic Ca
d) Melanoma

593. Adenocarcinoma of ethmoid sinus occur's commonly in- *(PGIDec. 06)*
a) Fireworkers b) Chimney workers
b) Watch makers d) Wood workers

594. CA maxillary sinus stage III (T3 No Mo), treatment of choice is / Ca maxillary sinus is treated by -
a) Radiotherapy *(IN 06, AP 05, AIIMS 97)*
b) Surgery + Radiotherapy
c) Chemotherapy
d) Chemotherapy + Surgery

595. First lymph node involved in maxillary carcinoma
a) Submental b) Submandibular *(RJ2K)*
c) Clavicular d) Jugular

596. Squamous cell carcinoma of maxilla T3N0M0 staging. Treatment is - *(AIIMS 01)*
a) Radiotherapy
b) Maxillectomy
c) Radiotherapy and maxillectomy
d) Maxillectomy and chemotherapy

597. Common about tumors of PNS and Nasal Ca-
a) Sq cell Ca is the M.C. type *(PGIDec. 06)*
b) Adeno Ca is the M.C type
c) Melanoma can occur

MISCELLANEOUS (NOSE & PNS)

598. The most common site of leak in CSF rhinorrhoea is- *(AI 05, NEET/DNB Pattern)*
a) Sphenoid sinus b) Frontal sinus
c) Cribriform plate d) Tegmen typmani

599. Most common site for CSF rhinorrhoea is- *(AIIMS May 10)*
a) Ethmoidal sinuses b) Maxillary sinuses
c) Frontal sinus d) Tegmen tympani

600. Common site for CSF Rhinorrhoea is - *(AI07)*
a) Ethmoidal sinus b) Frontal sinus
c) Petrous d) Cribriform plate

601. CSF rhinorrhoea is diagnosed by - *(AI 0 7)*
a) Beta 2 microglobulinb) Beta 2 transferrin
c) Thyroglobulin d) Transthyretin

602. All of the following statements about CSF leak are true, except - *(AI 10)*
a) Most common site of CSF leak is fovea ethmoidalis
b) Beta 2 transferrin estimation is highly specific for diagnosis
c) Fluorescin Dye can be used itrathecally for diagnosis of site of leak
d) MRI (Godolinium enhanced) T1 images are best for diagnosis of site of leak

581)c 582)a 583)e 584)All 585)a 586)a,c,d 587)b 588)a 589)b 590)c 591)d 592)a 593)d 594)b 595) b 596) c 597) a,c 598) c 599) a 600) d>a 601) b 602) d

603. Immediate treatment of CSF Rhinorrhoea requires-
a) Antibiotics and observation *(AIIMS 97)*
b) Plugging with paraffin guage
c) Blowing of nose
d) Craniotomy

604. CSF rhinorrhea 'immediate" management is -
a) Plugging with petrolleum jelly plugs
b) Wait & watch for 7 days + antibiotics
c) Blow the nose repeatedly *(AIIMS Nov 10)*
d) Surgery

605. *True* about CSF rhinorrhea is - *(PGI02)*
a) Occurs due to break in cribriform plate
b) Contains glucose
c) Requires immediate surgery
d) Contains less protein

606. CSF Rhinorrhea occurs due to fracture of -
a) Roof of orbit *(AIIMS 97)*
b) Cribriform plate of ethmoidal bone
c) Frontal sinus
d) Sphenoid bone

607. Oblique and horizontal fracture of nasal septum is called as - *(PGI 97, 88)*
a) Jaijavay and chevallete fracture
b) Arnold fracture
c) Citteli fracture
d) Thudicum fracture

608. InJarjaway fracture of nasal bone, the fracture hue i" is- *(M&hawshtra 07,-NEET/DNBPattern)*
a) Oblique b) Comminuted
c) Vertical d) Horizontal

609. In Chevallet fracture of nasal bone, the mechanism of trauma is - *(MH 08)*
a) Blow from side b) Blow from below
c) Blow directly from front d) Any of the above

610. Ideal time of correction fracture of nasal bone is - *(Kolkota 2K)*
a) Immediately b) After few days
c) After 2 weeks d) After 3-4 weeks

611. A female who underwent laproscopic appendicectomy for acute appendicitis, on post op. day 2 bumped her nose on to a table. She developed difficulty in breathing and examination showed a swelling in the anterior part of the nasal septum. Next line of management is - *(AIIMS Nov 07)*
a) Incision and drainage
b) Oral antibiotics for 7-10 days
c) Observation
d) IV antibiotics

612. Craniofacial dissociation is seen \u-{*SGPGI08, TN*
a) Lefort 1 fracture b)Lefort 2 fracture *06)*
c) Lefort 3 fracture d) Tripod fracture

613. Lefort classification involves which bone fracture? *(NEET/DNB Pattern)*
a) Maxilla b) Mandible
c) Zygomatic arch d) Nasal:bone

614. Tripoid fracture is seen in- *(MP08, NEET/DNB*
a) Mandible b) Maxilla *Pattern)*
c) Nasal bone d) Zygoma

615. Clinical feature(s) of fracture Zygoma is/are -
a) Cheek swelling b) Trismus *(PGI June 09)*
c) Nose-bleeding d) Infraorbital anesthesia
e) Diplopia

616. Fracture Zygoma shows all the features except -
a) Diplopia b) CSF rhinorrhoea
c) Epistaxis d) Trismus *(AI97)*

617. Tear drop sign is seen in - *(SGPGI05)*
a) # of floor of orbit b) # of lateral wall of nose
c) Le forts # d) # Zygomatic arch

618. Blow out fracture refers to *r(NEET/DNB Pattern)*
a) Fracture of orbit
b) Fracture of nasal septum
c) Fracture base of skull
d) Fracture of mandible

619. A patient presents with enophthalmos after a trauma to face by blunt object. There is no fever or extraocular muscle palsy. Diagnosis is -
a) Fracture maxilla *(NEET/DNB Pattern)*
b) Fracture zygoma
c) Blowout fracture
d) Fracture ethmoid

620. CSF rhinorrhea is seen in - *(PGI June 03)*
a) Lefort's # type I b) Nasal #
c) Nasoethmoid # d) Frontozygomatic #

621. True about inverted papilloma - *(PGI Dec 08)*
a) Arises mainly from nasal septum
b) Common in children
c) Risk of malignancy
d) Post operative radiotherapy useful
e) Also known as Schneiderian papilloma

622. True about inverted papilloma - *(PGI Nov 09)*
a) Predispose to child
b) May present with Epistaxix
c) Recurrance rare
d) Absolutely benign in nature
e) Arise from lateral wall of nose

623. All of the following are true about inverted papilloma except- *(Delhi 08)*
a) Most common in females
b) Arises from lateral wall of nose
c) Can causes epistaxis
d) Recurrent in nature even after removal

624. Inverted papilloma is characterized by all except -
a) Also called as Schneiderian papilloma *(MP 06)*
b) Seen more often in females
c) Presents with epistaxis and nasal obstruction
d) Originates from lateral wall of nose

625. Inverted papiloma- *(PGI 02)*
a) Is common in children b) Arises from lateral wall
c) Always benign d) Can be premalignant
e) Causes obstruction

603)a 604)b 605)a,b,d 606)b 607)a 608)d 609)a,b 610)b 611)a 612)c 613)a 614)d 615)A11 616)b

626. TVue about nasal glioma - *(PGI June 09)*
a) Soft & compressible
b) 60% Extranasal
c) CT provides the bony detail
d) MRI dufferentiate between glioma & nasal encepholocele
e) Present as midline swelling with obstruction & leak at birth

627. True about nasal T-cell lymphoma - *(PGI June 09)*
a) Presents with nasal obstruction & epistaxis
b) Association with EBV
c) Cell express T-cell marker
d) Wide local excision is treatment of choice
e) Locally invasive

628. Tbmor arising from olfactory nasal mucosa is-*(AI12)*
a) Nasal Glioma
b) Adenoid cystic carcinoma
c) Nasopharyngeal carcinoma
d) Esthesioneuroblastoma

629. Prolonged and repeated use of nasal decongestants leads to- *(CUPGEE 95)*
a) Rhinitis medicamentosa b) Bronchitis
c) Both d) None

630. Rhinitis medimentosa is due *to-(NEET/DNB Pattern)*
a) Nasal decongesants b) Steroids
c) Antihistaminics? d) Surgery

631. About nasal syphilis true - *(PGI 02)*
a) Perforation occurs in septum
b) Saddle nose deformity may occur
c) In new bom, it presents as snuffles
d) Atrophic rhinitis is a complication
e) Secondary syphilis is the common association

632. Orbital cellulitis is a complication of - *(MP 09)*
a) Parasinusitis
b) Faciomaxillary trauma
c) Endoscopic sinus surgery
d) All of these

633. Ciliary movement rate of nasal mucosa is - *(UP 01)*
a) l-2mm/min b) 2-5 mm/min
c) 5-10mm/min d) 10-12 mm/min

634. During inspiration the main current of airflow in a normal nasal cavity is through - *(AI 0 7)*
a) Middle part of die cavity in middle meatus in a parabolic curve
b) Lower part of the cavity in the inferior meatus in a parabolic curve
c) Superior part of the cavity in the superior meatus
d) Through olfactory area

635. Nasal cycle is the cyclical alternate nasal blockage occurring - *(DELHI PG Mar. 09)*
a) Every 6-12 hours b) 2*/2-4 hours
c) Every 6-8 hours d) Every 12-24 hours

636. Parosmia is - *(MAHE 01)*
a) Perversion of smell sensation
b) Absolute loss of smell sensation
c) Decreased smell sensation
d) Perception of bad smell

637. - Which of the follotvihg is premalignant -
a) Atrophic rhinitis *& (NEET/DNB Pattern)*
b) Rhinitis sicca
c) Rhinoscleroma
d) Rhinitis caseosa

ANATOMY OF PHARYNX AND ADENOIDS

638. Which of the following structures is seen in oropharynx? *(TN 06)*
a) Pharyngotympanic tube b) Fossa of Rosenmuller
c) Palatine tonsil d) Piriform fossa

639. Which of the following part is NOT included in hypopharynx is - *(UP 01)*
a) Pyriform sinus
b) Post cricoid region
c) Antrior pharyngeal wall
d) Posterior pharyngeal wall

640. Which is not a part of hypopharynx- *(SRMC 02)*
a) Posterior cricoid region
b) Ary epiglottic folds
c) Posterior pharyngeal wall
d) Pyriform fossa

641. Killian's dehisence is seen in - *(MH 2000)*
a) Oropharynx b)Nosophrynx
c) Cricopharynx d) Vocal cords

642. Afi^oj^£^Mso called? * *(NEET/DNB Pattern)*
a) Nasopharyngeal tonsils b) Palatine tonsils
c) Pharyngeal tonsils d) Lingual tonsils

643. Regarding adenoids true is/are - *(PGI 02)*
a) There is failure to thrive
b) Mouth breathing is seen
c) CT scan should be done to assess size
d) High-arched palate is present
e) Immediate surgery even for minor symptoms

644. Adenoids hypertrophy treatment is- *(NEET/DNB Pattern)*
a) Nasal decohgests
b) Antibiotics
c) β-blockers'
d) None

TONSILS

645. The palatine tonsil reveives its arterial supply from all of the follwing except - *(AIIMS May 05)*
a) Facial b) Ascending palatine
c) Sphenopalatine d) Dorsal lingual

646. Arterial supply of tonsil is mainly - *(PGI 9 7)*
a) Tonsillar branch of facial artery
b) Maxillary artery
c) Middle meningeal artery
d) Ext. carotid artery

647. Ascending pharyngeal artery is a branch of-*(RJ06)*
a) Maxillary b) Internal carotid
c) External carotid d)None

626) b,c,d 627) a,b,c,d 628) d 629) a 630) a 631)e 632) a,b 633) c 634) a 635) b 636) a 637) None
638) c 639) c 640) b 641) c 642) a 643)a,b,d 644) a 645) c 646) a 647) c

648. All of the following vessels supply blood tothe tonsils EXCEPT- *(NEET/DNW Pattern),*
a) Ascending pharyngeal artery
b) Tonsillar branch of facial artery
c) Superior labial artery
d) Dorsal lingual artery

649. Referred pain from tonsils to the middle ear is along the- *(Kolkota 01)*
a) Vagus nerve
b) Glossopharyngeal nerve
c) Auriculotemporal nerve
d) Greater auricular nerve

650. Tonsils reach their maximum size by - *(PGI93)*
a) 1 years b) 3 years
c) 5 years d) 12 years

651. Most common cause of acute tonsilitis - *(AI98)*
a) Streptococcus pneumoniae
b) H. Influenza
c) p- hemolytic streptococci
d) Staphylococcus aureus

652. Which of the following is the most common cause of tonsillitis in children - *(Manipal 06)*
a) Follicular b) Atrophic
c) Hypertrophic d) Parenchymatous

653. All of the following cause a grey - white membrane in the throat except - *(SGPGI05, AI 97)*
a) Streptococcal tonsillitis
b) Diphtheria
c) Ludwig's angina
d) Adenovirus pharyngitis

654. Membrane in throat is caused by all except- *(AI95)*
a) Steptococcus b) Staphylococcus
c) Pneumonia d)Borreliavincenti

655. All of the following cause a gray - white membrane on the tonsils, except - *(AIIMS May 04)*
a) Infectious mononucleosis b) Ludwig's angina
c) Streptococcal tonsillitis d) Diphtheria

656. All can cause white membrane over tonsils, except- *(AIIMS 93)*
a) Streptococcus b) Candida
c) Diphtheria d)Borreliavincenti

657. White patch in the throat may be due to- *(DPGFeb. 09)*
a) Streptococcus b) Actinomycetes
c) Sporotrichosis d) All of these

HEAD & NECK SPACE INFECTIONS

658. In which of the following locations there is collection of pus in the quinsy - *(AIIMS 04)*
a) Peritonsillar space b) Parapharyngeal space
c) Retropnaryngeal space d) Within the tonsil

659. All of the following is true about peritonsillar abscess except? *(AP 06, NEET/DNB Pattern)*
a) Bulge in soft palate
b) Does not involve floor of mouth
c) Abscess is collected lateral to the superior constrictor
d) Trismus is commonly associated

660. True about quinsy is - *(PGI 02)*
a) Penicillin is used in treatment
b) Abscess is located in capsule
c) Commonly occurs bilaterally
d) Immediate tonsillectomy should be done
e) Patient presents with toxic features and drooling

661. 7 years old child with peritonsillar abscess presents with trismus, the best treatment is - *(AIIMS 96)*
a) Immediate abscess drain orally
b) Drainage externally
c) Systemic antibiotics up to 48 hours then drainage
d) Tracheostomy

662. The ideal time for operation of quinsy after an attacks of acute tonsilitis is - *(PGI 98)*
a) 2 weeks b) 4 weeks
c) 6 weeks d) 12 weeks

663. Treatment for peritonsillar abscess is - *(AP 05)*
a) Tonsillectomy b) Incision and drainage
c) Antibiotics alone d) I & D + antibiotics

664. Swelling between tonsillar area of superior constrictor muscle is known as - *(MH 2000)*
a) Quinsy
b) Dental abscess
c) Parapharyngeal abscess
d) Retropharyngeal abscess

665. Quinsy is synonymous with - *(AI 99)*
a) Parapharyngeal abscess
b) Retropharangeal abscess
c) Peritonsillar abscess
d) Paratonsillar abscess

666. Parapharygeal space is also known as- *(PGI June 05)*
a) Retropharyngeal space
b) Pyriform sinus
c) Lateral pharyngeal space
d) Pterygomaxillary space

667. A male Shyam, age 30 years presented with Trismus, fever, swelling pushing the tonsils medially and spreading laterally posterior to the middle sternocleidomastoid. He gives a h/o excision of 3rd molar few days back for dental caries. The diagnosis is- *(UP 08, AIIMS 01)*
a) Retropharyngeal abscess
b) Ludwigs angina
c) Submental abscess
d) Parapharyngeal abscess

668. Middle age diabetic with tooth extraction with ipsilateral swelling over middle one-third of sternocleidomastoid & displacement of tonsils towards contralateral - *(NEET/DNB Pattern)*
a) Parapharyngeal abscess
b) Retropharyngeal abscess
c) Ludwigs angina
d) None

wm

648) c 649) b 650) d 651)c 652) d 653) c 654) c 655) b 656) None 657) a 658) a 659) c 660) a,e 661) c
662) c 663) d 664) a 665) c 666) c,d 667) d 668) a

669. The medial bulging of pharynx is seen in - *(AI91)*
a) Pharyngomaxillary abscess
b) Retropharyngeal abscess
c) Peritonsillar abscess
d) Paratonsillar abscess

670. Parapharyngeal abscess-all true except -
a) Midline swelling
c)Trismus
d) Torticollis

671. Gillette's space is - *(NEET/DNB Pattern)*
a) Velopharyngeal space b) Peritonsillar space
c) Parapharyngeal space d) None

672. True statement about Chronic retropharngeal abscess- *(PG103)*
a) Associated with tuberculosis of spine
b) Causes psoas spasm
c) Suppuration of Rouvier lymph node
d) Treatment by surgery

673. Commonest causeof chronicretropharyngeal abscess- *(Kolkata 01)*
a) Suppuration of retropharyngeal lymph node
b) Caries of cervical spine
c) Infective foreign body
d) Caries teeth

674. Which of the foDowing is not true about acute retropharyngeal 'abscess - *(NEET/DNB• Pattern)*
a) Dysphagia ,
b) Swelling on posterolateral wall of pharynx
c) Torticollis
d) Caries of cervical spine is usually a common cause

675. All of the following are true about retropharyngeal abscess except - *(ARMS Nov 10)*
a) Confined to one side of the midline
b) Can be palpable per orally by pressing the finger on posterior pharyngeal wall
c) Lies behind the prevertebral fascia
d) Presents with dysphagia & difficulty in breathing

676. Nodes of Rouvier - *(NKET/DNB Pattern)*
a) Retropharyngeal node b) Parapharyngeal node
c) Adenoids d) None

677. True about Ludwig's angina- *(PGI07)*
a) Involves both submandibular and sublingual spaces
b) Most common cause is dental infection
c) Bilateral
d) Spreads by lymphatics

678. Ludwig's angina is characterized by all the following except- *(AI94)*
a) Cellulitis of the floor of the mouth
b) Caused by anaerobic organisms
c) Aphthous ulcers in the pharynx
d) Infection spreads to retropharyngeal space

679. True about ludwig's angina - *(PGI June 03)*
a) Rapidly spreading cellulitis of neck
b) H. Influenzae in most common organism
c) Edema of floor of mouth
d) Sub- lingual and sub- maxillary spaces are involved
e) When operated *i* GA chances of aspiration, shock can develop

680. Infection of Submandibular space is seen in -
a) Ludwig's angina *(Manipal OS,*
b) Vincent's angina *NEET/DNB Pattern)*
Tffikmetal Vangiha Hf
dJTJmtable angina

TUMOURS OF PHARYNX

681. Site of origin of angiofibroma - *(Jipmer 04, AI 00)*
a) Roof of nasopharyx
b) Anterior wall of sphenoid bone
c) Posterior part of nasal cavity close to the sphenopalatine ganglion
d) Later wall of nasal canaiy

682. Angiofibroma bleeds excessively because - *(DNB 01)*
a) It lacks a capsule
b) Vessels lack a contractile component
c) It has multiple sites of origin
d) All of the above

683. In angiofibroma of nasopharynx all are correct Except- *(Kolkata 00)*
a) Common in female
b) Most common presentation is epistaxis
c) Arises from roof of nasopharynx
d) In late cases frog face deformity occurs

684. Frog face deformity of nose caused by- *(NEET/DNB Pattern)*
a) Rhinoscleroma b) Angiofibroma
c) Antral polyp d) Ethmoidal polyp

685. Most appropriate investigation for angiofibroma is -
a) Angiography b) CT scan *(ARMS 97)*
c)MRIscan d) Plain X-ray

686. Antral sign is seen in - *(NEET/DNB Pattern)*
a) Juvenile angiofibroma b) Otosclerosis
c) CSOM d) Sinusitis

687. True about nasopharyngeal angiofibroma-
a) Commonly seen in girls *(PGI Dec 03)*
b) Hormonal etiology
c) Surgery is treatment of choice
d) Radiotherapy can be given
e) Recurrence is common

688. Radiotherapy is used in treatment of angiofibroma when it involves - *(MP 04)*
a) Cheek b) Orbit
c) Middle cranial fossa d) Cavernous sinus

689. An 18- year old boy presented with repeated epistaxis and there was a mass arising from the lateral wall of his nose extending into the nasopharynx. It was decided to operate him. All management except-
a) Requires adequate amount of blood to be transfused
b) A lateral rhinotomy approach may be used
c) Transpalatal approach used *(ARMS 02)*
d) Transmaxillary approach

669) a 670) a 671) a 672) a,d 673) b 674) d 675) c 676) a 677)a,b,c 678) c 679)c,d,e 680) a 681)c
682) b 683) a,c 684) b 685) b 686) a 687)b,c,d,e 688) c 689) None

690. Treatment of choice for angiofibroma -
a) Surgery *(RJ 02,NEET/DNB Pattern)*
b) Radiotherapy
c) Both
d) Chemotherapy

691. Which of the following is not true for juvenile angiofibroma - *(NEETVDNB Pattern)*
a) Biopsy for diagnosis b) Benign tumor
c) Surgical excision d) Second decade

692. Stage 2B nasopharyngeal angiofibroma best treated with - *(NEE18084ferk)*
a) Surgery b) Chemotherapy
c) Radiotherapy d) None

693. Chandu a 15 year aged boy presents with unilateral nasal blockade mass in the cheek and epistaxis; likely dianosis is - *(AI01)*
a) Nasopharyngeal ca b) Angiofibroma
c) Inverted papilloma d) None of the above

694. Clinical features of nasopharyngeal angiogibroma are- *(PGI02)*
a) 3rd to 4th decades
b) Adolescent male
c) Epistaxis and nasal obstruction are the cardinal symptom
d) Radiotherapy is the Rx of choice
e) Arises from posterior nasal cavity

695. A14 years boy presented with repeated epistaxis, and a swelling in cheek. Which of these statements may be correct - *(PGI 02)*
a) Diagnosis is nasopharyngeal angiofibroma
b) Contrast CT scan should be done to see the extent
c) High propensity to spread via lymphatics
d) Arises from roof of nose
e) Surgery is therapy of choice

696. True about juvenile nasopharyngeal angiofibroma -
a) Surgery is treatment of choice *(PGI June 06)*
b) It is malignant tumour
c) T Incidence in females
d) Hormones not used in Rx
e) Miller's sign positive

697. A10 year old boy presents with nasal obstruction and intermittent profuse epistaxis. He has a firm pinkish mass in the nasopharynx. All of the following investigations are done in this case except-(T/PiSC *98)*
a) X - ray base of skull b) Carotid angiography
c) CT scan d) Biopsy

698. A 9 year boy presents with nasal obstruction, proptosis, recurrent epistaxis from 3-4 years. Management includes - *(PGI Nov 10)*
a) Routine radiological investigations
b) Embolisation alone should be done
c) Surgery is TOC
d) Embolisation followed by surgery
e) Conservative management is sufficient

699. A12 years child presents with B/L nasal pink masses. Most important investigation prior to undertaking surgery is - *(AI 97)*
a) Ultrasound b) FNAC
c) Biopsy d) Contrast C.T. Scan

700. A 10 years child has unilateral nasal obstruction epistaxis, swelling over cheek, the diagnosis is -
a) Nasal polyp *(AIIMS 99)*
b) Nasopharyngeal carcinoma
c) Angiofibroma
d) Foreign bodies

701. A13 year old boy presents with swelling in the cheek with recurrent epistaxis. Most likely cause is -
a) Angiofibroma *(UP 08, NEET/DNB*
b) Ca Nasopharynx *Pattern)*
c) Rhabdomyosarcoma
¥009 dVNbheff - / 7 ^ .tiiN/fA

702. Nasopharyngeal Ca is caused by - *(AIIMS98, 91,*
a) EBV b) Papilloma virus *MAHE 05)*
c) Parvo virus d) Adeno virus

703. Nasopharyngeal Ca involve - *PGI 02)*
a) Nasal cavity b) orophaynx
c) Oral cavity d) Tympanic cavity
e) Orbit

704. Most common site for nasopharyngeal carcinoma -
■ ■ª> Nasal septum ;; f). V. ■ / \ *(AIIMS 97, MP 02,*
b) Fossa of rosenmuller *NEET/DNB Pattern)*
c) Vault of nasopharynx
d) Antero-superior wall

705. Most common presentation m nasopharyngeal carcinoma is with - *(AI 97, NEET/DNB Pattern)*
a) Epistaxis b) Hoarseness of voice
c) Nasal stuffiness d) Cervical lymphadenopathy

706. Nasopharyngeal carcinoma presents as -
a) Epistaxis b) Mass in neck
c) Headache d)Vetigo

TO^rX A bet^bn with neck node and B type tympanogram -
a) Acoustic neuroma *(NEET/DNB Pattern)*
b) Nasopharyngeal CA
c) Angiofibroma
d) None

*1*08. Trotter's triad includes all of the following Except -**
a) Mandibular neuralgia b) Deafness *(AI 09)*
c) Palatal palsy d) Seizures

709. True about Trotters triad - *(PGI Dec 08)*
a) Conductive deafness b) Involvement of CN VI
c) Involvement of CNX d) Palatal paralysis
e) Associated with nasopharyngeal angiofibroma

716. Trotfer's triadffidiide&allexceptr^! ^·‹ v;
imqn $) Sensoiy fifeturbMee over distributionof 5th cranial
• nerve *(NEET/DNB Pattern)*
; ^ b) Drpibpia / * 1 1
-/v c) Conductive < leafness *.&jK'Ay>,7*
d) Palatal palsy *tmm*

711. Trotter's triad is seen in - *(NEET/DNB Pattern)*
'\N > a) Nasopharyngeal ca b) Maxillary sinusitis
c) Maxillary ca d) Angiofibroma >

690) a 691)a 692)a 693)b 694)b,c,e 695)a,b,e 696)a,e 697)d 698)a,d 699)d 700)c 701)a 702)a 703) a,d,e 704) b 705) d 706) a,b 707) b 708) d 709)a,c,d 710)b 711) a

712. TVeatment of choice for T2 carcinoma of nasopharynx is - *(Karnataka 05, AI 98)*
a) Surgery
b) Radiotherapy
c) Chemotherapy
d) Surgery + postoperative radiotherapy

713. TVeatment of nasopharyngeal carcinoma T1 -
a) Radiation therapy b) Surgery *(PGIDec. 05)*
c) Local resection d) Chemotherapy

714. Horners syndrome is caused by - *(PGI 97)*
a) Nasopharyngeal carcinoma metastasis
b) Facial bone injury
c) Maxillary sinusites
d) ethmoid polyp

715. Nasopharyngeal carcinoma causes deafness by -
a) Blocking the Eustachian tube *(PGIDec.07)*
b) Serous otitis media
c) Temporal bone metastasis
d) Radiation

716. A 70 year old male presents with hearing loss and tinnitus. On examination he was observed to have a conductive type of deafness and a dull tympanic membrane on the right side. Lymph nodal enlargement of 3x3 cm was noted in the posterior triangle of neck. Tympanogram revealed a type B wave. The most likely diagnosis is - *(AI 08)*
a) Middle tumor
b) Nasopharyngeal malignancy
c) Acoustic neuroma
d) T.B. of middle ear

717. 70 year old man with cervical lymphadenopathy.What can be the cause - . *(NEET/DNB Pattern)*
a) Nasopharyngeal carcinoma
b) Angiofibroma
c) Acoustic neuroma
d) Otosclerosis

718. All of the following statements about Nasopharyngeal carcinoma are true, except - *(AI 10)*
a) Bimodal age distribution
b) Nasopharyngectomy with radical Neck dissection is the treatment of choice
c) IgA antibody to EBV is observed
d) Squammous cell carcinoma is the most common histological subtype

719. Type of speech seen in nasopharyngeal carcinoma - *(Manipal 08)*
a) Rhinolalia clausa b) Rhinolalia aperta
c) Hot potato voice d) Hoarse voice

720. Commonest site of origin of nasopharyngeal carcinoma is- *(Jharkand 03)*
a) Lateral lingual b) Base of tongue
c) Tonsillar bed d)All

721. Nasopharyngeal Ca- *(PGI 02)*
a) Me nerve involve is vagus
b) Unilateral serous otitis media is seen
c) TOC radiotherapy
d) Metastasized to cervical LN
e) EBV is responsible

722. Which among the following is not true regarding nasopharyngeal carcinoma - *(PGI 01)*
a) Associated with EBV infection
b) Starts in the fossa of Rosenmuller
c) Radiotherapy is the treatment of choice
d) Adenocarcinoma is usual
e) If elderly patients present with unilateral otitis media it is highly suggestive

723. Nasopharyngeal Ca Causes deafness by -
a) Temporal bone metastasis *(PGI Nov. 05)*
b) Middle ear infiltration
c) Serous effusion
d) Radiation therapy

724. Trotters triad is seen in carcinoma of - *(Corned 08, NEET/DNB Pattern)*
a) Maxilla b) Larynx,
c) Nasopharynx d) Ethmoid sinus

ANATOMY OF LARYNX

725. All are paired cartilage of larynx except - *(RJ 01)*
a) Arytenoid b)Comiculate
c) Cuneiform d) Cricoid

726. Which of the following cartilage has signet ring shape- *(TN93)*
a) Thyroid b) Cricoid
c) Cuneiform d) Arytenoid

727. Laryngeal cartilage forming complete circle -
a) Arytenoid b) Cricoid *(TN 08)*
c) Thyroid d) Hyoid

728. Elastic cartilage is present in - *(NEET/DNB Pattern)*
a) Thyroid cartilage b) Epiglottis
c) Cricoid d) Aretynoid cartilage

729. Abductor of vocal cord is - *(AI 95, Kerala 95, NEET/DNB Pattern)*
a) Posterior cricoarytenoid
b) Lateral cricoarytenoid
c) Cricothyroid
d) None of the above

730. All are elevators of larynx except - *(AP 04)*
a) Thyrohyoid d)Diagastric
c) Stylohyoid d) Sternohyoid

731. Closure of glottis is by, all except - *(TN 08)*
a) Posterior cricoarytenoids
b) Lateral cricoarytenoids
c) Cricothyroid
d) Thyroarytenoids

732. Tensor of vocal cord is - *(NIMS 92, TN 06)*
a) Posterior cricoarytenoid
b) Lateral cricoarynoid
c) Cricothyroid
d) Thyro arytenoids-extemal part

733. Which of the following is the only intrinsic muscle of larynx that lies outside the laryngeal framework-
a) Cricothyroid *(NEET/DNB Pattern)*
b) Superior constrictor
c) Cricopharyngeus
d) Lateral cricothyroid

712)b 713)a 714)a 715)a,b 716)b 717)a 718)b 719)a 720)None 721)b,c,d,e 722)d 723)c 724)c
725) d 726) b 727) b 728) b>d 729) a 730) d 731) a 732) c 733) a

734. All of the following are Extrinsic Laryngeal Membranes/Ligaments, except - *(AI10)*
a) Hyoepiglottic b) Cricothyroid
c) Cricotracheal d) Thyrohyoid

735. The water cane in the larynx (saccules) are present in- *(UP 07)*
a) Paraglottic spaceb) Pyriform fossa
c) Reinke's spaced) Laryngeal ventricles

736. Supraglottis includes all of the following except -
a) Aryepiglottic fold *(PGI03)*
b) False cord
c) Lingual surface of epiglottis
d) Laryngeal surface of epiglottis

737. All of the following are paired except - *(PGINov 05)*
a) Inter arytenoids b) Comiculate
c) Vocal cords d) Cricothyroids
e) Thyroid

738. True about larynx in neonates - *(PGI 03)*
a) Epiglottis is large and omega shaped
b) Cricoid narrowest part
c) It extends C 4,5,6 vertebrae
d) Tongue is small comparison to oral cavity
e) Funnel shaped

739. Narrowest part of infantile Larynx is- *(Assam 95,*
a) Supraglottic b) Subglottic *RJ 05)*
c) Glottic d) None of the above

LARYNGEAL PARALYSIS

740. Which of the following muscle is not supplied by recurrent laryngeal nerve - *(PGI Dec 08)*
a) Post cricoarytenoid b) Thyroarytenoid
c) Lateral cricoarytenoid d) Cricothyroid
e) Inter arytenoids

741. Cricothyroid muscle is supplied by -*(Jharkhand 03)*
a) Superior laryngeal nerve
b) External laryngeal nerve
c) Vagus nerve
d) Glossophryngeal nerve

742. Position of vocal cord in cadaver is - *(DNB 2K)*
a) Median b) Paramedian
c) Intermediate d) Full abduction

743. Injury to superior laryngeal nerve causes -
a) Hoarseness *(DELHIPG Feb. 09)*
b) Paralysis of vocal cords
c) No effect
d) Loss of timbre of voice

744. Wagner and Grossman theory is related to -
a) Palatal palsy *(DELHIPG Mar. 09)*
b) Vocal cord palsy
c) Facial palsy
d) Hypoglossal palsy

745. In Bilateral abductor paralysis, which of following is seen - *(PGI Dec 08)*
a) Vocal cord in paramedian position
b) Voice is affected early
c) Stridor and dysponea occur
d) Vocal cord lateralisation is done
e) Hoarseness occur

746. A patient presented with stridor and dyspnea which he developed after an attack of upper respiratory tract infection. On examination he was found to have a 3 mm glottic opening. All of the following are used in the management except - *(AIIMS 02)*
a) Tracheostomy b) Arytenoidectomy
c) Teflon injection d)Cordectomy

747. In bilateral abductor palsy of vocal cords following is done except - *(PGI 98)*
a) Teflon paste b) Cordectomy
c) Nerve muscle implant d) Arytenoidectomy

748. A 10 year old boy developed hoarseness of voice following an attack of diphtheria. On examination, his Rt vocal cord was paralysed. The treatment of choice for paralysed vocal cord will be-
a) Gel foam injection of right vocal cord
b) Fat injection of right vocal cord
c) Thyroplasty-type-I *(AIIMS Nov 05)*
d) Wait for sponteneous recovery of vocal cord

749. Symptom of sudden onset bilateral vocal cord palsy- *(Kerala 96)*
a) Dyspnea & Stridor b) Hoarseness of voice
c) Asymptomatic d) Bovine cough
e) Difficulty in deglutation

750. The voice in a patient with Bilateral abductor paralysis of larynx is - *(AP 05)*
a) Pubophonia
b) Phonasthenia
c) Dysphonia plicae ventricularis
d) Normal or good voice

751. The voice is not affected in - *(UP 08)*
a) Unilateral abductor palsy
b) Unilateral adductor palsy
c) Partial abductor palsy
d) Total adductor palsy

752. Hoarseness with stridor seen in - *(TN 08)*
a) Unilateral abductor palsy
b) Bilateral abductor palsy
c) Both
d) None

753. Respiratory distress is seen *in-(NEET/pNB Pattern)*
a) Bilateral abductor palsy
b) Unilateral abductor palsy
c) JlLNPalsy Unilateral
d) None

754. In complete bilateral palsy of recurrent laryngeal nerves, there is - *(AIIMS Nov 03)*
a) Complete loss of speech with stridor and dyspnea
b) Complete loss of speech but not difficulty in breathing
c) Preservation of speech with severe stridor and dyspnea
d) Preservation of speech and not difficulty in breathing

734) b 735) d 736) None 737) a,e 738)a,b,e 739) b 740) d 741) a 742) c 743) d 744) b 745)a,c,d 746) c 747) a 748)d 749)a 750)d 751)a 752)d 753)a 754) c

755. Partial recurrent laryngeal nerve palys produces vocal cord in which position - *(UP 96)*
a) Cadeveric b) Abducted
c) Adducted d) Paramedian

756. Which one of the following lesions of vocal cord is dangerous to life - *(UPSC 01)*
a) Bilateral adductor paralysis
b) Bilateral abductor paralysis
c) Combined paralysis of left side superior and recurrent laryngeal nerve
d) Superior laryngeal nerve paralysis

757. U/L vocal cord palsy treatment includes -
a) Isshiki type I thyroplasty *(PG1 Nov 09)*
b) Isshiki type II thyroplasty
c) Woodmann operation
d) Laser arytenoidectomy
e) Teflon injection

758. The most common cause of vocal cord palsy is -
a) Total thyroidectomy *(UPSC 05)*
b) Bronchogenic carcinoma
c) Aneurysm aorta
d) Tuberucular lymph nodes

759. The most common cause of vocal cord palsy is -
a) Total thyroidectomy *(UPSC 05)*
b) Bronchogenic carcinoma
c) Aneurysm of aorta
d) Tubercular lymph nodes

760. Vocal cord palsy is not associated with - *(AP 03)*
a) Vertebral secondaries
b) Left atrial enlargement
c) Bronchogenic carcinoma
d) secondaries in mediastinum

761. Bilateral (B/l) recurrent laryngeal nerve palsy is/ are caused by - *(PGI00)*
a) Thyroid surgery
b) Thyroid malignancy
c) Aneurysm of arch of aorta
d) Viral infection
e) Mitral valve surgery

762. Cause of B/L recurrent laryngeal nerve palsy are- *(PGINov 09)*
a) Thyroid Ca b) Thyroid surgery
c) Bronchogenic cancer d) Aortic aneurysm

763. Bilateral recurrent laryngeal nerve palsy is seen in - *(Delhi08)*
a) Thyroidectomy
b) Carcinoma thyroid
c) Cancer cervical oesophagus
d) All of the above

764. Left sides vocal cord palsy is commonly due to -
a) Left hilar bronchial carcinoma *(TN05)*
b) Mitral stenosis
c) Thyroid malignancy
d) Thyroid surgery

765. The most common cause of unilateral left vocal cord palsy is - *(Delhi 96)*
a) Carcinoma thyroid b) Trauma
c) Carcinoma esophagus d) Idiopathic

766. Right sided vocal cord palsy seen in - *(AIIMS 99)*
a) Larynx carcinoma
b) Aortic aneurysm
c) Mediastinal lymphadenopathy
d) Tr. vocal nodule

767. Paralysis of recurrent laryngeal nerve true is -
a) Common in (Lt.) side *(Bihar 05)*
b) 50 % idiopathic
c) Cord will lie laterally
d) Speech therapy given

768. Most common nerve pressed by an enlarged left atrium is - *(Al 96)*
a) Phrenic nerve
b) External laryngeal nerve
c) Recurrent laryngeal nerve
d) Sympathetic nerve

769. Type I thyroplasty is for- *(Al 03)*
a) Vocal cord medialization
b) Vocal cord lateralization
c) Vocal cord shortening
d) Vocal cord lengthening

770. In thyroplasty type 2, vocal cord is - *(AP 04)*
a) Lateralized b)Medialized
c) Shortened d) Lengthened

771. Isshiki thyroplasty type I is - *(COMED06)*
a) Lateralisation of the vocal cord
b) Medialisation of the vocal cord
c) Shortening of the vocal cord
d) Lengthening of the vocal cord

772. Androphonia can be corrected by doing - *(Al05)*
a) Type 1 Thyroplasty b) Type 2 Thyroplasty
c) Type 3 Thyroplasty d) Type 4 Thyroplasty

CONGENITAL LESIONS, STRIDOR AND INFLAMMATION OF LARYNX

773. Laryngocele arises from - *(AIIMSMay 08,05)*
a) Anterior commisure b) Saccule of the ventricle
c) True cords d) False cords

774. Laryngocele arises as a herniation of laryngeal mucosa through the following membrance-(^47*06,*
a) Thyrohyoid b) Cricothyroid
c) Cricotracheal d) Crisostemal

775. About laryngomalacia, all are true except - *(PGI 08)*
a) MC neonatal respiratory lesion
b) Decreased symptoms during prone position
c) Self-limiting by 2-3 years of age
d) Omega shaped epiglottis seen
e) Surgery is treatment of choice

755) c,d 756) b 757) a,e 758) a 759) a 760) a 761)a,b,d 762) a,b 763) d 764) a 765) b 766) a 767) a 768) c 769) a 770) a 771)b 772) d 773) b 774) a 775) e

776. MC cause of intermittent stridor in a 10 days old child is - *(A101, ARMS 95)*
a) Laryngomalacia b) Foreign body
c) Vocal nodule d) Hypertrophy of turbinate

111. **Most common congenital anomaly of larynx-**
a) Laryngeal web *(TN 99, Delhi 08)*
b) Laryngomalacia
c) Laryngeal stenosis
d) Vocal and palsy

778. Regarding laryngomalacia - *(PGI02)*
a) Most common cause of stridor in newbron
b) Omega- shaped epiglottis
c) Inspiratory stridor
d) Requires immediate surgery
e) Stridor worsens on lying in prone position

779. All are true regarding Laryngomalacia except -
a) Poor prognosis *(AP 02)*
b) Most common congenital abnormality
c) Stridor with cyanosis
d) Gets relieved in prone position

780. All are true about Laryngomalacia except -
a) Most common congenital anomaly of larynx
b) Strider disappear on supine position
c) Manifest many weeks after birth *(Jharkhand 04)*
d) It needs not treatment in most of the cases

781. About laryngomalacia all are true except - *(Bihar 06)*
a) Curled epiglottis, Flaccid arytenoids
b) Curled epiglottis, Flaccid aryepiglotic fold
c) Flaccidity of supraglottic larynx
d) Treatment is conservative

782. Most common mode of treatment for laryngomalacia is- *(UP 07)*
a) Reassurance b) Medical
c) Surgery d) Wait & Watch

783. Main treatment of congenital laryngeal stridor is -
a) Tracheostomy *(Jipmer 04)*
b) Steroid therapy
c) Ressurance to the child's parents
d) Amputating epiglottis

784. Most common cause of stridor in children is -
a) Laryngeal papilloma *(UP 04, PGI 99)*
b) Laryngeal web
c) Laryngomalacia
d) Vocal cord palsy

785. TVue about laryngomalacia - *(PGI02)*
a) Most common cause of congenital stridor
b) Inspiratory stridor normal on crying
c) Prone position worsens condition
d) 50% of patients requires surgery
e) Omega shaped epiglottis

786. All of the following statements about Laryngomalacia are true, Except - *(A112)*
a) It is the most common congenital anomaly of the larynx
b) It is associated with an omega shaped epiglotitis
c) Stridor is increased on crying and relieved on lying prone
d) Surgical Traceostomy is the treatment of choice

787. Stridor is caused by - *(DPG Mar 09)*
a) Obstruction of the airway below the level of larynx
b) Obstruction of the airway at the level of larynx
c) Obstruction of the airway above the level of larynx
d) Obstruction of the airway above the level of trachea

788. Most common cause of stridor in children is -
a) Laryngomalacia *(UP 07)*
b) Congenital laryngeal paralysis
c) Foreign body in larynx
d) Congenital laryngeal tumors

789. The most common cause of laryngeal stridor in a 60 year old male is - *(JIPMER 00)*
a) Nasopharyngeal carcinoma
b) Thyroid carcinoma
c) Foreign body aspiration
d) Carcinoma larynx

790. Causes of congenitla laryngeal stridor is/ are -
a) Laryngomalacia *(PGI 00)*
b) Laryngeal papillomatosis
c) Subglottic papilloma
d) Laryngeal stenosis
e) Hemangioma of larynx

791. A 2 years male boy presenting with sudden severe dyspnoea, most common cause is- *(Bihar 06)*
a) Foreign body b) Bmchiolits
c) Asthmatic Attack d)None

792. Maximum stridor is seen in - *(Kerala 91)*
a) Unilateral incomplete paralysis
b) Bilateral incomplete paralysis
c) Unilateral complete paralysis
d) Bilateral complete paralysis

793. WMch ofthe fdlldwihgis the aetiological agent most often associated with Epiglottitis in children -
a) Streptococcus pneumoniae *(ARMS May 05,*
b) Haemophilus influenzae type b *Nov 04, May 94,*
c) Neisseria sp *NEET/DUB Pattern)*
d) Moraxella catarrhalis

794. Thumb sign in lateral X- ray of neck seen in -
a) Epiglottitis b) Internal haemorrhage
c) Saccular cyst d) Ca epiglottis
e) Valecular cyst *(PGI Dec. 04)*

795. Regarding acute epiglottitis which of the following is/are true - *(PGI Dec 08)*
a) Caused by Haemophilus influenzae type B
b) Thumb sign on X-ray
c) Ciprofloxacin is drug of choice
d) Diagnosis is made by indirect laryngoscopy
e) Odynophagia & drolling of saliva can occur

796. A child presents with stridor, barking cough and difficulty in breathing since 2-3 days. He has fever and elevated leukocyte count. All of the following statements about his condition are true, except -
a) Subglottis stenosis and hypopharyngeal dilatation may be seen on x-rays. *(AI10)*
b) Boys are more commonly affected than girls
c) Symptoms are predominantly caused by involvement of the subglottis
d) Antibiotics form the mainstay of treatment

776) a 777) b 778)a,b,c 779) a 780) b,c 781) a 782) a 783) c 784) c 785) a,e 786) d 787) d 788) a 789) d 790)a,d,e 791) a 792)b 793)b 794) a 795)a,b,d,e 796) d

797. Steeple sign is seen in - *(SCwS5iVBm NEET/DNB Pattern)*
a) Croup
b) Acute epiglottitis
c) Laryngomalacia
d) Quinsy

798. Which of the following statements is not true for contact ulcer ? *(A1IMS 03)*
a) The commonest site is the junction of anterior l/3rd and middle 1 /3rd of vocal cord and gastroesophageal reflux is the causative factor
b) Can be caused by intubation injury
c) The vocal process is the site and is caused / aggravated by acid reflux
d) Can be caused by adductor dysphonia

799. In a patient hoarseness of voice was found to be having pachydermia laryngitis. All of the following are true except- *(A1IMS02)*
a) It is a hyperkeratotic lesion present within the anterior 2/3rd of the vocal cords
b) It is not premalignant lesion
c) Diagnosis is made by biopsy
d) On microscopy it shows acanthosis and hyperkeratosis

800. Wrong about Laryngitis sicca - *(PGI June 04)*
a) Also known as Laryngitis atrophica
b) Caused by klebsiella ozaena
c) Caused by Rhinosporodium
d) Common in women

801. True about laryngitis sicca - *(PGI June 05)*
a) Caused by Klebsiella ozaena
b) Caused by Klebsiella rhinoscleromatosis
c) Hemorrhagic crust formation seen
d) Antifungal are effective
e) Microlaryngoscopic surgery is a modality of treatment

802. Tubercular laryngitis affects primarily - *(DPG08, IN 01)*
a) Anterior commissure
b) Posterior commissure of larynx
c) Anywhere within the larynx
d) Superior surface of larynx

803. A 50 year old male chronic smoker complains of hoarseness for the past 4 months. Microlaryngoscopic biopsy shows it to be keratosis of the larynx. All are suggested treatment modalities for this condition, except - *(AI02)*
a) Laser vaporizer b) Stop smoking
c) Stripping of vocal cord d) Partial laryngectomy

804. Rajesh, a 7 month old child, presents with failure of gaining weight & noisy breathing which becomes worse when the child cries. Laryngoscopy shows a reddish mass in subglottis. Treatment modality may include all, except - *(AI 02)*
a) Radiation
b) Steroids
c) Tracheostomy
d) Carbon dioxide laser treatment

805. Reinke's oedema is seen in - *(JIPMER 98, Karn 01)*
a) Vestibular folds
b) Edges of vocal cords
c) Between true & false vocal cords
d) In pyriform fossa

806. Reinke's layer seen in - *(CMC 03)*
a) Vocal cord b) Tympanic membrane
c) Cochlea d)Reissner's membrane

807. Infection involving anterior larynx - *(MP 01)*
a) TB b) Sarcoidosis
c) Syphillis d) All the above

808. Palpatory thud, audible slap is seen in- *(NEET/DNB Pattern)*
a) Tracheal foreign body
b) Bronchial foreign body
c) Laryngeal foreign body
d) Nopp

TUMOR OF LARYNX

809. True about vocal nodule is/are - *(PGI2K)*
a) Also known as screamer's node
b) Occur at junction of ant. l/3rd & post. 2/3rd of vocal cords
c) Most common presentation is aphonia
d) Microlaryngoscopic surgery is not useful

810. Most common location of vocal nodule -
a) Anterior 1/3 and posterior 2/3 junction
b) Anterior commissure *(UP 04, PGI 2K)*
c) Posterior 1/3 and anterior 2/3 junction
d) Posterior commissure

811. Treatment of choice of vocal nodule is - *(AIIMS 95)*
a) Radial excision
b) Microlaryngoscopic removal
c) Cryotherapy
d) Wait and watch

812. A 30 year old female with history of singing, vocal abuse and gastrooesophageal reflux developed nodules at junction of anterior l/3rd & middle 3rd of her vocal cords. What is treatment of choice ? *(AI 08)*
a) Speech therapy and Proton pump inhibitor (PPI)
b) Microlaryngascopic surgery & $C0_2$ laser
c) Microlaryngectomy
d) Direct laryngoscopy and biopsy

BENIGN TUMORS

813. All of the following statements about recurrent laryngeal papillomatosis are true, Except - *(AI 09)*
a) Caused by human papilloma virus (HPV)
b) HPV6 and HPV11 are most commonly implicated
c) HPV6 is more virulent than HPV 11
d) Transmission to neonate occurs through contact with mother during vaginal delivery

797)a 798)a 799)a 800)c 801)a,c,e 802)b 803)d 804)a 805)b 806)a 807)c 808)a 809)a,b 810)a 81 l)b 812) a 813)c

814. True about multiple papillomatosis - *(PGIDec 05)*
a) HSV is causative agent
b) Radiotherapy treatment of choice
c) It is premalignant
d) It is more common in 15 to 33 yrs
e) If recurs cause is due to parturition.

All of the following are true regarding Juvenile Papilloma except - *(AP 01;MEE7VDNB Pattern)*
a) Commonlyoccurin children Vvv,
b) ;Läsef:surgeryds; the/treatmehtiof(choice |
c) Stridor is common ;
d) Remissions areuncommon^ ^^*rml* ^ ^ r⁵

816. True about juvenile respiratory papillomatosis -
a) Affects children commonly *(PGI 2K)*
b) Lower respiratory tract can be involved
c) May resolve spontaneously
d) Microlaryngoscopic surgery is treatment of choice

817. Regarding Juvenfle papillomas true is/are-
a) Single b) Multiple *(PGI 2K)*
c) Seen in children d) Recurrent
e) Associated with HPV

818. The treatment of choice for recurrent respiratory papillomatosis is - *(DPG Mar. 09)*
a) Laser ablation
b) Diathermy excision
c) Excision with microdebrider
d) Wait for spontaneous resolution

819. Kamla 4 yrs of age presented in emergency with mild respiratory distress. On laryngoscopy she was diagnosed to have multiple juvenile papilomatosis of the larynx. Next line of management is - *(AIIMS 01)*
a) Tracheostomy b) Microlaryngoscopy
c) Steroid d) Antibiotics

820. Juvenile papillomatoses is caused by -
a) IIPV b)EBV *(NEET/DNB Pattern)*
c) CMV d)IISV

821. All are true about Adult laryngeal papill oma except-
a) M >F *(NEET/DNB Pattern)*
nji ^ nDrecur tiSiis
c) Posterior half of voc al cord
\~y r.y Sqj
ill
(1) Treatment is surgery

MALIGNANT TUMORS

822. Premalignant conditions for carcinoma larynx -
a) Leukoplakia b) Lichen planus *(PGI 01)*
c) Papillomas d) Smoking
e) Chronic laryngitis

823. Which one of the following condition is considered to be definitely precancerous in the larynx - *(AP 07)*
a) Vocal nodules b) Angioma of vocal cords
c) Leukoplakia d) None of the above

824. Which of the following is precancerous lesion-(T/P *00)*
a) Pachydermia of larynx b) Laryngitis sicca
c) Keratosis of larynx d) Scleroma larynx

825. Epilarynx includes - *(PGI Nov 10)*
a) Suprahyoid epiglottis b) Infrahyoid epiglottis
c) Arytenoids d) False cords
e) Posterior commisure

826. All the following are true about Laryngeal carcinoma except- *(AI94)*
a) More common in females
b) Common in patients over 40 years of age
c) After laryngectomy, esophageal voice can be used
d) Poor prognosis

827. Features of laryngeal Ca- *(PGI June 05)*
a) Glottis is the MC site
b) Commonly metastasizes to cervical lymphnode
c) Lesions seen at the edge of the vocal cord
d) Laryngeal compartments acts as barrier

828. Supraglottic Ca present with- *(PGI June 03)*
a) Hot potato voice
b) Aspiration
c) Smoking is common risk factor
d) Pain is MC manifestation
e) LN metastasis is uncommon

829. The most common and earliest manifestation of carcinoma of the glottis is - *(AI 05, RJ 06)*
a) Hoarseness b) Haemoptysis
c) Cervical lymph nodes d) Stridor

830. Lymphnode metastasis in neck is almost never seen with - *(AI 96)*
a) Carcinoma vocal cords
b) Supraglottic carcinoma
c) Carcinoma of tonsil
d) Papillary carcinoma thyroids

831. Involvement of neck lymph nodes is seen in all the following except - *(AI 96)*
a) Hodgkin's lymphoma
b) Vocal cord carcinoma
c) Tumors of the hypopharynx
d) Nasopharyngeal carcinoma

832. Select correct statements about Ca larynx -*(PGI02)*
a) Glottic Ca is the most common
b) Supraglottic Ca has best prognosis
c) Lymphatic spread is the most common in subglottic Ca
d) T j tumor is best treated by radiotherapy
e) Smoking predisposes

833. Highest lymph-node involvement seen *in-(AHMS 98)*
a) Glottic Ca b) Subglottic Ca
c) Supraglottic Ca d) Equal incidecne in all

834. Which of the following carcinomas commonly presents with neck nodes - *(AI 95)*
a) Cricoid b) Glottic
c) Epiglottis d) Anterior commissure

835. Hoarseness of voice occurs early in - *(RJ 04)*
a) Glottic Ca b) Subglottic Ca
c) Supraglottic d)None

814)c 815)d 816)a,b,c,d 817)b,c,d,e 818)a 819)b 820)a 821)c 822)a,c 823)c 824)c 825)a,c 826)a,d 827) a,b,c,d 828)a,b,c,d 829) a 830) a 831)b 832)a,d,e 833) c 834) c 835) a

836. True about carcinoma larynx - *(PGI2K)*
a) Glottis is most common site
b) Rarely presents with metastasis
c) Adenocarcinoma is commonest type
d) Responds to chemotherapy very well

837. Treatment of Ca larynx in stage. $T_{1?}$ M_0N_0 is - *(AI2K)*
a) Radiotherapy b) Surgery total laryngectomy
c) Laser therapy d) Microlaryngoscopic surgery

838. In a case of glottic carcinoma with fully mobile cords, the treatment of choice is - *(AP 96, AIIMS 92)*
a) Total laryngectomy b) Radiotherapy
c) Hemilaryngectomy d) Chemotherapy

839. Involvement of anterior commisure in Ca larynx. Best treatment - *(NEET/DNB Pattern)*
a) Laryngectomy
b) Radiotherapy followed by surgery
c) Chemotherapy
d) None

840. A patient presents with carcinoma of the larynx involving the left false cords, left arytenoid and the left aryepiglottic folds with bilateral mobile true cords. Treatment of choice is - *(AIIMS Nov 07)*
a) Vertical hemilaryngectomy
b) Horizontal partial hemilaryngectomy
c) Total laryngectomy
d) Radiotherapy followed by chemotherapy

841. The treatment of choice for stage I cancer larynx is-
a) Radical surgery *(AIIMS 03, PGI 98)*
b) Chemotherapy
c) Radiotherapy
d) Surgery followed by radiotherapy

842. Treatment of choice in stage HI carcinoma larynx is- *(AI 98, RJ 02, AIIMS 96)*
a) Chemotherapy b) Surgery + radiation
c) Surgery + chemotherapy d) Only radiotherapy

843. T_3 Nj M_0 stage of carcinoma larynx is treated by -
a) Radiotherapy *(DNB 02)*
b) Surgery
c) Chemotherapy
d) Surgery and radiotherapy

844. Treatment of choice for carcinoma larynx T^IV^ stage- *(AI02)*
a) External beam radiotherapy
b) Radioactive implants
c) Surgery
d) Surgery & radiotherapy

845. A patient of carcinoma larynx with stridor presents in casualty, immediate management is - *(AIIMS 91)*
a) Planned tracheostomy
b) Immediate tracheostomy
c) High dose steroid
d) Intubate, give bronchodilator and wait for 12 hours, if no response, proceed to tracheostomy
e) None

846. A case of carcinoma larynx with the involvement of anterior commissure and right vocal cord, developed perichondritis of thyroid cartilage. Which of the following statements is true for the management of this case - *(AIIMSMay 06)*
a) He should be given radical radiotherapy as this can cure early tumors
b) He should be treated with combination of chemotherapy and radiotherapy
c) He should first receive radiotherapy and if residual tumour is present then should undergo laryngectomy
d) He should first undergo laryngectomy and then post-operative radiotherapy

847. Radiotherapy is treatment of choice for -
a) Nasopharyngeal Ca T_3 N. *(AIIMSNov 09)*
b) Supraglottic CaT_3N_0
c) Glottic CaT_3Nj
d) Subglottic Ca T_3N_0

848. A middle aged male comes to the outer patient department (OPD) with the only complaint of hoarseness of voice for the past 2 years. He has been a chronic smoker for 30 years. On examination, a reddish area of mucosal irregularity overlying a portion of both cords was seen. Management would include all except - *(AI 03)*
a) Cessation of smoking
b) Bilateral cordectomy
c) Microlaryngeal surgery for biopsy
d) Regular follow - up

849. Contraindication of supraglottic laryngectomy is/are-
a) Poor pulmonary reserve
b) Tumor involving pyriform sinus
c) Tumor involving preepiglottic space
d) Vocal cord fixation
e) Postcricoid area extension

850. The preferred treatment of verrucous carcinoma of the larynx is - *(UP 07)*
a) Pulmonary surgery b) Electron beam therapy
c) Total laryngectomy d) Endoscopic removal

MISCELLANEOUS OF LARYNX

851. In Dysphonia plica ventricularis, sound is produced by - *(AIIMS 99)*
a) False vocal cords b) True vocal cords
c) Ventricle of larynx d) Tongue

852. Features of functional aphonia - *(PGI June 06)*
a) T Incidence in males
b) Due to vocal cord paralysis
c) Can cough
d) On laryngoscopy vocal cord is abducted
e) Speech therapy is the treatment of choice

836) a 837) a 838) b 839) a 840) b 841) c 842) b 843) d 844) a 845) b 846) d 847) a 848) b 849) a,b,d,e 850) d 851) a 852) c,d

853. Habitual dysphoria is characterized by-*(PGIDec. 04)*
a) Poor voice in normal environment
b) Related to stressful events
c) Treatments is vocal exercise and re- assurance
d) Whispering voice
e) Quality of voice is constant

854. All of the following statements about spasmodic dysphoria are true, except- *(AI12)*
a) It is a dystonia of Laryngeal Muscles
b) Standard treatment is with injection of Botulinum Toxin
c) Multiple injections of Botulinum toxin are required
d) Patient with Abductor type dysphonia have a strained and strangled voice

855. Rhinolalia clausa is associated with all of the following except - *(AI 07)*
a) Allergic rhinits b) Palatal paralysis
c) Adenoids d) Nasal polyps

856. In a patient with hypertrophied adenoids the voice abnormality that is seen is -*(JIPMER 00, Karn. 01)*
a) Rhinolalia clausa b) Rhinolalia aperta
c) Hotopotato voice d) Scatacto voice

857. Changing in pitch of sound is produced by which muscle - *(Jharkhand 04)*
a) Posterior cricoarytenoids
b) Lateral crico arytenoids
c) Cricothyroid
d) Vocalis

858. In Esophageal speech, the dynamic component is-
a) Buccal segment *(AI 00)*
b) Pharyngo- esophageal segment
c) Trachea
d) Pharynx

859. A patient with Pancoast's tumour, develops loss of voice after radiation. It is due to - *(AI 2K)*
a) Vocal cord infiltration with secondaries
b) Involvement of recurrent laryngeal nerve
c) Irradiation to vocal cords
d) Radiation stenosis of larynx

860. Gold standard test for diagnosis of laryngopharyngeal reflux is - *(AI 11)*
a) 24 hr double probe pH monitoring
b) Flexible endoscope
c) Barium swallow
d) Laryngoscopy

861. Reflux laryngitis produces - *(PGI Dec 04)*
a) Sub- glottic stenosis b) Ca larynx
c) Cord fixation d) Acute supra- glottitis
e) Laryngitis

862. Pharyngeal Pseudosulcus is seen secondary *to-(AI09)*
a) Vocal Abuse b) Laryngopharyngeal Reflux
c) Tuberculosis d) Corticosteroid usage

863. A 5 year old boy while having dinner suddenly becomes aphonic and is brought to the casualty with complaint of respiratory distress. What should be the appropriate management? *(AI 11)*
a) Cricothyroidotomy b) Emergency tracheostomy
c) Humidified oxygen d) Heimlich manoeuvre

864. Best management for inhaled Foreign body in an infant- *(RJ 02, NEET/DNBPattern)*
a) Tracheostomy b) Steroids
c) Bronchoscopy d) IPPV

865. Laryngeal cartilage involvement, investigation of choice is- *(Bihar 03)*
a) CT b) MRI
c) Radionucleids scans d) X- ray

866. Laryngofissure is - *(Jipmer 04)*
a) Opening the larynx in midline
b) Making window in thyroid cartilage
c) Removal of arytenoids
d) Removal of epiglottis

867. About total laryngectomy all is correct except -
a) Loss of smell b) Loss of taste
c) Speech difficulty d) Difficult swallowing

868. Maintenance of airway during laryngectomy in a patient with carcinoma of larynx is best done by -
a) Tracheostomy *(J & K 05,NEET/DNB Pattern)*
b) Laryngeal mask airway
c) Laryngeal tube
d) Combi tube

869. According to European laryngeal Society, Subligamental cordectomy is classified as -
a) Type I b) Type II *(AIMS May 11)*
c) Type III d) Type IV

870. Drug of choice in Laryngeal stenosis is - *(AI 10)*
a) Cyclophosphamide b) Doxorubicin
c) Adriamycin d) Mitomycin C

871. Topical mitomycin C is used to aid the following treatment - *(AIMS May 11, AI 09, 12)*
a) Endoscopic treatment of angiofibroma
b) Treatment of laryngotracheal stenosis
c) Skull base osteomyelitis
d) Sturge weber syndrome

872. Which of the following lasers is most commonly used in Laryngeal surgery - *(AI 10)*
a) $C0_2$ laser b)NdYAG laser
c) Argon laser d) KTP laser

ORAL CAVITY

873. Ranula is - *(Jipmer 95)*
a) Hypertrophid lymphoid tissue
b) Arises from mucosa of floor of mouth
c) Hard and Haemorrhagic
d) An abscess

874. Regarding ranula all are true except - *(MAHE 05)*
a) Retention cyst
b) Arises from submandibular gland
c) Translucent
d) Plunging may be a feature

875. Ranula is a - *(AP 03)*
a) Mucous cyst
b) Tumor
c) Submandibular gland swelling
d) Swelling on dorsum of tongue

853)a,c,d,e 854)d 855)b 856)a 857)c 858)b 859)b 860)a 861)a,b,e 862)b 863)d 864)c 865)b 866)a
867) None 868) a 869) b 870) d 871)b 872) a 873) b 874) b 875) a

876. All are precancerous lesions of oral cavity except -
a) Leukoplakia *(MP 09)*
b) Erythroplakia
c) Diffuse oral submucous fibrosis
d) Diffuse aphthous ulcers

877. The most common pre-malignant condition of oral carcinoma is- *(AI95, 96)*
a) Leukoplakia b) Erythroplakia
c) Lichen planus d) Fibrosis

878. Premalignant lesion of oral cavity includes -
a) Erythroplakia *(PGI Nov 10)*
b) Fordyce's spot c) Leukoplakia
d) Keratoacanthoma e) Aphthous ulcer

879. Which of the following is premalignant - *(AIIMS 91)*
a) Chronic glossitis
b) Submucous fibrosis
c) Hypertrophic glossitis
d) Aphthous stomatis

880. Premalignant lesions (s) are - *(Kolkata 2K)*
a) Submucous fibrosis b) Leukoplakia
c) Erythroplakia d) All of the above

881. Treatment ofleukoplakia- *(NEET/DNB Pattern)*
a) Local excision -
b) Excision and radiotherapy
c) Topical chemotherapy
d) Repositioning of ill fitting dentures

882. Not included in oral cavity Ca - *(PGI May 10)*
a) Base of tongue b) Gingivobuccal sulcus
c) Soft palate d) Hard palate
e) Buccal mucosa

883. The most common malignant tumor of adult males in India is - *(AI 04)*
a) Oropharyngeal carcinoma
b) Gastric carcinoma
c) Colo-rectal carcinoma
d) Lung cancer

884. Which ca has best prognosis - *(AIIMS 98)*
a) Carcinoma Lip b) Carcinoma Cheek
c) Carcinoma Tongue d) Carcinoma palate

885. The commonest site of oral cancer among Indian population is - *(AI 04, NEET/DNB Pattern)*
a) Tongue b) Floor of mouth
e) Alveobuccal complex d)Lip

886. Carcinoma tongue most frequently develops from -
a) Tip b) Lateral border *(AI 02)*
c) Dorsal portion d) All portions equally

887. Metastasis of carcinoma buccal mucosa goes to -
a) Regional lymph node b) Liver *(AIIMS 96)*
c) Heart d) Brain

888. Carcinoma of buccal mucosa commonly drain to the following lymph nodes sites - *(AI 97)*
a) Submental b) Submandibular
c) Supraclavicular d) Cervical

889. In carcinoma of lower lip secondaries are seen in- *(AI 91)*
a) Upper cervical LN b) Supra clavivular LN
c) Axillary LN d) Mediastinal LN

890. True about AJC stagine of ofal cavity carcinoma - *(PGI June 09)*
a) Involvement of pterygoid plate in stage T_3
b) Involvement of pterygoid plate in stage T_4
c) Involvement of lateral pterygoid muscle in stage T_4
d) Involvement of medial pterygoid muscle T_3

891. A patient has carcinoma of right tongue on its lateral border of anterior 2/3rd, with lymph node of size 4 cm in level 3 on left side of the neck, stage of disease is- *(AIIMSMay 07)*
a) N_0 b)N,
c) N_2 d)N_3

892. Gum tumor with 2 contralateral mobile lymph nodes in cheek comes under - *(PGI 99)*
a)$T_3N_2M_0$ b)$T_2N_2M_0$
c)$T_4N_2M_0$ d)$T_3N_3M_0$

893.. True statement about oral cancer is/are - *(PGI04)*
a) Most common in buccal mucosa
b) Systemic metastasis uncommon
c) Responds to radiotherapy
d) Surgery is treatment of choice
e) Syphilis and dental irridation predisposes

894. The most common site for squamous cell carcinoma in oral cavity is - *(DPG Mar. 09)*
a) Tongue b) Floor of mouth
c) Upper and lower alveolus d) Buccal mucosa

895. The highest frequency of palpable metastasis in neck on presentation is - *(DPG Mar 09)*
a) Carcinoma tongue b) Buccal mucosa
c) Alveolus d) Lip

896. Second primary tumor of Head and Neck is most commonly seen in malignancy of - *(AIIMS May 12)*
a) Oral cavity b) Larynx
c) Hypopharynx d) Paranasal sinuses

897. All are true about nasolabial cyst Except -
a) Arises from odontoid epithelium *(AIIMS Nov 08)*
b) Presents submucosally in anterior nasal floor
c) Bilateral
d) Usually seen in adults

898. True about aphthous ulcer - *(PGI June 05)*
a) Viral predisposition
b) Recurrent ulcer
c) Deep ulcers
d) Involves the mucosa of the hard palate
e) Steroids given as treatment

899. Fordyce's [spots] Granules Oral cavity arise from -
a) Mucous glands *(AIIMS 04)*
b) Sebaceous glands
c) Taste buds
d) Minor salivary glands

900. True about Quinke disease - *(PGI June 05)*
a) Bacterial infection b) Peritonsillar abscess
c) Vocal cord edema d) Edema of uvula
e) Allergy is an etiology

876) d 877) a 878) a,c 879) b 880) d 881)d 882) a,c 883) a 884) a 885) c 886) b 887) a 888) b 889) a 890) b,c 891) c 892) a,b 893)b,c,d,e 894) a 895) a 896) a 897) a 898)a,b,e 899) b 900)a,b,d,e

ESOPHAGUS

901. All statement about Plummer Winsbn Syndrome are true except- *(PGI 96, NEET/DNB Pattern)*
a) Commonly leads to carcinoma in lower third of esophagus
b) Common with iron deficiency
c) Common infematesi
d) Premahgnant

902. Which of the following region is involved in plummer-vinson syndrome-fUP *01, NEET/DNBTattem) SWfNS)* Pyriformtsinus b) Post cricoid^regidn H|
c) Valleculae d) Posterior pharyngeal wall

903. Which type of diverticulum is common in the oesophagus - *(Kerala89)*
a) Traction type b) Pulsion type
c) Rolling hernia d) None

904. Which of the following is known as "Gateway of tears"- *(Delhi08)*
a) Killian's dehiscence b) Ratheke's pouch
c) Waldeyer's ring d) Sinus of Morgagni

905. One of the following is true regarding Zenker's diverticulum - *(A 195)*
a) It is asymptomatic
b) Occurs in the mid oesophagus
c) Treatment is simple excision
d) It occurs in Children

906. Dohlman's operation is related to - *(DPGMar. 09)*
a) Carcinoma esophagus b) Carcinoma larynx
c) Zenker's diverticulum d) Nasal carcinoma

907. An elderly male presents with history of dysphagia, regurgitation foul breath and cough. Bilateral Lung crepts are noted on examination. The most likely diagnosis is - *(AI12)*
a) ShatzkiRing
b) Zenker's Diverticulum
c) Corkscrew Esophagus
d) Plummer-Vinson Syndrome

908. Intermittent dysphagia is caused by - *(PGI June 04)*
a) Stricture
b) Reflux esophagitis
c) Achalasia cardia
d) Pharyngeal diverticululam
e) Diffuse esophageal spasm

909. Dysphagia is caused by all except-
a) Esophageal varices *(DPG10, Kerala 95)*
b) Achlasia cardia
c) Stricture
d) Gastro-esophageal reflux of long standing duration

910. Dysphagia for fluids but not to solids is seen in -
a) Stricture *(Karnataka 04)*
b) Achalasia
c) Carcinoma oesophagus
d) Reflux oesophagitis

911. Dysphagia lusoria is because of - *(UPSC 88)*
a) Esophageal webs b) Achalasia
c) Esophageal Stricuture d) Aberrant great vassels

912. The commonest type of tracheo-oesophageal anomaly is - *(DPGMar. 09)*
a) Oesophageal atresia without tracheo-oesophageal fistula
b) Oesophageal atresia with distal tracheo-oesophageal fistula
c) Oesophageal atresia with proximal tracheo-oesophageal fistula
d) Tracheo-oesophageal fistula without oesophageal atresia

913. Odynophagis is - *(MH2K)*
a) Pain during swallowing
b) Difficulty in swallowing
c) Bad odour from mouth
d) Psychatric disease

914. A coin is struck at 25 cm from incisor in oesophagus, this place coincides *wiih-(Kolkata 2K)*
a) Cricopharyngeal junction
b) Bronchus bifurfation
c) Aortic arch
d) Oesophago-gastric junction

915. Site of lodging foreign body in esophagus is -
a) Upper constrictor *(Bihar 05)*
b) Bifurcation of trachea
c) Aortic body
d) Lower esophagus

916. Lump in the throat not interfering with swallowing-
a) Globus hystericus *(PGI 87)*
b) Cervical spondylosis
c) Pharyngeal divericula
d) Carcinoma esophagus

917. The commonest benign intramural tumor of the oesophagus is - *(AIIMS 80, Rohtak 86)*
a) Fibroma
b) Leiomyoma c) Angioma
d) Lipoma e) Neuroma

DIAGNOSTIC AND OPERATIVE ENT

918. Myringotomy is indicated in - *(PGI 98)*
a) Coalescent mastoiditis b) Choleastetoma
c) ASOM d) External otitis media

919. Grommet tube is used in - *(TN 02)*
a) Secretory otitis media b) Mucoid otitis media
c) Serous otitis media d) All of the above

920. Ideal site for myringotmy and grommet insertion-
a) Anterior superior aquadrant *(CUPGEE 02,*
b) Anterior inferior quadrant *Kolkata 02, RJ 01,*
f|p .e) Posterior superior / > *NEET/DNB Pattern)*
d) Posterior inferior

921. Procedure for serous otitis media is - *(AP 02)*
a) Tympanoplasty b) Mastoidectomy
c) Myringotomy d) Medical treatment

922. Surgery on ear drum is done using - *(Kerala 91)*
a) Operative microscope b) Laser
c) Direct vision d) Blindly

901)a 902)b 903)b 904)a 905)c 906)c 907)b 908)d,e 909)a 910)b 911)d 912)b 913)a 914)c
915)a 916) a 917)b 918) c 919)d 920)b 921) c 922)a

923. For ASOM, myringotomy is done in which quadrant-
a) Antero- inferior b) Antero - superior £4/ *95)*
c) Postero- superior d) Postero - inferior

924. Commonest cause for grommet insertion- *(IN08,*
a) Secretory otitis media *NEET/DNB Pattern)*
b) Otosclerosis
c) CSOM
d) Cholesteatoma

92$. **What is tympanoplasty -** *(NEET/DNB Pattern)*
a) Eradication of middle ear disease with reconstruction
\ý >£ *%m* of tympanic membrane & ossicles
b) Eradication of disease from internal ear
c) Repair of tympanic membrane only
d) Repair of ossicle only

926. Columella effect is seen in - *(TN 05)*
a) Tympanoplasty b) Septoplasty
c) Tracheostomy d) None of the above

927. Columellar tympanopl asty is - *(NEET/DNB Pattern)*
a) Type I b) Type II
c) Type If! 4) Type IV:

928. Myringoplasty is done using - *(PGI97)*
a) Temporalis fascia b) Dura mater
c) Perichondrium d) Mucous membrance

929. For myringoplaty, Graft material of choice is -
a) Peritoneum b) Palmer fascia *(RJ03)*
c) Temporalis fascia d) Fascial lata

930. Material used in Tympanoplasty - *(PGI 98)*
a) Temporalis fascia b) Cartilage
c) Muscle d) Mucous membrane

931. Austin's classification for ossicular chain defects depends on- *(DP G Mar 09)*
a) Malleus head and stapes footplate
b) Malleus handle and stapes suprastructure
c) Malleus head and stapes suprastructure
d) Malleus head and steps head

932. Tympanoplasty is mainj^i^i||9ʳʳ |3fi| *ET/DNB*
a) Otosclerosis b) CSOM *Pattern)*
£AT*\c) ASOM d) None

933. Myringoplasty is plastic repair of- *(PGI 90)*
a) Middle ear b) Internal ear
c) Eustachian tube d) Tympanic membrane

934. Schwartz operation is also called as - *(PGI97)*
a) Cortical mastoidectomy
b) Modified radical mastoidectomy
c) Radial mastoidectomy
d) Fenestration operation

935. Schwartz operation is done in - *(UP 2K)*
a) CSOM b) Serous otitis media
c) Otosclerosis d) Acute mastoiditis

936. Simple mastoidectomy is done in - *(MP 04)*
a) Acute mastoiditis
b) Cholesteatoma
c) Coalescent mastoiditis
d) Localized chronic otitis media

937. Cortical mastoidectomy in indicated in - *(AIIMS 93)*
a) Cholesteatoma without complication
b) Coalescent mastoiditis
c) CSOM with brain abscess
d) Perforation in Pars flaccida

938. Simple mastoidectomy is done for - *(PGI 97)*
a) Lateral sinus thrombophlebitis
b) Small localized cholesteatoma
c) ASOM
d) Acute mastoiditis

939. Modified radical mastoidectomy is indicated in all except- *(MP00)*
a) Safe CSOM
b) Unsafe CSOM with attticoantral disease
c) Coalescent mastoiditis
d) Limited mastoid pathology

940. Radical mastoidectomy is done for - *(DNB 00)*
a) ASOM
b) CSOM
c) Atticoantral cholesteotoma
d) Acute mastoiditis

941. All of the following steps are done in radical mastoidectomy except - *(AJ97)*
a) Lowering of facial ridge
b) Removal of middle ear mucosa and muscles
c) Removal of all ossicles except stapes footplate
d) Maintainance of patency of eustachian tube

942. Radical mastoidectomy includes all except -
a) Closure of the auditory tube *(AIIMS 00)*
b) Ossicles removed
c) Cochlea removed
d) Exteriorisation of mastoid

943. All of the following techniques are used to control bleeding from bone during mastoid surgery except -
a) Cutting drill over the bleeding area
b) Diamond drill over the bleeding area
c) Bipolar cautery over the bleeding area
d) Bone wax

944. Nerve damaged in radical mastiodectomy is -
a) Facial b) Chochlear *(MH 00)*
c) Vestibular d)All

945. All of the following true of sub- mucous resection [SMR] operation for DNS except - *(UPSC)*
a) Indicated in septal deviation
b) Mucoperichondrium is removed
c) Preferably done after 16 years of age
d) Done in some cases of epistaxis

946. Which of the following surgery is contraindicated below 12 years of age? *(MH03)*
a) Rhinoplasty b) Antral puncture
c) SMR d) Septoplasty

947. Alternative for SMR - *(DNB 01)*
a) Tympnaplasty b) Septoplasty
c) Caldwell Luc operation d) Turboplasty

948. Common indication of septoplasty - *(PGI June 04)*
a) DNS with symptoms b) Anosmia
c) Sluder's neuralgia d) Septal spar

923) d 924) a 925) a 926) a 927) c 928)a,b,c 929) c 930) a,b 931)b 932) b 933) d 934) a 935) d 936) a,c

949. **Killian's incision is used for-** *(TN 04)*
a) Sub- mucus resection of nasal septum
b) Intranasal antrostomy
c) Caldwell- Luc oepration
d) Myringoplasty

950. **Which is not done in Septoplasty -** *(St. Johns 02)*
a) Elective hypotension
b) Throakpack
c) Nasal preparation with 10% cocaine
d) None

951. **Local anaesthetic used for nasal surgery-**
a) Cocaine paste *(AIIMS 80; DNB 90)*
b) Xylo caine
c) Both
d) None of the above

952. **To prevent synachiae formation after nasal surgery, which one of the following packings is the most useful -** *(AIIMS Nov 04)*
a) Mitomycin
b) Ribbon gauze
c) Ribbon gauza with liquid paraffin
d) Ribbon gauza steroids

953. **Antral puncture is done through-** *(RJ06)*
a) Superior meatus b) Inferior meatus
c) Middle meatus d)All

954. **In Caldwell- Luc operation the nasoantral window is made through-** *(TN04)*
a) Superior meatus b) Inferior meatus
c) Middle meatus d) None of the above

955. **Caldwell luc approach opens -** *(NEET/DNB Pattern)*
a) Maxillary sinus b) Frontal sinus
I| lH c) Spfienoid'rsmus ^ Ethmdiff^inu^ gglgfljf

956. **Commonest complication of Caldwell-Luc operation is -** *(AP 00)*
a) Oroantral fistula b) Infra orbital nerve palsy
c) Haemorrhage d) Orbital cellulites

957. **FESS means -** *(Mahara02)*
a) Factual endoscopic sinus surgey
b) Functional endonasal sinus surgery
c) Factual endonasal sinus surgery
d) Functional endoscopic sinus surgery

958. **Indications of FESS-** *(PGI03, PGI June 06)*
a) Inverted papilloma b) Nasal Allergic polyposis
c) Mucocele d)Ca maxilla

959. **FESS are used for -** *(PGINov 10)*
a) Inverted papilloma
b) Orbital abscess
c) Nasal polyposis
d) Optic nerve decompression
e) CSF rhinorrea

960. **Endoscopic nasal surgery is indicated in-**
a) Chronic sinusitis b) Epistaxis *(Manipal 04)*
c) Both d)None

961. **Endoscopic surgery is not done in -** *(MP 03)*
a) Optic nerve compression b) CSF rhinorrhea
c) Dacryocystic carcinoma d) Ethmoidal polyps

962. **Which of the following is the very first step in Functional endoscopic sinus surgery ?** *(MH10)*
a) Opening of bulla ethmoidalis
b) Uncinectomy
c) Middle meatal antrostomy
d) Middle turbinectomy

963. **All of the following are indications for tonsillectomy except-** *(TN95)*
a) Foreign body in tonsils
b) Unilateral enlargement of tonsils with suspected malignancy
c) Keratin tonsil
d) Recurrent quinsy

964. **Tonsillectomy is indicated in -** *(AI94)*
a) Acute tonsillitis
b) Aphthous ulcers in the pharynx
c) Rheumatic tonsillitis
d) Physiological enlargement

965. **Contraindications to tonsillectomy are all except -**
a) Submucus fibrosis *(MH 02)*
b) Bleeding disorders
c) Epidemic of polio
d) Tonsilitis

966. **Not a Contraindications of routine Tonsillectomy -**
a) Upper respiratory tract infections *(MP 02)*
b) Bleeding disorder
c) Diphteria carriers
d) Cleft palate

967. **Tonsillectomy is contraindicated in which of the following situations ?** *(MP 03)*
a) Diphtheria (after four weeks)
b) Acute tonsillitis
c) For avulsion of glossopharyngeal nerve
d) Suspected tonsillar malignancy

968. **Contraindication of Adeno- tonsillectomy-** *(PGI04)*
a) Age < 4 yr b) Poliomyelitis
c) Haemophilus infection d) Upper RTI

969. **Tonsillectomy : following peritonsillar abscess is done after weeks -** *(PGI 98, 97)*
a) 1-3 b)6 - 8
c) 4-6 d)8-12

970. **Haemorrhage occurring 6 hours after Tonsillectomy is called as -** *(TN 00)*
a) Primary haemorrhage
b) Secondary haemorrhage
c) Reactionary haemorrhage
d) None of the above

971. **After tonsillectomy, secondary hemorrhage occurs-** *(JIPMER 03, NEET/DNB Pattern)*
a) Within 24 hours
b) After 2 weeks
c) 5-10 post operative days
d) After 1 month

972. **Time of occurence of secondary haemorrhage after tonsillectomy -** *(AI 11)*
a) 24 hrs **b) 6 days**
c) 12 days d) 12 hrs

949) a 950) d 951)c 952)a 953)b 954)b 955)a 956)b 957)d 958)a,b,c 959)A11 960)c 961)c 962)b
963) a,c 964) c 965) a 966) c 967) b 968)b,c,d 969) b 970) c 971) c 972) b

973. Commonest post operative complication of tonsilectomy is - *(PGI85)*
a) Palatal palsy b) Hemorrhage
c) Injury to uvula d) Infection

974. Excessive hemorrhage from tonsillectomy is due to injury of the- *(A194)*
a) Paratonsillar vein
b) Ascending palatine artery
c) Rheumatic tonsillitis
d) Physiological enlargement

*9J*q* **Torrential bleed during tonsillectomy is due to -**
a) Facial artery *(NEET/DNB Pattern)*
b) Tonsilar artery
c) Paratonsillar vejiij IgyMj
d) None

976. Ramu, 15 yrs of age presents with haemorrhage 5 hrs after tonsillectomy. TVeatment of choice is -
a) External gauze packing *(AIIMS 99)*
b) Antibiotics & mouth wash
c) Irrigation with saline
d) Reopen immediately

977. The position adopted for tonsillectomy is also adopted for this procedure. [Rose Position] - *(JIPMER 03)*
a) Direct laryngoscopy b) Bronchoscopy
c) Tracheostomy d) Indirect laryngoscopy

978. A5 year- old patient is scheduled of for tonsillectomy. On the day of surgery he had running nose, temperature, 37.5°C and dry cough. Which of the following should be the most appropriate decision for surgery? *(AI 06)*
a) Surgery should be cancelled
b) Can proceed for surgery if chest is clear and there is no history of asthma
c) Should get X- ray chest before proceeding for surgery
d) Cancel surgery for 3 weeks and patient to be on antibiotic

979. Indication for Adenoidectomy in children includes -
a) Recurrent respiratory tract infections *(AP 00)*
b) Middle ear infection with deafness
c) Recurrent allergic rhinitis
d) Multiple adenoids

SUP **Adehoidectoinv contraindicated in-** *(NEET/DNB*
'a) SOM , **g||g§l|** CSOhi$^{M\Lambda 7}$ *Eattetp)*
c) Bleeding disorder d) None

981. Tracheostomy is not indicated in (Rajasthan 1997) -
a) Emphysema b) Bronchiectasis *(TN 04)*
c) Atelectasis d) Pneumothorax

982. What is the most common indication of tracheostomy in a child? *(UPSC1I10)*
a) Carcinoma of larynx b) Laryngeal diphtheria
c) Vocal cord paralysis d) Poliomyelitis

m® **A high tracheostomy may be indicated in-** *(SGPGI05)*
a) Scleroma of the larynx *(NEET/DNB Pattern)*
b) Multiple papillomatosis of larynx
c) Bilateral vocal cdrd paralysis
d) Carcinoma of larynx

984. High tracheostomy is indicated in - *(DNB 04)*
a) Carcinoma b)TB
c) Tetanus d) Diphtheria
e) All of the above

985. Tracheostomy done at which level- *(NEET/DNB Pattern)*
a) Tl b) T3
c) T4 d) T5

986. Early complications of tracheostomy are -
a) Haemorrhage *(AIIMS 81; Bihar 91)*
b) Displacement of tube or obstruction
c) Surgical emphysema
d) Tracheal stenosis

987. Most common complication of tracheostomy is -
a) Tracheoesophageal fistula
b) Tracheocutaenous fistula
c) Surgical emphysema
d) Tracheal stenosis

988. A tracheostomised patient, with Portex tracheostomy tube, in the ward, developed sudden complete blockage of the tube. Which of the following is the best next step in the management - *(AIIMSMay 04)*
a) Immediate removal of the tracheostomy tube
b) Suction of tube with sodium bicarbonate
c) Suction of tube with saline
d) Jet ventilation

989. TVacheostomy is indicated in all except - *(MP 97)*
a) Carcinoma larynx
b) Uncomplicated bronchial asthma
c) Diphtheria
d) Comatose patient

990. TVacheostomy is indicated in all except - *(AI91)*
a) Tracheal stenosis
b) Bilateral vocal cord palsy
c) Foreign body larynx
d) Uncomplicated bronchial asthma

991. All are true about tracheostomy tube except -
a) Jackson's tube has 2 lumens *(MP 01)*
b) Removal of metallic tube in every 2-3 days
c) Cuffed tube is used to prevent aspiration of pharyngeal secretion
d) Made up of titanium silver alloy

992. Alpha Lvnch Howarth surgery is for -
||gt:|^|pfS^^®^m^gmtion *(NEET/DJIB pattern)*
111IS WvSi0na§^;:^m^rs:f *ilu'Skr* **fit!**
c) Acoustic a e u r o t n a r „ > , r
d) Otosclerosis

993. In direct laryngoscopy which of following can be visualised - *(PGI Dec. 01)*
a) Cricothyroid b) Lingual surface of eniglottis
c) Arytenoids d) Pyriform fossa
e) Tracheal cartilage

994. Which of the following is difficult to visualize or examine on Indirect Laryngoscopy? *(MH08,07)*
a) True vocal cord b) Anterior commissure
c) Epiglottis d) False vocal cord

973) b 974) a 975)c 976)d 977)c 978)d 979)a 980)c 981)d 982)None 983)d 984)a 985)b 986)a,b,c 987)None 988)a 989)b 990) d 991)b 992)b 993)All 994)b

995. In indirect larynogscopy not seen is - *(CUPGEE 02)*
a) Base of tongue b) Pyriform fossa
c) Glottis d) Sub glottis

996. In right handed person, Direct Laryngoscope is held by which hand? *(AIMS May 12)*
a) Left b) Right
c) Both d) Either of these

997. Which is not visualised on posterior rhinoscopy-
a) Eustachian tube b) Inferior meatus *(AI92)*
c) Middle meatus d) Superior concha

998. Thudichum's nasal speculum is used to visualize -
a) Tonsils b) Larynx *TN03)*
c) Anterior nasal cavity d) Posterior nares

999. Which focal length in the objective piece of microscope is commonly used for ear surgery?
a) 100mm b) 250 mm *(AIMSMay 05)*
c) 450mm d) 950 mm

1000. Which of the following structures is not seen on bronchoscopy - *(AI10, AIMS May 08)*
a) Trachea
b) Vocal cords
c) Subcarinal lymph nodes
d) First segmental division of bronchi

1001. Advantage of fibrooptic bronchoscopy over rigid bronchoscopy is - *(AIMS May 2000)*
a) Foreign body removal
b) Good view
c) Better airway control
d) In a sick child it can be passed through endotracheal tube

1002. Openings of the tube of bronchoscope are known as-
a) Holes b) Apertures *(MH 03)*
c) Vents d) Any of the above

1003. Rigid esophagoscopy is not done in - *(PGI01)*
a) Cervical spine rigidity b) Aortic aneurysm
c) Carcinoma esophagus d) Esophageal web
e) Lung abscess

1004. In a one year old child intubation is done using -
a) Straight blade with uncuffed tube *(MP 02)*
b) Curved blade with uncuffed tube
c) Straight blade with cuffed tube
d) Straight curved blade with cuffed tube

1005. Laparoscopic Intranasal approach is used for accessing all EXCEPT? *(AIMS Nov 10)*
a) Lacrimal sac b) Cerebellum
c) Pituitary gland d) Optic nerve

1006. MicroWick and Microcatheter sustained release devices are used in - *(AIMS May 11, Nov 08)*
a) Drooling of saliva
b) Frey's syndrome
c) Conrol of epistaxis
d) Delivering drug to the round membrane

1007. ;Most common neryfc injured: in. ligation of sup thyroid artery *(NEET/DNB Pattern)*
a) ELN b) Facial N.
c) Mandibular M. d) Auditory N.

1008. Laryngeal mirror is warmed before use by placing-
a) Glass surface on flame *(Karn. 89)*
b) Back of mirror on flame
c) Whole mirror into flame
d) Mirror in boiling water

1009. Route of approach of glossopharyngeal neurectomy-
a) Tonsillectomy approach *(Calcutta 00)*
b) Transpalatal approach
c) Transmandibular approach
d) Transpharyngeal approach

MISCELLANEOUS ENT

1010. X-ray view for supra orbital fissure - *(AIMS 97)*
a) Towne's b) AP
c) Caldwell d)Basal

1011. Which structure is NOT seen in occipitomental (water's) view - *(AIMS May 97)*
a) Anterior ethmoid air cells
b) Posterior ethmoid air cells
c) Maxillary sinus
d) Sphenoid sinus

1012. Caldwell lac view (occipito-frontal) can visualise -
a) Sphenoid sinus b) Nasal bone *(PGI 02)*
c) Maxillary bone d) Ethmoid
e) Frontal sinus

1013. Basal skull view (submentovertical view) X-ray is best to visualize - *(PGI 2K)*
a) Ethmoid sinus b) Frontal sinus
c) Sphenoid sinus d) Maxillary sinus
e) Nasopharynx

1014. Frontal Sinus can be best visualized *hy~(AIIMSNov 10)*
a) Caldwell's view b) Water's view
c) Towne's view d) Schuller's view

1015. Which of the following views is recommended for radiological examination of maxillary sinus - *(2003)*
a) Water's view b) Caldwell view
c) Ferguson's view d) Skyline view

1016. The peri-orbital view is carried out for -
a) Petrous apex *(DPG Mar. 09)*
b) Mastoid process
c) Bilateral mastoid pathologies
d) Internal auditory meatus

1017. Stenver's view is used for - *(NEET/DNB Pattern)*
a) Temporal bone
b) Nasopharyngeal carcinoma
c) Paranasal sinuses

1018. "Gold standard" surgical procedure for prevention of aspiration is - *(AIMS Nov 03)*
a) Thyroplasty
b) Tracheostomy
c) Tracheal division and permanent tracheostome
d) Feeding gastrostomy jejunostomy

995) d 996) a 997)b 998)c 999)b 1000)c 1001)b 1002)c 1003)a,b 1004)a 1005)b 1006)d 1007)a 1008)a 1009) a 1010) c 1011) None >d 1012)b,c,d,e 1013)c 1014)a 1015)a 1016)d 1017)a 1018)c

1019. A female Mamta, 26 year old presented with gradually increasing respiratory distress since 4 days. She gives history of hospitalisation and mechanical ventilation with orotracheal intubation for 2 weeks. Now she is diaganosed as having severe tracheal stenosis What would be the next line of management- *(AIIMSMay 01)*
a) Laser excision and stent insertion
b) Steroids
c) Tracheal dilation
d) Tracheal resection and end to end anastomosis

1020. Laser laryngectomy is done in - *(PGI May 10)*
a) Hemangioma
b) Arytenoidectomy
c) Papilloma larynx
d) Malignant T_4 lesions of the vocal cord

1021. Neck nodes are commonly seen with occult primary in- *(MP2K)*
a) Nasopharyngeal carcinoma
b) Papillary carcinoma of thyroid
c) Medullary carcinoma of thyroid
d) Bronchogenic carcinoma

1022. Mandibular hypoplasia are seen in - *(PGI May 10)*
a) CATCH-22 syndrome
b) Treacher-Collins syndrome
c) Crouzon's syndrome
d) Velocardio-facial syndrome
e) Achondroplasia

1023:: Commbiiest site of Ivory ostebma - *(MP 98, ^EET/DNB Pattern)*
a) Frontal-Ethmodial region
b) Mandible
c) Maxilla
d) Sphenoid

1024. Maxilla achieves maximum size at - *(Manipal 06)*
a) At birth b) At primary dentition
c) At secondary dentition d) At puberty

1025. Hyposmia is common in - *(PGI01)*
a) Coryza b) Influenza
c) CSF rihinorrea d) Fracture base skull
e) Antrochoanal polyps

1026. Which of the following are of viral origin - *(PGI 03)*
a) Laryngeal papilloma
b) Nasopharyngeal carcinoma
c) Vocal nodule
d) Laryngeal web

1027. Kartagener's syndrome-Characteristic is - *(PGI98)*
a) Absence of cilia
b) Cilia under
c) Ultra structural abnormality of cilia
d) None of the above

1028. Bifurcation af trachea takes place at -
a) T_4 - T_5 b) C_6 - C_7 *(NEET/DNB Pattern)*
c) C_3 - C_4 d) T_{10} - T_n

1029. Which of the following is not the site for paraganglioma - *(AIIMS 03)*
a) Carotid bifurcation b) Jugular foramen
c) Promontary in middle ear d) Geniculate ganglion

1030. A patient presented with a 3.5 cms size lymph node enlargement, which was hard and present in the submandibular region. Examination of the head and neck did not yield any lesion. The next investigation to be done - *(AIIMS May 02, MAHE 05)*
a) Chest x ray
b) Triple endoscopy
c) Supravital oral mucosa staining
d) Laryngoscopy

1031. Most radiosensitive tumour of the following is-
a) Supraglottic Ca b) Ca glottis *(AI01)*
c) Ca nasopharynx d) Subglottic ca

1032. Most radiosensitine tumor of the following is -
a) Ca glottis **b)** Ca nasopharynx *(RJ 03)*
c) Ca subglotic area d) Ca thyroid

1033. Herpangina is caused by virus- *(RJ 01)*
a) GroupAcoxackie b) Group B coxackie
c) Measles d) Adenovirus

1034. Thornwalt cysf- " - % \ *J(HEMfJ^$BpBakern)*
[a) Laryngeat cyst * *b)* Nasopharyngeal cyst
It c) Ear c y s t - ; ' d) None ipM jUS

1035. Thornwaldt's abscess is seen in - *(RJ 02)*
a) Ludwig angina b) Pharyngeal bursitis
c) Lateral sinus thrombosis d) Hydrocephalus

1036. Thornwaldt's Abscess FALSE is *(NEET/DNB Pattern)*
a) Antibiotics **b)** Marsopialization
c) Removal of lining d) Antihistaminics

1037. The most common presentation of Wegener's granulomatosis include - *(AP 07)*
a) Fever
b) Sinusitis
c) Glomerulonephritis
d) Diffuse pulmonary infiltrate

1038. Guy's aprosexia is seen in - *(AP 07)*
a) Chronic laryngitis b) Chronic adenoiditis
c) Allergic rhinititis d) Acute tonsillitis

1039. Olfactory area commonly looks - *(AP 2000)*
a) Pink colour b) Yellow colour
c) Greyish white colour d) Blue colour

1040. Treacher collins syndrome, all are present except- *(Bihar 03)*
a) Aural artesia b) Webbed neck
c) Hypoplasia of mandible d) Atrophic lid margins

1041. About skull of newborn, true are all except-
a) Paranasal sinuses are absent *(DNB 01)*
b) Absent diploic spaces
c) Middle ear ossicles are of same size as in adults
d) Mastoid process is not completely formed

1042. Muller's maneuver is - *(MH 02)*
a) Forceful expiration against closed glottis
b) Forceful inspiration against closed glottis
c) Forceful expiration against open glottis
d) Reverse of Valsalva's maneuver

1043. Styalgia is also called as - *(MH08)*
a) Eagle syndrome b) Costen's syndrome
c) Sluder syndrome d) Ramsay Hunt syndrome

1019) d 1020) a,b,c 1021)a 1022)a,b,d 1023)a 1024)c 1025)A11 1026)a,b 1027)c 1028)a 1029)d 1030)b 103 l)c 1032)b 1033) a 1034)b 1035)b 1036)d 1037)b 1038)b 1039)b 1040)b 1041)a 1042)d 1043)a

1044. The commonest cause of hoarseness of voice in elderly man of more than 3 months duration- *(Kerala 94)*
a) Cancer larynx b) Chronic bronchitis
c) Acute laryngitis d) Nodular goitre

1045. The nasopharyngeal space is visualized in OPD by -
a) PNS mirror
b) Tongue depressor
c) Both PNS mirror & tongue depressor
d) None

1046. Oral diaphragm is formed by - *(TN02)*
a) Mylohyoid b) Genioglossus
c) Hyoglossus d) Buccinator

1047. Citelli's angle is - *(J& K 05; NEET/DNB Pattern)*
a) Solid angle b) CP angle
c) Sinodurai angle d) Part of Mac Evans triangle

1048. The sleep apnea syndrome is defined as -
a) 30 or more episodes of apnea during 12 hours sleep *(DELHIPG Mar 09)*
b) 28 or more episodes of apnea during 7 hours sleep
c) 30 or more episodes of apnea during 7 hours sleep
d) 30 or more episodes of apnea during 10 hours sleep

1049. After mandibulectomy, muscle preventing falling back of tongue - *(PGI98)*
a) Genioglossus b) Hyoglossus
c) Palatopharyngeus d) All of the above

OPHTHALMOLOGY

ANATOMY, DEVELOPMENT & CLINICAL EXAMINATION

1. Anteroposterior stability of eyeball is provided by all except - *(AIIMS May 09)*
a) Suspensory ligament of the eye ball
b) Superior oblique
c) Superior rectus
d) Orbital fat

2. The length of the eye ball is - *(AI 94)*
a) 12mm b)16mm
c) 20mm d)24mm

3. The following ocular structure is not derived from surface ectoderm - *(AIIMS May 06)*
a) Crystalline lens
b) Sclera
c) Corneal epithelium
d) Epithelium of lacrimal glands

4. Surface ectoderm gives rise to all of the following structures except - *(AIIMSMay 03, Punjab 11)*
a) Lens b) Corneal epithelium
c) Conjunctival epithelium d) Anterior layers of iris

5. Smooth muscle of the IRIS is developed from- *(COMED06)*
a) Surface Ectoderm b) Mesoderm
c) Neural Crest d) Neural Ectoderm

6. Cornela endothelium is embryologically derived from - *(AIIMS May 09)*
a) Neural crest b) Ectoderm
c) Mesoderm d)Endoderm

7. Retinal blood vessels are developed from - *(AMU 05)*
a) Surface ectoderm b) Paraxial mesoderm
c) Endoderm d) Neuro ectoderm

8. Coloboma, most common site - *(NEET/DNB Pattern)*
a) Superotemporal b) Inferonasal
c) Inferotemporal d) Superonasal

9. Which continues to grow in the Iifetime-(fera/a *03)*
a) Cornea b)Iris
c) Lens d) Retina

10. Axial length of eye ball at birth is_____ % of adult eye - *(Maharashtra 10)*
a) 100 b) 90
c) 70 d)40

11. All statements are true about the eye of a newborn except - *(AI93)*
a) Optic nerve is myelinated only upto lamina cribrosa
b) Orbit is more divergent than adult
c) Apart from macular area the retina is fully differentiated
d) New bom is usually myopic by -2 to -3D

12. Refractive condition of the eye at birth is- *(PGIJune 99)*
a) Hypermetropia of 2D b) Myopia of 2 D
c) Hypermetropia of 5D d) Myopia of 5D

13. Infant Eye is - *(AIIMS Sep 96)*
a) Myopic b) Astigmatism
c) Hypermetropic d)None

14. Critical period of development of fixation reflex is - *(AI 95)*
a) 2-4 months of age b) 6-8 months of age
c) 2 years d) 3 years

15. Keratometry is useful in measuring - *(PGI June 05)*
a) Comeal curvature b) Comeal thickness
c) Comeal diameter d) Depth of anterior chamber

16. Curvature of cornea can be measured by -
a) Keratometry *(PGIDec 05, June 05)*
b) Direct ophthalmoscopy
c) Retinoscopy
d) Perimetry

17. Gonioscopy is used to study - *(PGI June 97)*
a) Ant. Chamber b) Post chamber
c) Angle of anterior chamber d) Retina

18. The thickness of cornea is measured by using -
a) Schiotz tonometer b) Keratometer *(UPSC 04)*
c) Pachymeter d) Aesthesiometer

19. Tonography helps you to determine - *(AI 02)*
a) The rate of formation of aqueous
b) The facility of outflow of aqueous
c) The levels of intraocular pressure at different times.
d) None of the above

20. Facility of aqueous outflow is_____ 1/ min/mm Hg. - *(Maharashtra 10)*
a) 0.8 b)0.6
c) 0.4 d)0.2

21. Inverted Purkinje image is seen *on-(AIIMS Nov 93)*
a) Anterior surface of cornea
b) Anterior surface of lens
c) Posterior surface of cornea
d) Posterior surface of lens

22. Area of fundus seen with direct ophthalmoscope is - *(NEET/DNB Pattern)*
a) 1 DD b). 2 DD
c) 3 DD d) 4 DD

23. The magnification obtained with a direct ophthalmoscope is - *(AI 06, AIIMS May05)*
a) 5 times b) 10 times
c) 15 times d) 20 times

24. Image seen by indirect ophthalmoscopy is- *(PGIDec 00)*
a) Inverted + Virtual b) Erect+Virtual
c) Inverted + Real d) Erect+Real

2 5. Image formed in direct opthalmoscopy *is-(PGIDec 09, Punjab 11)*
a) Real and erect b) Real and inverted
c) Virtual and erect d) Virtual and inverted

2 6. Magnification in Indirect ophthalmoscopy-
a) Depends on power of lens used *(PGI Dec 06)*
b) Depends on refractive error of pt
c) Independent of refractive error of pt

27. Periphery of retina is visualized by - *(PGIDec 02)*
a) Indirect ophthalmoscopy
b) Direct ophthalmoscopy
c) Goniocopy
d) Contact lens

28. Indirect opthalmoscopy detects A/E - *(AIIMS Sep 96)*
a) Examination of ora serrta
b) Retinal periphery
c) Examination of vitreous base
d) Examination of fovea

29. Indirect ophthalmoscopy is done for - *(PGIJune 97)*
a) Central retina b) Periphery of retina
c) Sclera d) Angle of ant. chamber

30. All are true about indirect ophthalmoscope except -
a) Image is real and inverted *(PGI June 97)*
b) Details of fundus can be seen even with slightly hazy media
c) Magnification is more than direct ophthalmoscope
d) Used for seeing periphery of fundus

31. Distant direct ophthalmoscopy is done at a distance of-
a) 20 cm b) 25 cm *(AI99, AIIMS Dec 94)*
c) 50 cm d) 100 cm

32. Fluorescent dye for ophthalmological diagnosis is injected in - *(AI 97)*
a) Antecubital vein b) Popliteal vein
c) Femoral vein d) Subclavian vein

33. Fluorescein angiography is used to identify lesions in all EXCEPT -
a) Retina b) Lens
c) Optic nerve head d) Iris

34. The periphery of retina is visualized with -
a) Indirect binocular ophthalmoscopy *(PGIDec 01)*
b) Direct opthalmoscopy
c) Contact lens
d) Goldman's three mirror contact lens
e) Hruby lens

35. Indocyanine Green Angiography (ICG Angiography) is most useful in detecting - *(AI 09)*
a) Occult Choroidal Neovascularization (Occult CNV)
b) Classic choroidal neovascularization(Calssic CNV)
c) Angioid streaks with choroidal Neovascularization (CNV)
d) Polypoidal choroidal vasculopathy

36. Which type of tonometer is best for measuring IOT-
a) Schiotz tonometer *(Kerala 01)*
b) Applantation tonometer
c) Pulse air tonometer
d) Intendation tonometer

37. Corneal endothelial cell count is done by -
hhtfSfy Specular *tmcxosco^^^f^^ET^JNB Pattern}^*
b) Keratometry
c) Gonioscopy
d) Slit%mp"

38. A wave in ERG is due to activity of- *(NEET/DNB Pattern)*
a) Pigmented epithelium b) Rods a nd cones
c) Ganglion cell d) Bipolar cell

39. Arden index is related to - *(AI 10)*
a) ERG (Electroretinogram)
b) EOG (Electroculogram)
c) VER (Visual Evoked response)
d) Perimetry

40. Perimetry is a test to assess the - *(Karn 11)*
a) Visual acuity b) Intraocular pressure
c) Visual field d) Depth of the anterior chamber

41. True about visual testing in a child - *(PGI Dec 06)*
a) Visual evoked potential
b) Teller's acquity card test
c) Perimetry
b) Keratometry

42. All except one are tests for macular fucntions-
a) Laser interferometry *(AIIMS Dec 97)*
b) Two point discrimination
c) Maddox rod test
d) Retinal ERG Electrorectinogram

43. Amsler grid is used in - *(PGI Dec 00)*
a) Detecting maculopathy b) Optic disc examination
c) Squint d) Retinal examination

44. Coloured halos are seen in all, except -
a) Cataract *(AIIMS Nov 93)*
b) Angle closure glaucoma
c) Corneal edema
d) Corneal opacity

45. Coloured halo is seen in all except - *(PGI June 99)*
a) Open angle glaucoma b) Closed angle glaucoma
c) Cataract d) Any of the above

46. Coloured halos are seen in all, except -
a) Mucopurulent conjunctivitis *(AIIMS Dec 90)*
b) Acute anterior uveitis
c) Tetracycline
d) Glaucoma

47. Floaters can be seen in following *except-(AHMSMay 95)*
a) Vitreous haemorrhage b) Retinal detachment
c) Uveitis d) Ac. congestive Glaucoma

48. Sudden painful loss of vision seen in - *(PGI Dec 04)*
a) Angle closure glaucoma
b) Central retinal artery occlusion
c) Acute uveitis
d) Endopthalmitis
e) Retinal detachment

49. Painful loss of vision is seen in - *(PGI Dec 06)*
a) Senile cataract
b) Primary open angle glaucoma
c) Primary angle closure glaucoma
d) Anterior uveitis

50. Painless sudden visual loss is seen in all except - *(AIIMS May 05)*
a) CRAO b) Retinal detachment
c) Vitreous hemorrhage d) Angle closure glaucoma

51. In the normal human right eye, the peripheral field of vision is usually least - *(AI 02)*
a) On the left side (nasally)
b) In the downwad direction
c) In the upward direction
d) On the right side (temporally)

28) d 29) b 30) c 31)b 32) a 33) b 34) a 35) a 36) b 37) a 38) b 39) b 40) c 41) a,b

ELEMENTARY OPTICS

52. Power of a reduced eye is normally - *(A197)*
a) 20-D b)35-D
c) 18-D d)58-D

53. Normal eye power is - *(NEET/DNB Pattern)*
a) 6D b) 8D
c) +60D d) +17D

54. Refractive index of cornea is - *(AIIMS Dec 97)*
a) 133 b) 1.37
c) 1.42 d) 1.45

55. Most important factor determining convergence of light rays on retina is - *(AI97)*
a) Length of eyeball
b) Dioptre power of lens
c) Refractive index of cornea
d) Physical state of vitreous

56. Most important factor determining convergence of light rays on retina is - *(ARMS May 95)*
a) Physical state of vitreous b) Diopter power of lens
c) Curvature of cornea d) Length of eyeball

ill 1 Whicfrcomponentof the eyehas maximumrefractive index - *(AIIMS May 10, May 09, Nov 08, NEET/DNB Pattern)*
a) Anterior surface of the lens
b) Posterior surface of the lens
c) Centre **or** the lens
d) Cornea

58. Refractive power of eye depends upon mainly following factor/ factors - *(PGI Dec 02)*
a) Lens b) Cornea
c) Vitreous haemorrhage d) Aq. Humours
e) Axial length of the eye

59. If the axial length of the eyeball is changed by 1 mm then the power changes by - *(ARMSMay 02)*
a) 1 diopter b) 2 D
c) 3D d)4D

60. Visual axis is - *(NEET/DNB Pattern)*
a) Center of cornea to retina b) Object to fovea
c) Center of lens to cornea d) None

ERRORS OF REFRACTION

61. Anisometropia means - *(SGPGI05)*
a) Both the eye are not oriented in the same parallel axis
b) There is high difference of refractive errors between the two eye
c) Subluxation of one of the eye
d) Difference in image sizes

62. Unequal eye power is known as - *(MAHE 05)*
a) Anisometropia b)Emmetropia
c) Ametropia d) Astigmatism

63. A man, 35 yrs of age complains of poor near vision Distant vision is normal. Retinoscopy at 1 meter shows + 2D spherical lens. He has - *(ARMSNov 99)*
a) Hypermetropia b) Presbyopia
c) Myopia d) Accommodation paralysis

64. Pseudopapillitis is seen in - *(DPG 10)*
a) Myopia b) Hypermetropia
c) Squint d) Presbyopia

65. Hypermetropia - True is - *(Manipal 08)*
a) Accommodative convergent squint may develop in children
b) Light fals in front of retina
c) Corrected with concave glasses
d) Short sight

66. A child presented with difficulty in seeing the blackboard in school. His teachers say that he frequently squeezes his eyes. Most probable cause is- *(ARMS Nov 00)*
a) Hypermetropia b) Myopia
c) Presbyopia d) Astigmatism

67. True in myopes - *(PGI Dec 06)*
a) Use diverging lens
b) Image formed in front of retina
c) Far point becomes near
d) Fundus normal

68. The most common cause of myopia is - *(MAHE 07)*
a) A-P diameter is increased
b) The thickness of lens is increased
c) The viscosity of squous humour is increased
d) The viscisity of vitous humour is increased

69. Fundal picture in myopia - *(Jipmer 03)*
a) Soft exudate
b) Hard exudates
c) Cystoid degeneration
d) Flame shaped hemorrhages

70. Foster's fusch's spots are seen in - *(NEET/DNB Pattern)*
a) Hypermetropia b) Myopia
c) Astigmatism d) None

71. Which is the most common complication of pathological myopia? *(DPG10)*
a) Glaucoma b) Cataract
c) Haemorrhage d) Retinal detachment

72. Which one of the following is the serious complication of degenerative myopia in the eye -
a) Retinal detachment *(UPSC02)*
b) Vitreous liquification
c) Myopic crescent
d) Posterior staphyloma

73. Which of the following is used for treatment of Myopia- *(Jipmer04)*
a) Nd-YAG LASER b)Excimer Laser
c) Carbamazepine d)SSRI

74. The most accepted modality of treatment of 2D myopia in a 13 year old girl is - **(***UPSC 05)*
a) Spectacles b) Excimer laser
c) Contact lens d) Radial keratotomy

75. Soft contact lens is used - *(APPG 06)*
a) High myopia b) Astigmatism
c) Presbyopia d) Keratoconus

52) d 53) c 54) b 55)c 56)c 57)c 58)a,b,e 59)c 60)b 61)b 62)a 63)a 64)b 65)a
66) b 67) a,b,c,d 68) a 69) c 70) b 71) d 72) a 73) b 74) a 75) a

76. Astigmatism is due to - *(SRMC 02)*
a) Irregularity of curvature of cornea
b) Irregularity of curvature of lens
c) Forward displacement of the lens
d) Backward displacement of lens

77. In simple astigmatism, foci of image formed on -
a) Both image are formed in front of retina
b) Both image are formed behind retina *(PGIDec 08)*
c) One image front & other behind the retina
d) One on retina, other behind the retina
e) One on retina, other front of the retina

78. A55-years-old male with a limbal scar presents to the ophthalmology clinic with markedly defective vision for near and far. Clinical examination reveals a wide & deep anterior chamber, iridodonesis and a dark pupillary reflex. A vision of 6/6 is achieved with correcting lens of+11D. Which of the following is the most likely diagnosis - *(AI 12)*
a) Aphakia
b) Pseudophakia
c) Hypermetropia
d) Posterior Dislocation of Lens

79. Treatment of choice in aphakia - *(AI 98,96, UP 07, 06)*
a) Contact lens b) Spectacles
c) IOL d) Laser therapy

80. Jkpk in feoi scotoma is seen affeF .correction of Aphakia by - *(NEET/DNB Pattern)*
a) IOL b) Spectacles
c) Contact lens d) None

81. Aniseikonia means - *(AIIMSMay 03)*
a) Difference in the axial length of the eyeballs
b) Difference in the size of corneas
c) Difference in the size of pupils
d) Difference in the size of image formed by the two eyes

82. ? Accommodation is due to - *(NEET/DNB ~Pattern)*
a) Relaxation of ciliary muscles
b) Gontractiohofciliarymusclps
c) Contraction ofdilatorpupillae
d) None

83. True about presbopia - *(PGI June 04)*
a) Age related defect of refraction
b) Defect in accommodation
c) Concave lens used
d) Convex lens used

84. Treatment of presbyopia - *(PGI Dec 02)*
a) LASIK b) Concave lens
c) Convex lens d) Radial keratotomy

85. A14 yrs old boy complains of pain during reading. On examination, his both eyes are normal and vision with Snellen's reading is 6/5. He still complains of pain on occluding one eye. The diagnosis is- *(AIIMSMay 01)*
a) Myopia b) Pseudomyopia
c) Hyperopia d) Emmetropia

86. A 35 years old hypermetrope is using 1.50D sphere both eyes. Whenever his glasses slip downward on his nose he will feel that his near vision - *(AI 02)*
a) Becomes enlargedb) Becomes distorted
c) Becomes decreased d) Remains the same

87. A 30 year old man has 6/5vision each eye, unaided. His cyclopegic retinoscopy is + 0.0 D sph. at 1 metre distance. His complaints are blurring of newsprint at 30 cm, that clears up in about two minutes. The most probable diagnosis is - *(AI 05)*
a) Hypermetropia b) Presbyopia
c) Accommodative inertia d) Cycloplegia

88. Retinoscopy is done on a 0.5D myopic patient at a distance of 1 metre. Movement of the image will -
a) Move with the mirror *(AIIMS Nov 01)*
b) Move opposite to the mirror
c) No movement of image with mirror
d) Image can move to any side

89. On performing refraction using a plane mirror on a patient who has a refractive error of -3 D sphere with-2 D cylinder at 90° from a distance of 1 metre under no cycloplegia, the reflex would be seen to move- *(AIIMS May 04)*
a) With the movement in the horizontal axis and against the movement in the vertical axis
b) With the movement in both the axes
c) Against the movement in both the axes
d) With the movement in the vertical axis and against the movement in horizontal axis

90. In retinoscopy for refractive error at 1 m we add ID if done at distance of 66 cm, the addition factor will be- *(PGI Dec 99)*
a)-2 b) -1.5
c) -0.5 d)-5

Objective assessment of the refractive state of the eye is termed - *(Corned 08, NEET/DNB Pattern)*
a) Retinoscopy b) Gonioscopy
c) Ophthalmoscopy d) Kcratoscopy

92. Duochrome test is for - *(NEET/DNB Pattern)*
a) Subjective verification of refraction
b) Subjective refinement, of refraction
c) Subjective binocular balancing
d) None

93. Cross cylinders is - *(PGI June 05)*
a) One plus cylinder and one minus cylinder of equal strength
b) One plus cylinder and one minus cylinder of unequal strength
c) Two plus cylinders
d) Both minus cylinders
e) One spherical & one cylindrical lens

94. The Most convenient form of cross cylinder is a combination of - *(Maharashtra 10)*
a) -0.5 Diopter sphere with+1 Diopter Cylinder
b) +0.5 Diopter sphere with -1 Diopter Cylinder
c) +0.25 Diopter sphere with-0.5 Diopter Cylinder
d) -0.25 Diopter sphere with +0.5 Diopter Cylinder

76) a 77) d,e 78) a 79) c 80) b 81)d 82) b 83)b,d 84) c 85) b 86) a 87) c 88) a 89) c
90) b 91) a 92) b 93)a,e 94) a

95. Agent used for dilatation of pupil in children is -
a) Atropine *(AIIMS Feb 97,*
b) Homatropine *AI96, AIIMS Dec 98)*
c) Tropicamide
d) Phenylephrine

96. A patient Mohan, aged 60 yrs* needs an eye examination. He needs a drug which will dilate his eyes but not paralyse his ciliary muscles- *(AIIMS*
a) Atropine b) Phenylephrine *Nov01)*
c) Cyclopentolate d) Tropicamide

97. All of the following are cycloplegics except - *(AI 97)*
a) Phenylephrine b) Atropine
c) Homatropine d) Cocaine

98. All of the following are examples of mydriatics except-
a) Atropine b) Homatropine *(AI 97)*
c) Tropicamide d) Pirenzepine

99. Mydriatic used in 3 years old child for refraction is - *(AI 99)*
a) 1 % Atropine drops
b) 1% Atropine ointment
c) 1% Homoatropine drops
d) 1% Tropicamide drops

100. For refraction in a hypermetropic child, which is the best drug - *(AIIMS May 93)*
a) Phenylephrine b) Atropine ointment
c) Atropine drops d) Homatropine

101. Soft contact lens is made up of - *(AIIMS May 94)*
a) PMMA b) HEMA
c) Glass d) Silicone

102. Contact lens wear is proven to have deleterious effects on the corneal physiology. Which of the following statements is incorrect in connection with contact lens wear ? *(AI 05)*
a) The level of glucose availability in the corneal epithelium is reduced
b) There is a reduction in hemidesmosome density
c) There is increased production of $C0_2$ in the epithelium
d) There is a reduction in glucose utilization by corneal epithelium.

103. Complications of soft contact lens are A/E -
a) Giant papillary conjunctivitis *(PGIDec09)*
b) Folliculosis
c) Corneal vascularization
d) Corneal erosion
e) Acanthomeba keratitis

104. A patient with contact lens is diagnosed to have overweare syndrome. He has symptoms of photophobia, redness, blurring of vision, Treatment should be - *(AIIMS June 00)*
a) Antibiotic + cyclopegic
b) Avoid wearing of contact lens for 48 -72 hours
c) Removal of contact lens and wear new lens
d) Send the lens for culture sensitivity

105. A soft contact lens user presents to you with pain, watering, photophobia and a white spot in the centre of the cornea. What will be you initial management?
a) Start frequent antibiotic eye drops after discontinuing the contact lens *(AIIMS May 04)*
b) Pad & bandage the eye for 12 hours
c) Frequent instillation of artificial tears
d) Topical non steroidal anti inflammatory drugs (NSAIDS)

106. A soft contact lens users has corneal keratitis cause is- *(AIIMS June 99)*
a) Acanthamoeba - ulcer b) Erosion of cornea
c) Pseudomonas infection d) Herpes infection

107. Commonest cause of keratitis in soft contact lens users is - *(PGI June 98)*
a) Acanthamoeba b) Staph aureus
c) Naegleria d) Herpes

108. An otherwise healthy Person who wears contact lenses develops a small ulceration of eye. what is the cause - *(HP 2006)*
a) Acanthamoeba b) Cytomegalovirus
c) Toxocama d) Toxoplasma

109. A person with prolonged usage of contact lenses presented with irritation of left eye. After examination a diagnosis of keratitis was made and corneal scrapings revealed growth of pseudomonas aeroginosa. The bacteria were observed to be multidrug resistant. Which of the following best explains the mechanism of antimicrobial resistance in these isolated pseudomonas aeroginosa strains - *(AI 10)*
a) Ability to transfer resistance genes from adjacent commonsal flora
b) Improper contact lens hygiene
c) Frequent and injudicious use of topical antibiotics
d) Ability of pseudomonas to produce biofilms

110. Treatment modalities for myopia are - *(PGIDec 00)*
a) Radial keratotomy b) LASER Keratomileusis
c) Epikeratophakia d) LASER Keratoplasty

111. Refractive power of eye can be changed by- *(PGI Dec 02, June 02)*
a) Radial keratotomy b) Keratomileusis
c) IOL d) LASIK
e) Photocoagulation

112. Radial keratotomy is used as treatment modality for-
a) Small degree in myopia *(PGI Dec 9 7)*
b) Progressive non healing ulcer
c) High astigmatism
d) High hypermetropia

113. LASIK is used in - *(Manipal 06)*
a) Myopia b) Hypermetropia
c) Astigmatism d) Presbyopia

114. A lady wants LASIK surgery for her daughter. She asks for your opinion. All the following things are suitable for performing LASIK surgery except -
a) Myopia of 4 Diopters *(AI 03)*
b) Age of 15 years
c) Stable refraction for 1 year
d) Corneal thickness of600 microns

95) a 96) b 97)a 98)c 99)b 100)b 101)b 102)a 103)b 104)a 105)a 106)c 107)a 108)a 109)d 110)a,b lll)a,b,c,<i 112)a 113)a>b,c,d 114)b

CONJUNCTIVA

115. Conjunctival epithelium is- *(PGIJune05)*
a) Pseudostratified
b) Stratified columnar
c) Stratified non keratinized squamous
d) Transitional

116. Maximum density of globlet cells is seen in *-(AI04)*
a) Superior conjunctiva b) Inferior conjunctiva
c) Nasal conjunctiva d) Temporal conjunctiva

117. Staphylococcal conjunctivitis is associated with -
a) Corneal margin infiltration *(PGI Dec 01)*
b) Phylctenular conjunctivitis
c) Vernal conjunctivitis
d) Hordeolum
e) Follicular conjunctivitis

118. Ophthalmia neonatorum is caused *by-(PGIDec 03,*
a) Gonorrhoea b) H. Influenzae *02)*
c) Chlamydia d) Pseudomonas
e) Staph, aureus

119. Neonatal conjunctivitis is caused by ail except- *(NEET/DNB Pattern)*
a) Gonococcus b) Chlamydia
c) Aspergillus d) Pseudomonas

120. Unilateral watery discharge from the eye of a new born, with no edema or chemosis is due to - *(AI 00)*
a) Chamydia b) Gonococcus
c) Sticky eye d) Chemical conjunctivitis

121. Which of the following is not given in ophthalmia neonatorum - *(ARMS May 94)*
a) Erythromycin locally b) Tetracycline 1%
c) Penicillin locally d) Silver nitrate

122. Inclusion body conjunctivitis true is all except-
a) Self limiting *(NEET/DNB Pattern)*
b) Present only in infants
c) Occurs while passage from birth canal
d) Caused by chlamydia

123. Angular conjunctivitis is caused by *-(PGI June 00)*
a) Moraxella b) Virus
c) Bacteroides d) Fungus

124. Angular conjunctivitis is caused by -
a) H. influenza *(SRMC, NEE*
b) Adenovirus type 3 **2** *p*
c) Morax-axenfield bacillus
d) Brahnmella

125. The specific topical remedy suggested for angular conjunctivitis is - *(ARMS June 92)*
a) Dexamethasone b)Sulphacetamide
c) Zinc sulphate d) Penicillin

126. In membranous conjunctivitis membrane is found in- *(TN03)*
a) Limbus b) Palpebral conjunctiva
c) Bulbar conjunctiva d) Cornea

127. Pseudomembranous conjunctivitis is caused by-
a) Gonococcus *(PGI 90)*
b) Staphylococcus
c) Streptococcus
d) Keratoconjunctivitis sicca

128. Conjunctivitis is seen in all except- *(ARMS98)*
a) CMV b) Adenovirus
c) CoxsackieA-24 d)Entero70

129. Which of the following does *not* cause hemorrhagic conjunctivitis - *(AI 95)*
a) Adenovirus b) Coxsackie - 24
c) Enterovirus - 70 d) Papilloma virus

130. Hemorrhagic conjunctivitis occurs with- *(ARMS*
a) Herpes zoster b) Herpes simplex *May 94)*
c) Enterovirus d) Picomavirus

131. A patient complains of pain in both eyes with congestion. Blurring of vision, photophobia and mucopurulent discharge since one day. Many cases have been reported from the same community. The causative agent is probably - *(ARMSMay 01)*
a) Adenovirus b) Enterovirus 70
c) Herpes simplex d) ECHO virus

132. Acute hemorrhagic conjunctivitis is seen with- *(DPGFeb. 09)*
a) Adenovirus b)Staphylococcal
c) Pneumococcus d) Hemophilus

133. Seen in trachoma are/ is - *(PGIDec 00)*
a) Papillary hypertrophy b) Follicles
c) Pannus formation d) Herbert's pits
e) Ropy discharge

134. Pathognomonic of trachoma is - *(Jipmer 03)*
a) Bulbar papillae b) Palpebral papillae
c) Bulbar follicles d) Palpebral follicles

135. Herbert's pits are seen in *-(MH10, ARMS May 95)*
a) Trachoma b) Spring catarrh
c) Phlyctenular conjunctivitis d) Sarcoidosis
e) Molluscum contagiosum

136. Arlt's line is seen in - *(AI 04, PGI June 02)*
a) Vernal keratoconjunctivitis b) Pterygium
c) Ocular pemphigoid d) Trachoma

137. Which of the following is/are caused by trachoma -
a) Entropion b) Ectropion
c) Pinguecula d) Corneal opacity
e) Dry eye

138. All are seen in stage HI trachoma except - *(DPG10)*
a) Tarsal epitheliofibrosis
b) Trachomatous pannus
c) Herbert's pits
d) Disappearance of Bowman's membrane

139. All are features of TVachoma stage HI, except -
a) Herbert's pits *(PGI Dec 08)*
b) Pannus
c) Necrosis in scar
d) Scar on tarsal conjunctiva

140. All statements are true about trachoma except-
a) Trachoma is caused by bedsonian organism of psittacosis - lymphogranuloma - trachoma (PLT) group.
b) Strains mainly responsible are A, B, Ba and C
c) Marked papillary hyperplasia with limbal follicles are seen in stage III
d) Mature follicles are seen in stage Ha

115) c 116)c 117)a,b 118)a,c,d,e 119)c 120) d 121) d 122)b 123) a 124) c 125) c 126)b 127)a,b,c
128) a 129) d 130)c,d 131)b 132)a 133)a,b,c,d 134)c 135)a 136)d 137)a,d,e 138)b 139)b 140)c

141. In the grading of trachoma, trachomatous inflammation -follicular is defined as the presence of- *(AIIMS Nov 02)*
a) 5 or more follicles in the lower tarsal conunctiva
b) 3 or more follicles in the lower tarsal conjunctiva
c) 5 or more follicles in the upper tarsal conjunctiva
d) 3 or more follicles in the upper tarsal conjunctiva

142. Follicles of a diameter of 5mm are typically seen in-
a) Pharyngoconjunctival fever *(Karn 11)*
b) Trachoma
c) Drug induced follicular conjunctivitis
d) Ophthalmia neonatorum

143., Drug of choice of trachoma is - *(AIIMS Dec 90)*
a) Penicillin b) Sulfonamide
c) Tetracycline d) Chloramphenicol

144. Tetracycline ointment for mass prophylaxis -
a) 0.1% b) 0.5% *(NEET/DNB Pattern)*
c) 1% d) 5%

145 , Inclusion conjunctivitis is caused by - *(PGINov 08)*
a) Chlamydia trachomatis b) Chlamydia psittaci
c) Herpes d) Gonorrhea

Spring catarrah is - *(PGI June 05, NEET/DNB Pattern)*
a) Type 1 hypersensitivity reaction
b) Type II
C) Type III
d) Type IV

"Ropy discharge" from the eye is seen in - *(AI91,*
a) Phylectenular conjunctvitisA'A7iT//}.VZ? *Pattern)*
b) Swimming pool conjunctvitis
c) Spring catarrh
d) Epidemic keratoconjunctivitis

148. Features of vernal conjunctivitis ar *z-(PGI May 10)*
a) Shield ulcer b) Homer-Tranta's spots
c) Papillary hypertrophy d) Herbert pits
e) Pannus

149. Ramu, age 10, yr present with itching in his eye, foreign body sensation, & ropy discharge since several months. These symptoms are more prominent in summer. Most probable diagnosis is -
a) Vernal conjunctivitis *(AI04, AIIMS Nov 01)*
b) Fungal keratoconjunctivitis
c) Viral conjunctivitis
d) Trachoma

150. A recurrent bilateral conjunctivitis occurring with the onset of hot weather in young boys with symptoms of burning, itching, and lacrimation with polygonal raised areas in the palpebral conjunctiva is - *(AI03)*
a) Trachoma
b) Phylctenular conjunctivitis
c) Mucopurulent conjunctivitis
d) Vernal kerato conjunctivitis

151. A 12 years old boy presents with recurrent attacks of conjunctivitis for the last 2 years with intense itching and ropy discharge. The diagnosis is- *(AIIMS May 01)*
a) Vernal conjunctivitis
b) Phlyctenular conjunctivitis
c) Trachoma
d) Viral conjunctivitis

152. A/E seen in spring catarrh - *(PGIDec 06)*
a) Follicles b)Pseudogeronto
c) Shield's ulcer d) Tranta's spot

153. Features of vernal keratoconjunctivitis are -
a) Papillary hypertrophy *(PGI Dec 05, June 03)*
b) Follicular hypetrophy
c) Herbert's pits
d) Trantra's Spot
e) Ciliary congestion

154. Seen in vernal catarrh are - *(PGI Jun 03)*
a) Papillary hypertrophy b) Follicles
c) Pannus formation d) Shield ulcer
e) Ropy discharge

155. Trantas spots are seen in - *(UP 08, AIIMS June 98, May 93, AI 96)*
a) Vernal conjunctivitis
b) Eczematous conjunctivitis
c) Ophthalmia nodosa
d) Tularemia

156. Cobblestone appearance of conjunctiva is typically seen with - *(AIIMS Feb 97, Dec 94, PGI Dec 99, June 98)*
a) Phlyctenular conjunctivitis
b) Foreign body
c) Spring catarrh
d) Trachoma

157. Vernal keratoconjunctivitis - *(Manipal09)*
a) Is usually unilateral
b) Eosinophil is common in the papillae
c) Is commoner in adult than children
d) Causes corneal melt

158. Complication of vernal kerato conjunctivitis -
a) Cataract *(NEET/DNB Pattern)*
b) Keratbconus
c) Retinal detachment
d) Vitreoiis hemorrhage

159. Treatment of vernal keratoconjunctivitis includes • all except - *(NEET/DNB Pattern)*
a) Steroids b) Chromoglycate
c) Olopatadine d) Antibiotics

160. Topical sodium cromoglycate is used in treatment of- *(COMED09)*
a) Phlyctenular conjunctivitis
b) Vernal catarrh
c) Subconjunctival haemorrhage
d) Trachoma

161. Type IV hypersensitivity to Mycobacterium tuberculosis antigen may manifest as - *(AI 03)*
a) Iridocylitis
b) Polyarteritis nodosa
c) Phlyctenular conjunctivitis
d) Giant cell arteritis

141)c 142) b 143) c 144)c 145)a 146)a 147)c 148)a,b,c 149)a 150)d 151)a 152)a 153)a,d 154)a,d,e
155) a 156) c 157)b 158)b 159)d 160)b 161)c

162. Phlyctenular conjunctivitis false is - *(Manipal 09)*
a) The most common cause is tuberculosis
b) The lesions are typically found near the limbus
c) Predominantly affects children
d) Is a type IV hypersensitivity reaction

163. Phlycten is due to - *(PGI Dec 98)*
a) Exogenous allergy b) Endogeneous allergy
c) Viral keratitis d) Fungal keratitis

164. Phlyctencular conj unctivitis is associated with -
a) Tuberculosis *(UPSC-110)*
b) Syphilis
c) Stevens Johnson syndrome
d) Leprosy

165. A malnourished child from a poor socioeconomic status, residing in overcrowded and dirty areas presents with a nodule around the limbus with hyperemia of surrounding conjunctiva in his left eye. He is also observed to have axillary and cervical lymphadenopathy. Which of the following is the most likely diagnosis - *(A1 12)*
a) Phlyctenular conjunctivitis
b) Foreign body granuloma
c) Vernal keratoconjunctivitis
d) Episcleritis

166. Papillae are seen in - *(Manipal 08)*
a) Trachoma b) Viral conjunctivitis
c) Spring catarrh d) All the above

167. Follicular conjunctivitis are found in all except -
a) Herpes simplex conjunctivitis *(PGI Nov. 10)*
b) Drug induced
c) Adult inclusion conjunctivits
d) Allergic conjunctivits
e) Molluscum contagiosum

168. Giant Papillary Conj unctivitis is caused by -
a) Contact Lens wear *(Karnataka 04)*
b) Ocular Prosthesis
c) Protruding corneal sutures
d) All of the above

169. Giant papillary conjunctivitis is seen - *(APPG 06)*
a) Trachoma
b) Contact lens
c) Phlytenular conjunctivitis
d) Vernal kerato conj unctivitis

170. Pterygium is - *(AIIMSMay 08)*
a) A vascular anomaly
b) A connective tissue degeneration
c) An inflammatory condition
d) Associated with Vit. A deficiency

171. Pterygium all are true except - *(PGI June 08)*
a) Arise from any part of conjunctiva
b) Can cause astigmatism
c) Surgery is treatment of choice
d) UV exposure is risk factor
e) Stromal defect seen

172. The histology of pterygium includes - *(Manipal 09)*
a) Elastotic degeneration
b) Epithelial inclusion bodies
c) Precancerous changes
d) Squamous metaplasia of the epithelium

173. Stocker's line is seen in - *(AIIMS Nov 10)*
a) Pinguencula
b) Pterygium
c) Congenital Ocular Melanosis
d) Conjunctival epithelial melanosis

174. Visual impairment in pterygium is due to -
a) Astigmatism b) Myopia *(Jipmer 11)*
c) Hypermetropia d) Hazy cornea

175. Subconjunctival hemorrhage occurs in all conditions except - *(Jipmer 04)*
a) Passive venous congestion
b) Pertusis
c) Trauma
d) High intraocular tension

176. Subconj unctival cyst is seen *m-(NEET/DNBPattern)*
a) Toxoplasmosis b) Cysticercosis
c) Leishmaniasis d) Chaga's disease

177. Parenchymatous xerosis of conjunctiva is caused by-
a) Trachoma *(PGI 02)*
b) Vitamin A deficincy
c) Vernal catarrh
d) Phlyctenular keratoconjunctivitis
e) Alkali bums

CORNEA

178. True about anatomy of adult cornea - *(PGI June 09, Dec 07)*
a) Horizontal diameter is 12 mm
b) Horizontal diameter is 10 mm
c) In megalocomea diameter is > 12mm
d) In microcomea diameter < 10mm
e) Vertical diameter > Horizontal diameter

179. True about cornea - *(PGI Nov. 10)*
a) Power is 43 D
b) Majority of refraction occur at air - tear interface
c) With the rule astigmatism is present because vertical meridian more steep than horizontal meridian
d) Spherical structure
e) Refractive index 1.334

180. Corneal epithelium is composed of - *(PGI Dec 01)*
a) Stratified keratinized epithelium
b) Stratified non- keratinized epithelium
c) Columnar epithelium
d) Pseudostratified epithelium
e) Transitional epithelium

181. This layer of cornea has no regenerating capacity -
a) Stroma/Bowman's membrane *(Manipal 08, UP 08)*
b) Endothelium
c) Epithelium
d) Descemet's membrane

162) a 163) b 164)a 165)a 166)d 167)None 168)d 169)b 170)b 171)a 172)a 173)b 174)a 175)d 176)b 177) a,e 178)a,d 179)a,b,c 180)b 181)a

182. Avascular coat in eye is - *(PGI Dec 99)*
a) Sclera b) Cornea
c) Retina d) Choroid

183. Metabolically active layer of cornea is - *(AI91)*
a) Endothelium b) Stroma
c) Descemet membrane d) Epithelium

184. Corneal transparency is maintained by all except -
a) Relative dehydration *(AHMS Nov 07)*
b) Increased mitotic figures in centre of cornea
c) Unmyelinated nerve fibres
d) Uniform spacing of collagen fibrils

185. The corneal transparency is maintained by -
a) Keratocytes *(AIIMSNov05)*
b) Bowman's membrane
c) Descement's membrane
d) Endothelium

186. Corneal transparency is due to all except - *(WB 98)*
a) Na^+ -K^+ pump
b) Normal IOT
c) Hypercellular stroma
d) Peculiar arrangement of lamella

187. Ionic pump in corneal endothelium is necessary for maintaining deturgescence of the cornea and thus transparency. It can be blocked by -*(A1IMS Nov 07)*
a) Inhibition of anaerobic glycolysis
b) Activation of anaerobic glycolysis
c) Inhibition of Kreb's cycle
d) Inhibition of HMP pathway

188. Corneal layer responsible for deturgescence -
a) Bowman's membrane *(MAHE 05)*
b) Endothelium
c) Epithelium
d) Stromal

189. Which of the following organism can penetrate the normal cornea - *(PGIDec 02)*
a) Gonococcus b) Pseudomonas
c) Diphtheria d) Streptococcus
e) Staphylococcus epidermidis

190. Intact cornea can be penetrated by-*(NEET/DNB Pattern)*
a) Gonococcus b) Pseudomonas
c) Streptococcus d) Pneumococcus

i 91. Ulcer serpens is caused by - *(DPG10)*
a) Pseudomonas pyocynaeceous
b) Pneumococcus
c) Corynebacteria
d) Gonorrhoea niesseria

192. True about fungal corneal ulcer - *(PGI June 08)*
a) Satellite lesion b) Symptoms more than signs
c) Purulent ulcer d) Hypopyon
e) Dry ulcer

193. Features of fungal ulcer - *(PGI June 06, Dec 05)*
a) Symptoms more than signs
b) Dry ulcer
c) Diffuse corneal edema
d) Hyphated margins

194. All are features of fungal keratitis, except -
a) Less symptoms, more signs *(ARMSNov 93)*
b) Infected hypopyon
c) Early vascularisation of cornea
d) Dry white slough

195. True about fungal corneal ulcer - *(PGIDec 04)*
a) Symptoms are severe b) Dry looking ulcer
c) Satellite lesion d) Shifting hypopyon
e) Immunogenic ring

196. A young man aged 30 years, presents with difficulty in vision in the left eye for the last 10 days. He is a rural community and gives history of trauma to his left eye with vegetative matter 10-15 days back. On examination, there is an ulcerative lesion in the cornea, whose base has raised soft creamy infiltrate. Ulcer margin is feathery and hyphate. There are a few satellite lesions also. The most probable etiological agent is - *(A1IMS May 04)*
a) Acanthamoeba b) Corynebacterium diphtheriae
c) Fusarium d) Streptococcus pneumoniae

197. A 30 year old male presents with a history of injury to the eye with a leaf 5 days ago and pain, photophobia and redness of the eye for 2 days. What would be the most likely pathology ? *(ARMSNov 02)*
a) Anterior uveitis b) Conjunctivitis
c) Fungal corneal ulcer d) Corneal laceration

198. Microscopy of corneal ulcer showed branching septate hyphae. The probable diagnosis - *(ARMS 2K)*
a) Candida b)Mucormycosis
c) Aspergillus d) Histoplasma

199. Which of thefollowingis the drug of choice of treatment of corneal ulcers caused by filamentous fungi ? a) Itraconazole b) Natamycin *(AI06)*
c) Nystatin d) Fluconazole

200. Topical antifungal used in corneal fungal infection - *(ARMS May 08)*
a) Silver sulfadiazine b) Neomycin
c) Natamycin d) Griseofulvin

201. Which of the following will be the most important adjuvant therapy in a case of fungal corneal ulcer -
a) Atropine sulphate eye ointment *(AI 04)*
b) Dexamethasone eye drops
c) Pilocarpine eye drops
d) Lignocaine eye drops

202. Satellite nodules are seen in -*(UP 08, ARMS Feb 97,*
a) Fungal corneal ulcer *ARMS Sep 96, Dec 95,*
b) Tuberculosis *AI 95)*
c) Sarcoidosis
d) Viral ulcer
e) All

203. Satellite lesions in eye is caused by - *(AIIMS Dec 92, NEET/DNB Pattern)*
a) Herpes zoster
b) Herpes simplex
c) Aspergillosis
d) Trachoma

182)b 183)a,b 184)b 185)d 186)c 187)a 188)b 189)a,c 190)a 191)b 192)a,d,e 193)b,d 194)c 195)b,c,e 196)c 197)c 198)c 199)b 200)c 201)a 202)a 203)c

204. Steroid are contraindicated in - *(AIIMS Dec 95)*
a) Herpes keratitis b) Atropic dermatitis
c) Fungal corneal ulcer d) Exposure keratitis

205. Steroids are contraindicated in - *(AI95)*
a) Phlyctenular conjunctivitis
b) Granular conjunctivitis
c) Mooren's ulcer
d) Dendritic ulcer

206. Not true about herpetic keratitis- *(NEET/DNB Pattern)*
a) Stromal Keratitis b) Dendritic Ulcer
c) Corneal guttata d) Disciform Keratitis

207. Disciform keratitis is seen - *(NEET/DNB Pattern)*
a) HSV b) HTV
c) HBV d) Rubella

208. A dendritic ulcer is caused by- *(PGI98, AIIMS 94,*
a) Mycetoma b) Herpes simplex *93, 91)*
c) Staphylococcus d) Pneumococcus
e) Gonococcus

209. '^porttgal sensation is lost in- *(NEET/DNB Pattern,*
a) Herpes simplex b) Conjunctivitis *AI 96)*
c) Fungal infection d) Trachoma

210. Corneal sensation is diminished in - *(COMED09)*
a) Band Keratopathy b) Exposure keratitis
c) Phylectenular keratitis d) Dendritic keratitis

211. Which of the following is true of dendritic ulcer-
a) Caused by Herpes simplex virus *(PGI Dec 01)*
b) Topical corticosteroid given suppresses the symptoms
c) Oral acyclovir is effective in treatment
d) Topical acyclovir is effective in treatment
e) Heals spontaneously

212. Rx of dendritic ulcer - *(PGI Dec 03, 02)*
a) Acyclovir b) Idoxuridine
c) Steroid d) Tetracycline
e) Trychophyton cains

213. Ocular symptom not seen in Herpes zoster is- *(AI 01)*
a) Nummular keratitis b) Glaucoma
c) Uveitis d) Cranial nerve palsies

214. A 56 year old man has painful weeping rashes over the upper eyelid and forehead for the last 2 days along with ipsilateral acute punctate keratopathy. About a year back, he had chemotherapy for Non-Hodgkin's lymphoma. There is no other abnormality. Which of the following is the most likely diagnosis? *(AIIMS Nov 04)*
a) Impetigo
b) Systemic Lupus Erythematosus
c) Herpes Zoster
d) Pyoderma gangrenosum

215. In Herpes zoster keratitis all occurs except-
a) Pseudodendritic keratitis *(AIIMS Nov 11)*
b) Anterior endothelial keratitis/Uveitis
c) Sclerokeratitis
d) Endothelitis

216. Herpes zoster ophthalmicus is predictor of-
a) Leukemia b) Lymphoma
c) HIV d) Disseminated T.B
e) Metastasis *(PGI Dec. 03, June 03)*

217. Which of the following statement is true regarding Acanthamoeba keratitis?
a) For the isolation of the causative agent, corneal scraping should be cultured on a nutrient agar plate
b) The causative agent, Acanthamoeba is a helminth whose normal habitat is soil
c) Keratitis due to Acanthamoeba is not seen in the immunocompromised host
d) Acanthamoeba does not depend upon a human host for the completion of its life-cycle

218. A17 year old girl with keratitis and severe pain in the eye came to the hospital and acanthamoeba keratitis was suspected. The patient gave the history of following 4 points. Out of these which is not a risk factor for acanthamoeba keratitis- *(AIIMSNov 02)*
a) Extended wear contact lens
b) Exposure to dirty water
c) Comeal trauma
d) Squamous blepharitis

219. Kallu, a 25 yr male pt. presented with a red eye and complains of pain, photophobia, watering and blurred vision. He gives a history of trauma to his eye with a vegetable matter. Corneal examination shows a dendritic ulcer. A corneal scraping was taken and examined. Microscopy showed macrophages like cells on culturing the corneal scrapings over a non-nutrient agar enriched with E.coli, there were plaque formations. Which organism is most likely -
a) Herpes simplex b) Acanthameba *(AIIMS May*
c) Candida d)Adenovirus *02)*

220. A regular contact lens user presents with complaints of servere pain, redness, photophobia and blurring of vision for more than two weeks not responding to standard treatment On examination, a paracentral ring shaped lesion with stromal infiltrates and overlying epithelial defects is observed in the affected eye. Which of the following is the most likely diagnosis - *(AI 12)*
a) Bacterial keratitis b)Acanthomoeba keratitis
c) Viral keratitis d) Fungal keratitis

221. A soft contact lens wearer developed pain and itching of the eye and showed a reticular pattern on the corneal epithelium the cause could be - *(Orissa 98)*
a) Comeal dystrophy b) Acanthamoeba
c) Pseudomonas d) Recurrent

222. A patient using contact lens develops corneal infection. Laboratory diagnosis of acanthamoeba keratitis was established. The following is the best drug for treatment - *(AI 03)*
a) Propamidine b) Neosporine
c) Ketoconazole d)Polyhexamethylenebiguanide

204)c 205)d 206)c 207)a 208) b 209)a 210)d 211)a,d 212)a,b 213)d 214)c 215)c 216)all 217)d 218)d 219) b 220) b 221)b 222)d

223. Neurotrophic keratopathy is caused by - *(Al93)*
a) Bell's palsy
b) Facial and trigeminal nerve palsy both
c) Trigeminal nerve palsy
d) All of the above

224. Corneal dystrophies are usually - *(AIIMS May 12)*
a) Primarily unilateral
b) Primarily bilateral
c) Primarily unilateral without systemic disease
d) Primarily bilateral with systemic disease

225. Corneal dystrophies are - *(PGI Dec 08)*
a) Macular b) Granular
c) Lattice d) Moorens
e) Fuchs

226. Which of the following is the least common corneal dystrophy - *(Al 10)*
a) Macular dystrophy
b) Lattice type I
c) Lattice type III
d) Granular corneal dystrophy

227. Which one of the following stromal dystrophy is a recessive condition ? *(Al 06)*
a) Lattice dystrophyb) Granular dystrophy
c) Macular dystrophy d) Fleck dystrophy

228. Recu^h^&S^niSofi^n *in-(AIINfSJune 98,*
a) Corneal dystrophy *NEET/DNB Pattern)*
b) Keratoglobus
c) Keratoconus
d) Peutz- anomalies'

229. Posterior polymorphous dystrophy - *(Manipal 09)*
a) Causes corectopia
b) Is inherited in an autosomal recessive fashion
c) Causes blindness in over 90% of sufferers
d) Can be treated with lamellar corneal grafts

230. Thining of cornea occurs in - *(UPSC 02)*
a) Megalocomea b) Bullous keratopathy
c) Endothelial dystrophy d) Keratoconus

231. In Keratoconus, all are seen except - *(PGI June 00)*
a) Munson's sign
b) Thinning of cornea in center
c) Distortion of corneal reflex at center
d) Hypermetropic refractive error

232. TVue about keratoconus - *(PGI Dec 02)*
a) Munson sign seen
b) Protrusion of anterior cornea
c) Protrusion of posterior cornea
d) Fleisher's sign positive

233. TVeatment option for keratoconus includes -
a) Spectacles *(PGINov 09, June 08)*
b) Contact lens
c) Kerotoplasty
d) LASIK
e) IOL

234. IVue about keratoconus - *(PGI June 04)*
a) **T** curvature of cornea **b)** Astigmatism
c) K.F. ring seen d) Thick cornea
e) Soft contact lens used

235. Fleischer ring is characteristic of -*(AIIMSNov 93,*
a) Megalocomea b) Diabetes *Punjab 11)*
c) Chalcosis d) Keratoconus

236. Munsòh-ssignis seen in^P^jifc^OSf^E^/DNti
~ | §g a) Keratoconus §| ' b) Keratoglobus *Pattern)*
Bfif **c) Keratomalacia d) All of these**

237. Keratoconus is associated with all except-
a) Down's syndrome *(Manipal 09)*
b) Ehlers-Danlos' syndrome
c) Marfan's syndrome
d) Usher's syndrome

Plgp To prevent keratoconus what is used - *(NEET/DNB*
a) Antibiotics b) Cycloplegics *Pattern)*
c) Glasses d) None

239. Interstitial keratitis is seen in all except -
a) Syphilis *(PGI Nov. 10)*
b) Acanthamoeba
c) Chlamydia Trachomatis
d) HSV
e) HZV

240. Salmon patch is seen in - *(Jipmer 11)*
a) Interstitial keratitis b) Disciform keratitis
c) Acne rosacea d) Phlectenular keratitis

241. Band shaped keratopathy is caused *by~(AIIMSMay 06)*
a) Amyloid b) Calcium
c) Monopolysaccharide d) Lipid

242. Sarcoidosis is associated with - *(Al 08)*
a) Band keratopathy b) Systemic amylodosis
c) Angioid streaks d) Cataracta nigra

243. Band shaped keratopathy seen in ? *(APPG 08)*
a) JRA b)RA
c) SLE d)DLE

244. Corneal vascularisation is/are caused by-
a) Graft rejection *(PGINov 09, June 09, 07)*
b) Chemical bum
c) Contact lens use
d) Vitreous haemorrhage
e) Viral infection

245. All of the following may lead to corneal opacity in newborn except - *(Al 93)*
a) Endothelial dystrophy
b) Sclerocomea
c) Mucopolysaccharidosis
d) Droplet keratopathy

246. Corneal deposits are seen in all except -*(Kerala 94)*
a) Reis- bucklers comeal dystrophy
b) Endothelial dystrophy of fuchs
c) Hunters disease
d) Hurler's disease

247. The central nebular corneal opacity is easily treated with- *(DPGEE 08)*
a) Lamellar keratoplasty
b) Penetrating keratoplasty
c) Gas permeable contact lens
d) Soft contact lens

223) c 224) b 225)a,b,c,e 226) a 227) c 228) a 229) a 230) d 231)d 232)a,b,d 233)a,b,c 234) a,b 235) d
236) a 237) d 238) d 239) b 240) a 241) b 242) a 243) a 244)a,b,c,e 245) d 246) a 247) a

248. 0.1 to 0.2 mm nebular corneal opacity is treated by -
a) Penetrating keratoplasty *(AMU 05)*
b) Lamellar keratoplasty
c) Enucleation
d) Evisceration

249. A 20 year student has a myopia of -2.0D and a post traumatic nebular corneal opacity in her right eye. Which of the following is the best refractive surgery option for her? *(AIIMS Nov 04)*
a) Photorefractive keratectomy b)LASIK
c) Radial keratotomy d) Epikeratoplasty

250. Photophthalmia is seen with - *(AI95)*
a) Ultraviolet rays b) Infra red rays
c) Gamma rays d) X-rays

251. Snow blindness is caused by - *(AI 97)*
a) Ultravoilet rays b) Infrarads
c) Microwaves d) Defect in mirror

252. Treatment of photophthalmia includes-fPG/ *May 10)*
a) Irrigation with saline water
b) Padding & Bandaging
c) Cold compresses
d) Lubricant eyedrop
e) Analgesics

253. Treatment for photophthalmia- *(PGI01)*
a) Flush with saline b) Apply pad and bandage
c) Topical antibiotics d) Steroid eye drops
e) Reassurance

254. In human corneal transplantation, the donor tissue is- *(AIIMS May 05)*
a) Synthetic polymer
b) Donated human cadaver eyes
c) Donated eyes from live human beings
d) Monkey eyes

255. Which of the following statements regarding corneal transplantation is true - *(AI 10)*
a) Whole eye needs to be preserved in tissue culture
b) Donor not accepted if age > 60 years
c) Specular microscopy analysis is used to assess endothelial cell count
d) HLA matching is mandatory

256. For transplatation cornea is preserved *\n-(AUMS 95)*
a) Modified MK medium b) Glycerine medium
c) Wet medium d) None of the above

257. Signs of graft rejection are all except - ***(PGI*** *05)*
a) Krachmer spots b) Khodadoust line
c) Oedema d) Epithelial line
e) Foster spot

258. What is percentatage of endothelial cell loss during Descemet's stripping automated endothelial keratoplasty - *(AIIMS Nov 11)*
a) 0-5% b) 10-20%
c) 30-40% **d)**50-60%

259. Following corneal transplantation, most common infection occur - *(NEET/DNB Pattern)*
a) Staph epidermidis b) Streptococcus
c) Klebsiella d) Pseudomonas

260. Enlarged corneal nerves may be seen in all of the following except- *(AI 05)*
a) Keratoconus b) Herpes simplex keratitis
c) Leprosy d) Neurofibromatosis

261. Prominent corneal nerves are seen in all except- *(Manipal 09)*
a) Ectodermal dysplasia b) Ichythyosis
c) Refsum's syndrome d) Macular dystrophy

262. Pigment deposition on cornea seen in -*(PGI Dec 0 7)*
a) Chloroquine b)Digoxin
c) Ranitidine d) Amiodarone

263. A patient on amiodarone is diagnosed to have cornea verticillate. What should be management-
a) Stop the drug b) Penetrating keratoplasty
c) Lamellar keratoplasty d) Observation
e) Steroids *(PGI Nov. 10)*

264. A 28 year old male complains of glare in both eyes. The cornea shows whorl like opacities of the epithelium. He also gave a history of long term treatment with amiodarone. The most likely diagnosis is - *(Corned 08)*
a) Terrain's marginal degeneration
b) Cornea verticillata
c) Band shaped keratophathy
d) Arcus juvenalis

265. Dellen is - *(Manipal 06)*
a) Localized thinning of peripheral cornea
b) Raised lesions in comeo limbal junction
c) Age related macular degeneration
d) Marginal keratitis

266. Megalocornea is associated with A/E - *(Punjab 11)*
a) Down syndrome b) Turner syndrome
c) Marfan syndrome d) Ehler danlos syndrome

267. Topical antiviral drugs not indicated in -*(PGI Dec 04)*
a) Dendritic ulcer
b) Metaherpetic ulcer
c) Stromal necrotizing keratitis
d) Neuroparalytic keratitis
e) Disciform keratitis

SCLERA

268. Sclera is thinnest at - *(AIIMS Nov 09, May 09,*
a) Limbus *Corned 08)*
b) Equator
c) Anterior to attachment of superior rectus
d) Posterior to attachment of superior rectus

269. Staphlyoma involvement - *(NEET/DNB Pattern)*
a) Iris with conjunctiva
b) Conjunctiva with cornea
c) Choroid with retina
d) Iris with cornea

270- Most common cause of posterior staphyloma -
a) Trauma b) Glaucoma *(NEET/DNB Pattern)*
c) Myopia d) Scleritis

248) b 249) a 250)a 251)a 252)b,c,d,e 253)b,c,e 254)b 255)c 256)a 257)e 258)c 259)a 260)b 261)d
262) a,d 263) a 264) b 265) a 266) b 267) b,c 268) d 269) d 270) c

271. Blue sclera is seen in -
a) Alkaptonuria
b) Osteogenesis imperfecta
c) Ehler - Danlos syndrome
d) Kawasaki syndrome

272. The most common systemic association of scleritis is- *(AIIMSNov 05)*
a) Ehlers - Danlos syndrome
b) Disseminated systemic sclerosis
c) Rheumatiod arthritis
d) Giant cell arteritis

273. In scleritis all are true except- *(Manipal 09)*
a) Scleromalacia perforans are more commonly associated with systemic diseases than posterior scleritis
b) Pain is not a prominent feature
c) Retinal detachment is a known complication
d) Glaucoma is a known complication

UVEALTRACT

274. Circulus iridis major is seen at - *(AIIMSDec 91)*
a) Ciliary body b) Root of iris
c) Colaretteofiris d) Pupillary margin of iris

275. Granulomatous uveitis is seen in -*(PGI Nov. 10)*
a) Vogt- Koyanagi - Harada disease
b) Fuch's disease
c) Bechet's syndrome
d) Sarcoidosis
e) Psoariasis

276. All are causes of chronic granulomatous uveitis except- *(UP 07)*
a) Sarcoidosis
b) Tuberculosis
c) Brucellosis
d) Fuchs heterochromic iridocyclitis

277. Chorioretinitis is caused by - *(PGIDec 06)*
a) Toxoplasmosis b)CMV
c) Rubella d) Oncocerca volvulus
e) Adeno virus

278. Uveitis is caused by - *(PGI June 04)*
a) T.B b) Staphylococcus
c) Streptococcus d) Klebsiella
e) E.Coli

279. Uveitis is seen in all except - *(CMC 05)*
a) Leprosy b)Ankylosing spondylitis
c) Sarcoidosis d) Reiter's syndrome

280. A10 yr boy present with b/1 chronic uveitis. Which investigation should be ordered - *(PGIMay 10)*
a) Hemogram b) X-ray of sacroiliac jt.
c) HIV test d) Mantoux test

281. The investigation of anterior uveitis of a young boy are - *(PGIDec 03, June 03)*
a) HLAB27 b) X-ray sacroiliac joint
c) TORCH agents d) ELISA for HIV
e) USG abdomen

282. Most common cause of anterior uveitis associated with arthritis- *(AZLUSDec 98, NEET/DNB Pattern)*
a) Ankylosing spondylitis b) Rheumatoid arthritis
c) Syphilis d) Tuberculosis

283. Uveitis is associated most commonly with - *(ABMSMay 02)*
a) Rheumatoid arthritis b) Systemic JRA
c) Pauciarticular JRA d) Polyarticular JRA

284. Iridocyclitis is a feature of - *(AIIMSDec 97)*
a) Juvenile rheumatoid arthritis with systemic involvement
b) Seropositive, pauciarticular, juvenile rheumatoid arthritis
c) Seronegative pauciarticular juvenile rheumatoid arthritis
d) Seropositive, polyarticular juvenile rheumatoid arthritis

285. Pauciarticular JRA is characterised by all except -
a) Uveitis b) Scleritis *(AIIMS Dec 98)*
c) Cataract d) Keratopathy

286. Signs of uveitis - *(PGI June 07)*
a) Generalized conjunctival congestion
b) Circumciliary congestion
c) Cells and flare in aqueous

287. Anterior uveitis is characterized by A/E -
a) Aqueons flare *(AIIMS Jun 97)*
b) Shallow anterior chamber
c) Circumcomeal cangestion
d) Miosis

288. Pupil in acute attack of Ant. Uveitis is-
a) Semidilated *(AIIMS Dec 95)*
b) Large and fixed
c) Irregular & constricted
d) Constricted & sluggish reacting

289. In acute anterior uveitis, pupil is - *(AIIMSMay 93)*
a) Oval b) Circular
c) Small, irregular d) Any of the above

290. The type of synechiae in iris bombe is -
a) Ring b) Totaled/ *94, AIIMS 90)*
c) Goniform d) Filiform

291. Mutton fat keratic precipitates are not seen in -
a) Tuberculosis *(Manipal 09)*
b) Fuch's heterochromia cyclitis
c) Sarcoidosis
d) Fungal infection

292. Pathognomic sign of Acute Iridocyclitis is - *(UP 08)*
a) Aquous flare b) Keratic precipitates
c) Small pupil d) All of the above

293. 1st sign of anterior uveitis - *(NEET/DNB Pattern)*
a) Keratic precipitate b) Aqueous flare
c) Hypopyon d) Miosis

294. Keratic precipitates are on which layer of cornea - *(NEET/DNB Pattern)*
a) Epithelium b) Endothelium
c) Stroma d) Bowman's membrane

271)b,c 272)c 273)b 274)b 275)a,d 276)d 277)a,b,c,d 278)a,b,c 279)None 280)d 281)a,b 282)a 283)c
284) c 285) b 286) b,c 287) b 288) c,d 289) c 290) a 291) b 292) b 293) b 294) b

295. Which of the following indicates activity of ant uveitis - *(NEET/DNB i Pattern)*
a) Cells in anterior chamber
b) Circumcomeal congestion
c) Keratic precipitate
d) Comeal edema

296. Ali are seen in acute Iridocyclitis except *(PGA June 2K)*
a) Pain b) Ciliary congestion
c) Mucopurulent discharge d) Small pupil

297. A patient has miotic pupil, IOP=25, normal anterior chamber, hazy cornea and a shallow anterior chamber in fellow eye. Diagnosis is - *(AlIMSMay 01, June 99, AI01)*
a) Acute anterior uveitis
b) Acute angle closure glaucoma
c) Acute open angle glaucoma
d) Senile cataract

298. Lallo, 25 yr old man, presented with h/o of pain, redness & watering of left eye for last 1 day. There is also intolerance to light. Most probable diagnosis is- *(AIIMSNov 00)*
a) Keratitis
b) Acute anterior uveitis
c) Acute posterior uveitis
d) Epidemic kerato conjunctivitis

299. A 25 - year old male gives a history of redness, pain and mild diminution of vision in one eye for past 3 days.There is also a history of low backache for the past one year. On examination there is circumcomeal congestion, cornea is clear apart form a few fine keratic precipitates on the corneal endothelium, there are 2+ cells in the anterior chamber and the intraocular pressure is within normal limits. The patient is most likely suffering from -
a) Acute attack of angle closure glaucoma
b) HLA B -27 related anterior *uveitis(AIIMS May 04)*
c) JRA associated uveitis
d) Herpetic keratitis

300. A 25 year old lady presents with severe sudden onset of pain, corneal congestion, photophobia and deep anterior chamber in the right eye. The left eye is normal. X-ray pelvis shows sacroilitis. The diagnosis is- *(AlIMSMay 01)*
a) Anterior uveitis b) Posterior uveitis
c) Intermediate uveitis d)Scleritis

301. In patients with anterior uveitis, decrease in vision due to posterior segment involvement can occur because of - *(AIIMS May 12)*
a) Visual floaters
b) Inflammatory disc edema
c) Exudative retinal detachment
d) CME

302. Complication of acute anterior uveitis are all EXCEPT- *(AIIMS June 98)*
a) Secondary glaucoma b) Cataract
c) Retinal detachment d) Macular oedema

303. What is the most common complication in recurrent anterior uveitis - *(AlIMSMay 93)*
a) Staphyloma b) Glaucoma
c) Cataract d) Vitreal haemorrhage

304. Which of the following statements is incorrect about pthisis bulbi ? *(AI 2006)*
a) The intraocular pressure is increased
b) Calcification of the lens is common
c) Sclera is thickened
d) Size of the globe is reduced

305. Metamorphopsia is seen in *M (JJEET/DNB pattern)*
a)Anterior uveitis b Posterior uveitis
d)Glau<#ma

306. Keoppe nodules are present on *P(NEET)DNB*
a) Cornea b). Conjunctiva
d)Retina

307. Mutton fat keratic precipitate and Busacca's nodules is seep to - *(APPG 06| NEET/BNB Pattern}*
a) Granulomatous uveitis
b) Non-granulomatous uveitis
c) Posterior uveitis
d) Choroiditis

308. Snow banking is typically seen in *PGI June 99, NEET/ DNB Pattern)*
a) Pars planitis b) Endophthalmitis
c) Coat's disease d)Eale's disease

309. Commonest complication of pars planitis- *(NEET/ DNB Pattern)*
a) Glaucoma b) Cataract
c) Retinal detachment d) Vitreous hemorrhage

310. Panuveitis involves - *(AMU 95)*
a) Iris b) Choroid
c) Iris, ciliary body, choroid d) None

311. Treatment of choice for acute anterior uveitis is -
a) Local steroids b) Systemic steroid
c) Local NS AIDS d) Systemic NS AIDS

312. Atropine is drug of choice in - *(AIIMS Dec 92)*
a) Chorioretinitis b) Lens induced glaucoma
c) Iridocyclitis d) Close angle glaucoma

313. Drug of choice for acute iridocyclitis is-*(DPGFeb 09)*
a) Steroids b)Acetazolamide
c) Atropine d) Antibodies

314. Primary objective of use of atropine in anterior uveitis - *(AIIMS June 00)*
a) Rest to the ciliary muscle
b) Increase supply of antibody
c) Increase blood flow
d) Prevents posterior synechia formation

315. Mainstay of treatment of uveitis - *(Jipmer 11)*
a) Antibiotics and cycloplegics
b) Steroids and cycloplegics
c) Antibiotics and steroids
d) Surgery

316. In a case of hypertensive uveitis, most useful drug to reduced intraocular pressure is - *(AI 02)*
a) Pilocarpine b) Latanosprost
c) Physostigmine d) Dipiveffine

295) a 296) c 297)a 298)a 299)b 300)a 301)d 302)c 303)c 304)a 305)b 306)c 307)a 308)a 309) b 310)c 311) a 312)c 313)a 314)a 315)b 316)d

317. Uveitis with raised intraocular tension is best managed by - *(AIIMSJune 97)*
a) Timolol b) Atropine
c) Pilocarpine d) Steroid

318. Drug of choice for increased IOT in acute anterior uveitis - *(A1IMS Dec 97)*
a) Atropine b) Timolol
c) 5% Epinephrine d) 2% Pilocarpine

319. In anterior uveitis with secondary glaucoma, all mydriatics can be given, except - *(AlIMSMay 94)*
a) Pilocarpine b) Homatropine
c) Epinephrine d) Tropicamide

320. Anterior uveitis in hypertensive patient, Drug of choice to decrease IOP - *(AIIMSJune 00)*
a) Lanatoprost b) Pilocarpine
c) Epinephrine d) Timolol

321. Which should not be used in raised IOT associated with uveitis - *(PGI June 99)*
a) Timolol b) Pilocarpine
c) Atropine d)Acetazolamide

322. All the following drugs are used in acute anterior uveitis except - *(AI95)*
a) Pilocarpine b) Atropine
c) Timolol d) Propranolol

323. All are given in anterior uveitis except -*(Manipal 08)*
a) Pilocarpine b) Atropine
c) Cyclophosphamide d) Corticosteroids

324. Drug of choice of choroiditis is - *(AIIMS Dec 90)*
a) Cycloplegic (atropine) b) Analgesic
c) Steroid d)Antibotic

325. Endop hthalmitis involves inflammation of all of the following, Except - *(AI 10)*
a) Sclera b)Uvea
c) Retina d) Vitreous

326. Late onset endothalmitis after lens implantation is caused by- *(AI 11)*
a) Staphylococcus epidermidis
b) Pseudomonas
c) Streptococcus pyogenes
d) Propionibacterium acne

327. A 60-year old diabetic patient has an uneventful phacoemulsification with IOL implantation. He presented with pain, diminution of vision, redness, watering and a grayish yellow pupillary reflex on the third postoperative day. Examination revealed circumcorneal congestion, aqueous cells 4+, hypopyon in the anterior chamber with posterior synechinae and retrolental flare. The most likely diagnosis is-
a) Keratitis b) Glaucoma
c) Endophthalmitis d) Postoperative cyclitis

328. Uveal effusion syndrome may be associated with all of the following, Except - *(AI 09)*
a) Myopia
b) Ciliochoroidal detachment
c) Structural defect in Sclera
d) Nanophthalmos

329. In heterochromic cyclitis - *(Manipal 09)*
a) 60% of patients develop glaucoma
b) Show a good response when treated with steroids
c) Lens implantation following cataract surgery is contraindicated
d) Hyphaema during cataract surgery is due to iris neovascularization

330. True about heterochromic uveitis- *(NEET/DNB Pattern)*
a) Involves posterior surface of iris
b) Involves anterior part of iris
c) Involves posterior chamber
d) P^sSiiJf syriechiae HE

331. A young patient presents to the ophthalmic outpatient department with gradual blurring of vision in the left eye. Slit lamp examination reveals fine stellate keratatic precipitates and aqueous flare and a typical complicated posterior subcapsular cataract. No posterior synechiae were observed. The most likely diagnosis is - *(AI 12)*
a) Intermediate Uveitis (Pars Plants)
b) Heerfordt's disease
c) Heterochromic Iridocyclitis of Fuch's
d) Subacute Iridocyclitis

332. Skin depigmentation b/1 uveitis and tinitus are features of - *(AIIMS June 98)*
a) Vogt Koyanagi harada syndrome
b) Waadenberg Syndrome
c) Alport Syndrome
d) Werner's Syndrome

333. The Uveitis associated with vitiligo & auditory defects occurs in - *(AIIMS June 98)*
a) Bechet's syndrome
b) Steven's Johnson syndrome
c) Vogt- Koyanagi syndorme
d) Ankylosing - spondylitis

334. Vogt Koyanagi - Harada (VKH) syndrome *is-(NEET/DNB Pattern)*
a) Chronic granulomatous uveitis
b) Chronic non-granulomatous uveitis
c) Acute purulent uveitis
d) None

335. In which of the following, intraocular pressure is very high and inflammation is minimum? *(MH10)*
a) Acute iridocyclitis
b) Glaucomatocyclic crises
c) Angle closure glaucoma
d) Hypertensive uveitis

336. All the following are true regarding acute anterior uveitis in ankylosing spondylitis EXCEPT -
a) More common in female (*SGPGI05)*
b) Recurrent attacks occur
c) Fibrous reaction in anterior chambers
d) Narrowing of joint spaces and sclerosis of the sacroiliac joints

337. Drug of choice for Herpes simplex Enophthalmitis is-
a) Acyclovir b) Vidarabine *(UPSC 05)*
c) Amantidine d) Interferon

17) d 318) b 319) a 320)d 321)b 322)a 323)a 324)c 325)a 326)d 327)c 328)a 329)d 330)b
331)c 332) a 333)c 334)a 335)b 336)a 337)a

338. Histological changes in lens induced uveitis include- *(Manipal 09)*
a) Ghost cells b) Giant cell reaction
c) Amyloid in the cornea d) Vasculitis

339. Choroidal neurovascularization is seen in all except - *(AIIMS May 08)*
a) Trauma b) Angiod streak
c) Myopia d)Hypermetropia

340. Drug used in LUMINATE programme for non-infectious uveitis is - *(AIIMS Nov 11)*
a) Cyclosporine b) Voclosporin
c) Methotrexate d) Infliximab

LENS

341. Equatorial diameter of the lens is - *(J&K2001)*
a) 7mm b)8mm
c) 9mm d)10mm

342. Lens contains the oldest cells in - *(AIIMSMay 02)*
a) Nucleus
b) Anterior surface of lens
c) Posterior surface of lens
d) Nucleo- cortical junction

343. The capsule of the crystalline lens is thinnest at -
a) Anterior pole b) Posterior pole *(UP08)*
c) Equator d)None

344. The crystalline lens derives its nourishment from -
a) Blood vessels *(AIIMSMay 06)*
b) Connective tissue
c) Aqueous and vitreous
d) Zonules

345. The major function of Major Intrinsic Protein 26 (MIP-26) is - *(AI08)*
a) Glucose transport in lens
b) Transport of water in lens
c) Diffusion barrier
d) Capsule of lens

346. Which does not handle free radicals inside lens - *(AIIMS May 10, 07, May 08, AI07)*
a) Vitamin A b) Vitamin C
c) VitaminE d) Catalase

347. Transport of Ascorbic acid to lens is done by -(AI 07)
a) Myoinositol b) Choline
c) Taurine d) Na-K ATP ase

348. Commonest cause of cataract -*(PGI June 04, Dec 05)*
a) Hereditary b) DM
c) Trauma d) Age related
e) Radiation

349. Causes of cataract - *(PGI May 10)*
a) Infrared b) Microwaves
c) UV rays d) Obesity

350. Cataract can be caused by - *(PGIDec 06)*
a) HypoCa^{2+} b) Obesity
c) Steroids c) Chloroquine

351. Cataract is caused by all except - *(PGI Dec 01)*
a) Ultraviolet radiation b)MRI
c) Infrared radiation d) Microwave radiation
e) Ionizing radiation

352. Cataract is seen in following except -
a) Gluocorticoid administration *(AIIMS May 95)*
b) Rheumatoid arthritis
c) Hypoparathyroidism
d) Galactosemia

353. All are causes of cataract except - *(Manipal 08,*
a) Smoking b) Diabetes mellitus *MAHE07)*
c) Hypertension d) Epilepsy

354. All are causes of cataract except - *(Manipal 08)*
a) Galactosemia b) Neurofibromatosis
c) Myotonic dystrophy d) Fabrey's disease

355. Which of the following is the only reversible cataract- *(NEET/DNB Pattern)*
f§ a) Senile Cataract || b) Cataract ifrG^qtoslmia
c) Congenital Cataract d) None

356. Minimum vision loss *mm* which cataract -
a) Blue dot cataract |g|Sj|l ,^*0PMT/D^B Paiterfp*
ijs^lfecfeif^bnular c&taract §f8
c) Anterior polar cataract
d) Posterior polar cataract

357. Most common cataract in new born is - *(PGIDec 98)*
a) Zonular b) Morganian
c) Ant. Polar d) Post. Polar

358. Most common type of congenital cataract is- *(AIIMS June 91, NEET/DNB Pattern)*
a) Capsular b) Zonular
c) Corailiform d) Blue dot

359. Commonest type of cataract is- *(PGI Dec 98)*
a) Blue dot b) Zonular
c) Cupuliform d) Cuneiform

360. Congenital cataract commonly associated with visual defect- *(NEET/DNB Pattern)*
a) Punctate Cataract b) Blue dot cataract
* c).Zonular cataract d)Fusiformcataract

361. An infant present with bilateral white pupillary reflex. On slit lamp examination a zone of opacity is observed arround the fetal nucleus with spoke like radial opacities. The most likely diagnosis is-
a) Caracto Centralis Pulverulenta *(AI 12)*
b) Lamellar cataract
c) Coronary cataract
d) Posterior polar cataract

362. Rider's cararact is seen in - *(AI 91)*
a) Blue dot cataract b) Zonular cataract
c) Anterior capsular cataract d) Coronary cataract

363. A child has got a congenital cataract involving the visual axis which was detected by the parents right at birth. This child should be operated -
a) Immediately *(DPG10, AI 03)*
b) At 2 months of age
c) At 1 year of age when the globe becomes normal sized
d) After 4 years when entire ocular and orbital growth becomes normal

338)b 339)d 340)b 341)d 342)a 343)b 344)c 345)b 346)a 347)?>d 348)d 349)a,b,c,d 350)a,b,c,d
351) b 352) b 353)d 354)d 355)b 356)a 357)a 358)d 359)d 360)c 361)b 362)b 363)a

364. A two week old child presents with unilateral cataract. Which of the following statement represents the best management advice - *(A104)*
a) The best age to operate him to get the best visual results is four weeks
b) The best age to operate him to get the best visual results is four months
c) The best age to operate him to get the best visual results is four years
d) The eye is already lost, only cosmetic correction is required

365. To avoid amblyopia, congenital cataract should be ideally operated within the age of- *(MH11)*
a) 6 weeks b) 6 months
c) 12 months d) 24 months

366. Treatment of choice in a new born child with cataract - *(PG1 June 08)*
a) ICCE b) Pars plana lansectomy
c) EGCE d) Vitrectomy
e) Aspiration

367. Treatment of choice for congenital cataract is -
a) Pharmacotherapy *(DPGMar. 09)*
b) Combined cataract surgery and Goniotomy
c) Cataract surgery with IOL implant and primary posterior capsulotomy
d) Pars plana lensectomy with no IOL implant

368. Treatment of congenital cataract is - *(PGIDec97)*
a) Needing and aspiration
b) Intracapsular extraction
c) Extracapsular extraction
d) Cryotherapy

369. Treatment of paediatric cataract - *(PG1 June 04)*
a) Needle aspiration
b) Discission
c) Intra- ocular lens implantation
d) Lensectomy
e) Phacoemulsification

370. The biochemistry of cataract formation is - *(UP 0 7)*
a) Hydration intumescence
b) Denaturation of lens proteins
c) Slow sclerosis
d) All of the above

371. Which morphological type of cataract is most visually handicapping ? *(ARMS Nov 02)*
a) Cortical b) Nuclear
c) Posterior subcapsular d) Zonular

372. Good vision in dim light and clusmy in day lights seen in- *(PGI DEC 98)*
a) Cortical cataract b) Morgagnian cataract
c) Nuclear cataract d) Steroid induced cataract

373. A 55 year old patient complains of decreased distance vision. However, now he does not require his near glasses for near work. The most likely cause is -
a) Posterior subcapsular cataract *(AI1MS Nov 05)*
b) Zonular cataract
c) Nuclear sclerosis
d) Anterior subcapsular cataract

374. Second sight phenomenon is seen in - **(77V***03)*
a) Nuclear cataract b) Cortical cataract
c) Senile cataract d) Iridocyclitis

375C'^?^^le^^te'^a'ct;cab cause **(NEEf01^iPciit&tii)*
a) Myopia *M* ^b)'TTyperopki Afffe
\giif **c) Presbyopia** **d) Astigmatism**

376. Uniocular polyopia is seen in which stage of cataract-
a) Incipient b) Itumescent *(AP 97)*
c) Mature d) Hypermature

377. The most common complication of hypermature sclerotic cataract is - *(ARMSMay 01)*
a) Dislocation of the lens
b) Phakomorphic glaucoma
c) Uveitis
d) Neovascularization of retina

378. Which type of senile cataract is notorious for glaucoma formation - *(ARMS June 00)*
a) Incipient cataract b) Hypermature morgagni
c) Intumescent cataract d) Nuclear cataract

379. Fluctuating refractive errors with cataract are seen in - *(ARMS June 92)*
a) Morgagnian cataract b) Diabetic cataract
c) Intumescent cataract d) Traumatic cataract

380. Cataract in a diabetic patients is because of accumulation of sorbital in lens. The enzyme responsible for this is - *(ARMS Nov 99)*
a) Hexokinase
b) $NADPH^+$ dependant aldolase reductase
c) Glucokinase
d) Phosphofructo isomerase

381. Typical appearance of diabetic cataract is-
a) Sunflower type *(AIIMS May 95, June 98,*
r;: b) ;Br|adcrumb" *typen^^^^NEEl^NjB^ Pattern)*
c) Polychromatic lusture
d) Snow flake appearance

382. Polychromatic lusture is seen *m~(NEET/DNB Pattern)*
a) Complicated cataract b)Diabetes mellitus *A!04)*
c) Post radiation cataract d) Congenital cataract

383. Polychromatic Lustre is seen in - *(ARMS Sep 96)*
a) Posterior cortical cataract
b) Zonular cataract
c) Cupuliform cataract
d) Posterior subcapsular

384. Clinical features of complicated cataract are all, EXCEPT- *(ARMS Dec 91)*
a) Polychromatic lusture
b) Axial spread of opacity
c) Opacity along sutures
d) Posterior subcapsular opacity

385. Causes of anterior polar cataract - *(PGI June 09,07)*
a) DM b) Perforating corneal injury
c) Irradiation d) Chalcosis

386. Steroid induced cataract is - *(AI96)*
a) Posterior subcapsular cataract
b) Anterior subcapsular cataract
c) Nuclear cataract
d) Cupuliform cataract

364) a 365) a 366)c>b,d,e 367) c 368) c 369)c,d,e 370) a,b 371)c 372)a,c,d 373) c 374) a 375) a 376) a 377) a 378) c 379)b 380)b 381)d 382)a 383)a 384)c 385)b 386)a

387. Sunflower type cataract is characteristically seen in - *(A197, NEET/DNB Pattern)*
a) Chalcosis b) Diabetes
c) Stragardt's disease d) Congenital syphilis

388. Sunflower cataract is seen in - *(A194)*
a) Hypertension b) Diabetes
c) Trauma d) SLE

389. Sun flower cataract is seen in - *(AIIMSMay 95)*
a) Galactosemia
b) Injuries
c) Laurence Moon Biedel syndrome
d) Wilson's disease

390* Christmastree cataract is seen in - *y/i (PGI June 99, NEET/DNB Pattern)*
a) Down's syndrome b) Rubella
c) Myotonic dystrophy d) Diabetes

391. Rubella cataract is seen as - *(COMED09)*
a) Posterior polar cataract b) Nuclear cataract
c) Blue dot cataract in young d) Cuneiform cataract

392. Rosette cataract seen in ? *(APPG 08, MH11)*
a) Ocular trauma b) Diabetes
c) Wilsons d)None

393. Hypovitaminosis - D causes - *(MAHE07)*
a) Zonular cataract b) Blue - Dot cataract
c) Rosette cataract d) Cupliform cataract

394. Most common type of cataract following radiation is- *(PGI93)*
a) Posterior subcapsular b) Anterior subcapsular
c) Tear drop cataract d) Diffuse cataract

395. Spontaneous absorption of lenticular material is seen in - *{Corned08)*
a) Myotonic dystrophy
b) Hallermann Streiff syndrome
c) Aniridia
d) Persistent hyperplastic primary vitreous

396. In preoperative assessment of cataract patient following is to be done - *(PGI Dec 05; PGI Dec 03)*
a) Axial length of eyeball b) Corneal thickness
c) Keratometry d) Thickness of the lens
e) Corneal curvature

397. Cataract is evaluated by - *(PGI June 03)*
a) Gonioscopy b) Tonometry
c) Stereoacuity d) Contrast
e) Clour vision

398. Power of Intraocular lens is determined by?
a) Keratometry *(APPG 08)*
b) Retinoscopy
c) Ophthalmoscopy
d) Gonioscopy/Biometry

399. Infective complication in cataract operation can be decreased by - *(PGI 01)*
a) Antibiotic eye drops
b) Intracamarel instillation of antibiotics at the end of the operation
c) Intraoperative antibiotics
d) Preoperative antibiotics
e) Post operative oral antibiotics

400. Method followed to decrease post-op infection in cataract surgery - *(PGI 96)*
a) Pre-op antibiotics
b) Intra op antibiotics
c) Post op subconjuctival gentamicin injection
d) Post op IV antibiotics

401. Which of the following is the most important factor in the prevention of the endophthalmitis in cataract surgery? *(AIIMSMay 06)*
a) Preoperative preparation with povidone iodine
b) One week antibiotic therapy prior to surgery
c) Trimming of eyelashes
d) Use of intravitreal antibiotics

402. Postcataract infection can be prevented by -
a) Preop oral antibiotics *(PGI May 10)*
b) Postop oral antibiotics
c) Intraop IV antibiotics
d) Postop topical antibiotics

403. Extra capsular cataract extraction (ECCE) is -
a) Posterior capsulectomy only *(AIIMS May 94)*
b) Lens extracted with posterior capsule left behind
c) Posterior capsulectomy with no lens removal
d) Anterior capsulectomy with no lens removal

404. All are indications of intracapsular cataract extraction except - *(PGI June 98)*
a) Mature cataract in age group above 45 years
b) Immature cataract
c) Subluxated and dislocated lens
d) Mature cataract in age group of 30-45 years

405. The standard sutureless cataract surgery done with phaco- emulsificaton and foldable IOL has an incision of- *(AIIMS Nov 2002)*
a) 1mm-1.5mm b) 2mm-2.5mm
c) 3mm-3.5mm d) 3.5mm -4.5mm

406. Phacoemulsification includes - *(PGIJune 08)*
a) Hydrodissection
b) Hydrodelineation
c) Continuous curvilinear capsular incision
d) IOL
e) Aspiration of lens matter

407. Recovery in cataract surgery is fastest with which of the following - *(Mahara 02)*
a) ICCE b)ECCE
c) Phacoemulsification d) ECCE with ICI

408. The best irrigating fluid during ECCE is -
a) Ringer lactate *(AIIMS May 02)*
b) Normal saline
c) Balanced salt solution
d) Balanced salt solution + glutathione

409. Which of the following instrument is NOT used in intracapsular extraction of lens - *(AIIMS Jun 98)*
a) Cryo b) Elschning's forceps
c) Phaco-emulsifier d) Van-graefe's cataract knife

410. In Cataract, spectacles are advised for following number of weeks after operation - *(AI9 7)*
a) 6 weeks b) 10 weeks
c) 12 weeks d) 14 weeks

387) a 388) c 389)d 390)c 391)b 392)a 393)a 394)a 395)b 396)a,c,e 397)a,b,d,e 398)a 399)a,b,c,d 400)a,b 401)a 402)d 403)b 404)c>a,b 405)c 406)A11 407)c 408)d 409)c 410)a

411. Whichisnota cataract *Hnrgeryr(NEET/DMB Pattern)*
a) Lensectomy b) Goniotomy
c) Phacoemulsification d) IOL

412. Treatment of traumatic cataract in children -
a) ECCE+IOL b) Lensectomy *(NEET/DNB*
c) €opitact lens d) Glasses *Mattefy)*

413. Most appropriate position for intraocular implant in extracapsular extraction is -
a) Capsular *(PGI June 01, AIIMS 94; June 97)*
b) Posterior chamber
c) Anterior chamber
d) Any of the above

414. Best site for IOL implantation-fZJPG *Feb. 09, PGI 01)*
a) Iris b) Capsular bag
c) Anterior chamber d) Sulcus

415. Best IOL is - *(PGI Dec 98)*
a) Ant chamber b) Post chamber
c) Iris supported d) Angle supported

416. Intraocular lenses are made up of - *(AIIMS June 01)*
a) PMMA b) HEMA
c) Glass d) Plastic

417. Modern IOL is made up of - *(PGI June 03)*
a) Acrylic acid b) PMMA
c) PML d) Silicon
e) Glass

418. Complications of cataract surgery - *(PGI Dec 04)*
a) Endophthalmitis b) Optic neuropathy
c) Retinal detachment d) Vitreousloss
e) Lagophthalmos

419. Leaving the capsule behind in cataract surgery is advantageous because it - *(PGI Dec 01)*
a) Prevents cystoid macular edema
b) Decreases endothelial damage
c) Progressively improves vision
d) Decreased chance of retinal detachement
e) Decreased chance of endophthalmitis

420. Advantages of extracapsular cataract extraction (ECCE)- *(PGI Jun 01)*
a) Less chance of vitreous h'ge & RD
b) Decreased chances of CME (cystoid macular edema)
c) Can be used in traumatic lens dislocation
d) Minimal endothelial damage
e) Sutureless surgery

421. Most common complication of extracapsular cataract surgery is - *(PGI 95)*
a) Retinal detachment
b) Opacification of posterior capsule
c) Vitreous haemorrhage
d) None

422. The complication of extra capsular extraction of lens is- *(PGI June 97)*
a) Cystoid macular oedema
b) Opacification of capsule
c) Iritis
d) Glaucoma

423. A 56 year old patient presents after 3 days of cataract surgery with a history of increasing pain and diminution of vision after an initial improvement. The most likely cause would be - *(ARMS Nov 03)*
a) Endophthalmitis
b) After cataract
c) Central retinal vein occlusion
d) Retinal detachment

424. A 60 years old male patient operated for cataract 6 months back now complains of floaters and sudden loss of vision. The diagnosis is - *(AIIMS May 01)*
a) Vitreous hemorrhage
b) Retinal detachment
c) Central retinal artery occlusion
d) Cystoid macular edema

425. Common complications of IOL lens are except -
a) Corneal dystrophy *(PGI June 00)*
b) Glaucoma
c) Anisocoria
d) macular edema

426. In which of the follwoing uveitic conditions it is contraindicated to put in an intraocular lens after cataract surgery ? *(AI06)*
a) Fuch's heterochromic cyclitis
b) Juvenile rheumatoid arthritis
c) Psoriatic arthritis
d) Reiter's syndrome

427. Ring of Sommerring is seen in - *(AIIMS May 94)*
a) Galactosemia
b) Dislocation of lens
c) Acute congestive glaucoma
d) After cataract

428. Which laser is used in the management of after cataracts- *(AIIMS May 05; AIIMS May 93;*
a) Argon *AIIMS Dec 92, NEET/DNB Pattern)*
h) Krypton
c) Nd-YAG
d) Kxeirrier

429. Laser used in cutting out cataract capsule is- *(AIIMS Dec 91)*
a) Nd: YAG laser b) Argon laser
c) DYE laser d) Diode

430. In posterior capsular cataract, treatment is- *(AIIMS May 94)*
a) Krypton Laser b) Nd - YAG Laser
c) Argon Laser d) $C0_2$ Laser

431. A patient presents to the emergency department with uniocular diplopia. Examination with oblique illumination shows golden crescent while examination with co-axial illumination show a dark crescent line. Which of the following is the most likely diagnosis - *(AI 12)*
a) Lenticonus b) Coloboma
c) Microspherophakia d) Ectopia lentis

411)b 412)a 413)a,b 414)b 415)b 416)a 417)a,b,d 418)a,c,d 419)a,b,d,e 420)a,b,d,e 421)b 422)a,b,c,d
423) a 424) b 425) c 426) b 427) d 428) c 429) a 430) b 431)d

43'2;,iDisldcati^niofiI^a$ is seen<iii^UfthefQllow[ng h conditions except - *(AI2000, NEET/DNB Pattern)*
<} a) Congential Rubella b) March^%^^d|o^
c) Marfan Syndrome i S^Ho®^ystiiii^|aj jgtjj

433. Ectopia lentis is seen in - *(PGINov. 10)*
a) Marfan's syndrome b) Congenital rubella
c) Homocystinuria d) Sulfite oxidase deficiency
e) Myotonic dystrophy

434. Eye lens dislocation seen in - *(PGIDec 06)*
a) Marfan's sydrome b) Homocystinuria
c) Down's syndrome d) Klinefelter syndrome

435. Dislocation of lens is seen in - *(PGI June 98)*
a) Trachoma b) Diabetes mellitus
c) Homocystinuria d) Turner's syndrome

436. Typically bilateral inferior subluxations of the lens is seen in - *(AI06)*
a) Marfan's syndrome b) Homocystinuria
c) Hyperinsulinemia d) Ocular trauma

437. In Mafan's syndrome lens dislocation is commonly seen- *{Corned 07)*
a) Upwards b) Downwards
c) Supero-temporally d) Nasally

438. '^enssuW^ ates in homocystinuria - *(NEET/DNB*
7 aj Inferotempc^lpf|5^^^^^W^^^lf^
c) Superonasal d) Superotemporal

439. Traumatic dislocation of lens is diagnosed by -
a) Direct ophthalmoscopy *(DPG Feb. 09)*
b) Indirect ophthalmoscopy
c) Distant direct ophthalmoscopy
d) Slit lamp examination

440. Which prominent ocular manifestation is associated with Marfan's syndrome - *(AI 04)*
a) Microcomea b) Microspherophakia
c) Megalocomea d) Ectopia lentis

441. Anterior lenticonus is found in - *(AI 96)*
a) Lowe's syndrome b) William's syndrome
c) Alport's syndrome d) Down's syndrome

442. Cataract associated with convulsion is seen in -
a) Toxoplasmosis *(AIIMS Dec 94)*
b) Tay Sac's disease
c) Galactosemia
d) Birth asphyxia with prematurity

GLAUCOMA

443. Regarding aqueous humor which one of them are correct - *(PGI June 02)*
a) It is secreted at rate of 2-3 microL/min
b) Secreted by ciliary process
c) Has less protein than plasma
d) Provides nutrition
e) Normal pressure is 5-15 mm Hg

444. The conversion of $C0_2$ and H_20 into carbonic acid during the formation of aqueous humour is catalysed by which one of the following enzymes- *(AIIMS*
a) Carboxylase b) Carbamylase *May05)*
c) Carbonic anhydrase d) Carbonic deoxygenase

445. Which of the following is primary glaucoma -
a) Juvenile glaucoma *(PGIDec 08)*
b) Steriod induced glaucoma
c) Pigmentary glaucoma
d) Congenital glaucoma
e) Infantile glaucoma

446. Ratio of incidence of open angle to closed angle glaucoma is - *(DPG Feb. 09, PGI 93)*
a) 1:1 b) 2:1
c) 3:1 d)4:l

447. Rapid change of presbyopic glass is a feature of -
a) Senile cataract b) Retinal detatchment
c) Intumescent cataract d) Open angle glaucoma

448. Open angle glaucoma causes - *(COMED09)*
a) Sudden loss of vision
b) Difficulty in dark adaptation
c) Amaurosis fiigax
d) Uniocular diplopia

449. In POAG (primary open angle glaucoma) which is not seen - *(PGIDec 06)*
a) Horizontal cupping
b) Bayonetting sign (crossing of vessels)
c) Macular oedema
d) Dot sign

450. Early sign of glaucoma includes following except- *(PGI97)*
a) Nerve fibre atrophy b) Splinter hemorrhage
c) Vertical cup d) Horizontal cup

451. Earliest field defect in open angle glaucoma is -
a) Contraction of the all isopters *(UP08)*
b) Enlarged blind spot
c) Nasal tip
d) Arcuate scotoma

452. Earliest visual field change in open angle glaucoma is- *(AIIMS Dec 91)*
a) Paracentral scotoma b) Ring scotoma
c) Siedel's scotoma d) Arcuate scotoma

453. Earliest field defect in primary open angle glaucoma- *(AIIMSFeb 97)*
a) Reidel's scotoma
b) Scotoma in Bjerrumns field
c) Arcuate scotoma
d) Nasal spur

454. First sign seen in open angle glaucoma -
a) Arcuate scotoma *(PGI June 00)*
b) Extension above blind spot
c) Roene's nasal step
d) Siedel's scotoma

455. You have been referred a middle-aged patient to rule out open angle glaucoma. Which of the following findings will help in the diagnosis - *(AI 02)*
a) Cupping of the disc
b) Depth of anterior chamber
c) Visual acuity and refractive error
d) Angle of the anterior chamber

432) a 433) a,c,d 434) a,b 435) c 436) b 437) c 438) b 439) d 440) d 441) c 442) c 443)a,b,c,d 444) c 445) a,d,e 446) None 447) d 448) b 449) a,c 450) d 451) a 452) a 453) b 454) b 455) a

456. In open Angle Glaucoma which investigation is least useful- *(AIIMS Sep 96)*
a) Indirect opthalmoscopy b) Tonometry
c) Direct opthalmoscopy d) Perimetry

457. A 75-year old patient presents with deterioration of vision. On examination the pupillary reflex is observed to be sluggish and the Intraocular pressure is normal. Optic disc evaluation shows a large and deep cup and primarily shows paracentral scotomas. The most likely diagnosis is - *(AI 12)*
a) Primary Narrow Angle glaucoma
b) Normal Tension Glaucoma
c) Neovascular Glaucoma
d) Absolute Glaucoma

458. Which of the following drugs is not used topically for treatment of open angle glaucoma - *(All India 06)*
a) Latanoprost b) Brimonidine
c) Acetazolamide d) Dorzolamide

459. Which one of the following is NOT used in glaucoma - *(AIIMS May 04)*
a) Timolol b)Physostigmine
c) Donepezil d) Dipivefrine

460. Rx of primary open angle glaucoma - *(PGI Dec 02, NEET/DNB Pattern)*
J |i§-;-0\Timolol malcate
b) Atropine
i itg c) Acetazolamide **y§ iiiiii** ^
d) Prostaglandin analogue

461. Drug used in glaucoma is - *(PGI June 9 7)*
a) Propranolol b) Atenolol
c) Timolol d) Pindolol

462. Topical beta blocker is the drug of choice of -
a) Angle closure glaucoma *(Karnataka 03)*
b) Open angle glaucoma
c) Hypopyon corneal ulcer
d) Ac granulomatous uveitis

463. The first line of treatment of open angle glaucoma is - *(COMED 08, NEET/DNB Pattern)*
a) Timolol b) Pilocarpine
f,j5:U^"^Ejpinephrme, d) Carbonic anhydrase inhibitor\1

464. Most ideal drug in open angle glaucoma with myopia is- *(UPSC 04)*
a) 2% pilocarpine b) 10% phenylephrine
c) 0.5% timolol d) Atropine

465. Argon Laser trabeculoplasty is done in - a) Open angle glaucoma *(Corned 08, AP 08)*
b) Secondary glaucoma
c) Angle recession glaucoma
d) Angle closure glaucoma

466. All except one predispose to angle closure glaucoma - *(AIIMS Nov 00, NEET/DNB Pattern)*
* a) Small cornea,' b) Flat cornea ~ ;,
,%£Shallo^yA^ , ç: dVsjiortaxiallengtjtuyfeyeb|JI

467. True about primary angle closure glaucoma -
a) More common in females *(PGINov 10)*
b) Shallow anterior chamber is a risk factor
c) Deep anterior chamber is a risk factor
d) Shorter diameter of cornea is a predisposing factor
e) Common in myopes

468. In acute angle closure glaucoma, primary mechanism of pathogenesis is - *(NEET/DNB Pattern)*
a) Increased secretion
b) Increased absorption but increased secretion
c) Outflow obstruction
d) None

469. Which one of the following procedures is most likely to increase intraocular pressure of glaucoma patient-
a) Use of atropine *(AIIMS 86)*
b) Decreased pressure in jugular vein
c) High does of vitamin C
d) Dark environment
e) Carbonic anhydrase inhibitors.

470. Which of the following is not a feature of Acute congestive glaucoma - *(PGI June 05)*
a) Deep angle
b) Painful condition
c) Vertically oval pupil
d) Increased intraocular pressure
e) Non reactive pupil

471. Not a symptom of angle closure glaucoma -
a) Blurring of vision *(NEET/DNB Pattern)*
b) Coloured Halos
c) Metamorp **lifi**
d) Headache **lSiEt**

472. A woman complains of coloured haloes around lights in the evening, with nausea and vomiting, IOP is normal Diagnosis is - *(AI 01)*
a) Incipent stage glaucoma open angle
b) Prodromal stage, closed angle glaucoma
c) Migraine
d) Cluster Headache

473. A patient presents with h/o evening halos and occasional headache for some months. His examination shows normal IOP but shallow AC. He is in which stage of glaucoma - *(AIIMSNov 09)*
a) Acute b) Absolute
c) Prodrome d) Constant instability

474. A patient has complaint of seeing coloured holoes in the evening and blurring of vision for last few days with normal IOP - *(AIIMS Nov 99)*
a) Prodromal phase of acute angle closure glaucoma
b) Acute angle closure glaucoma
c) Chronic glaucoma
d) Epidemic dropsy

475. Acute angle closure glaucoma - ***(PGI** Dec 05)*
a) Colored halos present b) Flashes of light seen
c) Deep anterior chamber d) Vertically oval pupil
e) Increased IOP

476. Kusum lata presents with acute painful red eye and mild dilated vertically oval pupil. Most likely diagnosis is - *(AI 02, AIIMS June 00)*
a) Acute retrobulbar neuritis
b) Acute angle closure glaucoma
c) Acute anterior uveitis
d) Severe kerato- conjunctivitis

456) a 457) b 458) c 459) c 460) a 461) c 462) b 463) a 464) c 465) a 466) b 467)a,b,d 468) c 469) a,d
470) a 471) c 472) b 473) c 474) a 475)a,d,e 476) b

477. Mild dilated fixed pupil seen in - *(AIIMS Dec 97)*
a) Acute congestive glaucoma
b) Iridocyclitis
c) Chronic congestive glaucoma
d) Open angle glaucoma

478. In acute congestive glaucoma, pupil is- *(PGJJune 97, NEET/DNBPattern)*
a) Oval and horizontal b) Oval and vertical
c) ^rcidar ' " ^ 4)t§litJ|^ev,v";r

479. A 30 year old woman with sudden right- sided painful red eye associated with nausea, vomiting and headache. The diagnosis is - *(PGI June 99)*
a) Acute congestive glaucoma
b) Endophthlmtis
c) Eale's disease
d) Trachoma

480. The most reliable provocative test for angle closure glaucoma - *(ARMS 95)*
a) Homatropine mydratic test
b) Mydriatic - miotic test
c) Water drinking test
d) Dark room test

481. In a case of acute attack of glaucoma Vogt's triad excludes - *(ARMS Feb 97)*
a) Iris atrophy b) Goniosynechiae
c) Pigment dispersal d) Glaucoma floaters

482. A 60 year male presented with the feature of coloured halos was examined with fincham's test, which revealed that halos split and then reunion, Diagnosis is- *(ARMS Dec 98)*
a) Acute congestive glaucoma
b) Open angle glaucoma
c) Senile immature cataract
d) Mucopurulant conjunctivitis

483. Fincham's test differentiates cataract from -
a) Conjunctivitis *(ARMSDec 95)*
b) Iridocyclitis
c) Open angle Glaucoma
d) Ac. Congestive Glaucoma

484. Drug used in acute congestive glaucoma are all except- *(PGINov 09, Dec 08)*
a) Atropine b) Pilocarpine
c) Acetozolamide d) Mannitol
e) Timolol

485. Treatment of acute congestive glaucoma includes all except - *(PGI Nov 09)*
a) Sclerectomy b)Trabeculectomy
c) Trabeculoplasy d) Vitrectomy
e) Iridotomy

486. Treatment of choice in acute congestive glaucoma -
a) Pilocarpine *(AI 99, 98, NEET/DNB Pattern)*
b) Laser iridotomy
tA ~ ***E)*** Timolol *■ r" - ^
d) Trabeculoplasty

487. Treatment of primary angle closure glaucoma is -
a) Trabeculectomy b) Pilocarpine *(AI 96)*
c) Timolol d) Iridectomy

P8§ **Drug of choice for acute congestive glaucoma is -**
a) 1-2% pilocarpine *(ARMSDec 99, 94; AI 96,*
b) Timolol *NEET/DNB Pattern)*
c) Levobunanol
Li d) Atropine

489. A 55 year old female comes to the eye casualty with history of severe eye pain, redness and diminution of vision. On examination the visual acuity is 6/60, there is circumcorneal congestion, corneal oedema and a shallow anterior chamber, Which of the following is the best drug of choice - *(ARMS Nov 05)*
a) Atropin ointment
b) I.V. Mannitol
c) Ciprofloxacin eye drops/
d) Betamethasone eye drops

490. Earliest drug used in acute angle closure glaucoma - *(AIIMS June 98)*
a) Diamox b) Pilocarpine
c) Atropine d)DFP

491. The treatment of choice of angle closure glaucoma is-
a) Parasympathomimetic drugs *(SGPGI05)*
b) Iridectomy
c) Trabeculoplasty
d) Timolol

492. Treatment of choice for the other eye in open angle glaucoma is - *(PGI June 97)*
a) Tabeculectomy b) Laser iridotoomy
c) Laser trabeculoplasty d) Peripheral iridectomy

493. The treatment of choice of fellow eye of acute angle closure glaucoma is - *(ARMS Sept 96, Dec 94, June*
a) Pilocarpine *92, PGI June 02, Dec 97, 93)*
b) Nd: YAG laser iridotomy
c) Peripheral iridectomy
d) Careful follow up

494. Prophylactic peripheral iridectomy is done in -
a) Narrow angle glaucoma *(PGIDec 97)*
b) Ac. Congestive glaucoma
c) Congenital glaucoma
d) Secondary glaucoma

495. Congenital glaucoma present as - *(TN 03)*
a) Microopthalmos b) Photophobia
c) Leucoria (white reflex) d)Pain

496. Photophobia in an infant could be due to- *(PGI June 99)*
a) Buphthalmos b) Lid coloboma
c) Cataract d) Any of the above

497. True about Buphthalmos - *(PGI June 04)*
a) Large cornea b) Haab's stria
c) Shallow AC d) Glaucoma
e) Medical treatment helps

498. In Buphthalmos, seen are all except - *(PGIDec 98)*
a) Subluxated lens b) Large cornea
c) Small cornea d)Big eye ball

499. In buphthalmos, lens is - *(PGI Dec 98)*
a) Anteroposterior flat b) Small
c) Large d) None of the above

477)a 478)b 479)a 480)d 481)d 482)c 483)d 484)a 485)c,d 486)b 487)d 488)a 489)b 490)a
491) b 492) b 493) b 494) b 495) b 496) a 497)a,b,d 498)a,b,d 499) a

500. Habb's striae are seen in - *(PGI June 02)*
a) Angle closure glaucoma b) Infantile glaucoma
c) Stargardt disease d) Disciform keratitis
e) Leber's disease

501. A neonate, 30 days old, presented with excessive lacrimation and photophobia. He has a large and hazy cornea. His both lacrimal duct systems are normal. The diagnosis is - *(AIIMSMay 01)*
a) Megalocomea b) Keratoconus
c) Congenital glaucoma d) Hunter's syndrome

502. Babloo a 5 yrs old child presents with large cornea, lacrimation and photophobia; Diagnosis *is-(AI 01)*
a) Megalocomea b) Congenital glaucoma
c) Congenital cataract d) Anterior uveitis

503. A child presents with lid lag and an enlarged cornea with a diameter of 13mm. Examination of the eye reveals double contoured opacities concentric to the limbus. Which of the following is the most likely diagnosis - *(AI 12)*
a) Superficial keratitis b) Deep keratitis
c) Thyroid Endocrinopathy d) Congenital Glaucoma

504. The treatment of congenital glaucoma is -
a) Essentially topical medications
b) Trabeculoplasty *(AIIMS May 03)*
c) Trabeculotomy with trabeculectomy
d) Cyclocryotherapy.

505. Treatment of choice for congenital glaucoma with corneal ulcer - *(CUPGEE 99)*
a) Trabeculotomy b)Goniotomy
c) Miotics d) Steroids

506. On mutation, which of the following may give rise to hereditary glaucoma. *(AIIMS May 03)*
a) Optineurin b) Ephrins
c) RBA8 d) Huntingtin

507. A male patient with a history of hypermature cataract presents with a 2 day history of ciliary congestion, photophobia, blurring of vision and on examination has a deep anterior chamber in the right eye. The left eye is normal. The diagnosis is-*(AIIMSMay 01)*
a) Phakomorphic glaucoma
b) Phakolytic glaucoma
c) Phakotoxic glaucoma
d) Phakoanaphylactic uveitis

508. False about phacolytic glaucoma - *(NEET/DNB Pattern)*
a) Due to contact of iris to lens
b)Open angle glaucoma
c) Seen in hypermature stage of cataract
d) Lens'induced glaucoma

509. Neovascularization of iris is frequently seen in all / except- *(MP 04)*
a) CRVO
b) Diabetic retinopathy
c) Fuch's heterochromic cyclitis
d) Congenital cataract

510. Rubeosis iridis is not seen in - *(PGI June 99)*
a) CRVO b)CRAO
c) Diabetic retinopathy d) Neovascularization

511. Rubeosis iridis is seen in all except - *(Jipmer 11)*
a) Open angle glaucoma b) Diabetic maculopathy
c) CRVO d) Uveitis

512. The laser procedure, most often used for treating iris neovascularization is - *(AIIMS May 06)*
a) Goniophotocoagulation
b) Laser trabeculoplasty
c) Panretinal photocoagulation (PRP)
d) Laser iridoplasty

513. Malignant glaucoma is seen in - *(PGIDec 04)*
a) Anterior chamber normal
b) Misdirected aqueous flow
c) Pilocarpine is the drug of choice
d) Management is medical only
e) Atropine is also given

514. Malignant glaucoma is seen in - *(PGIDec 99)*
a) Malignancy
b) After surgery for cataract or glaucoma
c) Trauma
d) Thrombosis

515. In which type of glaucoma the coloured haloes are NOT seen - *(AIIMS June 98)*
a) Phacomorphic glaucoma
b) Pigmentary glaucoma
c) Glaucoma of epidemic dropsy
d) Steroid induced glaucoma

516. Krukenberg spipdles - *(/0EEP/DNB Pattern)*
a) Involves anterior surface of cornea
b) Involves anterior lens surface
c) Involves posterior surface of cornea
d) Involves posterior surface of lens

517. Pigmentary glaucoma- findings seen is -
a) Fevy line *(NEET/DNB Pattern)*
b) Flesscher's line
c) Hadson hauti line
d) Kjmkeriberg's spmdles

518. iridocorneal endothelial syndrome is associated with- *(AIIMSMay 08)*
a) Progressive atrophy of iris stroma
b) Bilateral stromal edema of iris & cornea
c) Deposition of collagen in Descemef s membrane
d) Deposition of glycosaminoglycan in Descemet's membrane

519. Intractable secondary glaucoma is seen in - *(AI 08)*
a) Diffuse iris melanoma
b) Nodular iris melanoma
c) Melanocytic deposits in anterior part of iris
d) Melanocyte proliferation in posterior uveal tissue

520. In haemolytic glaucoma the mechanisms are all except- *(PGI 95)*
a) Siderosis of trabeculae
b) Deposition of haemosiderin
c) RBC clogging the trabeculae
d) Inflammation

521. Hypersecretory glaucoma is seen in - *(AI 94)*
a) Epidemic dropsy b) Marfan's syndrome
c) Hypertension d) Diabetes

500) b 501) c 502) b 503) d 504) c 505) a 506) a 507) b 508) a 509) d 510) None >b 511) a 512)c
513)b,e 514)b 515)None>d 516)c 517)d 518)a 519)a 520)d 521)a

522. Treatment option for glaucoma includes all except- *(PGI June 08)*
a) Trabeculectomy b) Trabeculotomy
c) Vitrectomy d) Viscoanulostomy
e) Iridectomy

523. Latanoprost used topically in glaucoma primarily acts by - *(A104)*
a) Decreasing aqueous humour formation
b) Increasing uveoscleral outflow
c) Releasing pupillary block
d) Increasing trabecular outflow

524. The following anti glaucoma drug increases uveoscleral outflow - *(JIPMER 2002)*
a) Latanoprost b) Timolol
c) Pilocarpine d)Acetazolamide

525. Hyperosmolar agents in glaucoma acts by ?
a) Increasing aqueous outflow *(APPG 08)*
b) Decreasing vitreous volume
c) Decrease aqueous production
d) Facilitate uveoscleral outflow

526. Which of the following antiglaucoma medications can cause drowsiness? *(AI06)*
a) Latanoprost b) Timolol
c) Brimonidine d) Dorzolamide

527. A patient of glaucoma with bronchial asthma presents to the emergency with status asthamaticus, causative agent might have been - *(ARMSNov 99)*
a) Pilocarphine eye drop b) Timolol eye drop
c) Betaxolol eye drop d) Levobunolol eye drop

528. A patient having glaucoma develops blepharoconjunctivitis after instilling some antiglaucoma drug. Which of the following drug can be responsible for it - *(AI 02)*
a) Timolol b) Latanosprost
c) Dipiverine d) Pilocarpine

529. Contraindication of topical beta blockers -
a) Hypertension b) Asthma *(PGIJune 04)*
c) Tachycardia d) Hypotension
e) Depression

530. All of the following conditions are contraindicated or likely to women in a case of Primary Open Angle glaucoma, when treated with Timolol maleate 0.5% eye drops, except - *(ARMS Nov 03)*
a) Hypertenison b) Hypercholesterolemia
c) Depression d) Bronchial asthma

531. Which of the following is not used in glaucoma in a hypertensive patients - *(ARMS Nov 00)*
a) Dipiverffine b) (3-blockers
c) Alpha agonist d) Trabeculoplasty

532. Epinephrine not used in - *(ARMS Dec 97)*
a) Uveitis glaucomab) Open angle glaucoma
c) Aphakic glaucoma d) Neovascular glaucoma

533. Which of the following drugs is contraindicated in a patient with history of sulfa allergy presenting with an acute attack of angle closure glaucoma -
a) Glycerol b) Acetazolamide *(ARMS Nov 05)*
c) Mannitol d) Latanoprost

534. Which of the following antiglaucoma medication is UNSAFE in infants - *(DPG 09)*
a) Timolol b) Brinzolamide
c) Latanoprost d) Dorzolamide

535. Anti-glaucoma drug that is long acting and used once daily- *(MH11)*
a) Bromonidine b) Dorazolamide
c) Latanoprost d) Timolol

536. Side effects of Pilocarpine are A/E - *(DPG 09, ARMS Dec 97)*
a) Shallow anterior chamber
b) Punctate stenosis
c) Follicular conjunctivitis
d) Posterior synechia

537. False statement about depth of anterior chamber -
a) Less in women than men *(PGI Nov. 10)*
b) Correspondent to volume of anterior chamber
c) Increase with age
d) More in myopes
e) Less in hypermetropes

538. Shallow Anterior Chamber is seen in all except -
a) Old age *(TN 03)*
b) Steroid induced cataract
c) Hypermetropia
d) Angle closure glaucoma

539. Glaucomflecken is - *(NEET/DNB Pattern)*
a) Acute uvetis due to glaucoma
b) Lens opacity due to glaucoma
c) Retinal detachment due to glaucoma
d) Corn *mmSBBBM* glaucom

rileni

VITREOUS

540. Mucopolysaccharide hyaluronic acid is present in - *(ARMS May 10, 07, Nov 06,AI 07)*
a) Vitreous humor b) Cornea
c) Blood vessels d) Lens

541. A vitreous aspirate has been collected in an emergency at 9 pm. What advice you like to give to the staff on duty regarding the overnight storage of the sample - *(AI 03)*
a) The sample should be kept at 4°C
b) The sample should be incubated at 37° C
c) The sample should be refrigerated in deep freezer
d) The sample should be refrigerated for the initial 3 hours and then incubated at 37°C

542. Persistent primary hyperplastic vitreous (PHPV) is associated with - *(AI 08)*
a) Patau syndrome b) Edward syndrome
c) Trisomy 14 d) Downs syndrome

543. Which one of the following statements, concerning persistent hyperplastic primary vitreous (PHPV) is not true? *(ARMS May 06)*
a) It is generally unilateral
b) Visual prognosis is usually good
c) It may calcify
d) It is most easily differentiated from retinoblastoma by the presence of exophthalmos or cataract

522) c 523) b 524) a 525) b 526) c 527) b 528) a 529) b 530) a 531)c 532) c 533) b 534) b 535) c>d
536) b 537)b,c 538)b 539)b 540) a 541) a 542) a 543)b,c,d

544. The most common cause of vitreous hemorrhage in adults is - *(AI06)*
a) Retinal hole b) Trauma
c) Hypertension d) Diabetes

545. A 25 year old male gives history of suddden painless loss of vision in one eye for the past 2 weeks. There is no history of trauma. On examination the anterior segment is normal but there is no fundal glow. Which one of the following is the most likely cause? *(AI 05)*
a) Vitreous haemorrhage
b) Optic atrophy
c) Development cataract
d) Acute attack of angle closure glaucoma.

546. In a young patient presenting with recurrent vitreous hemorrhage, diagnosis is - *(PGI June 02)*
a) Eale's disease b)CRVO
c) Proliferative retinopathy d) Coat's disease
e) Episcleritis

547. Eales disease is - *(NEET/DNB Pattern)*
a) Recurrent optic neuritis
b) Recurrent pappilloedema
c) Recurrent pcriphelbitis retinae
d) None

548. Eale's disease is - *(NEET/DNB Pattern)*
a) Retinal hemorrhage
b) Vitreous hemorrhage
c) Conjunctival hemorrhage
d) Choroidal hemorrhage

549. All of the following are true of Eale's disease except-
a) Occurs in the young *(AI 94)*
b) Vitreous hemorrhage is present
c) Retinal detachment
d) Optic neuritis

550. A 25year old male presents with painless sudden loss of vision, ocular and systemic examination is not contributory. What is probable diagnosis-(^ZZMS'
a) Retinal detachment b) Eale's disease *Nov 10)*
c) Glaucoma d) Cataract

RETINA

551. The average distance of the fovea from the temporal margin of the optic disc is - *(AI 06)*
a) 1 disc diameter b) 2 disc diameter
c) 3 disc diameter d) 4 disc diameter

552. Regarding fovea, which of the following statements is true- *(PGIDec 01)*
a) Has the lowest threshold for light
b) Contains only cones
c) Contains only rods
d) Maximum visual acuity
e) Is located at apex of optic nerve

553. Most sensitive part of retina is - *(AIIMSJune 98)*
a) Macula b) Fovea-centralis
c) Optic disc d) Peripheral - retina

554. True about fovea centralis - *(PGI May 10)*
a) Cones present b) Visual acquity lowest
c) Optic nerve passes d) Rods present
e) Visual acquity highest

555. The following are true about optic disc -
a) Forms an absolute scotoma in the eye field
b) Optc disc measures vertically 1.84 mm & horizontally 1.76 mm *(PGIDec 07)*
c) Approx. 1 million nerve fiber
d) Supplied by central retinal artery
e) Fovea centralis situated nasally

556. True about Optic disc - *(PGI June 09)*
a) Horizontal diameter 1.76 mm
b) Vertical diameter 1.88 mm
c) Contain 1 million nerve fibre
d) Central retinal artery directly supplies this area

557. Diameter of the optic disc is - *(J &. KOI)*
a) 0.5mm b) 1.5 mm
c) 2.5mm d) 3.5 mm

558. Broadest neuroretinai rim is seen in - *(NEET/DNB Pattern)*
a) Sup pole b) Inf pole
c) Nasal pole d) Temporal lobe

559. The retina receives its blood supply from all, except- *(AI 06)*
a) Posterior ciliary artery
b) Central retinal artery
c) Retinal arteries
d) Plexus of Zinn and Haller arteries

560. Strongest force of bonding b/w retina and RPE -
a) Vitreous gel pressure *(JIPMER 06)*
b) Intraocular fluid pressure
c) RPE water transport
d) IPM

561. Which of the following is not seen in the interphotoreceptor matrix - *(AI08)*
a) Metalloproteinase
b) Sialoprotein Associated with Rods and Cones (SPARC)
c) Tissue Inhibitors of metalloproteinases (TIMP)
d) Memicane

562. Soft exudates are found in - *(PGI Dec 07)*
a) DM b)HTN
c) Toxemia d) Coat's disease
e) All

563. Cotton wool spots are commonly seen *in-(PGI June 01)*
a) AIDS b) DM
c) Hypertension d) CMV

564. Cotton wool spots are commonly seen in A/E -
a) HIV b) DM *(PGI Dec 00)*
c) Hypertension d) CMV

565. Which of the following are differential diagnosis for cotton wool spots in fundus- *(PGI2K)*
a) AIDS b) Diabetic retinopathy
c) Hypertension d) Eales's disease
e) Coat's disease

544) d 545) a 546) a 547) c 548) b 549) d 550) b 551) b 552)a,b,d 553) b 554) a,e 555)a,b,c,d 556)a,b,c
557) b 558) b 559)a 560)d 561)d 562)e 563)a,b,c 564)d 565)a,b,c,d

566. Cotton wool spot is /are seen in - *(PGIMay 10)*
a) DR b) Hypertensive retinopathy
c) AIDS d) Retinoblastoma
e) Toxaemia of pregnancy

567. Hard exudates not seen in - *(PGI June 08)*
a) Hypertension b)DM
c) Toxemia of pregnancy d)SLE
e) Coat's disease

568. Hard exudates seen in - *(PGI June 00)*
a) CRVO b) DM
c) HTN d) Neovascularization

569. Hard exudates are seen in all except -*(PGINov 09)*
a) Diabetic retinopathy
b) Retinitis pigmentosa
c) Eale's disease
d) Retinal artery macroaneurysm
e) Choroidal neovascularisation

570. Cherry red spot found in - *(PGI June 04)*
a) Gangliosidosis
b) Retinopathy of prematurity
c) Tay- Sach's disease
d) Gaucher's disease
e) Retinal detachment

571. Cherry Red spot is found in all of the following except- *(AI07)*
a) Nimen Pick's disease
b) GM1 gangliosidosis
c) Krabbe's disease
d) Multiple sulfatase deficiency

572. Cherry red spot is seen in all except - *(AI 10)*
a) Niemann pick disease b) GMI gangliosidosis
c) Tay sach's disease d) Gaucher's disease

573. Cherry red spot is seen in -*(MAHE 07; SGPGI05, AI 94, NEET/DNB Pattern)*
a) Eale's disease
b) Retinitis pigmentosa
:Eff:plsjE) **Central retinal arterylhrombos^^^p|5g|^i^||ii |H111 d) Central retinalvein occlusion**

574. Cherry red spot is seen in - *(AI 98, 96)*
a) CRVO b) Blunt Trauma
c) Diabetes mellitus d) Retinitis pigmentosa

575. Cherry red spot at macula is not seen in -
a) Macular infarction *(AIIMS Jun 97)*
b) Niemann picks disease
c) Commotio retinae
d) CRVO

576. Cherry red spot is seen in - *(PGIDec 97)*
a) Retinitis pigmentosa
b) Retinopathy of prematurity
c) Metachromatic leukodystrophy
d) CRV occlusion

577. Cherry red spot on retina is seen in A/E-
a) CRAO b)CRVO
c) Nieman - pick disease d) Tay- sach's disease

578. A 30 year old patient with history of recurrent headache was sent for fundus evaluation. He was found to be having generalized arterial attenuation with multiple cotton wool spots and flame shaped haemorrhages in both eyes. The most likely casue is- *(AIIMSNov 05)*
a) Diabetic retinopathy
b) Hypertensive retinopathy
c) Central retinal artery occlusion
d) Temporal ateritis

579. All the following changes are caused in the retina by benign hypertension except - *(AI 94)*
a) Narrowing of arterioles b) Exudates
c) Cotton wool spots d) Retinal hemorrhage

580. All of the following take part in the pathogenesis of macular edema in diabetic retinopathy except -
a) Retinal pigment epithelium dysfunction
b) Oxidative stress *(AIIMS May 08)*
c) VEGF
d) Increased protein kinase-C

581. Degree of diabetic retinopathy depends on -
a) Type of disease *(AIIMS May 93)*
b) Duration of disease
c) Severity of disease
d) Retinal involvement

582. First retinal abnormality in diabetic retinopathy -
a) Microaneurysm *(PGI June 09, 00, PGI Dec 07,*
b) Hard exudates *AIIMS 91, Punjab 11)*
c) Soft exudates
d) Cotton wool spots

583. Which of following is not a feature in diabetic retinopathy on fundus examination - *(AI 01)*
a) Microaneurysmsb) Retinal hemorrhages
c) Arteriolar dilatation d) Neovascularisation

584. Features of non - proliferative DR is all except -
a) Neovascularisationb) Soft exudate
c) Hard exudate d) Vitreous detachment
e) Cotton - wool spot *(PGI May 10)*

585. Diabetic retinopathy is characterized by-
a) Hard exudates b) Neovascularisation
c) Glaucoma d) Cataract
e) Retinal detachment *(PGI June 08)*

586. Diabetic retinopathy is characterized *by-(PGIDec 97)*
a) Hard exudates, dot haemorrhage and microaneurysm
b) Flame shaped haemorrhages, soft exudates
c) Deep haemorrhage only
d) Hard exudates only

587. One of the following is NOT a sign of diabetic retinopathy- *(DPGMar. 09)*
a) Microaneurysms
b) Cotton wool spots
c) Hard exudates
d) Choroidal neovascularization

566)a,b,c,e 567)c 568)a,b,c,d 569)b 570)a,c,d 571)None>c 572)None>d 573)c 574)b 575)d 576)c 577) b 578)b 579) c 580) a 581)b 582) a 583) c 584) a,d 585)AH 586) a,b 587) d

588. Diabetes mellitus can lead to - *(PGI June 02)*
a) Vitreous haemorrhage b) Rubeosis iridis
c) Retinal detachment d) HI, IV and VI nerve palsy
e) Hypermetropia

589. A 40 year old male with diabetes presents with vitreous hemorrhage. What is the cause?
a) Posterior retinal detachment *(AIIMS May 12)*
b) Neovascularization at disc
c) Central retinal vein occlusion
d) Trauma to central retinal artery

590. A 29 years old man with IDDM for the last 14 years develops sudden vision loss, has non- proliferating diabetic retinopathy, cause is - *(AIIMSNov 99)*
a) Macular oedema b) Vitreous haemorrhage
c) Subretinal haemorrhage d) Retinal traction

591. Commonest cause of loss of vision in non-proliferative diabetic retinopathy is - *(AIIMS 99)*
a) Vitreous heamorrhage b) Macular edema
c) Detachment of retina d) Subretinal haemorrhage

592. A 35 year old insulin dependent diabetes mellitus(lDDM) patient on Insulin for the last 10 year complains of gradually progressive painless loss of vision. Most likely he has - *(AIIMS Nov 04)*
a) Cataract
b) Vitreous haemorrhage
c) Total rheugmatogenous retinal detachment
d) Tractional retinal detachment not involving the macula

593. Causes of floaters in DM is- *(PGIMay 10, 01, 96)*
a) Vitreous hemorrahage b) Vitreous detachment
c) Maculopathy d) Infarction

| . | Vitreous hemorrhage diabeficjrefittbpathy |§§|
^i§jg
b) Proliferative diabetic retinopathy
c) Both *(NEET/DNB Pattern)*
d) None

595. Diabetic retinopathy is treated by-
a) Strict glycemic control *(PGI Dec 03, June 03)*
b) Panphotocoagulation
c) Antihypertensive
d) Cyclophotocoagulation

596. Treatment of advanced proliferative diabetic retinopathy with extensive vitreoretinal fibrosis and tractional retinal detachment involves all of the following except - *(AI09)*
a) Reattachment of detached or tom retina
b) Removal of epiretinal membrane
c) Vitrectomy
d) Exophotocoagulation

597. Treatment of diabetic retinopathy - *(PGI June 07)*
a) Phocoemulsification
b) Retina laser photocoagulation
c) LASIK
d) Pars plana vitrectomy

598. Treatment of diabetic retinopathy neovascularisation is/are - *(PGI June 09)*
a) Retinal laser photocoagulation
b) Pars plana vitrectomy
c) Phacoemulsion
d) AntiVEGEAb
e) LASIK

599. Grid laser photocoagulation is indicated in -
a) Ischaemic maculopathy *(COMED 09)*
b) Clinically significant macular oedema
c) Macular hole
d) Proliferative diabetic retinopathy

600. Panretinal photocoagulation is indicated in -
a) Macular edema *(DPGMar. 09)*
b) Retinal breaks
c) Proliferative diabetic retinopathy
d) Tractional retinal detachment

601. A case of Non - Insulin dependent diabetes mellitus (NIDDM) with a history of diabetes for one year should have an ophthalmic examination? *(AI 06)*
a) As early as feasible
b) After 5 years
c) After 10 years
d) Only after visual symptoms develop

602. Child with Type I Diabetes. What is the advised time for fundus examinations from the time of diagnosis?
a) After 5 years b) After 2 years
c) After 10 years d) At the time of diagnosis

603. In NIDDM, fundus examination is done -
a) At the time of diagnosis *(PGI Dec 01)*
b) 5 year after diagnosis
c) At diagnosis & 5 years after diagnosis
d) At 2 years

604. In maturity onset diabetes mellitus, ophthalmoscopy should be done at - *(AIIMS June 00)*
a) Immediately b) After 5 years
c) After 10 years d) After 15 years

605. In recently reconised IDDM patient examination of fundus is done at - *(PGI 96)*
a) Immediately b) At 1 year
c) At 5 year d) None of the above

606. Diabetic retinopathy, most likely present with -
a) IDDM with 2 years duration *(AIIMS Dec 98)*
b) NIDDM with 2 years duration
c) Juvenile diabetes
d) Gestational diabetes

607. ETDRS vision chart study is done in patients with diabetic retinopathy. ETDRS stands for-
a) Extended therapy for diabetic retinopathy & its sutdy
b) Emergency treatment for diabetic retinopathy and study *(AIIMS Nov 01)*
c) Eye testing or rotatory drum & its study
d) Early treatment for diabetic retinopathy study

588)All 589) b 590) a 591) b 592) a 593) a 594) b 595)a,b,c,d 596) d 597) b,d 598) a,d 599) b 600) c
601) a 602)a 603)a 604)a 605)c 606)b 607) d

608. Which of the following agents is not used in the treatment of Diabetic Macular Edema/ Retinopathy-
a) Ruboxistaurim b) Pyridazinones *(AI11)*
c) Benfotiamine d) Tamoxifen

609. A young patient presented with sudden painless loss of vision with systolic murmur over chest, ocular examination reveals - cherry red spot in macula with clear AC, with perception of light, diagnosis -
a) Central retinal artery occlusion *(AIlMSNov99)*
b) Central retinal vein occlusion
c) Macular choroiditis with infective endocarditis
d) Central serous retinopathy

610. An elderly male with heart disease presents with sudden loss of vision in one eye; examination reveals cherry red spot; diagnosis is - *(AI 01)*
a) Central retinal vein occlusion
b) Central retinal artery occlusion
c) Amaurosis fugax
d) Acute ischemic optic neuritis

611. On fundoscopic examination of a patient of giant cell arteritis, who has had history of sudden & painless loss of vision two days back, the surgeon finds orange reflex. He also notices segmentation of blood column in vessels. These vessels are - & patient had suffered from - *(AI 93)*
a) Retinal arteries & Central Retinal Artery occlusion
b) Retinal veins & CRAO
c) Retinal veins &CRVO
d) Retinal arteries & CRVO

612. Following are seen in CRA occlusion except -
a) Gradual loss of vision *(PGI June 98)*
b) Headache
c) Sudden loss of vision
d) Retained central vision

613. Cattle track appearehce,. *(NEET/DNB A1$S|||*
a) CRVO b) CRAO
c) Diabetic retinopathy d) Syphilitic retinopathy

614. All of the following may be used to differentiate Central Retinal Venous Occlusion (CRVO) from ocular Ischemic syndrome due to carotid artery stenosis, Except - *(AI 09)*
a) Dilated retinal vein b) Tortuous retinal vein
c) Retinal artery pressure d) Opthalmodynamometry

615. Neovascularisation is seen in - *(AIIMS June 98)*
a) Central vein obstruction
b) Central retinal artery obstruction
c) Branch retinal vein obstruction
d) All of the above

616. A 25 year old executive presents with metamorphopsia in his right eye. On examination the fundus shows a shallow detachement at the macula. The fluorescein angiography shows a "smoke stack" sign. Which of the following management should be given ? *(AIIMSNov 03)*
a) Topical antibiotic- corticosteroid combination
b) Systemic corticosteroid for two weeks and then taper
c) Pulse Methyl Prednisolone for three days and then taper
d) Just wait and watch for spontaneous recovery

617. A **young adult male presented with sudden painless loss of vision. He recovered spontaneously within 3 months Most likely cause of his blindness is -**
a) Central serous retinopathy
b) Macular hole
c) Myopic crescent
d) Vitreous haemorrhage

618. Enlarging dot sign in fundus fluorescein scanning is seen in - *(PGI June 99)*
a) Cystoid macular edema
b) Central serous retinopathy
c) Significant macular edema
d) Coat's disease

619. In central serous retinopathy - *(Manipal 09)*
a) Often shows focal leakage on fluorescein fundus photography
b) A macular hole is a common end result
c) The image perceived by the patient on the affected side in unilateral cases is bigger than on the normal side
d) A dense central scotoma is the most common presentation

620. In retinal detachment -
a) Effusion of fluid into the suprachoroidal space
b) Retinoschisis *(MAHE 07, NEET/DNB Pattern)*
c) Separation of sensory retina from pigment epithelium
d) None of the above

621. Commonest type of Retinal detachment - *(MH10)*
a) Rheugmatogenous b) Choroidal hemorrhage
c) Exudative d) Tractional

622. Retinal detachment seen in - *(PGI Dec 07)*
a) Myopia b) Hypermetropia
c) Eale's disease d) Cataract extraction
e) Nd Yag photocoagulation

623. Risk factors for Retinal detachment are -
a) Diabetic retinopathy b) Myopia *(PGI Nov 09)*
c) Hypermetropia d)CRVO
e) Retinopathy of prematurity

624. Cause of exudative retinal detachment are -
a) Scleritis *(PGI June 09, PGI Dec 08)*
b) Toxaemia of pregnancy
c) Dysthyroid eye disease
d) Central serous retinopathy
e) Sickle cell retinopathy

625. Causes of exudative retinal detachment -
a) Central retinal artery occlusion *(PGI June 07)*
b) Hypertensive retinopathy
c) Harada's sydrome
d) Coat's disease

626. Retinal detachment is not seen in - *(Kerala 03)*
a) High myopia b) Aphakia
c) Choroiditis d) Hypermetropia

608) d 609) a 610)b 611)b 612)a 613)b 614)a 615)a 616)d 617)a 618)b 619)a 620)c 621)a 622) a,c,d 623)a,b,e 624)a,b,d 625) c,d 626) d

627. A patient with detachment of retina with photopsia with floaters in the eye. Diagnosis is - *(A12000)*
a) Vitreous haemorrhage
b) Exudative retinal detachment
c) Rheugmatogenous retinal detachments
d) Tractional retinal detachment

628. Photopsia seen in ? *(APPG 08, Jipmer 11)*
a) Choroiditis b) Retinitis
c) Retinal detachment d)All

629. All are features of early retinal detachment except -
a) Retroorbital pain *(Manipal 08)*
b) Photopsia
c) Floaters
d) Darkened peripheral field of vision

630. Features in retinal detachment all except -
a) Field defect *(PGI June 08)*
b) Retinal tears
c) AAV vitreous haemorrhage
d) Greyish - brown fundus
e) Defective vision

631. Shaffer's sign is seen in - *(NEET/DNB Pattern)*
a) Retinitis pigmentosa b) Retinal detachment
c) CRVO d) CRAO

632. RD is diagnosed by - *(PGI June 03)*
a) + 90D
b) Hurby lens
c) 3 mirror contact lens
d) Direct ophthalmoscopy
e) Indirect ophthalmoscopy

633. A 60 year old male patient operated for cataract 6 months back now complains of floaters and sudden loss of vision. The diagnosis is - *(AIIMS May 01)*
a) Vitreous hemorhage
b) Retinal detachment
c) Central retinal artery occlusion
d) Cystoid macular edema

634. An 18 years old girl who was using spectacles for last 10 years, came with the history of photopsia and sudden loss of vision in right eye. Which one of the following clinical examinations should be performed to clinch the diagnosis ? *(AIIMSNov 04)*
a) Cycloplegic refraction
b) Indirect Ophthalmoscopy
c) Schiotz tonometry
d) Gonioscopy

635. A friend of yours has a spectacle correction of -6.0 and-8.0. He telephones you one morning and tells that he has started seeing some opacities floating in front of his eye and that his vision has decreased slightly over the last few days. As an intern in the ophthalmology section, what would you do -
a) Reassure *(ARMS Nov 02)*
b) Refraction and prescribe a new spectacle
c) Direct opthalmoscopy
d) Indirect opthalmoscopy

636. In rheugmatogenous retinal detachment,all are true except- *(CUPGEE02)*
a) Holes are seen b) Scleral buckling is done
c) Follows trauma to eye d) Occurs in myopia

637. A patient presented with sudden onset of floater & perception of falling of a curtain (veil) in front of the eye which one of the following is the most appropriate diagnosis- *(AI -11)*
a) Retinal detachment b) Eale's disease
c) Vitreous hemorrhage d) Glaucoma

638. Exudative retinopathy in hypertensive is due to -
a) Co- arctation of aorta *(ARMS June 00)*
b) Type I Takayasu's arteritis
c) Renal artery stenosis
d) Diabetic atherosclerosis

639. Retinitis Pigmentosa is associated with all except -
a) Usher Syndrome *(ARMS May 08)*
b) Marfan's Syndrome
c) Kearns-Sayre Syndrome
d) Bussen - Komzweig Syndrome

640. Retinitis pigmentosa is a feature of all except -
a) Refsum's disease *(ARMS Nov 10)*
b) Hallervorden-Spatz disease
c) NARP
d) Abetalipoproteinemia

641. The ocular features of retinitis pigmentosa include-
a) Bony corpuscular appearanced *(Korn 11)*
b) Waxy pallor of the optic disc
c) Attenuation of the retinal arterioles
d) All of the above

642. Retinitis pigmentosa is due to defect in which gene - *(NEET/DNB Pattern)*
a) Scotopsin b) Rhodopsin
c) Pigmented epithelium d) None

643. All are true about retinitis pigmentosa EXCEPT -
a) Genetic inheritence (X-linked) *(ARMS Nov 99)*
b) Early diagnosis and treatment
c) Visual acuity not diminished till late in course
d) Associated with systemic abnormalities

644; Earliest symptom ofretinitis pigmentosar *(NEET/DNB Pattern)*
a) Ring scotoma b) Night blindness
c) Tubular vision d) None

645. A patient presented with peripheral Held loss and fundus examination shows waxy exudates & pale disc with pigmentation around retinal vessels, diagnosis is - *(ARMS June 99)*
a) Behcet's syndrome b) Chorio- retinitis
c) Open angel glaucoma d) Retinitis - pigmentosa

646. Attenuated retinal vessels with bony corpuscular like lesion seen in - *(APPGE 04)*
a) Diabetes mellitus b) Hypertension
c) Retinitis pigmentosa d) Eales disease

627)c 628)c 629)a 630)c 631)b 632)A11633)b 634)b 635)d 636)None 637)a 638)c 639)b 640)b
641) d 642) b 643) b 644) b 645) d 646) c

647. A young adults presents with night blindness and tubular vision. On examination, Intraocular Pressure was observed to be 18mm and the anterior segment was unremarkable. Fundoscopy showed attenuation of arterioles and waxy pallor of the optic disc with bony corpuscles like spicules of pigmentation in mid peripheral retina. Ring scotomas were observed on perimetry. Which of the following is the most likely diagnosis - *(AI 12)*
a) Pigmentary Retinal Dystrophy
b) Primary Open Angle Glaucoma
c) Lattice degeneration of Retina
d) Diabetic Retinopathy

648. Retinal inflammatory diseases which give to pseudoretinitis pigmentosa type of picture are all except-
a) Rubella b) Syphilis *(J&K05)*
c) Toxocara d) Toxoplasma

649. Most characteristic finding of retinitis pigmentosa -
a) Ring scotoma b) Peripheral field defect *(AI 02)*
c) Central scotoma d) Diplopia

650. The most frequent cataract type seen in adult Retinitis pigmentosa patient is - *(J&K 05)*
a) PSC b) Anterior polar
c) Cortical d) Mixed

651. In Retinitis pigmentosa, following are true except -
a) Pigments present b) Pale waxy disc
c) Narrowing of vessels d) ERG- normal

652. Fundus?inretinitis;Pigmentosais -
a) White spots with red disc *(NEET/DNB Pattern)*
b) Jet- black spots with pale-waxy disc
c) No pigmentation *mm*
d) Dilatation of arterioles

653. Ring scotoma is seen in - *(PGI June 98)*
a) Retinitis pigmentosa b) Glaucoma
c) Cataract d) Retinal detachment

654. Ring scotoma is a feature of - *(A1IMS Jun 97)*
a) Blue dot cataract b) Diabetic retinopathy
c) Nuclear cataract d) Retinitis pigmentosa

655. Idiopathic nyctalopia is due to a hereditary -
a) Absence of rod function *(AIIMSNov 05)*
b) Absence of cone function
c) Absence of rod and cone function
d) Decrease of cone function

656. Photoretinitis is due to - *(AP 96)*
a) Ultravoilet rays b) Infrared rays
c) X-rays d) Gamma rays

657. A 10 year old boy after watching the sun during eclipse in the apparent twilight developed persistant negative after image of the sun. He was taken to an ophthalmic surgeon who examined his fundus and found it normal. Most probable diagnosis is - *(AI 93)*
a) Malingering b) Photophthalmia
c) Photoretinitis d) Light induced maculopathy

658. Retinopathy in neonate is due to - *(PGI June 00)*
a) Prematurity < 1500 gm b) 0_2 toxicity
c) Trauma d) Diabetes

659. While working in a neonatal ICU. Your team delivers a preamature infant at 27 weeks of gestation and weighing 1500gm. How soon will you request fundus examination by an ophthalmologist ? *(ARMSNov 02)*
a) Immediately
b) 3- 4 weeks after delivery
c) At 34 weeks gestational age
d) At 40 weeks gestational age

660. A 70-year-old man presents with deterioration of vision 3 weeks after cataract extraction and IOL implantation. Slit lamp examination shows honeycomb maculopathy and Fluorescin angiography (FA) shows 'flower petal' hyperfluorescence. The most likely diagnosis is - *(AI 12)*
a) Age related macular degeneration (ARMD)
b) Central serous Retinopathy (CSR)
c) Macular Dystrophy
d) Cystoid Macular Edema

661. Macular edema is caused by all except- *(PGIDec 98)*
a) Microaneurysm b) Cap dilatation
c) Neovascularization d) None

662. Which of the following has autosomal dominant inheritance - *(ARMSMay 10,07, Nov 06, AI 07)*
a) Best's disease
b) Gyrate atrophy
c) Laurence Moon Biedl syndrome
d) Bassen-Komzweig's disease

663. Which is not an AR disorder - *(Jipmer 04)*
a) Gyrate atrophy
b) Goldmann syndrome
c) Bardet - Biedi syndrome
d) Butterfly macular dystrophy

664. Best diagnostic test for Best disease is - *(Jipmer 99,*
a) Dark adaptation b) ERG *CMC 01)*
c) BOG d) Gonioscopy

665. Coat's disease - *(Manipal 09)*
a) Has equal sex incidence
b) Caused by peripheral neovascularization
c) Is inherited in an autosomal dominant pattern
d) Can be treated with laser

666. All of the following statements are true about Juxtafoveal Retinal Telangiectasias, Except -
a) Variant of Coat's disease
b) Associated with telangiectasias in the macula
c) Associated with structurally abnormal Retinal Vessels
d) Associated with peripheral telangiectasias

667. What is the treatment of threshold ROP?
a) Laser photocoagulation *(ARMS Nov 10)*
b) Slow reduction in oxygen
c) Retinal reattachment
d) Antioxidants

668. Baby born prematurely at 29 wks, on examination at 42wks with ROP both eyes shows stage 2 zone 1 'plus' disease, how will u manage the patient?
a) Examine the patient after 1 week *(ARMSMay 11)*
b) Laser photocoagulation of both eyes
c) Laser photocoagulation of worse eye, follow up of other eye
d) Vitreoretinal surgery

647) a 648) c 649) a,b 650) a 651)d 652) b 653) a,b 654) d 655) a 656) None >a 657) c 658) a 659) c
660) d 661) d 662)a 663) d 664)c 665) d 666) d 667)a 668) b

669. "Photodynamic therapy" is used in the eye for the following disease - *(AI04)*
a) Cataract
b) Glaucoma
c) Uveitis
d) Wet AMD (Age related macular degeneration)

670. Angioid streaks in the eyes are seen in -
a) Pseudoxanthoma elasticum *(AIIMS Nov 05)*
b) Tendinous xanthoma
c) Xanthelasma
d) Eruptive xanthoma

671. In a patient with AIDS chorioretinitis is typically caused by - *(AI 03; AIIMS Nov 02)*
a) Cytomegalovirus
b) Toxoplasma gondii
c) Crytococcus neoformans
d) Histoplasma capsulatum

672. Salt & pepper fundus - *(NEET/DNB Pattern)*
a) Cong toxoplasmosis b) Cong histoplasmosis
c) Congenital syphilis d) None:

673. Sauce and cheese retinopathy is seen in-*(AIIMSNov*
a) CMV b) Rubella *93; June 92)*
c) Toxoplasmosis d) Congenital syphilis

674; H^a^^hfin feg appeari^ceS«^B tff^!' p|§§
a) Syphilis b) Toxoplasmosis *(NEET/DNB*
c) Toxocara d) Herpes *•Pattern)*

675. Bull's eye lesion seen with -*(TGI Nov 09, Dec 07, June*
a) Chloroquine b) Dapsone *99, AIIMS Nov 93,*
c) Rifampicin d) Ethambutol *Jipmer 11)*
e) Gold

676. Roth spots are seen in - *(COMED09)*
a) Hypertension b) Septicemia
c) Diabetes d) Central retinal occlusion

677. Roth spots are seen in - *(NEET/DNB Pattern)*
a) Bacterial endocarditisb) HTN retinopathy
c) DM retinopathy d) None

678. 'Snow ball' Opacity in vitreous is seen in-*(PGIDec 03,*
a) Pars planitis b) Sarcoidosis *June 03)*
c) Juvenile RA d) Toxplasmosis
e) Fuch's lesion

679. Lattice retinal degeneration seen *in-(AIIMSDec 98)*
a) Myopia b)Hypermetropia
c) Presbyopia d) Anisocoria

680. Peripheral retinal degeneration is most common in case of - *(AIIMSMay 93)*
a) Myopia b) Presbyopia
c) Hypermetropia d) Astigmatism

681. A patient with clinically significant diabetic macular edema with non progressive diabetic retinopathy was treated with Macular grid photocoagulation. The patient still has vitreo macular traction. What is the preferred treatment? *(AIIMS May 11)*
a) Intravitreal bevacizumab
b) Pars plana vitrectomy
c) Repeat macular grid photocoagulation
d) Augmented macular photocoagulation

682. A 60 yr old man has both HTN and DM for 10 yrs. There is reduced vision in one eye. On fundus examination there is a central bleed and the fellow eye is normal. The diagnosis is - *(AIIMS Nov 10)*
a) Retinal tear
b) Optic neuritis
c) Diabetic retinopathy
d) Hypertensive retinopathy

683. Mizuo-phenomenon is seen in - *(AIIMS Nov-11)*
a) Fundus albipathicusb) Fundus flavimaculatus
c) Oguchi's disease d) Choroideremia

684. Which retinal layer is most radioresistant-
a) RPE *(AIIMS Nov 11)*
b) Layer of rods and cones
c) Bipolar cell layer
d) Ganglion cell layer

685. 'Sea-Fan' retina is seen in- *(MH 11)*
a) CRAO b) SLE
c) Sickle cell disease d) Gaucher's disease

686. Central Retinal artery occlusion is known to be associated with - *(AI 12)*
a) Panophthalmitis b) Diabetic Retinopathy
c) CMV retinitis d) Orbital mucormycosis

NEURO-OPHTHALMOLOGY

687. All are true about optic nerve except - *(PGIMay 10)*
a) Arises from axons of bipolar neurons
b) 4 cm long
c) Covered by 3 layers continuous with meninges
d) Crossed by ophthalmic artery

688. Optic nerve is - *(DPGEE 08)*
a) Second order neuron b) First order neuron
c) Fourth order neuron d) Third order neuron

689. The visual pathway consists of all of these except -
a) Optic tract *(PGI June 02)*
b) Geniculocalcarine tract
c) Inferior colliculus
d) Lateral geniculate body
e) Pretectal region

690. Components of pupillary reflex are - *(PGI June 01)*
a) Retina
b) Pretectal nucleus
c) Lateral geniculate body
d) Edinger- westphal nucleus
e) Calcarine sulcus

691. The afferent pathway for light pupillary reflex is- *(AIIMSMay 06)*
a) Trigeminal nerve b) Optic nerve
c) Abducent nerve d) Ciliary nerve

692. In pupillary reflex nerve tested is - *(PGI Dec 98)*
a) 2^{nd} b) 3^{rd} !
c) Both 2^{nd} and 3^{rd} d)4^{th}

669) d 670) a 671) a 672) c 673) a 674) b 675) a 676) b 677) a 678) a,b 679) a 680) a 681) b 682) c
683) c 684) b 685) c>b 686) d 687) a,b 688) a 689) c,e 690)a,b,d 691) b 692) c

693. A patient presented with normal eyesight and absence of direct and consensual light reflexes. Which of the following cranial nerves is suspected to be lesioned? *(AIIMS May 04)*
a) Occulomotor b) Trochlear
c) Optic d) Abducent

694. Which is not a part of the pupillary light reflex -
a) Lateral geniculate body
b) Pre- tectal area
c) Retina
d) Edinger- Westphal nucleus

695. In unilateral Afferent pupillary defect, when light is moved from normal to affected eye, there is -
a) Dilatation in affected side and constriction in normal eye
b) Dilatation in normal eye and constriction in affected side
c) Dilatation in both pupils
d) Constriction in both pupils

696. Relative afferent pupillary defect (RAPD) is characteristically seen in damage to - *(A110)*
a) Optic nerve b) Optic tract
c) Lateral geniculate body d) Occulomotor nerve

697. Swinging light test is positive in - *(NEET/DNB Pattern)*
a) Conjunctivitis b) Glaucoma
c) Retrobulbar neuritis d) Keratoconus

698. Marcus Gunn Pupil is due to - *(MAHE 05)*
a) Defect anterior to optic chiasma
b) Defect at optic chiasma
c) Defect posterior to optic chiasma
d) Defect in ciliary muscles

699. Wernicke's hemianopic pupillary reponse is seen in lesions at- *(AI02, NEET/DNB Pattern)*
a) Optic tract b) Optic chiasma
c) Optic radiation d) Lateral geniculate body

700. Pupil that responds to convergence but light reflex is absent - *(DPG 10, UP 04, PGI Dec 99)*
a) Adies pupil b) Argyl Robertson pupil
c) Hutchison pupil d) Myotonic pupil

701. All of the following statements about Argyll Robertson Pupil are correct, Except - *(AI 11)*
a) Near Reflex Normal
b) Direct light Reflex Absent
c) Consensual Light Reflex Normal
d) Visual Acuity Normal

702. Light reflex absent but accommodation reflex present is seen in - *(PGI June 97)*
a) Hutchison's pupil b) Argyl Robertson pupil
c) Adies pupil d) Homer's syndrome

703. In Holmes-Adie pupil all are true except -
a) There is absent or retarded pupil reactions to light and near *(Manipal 09)*
b) Most cases are bilateral
c) Causes reduced or absent accommodation
d) Constricts with 2.5% methacholine

704. Loss of convergence with slight light reflex is seen in - *(PGIDec 01)*
a) ARP b) Holme Adie's pupil
c) Marcs gun pupil d) Wimecke's pupil

705. Homonymous hemianopia is seen in - *(PGIDec 97)*
a) Pituitary adenoma b) Optic nerve damage
c) Post chiasmic damage d) Cortical lesion

706. Homonymous hemianopia is seen in lesion of -
a) Optic tract b) Optic chiasma
c) Optic radiation d) Optic nerve
e) Occipital cortex *(PGI Dec 03, 02)*

707. Homonymous hemianopia is seen in all except -
a) Optic nerve lesion (*SGPGI05)*
b) Optic tract lesion
c) Lesions of lateral geniculate body
d) Visual cortex lesion

708. Lesion of right optic tract will leads to -
a) Bitemporal hemianopia *(NEET/DNB Pattern)*
b) Right homonymus hemianopia
c) Left homonymous hemianopia
d) Binasal hemianopia

709- Bitemporal hemianopic field defect feecharactersitic *(AIIMS May 06, NEET/DNB Pattern)*
a) Glaucoma b) Optic neuritis
c) Pituitary tumour d) Retinal detachment

710. Site of lesion in Bitemporal hemianopia is - *(PGI Nov 09, AIIMS Nov 93, NEET/DNB Pattern)*
a) Optic nerve
b) Optic tract
c) Optic chiasma
d) Occipital radiation

711. Headache with bitemporal hemianopia with 6/6 vision is seen in - *(AIIMS Nov 09)*
a) Optic neuritis b) Trauma
c) Chiasmal lesion d) Bilateral cavernous lesion

712. Field defect seen in pituitary adenoma -
a) Bitemporal hemianopia *(PGI Jun 01)*
b) Binasal hemianopia
c) Quadrantanopia
d) "Pie in sky" defect
e) Amaurosis in one eye & temporal hemianopia in other eye

713. Visual field defect in pituitary tumour with supracellar extension is - *(AIIMS June 00, Jipmer 11)*
a) Bitemporal hemianopia
b) Binasal hemianopia
c) Homonymous hemianopia
d) Pie in the sky vision

714. Visual defect in optic chiasmal lesion -
a) Bitemporal hemianopia *(PGI June 04)*
b) Binasal hemianopia
c) Homonymous upper temporal hemianopia
d) Homonymous upper nasal hemianopia
e) Homonymous lower temporal hemianopia

715. Lesion in the optic chiasma causes - *(PGIDec 05)*
a) Bitemporal hemianopia b) Upper nasal
c) Lower nasal d) Upper temporal
e) Lower temporal

716. Which of the following can cause Superior quadrantopia - *(AI94; AIIMS Dec 98)*
a) Temporal lobe tumor b) Fontal lobe tumor
c) Pituitary tumor d) Craniopharyngioma

717. A homonymous upper quadrantic field defect is typical of lesion in - *(AIIMS June 92)*
a) Parietal lobe b) Temporal lobe
c) Occipital lobe d) Optic chiasma

718. A lesion of the optic radiation involving the Meyer's loop casues - *(AIIMS May 02)*
a) Homonymus hemianiopia
b) Superior quadratopia
c) Inferior quadrantopia
d) Central scotoma.

719. In a patient presenting with headache and eye complaints, Examination of right eye reveals: Right eye superotemporal quadrotpsia. Left eye reveals: Left eye superotemoral quadrotopsia Left eye reveals: Left eye centrocecal scotoma. Likely site of lesion is - *(AI 98)*
a) Left optic nerve + chiasma
b) Left optic tract + chiasma
c) Right optic nerve + chiasma
d) Right optic tract + chiasma

720. Optic tract lesions presents with - *(SGPGI05)*
a) Bitemporal hemianopia
b) Binasal hemianopia
c) Homoymous hemianopia
d) Superior quadraopia

721. Field defect seen in pituitary adenoma is - *(DPG10)*
a) Bitemporal hemianopia
b) Binasal hemianopia
c) Quadrantanopia
d) "Pie in sky" defect

722. Macular sparing is seen in the affection of -
a) Optic nerve b) Optic tract *(Jipmer 03)*
c) Optic chiasma d) Occipital lobe

723. TVue regarding cortical blindness -
a) Direct and consensual reflexes are present in both the eyes *(AIIMS Nov 00, Dec 94)*
b) Direct and consensual reflexes absent in both the eyes
c) Direct reflex is present and consensual absent on the normal side
d) Direct reflex is absent on normal side and consensual reflex present

724. A female presented with loss of vision in both eyes and on examination has normal pupillary responses and normal fundus, Her visually evoked response (VER) examination shows extinguished responses. The most likely diagnosis is - *(AIIMS Nov 05)*
a) Hysteria b) Cortical blindness
c) Optic neuritis d) Retinal detacment

725. All satements are true about papilloedema except -
a) Collection of extra - cellular fluid *(AI 0 7)*
b) Disruption of neurofilament
c) Stasis of axoplasmic transport
d) Swelling of the axon

726. Fundoscopic features of papilledema include all the following except - *(AI 94)*
a) Ill-defined disc margin
b) Deep physiological cup
c) Absent venous pulsation
d) Bending of blood vessels

727. In papilledema, all the following are true except -
a) Blurring of the disc *(AI94)*
b) Congestion of retinal veins
c) Soft white exudates around the disc
d) Sudden loss of vision

728. Increased ICT is associated with all of the following exept- *(AI99)*
a) Disc - oedema b) Macular oedema
c) Normal vision d) Afferent pupillary defect

729. All are seen in papilledema after a head injury except - *(AIIMS Nov 01)*
a) Blurring of disc margin b) Hyperemia
c) Afferent pupillary defect d) Filling of cup

730. All the following are true about Papilledema except*
a) It is a purely non-inflammatory phenomenon
b) Transient loss of vision occurs *(AI 95)*
c) First sign is blurring of the nasal side of the optic disc
d) Sudden loss of vision with painful eye movement

731. Field defect seen in papilledema - *(Karnataka 04)*
a) Seidel's scotoma
b) Constriction of peripheral fields
c) Centro-caecal scotoma
d) None of the above

732. Features of papilloedema are all except-
a) Loss of vision *(CUPGEE 02)*
b) Normally reacting pupil
c) Peri pupillary congestion
d) Increased IOT

733. Acute Papilloedema present with *AM-(AIIMS Sep 96)*
a) Post neuritic atrophy b) Increase blind spot
c) Severe loss of vision d) Hypermic field

734. All are seen in papilloedema *except-(AIIMSJune98)*
a) Hyperemia of disc b) Sudden vision loss
c) Post - neuritic atrophy d) Macular fan

735. Papilloedema is characterised by all of the following except - *(AIIMS June 92)*
a) Loss of retinal venous pulsations
b) Transient obscurations of vision
c) Sudden painless loss of vision
d) Disc oedema

736. Significant loss of vision in a patient with hypertension can occur due to all of the following, except -
a) Occipital infarct *(AIIMSNov 02)*
b) Anterior ischemic optic neuropathy
c) Papilloedema
d) Retinal hemorrhage

716) a 717) b 718) b 719) a 720)c 721) a 722)d 723)a 724)b 725)b 726)b 727)d 728)d 729)c
730) d 731)b 732) a 733) a,c 734) b 735) c 736) c

737. Papilloedema is characterised by all except -
a) Sudden loss of vision *(UP 08)*
b) Blurred vision
c) Hyperaemic disc
d) Venous engorgement marked

738. Ispilateral optic atrophy with contralateral papilloedema is a feature of - *(AI99)*
a) Fischer syndrome
b) Foster kennedy syndrome
c) Vogt- kayanagi- Harada syndrome
d) WAGR syndrome

739. Foster Kennedy syndrome is - *(AI 99)*
a) I/L Papilloedema C/L optic atrophy
b) I/L Optic atrophy C/L papilloedema
c) I/L Optic atrophy and papilloedema
d) I/L Papilloedema C/L Papilitis

SB Unilateral papilloedema with optic atrophy on the other side is a feature of - *(DPGEE 08, NEET/DNB Pattern)*
a) Foster kennedy syndrome
b) Fisher syndrome
c) Vogt-koyanagi harada syndrome
Iflfe'd) WAGR;syiidrome -

741. A 40 year old lady presents with bilateral Papilloedema. CT scan shows normal ventricles. Diagnosis is - *(AI 2000)*
a) Benign intracranial hypertension
b) Malignant hypertension
c) Papillus
d) Raised intraocular pressure

742. In Optic neurities in children all symptoms are present EXCEPT - *(AIMS Sep 96)*
a) Afferent pupillary defect
b) Headache and vomiting
c) Pain on movements of eye ball
d) Sudden vision loss

743. A child presents with sudden loss of vision with painful ocular movements. The eye is white and there are no obvious signs on ophthalmoscopy. The most likely diagnosis is - *(AI 96)*
a) Optic nerve glioma b) Retrobulbar neuritis
c) Craniopharyngioma d) Papillitis

744. 'y^l^iinln B deficiency is likely to cause r *(AI?0J, NEET/DNB Pattern)*
a) Bitemporal heminanopia
b) Binasal hemianopia
!§§ c) Heteronymous hemianqpia;
d) Centrocecal scotoma

745. All are true regarding optic neuritis except -
a) Decreased visual acuity *(AI 01)*
b) Decreased pupillary reflex
c) Abnormal electroretinogram
d) Abnormal visual evoked response retinogram

746. Optic neuritis causes - *(NEET/DNB Pattern)*
a) Gradual painless loss of vision
b) Sudden painless loss of vision
c) Gradual painful loss of vision.
d) Sudden painful loss of vision

747. All of the following can cause Optic Neuritis, except- *(AI 2000)*
a) Rifampicin b) Digoxin
c) Chloroquine d)Ethambutol

748. Which of the following ATT drugs is associated with visual deterioration - *(AI 95)*
a) INH b) Rifampicin
c) Capreomycin d) Ethambutol

749. Optic neuritis is seen in all except - *(PGIJune 2000)*
a) DM b) Methanol poisoning
c) Multiple sclerosis d)SLE
e) None

750. Visible range of electromagnetic spectrum of human eye- *(PGI June 04)*
a) 370 - 740 nm b) 740-1140 nm
c) 200-370 nm d)200-370nm
e) 370-770 nm

751. The colours best appreciated by the central cones of our foveo- macular area are - *(AI 02)*
a) Red and blue b) Blue and green
c) Red and green d) Blue and yellow

752. Chalky white optic disc on fundus examination is seen in all except - *(AI 01)*
a) Syphilis
b) Lebers hereditary optic neuropathy
c) Post papilledema optic neuritis
d) Traumatic injury to the optic nerve

753. Fundoscopy of a patient shows chalky white optic disc with well defined margins. Retinal vessels and surrounding Retina appears normal. Which of the following is the most likely diagnosis -
a) Primary Optic Atrophy *(AI 12)*
b) Post-neuritic secondary optic atrophy
c) Glaucomatous optic atrophy
d) Consecutive optic atrophy

754. In optic atrophy, the optic disc appears to pale is index of- *(UP 08)*
a) Atrophy of the nerve fibre b) Los of vasculature
c) Gliosis d) All of the above

755. Consecutive optic atrophy is seen in -
a) Papilloedema *(UP 07, NEET/DNB Pattern)*
, b) Papilitis
c) Retinal detachments;
d) Retihitis-pigmcntosa

756. A15 year old boy has bilateral optic atrophy, diabetes mellitus and diabetes insipidus. The diagnosis is-
a) Kjer syndrome b) Behr syndrome *(AI93)*
c) Wolff am syndrome d)None

757. An optic nerve injury may result in all the following except - *(AIMS May 03)*
a) Loss of vision in that eye b) Dilatation of pupil,
c) Ptosis d) Loss of light reflex.

758. First sign of optic nerve disease is -
a) Papilloedema *(SGPGI05, AIMS Nov 93)*
b) Colour blindness
c) Afferent pupillary defect
d) Efferent pupillary defect

737) a 738) b 739) b 740) a 741) a 742) b 743) b 744) d 745) c 746) d 747) a 748)d>a749)e 750) a
751) c 752) c 753) a 754)b 755) d 756) c 757) c 758) c

759. Best investigation for optic nerve damage amongst the following is - *(AI9 7)*
a) Opthalmoscopy b)Flourscence angiograhy
c) Ultrasound d) Perimetry

760. A case of injury to right brow due to a fall from scooter present with sudden loss of vision in the right eye.The pupil shows absent direct reflex but a normal consensual pupillary reflex is present. The fundus is normal. The treatment of choice is -
a) Intensive intravenous corticosteroids as prescribed for spinal injuries to be institued within six hours
b) Pulse methyl Prednisolone 250 mg four times daily for three days
c) Oral Prednisolone 1.5 mg/kg body weight
d) Emergency optic canal decompression

761. A young man with blurring of vision in right eye, followed by left eye after 3 months, showing disc hyperemia, edema, circumpapillary telangiectasia with normal pupillary response with centrocecal scotoma on perimetry, the cause is -*(AIIMS May 09)*
a) Typical optic neuritis
b) Acute Papilledema
c) Toxic optic neuropathy
d) Leber's hereditary optic neuropathy

762. The most common condition of inherited blindness due to mitochondrial chromosomal anomaly is -
a) Retinopathy of prematurity *(AI 04)*
b) Leber's Hereditary Optic neuropathy
c) Retinitis pigmentosa
d) Retinal detachment

763. Leber's optic neuropathy - *(Manipal 09)*
a) Typically presents in the fourth decade of life
b) Males do not transmit the disease
c) Is inherited in autosomal X-link fashion
d) The optic disc is pale early in the disease

764. True about color blindness - *(PGI Dec 05, 04)*
a) Age related b) Hereditary
c) Males only d) Female only
e) Can be treated

765. A person has defective blue colour appreciation. His condition is better named as - *(AI 93)*
a) Deuteranomalous b) Deuteranopia
c) Tritanopia d) Tritanomalous

766. Protonopes have defect in identifying which colour- *(AIIMSMay 02)*
a) Red b)Blue
c) Green d) Black

767. Any spectral colour can be matched by a mixture of three monochromatic lights (red, green, blue) in different proportions. If a person needs more of one of the colour for matching than a normal person, then he has a colour anomaly. More red colour is needed in the case of - *(AI 02)*
a) Deuteranomaly b) Tritanomaly
c) Protonomaly d) Tritanomaly

768. Regading color blindness true - *(PGIDec 07)*
a) Mainly congenital
b) Can be tested with Fansworth 100 hue test
c) Isihara chart test red/ green color blindness
d) Jerlin- Merlin cotton wool tests it

769. Enlargement of blind spot is indicative of - *(AI 93)*
a) Papillitis b) Papilloedema
c) Avulsion of optic nerved) Retinal detachment

770. Anisocoria in dim light is maximally seen in -
a) 3rd nerve palsy *(NEET/DNB Pattern)*
b) Pharmacological mydriasis
c) Humer syndrome
d) Parasympathetic paralysis

771. In case of anisocoria when 1 % pilocarpine is instilled into the eye with abnormally dilated pupil, pupil remains dilated. Cause of anisocoria may be -
a) Adies pupil *(AIIMS Nov II)*
b) Pharmacological blockage
c) Uncal herniation
d) Diabetic III cranial nerve palsy

772. Unilateral sudden complete loss of vision (Amaurosis fugax) is due to lesion in - *(Jipmer 11)*
a) Internal carotid artery b) Middle cerebral artery
c) Anterior cerebral artery d) Basilar artery

773. Amaurosis fugax is due to - *(NEET/DNB Pattern)*
a) TIA b) Tobacco
c) Optic neuritis d) Papilloedema

OCULAR MOTILITY

774. Dilator pupillae is supplied by - *(AIIMS Nov 11)*
a) Post-ganglionic parasympathetic fibers from Edinger Westphal nucleus
b) Post-ganglionic sympathetic fibers from cervical sympathetic chain
c) IIIrd nerve
b) Sympathetic fibers from fronto-orbital branch of V nerve.

775. Longest and thinnest extrocular muscle - *(NEET/*
a) SR b)IR *DNB Pattern)*
c) SO d)IO

776. Distance of medial rectus from limbus - *(NEET/*
a) 4.5 mm b) 5.5 mm*DNB Pattern)*
c) 7.0 mm d)10mm

777. Action of superior oblique muscle is/are -
a) Extorsion b) Abduction
c) Intorsion d) Depression
e) Elevator *(PGI Nov 09)*

778. Superior oblique muscle performs action of - *(PGI*
a) Intortion b) Extortion *June 97)*
c) Elevation d) Medial rotation

779. Function of superior oblique muscle - *(PGIDec 04)*
a) Intortion b) Extortion
c) Lateral rotation d) Upward rotation
e) Downward rotation

759) d 760) a 761) d 762) b 763) b 764) a,b 765) d 766) a 767) c 768)a,b,c 769) b 770) c 771) b 772) a
773) a 774) b 775) c 776) b 777)b,c,d 778) a,d 779) a

780. Action of superior oblique is following except -
a) Extortion b) Depression *(AIIMS*
c) Abduction d) Intortion *June 97)*

781. Function of superior oblique muscle is - *(AI99)*
a) Elevation with eye rotated outwards
b) Elevation with eye rotated downwards
c) Depression with inward rotation
d) Depression with outward rotation

782. Which muscle is intorter of eye - *(AIIMSMay 99)*
a) Inferior oblique b) Inferior rectus
c) Superior rectus d) Medial rectus

783. Downward and lateral gaze is action of- ^ V *(ARMSDec92^NEET/DlpPattem)*
a) Inferior oblique b) Medial rectus
\ cJlu^fi^jMqueV;^ d) Lateral rectus^

784. Elevators of eye - *(NEET/DNB Pattern)*
a) SR and IO b)!OandSO
c) JR anas ^ J ^^d)sd^R j4l;>;,[1]

785. Yolk muscle pair is - *(NEET/DNB Pattern)*
a) Rt MR & Rt LR b) Rt MR & Lt LR
c) Rt SO & Lt IO d) Rt SR & Lt SR

786. 3rd cranial nerve supplies - *(PGI Dec 04)*
a) Lateral rectus
b) Medial rectus, Levator palpabrae superioris
c) Superior rectus
d) Superior oblique
e) Inferior oblique

787. Occulomoter nerve palsy affects all of the following muscles, EXCEPT - *(AI 02)*
a) Medial rectus b) Inferior oblique
c) Lateral rectus d) Levator pelpabrae superioris

788. The superior oblique muscle is supplied by - *(AI 05)*
a) 3rd cranial nerve b) 4th cranial nerve
c) 5th cranial nerve d) 6th cranial nerve

789. Superior oblique is supplied by - *(PGIDec 99)*
a) Upper branch of 3rd N b) Lower branch of 3rd N
c) Trochlear d) Abducens

790. All are characteristics of 3rd nerve except
a) Carries parasympathetic nerve *(AIIMS Nov 06)*
b) Supplies inferior oblique
c) Enters orbit through the inferior orbital fissure
d) Causes miosis

791. Ill nerve palsy causes all of the following except -
a) Ptosis *(AI 99)*
b) Mydriasis
c) Medial deviation of eyeball
d) Pupillary reflex lost

792. Which action of extra-ocular muscle is spared in involvement of Occulomotor nerve - *(AI2000)*
a) Abduction b)Depression
c) Elevation d) Adduction

793. Eye is deviated laterally and downwards; patient is unable to look up or medially; likely nerve involved is- *(AI01)*
a) Trochlear b) Trigeminal
c) Oculomotor d) Abducent

794. In complete 3rd Nerve palsy- *(PGI June 03)*
a) Eye Deviated Medially
b) Superior and inferior recti affected
c) Dilated pupil
d) Ptosis
e) Conversion/accommodation is lost

795. All are seen in 3rd nerve palsy except-
a) Ptosis b) Diplopia *(AIIMSNov II)*
c) Miosis d) Outward deviation of eye

796. Left sided sixth nerve palsy would lead to - *(AIIMS*
a) Accommodation paresis of left eye *Nov 08)*
b) Ptosis of left eye
c) Adduction weakness of left eye
d) Diplopia in left gaze

797. Clinical featues of sixth nerve palsy is -
a) Convergent squint *(AIIMS June 98)*
b) Divergent squint
c) Limitation in upward movement
d) Limitation in downward movement

798. A 30 year old man came ot the outpatient department because he had suddenly developed double vision. On examination it was found that his right eye, when at rest, was turned medially. The most likely anatomical structures involved are - *(AI 03)*
a) Medial rectus and superior division of oculomotor nerve
b) Inferior oblique and inferior division of oculomotor nerve
c) Lateral rectus and abducent nerve
d) Superior rectus and trochlear nerve

799. In right lateral rectus palsy all of the following are seen except - *(AIIMS Feb 97)*
a) Face turned to left
b) Medial convergent squint.
c) Inability to abduct right eye
d) Diplopia

800. A patient presented with his head tilted towards left. On examination, he was having left hypertropia which increased on looking towards right or medially. The muscle which is most likely paralyzed is - *(AIIMS May08)*
a) Left superior oblique b) Left inferior oblique
c) Right superior oblique d) Right inferior oblique

801. Action of right superior oblique muscle *is-(PGI 93)*
a) Dextro depression b) Dextro elevation
c) Laevo elevation d) Levo depression

802. Diplopia in Superior Oblique palsy is most correctly described as - *(AI II)*
a) Vertical on looking down
b) Vertical on looking up
c) Horizontal on looking in
d) Horizontal on looking out

803. The reciprocal inhibition of antagonist muscle upon lateral gaze is explained by - *(AIIMS May 08)*
a) Sherrington's law b)Hering's law
c) Laplace law d) Hick's law

780)a 781)c 782)c 783)c 784)a 785)b 786)b,c,e 787)c 788)b 789)c 790)c 791)c 792)a 793)c
794) b,c,d,e 795) c 796) d 797) a 798) c 799) a 800) a 801) d 802) a 803) a

STRABISMUS

804. Pseudoconvergent squint is seen with - *(PGI93)*
a) Thyrotoxicosis
b) Broad epicanthus
c) Abducent squint
d) Narrow interpupillary distance

805. Child with mild squint Intrauterine, birthhistory, developmental history till date all normaL Corneal reflex normal. All other eye parameters normal except exaggerated^epicnii^b^£olds' Diagnosis -
a) Pseudostrabismus *(NEET/DNB Pattern)*
iCfSSMJ b) Accomrn^datiy^r.squmC3ir; ,<h'&z
$00 c) Exopbqim *u iBp'*
\0M d) Esophoria -

806. Latent squint is also known as - *(MH 11)*
a) Hyperphoria b) Exophoria
c) Heterophoria d)Esopheria

807. True about infantile esotropia - *(PGI June 08)*
a) Presented from birth
b) Large angle of deviation
c) Inferior oblique muscle hyperactivity
d) Variale angle of deviation
e) A/W refractive error

808. Which of the following are features of congenital esotropia- *(PGI June 05)*
a) Present since birth
b) Abduction abnormality
c) Inferior oblique involved
d) Surgery is treatment of choice
e) Small angle squint

809. Rx of Accommodative squint in children is -
a) Surgery *(AIIMS Dec 95)*
b) Occlusion of one eye
c) Convergent exercise
d) Correction of refractory error

810. A 3 year- old child presents with a right convergent squint of 6 months duration. What is the appropriate management ? *(AIIMS May 04)*
a) Immediate surgical correction followed by amblyopia therapy
b) Proper refractive correction, amblyopia therapy followed by surgical correction
c) Prescrible spectacles and defer surgery until the child is 5 year old
d) Botulinum toxin injection followed by occlusion therapy

811. A 3 years old child with 15° esotropia management of the child will be - *(PGIDec 05)*
a) Refraction correction b) Prism cover test
c) Surgery alignment d) Wait and watch

812. TVue regarding accommodative esotropia is -
a) Glasses are used when miotics ineffective
b) Miotics are used when glasses are ineffective
c) Use of both together salvage patient who does not respond to one *(PGI 96)*
d) Miotics are used in high AC/ A ratio

813. Iris cyst are induced by - *(SGPGI02)*
a) Atropine b) Pilocarpine
c) Phenylephrine d) Ecothiopate

814. Iris cysts are prevented by - *(KA 01)*
a) Atropine b) Pilocarpine
c) Phenylephrine d) Ecothiopate

815. Diplopia is not a presenting feature in-*(PGI June 98)*
a) Manifest squint b) Paralytic squint
c) Latent squint d) Anisometropia

816. Uncrossed diplopia in seen in - *(AIIMS Jun 97)*
a) Exotropia b) Exophoria
c) Esotropia d) Esophoria

817. Lateral rectus palsy is characterized by - *(AJ 9 7)*
a) Crossed diplopia
b) Uncrossed diplopia
c) Suppression of eye ball
d) Upward rotated eye ball

818. All are true about paralytic strabismus EXCEPT -
a) Binocular diplopia
b) False orientation
c) Primary deviation = Secondary deviation
d) False projection

819. Manifestation of squint in children are all EXCEPT- *(AIIMSDec 98, Sept 96)*
a) Diplopia b) Confusion
c) Deviation of eye d) Stereopsis

820. What is incorrect about paralytic squint -
a) Deviation is more on radial side *(AIIMS May 94)*
b) Deviation is same in all directions
c) Deviation is more on lateral side
d) There is no deviation

821. All are TRUE about paralytic squint, EXCEPT -
a) Head tilt b) Lateral deviation
c) Diplopia d) Amblyopia *(AIIMSDec 92)*

822. What is not a feature of paralytic squint -
a) Diplopia *(AIIMS Dec 94)*
b) Decreased visual acuity
c) Limited movement of eye ball
d) Change of head posture

823. A feature of paralytic squint is - *(AIIMS Dec 94)*
a) Detected by cover uncover test
b) Always divergent
c) Clinically called tropia
d) Associated with decreased vision

824. In concomitant squint - *(NEET/DNB Pattern)*
a) Primary deviation > Secondary deviation
b) Scondary deviation > Primary deviation
c) Primary deviation = Secondary deviation
d) None J ^ w ? - V' " ^

825. Angle of squint is measured by -*(NEET/DNB Pattern)*
V ^s*Qbmo^d0^(" "'a b) Prism < -
c) Retinoscopy d) Keratometry

804)b 805)a 806)c 807)b,c 808)c,d 809)d 810)b 811)a,c 812)d 813)d 814)c 815)c 816)c 817)b 818)c 819)d 820)b 821)d 822)b 823)a,c 824)c 825)b

826. A12 year old boy presented with right eye vision 6/ 36 and left eye vision of 6/6 after maximum correction retinoscopy shows fundus and anterior chamber is normal - *(AI02, A1IMS June 00)*
Right eye = +4.5 Din both axis
Left eye = + 1.5 D in both axis
Cause of decreased vision in right eye is
a) Refractive error
b) Amblyopia
c) Optic neuritis
d) Occipital lobe infaraction

827. Amblyopia should be corrected by the- *(AIIMS June 91)*
a) < 5 year of age b) 5-8 year
c) 8-12 year d) 10-15 year

828. Treatment of choice,for amblyopia is - ^*IIMS Dec. 94, NEET/DNB Pattern)
a) Convergent exercises
b) Spectacles
c) Surgery
d) Conventional occlusion

829. Amblyopia is treated by - *(PGI June 03)*
a) Optical correction b) Occlusion
c) Orthoptic exercise d) Pleoptic exercise

830. Regarding amblyopia which of following is true -
a) Reversible loss of vision
b) Associated with squint
c) Defect in refractive error
d) Surgery is treatment of choice
e) Exercise is done

831. Regarding ambylopia which of the following is true-
a) Spectacles should be used *(PGI June 05)*
b) T/t with occlusion method
c) Surgery is the TOC
d) Idiopathic condition

832. A16 year old boy complains of pain in the right eye. After refractometry, he was prescribed a+3.5 D sphere lens. The cover test is normal. There is no heterophoria. The diagnosis is - *(AIIMSMay 01)*
a) Organic amblyopia
b) Anisometric amblyopia
c) Emmetropic amblyopia
d) Toxic amblyopia

833. True stereopsis is perceived due to the following -
a) Overlay of contours *(AIIMSMay 06)*
b) Motion parallax
c) Bi-nasal disparity
d) Linear perspective

834. Which of these can cause 3rd nerve paralysis -
a) Posterior communicating artery (PCA) aneurysm
b) Tolosa - Hunt syndrome *(PGI June 02)*
c) Midbrain infarct
d) Pons Infarct
e) Lateral medullary lesion

835. HI nerve palsy with pupillary sparing is seen in -
a) Craniopharyngioma *(AIIMSNov 09, May 95)*
b) Hypertension
c) Aneurysm of post, communicating artery
d) DM

836. The only cranial nerve which supplies a contralateral muscle is - *(SCTIMS 98)*
a) Third b) Fourth
c) Seventh d) Tenth

837. **A patient presents with diplopia with limitations of adduction in the left eye and abducting saccade in the right eye. Convergence is preserved. Most likely etiology is -** *(AIIMSMay 09)*
a) Partial 3rd nerve palsy
b) Intemuclear ophthalmoplegia
c) Duane's reactionary syndrome
d) Absence of medial rectus muscle

838. Internuclear opthalmoplegia is caused due to lesion in - *(AIIMS May 02)*
a) Occipital lobes
b) Pretectal fibres
c) Medial longitudinal fasciculus
d) Parapontine reticular fibres

839. Lesion in unilateral medial longitudinal fasciculus causes - *(SGPGI05)*
a) Hemiplegia
b) Hemianopia
c) Internal ophthalmoplegia
d) Intemuclear ophthalmoplegia

840. A 26 yrs old male with restriction of eye movements in all directions &moderate ptosis but with no diplopia or squint. Diagnosis is - *(AIIMS Nov 09)*
a) Thyroid ophthalmopathy
b) Chronic progressive external ophthalmoplegia
c) Myasthenia gravis
d) Multiple cranial nerve palsies

841. Ophthalmoplegic migraine means -
a) Headache with irreversible loss of ophthalmic nerve function *(AI 11, AIIMS May 03)*
b) Recurrent transient 3rd nerve palsy associated with headache
c) Headache associated with 3rd, 4th & 6th nerve palsy
d) Headache associated with optic neuritis

Si® **Ataxia, nystagmus and ophthalmoplegia is seen in -**
a) Mysthenia gravis *(NEET/DNB Pattern)*
b) Chronic progressive external ophthalmoplegia
c) 3rd nerve palsy
a) None

843. Which of the following best defines the "Saccade" -
a) Voluntary slow eye movements
b) Involuntary slow eye movement
c) Abrupt, involuntary slow eye movements
d) Abrupt, involuntary rapid eye movements

844. All horizontal movements of eye are affected by lesions in the - *(AIIMSMay 93)*
a) Cerebellum b) Midbrain
c) Cerebrum d) Pons

845. **Final centre for horizontal movements of eye** *is-(AI 08)*
a) Abducent nucleus b) Trochlear nucleus
c) Oculomotor nucleus d) Vestibular nucleus

826) b 827) a 828)d 829)a,b,d 830)a,b,c,e 831)a,b 832)b 833)c 834)a,b,c 835)d 836)b 837)b 838)c 839) d 840)b 841)c 842)b 843) d 844)d 845) a

846. Left sided lateral gaze is affected in lesion *of-(AI 01)*
a) Right frontal lobe b) Right occipital lobe
c) Left occipital lobe d) Left frontal lobe

847. Down beat nystagmus could be due to-*(PGI June 99)*
a) Cerebellar lesion b)Amold-Chiari malformation
c) Optic neuritis d) Pontine lesion

848. A patient has a right homonymous hemianopia with saccadic pursuit movements and defective optokinetic nystagmus. The lesion is most likely to be in the - *(ARMS Nov 05)*
a) Frontal lobe b) Occipital lobe
c) Parietal lobe d) Temporal lobe

849. Weakness of both Adduction and Abduction is seen in- *(AI1MS May 12)*
a) Duane's Retraction Syndrome Type 1
b) Duane's Retraction syndrome Type 2
c) Duane's Retraction syndrome Type 3
d) All

TUMORS

850. Most common intraocular tumour in adult -
a) Metastasis *(ARMSMay 93)*
b) Retinoblastoma
c) Malignant melanoma
d) Vitreous tumour

851. Most common orbital tumor in *chRdren-(AIlMSJime97)*
a) Rhabdomyosarcoma b) Retinoblastoma
c) Melanoma d)Chloroma

852. The commonest malignant tumor of the orbit in the 1st decade is - *(ARMS June 92)*
a) Retinoblastoma b) Neuroblastoma
c) Rhabdomyosarcoma d)Chloroma

853. The most common malignant orbital tumor in children is - *(AI11)*
a) Rhabdomyosarcoma b) Cavernous Hemangioma
c) ALL d)AML

854. In which of the following, orbital metastasis is common - *(ARMS May 95,94,93)*
a) Hypernephroma b) Hepatoma
c) Neuroblastoma d) Melanoma

855. Most common tumor to extend from intracranial to orbit is - *(NEET/DNB Pattern)*
a) Astrocytoma
b) Pituitary adenoma ■*?}./* r. * .,*■ r,- / ■
c) Craniopharyngioma
d) Sphenoidal wing meningioma

856. The most common primary cause of intraocular tumor in children -*(SGPGI05, NEET/DNB Pattern)*
a) Retinoblastoma b) Rhabdomyosarcoma
c) Neuroblastoma d) Melanoma

857. Most common eye ball tumour is - *(ARMS Dec 95)*
a) Retinoblastoma b) Sarcoma
c) Medulloblastoma d) Malignant melanoma

858. The most common retrobulbar orbital mass in adults - *(ARMS Nov 05; AI 06)*
a) Nerurofibroma b) Meningioma
c) Cavernous haemangioma d) Schwannoma

859. MC orbital tumor - *(NEET/DNB Pattern)*
a) Nerve sheath tumor b) Hemangioma
c) Lymphoma d) Meningioma

860. Most commonorbital tumor has its origin from -
a) Blood vessels, *(NEET/DNB Pattern)*
b) Nerves
c) Muscle
4) Lymph node

861, Most common carcinoma of conjunctiva -
a) Squamous cell Ca *(NEET/DNB Pattern)*
b) Basal cell ca **ISM**
c) Melanoma
d) Lymphoma

862. As regards to intraocular retinoblastoma, which one of the following statements is *fsdse-(AIIMSMay 06)*
a) 94% of cases are sporadic
b) Patients with sporadic retinoblastoma do not pass their genes to their offsprings
c) Calcification in the tumor can be detected on ultrasound scan
d) Reese-Ellsworth classification is useful in predicting visual prognosis following radiotherapy

863. Knudson's two stage hypothesis is for -
a) Glaucoma *(PGI Dec 00, PGI Dec 99)*
b) Retinoblastoma
c) Optic glioma
d) Meningioma

864. Familial retinoblastoma - *(PGI June 02)*
a) Has autosomal recessive inheritance
b) More commonly bilateral
c) Due to mutation
d) More common than sporadic retinoblastoma
e) Poorer prognosis than sporadic type

865. Pseudorosettes are seen in - *(PGI June 98)*
a) Retinoblastoma b) Ophthalmic nodosa
c) Phakolytic glaucoma d) Trachoma

866. Rosettes are characteristically seen in - *(AI 08)*
a) Dysgerminoma b) Melanoma
c) Retinoblastoma d) Lymphoma

867. Calcification is pathognomonic feature of -(Kara *H)*
a) Malignant melanoma of choroid
b) Retinocytoma
c) Retinoblastoma
d) Angiomatosis retinae

868. All are presentation of retinoblastoma except -
a) Leucocoria b) Squint *(ARMS Feb 97)*
c) Cataract d) Glaucoma

869. Increased LDH in Aqueous Humor suggest a diagnosis of - *(AI 09)*
a) Galactosemia b) Retinoblstoma
c) Glaucoma d) Gyrate atrophy

846) a 847) a,b 848) c 849) c 850) a 851) a 852) c 853) a 854) c 855) d 856) a 857) d 858) c 859)b
860) a 861) a 862) b 863) b 864)b,c,e 865) a 866) c 867) c 868) c 869) b

870. The most common mode of spread of Retinoblstoma is - *(AI 12)*
a) Hematogenous b) Lymphatogenous
c) Optic nerve d) Trans-scleral

871. All of the following can cause a white pupillary reflex except- *(AI 04)*
a) Retinoblastoma b) Cataract
c) Retrolental fibroplasias d) Glaucoma

872. The differential diagnosis of retinoblastoma would include all except - *(A11MS May 03)*
a) Persistent hyperplastic primary vitreous
b) Coat's disease
c) Retinal astrocytoma
d) Retinal detachment

873. Leucocoria seen is - *(PGI Dec 06)*
a) PHPV b) Coat's disease
c) RD. d) Retinopathy of prematurity

874. Leucokoria can be seen in all except -
a) Persistant hyperplastic primary vitreous
b) Congenital glaucoma *(AIIMS Nov 01)*
c) Fungal endopthalmitis
d) Retinoblastoma

875. Pseudoglioma differs from Retinoblastoma in that pseudoglioma is associated with - *(AI 95)*
a) Decreased intraocular pressure
b) Blurring of vision
c) Enlargement of the optic foramen
d) All of the above

876. The mother of a one and a half year old child gives history of a white reflex from one eye for the past 1 month. On computed tomography scan of the orbit there is calcification seen within the globe. The most likely diagnosis is - *(AI 05)*
a) Congenital cataract b) Retinoblastoma
c) Endophtalmitis d) Coats disease

877. A 2 year old child presented with leucocoria in the right eye since 2 months. On examination a total retinal detachment was present in the same eye. Ultrasound B scan revealed a heterogenous subretinal mass with calcification. The most likely clinical diagnosis is - *(AIIMS Nov 02)*
a) Coats- disease b) Retinoblastoma
c) Toxocariasis d) Retinal tuberculoma

878. One year old male child with cat's eye reflex and raised IOT - *(PGI Dec 00)*
a) Toxplasma gondii infection
b) Toxcara canis
c) Retinoblastoma
d) Retinopathy of prematurity
e) Noorie's disease

879. The most common second malignant in survivors of retinoblastoma is - *(AI 06)*
a) Thyroid cancer b) Nasopharyngeal carcinoma
c) Optic glioma d) Osteosarcoma

880. A patient with known mutation in the'RB gene' is 'disease free' from Retinoblastoma. The patient is at highest risk of developing which of following malignancies- *(AI 10)*
a) Renal cell carcinoma b) Osteosarcoma
c) Pinealoblastoma d) Chondrosarcoma

881. A child with a unilateral white reflex raised IOP. The required investigations are - *(PGI Dec 05)*
a) USG b) Observation under anaesthesia
c) Tonometry d) X-ray

882. Management of retinoblastoma - *(PGI June 03)*
a) Enucleation b) Chemotherapy
c) Radiotherapy d)USG
e) Fluorescein angiography

883. A one year old child having leucocoria was detected to be having a unilateral, large retinoblastoma filling half the globe. Current therapy would involve -
a) Enucleation *(AI03)*
b) Chemotherapy followed by local dyes
c) Direct Laser ablation using photodynamic cryotherapy
d) Scleral radiotherapy followed by chemotherapy.

884. Ideal treatment of B/L retinoblastom2*l* **-***(PG1 June 04, Jipmer02)*
a) Enucleation
b) Radiation
c) Chemotherapy
d) Cyclophotocoagulation

885. Most B/L multifocal retinoblastoma require -
a) Chemotherapy *(CMC03)*
b) Radiotherapy
c) Enucleation
d) Multimodality therapy

886. In retinoblastoma, after enucleation, which tissue is sectioned to find out systemic metastasis -
a) Central retinal artery *(AIIMS June 99)*
b) Sclera and episclera
c) Optic nerve
d) Vortex vein

887. Treatment of metastatic disease in retinobastoma is - *(UP 03)*
a) Chemotherapy b) Enucleation
c) Radiotherapy d)Cryo

888. Treatment of small tumour of retinoblastoma is -
a) Enucleation b) Eviceration *(UP 07)*
c) Brachytherapy d) Chemotherapy

889. A 5 yr old boy presented with leukocoria in right eyeball diagnosed to be retinoblastoma involving full eyeball, while other eye had 2-3 small lesions in the periphery. What will be the ideal management for this patient? *(AI 11)*
a) Enucleation of both eyes
b) Enucleation of right eye & conservative management of the other eye
c) Enucleation of right eye and focal therapy of the other eye
d) 6 cycles of chemotherapy

870)c 871)d 872)None 873)a,b,c,d 874)b 875)a 876) b 877)b 878)c 879)d 880)b 881)a,b,c,d
882) a,b,c,d 883) a 884) b 885) d 886) c 887) a 888) c>d 889) c

890. True about Retinobastoma - *(PGI June 09)*
a) Leucocoria is most common presentation
b) Always unilateral
c) May have family history
d) Enucleation is the only treatment
e) Most common age group affected is 1-2 yr

891. Retinoblastoma- *(Manipal 09)*
a) Is inherited in 50% of cases
b) Is caused by deletion of 1 lql4
c) Rosettes suggest good prognosis
d) Causes death in 60% of sufferers in the UK

892. Which of the following is not of prognostic significance to choroidal melanoma? *(AJIMSMay 06)*
a) Presence of retinal detachment
b) Size of the tumour
c) Cytology of the tumor cells
d) Presence of extraocular extension

893. Vortex Vein invasion is commonly seen in -*(AI03)*
a) Retinoblastoma b) Malignant melanoma
c) Optic nerve gliomas d) Medullo-epitheliomas

894. Most common type of optic nerve glioma is-
a) Gemistocytic b) Fibrous *(AIIMS 98)*
c) Protoplasmic d) Pilocytic

895. Which one of the following statements is incorrect about Optic glioma? *(AI 06)*
a) Has a peak incidence in first decade
b) Arises from oligodendrocytes
c) Causes meningeal hyperplasia
d) Is associated with type I neurofirbromatosis

896. A child age 5 years, presents with loss of vision and mild proptosis of left eye. On examination direct light reflex is absent but consensual is present in left eye. He is - *(AIIMS Nov 00)*
a) Optic nerve glioma b) Optic sheath meningioma
c) Retinoblastoma d) Optic disc angioma

897. 20 yrs old female presents with proptosis and Abducens nerve palsy. On MRI scan, hyperintense lesions were seen on T2 weighted images which showed intense homogenous contrast enhancement. Most probable diagnosis is - *(AIIMS Nov 08, 10)*
a) Meningioma b) Astrocytoma
c) Schwannoma d) Cavernous hemangioma

898. In Von Hippel - Lindau Syndrome, the retinal vascular tumour are often associated with intracranial hemangioblastoma. Which one of the following regions is associated with such vascular abnormalities in the syndrome? *(AI 05)*
a) Optic radiation b) Optic tract
c) Cerebellum d)Pulvinar

899. Retinal astrocytoma is seen *m-(NEET/DNB Pattern)*
a) Tuberous sclerosis
b) Sturge weber syndrome
c) Von Hippel-Lindau syndrome
d)Kbne

ORBIT

900. Commonest cause for bilateral proptosis in children is- *(All!)*
a) Cavernous hamangioma b)Chloroma
c) Fibrous histiocytoma d) Rhabdomyosarcoma

901. Which of the following tumours present with proptosis - *(PGI June 05)*
a) Neuroblastoma b) Nephroblastoma
c) Germ cell tumour d) Medulloblastoma
e) Meningioma

902. Proptosis is seen in - *(DPG 09, PGI Dec 97)*
a) Neuroblastoma c) Meningioma
c) Sympathetic ophthalmia d) Injuries

903. Childhood malignancy producing proptosis is/are-
a) Neuroblastoma b) Chloroma *(PGIDec*
c) Optic nerve glioma d) Retinoblastoma *05)*
e) Wilm's tumour

904. A patient presented with unilateral proptosis which was compressible and increases on bending forward. No thrill or bruit was present. MRI shows a retroorbital mass with enhancement. The likely diagnosis is - *(AIIMSMay 10,12)*
a) AV malformations b) Orbital encephalocoecle
c) Orbital varix d) Neurofibromatosis

905. Most common cause of intermittent proptosis -
a) Orbital varices ■* *(NEET/DNB Pattern)*
b) Trauma
c) Cavernous sinus thrombosid
d) Retinoblastoma *ci* •

906. Most common cause of unilateral proptosis is -
a) Thyrotoxicosis *(AIIMS 93)*
b) Retinoblastoma
c) Intraocular haemorrhage
d) Raised intracranial tension

907. Kamla, age 48 yrs, presents with unilateral mild axial proptosis. There is no redness or pain. Investigation of choice is - *(AIIMS Nov 00)*
a) T3 & T4 measurement to rule out thyrotoxicosis
b) CT scan to rule out meningioma
c) Doppler to rule out hemangioma
d) USG to rule out orbital pseudotumor

908. Dysthyroid ophthalmopathy all are true except -
a) Proptosis b) Myopathy *(PGI Dec 98)*
c) Exophthalmos d) Optic neuritis

909. Thyroid ophthalmopathy a/w- *(PGI June 04)*
a) External ophthalmoplegia
b) Internal ophthalmoplegia
c) Proptosis
d) Large extra- ocular muscle
e) Lid lag

910, The most common ocular motility problem in thyroid myopathyis due to involvement of- *(AIIMS June 92, NEET/DNB Pattern)*
a) Medial rectus b) Sueprior rectus
c) Inferior rectus d) Inferior oblique

890)a,c,e 891)c 892)a 893)b 894)d 895)c 896)a 897)a 898)c 899)a 900)b 901)a,b,e 902)a,b,e
903) All 904) c 905) a 906) a 907) a 908) d 909)a,c,d,e 910)c

911. True statement about dysthyroid eye disease (grave's opthalmopathy) is - *(AI93)*
a) Decreased power of divergence
b) Most common casue of U/L proptosis in <25 years age group
c) Extreme exopthalmos is usually seen in hypothyroidism
d) On looking upwards lower lid does not follow eye movements

912. All the following signs could result from infection within the right cavernous sinus except-
a) Constricted pupil in response to light
b) Engorgement of the retinal veins upon ophthalmoscopic examination *(AIIMSMay 03)*
c) Ptosis of the right eyelid
d) Right ophthalmoplegia

913. Paralysis of 3rd, 4th, 6th nerves with involvement of ophthalmic division of 5th nerve, localizes the lesion to- *(AI 05)*
a) Cavernous sinus b) Apex of orbit
c) Brainstem d) Base of skull

914. All the following signs could result from infection within the right cavernous sinus, except-
a) Loss of pupillary light reflex *(AIIMS Nov 03)*
b) Loss of comeal blink reflex
c) Ptosis
d) Right ophthalmopegia

915. All the following signs could result from infection within the right cavernous sinus except -
a) Constricted pupil in response to light
b) Engorgement of the retinal veins upon ophthalmoscopic examination
c) Ptosis of the right eyelid *(AIIMS May 03)*
d) Right Ophthalmolegia

916. A19 year old young girl with previous history of repeated pain over medial canthus and chronic use of nasal decongestants, presented with abrupt onset of fever with chills & rigor, diplopia on lateral gaze, moderate proptosis & chemosis. On examination optic disc is congested. Most likely diagnosis is- *(AI 11, AIIMS Nov 09)*
a) Cavernous sinus thrombosis
b) Orbital cellulitis
c) Acute Ethmoidal sinusitis
d) Orbital apex syndrome

917. Unilateral proptosis with bilateral VIth nerve palsy, diagnosis is - *(AIIMS Dec 91)*
a) Grave's disease
b) Retinoblastoma
c) Pseudotumour of orbit
d) Cavernous sinus thrombosis

918. Orbital apex syndrome constitutes all except -
a) Ptosis *(MP 06)*
b) CSF rhinorrhea
c) Ophthalmoplegia
d) Pain over distribution of optic nerve

919. Which of the following are orbital tumours -
a) Glioma b) Lymphoma
c) Chloroma d) Meningioma
c) Schwannoma *(PGI Dec 08)*

920. All of the following type of lymphoma are commonly seen in the orbit except - *(AIIMS May 03)*
a) Non Hodgkin's lymphoma, mixed lymphocytic & histiocytic.
b) Non Hodgkin's lymphoma, lymhocytic poorly differentiated.
c) Burkitt's lymphoma
d) Hodgkin's lymphoma

921. A tumor has the following characteristics retrobulbar location within the muscle cone, well defined capsule, presents with slowly progressive proptosis,easily resectable, occurs most commonly in the 2nd to 4th decade. Most likely diagnosis is -
a) Capillary hemangioma *(AIIMS May 08)*
b) Cavernous hemangioma
c) Lymhangioma
d) Hemangiopericytoma

922. Structures passing through superior orbital fissure-
a) 2nd CN b) 3rd CN
c) 4th CN d) 6th CN
e) Lacrimal nerve *(PGI Nov 10)*

923. Ayoung man following RTA presented with proptosis and pain in right eye after four days. On examination there is bruise on forehead and right eye. What is the diagnosis - *(AIIMS Nov 11)*
a) Cavernous sinus thrombosis
b) Internal carotid artery aneurysm
c) Carotico-cavemous fistula
d) Fracture of sphenoid

924. A young adult presents with proptosis and pain in eye after 4 days of trauma to eye. Chemosis, conjunctival congestion and extraocular muscle palsy with inability to move eye are seen. Investigation of choice - *(AIIMS Nov-11)*
a) MRI b) Digital subtraction angiography
c) CT d) MR angiography

925. A 8 year old boy presented with swelling in the left eye of 3months, examination revealed proptosis of left eye with preserved vision. Right eye is normal. CT scan revealed intraorbital extraconal mass lesion. Biopsy revealed embryonal rhabdomyosarcoma. Metastatic work up was normal The standard line of treatment is - *(AIIMS Nov 02)*
a) Chemotherapy only
b) Wide local excision
c) Enucleation
d) Chemotherapy and Radiaton therapy

LIDS

926. Infection of what is called stye - *(NEET/DNB Pattern)*
a) Hair follicles b) Tarsal glands
c) Conjunctiva d) Zeis glands

911)c 912)a 913)a 914)None 915)a 916)a 917)d 918)b 919)All 920)d 921)b 922)b,e 923)c 924)b 925)d 926)d

927. Chalazion of lid is - , *(AIIMSMayOS, NEET/DNB Pattern)*
a) Caseous necrosis
b) Chronic nonspecific inflammation
c) Chronic lipogranuloraatpus inflammation
d) Liposarcoma

928. Chalazion is/are - *(PGI Dec 02)*
a) True meibomian cyst b) Mucous cyst
c) Sebaceous cyst d) Cyst of hair follicle
e) Obstruction of meibomian gland

929. Which among the following statements is true regarding chalazion - *(PGI Dec 01)*
a) Mucous cyst
b) Sebaceous cyst
c) Due to staphylococcal infection
d) Recurrence may imply malignancy
e) Occlusion of Meibomian gland

930. TVue about Chalazion treatment - *(PGI Dec 05)*
a) Intralesional steroid b) Laser
c) Curettage d)I&D
e) Medical treatment

931. Treatment of chalazion - *(PGI June 04)*
a) Incision & drainage b) Curettage
c) Intralesion steroid d) Pressure bandage
e) Antibiotics

932. A recurrent chalazion should be subjected to histopathologic evalution to exclude the possibility of- *(AIIMS May 06, AI12)*
a) Squamous cell carcinoma
b) Sebaceous cell carcinoma
c) Malignant melanoma
d) Basal cell carcinoma

933. Recurrent chalazion is predisposed to develop -
a) Squamous cell carcinoma *(AIIMS May 02)*
b) Basal cell carcinoma
c) Adenocarcinoma
d) Epidermoid carcinoma

934. Fusion of palpebral and bulbar conjunctiva is-
a) Symblepharon b) Trichiasis *(NEET/DNB Pattern)*
c) Ectropion d) Tylosis

935. Eyelid drooping is 7 are seen in - *(PGI Nov. 16)*
a) Damage to edinger - westphal nucleus
b) Damage to motor part of facial nerve
c) Damage to sympathetic nerve supply
d) Damage to motor root of occulomotor nerve
e) Damage to lacrimal nerve

936. Ptosis results from trauma to which nerve -
a) vn b)'vm *(AIIMS Feb 97)*
c) m d)VI

937. Bilateral ptosis is not seen in- *(AI 01)*
a) Marfan's syndrome b) Myaesthenia gravis
c) Myotonic dystrophy d) Kearns sayre syndrome

938. Weakness of extraocular muscle may be seen in all of the following conditions except - *(AI 99)*
a) Polymyositis
b) Myasthenia-gravis
c) Eaten-lambert-myasthenic syndrome
d) Thyrotoxicosis

939. Shanti, aged 27 yrs presented with complaints of difficulty in reading near print. There is ptosis and diplopia in all directions. She is *h2L\mg-(AUMSNov 00)*
a) III CN palsy b) Myasthenia gravis
c) Presbyopia d) VI CN palsy

940. Ptosis with weakness of orbicularis- oculi is an early feature of - *(AI 99)*
a) Fisher syndrome b) Myasthenia gravis
c) Eaten lambert syndrome d) Thyrotoxicosis

941. Fasanella Servan operation is specifically indicated in- *(AI03)*
a) Congenital ptosis b) Steroid induced ptosis
c) Myasthenia gravis d) Homer's syndrome

942. Lid lag on the ptotic side on down gaze is characteristic of - *(PGI June 97, AIIMS June 92)*
a) Congenital ptosis b) Traumatic ptosis
c) Myogenic ptosis d) Synkinetic ptosis

943. A patient with ptosis presents with retraction of the ptotic eye lid on chewing. This represents - *(AI 10)*
a) Marcus Gunn Jaw winking sydrome
b) Third nerve misdirection syndrome
c) Abducent palsy
d) Occulomotor palsy

944. * Loss of eyelashes is - f r ^ *(NEET/DNB Pattern)*
a) Tylosis §j|j b) Madarosis
c) Trichiasis d) Ectropion

945. Mostcommohma lignant tumour of eyelid is -
a) Sebaceous gland carcinoma *(AIIMS Nov 09, Nov*
b) Basal cell carcinoma *i 93, June 92, NEET/DNB*
fe) Squamous cell carcinoma *Pattern)*
d) Malignant melanoma

946. The operation of plication of inferior lid retractors is indicated in - *(AI 03)*
a) Senile ectropion b) Senile entropion
c) Cicatrical entropion d) Paralytic entropion

947. All of the following are the features of Horner's syndrome Except - *(AIIMS Nov 08)*
a) Ptosis and Miosis in ipsilateral eye
b) Anhydrosis of ipsilateral face
c) Hetrochromia irides
d) Apparent exophthalmos

948. Horner's syndrome consists of - *(AIIMS May 02)*
a) Miosis and enophthalmos
b) Miosis and exophthalmos
c) Miosis and proptosis
d) Miosis and ptosis

949. Features of Horner's syndrome include all of the following except- *(AI 98, Punjab 11)*
a) Miosis b) Ptosis
c) Anhydrosis d) Exopthalmos

950. All of the following are components of Horner's syndrome except - *(AI 96)*
a) Ptosis b) Exophthalmos
c) Anhidrosis d) Loss of cilio- spinal reflex

927) c 928) a,c,e 929)b,d,e 930)a,c,d,e 931)a,b,c,e 932) b 933) c 934) a 935) c,d 936) c 937) a 938) a

951. Horner's syndrome, all are true except-*(PGI June 00)*
a) Unilateral loss of sweating b) Enophthalmos
c) Mydriasis d) Ptosis

952, Madarosis is seen in - *(NEET/DNB Pattern)*
a) Addison's disease b) Hypothyroidism
c) Acromegaly d) None

LACRIMAL APPARATUS

953. Mucin layer tear flilm deficiency occurs in -
a) Keratoconjunctivitis sicca *(AIIMS May 06,*
b) Lacrimal gland removal *Dec 95)*
c) Canalicular block
d) Herpetic keratitis

954. A two months old child presents with epiphora and regurgitation. The most probable diagnosis is -
a) Mucopurulent conjunctivitis
b) Buphthalmos
c) Congenital dacryocystitis
d) Encysted mucocele

955. Treatment of chronic dacrocystitis - *(PGIDec 05,00)*
a) Dacrocystorhinostomy b) Antibiotics
c) Probing d) Massage

956. Treatment of dacrocystitis includes all except -
a) Probing b) Syringing
c) Endoscopic DCR d) DCR *(PGI Nov 09)*
e) Dacryocystectomy (DCT)

957. Treatment of nasolacrimal duct obstruction -
a) Syringing b) Probing *(PGI June 08)*
c) DCR d) Dacryocystectomy
e) Antibiotic

958. Initial treatment of congenital dacryocystitis -
a) Massaging b) Probing *(PGI 05)*
c) DCR d)Ointment
e) No treatment required

959. A mother noticed mucopurulent discharge from the right puncta of her 3 month old child. There is h/o watering from his right eye, t/t is -*(AIIMS Nov 99)*
a) Syringing
b) Probing with syringing
c) Sac massage with topical antibiotics
d) Dacryocysto- rhinostomy

960. Epiphora is- *(AI02)*
a) Cerebrospinal fluid running from the nose after fracture of anterior cranial fossa
b) An epiphenomenors of a cerebral tumor
c) An abnormal overflow of tears due to obstruction of lacrimal duct
d) Eversion of lower eyelid following injury

961. A 60 year old man presented with watering from his left eye since 1 year. Syringing revealed a patent drainage system. Rest of the ocular examination was noraml. A provisional diagnosis of lacrimal pump failure was made. Confirmations of the diagnosis would be by- *(AIIMS Nov 02)*
a) Dacryoscintigraphy b) Dacryocystography
c) Pressure syringing d) Canaliculus irrigation test

962. MC ocular manifestation of mumps *\s-(AHMSDec 97)*
a) Dacryoadenitis b) Chorioretinitis
c) Anterior uveitis d) Memb. conjunctivitis

963. Crocodile tears are seen in - *(PGI June 98)*
a) Frey's syndrome
b) Conjunctivitis
c) Lacrimal tumour
d) Abnormal VII nerve regeneration

OCULAR TRAUMA

964. In blunt injury to eye, following changes are seen EXCEPT- *(AIIMS Dec 98)*
a) Macular hole b) Berlin's edema
c) Subluxation of lens d) Soft exudates

965. Traumatic eye lesion can causes - *(PGI Dec 08)*
a) Vitreous haemorrhage
b) Comeal opacity
c) Exudative retinal detachment
d) Glaucoma
e) Cataract

966. Which of the following is not seen in blunt trauma to eye - *(AIIMS Feb 97)*
a) Retinal detachment
b) Double perforation in iris
c) Hyphaema
d) Iridiodialysis

967. Voissius ring is seen in the - *(AI 96, AIIMS 94)*
a) Cornea
b) Anterior capsule of the lens
c) Posterior capsule of the lens
d) Iris

968. Vossius ring occurs in - *(AIIMSDec 90)*
a) Lens dislocation b) Concussion injury
c) Penetrating injury d) Extra capsular extraction

969. Vossius ring is seen in - *(Corned 07)*
a) Cornea b)Lens
c) Vitreous d) Retina

970. Rosette shaped cataract is seen in - *(PGI June 00)*
a) Trauma b) Radiation
c) DM d) Iridocyclitis

971. Secondary glaucoma associated with angle recession is seen in - *(AIIMS Dec 94)*
a) Concussion injury b) Radiation injury
c) Penetrating injury d) Chemical injury

972. An 18 year old boy comes to the eye casuality with history of injury with a tennis ball. On examination there is no perforation but there is hyphaema. The most likely source of the blood is - *(AI 05)*
a) Iris vessels
b) Circulus iridis major
c) Circulus iridis minor
d) Short posterior ciliary vessels

951)c 952) b 953) a 954)c 955)a,b,c,d 956)None 957) All 958)a 959)c 960)c 961)a 962)a 963)d
964)d 965)All 966)b 967)b 968)b 969)b 970)a 971)a 972)b

973. In which of the following conditions Berlin's edema is seen - *(AIIMS May 06, Sept 96, PGIDec 98)*
a) Open angle glaucoma
b) After cataract surgery
c) After concussional trauma
d) Diabetic retinopathy

974. ^{6}D' shaped pupil is seen in - *(JIPMER 93)*
a) Glaucoma b) Dislocation of lens
c) Iridodialysis d) Iridocyclitis

975. A boy gets hit by a tennis ball in the eye following which he has complaints of decreased vision. Which of the following tells that blunt injury is due to the baU? *(AI11)*
a) Optic neuritis b) Pars planitis
c) Vitreous base detachment d) Equatorial edema

976. A patient sustained blunt trauma to eye after that the developed sudden loss of vision with deep anterior chamber, Most likely cause is - *(AIIMS June 99)*
a) Lens dislocation
b) Berlin's oedema
c) Retinal haemorrhage
d) Recession of angle of AC

977. Globe rupture due to blunt trauma is indicated by -
a) Blow out fracture *(AIIMS Dec 91)*
b) Lens subluxation
c) Contusion + haemorrhage + low intraocular pressure
d) Proptosis and decreased mobility of muscle

978. A patient presented with pain in left eye associated with visual distrubance, also a history of blunt trauma to eye 4 month back, first investigation of choice is - *(AIIMS June 99)*
a) Introcular tension b) Ophthalmoscopy
c) Perimetry d) Ultrasound

979. After blunt trauma to eye a pt. develops circumcorneal congestion. The further test done is - *(AIIMS June 99)*
a) Perimetry
b) Direct opthalmoscopy
c) Ultrasonography
d) Intraocular pressure measurement

980. Dangerous area of eye - *(AIIMS Nov 07)*
a) Ciliary body b) Optic nerve
c) Sclera d) Choroid

981. Sympathetic ophthalmitis is - *(AIIMSMay 95)*
a) U/L suppurative uveitis
b) B/L suppurative uveitis
c) U/L non- suppurative uveitis
d) B/L non- suppurative uveitis

982. Earliest symptom of sympathetic ophthalmitis is -
a) Photophobia *(AIIMS Dec 91)*
b) Pain
c) Loss of near vision
d) Loss of distant vision

983. In sympathetic ophthalmitis first sign is -
a) Presence of KPs *(PGI June 98, Feb 97,*
b) Retrolental flare *AIIMS 94, Punjab 11)*
c) Presence of aquous flare
d) Constriction of pupil

984. First sign in sympathetic ophthamilis is - *(AI 97)*
a) Presence of aquous flare
b) Presence of precipitates
c) Constriction of pupil
d) Retrolental flare

985. Dalen fuch's nodule is seen in-*(PGIDec 99, AIIMS 97)*
a) Sympathetic ophthalmitis b) Myopia
c) Retinal detachment d) Spring catarrah

986. Sympathetic ophthalmitis is characterized by- *(Corned 07)*
a) Lisch nodules b) Busacca nodules
c) Koepee nodules d) Dalen Fuch's nodules

987. Sympathetic ophthalmitis results due to -
a) Penetrating injury of ciliary body *(PGIDec 97)*
b) Uveitis
c) Glaucoma
d) Trachoma

988. Two weeks after an injury to his right eye, a boy presents with bilateral pain and redness, most probable diagnosis is - *(AIIMS Nov 00)*
a) Sympathetic ophthalmitis b) Endophthalmitis
c) Optic neuritis d) Glaucoma

989. A 20 year old man complains of difficulty'm reading the newspaper with his right eye, three weeks after sustaining a gun shot injury to his left eye. The most likely diagnosis is - *(AI 03)*
a) Macular edema
b) Sympathetic ophthalmitis
c) Optic nerve avulsion
d) Delayed viterous hemorrhage

990. Common feature between sympathetic Ophthalmitis and vogt Kanayagi Harada syndrome -*(PGI June 07)*
a) Autoimmune etiology b) Injury
c) Uveitis d) Vitiligo

991. MC retained foreign body intraocularly -
a) Airgun pellets b) Iron *(AIIMS Dec 95)*
c) Glass d) Chisel and hammer

992. Most common occular foreign body is - *(AI 98)*
a) Chiesel and hammer b) Glass
c) Plastics d) Stone

993. Chalcosis is seen with - *(AIIMS Dec 97)*
a) Pb b)Cu
c) Fe d) Hg

994. What is deposited in Kyser-Fleischer ring -
a) Copper b) Lead *(NEET/DNB*
c) Mercury d) Heme *- Pattern)*

995. Blow out fracture of the orbit, most commonly leads to fracture of - *(AIIMS Nov 09)*
a) Posteromedial floor of orbit
b) Medial wall of orbit
c) Lateral wall of orbit
d) Roof of orbit

973)c 974)c 975)c 976)a 977)c 978)a 979)d 980)a 981)d 982)a 983)a 984)b 985)a 986) d
987) a 988) a 989) b 990) a,c 991) b 992) a 993) b 994)? 995) a

996. "Blow out" fracture of orbit involve - *(PGI03)*
a) Floor b) Medial wall
c) Lateral wall d)Roof
e) Apex

997. Blow out # orbit is characterized by - *(PGI 01)*
a) Diplopia b) "Tear drop" sign
c) Forced duction test d) Exophthalmos

998. A boy presents with diplopia and restriction of eye movements following blunt trauma to his eye. X- ray reveals blow.out fracture of orbit. Which part of orbit is most likely damaged - *(A1IMS Nov 01)*
a) Superior wall b) Inferior wall
c) Lateral wall d) Medial wall

999. TVue about blow out # orbit - *(PGI Dec 06)*
a) Herniates into maxillary antrum
b) Movements restricted
c) Looking down is easy
d) Silastic better for correction
e) Diplopia

1000. Most common cause of fracture of roof of orbit- *(AIMS May 09)*
a) Blow on back of head b) Blow on parietal bone
c) Blow on the forehead d) Blow on the upper jaw

1001. Traumatic eye with late presentation of hyper aemic sclera with unilateral proptosis is due to -
a) Retrobulbar hematoma *(AIMS June 00)*
b) Retrobulbar cellulites
c) Carotico- cavernous fistula
d) Pneumo- orbit

1002. Unilateral lacrimal gland destruction may be caused by- *(NEET/DNB Pattern)*
a) Inferior orbital fissure fracture
b) Fracture of roof of orbit
c) Fracture of lateral wall
d) Fracture of sphenoid

1003. Alkali causes - *(NEET/DNB Pattern)*
a) Symblepharon b) Papilloedema
c] Optic neuritis * * d) Retinal detachment

MISCELLANEOUS

1004. Enucleation means - *(PGIDec 97)*
a) Removal of the contents of globe
b) Removal of the contents of globe and sclera except a frill around the optic nerve
c) Removal of entire globe along with portion of optic nerve
d) Removal of the entire contents of orbit

1005. Enucleation is done for - *(PGI June 02)*
a) Retinoblastoma b) Malignant melanoma
c) Glaucoma d) Pthisis bulbi
e) Vitreous hemorrhage

1006. Enucleation of the eyeball is contraindicated in- *(AIMSMay 03)*
a) Endophthalmitis b) Panophthalmitis
c) Intraocular tumours d) Painful blind eye

1007. A patient is on follow - up with you after enucleation of a painful blind eye. After enucleation of the eyeball, a proper sized artificial prosthetic eye is advised after a postoperative period of - *(AI 03)*
a) About 10 days b) About 20 days
c) 6-8 weeks d) 12-24 weeks

1008. Peripheral iridectomy is indicated in-
a) Acute angle closure glaucoma *(PGI Dec 05, 04)*
b) Open angle glaucoma
c) Malignant glaucoma
d) InICCE
e) Pupil block glaucoma

1009, YAG laser is used in - *(PGI Dec 99)*
a) Retinal detachment b) Diabetes
c) After-cataract d) Refractive errors

1010, Laser used in LASIK- *(MH 11)*
a) Excimer b) Argon
c) Holmium d) Nd-yag

1011. The wavelength of laser (in nanometers) for shaping cornea in refractive surgery is - *(AI 12)*
a) 193 nm b) 451 nm
c) 532 nm d) 1064 nm

1012. Wavelength of ND: Yag laser - *(PGI June 07)*
a) 1040nm b) 1040mm
c) 1040 cm d) 1040 m

1013. Xerophthalmia is caused by - *(PGI Nov. 10)*
a) Vit C deficiency b) Small bowel resection
c) Cystic fibrosis d) Chronic alcoholism
e) Glomerulonephritis

1014. Vit A deficiency produces - *(PGI Dec 05)*
a) Bitots Spots b) Trantas spots
c) Keratomalacia d) Xerophthalmia
e) Colorblindness

1015. Cornea melts without inflammation in which condition - *(TN 03)*
a) Gout b) Sarcoidosis
c) Keratomalacia d) Rheumatoid arthritis

1016. Keratomalacia is - *(PGI Dec 00)*
a) Occurs due to Vit-A deficiency
b) Relatively benign condition
c) First feature ofVit- A deficiency
d) Also seen in retinitis pigmentosa

1017. Which of the following is true about Bitots spots -
a) Predispose to pingecula *(NEET/DNB Pattern)*
b) Caused by hyperplasia of goblet cells
c) Seen with fat malabsorption
d) Most common site is nasal site of conjunctiva

1018. Keratomalacia is associated with - *(PGI June 01)*
a) Measles b) Mumps
c) Rubella d) Diarrhoea
e) Chicken pox

1019. Most common cause of blindness in India is - *(AI 98, NEET/DNB Pattern)*
a) Trachoma b) Vit-A deficiency
c) Cataract d) Mypopia

996)a,b 997)a,b,c,d 998)b 999)a,b,d,e 1000)c 1001)a 1002)b 1003)a 1004)c 1005)a,b,d 1006)b 1007)c
1008) a,d,e 1009)c 1010)a 1011)a 1012)a 1013)b,c,d 1014))a,c,d 1015)c 1016) a 1017)c 1018) a,d 1019)c

1020. Most common cause of blindness in children in India except - *(AIMS May 10, AI07,AIMS Nov 06, May 07)*
a) Malnutrition b) Ophthalmia neonatorum
c) Glaucoma d) Congenital dacryocystitis

1021. Blindness in a child is most commonly due to -
a) Keratomalacia b) Congenital cataract
c) Glaucoma d) Injuries *(PGIJune97)*

1022. Most common cause of blindness in children in India is - *(AIMS Dec 92)*
a) Trachoma b) Cataract
c) Injury d) Vitamin A deficiency

1023. Which is the commonest casuse of occular morbidity in the community - *(AIMS Nov 02)*
a) Cataract b) Refractive error
c) Occular injury d) Vitamin A deficiency

1024. The commonest cause of low vision in India *is-(AI 03)*
a) Uncorrected refractive errors b) Cataract
c) Glaucoma d) Squint

1025. Under the school eye screening programme in India, the initial vision screening of school children is done by - *(AIMS May 03)*
a) School teachers b) Primary level health workers
c) Eye specialists d) Medical officers

1026. The eye condition for which the World Bank assistance was provided to the National Programme for Control of Blindness (1994-2001) is - *(AIMS May 03)*
a) Cataract b) Refractive errors
c) Trachoma d) Vitamin A deficiency

1027. All of the following conditions are immediate priorities in the WHO's "Vision - 2020: The Right to sight" except- *(AIMSMay 08)*
a) Trachoma b) Epidemic conjunctivitis
c) Cataract d) Onchocerciasis

1028. All of the following are given global prominence in the VISION 2020 goals, except - *(AIMSMay 03)*
a) Refractive errors b) Cataract
c) Trachoma d) Glaucoma

1029. | *8' component of SAM} ||| *(NEET/DNB Pattern)*
a) Screening b) Surgery
c) Steroids d) None

1030. Under the WHO 'Vision 2020' programme, the 'SAFE' strategy is adopted for which of the following diseases - *(AI 05, AIMS 07)*
a) Trachoma b) Glaucoma
c) Diabetic retinopathy d) Onchocerciasis

1031. On SAFE strategy false is -
a) Screening *(AI 07, AIMS Nov 06, Nov 08)*
b) Antibiotics
c) Facial hygiene
d) Environmental modification

1032. Abnormaliy f eccentric placed pupil is called - *(NEET/DNB Pattern)*
a) Polycoria b) Corectopia

V^r§?) Ahisbtpna *<-<- ^Mctogi^lqutis'f

wm **Brushfield spot in iris is seen in-***(NEET/DNB Pattern)*
a) Neurofibromatosis b) Dov[illegible]n syndrome
c) Tuberous s clerosis d) Toxoplasmosis

1034. Lamina cribrosa is absent in - *(AI 07)*
a) Morning glory syndrome
b) Nanophthalmia
c) Colobama of retina
d) Optic nerve agenesis

1035. A young patient presents to the ophthalmology clinic withloss of central vision. There is no obvious family history. ERG and EOG were observed to be normal which of the following is the most likely diagnosis- *(AI II)*
a) Stargardt's disease
b) Best's Vitelliform Dystrophy
c) Retinitis Pigmentosa
d) Cone- Rod Dystrophy

1036. A young patient presents to the ophthalmology clinic with loss of central vision. ERG is normal but EOG is abnormal. Which of the following is the most likely diagnosis - *(AI 11)*
a) Stargardt's disease
b) Best's Vtielliform Dystrophy
c) Retinitis Pigmentosa
d) Cone- Rod Dystrophy

1037. A young patient present with significant loss of central vision and a normal ERG There is no obvious family history of similar presentation. The most likely diagnosis - *(AI11)*
a) Best's disease b) Stargardt's disease
c) Retinitis Pigmentosa d) Cone Rod Dystrophy

1038. Aniridia is associated with - *(AIMS Nov 09)*
a) Retinoblastoma b) Hepatoblastoma
c) Nephroblastoma d) Medulloblastoma

1039. Von recklinghausen disease is associated with-
a) Glaucoma *(AI08)*
b) Optic nerve glioma
c) Neurofibroma of the lids
d) All the above

1040. Von recklinghausen disease is associated with-
a) Glaucoma *(AI08)*
b) Choroidal hemangioma
c) Sub-retinal neovascularization
d) Anterior chamber angle malformation

1041. Telecanthus means - *(AIMSMay 08)*
a) Widened interpupillary distance
b) Widened root of nose with normal interpupillary distance
c) Widely separated medial orbital wall
d) Widely separated nose and medial canthi

1042. Afferent component of corneal reflex is mediatd by-
a) Vagus nerve *(All India 06)*
b) Facial nerve
c) Trigeminal nerve
d) Glossopharyngeal nerve

1020)d 1021) a 1022)d 1023)b 1024)a 1025)a 1026)a 1027)b 1028)d 1029)b 1030)a 1031)a 1032)b 1033)b

1043. All are ocular emergencies except - *(AI04)*
a) Angle closure glaucoma
b) Central serous retinopathy
c) Retinal detachment
d) Central retinal arterial occlusion

1044. Ocular manifestation of HIV are all except -
a) Predispose to viral, bacterial & fungal function
b) Kaposi sarcoma *(PGI Nov 09)*
c) CMV retinitis
d) Cotton wool spot
e) Intraocular lymphoma

1045. Ocular manifestations in AIDS - *(PGI Dec 07)*
a) Kaposi sarcoma b) Retinitis
c) Lymphoma d) Tuberculosis
e) Herpes

1046. Waardenburg's syndrome following are seen except- *(PGIDec 98)*
a) Widening of the eyebrow
b) Short palpebral fissure
c) Interstitial keratitis
d) heterochromia iridis

1047. Common ocular manifestation in Trisomy 13 is -
a) Capillary hemangioma *(AIIMSMay03)*
b) Bilateral microphthalmos
c) Neurofibroma
d) Dermoid Cyst

1048. Epidemic dropsy is characterised by all except -
a) Disc- edema *(AIIMS Dec 98)*
b) Hard- exudates
c) Peri-retinal haemorrhage
d) Tortuous - retinal vessels

1049. Hypersecretory glaucoma is seen in - *(AI 94)*
a) Epidemic dropsy b) Marfan's syndrome
c) Hypertension d) Diabetes

1050. Most common allergic manifestation of tuberculosis is- *(AIIMSNov 01)*
a) Phyctenular conjunctivitis b) Koeppe's nodule
c) Retinopathy d)Scleritis

1051. Complications of topical steroids - *(PGI Dec 0 mm NEET/DNB Pattern)*
a) Cataract
b) Glaucoma
c) uveitis

1052. Thefedmmonestcdmplications aLtopicalistercfidfc is-> || *(AI95:NEET/DNBPattern)*
a) Glaucoma b) Cataract
c) Ptosis d) Iritis

1053. Topical steroids can be used in - *(PGI Dec 06)*
a) Herpetic keratitis b) Herpetic dendritic keratitis
c) Disciform keratitis d) Ant. uveitis
e) Parsplanitis

1054. Brown skin cornea is seen in - *(PGI June 98)*
a) Siderosis b) Mustard gas exposure
c) Chalcosis d) Argyrosis

1055. Which drug can cause macular toxicity when given intravitreally ? *(All India 06)*
a) Gentamicin b) Vancomycin
c) Dexamethasone d) Ceftazidime

1056. Peribulbar injection is given in- *(PGI Dec 98)*
a) Subtenon space b) Outside muscle case
c) Periorbital space d) Subperiorbital space

1057. Macula involvement is common in - *(PGIDec 97)*
a) Toxoplasma b) Malaria
c) CMV d) Syphilis

1058. Commonest infection causing blindnesss in adult man- *(AIIMSNov 00)*
a) Toxocara b) Plasmodium
c) Toxoplasma gondii d) Tenia solium

1059. River blindness is caused by - *(AIIMS Feb 9 7)*
a) Drinking river water without boiling
b) Oncocerca volvulus
c) Toxoplasma canis
d) Glaucoma

1060. A young female presents with sudden, severe bilateral loss of vision more so on right side with no perception of light Rest of the examination including pupillary reflex, fundus & optokinetic nystagmus are normal. She was able to touch tips of her Anger with right eye closed but not with left eye closed. Most likely diagnosis - *(AIIMS Nov 11)*
a) Optic neuritis b) Anterior ischaemic optic neuritis
c) CMV retinitis d) Functional visual loss

1061. A young adult presented with diminished vision. On examination he has anterior uveitis, vitritis, focal necrotizing granuloma, macular spot. What is the most probable diagnosis? *(AIIMS May 12)*
a) Proteus syndrome b) White dot syndrome
c) Multifocal chorioditis d) Ocular toxoplasmosis

ORTHOPAEDICS

ANATOMY & PHYSIOLOGY OF BONE AND FRACTURE HEALING

1. True about Osteoclast is all except - *(PGI June 2K)*
a) Derived from monocytes
b) Stimulated by PTH
c) Phagocytosis of foreign bodies
d) Resporption of bone

2. Maj or mineral of the bone is - *(AIIMS May 10)*
a) Calcite b) Hydroxyapatite
c) Calcium oxide d) Calcium carbonate

3. Bone apposition is best in - *(AIIMS Nov 01)*
a) Osteoblastic activity at the area of stress
b) Endochondral ossification
c) Subperiosteal cambium layer
d) Osteoblastic activity in howship's lacunae

4. Regarding bone remodelling, all are true except -
a) Osteoclastic activity at the compression site
b) Osteoclastic activity at the tension site
c) Osteoclastic activity and osteoblastic activity are both needed for bone remodelling in cortical and cancellous bones *(AIIMS Nov 01)*
d) Osteoblasts transforms into osteocytes

5. Which of the changes occur in bone growth -
a) Increased acid phosphatase *(AIIMS Dec 97)*
b) Increased urinary calcium
c) Increased bone nucleotidase
d) Increased osteocalcin

6. Indicators of bone formation includes all of following except- *(AI07, 11)*
a) Osteocalcin b) Alkaline phosphatase
c) Hydroxyproline d) Type 1 procollegen

7. Bone resorption markers are - *(PGI June 08)*
a) Serum propeptide of type I procollagen
b) Osteocalcin
c) Urine total free deoxypyridinoline
d) Free glutamic acid cross linkage

8. Rate of newly synthesized osteoid mineralization can be best estimated by - *(AI 09)*
a) Tetracycline labeling b) Alizarin red stain
c) Calcein stain d) Van kossa stain

9. Bone formation markers - *(PGIDec. 07)*
a) Procollagen-I b) Alkaline phosphatase
c) Hydroxyappetite d) Calcitonin
e) TRAP

10. Adult bone trabeculae are differentiated from foetal bone trabeculae histologically by the presence of -
a) Haversian system *(DPG Mar. 09)*
b) Lamellar structure
c) Certain special staining characteristics
d) Different types of bone cells in each

11. Direct impact on the bone will produce a -
a) Transverse fracture *(AIIMS May 03)*
b) Oblique fracture
c) Spiral fracture
d) Communited fracture

12. The one most consistent sign of fresh fracture is -
a) Crepitus b) Bony tenderness *(PGI 97)*
c) Deformity d) Abnormal mobility
e) Shortening of bone

13. Pathognomonic sign of traumatic fracture is -
a) Redness b) Swelling *(JIPMER 98)*
c) Crepitus d) Tenderness

14. Pathologic fracture can occur in all except-*(PGIDec. 05)*
a) Metabolic bone disease b) Osteosarcoma
c) Osteochondroma d) Bone cyst
e) Fluorosis

15. Pathological # is seen in following except -
a) Radiation b) Anaemia *(PGI June 2K)*
c) Osteoporosis d) Osteomalacia

16. Stress fracture not involves - *(PGI 00)*
a) Metatarsals b) Metacarpals
c) Tibia d)Calcaneum

17. The usual site of stress fracture includes -*(TN 93)*
a) Tibia
b) First metacarpal bone
c) Second metacarpal bone
d) Second metatarsal bone

18. Commonest site of march # is - *(PGI June 2K)*
a) Involves shaft of 2 & 3rd metatarsals
b) Avulsion # of 5th metatarsals
c) Calcaneus involved
d) Olecranon involved

What is March fracture ? *(PGI 99, NEEVDNB*
a) Fracture of 2nd metatarsal *Pattern)*
b) Fracture of^ipetatars^L § **11Z**
c) Fracture of cuboids
d) Fracture of tibia

20. An army recruit, smoker and 6 months into training started complaining of pain at posteromedial aspect of both legs. There was acute point tenderness and the pain was aggravated on physical activity. The most likely diagnosis is - *(AI04)*
a) Bearger's disease b) Gout
c) Lumbar canal stenosis d) Stress fracture

21. All of the following factors facilitate nonunion except- *(AI97)*
a) Haematoma formation b) Periosteal injuries
c) Absence of nerve supply d) Chronic infection

22. Initial stage of clinical union of bone is equivalent to- *(BIHAR90)*
a) Callus formation b) Woven bone
c) Haematoma formation d) Calcification only
e) None of the above

23. Factors that promotes callus formation -*(PGIDec. 03)*
a) Micromovements between the fracture fragments
b) Appropriate approximation of the fragments
c) Muscle interposed in between the fracture fragment
d) Early initiation of mobilization
e) Ischemia

l)c>b 2)b 3) c,d 4) None >a 5)d 6)c 7)c 8) a 9)a,b 10)b>a ll)a>d 12) b 13) *o* 14) e
15)b 16)b 17)d>a 18)a 19)a 20)d 21)a 22)b 23)a,b

24. Callus inducion is hampered in - *(PGI June 06)*
a) Hypoxemia
b) Fractured fragments of bone
c) Micromovements
d) Muscle interposition in between fractured fragments
e) Early mobilization

25. **Healing of # of bone is affected by -** *(PGI Dec 0 7)*
a) Micromovement b) Muscle interposition
c) Hypoxia d) Bone fragments

26. **TVue about fracture healing except -**
a) Nutrition affects healing *(NEET/DNB Pattern)*
b) Stable fixation promotes healing
c) **Compression at fracture** site causes nonunion
d) Hormonal status may affeet,healing •

27. **Non union is a complicatic** *(AIMSJune 98*
Hi **Scaphoid #** *NEET/DNB Pattern)*
b) Colic's#
c) **Inter-trochanteric # of hip** ***10658**
d) Supracondylor # of **the**

28. The following fractures are known for Non-union except - *(DNB 90, UP 02)*
a) Fracture of lower half of tibia
b) Fracture of neck of femur
c) Fracture of scaphoid
d) Fracture of patella
e) Supracondylar fracture of humerus

29. In some old fractures, cartilaginous tissue forms over the fractured bone ends with a cavity in between containing clear fluid. This condition is called as -
a) Delayed union b) Slow union *(A104)*
c) Nonunion d) Pseudoarthrosis

SHOULDER AND ARM INJURIES

30. Rotator interval is between - *(MAHE 05, ARMS 06,*
a) Supraspinatus & teres monor *Jipmer 02)*
b) Teres major & teres minor
c) Supraspinatus & subcapsularis
d) Subscapularis & infraspinatus

31. Most common muscle damaged in rotator cuff -
a) Supraspinatus *(NEET/DNB Pattern)*
b) Infraspinatus
c) Subscapularis
d) Teres minor

32. Lift off test is done to assess the function of -
a) Supraspinatus b) Infraspinatus *(A110)*
c) Teres minor d) Subscapularis

33. A person is able to abduct his arm, internally rotate it, place the back of hand on the lumbosacral joint, but is not able to lift it from back. What is the Etiology?
a) Subscapularis tendon tear *(ARMS Nov 10)*
b) Teres major tendon tear
c) Long head of biceps tendon tear
d) Acromioclavicular jt. dislocation

34. Most common joint to undergo recurrent dislocation is - *(AI97, ARMS 97, NEET/DNB Pattern)*
a) Shoulder joint; b) Patella
c)-Knee joint d) Hip joint

35. Uncomplicated shoulder dislocation most commonly occurs in the following direction - *(NEET/DNB*
a) Anterior * **b)** Posterior *Pattern)*
c) Superior dy Medially

36. A 20-years old male presents with anterior shoulder dislocation. This injury is usually caused as a combination of which of the following -
a) Abduction & external rotation *(ARMS Nov 11)*
b) Adduction & external rotation
c) Abduction & internal rotation
d) Adduction & internal rotation

37., Anterior dislocation of shoulder is |nost commonly complicated by - *(PGI97, ARMS95, AI97,96NEED*
a) Axillary artery injury *DNB Pattern)*
b) Circumflex neryeinjury;
c) Recurrent dislocation ;
d) Axillary nerve injury

38. Following anterior dislocation of the shoulder, a pt develops weakness of flexion at elbow and lack of sensation over the lateral aspect forearm; nerve injured is - *(AI 01, ARMS 99)*
a) Radial nerve b) Musculocutanous nerve
c) Axillary nerve d) Ulnar nerve

39. The lesions associated with recurrent dislocation of shoulder include all, except - *(ARMS May 06)*
a) Hill-Sach's lesion b) Bankart's lesion
c) Capsular laxity d) Supraspinatus tear

40. Bankart's lesion is seen at - *(ARMS June 2K)*
a) Post surface of glenoid labrum
b) Ant surface of glenoid labrum
c) Ant part of head of humerus
d) Post part of head of humerus

41. Bankart's lesion involves the_____ of the glenoid labrum - *(ARMS Nov 06)*
a) Anterior lip b) Superior lip
c) Antero-superior lip d) Antero-inferior lip

42. Hill sach's lesion is most commonly seen ipl-
a) Recurrent shoulder dislocation *(NEET/DNB*
b) Posterior shoulder dislocation - * *Pattern)*
c) Fracture neck of humrus
d) Anterior shoulder dislocation .

43. A 6 year old boy has a history of recurrent dislocation of the right shoulder. On examination, the orthopedician puts the patient in the supine position and abducts his arm to 90 degrees with the bed as the fulcrum and then externally rotates it but the boy does not allow the test to be performed. The test done by the orthopedician is - *(ARMSMay 01)*
a) Apprehension test b) Sulcus test
c) Dugas test d) MC Murray's test

24) a,b,d,e 25)a,b,c,d 26) c 27) a 28) e 29) d 30) c 31) a 32) d 33) a 34) a 35) a 36) a
37) b,d 38) b 39) d 40) b 41) d 42) a 43) a

44. Traumatic glenohumeral instability on one direction with Bankarts lesion are treated by -
a) Conservative methods *(NIMHANS 03)*
b) Surgery
c) Rehabilitation
d) Observation followed by inferior capsule shift

45. Which is true regarding shoulder dislocation -
a) Posterior dislocation is often over-looked
b) Pain is severe in anterior dislocation
c) Radiography may be misleading in posterior dislocation *(SGPGI02, NIMHANS 99)*
d) All of the above

46. A 24-yar old male, known epileptic, presented following a seizure with pain in the right shoulder region. Examination revealed that the right upper limb was adducted and internally rotated and the movements could not he performed. Which of the following is the most likely diagnosis - *(DPG10)*
a) Posterior dislocation of shoulder
b) Luxatio erecta
c) Intrathoracic dislocation of shoulder
d) Subglenoid dislocation of shoulder

47. Posterior glenohumeral instability can be tested by- *(AIIMS May 10,09)*
a) Jerk test b) Crank test
c) Fulcrum test d) Sulcus test

48. Following statement regarding dislocation of shoulder are true except - *(KA 97)*
a) Head of humerus usually dislocates forward from shoulder joint
b) Injury is produced by forced extension & external rotation of abducted arm
c) In posterior dislocation, appearance of shoulder is not normal
d) None of the above

49. Common injury to baby is - *(CMC 02)*
a) Fracture humerus b) Fracture clavicle
c) Fracture scapula d) Fracture femur

50. True about fracture clavicle is - *(PGI97)*
a) Malunion
b) Most common site is medial l/3rd & 2/3rd
c) Comminuted fracture
d) Due to fall on outstretched hand

51. True statement regarding fracture of clavicle is -
a) Most common complication is malunion *(AI2K)*
b) Occurs at the jn. of medial l/3ri & lateral 2/3rd
c) Usually occurs due to fall on elbow
d) Communitted fracture is common

52. All are TRUE about clavicle, except-^TZZMS' *May 93)*
a) No treatment required for fracture but rest
b) Breaks at mid point
c) First bone to ossify
d) Ossifies in membrane

53. The most common bone fractured during birth -
a) Clavicle b) Scapula *(MP 98)*
c) Radius d) Humerus

54. ^ a ^Proximal humerus fracture which has maximum chances of avascular necrosis - *(NEET/DNB*
a) One part b)Two part *Pattern)*
c) Three part d) Four part

55. Treatment of choice in 65 year old female with impacted # neck of humerus is - *(AIIMS June 99,*
a) Triangular sling *PGI 2K, UP 2K)*
b) Arm chest strapping
c) Arthroplasy
d) Observation

56. Most common nerve involvement in fracture surgical neck humerus - *(AI 02, AIIMS Dec 9 7)*
a) Axillary nerve b) Radial nerve
c) Ulnar nerve d) Median nerve

57. A boy fell down from a tree and has fracture of neck of humerus. He cannot raise his arm because of the involvement of- *(AI 2K)*
a) Axillary nerve
b) Supraspinatus nerve
c) Musculocutaneous nerve
d) Radial nerve

58. Which of the following movements will be affected if the greater tubercle of the humerus is lost -
a) Abduction and lateral rotation *(AIIMS Nov 2K)*
b) Adduction and flexion
c) Adduction and medial rotation
d) Flexion and medial rotation

59. Hanging cast is used in - *(AIIMSDec 95)*
a) # Femur b) # Radius
c)# Tibia d) # Humerus

60. Nerve commonly involved in fracture distal shaft of the Humerus- *(NEET/DNB Pattern)*
a) Radial nerve b) Medial
c) Ulnar d) Circumflex brachial nerve

ELBOW INJURIES

61. Three bony point relationship is maintained in - *(AIIMS Dec 95, 93, Nov 91)*
a) Supracondylar # humerus b) Dislocation of elbow
c) # Lateral condyle d) Intercondylar #

62. Three point relationship is reversed in all, except - *(AIIMS June 2K, 91)*
a) # Medial epicondyle b) # Lateral epicondyle
c) Supracondylar # d) Intercondylar #

63. 3 point symmetry is not disturbed in which fracture-
a) Fracture ulna only *(AIIMS May 93)*
b) Fracture radius only
c) Fracture of radius & ulna both bones of forearm
d) Weak posterior capsule

64. After falling from a height, a child lands on his fully out stretched hands. On examination there is pain and swelling over his right elbow. Give your probable diagnosis - *(AIIMS Nov 2K)*
a) Fracture olecranon
b) Post dislocation of elbow
c) Supra condylar fracture of humerus
d) Fracture both bones forearm

44) b 45) d 46) a 47) a 48) d 49) b 50) a,d 51) a 52) a 53) a 54) d 55) a 56) a 57) a
58) a 59) d 60) a 61) a 62)a,b,c 63) b 64) c

65. Complications of supracondylar fracture of humerus are all except - *(PGI Dec 05)*
a) Elbow stiffness b) Malunion
c) Nonunion d) Myositis ossification
e) Gun-Stock deformity

66. All of the following are complications of supracondylar fracture of humerus in children, except- *(AIIMSMay 06)*
a) Compartment syndrome b) Myositis ossificans
c) Malunion d) NonUnion

67. Volkmanns contracture, which artery is involved-
a) Radial b) Brachial *(NEET/DNB Pattern)*
c) Ulnar d) Interosseus

68. The malunion of supracondylar fracture of the humerus most commonly leads to - *(AIIMSMay 06)*
a) Flexion deformityb) Cubitus varus
c) Cubitus valgus d) Extension deformity

69. The most common complication of supracondylar fracture is - *(PGI97, AIIMS97)*
a) Osteosarcoma
b) Genu valgum
c) Blood vessel injury
d) Volkmann's ischaemic contracture
e) Malunion with gun stock deformity

70. Cabitus varus is most commonly seep, in *41})*
: : V v a) Rickets ' a *(AI94, NEET/DNB: Pattern^*
b) Post inflammatory epiphyseal damage
c) Fracture lateral condyle humerus
d) Malunited supracondylar fracture

71. Most commonly injured nerve in supracondylar fracture of humerus - *(AI11)*
a) Median b) Ulnar
c) Radial d) Anterior interosseus nerve

72. Which complication may arise after supracondylar fracture - *(PGI 95)*
a) Median nerve injury b) Damage to brachial artery
c) Cubitus varus d) All of the above

73. A 10-year-old boy presenting with a cubitus varus deformity and a history of trauma 3 months back, on clinical examination has the preserved 3 bony point relationship of the elbow. The most probable diagnosis is - *(AI 94, AIIMS 94, May 04)*
a) Old unreduced dislocation of elbow
b) Non-union lateral condylar fracture of humerus
c) Malunited intercondylar fracture of humerus
d) Malunited supracondylar fracture of humerus

74. All of the following are associated with supracondylar fracture of humerus, except- *(AI 02,NEET/DNB*
a) It is uncommon after 15 yrs of age *Pattern)*
b) Extension type fracture is more common than the flexion type
c) Cubitus varus deformity commonly results following malunion
d) Ulnar nerve is most commonly involved

75. Supracondylar fracture is usually caused by -
a) Hyperflexion injury *(MAHE 02, SGPGI01)*
b) Axial rotation
c) Extension injury
d) Hyperextension injury

76. "Cubitus-valgus" deformity is complication of -
a) # Lateral condyle of humerus *(AIIMS June 97)*
b) # Intercondylar of humerus
c) # of the olecranon
d) # Head of the radius

77. All true regarding fracture lateral condyle humerus except - *(PGI 93, Jipmer 98)*
a) Salter Harris type IV injury
b) Most common complication of surgically treated cases is cubitus valgus deformity
c) Tardy ulnar nerve palsy occurs
d) Cubitus varus occur more commonly than valgus
e) Open rudction & internal fixation

78. Most common complication of lateral condyle humerus fracture - *, (NEET/DNB Pattern)*
a) Malunion b) Nonunion
c) VIC d) Median nerve injury

79. Tardy ulnar nerve palsy caused by - *(PGI June 02)*
a) Supracondylar# b) Lateral condylar #
c) Olecranon # d) Intercondylar #
e) Distal radio-ulnar dislocation

80. Tardy ulnar nerve palsy seen in - *(AIIMS Dec 98)*
a) Medial condyle # humerus
b) Lateral condyle # humerus
c) Supracondylar condyle # humerus
d) Fracture shaft humerus

81. A 6-year old child has an accident and had # elbow, after 4 years presented with tingling and numbness in the ulnar side of finger, fracture is -
a) Supracondylar # humerus *(AIIMS June 99)*
b) Lateral condylar # humerus
c) Olecranon#
d) Dislocation of elbow

82. A 12-year-old child presents with tingling sensation and numbness in the little finger and gives history of fracture in the elbow region 4 years back. The probable fracture is -
a) Lateral condyle fracture humerus
b) Injury to ulnar nerve
c) Supracondylar fracture humerus
d) Dislocation of elbow

83. A patient sustained injury to the upper limb 3 yrs back; he now presents with valgus deformity in the elbow and paresthesias over the medial border of the hand. The injury is likely to have been - *(AI01)*
a) Supracondylar # humerus
b) Lateral condyle # humerus
c) Medial condyle # humerus
d) Posterior dislocation of the humerus

65)c 66)d 67)b 68)b 69)e 70)d 71)d>a 72)d 73)d 74) d 75)d 76)a 77)b 78)b
79) a,b 80)b,c 81)b 82) a 83) b

84. Pulled elbow is - *(PGI94)*
a) A sprain of extensor tendons
b) Dislocation of head of radius
c) Fracture of lateral condyle of humerus
d) Dislocation of elbow

85. Pulled elbow means •y. j /. *(NEET/DNB Pattern)***
a) Fracture of head of radius , - . * '1
b) 'Subluxation of head of radius ALA:'
c) Fracture dislocation of elbow ;.>n *:j
d) Fracture ulna , ' *Jxj*, h'Akf,* £r>.^ ',{>

86. A 30 years old male comes to ortho emergency with his 3 years old daughter who is crying. The father gives the history of child being swung by forearm. The most probable diagnosis is - *(AIIMS 01, TN 02)*
a) Supracondylar humerus fracture
b) Elbow dislocation
c) Stress fracture
d) Pulled elbow

87. A one and a half year old child holding her father's hand slipped and fell but did not let go of her father's hand. After that she continued to cry and hold the forearm in pronated position and refused to move the affected exremity. Which of the following management of this stage is most appropriate -
a) Supinate the forearm *(AIIMS Nov 04)*
b) Examine the child under GA
c) Elevate the limb and observe
d) Investigate for osteomyelitis

88. A 3 year old girl has developed painful elbow after being jerked by the forearm. The next thing to be done is - *(AIIMS 93, AMU 99, Jipmer 01)*
a) Cuff & collar sling immobilization
b) Reduction setting and AEPOP application
c) X-ray and elevation of limb in posterior slab
d) Fully supinate the forearm

89. A child is spinned around by holding his hand by his father. While doing this the child started crying and does not allow his father to touch his elbow. The diagnosis is - *(AIIMSMay 01)*
a) Pulled elbow
b) Radial head dislocation
c) Annular ligament tear
d) Fracture olecranon process

9 0 . . Commonest dislocation of *elbo\v-(NEET/QNB Pattern)*
a) Anterior b)Posterior,
; • c) Both same ^ 4) Medial

91. Deformity in posterior elbow dislocation- *(NEET/*
a) Flexion b) Extension :; *DNB Pattern)*
c) Both d) None i; ;; {*i\ * / l.*

92. In posterior dislocation of elbow, most prominent part- *(NEET/DNB Pattern)*
a) Coronoid b) Radial head
c) Olecranon d) None

93s iylWhat is seen on x-ray with posterior elbow 1;\ V vdislocation - *(NEET/DNB Pattern)*
a) Coronoid process posterior to humerus
ip;. n;b) Coronoid process anterior to humerus
k j Coronoid process below humerus) 4 n A ^ - i
i.V.^;.\J;d) None

94. All are common with elbow dislocation, except -
a) Myositis ossificans progressiva *(DELHIPG Feb. 09)*
b) Median Nerve Palsy
c) Brachial artery injury
d) Volkmann's contracture

95. Most common elbow injury in adolescents is-*(AI90,*
a) Dislocation *AMU 97, UP 01)*
b) Physeal injury
c) Supracondylar fracture
d) Olecranon fracture

96. An oblique # of olecranon. If displaced proximally. The treatment is - *(AIIMS SP 96)*
a) Excision & resuturing
b) Tension band wiring
c) Elbow is immobilized by cast
d) Open reduction & external fixation

97. In fracture of the olecronon, excision of the proximal fragment is indicated in all of the following situation except- *(AI 04)*
a) Old ununited fracture
b) Non-articular fracture
c) Fracture extending to coronoid process
d) Elderly patient

98. Open reduction is not required in which fracture -
a) Patella *(AIIMSMay 95)*
b) Outer 1/3 of radius head
c) Condyle of humerus
d) Olecranon displaced #

99. Excision of head of radius in a child should not be done because- *(Jipmer01)*
a) It produces instability of elbow joint
b) It leads to secondary osteoarthritis of elbow
c) It causes subluxation of inferior radio-ulnar joint
d) It causes myositis ossificans

100. If head of the radius is removed, it will result in- *(PGI91)*
a) Lengthening of limb b) Valgus deformity
c) Varus deformity d) No deformity

FOREARM ■ WRIST AND HAND INJURIES

101. Fracture of both bone forearm at same level, position of the arm in plaster is - *(AIIMS June 99)*
a) Full supination b) 10 degree supination
c) Full pronation d) Mid- prone

102. Most common fracture in *ddeify-(NEET/DNB Pattern)*
a) TCNF A b) Colle's fracture
c) IT fracture d) Supracondylar fracture

84) None >b 85)b 86)d 87)a 88)d 89)a 90)b 91)a 92)c 93)a 94)a 95)b 96)b
97) c 98) b 99) c 100) b 101) d 102) b

103. Following displacement seen in Colle's fractue EXCEPT- *(ARMS June 97)*
a) Dorsal tilt b) Ventral tilt
c) Dorsal displacement d) Lateral displacement

104. All of the following can be the complications of a malunited Colles fracture except - *(AI04)*
a) Rupture of flexor pollicis longus tendon
b) Reflex sympathetic dystrophy (RSD)
c) Carpal tunnel syndrome
d) Carpal instability

105. Most common complication of Colies *fcKarn 00, AI 95*
a) Malunion *97, ARMS May 95,NEET/DNB Pattern)*
!/^:'^';^AV£fecular necrosis :-v ' .j
c) Finger stiffness - ^ •
d) Rupture of EPL tendon

106. Dinner fork deformity is seen in - *J.';; &*
a) Colie's fracture • ■ - - *(NEET/DNB Pattern)*
V '' ' b) March fracture - *A,* \
c) Laterar.condylefractureL;-/\X' w.?:; "
d) Supracondylar fracture

107. Which tendon gets involved in Colle's fracture?
a) Abductor pollicis longus *(Rohtak 97, WB 99)*
b) Extensor pollicis brevis
c) Extensor pollicis longus
d) All the above

108. Complication of Colle's fracture include all of the following except- *(AI 98, 96)*
a) Malunion
b) Nonunion
c) Sudeck's osteodystrophy
d) Rupture of EPL tendon

109. Not a complication of Colies' fracture - *(JIPMER 00)*
a) Stiffness of wrist b) Stiffness of shoulder
c) Carpal tunnel syndrome d) Wrist drop

110. Seen in Colles # A/E - *(ARMSMay 95)*
a) Proximal shift b) Dorsal tilt
c) Lateral tilt d) Pronation

111. In colles fracture not seen is - *(AI 9 7)*
a) Proximal impaction b) Lateral rotation
c) Dorsal angulation d) Medial rotation

112. Smith's **fracture involves which bone-** *(NEET/DNB*
a) Distal radius **b)** Proximal ulna *Pattern)*
c) Metatarsal d) Patella

113. Management of Smith's fracture is - *(AI 94)*
a) Open reduction and fixation
b) Plaster cast with forearm in pronation
c) Closed reduction with below - elbow cast
d) Above- elbow cast with forearm in supination

114. All are injuries of lower end of radius except -
a) Smith's fracture *(PGI95, IN- 98)*
b) Colle's fracture
c) Night stick fracture
d) Barton's fracture

115. What is the most common injury sustained due to fall on out-streched hand by a person aged 65 years?
a) Colle's fracture *(UPSCII10)*
b) Supracondylar fracture
c) Shoulder dislocation
d) Fracture of metacarpals

116. Fracture scaphoid is usually seen in - *(PGI 95)*
a) Elderly male
b) Elderly postmenopausal female
c) Young active adult
d) Children

117. Most common site of scaphoid fracture is - *(AI97)*
a) Waist b) Proximal fragment
c) Distal fragment d) Tilting of thelunate

118. In children fracture scaphoid is though rare but usually involves - *(JIPMER 98, ARMS 92)*
a) Waist b) Proximal pole
c) Neck d) Distal pole

119. Which one of the following statements is not correct regarding fracture of the scaphoid - *(UPS 01)*
a) It is the most commonly fractured carpal bone
b) Persistent tenderness in the anatomical sunffbox is highly suggestive of fracture
c) Immediate X-ray of hand may not reveal fracture line
d) Malunion is a frequent complication

120. The commonly inured carpal bone next to scaphoid is - *(NB 91)*
a) Triquetrum b) Trapezoid
c) Lunate d) Capitate
e) Hamate

121. The most common nerve involvement is dislocation of Lunate is - *(UP 98)*
a) Median nerve b) Anterior interosseus
c) Posterior interosseus d) Ulnar nerve

122. Which carpal bone fracture causes median nerve involvement ? *(NIMS 2000)*
a) Scaphoid b) Lunate
c) Trapezium d)Trapeziod

123. Which of the following statement(s) is/are true?
a) Oedema & tenderness over the anatomical snuffbox is the pathognomonic featues of Fracture of the scaphoid *(PGI 92)*
b) Normally the radial styloid is 54" lower than the ulnar
c) Dinner folk deformity is charateristic of Colle's fracture
d) All of the above

HAND INJURY

124. True regarding mallet finger is - *(ARMSNov 00)*
a) Avulsion of tendon at the base of the middle phalanx
b) Avulsion of extensor tendon at the base of foe distal phalanx
c) Fracture of distal phalanx
d) Fracture of the proximal phalanx

103) b 104) a 105) c 106) a 107) c 108)b 109)d 110)d lll)a 112)d 113)d 114)c 115)a 116)c
117) a 118) d 119)d 120) a 121)a 122) b 123) d 124)b

125. A 30 year old man involved in a fisticuff, injured his middle finger and noticed slight flexion of DIP joint. X-ray were normal. The most appropriate management at this stage is - *(A1IMS Nov 04)*
a) Ignore
b) Splint the finger in hyperextension
c) Surgical repair of the flexor tendon
d) Buddy strapping

126. Mallet finger is due to avulsion of extensor tendon of- *(PGI Dec 01)*
a) Proximal phalanx b) Middle phalanx
c) Distal phalanx d) Metacarpals
e) Any other phalanx

127. Bennett's fracture is fracture dislocation of base of metacarpal - *(MH10, PGI 00, UP 88)*
a) 4th * b) 3rd
c) 2nd d) 1st

128. During fixation of Bennett's fracture, which muscle hinders it - *(Karn 99, AIIMS May 94, PGI 92)*
a) Extensor pollicis brevis
b) Flexor pollicis brevis
c) Flexor pollicis longus
d) Abductor pollicis longus

129. One of the common fractures that occur during boxing by hitting with a closed fist is - *(NEET/DNB Pattern)*
a) Monteggia fracture dislocation
b) Galeazzi fracture dislocation
c) Bennett's fracture dislocation
d) Smith's fracture

130. Game Keeper's thumb is - *(PGI 92, KA 95)*
a) Ulnar collateral ligament injury of MCP Joint
b) Radial collateral ligament injury of MCP joint
c) Radial collateral ligament injury of CMC joint
d) Ulnar collateral ligament injury of CMC joint

131. A cricketer holds a catch and then presents with pain at the base of the right thumb. He should be examined to specifically rule out damage to which of the following structure - *(AIIMS Nov 11)*
a) Extensor pollicis brevis
b) Abductor pollicis longus
c) Volar plate
d) Ulnar collateral ligament

132. In hand surgery which area is called no man's land -
a) Proximal phalanx *(AIIMS Nov 00)*
b) Distal phalanx
c) Between distal phalanx crease and proximal phalanx
d) Wrist

PELVIS & HIP INJURIES

133. True about Crescent fracture is - *(AIIMSMay 09)*
a) Anteroposterior instability with rotational stability
b) Diastasis of pubis with pubic rami fracture
c) Antero-posterior compression is the mechanism of injury
d) Fracture of the iliac bone with sacroiliac disruption

134. All of the following areas are commonly involved sites in pelvic fracture except - *(AI 05)*
a) Pubic rami b)Alae of ilium
c) Acetabulum d) Ischial tuberosities

135. Jumper's fracture is seen in - *(PGI 97)*
a) Calcaneum b) Tibia
c) Pelvis d) Neck femur

136. If a patient with a suspected fracture of the pelvis has some bleeding from the urethra and is unable to pass urine- *(UPSC 97)*
a) He should be encouraged to pass urine after being given antibiotics and analgesics
b) He should be immediately catheterized in the ward
c) A hot water bottle should be given followed by injection of corbachol
d) He should be prepared for surgery and catheterization attempted in the O.T

137. Late complication of Acetabular fracture - *(PGI 97)*
a) Avascular necrosis of head of femur
b) Avascular necrosis of lilac crest
c) Fixed deformity of the hip joint
d) Secondary osteoarthritis of hip joint

138. In Fracture acetabulum, late complication is -
a) Osteoarthritis *(DELHI 94)*
b) Tardy sciatic nerve palsy
c) Recurrent Dislocation
d) None of the above

139. Kocher Langenbeck approach for emergency acetabular fixation is done in all Except -
a) Open fracture *(AIIMSMay 09)*
b) Progressive sciatic nerve injury
c) Recurrent dislocation inspite of closed reduction and traction
d) Morel - Lavallee lesion

FRACTURE NECK FEMUR

140. An elderly woman was admitted with a fracture of the neck of right femur which failed to unite. On examination an avascular necrosis of the head of femur was noted. The condition would have resulted most probably from the damage to - *(AIIMSNov 03)*
a) Superior gluteal artery
b) Inferior gluteal artery
c) Acetabular branch of obturator
d) Retinacular branches of circumflex femoral arteries

141. Main blood supply to the head and neck of femur comes from- *(AI 11)*
a) Lateral circumflex femoral Artery
b) Medial circumflex femoral Artery
c) Artery of Ligamentum Teres
d) Popliteal Artery

142. Increase in Pauwel's angle indicate -
a) Good prognosis *(SGPGI00, MAHE 2K)*
b) Impaction
c) More chances of displacement
d) Trabecular alignment disrupted

125) b 126) c 127) d 128) d 129) c 130) a 131)d 132) c 133) d 134) d 135) c 136) d 137) a,d 138) a
139) d 140) d 141) b 142) c

143. Garden -I fractures are also known as - *(Assam 97,*
a) Complete fracture without displacement *UP 03)*
b) Complete fracture with minimal (partial) displacement
c) Complete fracture with full displacement
d) Valgus impaction fractures

144. Which of the following describes grade 2 fracture neck feitiur? *(NEET/DNB pattern)*
a) Incomplete fracture, medial trabeculae intact
b) Complete fracture with undisplaced neck
c) Complete fracture with ischeniic head
d) Moderate displacement of neck, vascularity damaged

145. Occult fracture of neck femur are best diagnosed by - *(SGPGI03, AIMS SR 06)*
a) Bone Scan b) MRI
c) X-ray d) CT scan

146. Commonest complication of Trans^ervical fracture of femur is - *(NEET/DNB Pattern)*
a) Non union b) Mahinibii
c) Avascular necrosis d) All of the above

147. The most common site of fracture neck of femur that causes avascular necrosis is - *(DNB 00, AMU97, AI 96)*
a) Sub-capital b) Intertrochanteric
c) Trans-cervical d) Basal

148. AVN is seen in which type of # of femur-(PG/ *June08)*
a) Intertrochantric # b) Subcapital #
c) Trans cervical # d) Basal #

149. Avascular necrosis of head of the femur is most common in - *(AIMS Feb 9 7, AI 96)*
a) Subcapital#
b) Basal #
c) Fracture intertrochantric
d) Transcervical fracture

150. AVN of femoral head is most common in-
a) Intracapsular fracture neck .of femur
b) Extracapsular fracture neck of femur
c) Subtrochanteric fracture *(NEET/DNB Pattern)*
d) Fracture shaft humerus *'M*

151. Avascular necrosis is the commonest in one of the following fracture - *(DPG 10)*
a) Garden 1 and 2 fracture of femoral neck
b) Garden 3 and 4 fracture of femoral neck
c) Sub-trochanteric fracture of femoral neck
d) Baso-trochanteric fracture

152. Treatment of choice in fracture neck of femur in a 40 year old male presenting after 2 days is - *(AI 96)*
a) Hemiarthroplasty
b) Closed reduction and Internal fixation by cancellous screws
c) Closed reduction and Internal fixation by Austin Moore pins
d) Plaster and rest

153. A 50 years male with fracture neck of femur comes after 3 days, treatment of choice is - *AIMS June 99)*
a) Hemiarthroplasty b) Total hip replacement
c) Hip spika d) CR & IF

154. Treatment of choice for one week old fracture neck femur at 65 years age is - *(AIMS 98, UPSC 97, AI 94)*
a) Hemi-replacement arthroplasty
b) Closed reduction and itnernal fixation by cannulated cancellous screws
c) Closed reductionand internal fixation by Austin more pins
d) Total hip replacement

155. Best treatment for fracture neck femur is a 65 year old lady is - *(AIMS Dec 94)*
a) POP cast
b) Gleotomy
c) Bone grafting and compression
d) Hemireplacement arthroplasty

156. In the case of a 70 year old lady with intracapsular fracture of the neck of femur, the ideal treatment would be- *(AMU 00)*
a) Closed traction
b) Hemiarthropalsty
c) Internal fixation with nail
d) Internal fixation with nail and plate

157. Femoral neck fracture of three weeks old in a young adult should be best treated by one of the following -
a) Total hip replacement
b) Reduction of fracture and femoral osteotomy with head
c) Prosthetic replacement of femoral head
d) Reduction of fracture and multiple pin or screw fixation
e) Upper femoral displacement osteotomy

158. In 65 year old male with history of fracture neck of femur 6 weeks old,treatment of choice - *(AIMS 94)*
a) SP nailing b) Me Murray's osteotomy
c) Hemiarthroplasty d)None

159. Prosthesis at head of femur applied in - *(UP 98)*
a) 40 years young male with # head of femur
b) 40 years young male with # neck of femur
c) 40 years young male with posterior dislocation of hip
d) 65 years old male with nonunited fracture neck of femur

160. Prosthetic replacement of femoral head is usually indicated for- *(PGI90)*
a) Fresh intracapsular fracture head of femur in old patients
b) Fresh intracapsular fracture of femoral neck in a young adult
c) Unreduced posterior dislocation of hip
d) Untreated femoral neck fracture in a patient over 65 years
e) Pathological femoral neck fracture due to secondaries

161. Trochanteric fracture of femur is best treated by -
a) Dynamic hip screw *(PGI93)*
b) Inlay plates
c) Plaster in abduction
d) Plaster in abduction and internal rotation

143) d 144) b 145) b 146) c 147) a 148)b,c,d 149) a 150) a 151)b 152) b 153)d 154) b 155)d 156)b 157) d 158) c 159) d 160) d,e 161) a

162. Most common complication of intertrochanteric fracture femur is - *(Al 98)*
a) Malunion b) Nonunion
c) Osteoarthritis d) Nerve injury

163. A 60- years old man fell in bathroom and was unable to stand, on right buttock region echymosis with external rotation of the leg and lateral border of foot touching the bed. The most probable diagnosis is-
a) Extracapsular fracture neck of femur
b) Anterior dislocation of hip
c) Intracapsular fracture neck of femur
d) Posterior dislocation of hip

164. 80 years old female after fall developed inability to walk with external rotation deformity, on examination SLR is not possible and broadening of the GT and lateral border of foot touching the bed. The most probable diagnosis is - *(PGI93, AMU 96)*
a) # Neck femur
b) # Intertrochanteric femur
c) # Subtrochanteric femur
d) # Greater trochanter

165. A women aged 60 yrs suffers a fall; her lower limb is extended and externally rotated; likely diagnosis is-
a) Neck of femur # *(AllMS 98, PGI 95)*
b) Intertrochanteric femur #
c) Posterior dislocation of hip
d) Anterior dislocation of hip

166. The commonest hip injury in the elderly patients is -
a) Stress#
b) Extracapsular #
c) Impacted # neck of femur
d) Subcapital capsular fracture neck of femur

167. Prosthetic replacement of femoral head is indicated for one of the following sites of fractures-(#//zar *98)*
a) Inter-trochanteric fracture of femoral neck
b) Subcapital fracture neck femur
c) Transtrochanteric fracture femur
d) Basal fracture of femoral neck

168. The most common complication of extracapsular fracture of neck of femur is - *(DELHI 97)*
a) Avascular necrosis b) Nonunion
c) Malunion d) Myositis ossificans

DISLOCATION OF HIP

169. The pain around the hip with flexion, adduction & internal rotation of lower limb in a young adult after a road traffic accident is suggestive of -
a) Intracapsular fracture of the femoral neck
b) Extracapsular fracture of the femoral neck
c) Posterior dislocation of hip *(AIIMS Nov 05,*
d) Anterior dislocation of hip . *May 01)*

170. A 30 year old male was brought to the casualty following a road traffic accident. His physical examination revealed that his right lower limb was short, internally rotated, and flexed and adducted at the hip. The most likely diagnosis is- *(AI03)*
a) Fracture neck of femur
b) Trochanteric fracture
c) Central fracture dislocation of hip
d) Posterior dislocation of hip

171. Posterior dislocation of hip is characterized by -
a) Marked shortening of limb
b) Lengthening of limb *(NEET/DNBrPattern)*
c) No change in limb length
d) Extension deformity

172. Sciatic nerve palsy may occur in the foUowinginjury-
a) Posterior dislocation of hip joint
b) Fracture neck of femur *(NEET/DNB Pattern)*
c) Trochanteric fracture ,
d) Anterior dislocation ofhip

173. Pipkin fracture is defined as - *(PGI Dec. 05)*
a) Head of radius fracture
b) Head of femur fracture
c) Fracture dislocation of ankle
d) Fracture neck of femur
e) Fracture of C6 Spine

174. Deformity in anterior dislocation of hip is -
a) Ext. rotation, abduction, flexion *(AIIMSNov 99,*
b) Ext. rotation, adduction, flexion *DPG 99)*
c) Int. rotation, abduction, flexion
d) Int. rotation, adduction, flexion

175. Kumar, a 31 yrs old motorcyclist sustained injury over his Right hip joint. X-ray revealed a posterior dislocation of the Right hip joint The clinical attitude of the affected lower limb will be -*(AHMSNov 00,98,*
a) External rotation, extension & abduction *AI02)*
b) Internal rotation, flexion & adduction
c) Internal rotation, extension & abduction
d) External rotation, flexion & abduction

176. Maximum shortening of limbs occur *in-(AIIMS Feb9 7)*
a) Trochantric # femur b) Post dislocation of hip
c) # neck femur d) Anterior dislocation ofhip

177. Which is true about dislocation ofhip joint? *(KA 94)*
a) Posterior dislocation is commoner
b) In posterior dislocation whole lower limb is rotated medially
c) In anterior dislocation whole lower limb is rotated laterally
d) All of the above

178. Flexion, adduction and internal rotation is characteristic posture in - *(JIPMER 95)*
a) Anterior dislocation of hip joint
b) Posterior dislocation of hip joint
c) Fracture of femoral head
d) Fracture shaft of femur

179. A patient with hip in adduction and medial rotation and is unable to move probable diagnosis is -
a) Posterior dislocation head of femur *(Andhra 94)*
b) Fracture shaft of femur
c) Fracture neck of femur
d) Sciatica

162) a 163) a 164)b 165)a 166)b 167)b 168)c 169)c 170)d 171)a 172)a 173)b 174)a 175)b 176) b 177) d 178) b 179) a

180. In traumatic injury of the hip - *(PGI Dec. 02)*
a) Anterior dislocation is common
b) Posterior dislocation is common
c) Avascular fracture is common
d) Visceral injury usually associated with fracture femur
e) Open reduction is always necessary

INJURIES AROUND THE THIGH AND KNEE

181. Subtrochanteric fractures of femur can be treated by all of the following methods except - *(AI 05)*
a) Skeletal traction on Thomas' splint
b) Smith Petersen Nail
c) Condylar blade plate
d) Ender'snail

182. **In fracture of femur popliteal artery is common damaged by-** *(PGI 93)*
a) Proximal fragment b) Distal fragment
c) Muscle haematoma d) Tissue swelling

183. **Why fracture shaft femur is early stabilised -**
a) To prevent blood loss *(NEET/DNB Pattern)*
b) ARDS
c) Non union
d) Compartment syndrome

184. Treatment of Non-union of # shaft femur -
a) Open reduction with external fixation
b) Excision of the bone *(ARMS Sept 96)*
c) Bone grafting with internal fixation with K-Nail
d) All of the following

185. Treatment of choice for old non-united fracture of shaft of femur - *(ARMS 94)*
a) Compression plating
b) Bone grafting
c) Nailing
d) Compression plating with bone grafting

186. Best treatment of 3 weeks old, fracture shaft femur with nonunion is - *(ARMS Dec 94)*
a) Bone graft with internal fixation
b) External fixation
c) Internal fixation only
d) Prosthesis

187. Maximum shortening of lower limb is seen in- *(ARMSDec 95)*
a) # Shaft femur b)# Neck femur
c) # Intertrochanter d) Transcervical #

188. Gallow's traction is used for fracture - *(ARMSNov 10, 11)*
a) Shaft femur b) Neck femur
c) Shaft tibia d) Tibial tuberosity

189. The traction that is applied for fracture shaft of the femur in children below 2 years *i&-(NEET/DNB Pattern)*
a) Russell's traction b) Smith's traction
c) Gallow's traction d) Bryant fraction

190. The classical example of muscular violence is -
a) # of fibula b) # of patella *(PGI 96)*
c) # of clavicle d) All of the these

191. Treatment of displaced transverse fracture of patella - *(PGI June 03, Dec 06)*
a) POP b) Tension band wiring
c) Screw d) Patellectomy

192. Thbe (Cylinder) cast is applied for the fracture of -
a) Shoulder b)Hip *(AI 07)*
c) Pelvis d)Knee

193. About posterior cruciate ligament true statement is - *(AI 07)*
a) Prevent posterior displacement of Tibia
b) Attaches to lateral femoral condyle
c) Intra synovial
d) Inserted on medial side of medial femoral condyle

194. Posterior cruciate ligament-true statement is -
a) Attached to the lateral femoral condyle
b) Intrasynovial *(ARMS Nov 06)*
c) Prevents posterior dislocation of tibia
d) Relaxed in full flexion

195. The blood supply of anterior cruciate ligament (ACL) is primarily derived from - *(AI 08)*
a) Superior medial genicular artery
b) Descending genicular artery
c) Middle genicular artery
d) Circumflex fibular artery

196. Which activity will be difficult to perform for a patient with an anterior cruciate deficient knee joint- *(ARMSMay 02)*
a) Walk downhill b) Walk uphill
c) Sit cross leg d) Getting up from sitting

197. In anterior cruciate ligament tear, which of these tests are positive - *(PGI June 02)*
a) Lachmann test b) McMurry's test
c) Anterior drawer test d) Posterior drawer test
e) Apley's test

198. What would be the most reliable test for an acutely injured knee of a 27 year old athelete -
a) Anterior drawer test *(ARMS May 02,Jipmer 02)*
b) Posterior drawer test
c) Lachman test
d) Steinmann test

199. Which of the following is the SAFEST test to be performed in a patient with acutely injured knee joint- *(AI 08)*
a) Lachmann test b) Pivot shift test
c) McMurray's test d) Apley's grinding test

200. Which one of the following tests will you adopt while examining a knee joint where you suspect an old tear of anterior cruciate ligament - *(AI 03)*
a) Posterior drawer test b) Me Murray test
c) Lachman test d) Pivot shift test

201. Positive pivot shift test in knee is because of inj ury to - *(ARMS June 2K, AI 01)*
a) Post cruciate lig.
b) Ant. cruciate lig.
c) Medial collateral ligament
d) Posterior elbow ligament

180)b 181)b 182)b 183) a 184)c 185)d 186) a 187) a 188) a 189)c 190)b 191)b 192) d 193) a
194) c 195) c 196) a 197) a,c 198) c 199) a 200) c 201)b

202. A twisting injury of knee in flexed position would result in injury to all except - *(AIIMSMay 02)*
a) Meniscal tear
b) Capsular tear
c) Anterior cruciate ligament
d) Fibular collateral ligament

203. Torsion of knee results in injury most commonly to- *(AIIMS May 02)*
a) Anterior cruciate ligament
b) Medial meniscus
c) Fibular collateral ligament
d) Tibial collateral ligament

204. When a patient gets up from sitting position which of the following events takes place in his knee joint?
a) Medial rotation of femur on a fixed tibia *(AI08)*
b) Lateral rotation of femur on a fixed tibia
c) Medial rotation of tibia on a fixed femur
d) Lateral rotation of tibia on a fixed femur

205. Medial meniscus of knee joint is injured more often than the lateral meniscus because the medial meniscus is relatively - *(AIIMS Nov 02)*
a) More mobile b) Less mobile
c) Thinner d) Attached lightly to femur

206. Which of the following statements about 'Menisci' is not true- *(AI10)*
a) Medial meniscus is more mobile than lateral
b) Lateral meniscus covers more tibial articular surface than lateral
c) Medial meniscus is more commonly injured than lateral
d) Menisci are predominantly made up of type I collagen

207. Which type of injury causes more damage to the semi-lunar cartilage in the knee - *(AI 96, AP 99,*
a) Flexion and extension at the ankle *Jipmer 11)*
b) Rotation on a flexed knee
c) Rotation on an extended knee
d) Squatting position

208. Injury to the medial meniscus is rather impossible when the knee j oint does not - *(NB 99)*
a) Extend b) Flex
c) Rotate d) Abduct adduct

209. A patient gives a H/O twisting strain and locking of the knee joint, the most likely diagnosis is -
a) Avulsion of tibial tubercle *(PGI97, AI 93)*
b) Meniscal tear
c) Tearing of lateral collateral ligament
d) Tear of anterior cruciate ligament

210. A 18 yrs old boy was playing football, when he suddenly twisted his knee on the ankle and he fell down. He got up after 10 minutes and again started playing, but next day his knee was swollen and he could not move it. The most probable cause is -
a) Medial meniscus tear *(AIIMS May 01)*
b) Anterior cruciate ligament tear
c) Medical collateral ligament injury
d) Posterior cruciate ligament injury

211. All of the following features in the knee are recognized to be consistent with a torn medial meniscus, except - *(Manipal 94)*
a) Excessive forward glide b) Giving way
c) Locking d) Mc.Murray's sign

212. McMurray's test is positive in injury of - *(PGI June 02, Karn. 11)*
a) Anterior cruciate ligament
b) Posterior cruciate ligament
c) Medical meniscus injury
d) Popliteal bursitis

213. Atheletic sustained an injury around the knee joint suspecting cartilage damage, which of the following is an investigation of choice - *(AP 2K, AIIMS 94)*
a) Pain X-ray b) Clinical examination
c) Arthroscopy d)Arthrotomy

214. Which is the investigation of choice for a sport injury of the knee - *(AP 93, TN 97)*
a) Ultrasonography b) Plain radiography
c) Arthrography d) Arthroscopy

215. In which of the following meniscal tears will meniscectomy be a more suitable option than meniscal repair ? *(AI 08)*
a) Tears in the outer zone
b) Tears in the middle zone
c) Tears in the inner zone
d) Tears at the junction of anterior horn of medial meniscus & tibial collateral ligament

216. An athletic teenage girl complains of anterior knee pain on climbing stairs and on getting up after prolonged sitting. Which of the following is the most likely diagnosis? *(AI 11)*
a) Chondramalacia Patellae
b) Plica Syndrome
c) Bipartite Patella
d) Patellofemoral osteoarthritis

217. Commonest dangerous complication of posterior dislocation of knee is - *(AIIMS Nov 99)*
a) Popliteal artery injury
b) Sciatic nerve injury
c) Ischaemia of lower leg compartment
d) Femoral artery injury

218. Management of hemarrthrosis - *(PGI June 04)*
a) Compression bandage b) Needle aspiration
c) PO.P. cast d) Rest to the joint
e) Synovectomy in recurrent cases

219. Locking of knee joint can be caused by -
a) Osgood shalter *(PGI Dec 05)*
b) Loose body in knee joint
c) Tuberculosis of knee
d) Medial meniscal partial tear

220. In "bounce home" test of knee joint, end feel is described as all except? *(AIIMS May 11)*
a) Bony b) Empty
c) Springy d)Firm

202)d 203)a 204)a 205)b 206)a 207)b 208)b 209)b 210)a 211)a,b 212)c 213)c 214)d 215)c 216)a 217)a 218)A11 219)b,d 220)b

221. A patient met with Road Traffic Accident with injury to the left knee. Dial test was positive. What could be the cause ? *(AIIMS Nov 10)*
a) Medial Collateral Ligament Injury
b) Posterolateral Comer Injury
c) Lateral Meniscus Tear
d) Medial Meniscal Injury

INJURY TO THE LEG, ANKLE AND FOOT

222. What is acceptable angulation after reducing the fracture tibia - *(AIIMS May 93)*
a) 5 b) 10
c) 15 d)20

223. Patellar tendon bearing P.O.P. cast is indicated in the following fracture - *(AI 02)*
a) Patella b) Tibia
c) Medial malleolus d) Femur

224. Treatment of choice for non-united fracture of lower l/4th tibia with multiple discharging sinuses & various puckered scar with 4 cm shortening of leg- *(AIIMS Dec 09)*
a) Plating b) External fixator
c) Ilizarov's fixator d) Intramedullary nail

225. The stability of the ankle joint is maintained by all of the following, except - *(AIIMS Dec 03)*
a) Plantar calcaneonavicular (spring) ligament
b) Deltoid ligament
c) Lateral ligament
d) Shape of the superior talar articular surface

226. The most commonly affected component of the lateral collateral ligament complex in an "ankle sprain" is the - *(AIIMSDec 03, AI 98)*
a) Middle component b) Anterior component
c) Posterior component d) Deeper component

227. Most; common ligament injured in ankle sprain - *(NEET/DNB Pattern)*
a) Anterior talofibular
b) Posterior talofibular
c) Deltoid
d) Calcaneofibular

228. Inversion injury at the ankle can cause all of the following except - *(AI 02)*
a) Fracture tip of lateral melleolus
b) Fracture base of the 5th metatarsal
c) Sprain of Ext. Digitorum brevis
d) Fracture of sustentaculam tali

229. The mechanism of injury of transverse fracture of medial malleolus results due to - *(Andhra 99)*
a) Abduction injury b) Adduction injury
c) Rotation injury d) Direct injury

230. Watson Jones operation is done *ior-(AIIMS Nov 08)*
a) Polio b) Muscle paralysis
c) Neglected clubfoot d) Chronic ankle instability

231. Talus receives a rich blobd supply from the following arteries except- *(NEET/DNB Pattern)*
a) Anterior tibia - b) Posterior tibial
c) Peroneal d) Dorsalis pedis

232. Fracture of talus without displacement in x-ray would lead to - *(PGI June 02)*
a) Osteoarthritis of ankle
b) Osteonecrosis of head of talus
c) Avascular necrosis of body of talus
d) Avascular necrosis of neck of talus
e) Non union

233. Avascular necrosis is a complication of - *(AI 99)*
a) Fracture of talus
b) Fracture of medial condyle of femur
c) Olecranon fracture
d) Radial head fracture

234. MC comp, of# talus is- *(AIIMS May 95)*
a) Avascular necrosis
b) Nonunion
c) Osteoarthritis of ankle joint
d) Osteoarthritis of subtalar joint

235. Calcaneum is associated most commonly with which # - *(AIIMS Feb 97)*
a) # rib b) # vertebrae
c) # skull d) # fibula

236. Bohler's angle is decreased in fracture of -
a) Calcaneum b) Talus *(AIIMSMay 07,*
c) Navicular d) Cuboid *AI 07)*

237. Gissane's angle in intraarticular fracture of calcaneum - *(AMU 02, MAHE 04)*
a) Reduced b) Increased
c) Not changed d) Variable

238. Neutral triangle is seen radiologically *in-(NIMS 03)*
a) Neck femur b) Proximal humerus
c) Calcaneus d) Talus

239. # of calcaneous management depending upon -
a) Type of fracture *(PGI June 08)*
b) Subtalar joint dislocation
c) Duration of presentation
d) Degree of displacement

240. Least common complicaation of fall from height is -
a) Fracture base of skull *(AIIMS DEC 94)*
b) Fracture calcaneum
c) Fracture fibula
d) Fracture 12th thoracic vertebra

SPINAL INJURIES

241* Most common site for trauma of spine is - ?
a) Cervical b) Thoracic *(NEET/DNB Pattern)*
c) Lumbar d) Sacrum

242. The commonest cause of spinal cord injuries in our country is - *(AMU 02, SGPGI03)*
a) Road traffic accident b) Fall from a height
c) Fall into well d) House collapse

221)b 222)a,b 223)b 224)c 225)a 226)b 227)a 228)c 229)a,c 230)d 231)None 232)a,c 233)a 234) d 235) b 236) a 237) b 238) c 239)a,b,c,d 240) c 241) a 242) b

243. Which of the following skull fractures is called a Motorcyclist's fracture - *(Al 09)*
a) Ring fracture of base of skull
b) Hinge fracture of base of skull
c) Comminuted fracture of skull
d) Depressed fracture of skull

244. Jafferson's fracture is the fracture of -
a) Odontoid b) C_x *(NEET/DNB Pattern)*
c) G_j d) C_3

245'. Allofthefollowing are true about fracture of the atlas vertebra, except - *(Al 05)*
a) Jefferson fracture is the most common type
b) Quadriplegia is seen in 80% cases
c) Atlantooccipital fusion may sometimes be needed
d) CT scans should be done for diagnosis

246. Hangman's fracture is-fXarw *98,NEET/DNB Pattern)*
a) Subluxation of G5 over C_6
b) Fracture dislocation of C2
c) Fracture dislocation of ankle joint
d) Fracture of odontoid

247. Regarding Hangman's fracture true *is-(JIPMER 99,*
a) High post admission mortality *AMU 02,SGPGI 04)*
b) Most common axis fracture
c) Surgical treatment is necessary
d) Union almost always occurs

248. True regarding Hangman's fracture is-*(Manipal 00)*
a) Odotoid process fracture of C2
b) Spondylolisthesis of C2 over C3
c) Whiplash injury
d) Fracture of hyoid bone

249. Hangman's fracture is fracture of C2 - *(AIIMS 99,*
a) Dens fracture b) Lamina *Al 93)*
c) Pars interarticularis d) Spinous process

250. All are true regarding whiplash injury except -
a) Lumbar spine is commonly involved *(PGI 96,98)*
b) Fractures are not common
c) Paresthesia and chronic pain
d) Hyperextension injury
e) Sprains and strains without radiological findings

251. Regarding whiplash injury, a true statement includes
a) Contusion of the spinal cord and fracture of vertebra
b) Fracture of vertebral body
c) Spinal cord injury without vertebral fracture
d) Vertebral fracture without spinal cord injury

252. 'Whip-lash' injury is caused due to -*(AIIMSMay 03)*
a) A fall from a height
b) Acute hyperextension of the spine
c) A blow on top to head
d) Acute hyperflexion of the spine

253. Tear drop fracture of lower cervical spine implies -
a) Wedge compression fracture *(AIIMS SR 05,*
b) Axial compression fractures *06, KA 02)*
c) Flexion-rotation injury with failure of anterior body
d) Flexion compression failure of body

254. Burst Fracture of spine is a - *(Al 07)*
a) Compression Fracture b) Extension injury
c) Direct injury d) Flexion - rotation

255. Most common type of injury to spinal cord is -*(Al 07)*
a) Flexion b) Extension
c) Compresson d) Flexion - rotation

256. In a Pt. with head injury, unexplained hypotension warrants evaluation of - *(Al 02)*
a) Upper cervical spine b) Lower cervical spine
c) Thoracic spine d) Lumbar spine

257. Chance fracture is/are - *(PGI 93, 90)*
a) Mainly ligamentous injury
b) Neurological involvement is common
c) Flexion compression injury
d) Seat belt injury

258. The compression fracture is commonest in -
a) Cervical spine b) Upper thoracic spine
c) Lower thoracic spine d) Lumbosacral region

259. Return of Bulbocavernous reflex in spinal shock -
a) Sign of recovery from spinal shock *(JIPMER99)*
b) Partial lesion of spinal cord
c) Complete transection of spinal cord
d) Incomplete transection of spinal cord

260. Bulbocavernosus reflex is elicited by A/E - *(PGI 93)*
a) Gians pens b) Clitoris
c) Tug of foley catheter d) Perianal

261. Complete transection of the spinal cord at the C7 level produces all of the following except - *(Al 02)*
a) Hypotension
b) Limited respiratory effort
c) Anaesthesia below the level of the lesion
d) Areflexia below the level of the lesion

262. On accident there is damage of cervical spine, first "E. line of management is - *(AIIMS Nov. 99, PGI 94,*
a) X- ray *NEET/DNB Pattern)*
b) Turn head to side
c) Maintain airway
d) Stabilise the cervical spine

263. Careless handling of a suspected case of cervical spine inj ury may result in - *(UPSC 99)*
a) Injury to the spinal cord leading to quadriparesis or quadriplegia
b) Intracranial haemorrhage with cerebral imtation of unconsciousness.
c) Cervical haematoma with compression of brachial vessels
d) Complete paralysis of the affected upper extremity

264. A scooter is hit from behind. The rider is thrown off and he lands with his head hitting the kerb. He does not move, complains of severe pain in the neck and is unable to turn his head. Well-meaning onlookers rush up to him and try to make him sit up. What would be the best course of action in this situation?
a) He should be propped up and given some water to drink
b) He should not be propped up but turned on his face and rushed to the hospital

243) b 244) b 245) b 246) b 247) d 248) b 249) c 250) a 251) c 252) b 253) d 254) a 255) a 256) b>a
257) d 258) c 259)a 260)d 261)b 262)c 263)a 264)c

c) He should be turned on his back and a support should be placed behind his neck and transported to the nearest hospital
d) He should not be moved at all but carried to the nearest hospital in the same position in which he has been since his fall.

265. Patient develops myelopathy post-trauma. What dose of methyl prednisolone is to be given ?
a) 3Omg/kg within 3hrs. *(A1IMS Nov 11)*
b) 45mg/kg within 6 hrs.
c) 60mg/kg within 9 hrs.
d) 75mg/kg within 12 hrs.

266. A young woman met with an accident and had mild quadriparesis. Her lateral X-ray cervical spine revealed C-C_{5-6}, fracture dislocation. Which of the following is the best line of management? *(AI05)*
a) Immediate anterior decompression
b) Cervical traction followed by instrument fixation
c) Hard cervical collar and bed rest
d) Cervical laminectomy

267. Material used in verterbroplasty is - *(AIIMS May 08)*
a) Isomethylmethacrylate
b) Isoethyl methacrylate
c) Polyethyl methacrylate
d) Polymethyl methacrylate

268. Percutaneous vertebroblasty is indicated in all except - *(A1IMS May 11)*
a) Tuberculosis b) Metastasis
c) Osteoporosis d) Hemangioma

269. Wrist flexion and finger extension test the following nerve root - *(A11MS SR 05, Jipmer 03)*
a) C8 b) C_7
c) G d) Ti

270. A patient involved in a road traffic accident presents with quadriparesis, sphincter disturbance, sensory level up to the upper border of sternum and a respiratory rate of 35/minute. The likely level of lesion is -
a) Cj-C_2 b) C_4-C_5 *(A110)*
c) Tj-T_2 d)T_3-T_4

271. Disc prolapse commonly occurs at - *(PGI June 01)*
a) L_4-L_5 b) L_5-S_1
c) C_5-C_6 d)Ls-Si
e) C3-C4

272. Prolapsed intervertebral Disc (PID) is most common at- *(DPGFeb. 09)*
a) CioCn b)C_2C_3
c)I^L_4 d)L_5Sj

273. After L4 - Si the next commonest site of intervertebral disc prolapse is - *(JIPMER 95)*
a) C6 - C_7 b) T_{12} - Li
c) Li - L_2 d) L_2 - L_3

274. A 44- years old man presented with acute onset of low backache radiating to the right lower limb. Examination revealed SLRT < 40° on the right side, weakness of extensor hallucis longus on the right side, sensory loss in the first web space of the right foot and brisk knee jerk. Which of the following is the most likely diagnosis - *(AIIMS May 04)*
a) Prolapsed intervertebral disc L_{4-5}
b) Spondylolysis L5-S1
c) Lumbar canal stenosis
d) Spondylolisthesis L4-5

275. A middle-aged lady presents with complaints of lower back pain. On examination there is weakness of extension of right great toe with no sensory impairment An MRI of the lumbosacral spine would most probably reveal a prolapsed intervetebral disc at what level? *(AIIMS Nov 11)*
a) L3-L4 b)L4-L5
c) L5-S1 d)Sl-S2

276. A previously healthy 45 yrs old laborer suddenly develops acute lower back pain with right-leg pain & weakness of dorsiflexion of the right great toe. Which of the following is true - *(AI02)*
a) Immediate treatment should include analgesics muscle relaxants & back strengthening exercises
b) The appearance of the foot drop indicate early surgical intervention
c) If the nerurological signs resolve within 2 to 3 weeks but low back pain persists, the proper treatment would include fusion of affected Lumbar vertebra
d) If the neurological signs fail to resolve within 1 week, Lumbar laminectomy and excision of any herniated nucleus pulposus should be done -

277. Investigation of choice for lumbar prolapsed disc -
a) X-ray b) CT Scan *(NEET/DNB*
l c -v ^h c) MRI ■ d)Myelogram *Pattern)*

278. Partial anteriordislocation of one segment of the spine over another is - « *i; (NEET/DNB Pattern)*
a) Spondylosis •. r b) Spondylolisthesis
c) Kyphosis . d) Scoliosis

279. Least helpful for the diagnosis of spondylolisthesis -
a) AP x-ray of spine b) Lateral x-ray of spine
c) MRI d) CT *(AIIMS Nov 11)*

280. Which of the following is not recommended in the treatment of chronic low back pain - *(AI 09)*
a) NSAIDs b) Bed rest for 3 months
c) Exercises d) Epidural steroid injection

281. Progression of congenital scoliosis is least likely in which of the following vertebral anomalies -
a) Fully segmented Hemivertebra *(AI 10)*
b) Wedge vertebra
c) Block vertebra
d) Unilateral unsegmented bar with Hemivertebra

282. Hari Verdhman, 9 yrs old child, presents with scoliosis, hairy tuft in the skin of back and neurological deficit. Plain X- rays reveal multiple vertebral anomalies & a vertical bony spur overlying lumbar spine on AP view. The most probable diagnosis is - *(AI 02)*
a) Dorsal dermal sinus b) Diastometamyelia
c) Tight filum terminale d) Caudal regresion syndrome

265)a 266)b 267)d 268)a 269)b 270)b 271)a,d 272)d 273)a 274)a 275)b 276)b 277)c 278)b 279) a 280) b 281)c 282) b

283. Vertebra plana seen in - *(PGI June 06)*
a) Eosinophilia granuloma b) Trauma
c) Paget's disease d) Malignancy
e) Ewing's sarcoma

284. Cranio-vertebral junction abnormalities are seen in all except - *(AIMS Nov 11)*
a) Rheumatoid arthritis b) Ankylosing spondylitis
c) Odontoid dysgenesis d) Basilar invagination

285. Subluxation of atlanto- occipital joint is seen in all except- *(DELHI 91)*
a) Gout b) Parpharyngeal abscess
c) Rheumatoid arthritisd) Ankylosing spondylitis

286. In scoliosis degree of deformity is calculated by- ***Pattern) (NEET/DNB***
a) Cobbs method b) Hamburger method
c) Haldane method d) Milwaukee method

PERIPHERAL NERVE INJURIES

287. Which nerve repair has worst prognosis ? *(Delhi*
a) Ulnar b) Radial *PG Mar 09)*
c) Median d) Lateral popliteal

288. Tinel sign is used for - *(NEET/DNB Pattern)*
a) To assess the severity of damage of nerve
b) To classify the type of nerve injury
c) To locate the site of nerve injury
d) To assess the recovery

289. Median nerve injury at wrist, is commonly tested by- *(AI97)*
a) Contraction of abductor pollicis brevis
b) Contraction flexor pollicis brevis
c) Loss of sensation on palm
d) Loss of sensation on ring finger

290. Median nerve injury at the wrist causes - *(PGI98)*
a) Claw hand
b) Loss of apposition of thumb
c) Policeman's tip deformity
d) Saturday night palsy

291. Compression of a nerve within the carpal tunnel products inability to - *(AIMS May 05)*
a) Abduct the thumb
b) Adduct the thumb
c) Flex the distal phalanx of the thumb
d) Oppose the thumb

292. Pointing index sign is seen in — nerve palsy -
a) Ulnar b) Radial *(AIMS 97)*
c) Median d) Axillary

293. Ape thumb deformity is seen in involvement of- *(AI2K, NEET/DNB Pattern)*
a) Median nerve b) Ulnar nerve A C; . , ..
-?e) Radial nerve ^ d) Axillary nerve *Ti** f.V

294. A cut injury on wrist causes inability of thumb to touch the tip of little finger, the nerve likely to be damaged is - *(AIMS June 9 7)*
a) Ulnar b) Radial
c) Median d) Deep branch of ulnar nerve

295. A boy presents with complaints of hypoaesthesia and wasting of thenar eminence. The nerve most likely to be damaged in this patient - *(AIMS 02)*
a) Musculocutaneous nerve b) Median nerve
c) Ulnar nerve d) Radial nerve

296. Nerve damaged due to lunate dislocation (in carpal tunnel) - *(PGI 2000)*
a) Median & ulnar b) Median
c) Ulnar d) Radial

297. All of the following muscles are paralyzed in trauma to median nerve at the wrist except - *(AIMSMay 08)*
a) Adductor pollicis
b) Abductor pollicis
c) First two lumbicals
d) Muscles of the Thenar eminence

298. Median nerve lesion at the wrist causes all of the following, except - *(A110)*
a) Thenar atrophy
b) Weakness of Adductor pollicis
c) Weaknes of 1st and 2nd lumbricals
d) Weakness of Flexor pollicis Brevis

299. Ulnar nerve injury at wrist involves following except- *(PGI 98)*
a) Palmar interossei b) Opponens pollicis
c) Dorsal interossei d) Adductor pollicis

300. Froment's sign is characteristically seen in -
a) Ulnar nerve injury *(AIMS June 97, May 93,*
b) Median nerve injury *DPG 94, NEET/DNB*
c) Radial nerve injury *Pattern)*
d) Intercostobrachial nerve injury

301. Claw hand is caused by lesion of - *(At 0 7)*
a) Ulnar nerve b) Median nerve
c) Axillary nerve d) Radial nerve

302. A patient with leprosy presents with clumsiness of hand. His ulnar nerve is affected. Clumsiness is due to palsy of which muscle - *(AIMS June 00)*
a) Extensor carpi ulnaris b) Abductor pollicis brevis
c) Oppenens pollicis d) Interosseous muscle

303. Following an incised wound in the front of wrist, the subject is unable to oppose the tips of the little finger and the thumb. The nerve (s) involved is/are -
a) Ulnar nerve alone *(UPSC 00)*
b) Median nerve alone
c) Median and ulnar nerves
d) Radial and ulnar nerves

304. Low ulnar nerve palsy is characterised by - *(PGI03)*
a) Claw hand
b) Sensory loss of medial four digits
c) Weakness of grips
d) Inability to extend at M.C.P. joint
e) Inability to abduct the thumb

305. Injury to the Ulnar nerve at the wrist causes paralysis of- *(AI95)*
a) Apposition of the thumb
b) Abduction of the carpo-metacarpal joint of the thumb
c) Adduction of the thumb
d) Flexion of the MCP joint of the middle finger

283) a,b,d,e 284)None>b 285)b>a 286)a 287)d 288)d 289)a 290)b291)d 292)c 293)a 294)c 295)b 296)b 297)a 298)b 299)b 300)b 301)a>b 302)d 303)c 304)a,c 305)c

306. A boy presents with injury to medial epicondyle of the humerus. Which of the following would not be seen - *(AIMS 02)*
a) Weakness of the ulnar deviation and flexion
b) Complete paralysis of the Illrd and IV th digits
c) Atrophy of the hypothenar eminence.
d) Decreased sensation of the hypothenar eminence

307. A cut injury of the ulnar nerve results in -
a) Total claw hand *(COMED 09)*
b) Paralysis of all lumbricals
c) Paralysis of all interossei
d) Paralysis of all slips of the flexor digitorum profundus

308. Wasting of the intrinsic muscles of the hand can be expected to follow inj ury of the - *(UPSC-II09)*
a) Ulnar nerve b) Radial nerve
c) Brachial nerve d) Axillary nerve

309. 'Ulnar paradox'is seen in- *(NEET/DNB Pattern)*
a) High ulnar lesion
b) Low ulnar lesion
c) Triple nerve disease
d) Combined ulnar and median nerve injury

310. Damage to the radial nerve in the spiral groove spares which muscle - *(AI 94)*
a) Lateral head of triceps b) Long head of triceps
c) Medial head of triceps d) Anconeus

311. Injury to radial nerve in lower part of spiral groove- *(AI 03)*
a) Spares nerve supply to extensor carpi radialis longus
b) Results in paralysis of anconeus muscle
c) Leaves extensions at elbow joint intact
d) Weakens pronation movement

312. A 30-year-old male underwent excision of the right radial head. Following surgery, the patient developed inability to extend the fingers and thumb of the right hand. He did not have any sensory deficit. Which one of the following is the most likely cause?
a) Injury to Posterior interosseus nerve
b) Iatrogenic injury to common extensor origin
c) Injury to anterior interosseus nerve
d) High radial nerve palsy *(AIIMS May 04)*

313. All of the following are affected in low radial nerve palsy except - *(AI 11)*
a) Extensor carpi radialis longus
b) Extensor carpi radialis brevis
c) Finger extensors
d) Sensation on dorsum of hand

314. A person is not able to extend his metacarpo-phalangeal joint This is due to injury to which nerve -
a) Ulnar nerve *(AIIMS June 00)*
b) Radial nerve injury
c) Median nerve injury
d) Post. Introsseus nerve injury

315. A 19 year old boy fell from the motar bike on his shoulder. The doctor diagnosed him a case of Erbs paralysis. The following signs and symptoms will be obsereved except - *(ARMS 02)*
a) Loss of abduction at shoulder joint
b) Loss of lateral rotation
c) Loss of pronation at radioulnar joint
d) Loss of flexion at elbow joint.

316. A young boy who was driving motorcycle at a high speed collided with a tree & was thrown on his right shoulder. Though there was no fracture, his right arm was medially rotated and forearm pronated. The following facts concerning this patient are correct, except - *(ARMS 04)*
a) The injury was at Erb's point
b) A lesion of C5 and C6 was present
c) The median and ulnar nerves were affected
d) Supraspinatus, Infraspinatus, Subclavius & Biceps brachii were paralyzed

317. A pole vaulter had a fall during pole vaulting and had paralysis of the arm . Which of the following investigations gives the best recovery prognosis -
a) Electromyography *(ARMS Nov 03)*
b) Muscle biopsy
c) Strength Duration Curve
d) Creatime phosphokinase levels

318. All are true regarding brachial plexus injury, except - *(AI 06)*
a) Preganglionic lesions have a better prognosis than postganglionic lesions
b) Erb' s palsy causes paralysis of the abductors and external rotators of the shoulder.
c) In Klumpke's palsy, Homer's syndrome may be present on the ipsilateral side
d) Histamine test is useful to differentiate between the preganglionic and postganglionic lesions

319. Most common cause of neurological deficit in upper limb is - *(ARMS Nov 93)*
a) Polio
b) Erb's palsy
c) C_1-C_2 dislocation
d) Fracture dislocation of cervical spine

320. All the following nerves are involved in entrapment neuropathy except - *(AI 09)*
a) Femoral nerve
b) Median nerve
c) Ulnar nerve
d) Lateral cutaneous nerve of thigh

321. Meralgia paresthetica is due to involvement of -
a) Medial cutaneous nerve of thigh *(ARMS Dec 06,*
b) Lateral cutaneous nerve of thigh *May 10)*
c) Sural nerve
d) Femoral nerve

322. Carpel tunnel syndrome is due to compression of-
a) Radial nerve *(AI 02)*
b) Ulnar nerve
c) Palmer branch of the Ulnar nerve
d) Median nerve

306)b 307)c 308)a 309)a 310)b>c 311)c 312)a 313)a 314)d>b 315)c 316)c 317)a 318)a 319)b 320) a 321) b 322) d

323. In Carpal tunnel syndrome, features are of -
a) Compression of ulnar nerve *(JIPMER 99)*
b) Compression of median nerve under the flxor retinaculum
c) Anaesthesia over thenar eminence
d) Atrophy of hypothenar muscles

324. Carpal tunnel syndrome can be caused by the following except- *(AI 09)*
a) Diabetes Mellitus b) Amyloidosis
c) Addison's Disease d) Hypothyroidism

325. Which of the following does NOT predispose to carpal tunnel syndrome - *(AIIMSDec 94)*
a) Hypertension b) Hypothyroidism
c) Pregnancy d) Acromegaly

326. True about carpal tunnel syndrome - *(PGI Dec 03)*
a) Paraesthesia of the lateral 2 fingers
b) Atropy of the thenar eminence
c) Atropy of the hypothenar eminence
d) Claw hand
e) Tinel sign is positive

327. TVue about carpal tunnel syndrome -f*PGI June 09)*
a) More common in female (F>M)
b) Acromegaly can cause
c) Positive tinel's sign
d) Nerve conduction study done
e) Transverse carpal ligament are cut to relieve syndrome

328. Carpal tunnel syndrome all are present except -
a) Ulnar nerve dysfunction *(NEET/DNB Pattern)*
b) Tinel sign
c) Phalens sign
d) Pain & paraesthesia of wrist

329. As regards carpal tunnel syndrome, which one of the following statements is not correct?
a) It may occur in hypothyroidism. *(UPSC-110)*
b) Pain or tingling of fingers often occurs at night
c) there is decreased strength of abduction, flexion and opposition of the thumb.
d) Localised tenosynovitis of the flexor tendons of the fingers is an infrequent cause

330. TVue about carpal tunnel syndrome - *(PGIMay 10)*
a) Occur in pregnancy
b) Affects medial 3⁄4 finger
c) Associated with Hypothyroidism
d) Froment sign positive
e) Median nerve involvement is present

331. Most common cause of tarsal tunnel syndrome - *(AIIMS May 09)*
a) Osteoarthritis b) Ankylosing spondylitis
c) Psoriatic arthritis d) Rheumatoid arthritis

332. A 56-years old female presents with nocturnal pain in the right thumb, index and middle fingers for the past 3 months. All of the provocative tests can be performed except - *(AIIMS Nov 11)*
a) Finkelstein's test b) Tinel sign
c) Phalen's test d) Tourniquet test

333. Nerve injured in fibiilar *neokfrXQture-(NEET/DNB*
a) Common peroneal b) Tibial *Pattern)*
c) Sural d) Femoral

334. Trauma to neck of humerus, nerve damaged-fMsZiT/
a) Radial b) Ulnar *DNB Pattern)*
c) Median d) Axillary

335. Posterior dislocation of Hip can damage which nerve- *(NEET/DNB Pattern)*
a) Superior gluteal b) Sciatic
c) Inferior gluteal d) Femoral

336. In axillary nerve paralysis* all the following are true except- *(NEET/DNB Pattern)*
■■ a) Deltoid muscle is wasted
b) Extension of shoulder with arm abducted to 90 degrees is impossible
c) Small area of numbness is present over the shoulder region
d) Patient cahnot initiate abduction

337. A burn patient develop claw hand. Joint affected will be- *(PGIDec 08)*
a) Flexion at Proximal Interphalangeal Joint
b) Flexion at Distal Interphalangeal Joint
c) Extension at Distal interphalangeal joint
d) Extension at Metarcarpophalangeal joint
e) Flexion at Metarcarpophalangeal joint

338. In a patient with a history of burning pain localized to the plantar aspect of the foot, the differential diagnosis must include - *(AIIMS Dec 03)*
a) Peripheral vascular disease
b) Tarsal coalation.
c) Tarsal tunnel syndrome
d) Planter fibromatosis

339. A commonest cause for neuralgic pain in foot is -
a) Compression of comunication between medial and lateral planter nerves *(AI 03)*
b) Exaggeration of longitudinal arches
c) Injury to deltoid ligament
d) Shortening of planter aponeurosis

PAEDIATRICS ORTHOPEDIC

340. In children, all are true except - *(AI00)*
a) Dislocations are rare
b) Comminuted fractures are common
c) Thick periosteum
d) Soft bones

341. Perichondrial ring is - *(PGI June 08)*
a) Seen around foramen magnum
b) Seen around epiphyseal plate
c) More prominent in adults
d) Shear strength increases with age

342. Which is the commonest fracture in children ?
a) Fracture clavicle *(PGI 96, AI 95)*
b) Supracondylar fracture
c) Green stick fracture of lower end of radius
d) All of the above

323) b 324) c 325) a 326)a,b,e 327) All 328) a 329) d 330)a,c,e 331)d 332) a 333) a 334) d 335) b 336) d 337) a,b,e 338) c 339) a 340) b 341) b 342) a

343. In children best remodelling is seen in fracture with- *(AIIMSFeb 97)*
a) Angulation in diaphysis
b) Angulation in metaphysis
c) Rotation in diaphysis
d) Rotation in metaphysis

344. Green stick fracture is - *(NEET/DNB Pattern)*
a) Fracture in adults b) Complete fracturef g
c) Incomplete fracture d) Fracture spine

345. Type VI Rang's injury indudes - *(PGIDec 08)*
a) Transverse fracture of metaphysis with longitudinal extension into physis
b) Open injury with loss of physis
c) Thurston Holland's sign
d) Perichondrial ring injury
e) Intraarticular fractures

346. An 8 year old boy with a history of fall from 10 feet height complains of pain in the right ankle. X-ray taken at that time are normal without any fracture line. But after 2 years, he developed a calcaneovalgus deformity. The diagnosis is - *(AIIMS May 01)*
a) Undiagnosed malunited fracture
b) Avascular nercrosis talus
c) Tibial epiphyseal injury
d) Ligamentous injury of ankle joint

347* , Perthe's disease is - *(AIIMS May 94, NEET/DNB Pattern)*
a) Fracture of femoral shaft
b) Osteochondritis of femoral epiphysis
c) Infarction of femoral head
d) Fracture dislocation of femoral neck

348. A10 years old male with pain in left hip & limping on examination restricted abduction & internal rotation, probable diagnosis is - *(AIIMS Nov 99)*
a) Septic arthritis of hip
b) Tuberculous arthritis of hip
c) Congenital dislocation of hip
d) Perthes disease

349. Which one of the following is the investigation of choice for evaluation of suspected Perthes' disease?
a) Plain X-ray *(AI05)*
b) Ultrasonography (US)
c) Computed Tomography (CT)
d) Magnetic Resonance Imaging (MRI)

350. Perthe's disease is treated by - *(AIIMSNov 93)*
a) High dose of calcium with steroids
b) Total hip replacement
c) Supervised containment of femoral head in acetabulum
d) Relieving weight bearing

351. Regarding Perth's disease all of the following are correct except - *(PGI 95)*
a) Osteonecrotic osteochondritis
b) Decreased bone age
c) Male predominance
d) Restricted abduction
e) Age of onset has no affect on course

352. True about perthe's disease - *(PGI Nov 09)*
a) Avascular necrosis of femoral head
b) Onset before 10 years of age
c) Osteotomy is used for treatment
d) Limb shortening

353. An 11 year old 70 kg. child presents with limitation of abduction an internal rotation. There is tenderness in scarpas triangle. On flexing the hip the limb is abducted. The diagnosis is - *(AIIMS Nov 01)*
a) Perthes disease
b) Slipped capital femoral epiphyses
c) Observation hip
d) Tuberculosis hip

354. 14 year old boy with 78 kg weight & hypothyroidism developed sudden onset of severe pain & tenderness on left hip as a result of minor fall. Most likely diagnosis is - *(PGI 95, JIPMER 02)*
a) Fracture neck femur b)SCFE
c) Perthes d) Hip Dislocation

355. Slipped capital femoral epiphysis is seen most commonly in which age *group-(NEET/DNB Pattern)*
a) Infants b) Adolescents
c) Old age d) Childhood

356. Commonest deformity in congenital dislocation of hip- *(PGI 97)*
a) Small head of femur
b) Angle of torsion
c) Decreased neck shaft angle
d) Shallow accetabulum

357. Primary pathology in CDH- *(NEET/DNB Pattern)*
a) Large head of femur b) Shallow acetabulum
c) Excessive retroversion d) Everted limbus

358. All of the following statements are true about development dysplasia (DDH) of the hip, except -
a) It is more common in females *(AI 06)*
b) Oligohydramnios is associated with a higher risk of DDH
c) The hourglass appearance of the capsule may prevent a successftil closed reduction
d) Twin pregnancy is a known risk factor

359. Which of the following test is useful in diagnosis of congenital dislocation of hip ? *(PGI 99)*
a) Barlow's test b) Thomas test
c) Hibb's test d) Laguerres test

360. Proypc&tiye Tiest for detecting CDH? *(MH 10,NEET/ DNBPattem)*
a) Peterson test b) Barlow test
c) Perkin's test d) Von Rosen tests ,

361. TVue about B/L CDH- *(PGIDec 07, 06)*
a) Exaggerated lordosis b) B/L genu valgum
c) Waddling gait d) Shenton's line broken
e) Short stature

362. Seen in B/L congenital hip dislocation is/are -
a) Short strature *(PGI June 01)*
b) Wandering acetabulum
c) Waddling gait
d) Lumbar lordosis

343) b 344) c 345)d 346)c 347)b 348)d 349)d 350)c 351)e 352)a,b,c,d 353)b 354)b 355)b 356)d>a 357)b 358)d 359)a 360)b 361)A11 362)a,c,d

363. In a newborn child, abduction and internal rotation produces a click sound. It is - *(Andhra 93, Delhi 93)*
a) Ortolani'ssign b) Telescoping sign
c) Lachman's sign d) Me Murray's sign

364. Dysplastic hip in a child* investigation of choice -
a) X-ray b)MRI *(NEET/DNB*
c) USG d)CTScan *Pattern)*

365. Von Rosen Splint is used in - *(PGI97)*
a) CIEV b)CDH
c) Fracture shaft of femur d) Fracture tibia

366. Absolute indication of X-ray of pelvis in case of congenital dislocation of hip are all except -
a) Positive family history *(AIIMS June 99)*
b) Breech presentation
c) Unstable hip
d) Shortening of limb

367. True about CDH- *(PGI Nov. 10, June 09)*
a) Usually b/1 b) Genu valgum
c) Wadding gait d) Shenton's line broken
e) Spine lordosis present

368. Talipes equinovarus is - *(PGI 97)*
a) Equinus, inversion, abduction
b) Equines, inversion, adduction
c) Equines, eversion, adduction
d) Equines, eversion, abduction

369. CTEV is caused by all except - *(PGIDec 01, June 01)*
a) Neurological disorder b) Idiopathic
c) Spina fibida d) Cubitus varus
e) Arthrogryposis multiplex

370. The ideal treatment of bilateral idiopathic clubfoot in a newborn is - *(AI 06)*
a) Manipulation by mother
b) Manipulation and Dennis Brown splint
c) Manipulation and casts
d) Surgical release

371. Triple arthrodesis *mxolye&-(AI01s NEET/DNB Pattern)*
a) Calcaneocuboid, talonavicular and talocalcaneal
b) Tibiotalar, calcaneocuboid and talonavicular
c) Ankle joint, calcaneocuboid and talonavicular
d) None of the above

372. Triple arthrodesis is NOT done before- skeletal maturation because of - *(AIIMS June 98)*
a) Shortening of foot
b) Recurrence of deformity
c) Inadequate fusion
d) Complete correction not possible

373. All are true statement regarding talipes euinovarus except- *(PGI May 10)*
a) Cubitus valgus
b) Inversion of the foot
c) Abduction of the forefoot
d) Arthrogryposis multiplex congenita causes it
e) Treatment should start after 3 month

374. True about CTEV- *(PGINov.10)*
a) A/w Arthrogroposis Multiplex Congenita
b) Spina bifida is a risk factor
c) A/w nerurological disease
d) Cubitus varus present
e) Mostly idiopathic

375. Treatment of club foot in new born is -
a) Observation till 6 months of age *(AIIMS Dec 95)*
b) Corrective splint application
c) Manipulation alone
d) Tendon release operation

376. Early CTEV is treated by - *(UP 99)*
a) CTEV cast from 1 st postnatal day
b) Manipulation
c) Manipulation & Strapping
d) Operative repair as early as possible

377. Rocker bottom foot is seen in - *(PGI Dec 08)*
a) Congenital vertical talus
b) Excessive correction of Grice procedure
c) Arthrogryposis
d) Holding club foot in too long corrected position
e) Force dorsiflexion against equinus varus

378. A newborn child presents with inverted foot and the dorsum of the foot cannot touch the anterior tibia. The most probable diagnosis is - *(AIIMS Nov 10)*
a) Congenital vertical talus
b) Arthrogryposis Multiplex
c) CTEV
d) Flat foot

379. Psedoarthrosis is seen in all of the following except-
a) Idiopathic b) Fracture *(AI 98)*
c) Osteomyelitis d) Neurofibromatosis

380. Phocomelia is best described as - *(AI 98, 96)*
a) Defect in development of long bones
b) Defect in development of flat bones
c) Defect of intramembranous ossification
d) Defect of cartilage replacement by bone

381. Musculoskeletal abnormalities in neurofibromatosis is- *(UP 01)*
a) Hypertrophy of limb b) Scoliosis
c) Pseudoarthrosis d)All

382. Transient synovitis (toxic synovitis) of the hip is characterized by all of the following, except -
a) May follow upper respiratory infection
b) ESR and white blood cell counts are usually normal
c) Ultrasound of the joint reveals widening of the joint space *(AIIMS May 06)*
d) The hip is typically held in adduction and internal rotation

383. A 7 yr. old boy with abrupt onset of pain in hip with hip held in abduction. Hemogram is normal. ESR is raised. What is the next line of management-
a) Hospitalize and observe *(AIIMS May 09)*
b) Ambulatory observation
c) Intravenous antibiotics
d) USG guided aspiration of hip

363) a 364) c 365) b 366) d 367)b,c,d,e 368) b 369) d 370) c 371) a 372) c 373)a,c,e 374)a,b,c,e 375) b
376) c 377) a,c,d,e 378) c 379) c 380) a 381) d 382) d 383) d

384. A six year old boy presents to the emergency department with a painful limp. Clinical examination reveals tenderness in the femoral triangle and some limitation of hip movements. An X-ray was done which was normal. Which of the following should be the next course of action ? *(AI11)*
a) Wait and Watch/Observation
b) Ultrasonogrpahy
c) Aspiration
d) MRI Scan

385. The characteristic triad of Klippel -Feil syndrome includes all of the following, Except - *(AI 10)*
a) Short neck b) Low hair line
c) Limited neck movements d) Elevated scapula

386. In klippel - Feil syndrome, the patient has all of the following clinical features except - *(AI 05)*
a) Low hair line
b) Bilateral Neck webbing
c) Bilateral shortness of steronomastoid muscles
d) Gross limitations of neck movements

387. Sprengel's deformity is - *(UP 2K)*
a) Absence of clavicle
b) Acomioclavicular dislocation
c) Congenital elevation of scapula
d) Recurrent dislocation of shoulder

388. SprengePs shoulder is due to deformity- *(TN 02)*
a) Scapula b) Humerus
c) Clavicle d) Vertebra

389. About congenital torticollis all are true except - *(AIMSMay 07,AI 07)*
a) Always associated with breech extraction
b) Spontaneous resolution in most cases
c) 2/3rd cases have palpable neck mass at birth
d) Uncorrected cases develop plagiocephaly

390. Pappu, 7 yrs old young boy, had fracture of lateral condyle of femur. He developed malunion as the fracture was not reduced anatomically. Malunion will produce- *(AI 02)*
a) Genu vulgum b) Genu varum
c) Genurecurvatum d) Dislocation of knee

391. Most common cause of genu valgum in children is -
a) Osteoarthritis b) Rickets
c) Pager's disease d) Rheumatoid arthritis

392. Which statement is true regarding genu varum (bowleg)- *(PGIDec.01)*
a) In infants, it may be considered normal
b) Occurs due to epiphyseal dysplasia
c) Seldom associated with tibial angulation
d) Affects only tibia but nerve femur
e) Does not require any treatment

393. Blount's disease is - *(AI 11, PGI June 00)*
a) Genu valgum b) Genu varum
c) Genurecurvatum d)Meniscalinjury

394. Blount's dsease is associated with all of the follwoing, except - *(AI 11)*
a) Genu varum b) Genu Recurvatum
c) Internal Tibial Torsion d) External Tibial Torsion

395. Nail patella syndrome is characterized by -
a) Iliac horn b) Sacral horn
c) Absent patella d) Knee deformity
e) Dislocation of patella

396. Commonest presentation of congenital dislocation of knee is - *(AIMS Sept 96, MH11)*
a) Varus b) Valgus
c) Flexion d) Hyperextension

397. Fairbank triangle is seen in - *(NEET/DNB Pattern)*
a) CDH b) Congenital coxa vara
c) Perthe's disease d) SCFE

398. Congenital Coxa vara is treated by - *(PGI June 04)*
a) Fixation by SP Nail b) Osteotomy
c) Bone grafting d) Traction
e) Splint

399. All the following are causes of a painful limp except- *(AI95)*
a) Slipped femoral epiphysis b)TBofthehip
c) Perthes disease d) Infantile Coxa Vara

400. The commonest cause of limp in a child of seven years is - *(UP02)*
a) TB.hip b)C.D.H
c) Perthe's diseased) Slipped upper femoral epiphysis

401. Traumatic dislocation of epiphysial plate of femur occurs - *(PGIDec. 02)*
a) Medially b) Laterally
c) Posteriorly d) Rotationally
e) Anteriorly

402. Epiphyseal enlargement occurs in - *(AIMSMay 94)*
a) Paget's disease b) Sheurmann's disease
c) Epiphyseal dysplasia d) Hemophilia

403. Epiphyseal dysgenesis is a feature *of-(AIMSMay 93)*
a) Hyperparathyroidism b) Hypoparathyroidism
c) Hypothyroidism d) Hyperthyroidism

404. Metaphyseal lesion in children include - *(PGI 91)*
a) Fracture b) Osteomyelitis
c) Dislocation d) Ewing's tumour
e) Osteosarcoma

METABOLIC AND ENDOCRINE BONE DISORDERS

405. Caffey's disease is - *(UP 03)*
a) Renal osteodystrophy
b) Infantile cortical hyperostosis
c) Osteomyelitis of jaw in children
d) Chronic osteomyelitis in children

406. Osteomalacia is assciated with - *(AI 03)*
a) Decreases in osteoid volume
b) Decrease in osteoid surface
c) Increase in osteoid maturation time
d) Increase in mineral apposition rate

407. Osteomalacia is due to - *(NEET/DNB Pattern)*
a) Vitamin C deficiency b) Vitamin D deficiency
c) VitaminEdeficiency id) None

384) a 385) d 386) c 387) c 388) a 389) a,b 390) a 391)b 392) a,b 393)b 394) d 395)a,c,d,e 396) d
397) b 398) b 399) d 400) c 401)a,b,c 402) d 403) c 404)a,b,e 405) b 406) c 407) b

408. Basic pathological defect in rickets is -
a) Decreased osteoblastic activity *(UP 97, RA 98)*
b) Non functional osteoclast
c) Defective osteoclastic resorption of uncalcified osteoid and cartilage
d) Defective proliferation of physis

409. Decreased mineralization of Epiphyseal plate in a growing child is seen in - *(AI2K)*
a) Rickets b) Osteomalacia
c) Scurvy d) Osteoporosis

410. True about nutritional rickets - *(PGIDec 03)*
a) Craniotabes b) Multiple #
c) Widening of wrist d) *i* Phosphate in serum
e) Growth retardation

411. Rickets in infant present as all except*
(Aiims May 07, NEET/DNB Pattern)
a) Cranitabes b) Widened Fontanel
c) Rachitic Rosary d) Bow legs -

412. Which of the following is a persistant biochemical marker of rickets - *(AI 98)*
a) S.Ca^ b) S. Alkaline phosphatase
c) S. Acid phosphate d) S. phosphate

413. Radiological features of rickets include -
a) Narrowing of epiphysis *(PGI Dec 05)*
b) Cupping of metaphysis
c) Ricketic rosary
d) Pelkan's spur

414. Windswept deformity is *seenin-(NEET/DNBPattem)*
a) Achondroplasia b) Ankylosing spondylitis
c) Rickets d) Scurvy

415. All are true regarding Osteomalacia except -
a) High serum Ca^ *(PGI Nov 09)*
b) Normal serum phosphate
c) Normal serum calcium
d) Osteosclerotic lesions
e) Pseudofracture seen

416. Milkman's Fracture is a type of- *(AI 09)*
a) Pseudofracture b) Clavicular fracture
c) Humeral fracture d) Metacarpal fracture

417. Increased alkaline phosphate in seen in - *(AI99)*
a) Multiple myeloma
b) Primary hyperparathyroidism
c) Chronic renal failure
d) Osteoporosis

418. Alkaline phosphatase is elevated in all except -
a) Rickets *(AIIMSDec 97)*
b) Osteomalacia
c) Hypoparathyroidism
d) Hypophosphatemia

419. A patient Shweta with raised serum alkaline phosphatase and raised parathormone level along with low cacium and low phosphate level is likely to have - *(AIIMS June 99)*
a) Primary hyperparathyroidism
b) Paget's disease
c) Osteoporosis
d) Vitamin D deficiency

420. During a routine check up, a 67-year- old man is found to have a level of serum alkaline phosphatase three times the upper limit of normal. Serum calcium and phosphorus concentrations and liver funcition test results are normal. He is asymptomatic. The most likely diagnosis is - *(AIIMS Nov. 99)*
a) Metastatic bone disease
b) Primary hyperparathyroidism
c) Paget's disease of bone
d) Osteomalacia

421. A 67 year old man on biochemical analysis found to have three fold rise of level of serum alkaline phosphatase that of upper limit of norm value during a routine checkup but serum calcium and phosphorous concentration and liver function test results and normal. He is asympto-matic. The probable cause is - *(AIIMS 99)*
a) Multiple myeloma
b) Paget's disease of bone
c) Primary hyperparathyroidism
d) Osteomalacia

422. A young patient presents with enlargement of costocondral junction and with the white line of Fraenkel at the metaphysis. The diagnosis is -
a) Scruvy b) Rickets
c) Hyperparathyroidism d) Osteomalacia

423. A 50 year old man presented with multiple pathological fractures. His serum calcium was 11.5 mg/dl and phosphate was 2.5 mg/dl. Alkaline phosphatase was 940 I.U./dl. The most probable diagnosis is - *(AIIMS Nov 05)*
a) Osteoporosis b) Osteomalacia
c) Multiple myeloma d) Hyperparathyroidism

424. Hyperparathyroidism causes -
a) Multiple bone cysts *(NEET/DNB Pattern)*
V b) Subperiosteal bone resorption
c) Brown's tumor
j ■ d) All of the above

425. Brown Himor is seen in - *(AI 10, 06)*
a) Hypothyroidism b) Hyperthyroidism
c) Hypoparathyroidism d) Hyperparathyroidism

426. Resorption of the terminal phalanx is not seen in - *(KERALA98)*
a) Hyperparathyroidism b) Reiter's syndrome
c) Scleroderma d) Psoriasis

427. Tufting of the terminal phalanx is not seen in -*(AI95)*
a) Hypoparathyroidism b) Hyperparathyroidism
c) Hyperthyroidism d) Hypothyroidism

428. Absence of lamina dura in the alveolus occurs in- *(DPGMar 09)*
a) Rickets b) Osteomalacia
c) Deficiency of Vitamin C d) Hyperparathyroidism

429. Which of the following is a primary defect in Paget' s disease? *(WB2K)*
a) Osteoblast b) Osteoclast
c) Osteocyte d) Fibroblast

408) c 409) a 410)a,c,d,e 411)d 412)b 413)b 414)c 415)a,b,d 416)a 417)b,c 418)c 419)d 420)d 421)c 422)a 423)d 424) d 425)d 426)None 427)b 428)d 429)b

430. Paget's disease of bone commonly affects-(PG/*June 01, Dec 06, 2K)*
a) Skull b) Vertebra
c) Pelvis d) Femur
e) Humerus

431. Treatment of choice for Paget's disease of the bone is - *(AI95)*
a) Vitamin D b) Immobilization of the limb
c) Surgical treatment d) Calcitonin

432. All of the following statements regarding Paget's disease are correct except - *(Manipal 97)*
a) Females are affected more than males
b) It frequently leads to Osteogenic sarcoma
c) Serum alkaline phosphates level is T ed
d) Also called as Osteitis deformans

433. True about paget's disease - *(PGI Nov 09)*
a) Common in young girl 10-16 yr of age
b) tALP
c) Associated with hypercalcemia & hypophosphatemia
d) More common in female
e) Associated with chondrosarcoma

434. 60 yrs old male with bony abnormality at upper tibia associated with sensorineural hearing loss. On laboratory examination serum alkaline phosphatase levels are (440mU/I) elevated and serum Ca^and $P0_4$-are normal, Skeletal survey shows ivory vertebrae and cotton wool spots in x-ray skull. Diagnosis is - *(AIlMSMay 07)*
a) Fibrous dysplasia b) Paget's disease
c) Osteosclerotic metastasis d) Osteoporosis

435. Paget's disease after 10 years develops into -
a) Osteosarcoma *(NEET/DNB Pattern)*
b) Fibrous cortical defect
c) Osteoid osteoma
d) Ankylosing spondylitis

436. Paget's disease also known as - *(PGI June 2K)*
a) Osteitis deformans b) Osteitis fibrosa cystica
c) Osteochondritis d) Osteomalacia
e) Marble bone disease

437. Osteoporosis is characterized by - *(PGI June 05)*
a) Increased serum alkaline phosphatase
b) Decreased bone density
c) Wasting of muscles
d) Looser's zone seen
e) Decreased serum Ca^{2+}

438. Osteoporosis is seen in - *(AI 94)*
a) Thyrotoxicosis b) Cushing's disease
c) Menopause d) All of the above

439. All are causes of Osteoporosis, except - *(AI 00)*
a) Thyrotoxicosis b) Hypothyroidism
c) Chronic heparin therapy d) Old age

440. Osteporosis may be seen in all except-^*98,96,94)*
a) Hyperparathyroidism
b) Hypoparathyroidism
c) Thyrotoxicosis
d) Heparin administration

441. Osteoporosis is characterized most commonly by -
a) Fracture vertebra b) Backache *(AI 99, 94)*
c) Bowing of legs d) Abdominal pain

442. Most common site of osteoporosis- *(NEET/DNB*
a) Humerus ;[illegible] b) Vertebrae *Pattern)*
c) Scapula [illegible] d) Flat bones [illegible]

443. Which of the following is seen in osteoporosis - *(AIIMS June 2K)*
a) Low Ca, high $P0_4$, high alkaline phosphatase
b) Low Ca, low $P0_4$, low alkaline phosphatase
c) Normal Ca, normal $P0_4$, normal alkaline phosphatase
d) Low Ca, low $P0_4$, normal alkaline phosphatase

444. True about osteoporosis - *(PGIDec 07)*
a) T with age
b) Due to diet deficiency in Ca
c) Commonly presented with #
d) Cod- fish vertebra seen

445. TVeatment of postmenopausal osteoporosis -
a) Tamoxifen b) Progesterone *(PGI June 06)*
c) Estrogen d) Alendronate
e) Calcitonin

446. Rx of postmenopausal osteoporosis - *(PGI Dec 04)*
a) Calcitonin b) Alendronate
c) Progesterone d) Tamoxifiene
e) Androgen

447. All of the following agents decreases bone resorption in osteoporosis, Except - *(AI 11)*
a) Alendronate b) Etidronate
c) Strontium d) Teriparatide

448. Bone density is decreased in which of the following - *(PGI June 02)*
a) Osteoporosis
b) AVN of bone
c) Osteopetrosis
d) Fracture and collapse of cancellous bone
e) Fluorosis

AVASCULAR NECROSIS & OSTEOCHONDROSES

449. Avascular necrosis can be a possible sequelae of fracture of all of the following bones, except -
a) Femur neck b) Scaphoid *(AI 03)*
c) Talus d)Calcanuem

450. Traumatic avascular necrosis occurs in which fracture - *(PGI June 01, Dec 2K)*
a) Neck femur b) Surgical neck humerus
c) Talus d) Lunate
e) Scaphoid

451. Most common site of avascular necrosis amongst the following is - *(AI 99)*
a) Medial candyle of femur #
b) Talus #
c) Olecranon#
d) Head of the radius #

430) a,b,c,d 431) d 432)a,b 433)b,e 434)b 435)a 436)a 437)b 438)d 439)b 440)b 441)a,b 442)b 443) c 444) a,c,d 445)c,d,e 446) a,b 447) d 448) a 449) d 450)a,c,d 451)b

452. Avascular necrosis seen in - *(PGI June 04, Nov 10)*
a) # Surgical neck of humerus b) # Neck of scapula
c) # Neck of talus d) # Neck of femur
e) # Neck of radius

453. Traumatic fracture showing avascular necrosis -
a) Femoral neck *(PGI Dec 0 7)*
b) Surgical neck of humerus
c) Body of talus
d) Cuboid

454. Posttraumatic avascular necrosis occur in fracture of- *(PGI June 09)*
a) Neck femur b) Surgical neck humerus
c) Neck talus d) Waist scaphoid
e) Neck radius

455. Aseptic necrosis can occur in - *(PGIDec 08)*
a) Perthes disease
b) Slipped capital femoral epiphysis
c) Steroid administration
d) Caisson disease
e) Gaucher's disease

456. Which of the following is NOT a risk factor for avascular necrosis of head of femur ? *(COMED 09)*
a) Alcohol b) Smoking
c) Obesity d) Chondromyxoid fibroma

457. A 45 year old was given steroids after renal transplant After 2 years he had difficulty in walking and pain in both hips. Which one of the following is most likely cause - *(AI 05)*
a) Primary osteoarthritis b) Avascular necrosis
c) Tuberculosis d) Aluminum toxicity

458. A thirty one year old male with neprhrotic syndrome complains of pain in right hip joint of 2 months duration. The movements at the hip are free but painful terminally. The most likely diagnosis is -
a) Tuberculosis of hip *(AIIMS Nov 03)*
b) Avascular necrosis of femoral head
c) Chondrolysis of hip
d) Pathological fracture of femoral neck

459. A woman of 45, a known cause of pemphigus vulgaris on a regular treatment with controlled primary disease presented with pain in the right hip and knee. Examination revealed no limb length discrepancy but the patient has tenderness in the scarpa's triangle and limitation of abduction and internal rotation of the right hip joints as compared to the other side. The most probable diagnosis is -
a) Stress fracture of neck of femur *(AIIMS May 04)*
b) Avascular necrosis of femoral head
c) Perthe's disease
d) Transient synovitis of hip

460. A patient of nephrotic syndrome taking steroids for 6 years presented with a limping gait and of limitation of abduction and internal rotation. He most probably has - *(AIIMS Nov 01)*
a) Primary osteoarthritis b) Avascular necrosis
c) Tuberculosis d) Aluminum toxicity

461. After chronic use of steroids severe pain in right hip with immobility is due to - *(NEET/DNB Pattern)*
a) Avascular necrosis b) Perthes disease
c) Hip dislocation d) Osteoarthritis

462. A 50-year-old man sustained posterior dislocation of left hip in an accident. Dislocation was reduced after 3 days. He started complaining of pain in left hip after 6 months. X-ray of the pelvis were normal. The most relevant investigation at this stage will be- *(AIIMS Dec 04)*
a) CRP Levels in blood b) Ultrasonography of hip
c) Arthrography of hip d) MRI of hip

463. Avascular necrosis of hip, investigation of choice -
a) **MRI** b)USG *(NEET/DNB*
c)GT **d)XRAY** *Pattern)*

464. Avascular necrosis of femur seen in - *(PGI Dec 04)*
a) Steroid therapy b) Gaucher's disease
c) Fracture d) Pancreatitis

465. Avascular necrosis is seen in - *(PGI Dec 02)*
a) Sickle cell disease b) Thalassemia
c) Polycythemia d) Hyperparathyroidism

466. Osteonecrosis of femoral head seen in -
a) Sickle cell disease b) Gaucher's disease
c) Polycythemia d) Hyperparathyroidism
e) Fracture *(PGI June 05)*

467. Avascular necrosis is/are seen in - *(PGI Nov 09)*
a) Fracture neck of femur b) Gaucher's disease
c) Polycythemia d) Hyperparathyroidusm
e) Sickle cell disease

468. Which joint is commonly involved in osteochondritis dessicans - *(AI 95, NEET/DNB Pattern)*
a) Ankle joint b) Knee j oint
c) Wrist joint d) Elbow joint

469. Most common site of osteochondritis dessicans - *(AIIMS June 98)*
a) Lateral part of the medial femoral condyle
b) Medial part of the medial femoral condyle
c) Lateral part of the lateral femoral condyle
d) Medial part of the lateral femoral condyle

470. Kinebock's disease is due to avascular necrosis of-
a) Femoral neck *(AI 03)*
b) Medial cuneiform bone
c) Lunate bone
d) Scaphoid bone

471. Which of the following is true about manifestations of Kienbocks disease - *(PGI Dec 05)*
a) Constant tenderness is present
b) Seen in old age
c) Restriction of joint movement is late sequale
d) Tenderness in lunate bone
e) Ulna is shortened

472. Osgood-Schllatter's disease is seen in -
a) Proximal tibia b) Proximal femur
c) Distal tibia d) Distal femur
e) Patella *(PGI Nov 10, Dec 01)*

452)c,d 453)a 454)a,c,d 455)A11 456)d>c 457)b 458)b 459)b 460)b 461)a 462)d 463)a 464)a,b,c,d 465) a,c 466)a,b,c,e 467)a,b,c,e 468) b>d 469) a 470) c 471)a,b,d,e 472) a

473. Osgood Shattller disease - *(PGI June 07)*
a) Involve the knee joint b) Pelvis
c) Wrist joint d) Cervical spine

474. What is Kienboch's disease - *(AIIMSJune 2K)*
a) Osteochondritis of lunate
b) Osteochondritis of neck of femur
c) Osteochondritis of navicular
d) Osteochondritis of tibial condyle

475. Osteonecrosis is not seen in - *(NEET/DNB Pattern)*
a) Olliers disease b)Kienboch V.
c) Kohlers disease d) Perthes disease

JOINT DISORDERS (ARTHRITIS)

476. All of the following statements about synovial fluid are true, Except - *(ARMS May 10, AI09)*
a) Secreted primarily by type A synovial cells
b) Follows Non - Newtonian fluid kinetics
c) Contains hyaluronic acid
d) Viscosity is variable

477. The articular cartilage is characterized by all of the following features except - *(DPG 10)*
a) It is devoid of perichondrium
b) It has a rich nerve supply
c) It is avascular
d) It lacks the capacity to regenerate

478. Which of the following statements about changes in articular cartilage with aging is not true - *(AI 10)*
a) Total proteoglycan content is decreased
b) Synthesis of proteoglycans is decreased
c) Enzymatic degradation of proteoglycans is increased
d) Total water content of cartilage is decreased

479. Osteoarthritis following is not a predisposing factor- *(KERALA 96)*
a) Diabetes mellitus
b) Defective joint position
c) Weight bearing joints
d) Incongruity of articular surfaces
e) Old age

480. Ostearthritis commonly involves - *(PGI June 02)*
a) Proximal IP joint b) Distal IP joint
c) Ist carpometacarpal joint d) Wrist joint
e) Distal radio - ulnar joint

481. The most common site of primary osteoarthrosis is - *(TAMILNADU97)*
a) Hip joint b) Knee joint
c) Ankle j oint d) Shoulder j oint

482. Heberden's Arthropathy affects- *(AI05)*
a) Lumbar spine b) Symmetrically large joints
c) Sacroiliac joints d) Distal interphalangeal joints

883. Bouchard's nodes are seen in - *(DPG Mar. 09)*
a) Proximal IP joints b) Distal IP joints
c) Sternoclavicular joints d) Knee joint

484. Osteoarthritis is associated with all of the following except- *(AI 99)*
a) Decreased joint space
b) Subchondral sclerosis
c) Osteophyte formation
d) Ca^ deposition in joint space

485. Which of these muscles undergoes wasting first in osteoarthritis knee- *(AI07, ARMS May 07, Nov. 11)*
a) Quadriceps only b) Hamstrings only
c) Gastronemius

486. Deformity most commonly seen in primary osteoarthritis of knee joint - *(NEET/DNB Pattern)*
a) Genu valgum b) Genu recurratiin • ;
c) Genu varus d) Procurvatum.

487. A 68 yr old man came with pain and swelling of right knee. Ahlback grade 2 osteoarthritic changes were found on investigation. What is the further management? *(ARMS May 10)*
a) Arthroscopic washout b) High tibial osteotomy
c) Total knee replacement d) Conservative

488. A 65 years old lady presented with a swollen and painful knee. On examination, she was found to have grade III osteoarthritic changes. What is the best course of action? *(AI 11)*
a) Conservative management
b) Arthroscopic washing
c) Partial knee replacement
d) Total knee replacement

489. All of the following statements about High Tibial Osteotomy are true, Except- *(AI 09)*
a) Magnitude of correction achieved is greater than 30°
b) Indicated in Unicompartmental osteoarthritis
c) Performed through concellous bone
d) Recurrence is a long term complication

490. All true about high tibial osteotomy except -
a) Can correct varus over 30 degress
b) Deformity recurs after a long time
c) Done through cancellous bone *(ARMS May 11)*
d) Done in case of unicompartmental disease

491. Severe disability in primary osteoarthritis of hip is best managed by - *(PGI 95)*
a) Arthrodesis
b) Arthroplasty
c) Me Murray's osteotomy
d) Intra-articular hydrocortisone and physiotherapy

492. Osteoarthritis all are true except - *(PGIDec 03, 02)*
a) Occurs after 50 years of age
b) Single joint involvement
c) Heberden's node present
d) Lower limb deformity seen
e) Ankylosis occurs

493. 40 years patient having arthritis of PIP and DIP along with carpometacarpal joint of thumb and sparing of wrist and metacarpophalangeal joint, most likely diagnosis is - *(AI 01, 00, AIIMSJune 99, Dec 95)*
a) Rheumatoid arthritis b) Osteoarthritis
c) Psoriatic arthritis d) Pseudogout

473) a 474) a 475) a 476) a 477) b 478) c 479) None 480)a,b,c 481) b 482) d 483) a 484) d 485) a
486) c 487) d 488) a 489) a 490) a 491) b 492) e 493) b

494v Which joint is spared in Rheumatoid arthritis -
a) MP joints of hand *(NEET/DNB Pattern)*
b) DIP joints of finger
c) PIP-joints of finger
d) Atlanto-axial joint

495. Swan-neck deformity is - *(AIIMS 2K, PGI92)*
a) Flexion of Metacarpophalangeal joint and extension at interphalangeal joint
b) Extension at Proximal interphalangeal joint and flexion at Distal interphalangeal joint
c) Flexion at proximal interphalangeal joint and extension at distal interphalangeal joint
d) Extension at Metacarpophalangeal joint and flexion at interphalangeal joint

496. Butonniere deformity occur due to - *(PGIDec 08)*
a) Flexion of Proximal interphalangeal joint
b) Flexion at Distal interphalangeal joint
c) Extension at Distal interphalangeal joint
d) Extension at Metarcarpophalangeal joint
e) Flexion at Metarcarpophalangeal joint

497. Joint not involved in Rheumatoid arthritis according to 1987 modified ARA criteria? *(AIIMS Dec 08)*
a) Knee b) Ankle
c) Tarsometatarsal d)Metatarsophalangeal

498. Rheumatoid arthritis is associated with all except -
a) Cardiac involvement *(NEET/DNB Pattern)*
b) Bauchards nodes
c) Herberdens node
d) Swan-neck deformity

499. What is pathognomic feature of rheumatoid arthritis? *(AIIMS May 05)*
a) Rheumatoid factorb) Rheumatoid nodule
c) Morning stiffness d) Ulnar drift of fingers

500. Rheumatoid factor in rheumatoid arthritis is important because - *(AI 02)*
a) RA factor is associated with bad prognosis
b) Absent RA factor rules out the diagnosis of Rheumatoid arthritis
c) It is very common in childhood Rheumatoid arthritis
d) It correlates with disease activity

501. In rheumatoid arthritis, pathology starts in the -
a) Articular cartilage b) Capsule *(AI95)*
c) Synovium d) Muscles

502. In a case of undifferentiated arthritis, presence of anti-cyclic citrullinated peptide (anti CCP) indicates strong possibility of which of the following?
a) Rheumatoid arthritis *(UPSC-110)*
b) Systemic lupus erythematosis
c) Mixed connective tissue disorder
d) Reactive arthritis

503. All the following are true about Rheumatoid arthritis except- *(AI 94)*
a) Positives for Anti-IgG antibody
b) Juxta-articular osteoporosis
c) Morning stiffness
d) C Reactive protein indicates better prognosis

504. All are features of Rheumatoid - arthritis, EXCEPT-
a) Osteosclerosis of joint *(AIIMS June 97)*
b) Soft tissue swelling
c) Narrowing of joint space
d) Periarticular osteoporosis

505. Which of the following is true regarding Rheumatoid arthritis- *(AI 94)*
a) Typically involves small and large joints symmetrically but spares the cervical spine
b) Causes pleural effusion with low sugar
c) Pulmonary nodules are absent
d) Enthesopathy prominent

506. Which is true regarding rheumatoid arthritis -
a) Small and large joints are affected mostly
b) Younger females are affected more commonly
c) Diagnosed only if Rheumatoid factor is positive
d) Life expectancy is unchanged *(PGI Dec 06)*
e) Hepatosplenomegaly is common

507. IVue about Rheumatoid arthritis - *(PGIDec 06)*
a) Involves peripheral joints more commonly than axial joints
b) Does not decrease life expectancy
c) A/w vasculitis
d) Adrenal hyperplasia

508. Earliest radiological change in RA -
a) Decreased joint space *(NEET/DNB Pattern)*
b) Articular erosion - 2'V;
c) Periarticular osteopenia
d) Subchondral cyst r

509. IVue regarding felty's syndrome is all, except -
a) Splenomegaly *(AIIMS Dec 97)*
b) Rheumatoid arthritis
c) Neutropenia
d) Nephropathy

510. Indication of systemic steroids in Rheumatoid arthritis is - *(AI 97)*
a) Mononeuritis multiplex
b) Carpal tunnel syndrome
c) Presence of deformities
d) Articular cartilage involvement

511. "Wind-sweep deformity" is seen in -*(AIIMS Dec 98)*
a) Ankyloising spondylitis b) Scurvy
c) Rheumatoid arthritis d) Rickets

512. All the following diseases are associated with HILA B-27 & Uveitis, except - *(AI 00)*
a) Bechcet's syndrome b) Psoriasis
c) Ankylosing Spondylitis d) Reiter's syndrome

513. Seronegative arthritis include - *(AIIMS 01)*
a) Ankylosing spondylitis b) Reiters arthritis
c) Psoriatic arthritis d) Enteropathic arthritis
e) All of the above

514. Spondyloarthopathy which is seronegative are all except- *(NEET/DNB Pattern)*
a) AS b) Psoriasis
c) JRA d) Reiter syndrome

494) b 495) b 496) a 497) c 498) Ob 499) b 500) a 501) c 502) a 503) d 504) a 505) b 506) a 507) a,c
508)c 509)d 510)a 511)c>d 512)a 513)e 514)c

515. Ankylosing apondylitis is associated with - *(AI99)*
a) HLA-B27 b) HLA - B-8
c) HLA - DW4/DR4 d) HLA - DR3

516. Which is not involved in Ankylosing spondylitis - *(AIMS Dec 95, AIMS 93)*
a) Knee & Ankle b) Sacroilac Jt.
c) Wrist & elbow d) Spine

517. All are true regarding Anklosing spondylitis except- *(PGI97)*
a) Sacroilitis b) HLA -B27
c) Iridocyclitis d) More common in females

518. In ankylosing spondylitis, radiological change are first seen in - *(DPG 10)*
a) Sacro-iliac joints b) Intervertebral ligament
c) Vertebral bodies d) Intervertebral discs

519. Earliest investigation for diagnosis of Ankylosing spondylitis - *(PGI May 10)*
a) MRI STIR sequence b) Bone scan
c) CT scan d) X- ray
e) USG

520. True statements about ankylosing spondylitis include all except - *(Manipal 09)*
a) HLA-B27 is found in 90% of sufferers
b) Uveitis is found in 15 to 20% of sufferers
c) The conditions is commoner in female
d) The radiological changes can occur in the spine before symptoms

521. A 65 yrs old man with H/O back pain since 3 months. ESR is raised. On examination marked stiffness and mild restriction of chest movements is found. On x-ray, syndesmophytes are present in vertebrae. Diagnosis is - *(AIMSMay 10)*
a) Ankylosing spondylitis
b) Degenerative osteoarthritis of spine
c) Ankylosing hyperosteosis
d) Lumbar canal stenosis

522. Syndermophytes are seen in - *(UP 08)*
a) AS b)RA
c) OA d)All

523. Bamboo spine with sacroilitis - *(NEET/DNB Pattern)*
a) Ankylosing spondylitis b) RA
c) OA d) Psoriatic arthritis

524. Enthesopathy is commonly found in - *(PGI 94)*
a) Rheumatoid arthritis
b) Rheumatic fever
c) Ankylosing spondylitis
d) Osteoarthritis

525. Which one of the following definitions best fits the term enthesitis ? *(UPSC-109)*
a) Inflammation at the site of tendinous or ligamentous insertion into bone
b) Inflammation of the periarticular membrane lining the joint capsule
c) Inflammation of a sac-like cavity near a joint that decreases friction
d) A palpable vibratory or crackling sensation elicited with joint motion

526. All are true regarding psoriatic arthritis except -
a) Arthritis mutilans *(PGI 02, JIPMER 01)*
b) DIP involvement
c) Ankylosis of small joints
d) Sacroilitis
e) Lengthening of digit known as telescoping

527. Terminal interphalangeal joints of hands are commonly involved in- *(AI 93)*
a) Psoriatic arthropathy b) Rheumatoid arthritis
c) Still diseases d) Ankylosing spondylitis

528. TVue about psonatic arthritis are aU expect - ;
a) HLA-Cco6 association *(NEET/DNB Pattern)*
b) Involvement of DIP joint
c) More common in males
d) DOC is methotrexate

529. A 35 year old male develops involvements of PIP, DIP and metacarpophalangeal joints with sparing of wrist and carpometacarpal joints. The probable diagnosis is - *(AIMS June 99)*
a) Psoriatic arthopathy b) Osteoarthritis
c) Rheumatoid arthritis d) Pseudo gout

530. MC joint involved in Gout - *(AIMSMay 95)*
a) Knee b)Hip
c) MP joint of the big toe d) MP joint of thumb

531. Which of the following is not affected in gout?
a) Muscle b) Skin *(PGI Dec 2k)*
c) Cartilage d) Tendon
e) Bursa

532. In gout tophi is found in - *(PGI Nov 10, PGI June 03)*
a) Synovial fluid b) Articular Cartilage
c) Joint capsule d) Skin
e) Muscle

533. In a patient with gouty arthritis, synovial fluid aspiration will show - *(AI 09)*
a) Monosodium Urate crystals
b) Calcium Pyrophosphate crystals
c) Mononuclear Leucocytosis
d) Polymorphonuclear Leukocytosis

534. Specific test for gout is - *(AI 98, AIMS Sept 96)*
a) Raised serum uric acid level
b) Raised uric acid in synovial fluid of joint
c) Raised urea level
d) Raised urease enzyme level

535. A person has severe pain & swelling in great toe. True statements are - *(PGI June 09)*
a) Allopurinol used in acute control of gout
b) Colchicine acts slowly
c) Colchicine cause gastrointestinal disturbances
d) High serum uric acid level may be not present
e) Joint fluid aspiration is done for investigation

536. Drug used in acute gout - *(NEET/DNB Pattern)*
a) Allopurinol b) Probenacid
c) Colchicine d) Sulfinpyrazone

537. CPPD crystals are seen in which disease -
a) Hypothyroidism *(NEET/DNB Pattern)*
b) Primary hyperparathyroidism
c) Hemochromatosis
d) All of the above

515) a 516) c 517)d 518) a 519) a 520)b,c,d 521) a 522) a 523) a 524) c 525) a 526) e 527) a 528) c
529) a 530) c 531) a 532)a,b,d 533) a 534) b 535)c,d,e 536) c 537) d

538. Which of the following is not seen in pseudogout -
a) Small joints affected *(AIIMS Nov 09)*
b) Large joints affected
c) Chondrocalcinosis
d) Deposition of calcium pyrophosphate

539. How to differentiate gout with pseudogout -
a) Large joint involvement *(PGI June 2k)*
b) Birefringent (Particles) crystals
c) Serum uric acid normal
d) Associated with hyperparathyroidism
e) Pain is very intense

540. A lady presents with right knee swelling. Aspiration was done in which CPPD crystals were obtained. Next best investigation is - *(AIIMSMay 10)*
a) **ANA** b)RF
c) CPK d)TSH

541. A 60 year old man with diabetes mellitus presents with painless, swollen right ankle joint Radiographs of the ankle show destroyed joint with large number of loose bodies. The most probable diagnosis is -
a) Charcot's joint b)Clutton's joint *(AI03)*
c) Osteoarthritis d) Rheumatoid arthritis

542. Most common charcot's joints involved in diabetes mellitus are those of - *(AI97)*
a) Shoulder b) Ankle
c) Knee d) Foot

543. False about Charcot's joint in diabetes mellitus is-
a) Limitation of movements with bracing *(AI08)*
b) Arthrodesis
c) Total ankle replacement
d) Arthrocentesis

544. Most common site for Pseduotumour like growth in haemophilic arthropathy is - *(AI 98)*
a) Quadriceps femoris b) Hamstring muscle
c) Gastrocnemius d) Iliopsoas

545. Multiple loose bodies are seen in - *(PGI June 01)*
a) Osteochondritis dessicans
b) Synovial chondromatosis
c) Osteoarthritis
d) Rheumatoid arthritis
c) Osteogenesis imperfecta

546. Osseous loose bodies in the joints are common in all of the following, except - *(DPGFeb. 09)*
a) Osteochondritis dessicans
b) Osteoarthritis
c) Osteochondral fracture
d) Rheumatoid arthritis

547. Joints of hand are not affected in - *(NEET/DNB Pattern)*
a) AS b)RA
c) OA i;;.:.;.£•••. ;!,/ A· .v; d) Psoriatic arthritis

548. Chondrocalcinosis is seen in - *(AIIMSMay 02)*
a) Ochronosis b) Hypoparathyroidism
c) Rickets d) Hypervitaminosis D

549. Erosion of bone is seen with all of the following except- *(AI 94)*
a) Gout b) SLE
c) Psoriasis d) Rheumatoid arthritis

550. Which is NOT characterized by bony lesion -
a) Gout b) SLE *(AIIMS Dec 94)*
c) Psoriasis d) Rheumatoid arthritis

551. The earliest manifestation of Alkaptonuria is -
a) Ankylosis of lumbodorsal spine
b) Ochronotic arthritis
c) Prostatic calculi
d) Pigmentation of tympanic membrane
e) All of the above

552. Deforming Polyarthritis is associated associated with all of the following except - *(JIPMER 99)*
a) Rheumatoid arthritis b) Psoriatic arthritis
c) Behcet's syndrome d) Ankylosing spondylitis

SKELETAL INFECTIONS

553. Acute Osteomyelitis is most commonly caused by -
a) Staphylococcus aureus *(AI 02, UP 98)*
b) Actinomyces bovis
c) Nocardia asteroids
d) Borrelia vincentii

554. The most common organism causing osteomyelitis in drug abusers is - *(PGI 97)*
a) Ecoll b) Pseudomonas
c) Klebsiella d) Staph Aureus

555. Earliest site of bone involvement in hematogenous osteomyelitis - *(AIIMS Nov 10, May 09, PGI 98)*
a) Metaphysis b) Diaphysis
c) Epiphysis d) Point ofentiy of the nutrient arteiy

556. True regarding acute osteomyelitis in a child - *(PGI June 02)*
a) Diagnosis by X-ray is 8-10 days after onset
b) There is diffuse tenderness at the site
c) Antibiotic therapy should be at least for 4 weeks
d) Salmonella is the most common cause

557. Complications of acute osteomyelitis -*(PGI June 05)*
a) Malignancy b) Fracture of the affected bone
c) Sepsis d)Chronicity

558. Radiologically, earliest sign of osteomyelitis is -
a) Loss of muscle and fat planes *(DPG Feb. 09)*
b) Periosteal reaction
c) Callus formation
d) Presence of sequestrum

559. Cloacae are present in - *(NEET/DNB Pattern)*
a) Sequestrum b) Involucrum
c) Normal bone d) Myositis

560. Sequestrum is best defined as - *(NEET/DNBPattern)*
a) A piece of dead bone
b) A piece of dead bone surrounded by infected tissue
c) A piece of bone with poor vascularity
d) None

561. All are associated with chronic osteomyelitis except-
a) Amyloidosis *(AI 99)*
b) Sequestrum
c) Metastatic abnormality
d) Myositis ossificans

538) a 539) b,e 540) d 541) a 542) d 543) c 544) None >a 545)a,b,c 546) d 547) a 548) a 549) b 550) b 551)b 552) c 553) a 554) d 555) a 556)a,b,c 557)b,c,d 558) b 559) b 560) b 561) d

562. **True about osteomyelitis -** *(PGI Nov 09)*
a) Staph, aureus is most common causative organism
b) Epiphysis most commonly involved region
c) In sickle cell anemia - salmonella is causative organism
d) Sequestrum is a piece of dead bone
e) Involucrum is dense sclerotic bone overlying a sequestrum

563. **True about HIV, Osteomyelitis is all exceot -**
a) Necrosis absent *(AIIMS June 97)*
b) Often bilateral
c) Periosteal new bone formation
d) Most common cause is staph, aureus _

564. **Chronic persistent neutrophilic discharge is seen in -** ,-:'J *(NEET/DNB Pattern)*
a) Chronic osteomyelitis b)Acute osteomyelitis
c) Septic arthritis d)None

565. **Brodie's abscess is -** *(NEET/DNB Pattern)*
a) Acute osteomyelitis
b) Subacute osteomyelitis
c) Chronic osteomyelitis
d) Septic arthritis

566. **Most common cause of nongonococcal septic arthritis is -** *(AIIMS Feb 97)*
a) Staph-aureus b)H.influenza
c) Pseudomonas d)Streptococcus

567. **Septic arthritis in a 2 year old child is often caused by-** *(AIIMS May 94)*
a) Hemophilous influenzae
b) Staphylococcus aureus
c) Gonococci
d) Pneumococci

568. **Septic arthritis is diagnosed** *by-(NEET/DNB Pattern)*
a) X-ray : b) Joint aspiration
c) USG d)MRl v,;

569. **Tom smith's arthritis is due to -** *(PGI 99)*
a) Pyogenic infection in infancy
b) TB
c) RA
d) OA

570. **Tom Smith arthritis involves -** *(MH10)*
a) Knee b) Hip
c) Ankle d) Wrist

571. **Most common cause ofbony ankylosis** *]&-(AHMSMay 93)*
a) Rheumatoid arthritis b) Pyogenic arthritis
c) Traumatic arthritis d) Osteoarthritis

572. **In Bony ankylosis, there is -** *(UP 98)*
a) Painless, No movement
b) Painful complete movement
c) Painless complete movement
d) Painful incomplete movement

573. **Which of the following statements about tubercular osteomyelitis is not true ?** *(AI 08)*
a) It is a type of secondary osteomyelitis
b) Sequestrum is uncommon
c) Periosteal reaction is characteristic
d) Inflammation is minimal

574. **Tuberculosis spine; most common site** *is-(AIIMSDec*
a) Sacral b)Cevical *95,AI95)*
c) Dorsolumbar d) Lumbosacral

575. **Pott's spine is commonest in spine -** *(DELHI 94*
a) Cevical b) Thoracic *NEET/DNB*
c) Lumbar d) Sacral *Pattern)*

576. **Commonest site for tuberculous spondylitis is -**
a) Tjj/L, b)C„ *(AIM)*
°)L« d)S_M

577. **Tuberculosis of the spine commonly affects all of the following parts of the vertebra except -** *(AI 04)*
a) Body b) Lamina
c) Spinous process d) Pedicle

578. **The most common sequelae of tuberculous spondylitis in an adolescent is-** *(AI 05, NEET/DNB*
a) Fibrous Ankylosis *Pattern)*
b) Bony-Ankylosis
c) Pathological dislocation
d) Chronic osteomyelitis

579. **Clinical features of TB spine are A/E-** *(PGI June 06,*
a) Loss of lordosis b) Night sweat *04)*
c) Loss of appetite d) Fever (evening rise)
e) Back pain f)None

580. **Clinical features of T.B. Spine are A/E -***(PGI June 03)*
a) Loss of lordosis b) Night sweats
c) Weight gain d) Evening rise of temperature
e) ied appetite

581. **In TB spine the first symptom is -** *(AIIMS May 95)*
a) Decreased sensation
b) Decreased motor power
c) Pain
d) Increased deep tendon reflexes.

582. **A 46-year-old, known alcoholic, presented with pain in the dorsal spine. On examination there is tendmess at the dorso-lumbar junction. Radiograph shows destruction of the 12th dorsal vertebra with loss of disc space between D12- LI vertebrae. The most probable diagnosis is -** *(AIIMSNov 04)*
a) Metastatic spine disease b) Pott's spine
c) Missed trauma d) Multiple myeloma

583. **A 35 yr old lady with chronic backache. On X ray she had a D12 collapse. But Intervertebral disc space is maintained. All are possible except -** *(AIIMS*
a) Multiple myeloma b) Osteoporosis *Nov 10)*
c) Metastasis d) Tuberculosis

584. **First symptom in tuberculous cord compression is -** *(AI 97)*
a) Sensory change b) Decrease tendon reflex
c) Spasticity d) Lower limb weakness

585. **The early feature of Pott's paraplegia is -** *(DPG10)*
a) Flexor spasm b) Increased tendon jerk
c) Ankle clonus d) Sensory loss

586. **Indicator (s) of poor prognosis in the pott's spine is/are -** *(PGI June 09, Dec 08)*
a) Healed vertebral lesion b) Grade IV pott's spine
c) Kyphotic angle > 60° d) Short duration
e) Acute onset

562) a,c,d,e 563) a 564) a 565) c 566) a 567) b 568) b 569) a 570) b 571) b 572) a 573) c 574) c 575) b
576) a 577) c 578) b 579) f 580) c 581) c 582) b 583) d 584) c 585) c 586)a,b,c

587. Poor prognostic factors in port's paraplegia -
a) Acute onset of paraplegia *(PGI Dec 03)*
b) Sudden progression of paraplegia
c) Motor paralysis alone
d) Long standing paraplegia
e) Paraplegia in children

588. True about TB spine is all except - *(PGI June 2K)*
a) Early paraplegia is good prognosis
b) Insidious onset paraplegia is good prognosis
c) Dorsolumbar spine is commonest site
d) It is commonest site for TB of bone in the body

589. False about Pott's spine - *(NEET/DNB Pattern)*
a) Gominonestatdorsoliimbarjunction
b) Always heals by chemotherapy
c) Back pain is an early symptom
d) There is disc space narrowing on x-ray

590. Cold abscess in chest wall is most common due to -
a) T.B spine b) T.B rib *(AIIMSDec 98)*
c) T.B. pelvis d) T.B pleura

591. The commonest infective lesion of the spine in India is- *(AIIMS 96)*
a) Pyogenic infection b) Fungal
c) T.B. d) Typhoid

592. Apparent lengthening is seen in which stage of TBBSpf *(NEET/DNB Pattern)*
a) Stage I b) Stage II
c) Stage III d) None

593. Wandering acetabulum is seen in - *(AIIMS 93)*
a) Fracture acetabulum b) Dislocation of femur
c) CDH d) Tubeculosis of hip

594. Triple deformity of knee is classically seen in - *(AIIMS Dec 94)*
a) Fracture patella b) Tuberculosis
c) Rheumatic arthritis d) Rheumatoid arthritis

595. Spina Ventosa results from - *(BIHAR 88, NEET/DNB Pattern)*
a) Sarcoidosis
b) Tuberculosis
c) Histiocytosis X syndrome
d) Both A + B but not C

596. Caries sicca is seen in - *(Rohatak 96, NEET/DNB Pattern)*
a) Hip b) Shoulder
c) Knee d) None of the above

597. Synovial fluid of low viscosity seen in-*(PGI June 05)*
a) Gout b) Septic arthritis
c) TB d) Osteoarthritis
e) Rheumatoid arthritis

598. The joint commonly involved in sphilitic arthritis is-
a) Hip b) Shoulder *(A193)*
c) Wrist d)Knee

599. Painless effusion in joints in Congenital syphilis are called - *(AI 95)*
a) Clutton's joint b) Charcot's joint
c) Barton's joint d) Chronic osteomyelitis

600. Clutton's joint are - *(WB 97)*
a) Syphilitic joints
b) End stage Tuberculous joints
c) Associated with trauma
d) Usually painful

601. Most common site of Actinomycosis amongst the following is - *(AI 99)*
a) Tibia b) Rib
c) Mandible d) Femur

602. In actinomycosis of the spine, the abscess usually erodes- *(AI 03)*
a) Intervertebral disc
b) Into the pleural cavity
c) Into the reteroperitoneal space
d) Towards the skin

BONETUMORS

603. Benign bone tumor is/are - *(PGI Dec 06)*
a) Osteoid osteoma b) Chondroblastoma
c) Endothelial hemangioma d) Osteoclastoma
e) Osteochondroma

604. Which of the following is not a benign bone tumor -
a) Osteoid osteoma b) Chondroma *(AI 96)*
c) Enchondroma d) Chordoma

605. Bone forming tumors are - *(PGIDec 03)*
a) Osteosarcoma b) Osteoid osteoma
c) Giant cell tumour d) Osteoblastoma
e) Chondrosarcoma

606. Benign bone tumors are - *(PGI Dec 03)*
a) Osteoid osteoma b) Osteochondroma
c) Chondroblastoma d) Chondromyxoid fibroma
e) Multiple myeloma

607. All of the following tumor are benign tumors except- *(AI98)*
a) Chondroma b) Chordoma
c) Osteochondroma d) Enchondroma

608. According to a newer hypothesis Ewings sarcoma arises from - *(AI99)*
a) Epiphysis b) Diaphysis
c) Medullary cavity d) Cortex

609. Classification system of bone tumors is -
a) Enneking b) Manchester
c) Edmonton d)TNM

610. According to Enneking system, not true regarding an active benign tumor is - *(AIIMSMay 11)*
a) Intracapsular
b) Margin of reactive bone
c) Thick rim of reactive bone
d) Extended curettage is treatment

611. Which of the following occurs in epiphysis-
a) Osteoclastoma b) Chondroblastoma
c) Osteochondroma d) Ewing's sarcoma
e) Chondrosarcoma *(PGI Dec 01)*

612. The following tumors are seen in metaphysis -
a) Osteomyelitis b) Osteosarcoma
c) Chondrosarcoma d) Osteoclastoma
e) Ewing's sarcoma

613. Bone tumors arising from diaphysis - *(PGIDec 2K)*
a) Chondrosarcoma b) Ewing's tumor
c) Osteoclastoma d) Chondroblastoma
e) Osteid osteoma

587)b,d 588)None 589)b 590)a 591)c 592)a 593)d 594)b,d 595)b 596)b 597)a,b,c,e 598)d 599)a 600)a 601)c 602)d 603)All 604)d 605)a,b,d 606)a,b,c,d 607)b 608)c 609)a 610)c 611)a,b 612)b,c 613)b,e

614. Most common benign tumor of the bone is-
a) Giant cell tumor *(AIIMS Dec. 95)*
b) Simple bone cyst
c) Osteochondroma
d) Enchondroma

615. Dense calcification is found in - *(AIIMSSep 96)*
a) Osteosarcoma b) Chondroblastoma
c) Synovial sarcoma d) Osteoblastoma

616. Himor with maximum bone matrix - -
a) Osteoid osteoma • *(NEET/DNB Pattern)*
b) Chondrosarcoma
c) Enchondroma
d) None

617. All the statements are true about exotosis, except -
a) It occurs at the growing end of bone *(AI 06)*
b) Growth continues after skeletal maturity
c) It is covered by cartilaginous cap
d) Malignant transformation may occur

618. All of the following are the causes of sudden increase in pain in osteochondroma, except- *(AIIMSMay 06)*
a) Sarcomatous change b) Fracture
c) Bursitis d) Degenerative changes

619. Which of the following statement is true about osteochondromatosis- *(PGIDec 01)*
a) Usually affects long bones, but can also occur in skull and pelvis
b) Usual site is metaphyseal region
c) Also known as multiple exostoses, diapheseal aclasis
d) It doesn't interfee with general body stature
e) Autosomal dominant in inheritance

620. True about osteochondromatosis - *(PGI June 08)*
a) Malignant
b) Manifest at adult
c) Knee is the most common size
d) Common in women

621. Babu a 19 yrs old male has a small circumscribed sclerotic swelling over diaphysis of femur; likely diagnosis is - *(AI 01, AIIMS Nov 01)*
a) Osteoclastoma b) Osteosarcoma
c) Ewing sarcoma d) Osteoid osteoma

622. True statements(s) regarding osteoid osteoma is/are - *(PGI Nov 09)*
a) Malignant
b) MC bone involvement-tibia
c) Local excision or curettage cure
d) Bone pain relieved by aspirin
e) X-ray shows : densly surrounding radiolucent lesion

623. A patient presents with pain in the thigh, relieved by aspirin. X-ray shows a radiolucent mass surrounded by sclerosis. Diagnosis is - *(NEET/DNB Pattern)*
a) Osteoma b) Osteoid osteoma
c) Osteoblastoma d) Osteoclastoma

624. Enchondroma commonly arises from - *(DPG10)*
a) Ribs b) Vertebra
c) Tibia d) Phalanges

625. Most common tumor in hand - *(AIIMS June 97)*
a) Exostosis b) Giant cell tumor
c) Enchondroma d) Synovial sarcoma

626. Epiphyseal tumor is - *(AI 07)*
a) Osteoclastoma b) Chondromyxoid fibroma
c) Osteosarcoma d) Ewing sarcoma

627. Which of the following is true about Giant cell tumor-
a) Usually presents asa lytic lesion with sclerotic rim
b) Alwasys beingn *(NEET/DNB Pattern)*
c) Epiphyseal origin
d) Seen in age less than 15 years

628. When size of osteoclastoma exceeds the size of metaphysis - *(PGI June 08)*
a) Tumor will be covered by cortex
b) Tumor will be covered by fibrous capsules
c) Covered by thin layered of bone
d) It is limited to metaphysis
e) Covered by periosteum

629. Osteoclastoma is treated with - *(PGI Dec 2K, June 01)*
a) Total bone replacement b) Excision
c) Curettage d) Arthrodesis
e) Chemotherapy

630. Soap bubble appearance at lower end of radius, the treatment of choice is - *(AIIMS June 98)*
a) Local excision b) Excision and bone grafting
c) Amputation d) Radiotherapy

631. Treatment of histologically confirmed giant cell tumour- *(PGI June 03)*
a) Excision, bone grafting and chemical cautery
b) Excision
c) Radiotherapy
d) Chemical excision

632. All are the predisposing factors of osteogenic sarcoma except- *(PGIDec 03)*
a) Paget's disease of bone b) Radiation
c) Viral infection d) Bone infarction

633. Osteogenic sarcoma arise from - *(PGI Dec 02)*
a) Epiphysis b) Metaphysis
c) Growth plate d) Epiphyseal cortex
e) Diaphysis

634. Most common site of osteogenic sarcoma is - *(AI 01, AIIMS June 2K)*
a) Femur, upper end b) Femur, lower end
c) Tibia, upper d) Tibia, lower end

635. Radiological features of the osteosarcoma -
a) New bone formation *(PGI June 06, 03)*
b) Sun ray appearance
c) Codman's triangle
d) Soap bubble appearance
e) Onion pool appearance

636. X-ray appearance of osteosarcoma are all except - *(NEET/DNB Pattern)*
a) Periosteal reaction b) Cod3tnan's triangle
c) Soap-bubble d) Sunray appearance

614)c 615)a,b,d 616)a 617)b 618)d 619)a,b,c,e 620)b 621)d 622)b,d,e 623)b 624)d 625)c 626)a
627) c 628)All 629)b,c,d 630) b 631)a,b,c,d 632) c 633) b 634) b 635)a,b,c 636) c

637. All of the following investigations are needed for the diagnosis of osteosarcoma, except - *(AI 07)*
a) MRI of femur b) Bone marrow biopsy
c) Bone scan d) CT chest

638. Which of the following bone tumour present secondaries in lung with pneumothorax - *(AIIMS Sept 96)*
a) Osteosarcoma b) Ewing sarcoma
c) Osteoclastoma d)Chondroblastoma

639. A pt presents with phneumothorax, Examination shows a swelling over knee. Chest x-ray shows lung nodules, give your most probable diagnosis - *(AIIMS Dec 95)*
a) Osteosarcoma b) Ewing sarcoma
c) Multiple myeloma d) Osteoclastoma

640. Management plan for osteogenic sarcoma of the lower end of femur must include - *(AI 04)*
a) Radiotherapy, amputation, chemotherapy
b) Surgery alone
c) Chemotherapy + Limb Salvage Surgery + Chemotherapy
d) Chemotherapy + Radiotherapy

641. 'T - 10 Protocol' for treatment of osteosarcoma includes all of the following except - *(AI 09)*
a) High dose methotrexate
b) Bleomycin, Cyclophosphamide, Doxorubicin (BCD)
c) Vincristine
d) Etoposide

642. Feature of parosteal osteosarcoma include -
a) It invades the medullary cavity *(PGI Dec 01)*
b) Easily diagnosed by X-ray
c) Prognosis is same as in other forms of osteosarcoma
d) En bloc resection/amputation is the treatment of choice
e) Seen most commonly in younger age groups

643. TVue about parosteal osteosarcoma - *(PGIMay 10)*
a) Same prognosis as medullary type
b) Never go to medulla
c) May involve medulla

644. 7 years Old child presents with a lesion in upper tibia. X-ray shows radiolucent area with Codman's triangle and Sunray appearance. Diagnosis is - *(AIIMS May 07, AI 07, NEET/DNB Pattern)*
a) Ewing sarcoma b) Osteosarcoma
c) Osteoid osteoma d) Chondrosarcoma

645. Sunburst appearance found in - *(PGI Dec 07)*
a) Osteosarcoma b) Ewings sarcoma
c) Osteoclastoma d) Osteoid osteoma
e) Chondrosarcoma

646. Radiological investigation shows sun ray appearance; diagnosis is - *(AIIMD Dec 95)*
a) Osteosarcoma b) GCT
c) Osteomyelitis d) Ewing's sarcoma

647. TVue regarding osteosarcoma is - *(AIIMS June 2K)*
a) Occurs because of proliferation of osteoclasts
b) Sunray appearance in X-ray indicates new bone formation
c) Affects mainly males in 5th or 6th decade
d) Lymphtic metastasis is most common

648. Which of the following malignant tumors is radioresistant -
a) Ewing's sarcoma b) Retinoblastoma
c) Osteosarcoma d) Neuroblastoma

649. TVue about osteosarcoma - *(PGI Nov 09)*
a) Involves epiphysis of long bones
b) Most commonly involve knee & distal femur
c) Spread to lung through hematogenous route
d) Exclusively found in adolescent & early adult life
e) X-ray : sunray appearance

650. A child 10 yrs of age presents with a mass on his left thigh. The mass seems to be arising from diaphysis of femur, and involving the soft tissue of thigh. The child is having fever also. Give your most probable diagnosis - *(AIIMS Nov 2K)*
a) Osteosarcoma
b) Ewing's sarcoma
c) Chondrosarcoma
d) Malignant fibrous histiocytoma

651. A 12 year old girl complains of pain persisting in his leg for several weeks with a low grade fever. A radiograph reveals a mass in the diaphyseal region of the left femur with overlying cortical erosion and soft tissue extension. A biopsy of the lesion shows numerous small round cells, rich in PAS positive diastase sensitive granules. The most likely histological diagnosis is - *(AIIMS May 03)*
a) Osteogenic sarcoma b) Osteoblastoma
c) Ewing's sarcoma d) Chondroblastoma

652. A 15-year-old boy is injured while playing cricket. X-rays of the leg rule out of a possible fracture. The radiologist reports the boy has an evidence of aggressive bone tumor with both bone destruction and soft tissue mass. The bone biopsy reveals a bone cancer with neural differentiation. Which of the following is the most likely diagnosis? *(AIIMSMay 06)*
a) Chondrablastoma b) Ewing's sarcoma
c) Neuroblastoma d) Osteosarcoma

653. True about Ewing's sarcoma is all except -
a) 5% cases reveals t (11-22) *(PGI June 2K)*
b) Arise from medullary cavity of tubular bone
c) Arise from diaphysis
d) N-myc chromosome

654. Onion peel appearance in X-ray suggests-(DPG *Feb. 09)*
a) Osteogenic sarcoma b) Ewing's sarcoma
c) Osteoclastoma d) Chondrosarcoma

655. A young girl presented with swelling of right thigh, with history of trauma 2 months back. Now she presents with swelling at mid-shaft of femur & low grade fever. ESR is mildly raised. X-ray shows a laminated periosteal reaction. Next line of investigation would be - *(AIIMS Dec 09)*
a) MRI b) Biopsy
c) Bone scan d) Blood count & CRP

637)b 638)a>b 639)a>b 640)c 641)d 642)None 643)c 644)b 645)a,b 646)a 647)b 648)c 649)b,c,e 650)b 651)c 652)b 653)b,c 654)b 655)a

656. An eight years old boy presents with progressive swelling around the knee joint of two months duration following mild trauma. Local examination reveals an irregular bony swelling over the upper end of tibia, with raised local temperature and of variable consistency and ill defined margins. The most likely diagnosis is - *(DPG Feb. 09)*
a) Giant cell tumour b) Ewing's sarcoma
c) Osteogenic sarcoma d) Secondary metastasis

657. Which of the following is associated with poor prognosis in Ewings sarcoma? *(A1IMSNov 10)*
a) B2 microglobulin b) F ever
c) Thrombocytosis d) Young age

658. Which one of the following bone tumors typically affects the epiphysis of a long *bone-(AUMS May 05,02A12K)*
a) Osteosarcoma b) Ewing's sarcoma
c) Chondroblastoma d)Chondromyxoid fibroma

659. A15 year-old boy presented with painful swelling over the left shoulder. Radiograph of the shoulder showed an osteolytic area with stippled calcification over the proximal humeral epiphysis. Biopsy of the lesion revealed an immature fibrous matrix with scattered giant cell. Which of the followng is the most likely diagnosis - . *(AIIMS Nov 04)*
a) Gaint cell tumor b) Chondroblastoma
c) Osteosarcoma d) Chondromyxoid fibroma

660. Variant of Giant cell tumor is? *(AIIMS May 11)*
a) Ossifying fibroma b) Non ossifying fibroma
c) Osteosarcoma d) Chondroblastoma

661. A 45 yrs male presented with an expansile lesion in the centre of femoral metaphysis. The lesion shows endosteal scalloping & punctuate calcifications. Most likely diagnosis is - *(AI 02)*
a) Osteosarcoma b) Chondrosarcoma
c) Simple bone cyst d) Fibrous Dysplasia

662. Characteristic radiological feature of fibrous dysplasia - *(AIIMS May 10)*
a) Thickened bone matrix b) Cortical erosion
c) Ground glass appearance d) Bone enlargement

663. Most common site of admantinoma of the long bones is - *(AIIMSMay 01)*
a) Femur b)Ulna
c) Tibia d) Fibula

664. True about Ameloblastoma- *(PGIDec 06)*
a) Cystic lesion b) Rapidly growing
c) Malignant disease d) MC site is Tibia
e) Presented in children

665. A 33-year-old man presented with a slowly progressive swelling in the middle l/3rd of his right tibia. X-rays examination revealed multiple sharply demarcated radiolucent lesions separated by areas of dense and sclerotic bone. Microscopic examination of a biopsy specimen revealed island of epithelial cells in a fibrous stroma. Which of the following is the most probable diagnosis? *(AIIMSMay 04)*
a) Adamantinoma b) Osteofibrous dysplasia
c) Osteosarcoma d) Fibrous cortical defect

666. **Most common site of origin of adamantinoma is-**
a) Mandible near molar tooth *(AIIMS Dec 01)*
b) Middle alveolar margins
c) Hard palate
d) Mandible near symphisis menti

667. Most common lesion of the mandible *\s-(AHMSNov 01)*
a) Ameloblastoma b) Squamous cell ca
c) Osteosarcoma d) Osteoclastoma

668. **A patient with pain in back. Lab investigation shows elevated ESR. X-ray skull shows multiple punched out lytic lesions. Most imp. Investigation to be done is -** *(AIIMS June 2K)*
a) Serum acid phosphatase
b) CT head with contrast
c) Whole body scan
d) Serum electrophoresis

669. Lytic bevelled lesions are seen in skull X-ray, most likely cause is - *(AIIMS June 2K)*
a) Multiple myeloma b) Eosinophilic granuloma
c) Metastasis d) Osteosarcoma

METASTATIC BONE DISEASE

670. Most common cause of bone malignancy- *(PGIJune*
a) Secondaries b) Osteosarcoma *08)*
c) Ewing's sarcoma d) Osteoclastoma

671. Three most common cancers metastasizing to bone- *(PGIDec 07)*
a) Kidney b) Thyroid
c) Breast d) Prostate
e) Lung

672. Bone metastases is common in which of the folio wing-
a) Nephroblastoma b) Neuroblastoma *(PGIDec 05)*
c) ROC d) Clear cell sarcoma

673. Metastases least common in - *(PGINov 10, Dec 07)*
a) Skull
b) Pelvis
c) Vertebrae
d) Proximal part of long bones of the upper limb
e) Small bones of the hand

674. Metastatic tumor least common in - *(PGI June 04)*
a) Pelvis b)Ribs
c) Small bone of lower limb d) Vertebra
e) Skull

675. Metastasis not found in - *(NEET/DNB Pattern)*
a) Femur b) Humerus
c) Fibula d) Spine

676. Which of the following usually produces osteoblastic secondaries - *(AIIMS May 09, 04)*
a) Carcinoma lung
b) Carcinoma breast
c) Carcinoma urinary bladder
d) Carcinoma prostate

677. Expansile lytic osseous metastases are characteristics of primary malignancy of -
a) Kidney b) Bronchus
c) Breast d) Prostate

656) c 657) b 658) c 659) b 660) d 661) b 662) c 663) c 664) a,e 665) a 666) a 667) a 668) d 669) b 670) a 671)c,d,e 672) b,c 673) e 674) c 675) c 676) d 677) a

678. A patient developed paraplegia. On routine examination and X-ray it was found that there are osteoblastic lesion in his spine. Most probable diagnosis is - *(AIIMS June 2K)*
a) Carcinoma thyroid b) Ca. Prostate
c) Breast Ca. d) Pancreatic Ca.

679. Which soft tissue sarcoma commonly gives to bone secondary- *(PGIJune08)*
a) Fibrosarcoma b) Liposarcoma
c) Osteosarcoma d) Neurofibroma
e) Synovial sarcoma

680. True about Bone metastasis - *(PGI Nov 09)*
a) 5% bone metastasis are symptomatic
b) Higher serum levels of alkaline phosphatase
c) Most common secondary in female is breast
d) Prostate produce osteosclerotic lesion

681. A 60 yrs old male has bone pain, vertebral collapse, fracture pelvis, the probable diagnosis is - *(AIIMS*
a) Multiple myeloma b) Secondaries *Sept 96)*
c) IB d)Lung

682. Solitary bone cyst is most common in the -
a) Upper end of humerus *(AI04, AIIMS 95)*
b) Lower end of humerus
c) Upper end of fibula
d) Lower end of femur

683. Histological features of unicameral bone cysts are-
a) Blood filled cystic spaces *(PGIDec 02)*
b) Endothelial cell lining
c) Fibrous tissue with cystic spaces
d) Pseudocyst
e) Single cavity with connective tissue lining

684. Histology of unicameral bone cyst - *(PGI June 04)*
a) Blood filled cavities b) Endothelial lining
c) Giant cells d) Bone formation

685. True about simple bone cyst - *(PGI Dec 05)*
a) Seen in young adult
b) Present as well demarcated radiolucent lesions
c) Shaggy fibrous layering
d) Pathological fracture seen
e) Commonest site is diaphysis

686. True about aneurysmal bone cyst - *(PGI Dec 07)*
a) Endothelial lining
b) Blood filled spaces
c) Found in upper end of tibia
d) Pulsatile
e) Seen in older age

687. Secondary aneurysmal bone cyst arises in -
a) Osteoclastoma *(PGIJune 07)*
b) Chondroblastoma
c) Fibrous dysplasia

688. Differential diagnosis of simple bone cyst are - *(PGI Dec 03)*
a) Giant cell tumor b) Non ossifying fibroma
c) Enchondroma d) Fibrous dysplasia
e) Eosinophilic granuloma

689. Which of the following conditions is least likely to present as an eccentric osteolytic lesion -
a) Aneurysmal bone cyst b) Giant cell tumor
c) Fibrous cortical defect d) Simple bone cyst

690. A11 year old boy presented with the complaints of pain in the right arm near the shoulder. X-ray examination revealed an expansile lytic lesion in the upper third of humerus. The most likely diagnosis is - *(AIIMS May 02)*
a) Giant cell tumor b) Unicameral bone cyst
c) Osteochondroma d) Parosteal osteosarcoma

691. Babloo a 10 year old boy presents with # of humerus. X-ray reveals a lytic lesion at the upper end. likely condition is - *(AI 01, AIIMS Nov 99)*
a) Unicameral bone cyst b) Osteosarcoma
c) Osteoclastoma d) Aneurysmal bone cyst

692. Ramu, an 8-year old boy presented with pain in the arm. On x-ray his upper end of humerus demonstrates an expansile lesion in the metaphysis with breech of the overlying cortex. Most likely diangosis is - *(AIIMS May 02)*
a) Aneurysmal bonecystb) Unicameral bone cyst
c) Chondroblastomad) Osteoclastoma

693. A classical expansile lytic lesion in the transverse process of a vertebra is seen in - *(AI 03, PGI Dec 04)*
a) Osteosarcoma b) Aneurysmal bone cyst
c) Osteoblastoma d) Metastasis

694. An 8 year old boy presents with a gradually progressing swelling and pain since 6 months over the upper tibia. On x-ray, there is a lytic lesion with sclerotic margins in the upper tibial metaphysis. The diagnsis is - *(AIIMS May 01)*
a) Osteogenic sarcomab) Osteoclastoma
c) Brodie's abscessd) Ewing's sarcoma

695. True about bone tumor is - *(AIIMS Nov 99)*
a) Multiple myeloma-more than 55 years age and above
b) Osteogenic sarcoma-fourth decade
c) Chondrosarcoma-first decade
d) Osteoclastoma-fifth decade

696. In a young boy, x-ray of upper end of the tibia shows a lytic lesion. The least likely diagnosis *is-(AIIMS*
a) Giant cell tumor b) Osteosarcoma *Dec94)*
c) Solitary bone cystd) Tuberculosis

697. 13, years old boy, LEAST common cause of proximal lytic lesion of head of femur is - *(AIIMS June 97)*
a) Plasmacytoma b) Metastasis
c) Histiocytosis d) Bone tumour

698. The differential diagnosis of lesion, histologically resembling giant cell tumor in the small bones of the hands or feet, includes all of the following except
a) Aneurysmal bone cyst *(AIIMS May 06)*
b) Fibrosarcoma
c) Osteosarcoma
d) Hyperparathyroidism

678)b 679)b,e 680)b,c,d 681)d>a 682)a 683)c,e 684)c,d 685)b,c,d 686)b,c 687)a,b,c 688)All 689)d
690) b 691)a 692)a 693)b 694)c 695)a 696)a 697)a 698) b

699. All of the following statements about synovial cell sarcoma, are true, except - *(AI10)*
a) Originate from synovial lining
b) Occur more often at extraarticular sites
c) Usually seen in patients less than 50 years of age
c) Knee and foot are common sites involved

700. IVue about hemangioma of bone - *(PGI Nov 10)*
a) Mostly symptomatic
b) Peak incidence in 5th decade
c) Constitute 10-20% of total bone tumor
d) Overgrowth of bone occurs
e) hematogenous spread

701. Striated vertebra is seen in - *(NEET/DNB Pattern)*
a) TB spine ' :; ^6) Haemangioma
6) Chordoma d) Metastasis ^

702. Which of the following statements is true regarding hemangioma of the bone - *(PGI Dec 01)*
a) Occurs common in skull bones
b) Requires observation as it is premalignant
c) Hamartomous in origin
d) Forms 10-12% of the bone tumors
e) Local gigantism occurs when it occurs in an extremity

703. IVue about non-ossifying fibroma of bone -
a) Present until 3rd & 4th decade *(PGI June 03)*
b) Eccentric
c) Prominent sclerotic margin
d) Histologically giant cell with areolar tissue
e) Metaphyseal lesion

704. IVue about non-ossifying fibroma - *(PGIDec 02)*
a) Prominent at 2nd and 4th decade
b) Prominent sclerotic margin
c) Fibrous tissue with areolar tissue
d) Centrally located
e) Risk of malignancy

705. Chordoma commonly involves - *(PGI June 02)*
a) Dorsal spine b) Clivus
c) Lumbar spine d) Sacrum
e) Cervical spine

706. Chordoma can occur over all the following sites, except- *(AI2K)*
a) Rib b) Clivus
c) Sacrum d) Vertebral body

707. Which of the following is a pulsatile tumor? *(AIIMSMaylO)*
a) Osteosarcoma b) Chondrosarcoma
c) Ewing's sarcoma d) Osteoclastoma

708. Most common soft tissue tumor in a child -*(PGI June*
a) Rhabdomyosarcoma b) Histiocytoma *2K)*
c) Fibrosarcoma d) Liposarcoma

709. Regional lymph nodes are involved in which of these - *(AIIMS Dec 95)*
a) Ewing sarcoma b) Osteosarcoma
c) Adamantinoma d) Synovial cell sarcoma

710. Non neoplastic lesions simulating bone tumor are all except? *(AIIMS May 11)*
a) Fibrous dysplasia b) Bone island
c) Bone infarct d) Hurler syndrome

IMPORTANT COMPLICATIONS IN ORTHOPEDICS

711. Stellate ganglion block is useful ṁ-*(AIIMSNov 99)*
a) Sudeck osteodystrophy
b) Compound palmar ganglion
c) Tenosynovitis
d) Osteoarthritis of first CMC joint

712. Sudeck's atrophy is associated with - *(Delhi 99)*
a) Osteoporosisb) Osteophyte formation
c) Osteopenia d) Osteochondritis

713. Sudeck's dystrophy symptoms are all except - *(NEET/DNB Pattern)*
a) Pain b) Increased bone density
c) Sweating d) Stiffness

714. A lady presents with swelling of hands with shiny skin. She has a history of fracture radius and kept on POP cast for 4 weeks after which she develops this. Give the most likely diagnosis - *(ARMS Nov 00)*
a) Myositis ossification
b) Rupture of external pollicis longus tendon
c) Reflex sympathetic dystrophy
d) Malunion

715. A 50 year oldlady sprained her ankle 2 months back from which she made a steady recovery. 2 months after the injury she gradually developed severe pain in her right ankle with significant limitation of ankle movement. Clinical examination reveals edema and shiny skin.What is the likely diagnosis?
a) Fibromyalgia *(AI 11)*
b) Complex Regional pain syndrome Typel (CRPSI)
c) Complex Regional pain syndrome Type II (CRPSII) .
d) Peripheral Neuropathy

716. Heterotopic ossification occurs in - *(NEET/DNB*
a) Bone b) Joint *Pattern)*
c) Soft tissue -v-~ d)None ,V

717. Which of the following is not true about Myositis ossificatn? *(PGI 00)*
a) Associated with muscle tendon rupture
b) Inflammation around the ruptured muscle deposition of hydroxyapatite crystals with
c) Common in supracondylar fracture
d) Ossification of musculo-periosteal haematoma

718. Iii myositis ossificans mature bone is seen -
a) At periphery *(MAHE 04, AMU 03)*
b) In center
c) Whole muscle mass
d) In the joint capsule

719. Radiological feature differentiating myositis ossificans from bone tumor is - *(Nimhans 03,*
a) Peripheral ossification *SGPGI99)*
b) Central lucency
c) Discontinuity with the bone
d) None

699)a 700)b,d 701)b 702)a,c,e 703)b,c,d,e 704)b,c 705)b,d 706)a 707)d 708)a 709)d 710)d 711)a 712)a,c 713)b 714)c 715)b 716)c 717)a 718)a 719)a,b,c

720. 16 year old male presents with extensive heterotropic ossification over the neck, back & shoulders and decreased chest movements. He gives history of progressive immobility since the age of 3 years. Which of the following statement about his affecting condition is not true ? *(AI08)*
a) They have a near normal life expectancy
b) They are predisposed to Pneumonia
c) They have short hallux
d) Increased expression of BMP4 gene is seen

721. A person of 60 years age is suffering from myositis ossificans progressive. The usual cause of death would be - *(NIMHANS 01, AIMS 00)*
a) Nutritional deficiency b) Bed sore
c) Lung disease d) Septicemia

722. All are true regarding myositis ossificans progressive except - *(PGI03)*
a) Usually involve childs
b) Progressive form of normal myositis
c) Respiratory problems
d) Ankylosis
e) Form normal bone

723. Commonest site of fracture leading to fat embolism is - *(AI 99)*
a) Tibia# b)Femur#
c) Humerus # d) Ulna#

724. Factors favoring fat embolism in trauma patient - *(PGI Dec 0 7)*
a) Diabetes Mellitus b) Mobility of joint
c) Resp. failure d) Hypvolemic shock

725. True about fat embolism - *(PGI June 04)*
a) Seen one week after injury
b) Patechie
c) Bradycardia
d) Tachycardia
e) Tlncidence in multiple #

726. Fat embolism is characterized by - *(PGI Dec 04)*
a) Petecheal haemorrhages
b) Closed fractures of femur
c) Aggregation of chylomicrons
d) Fall in the haemoglobin
c) Fat globules in sputum & urine

727. True about Posttraumatic fat embolism syndrome -
a) Fracture mobility is a risk factor *(PGI Nov. 10,*
b) Associated diabetes pose a risk *June 09)*
c) Bradycardia occurs
d) Thrombocytopenia
e) OnABGPaO_2<60mmHgonFIO_2<0.4

728. The management of fat embolism includes all of the following except - *(AI 04)*
a) Oxygen
b) Heparinization
c) Low Molecular weight dextran
d) Pulmonary Emblectomy

729. A person with multiple injuries develops fever, restlessness, tachycardia, tachypnea and periumbilical rash. The likely diagnosis is -
a) Air embolism *(AIIMSNov08)*
b) Fat embolism
c) Pulmonary embolism
d) Bacterial pneumonitis

730. Ramesh singh, a 40 yrs old man, was admitted with fracture shaft femur following a road traffic accident. He was tachypnoeic, and had conjunctival petechiae.Most likely diagnosis is - *(AI 02)*
a) Pulomary embolism b) Sepsis syndrome
c) Fat embolism d) Hemothorex

731. A 30 year old man had road traffic accident and sustained fracture of femur. Two days later he developed sudden breathlessness. The most probable cause can be - *(AI 05)*
a) Pneumonia b) Congestive heart failure
c) Bronchial asthma d) Fat embolism

732. Clincial feature of fat embolism includes all excepts - *(PGI Nov. 10)*
a) Tachypnoea
b) Systmic hypoxia may occur
c) Fat globules in urine are diagnostic
d) Manifests after several days of trauma
e) Petechiae in the anterior chest wall

733. A 64 year old hypertensive obsese female was undergoing surgery for fracture femur under general anaesthesia. Intra-operatively her end-tidal carbon dioxide decreased to 20 from 40 mm of Hg, followed by hypotension and oxygen saturation of 85%. What could be the most probable cause? *(DPG 09, AI 03)*
a) Fat embolism b) Hypovolemia
c) Bronchospasm d) Myocardial infarction

734. True about fat embolism - *(PGIDec 07)*
a) Petechia in the anterior chest wall
b) Bradycardia
c) Fat globules in urine
d) Occurs after 1st week of polytrauma
e) Thrmbocytopenia

735. Which of the following is not a component of the crush syndrome - *(AIIMSMay 02)*
a) Myohemoglobinuria
b) Massive crushing of muscles
c) Acute tubular necrosis
d) Bleeding diathesis

736. The first sign of Volkman's ischemia is -
a) Paresthesia *(PGI Dec 2k)*
b) Pain on passive extension of fingers
c) Pain on active extension of fingers
d) Swelling of fingers

737. In posterior compartment syndrome which passive movement causes pain ? *(AIIMS Nov 08)*
a) Dorsifiexion of foot b) Foot inversion
c) Toe dorsifiexion d) Toe planter flexion

720) a 721) c 722) b 723) b 724) a,d 725)b,d,e 726) All 727)a,b,d,e 728) d 729) b 730) c 731)d 732) d
733) a 734)a,c,e 735) d 736) b 737) a

738. A patient presenting with Volkmann's Ischaemia all of the following are done except - *(PGI00)*
a) Split open the plaster of Paris cast and bandage
b) Decompression by fasciotomy
c) Exploration
d) Sympathetic ganglion blockade

739. All are correct regarding compartment syndrome except- *(PGI 05)*
a) Pulse is a reliable indicator
b) Pain on passive stretching
c) Interstitial pressure > capillary pressure
d) Hyperesthesia
e) Fasciotomy is the earliest treatment

740. Most common muscle involved in volkmann's ischemic contracture is - *(AIIMSDec 98)*
a) Flexor- pollicis longus
b) Flexor- digitorum pro funds
c) Flexor-indicis
d) Abductor pollicis

741. The most common nerve involved in Volkamann's ischaemic contracture of forearm includes - *(AI99)*
a) Radial b) Ulnar
c) Median d) Posterior nterosseous

742. Which of the following does not involve nerve damage - *(AIIMS Dec 94)*
a) Guillian Barre syndrome b) Erb's paralysis
c) Volkmann's paralysis d) Neurotmesis

743. The most common cause of Volkmann's ischaemic contracture (V.I.C) in a child is - *(PGI 00, AIIMS 99)*
a) Intercondylar fracture of humerus *(NEET/DNB*
b) Fracture both bone of forearm *Pattern)*
c) Fracture lateral condyle of humerus
d) Supracondylar fracture of humerus

744. Vascular injury during childhood is common in fracture of - *(AIIMS May 94)*
a) Lower end of humerus b) Lower end of radius
c) Upper end of femur d) Upper end of radius

BONE DYSPLASIA AND SOFT TISSUE AFFECTION

745. "Trident hand" seen in - *(AIIMS Dec 98)*
a) Achondroplasiab) Mucopolysaccharidosis
c) Diphyseal achlasia d) Cleido- cranial dystosis

746. The features of Achondroplasia inlcude all, except - *(UP 02)*
a) Defective head b) Mental retardation
c) Autosomal recessive d) Familial

747. Mode of inheritance for Achondroplasia is - *(PGI 96)*
a) Autosomal dominant b) Autosomal recessive
c) X-linked dominant d) X- linked recessive

748. Absent lateral l/3rd of clavicle is seen in -
a) Hyperparathyroidism *(PGI Dec 02)*
b) Turner's syndrome
c) Fibrous dysplasia
d) Cleidocranial dysostosis

749. Osteogenesis imperfecta is characterized by -
a) Blue sclera *(PGI Dec 04, 03)*
b) Also known as brittle bone disease
c) Collagen defect
d) AAV otosclerosis
e) Autosomal dominant

750. All are features of Osteogenesis imperfecta except- *(AIIMS June 97)*
a) Blue sclera b) Multiple #s
c) Cataract d) Hearing loss

751. Not true about Osteogenesis imperfecta - *(UP 00)*
a) Impaired healing of fracture
b) Deafness
c) Laxity of joints
d) Fragile fracture

752. Osteogenesis imperfecta is defect in - *(PGI 98)*
a) Bone b)Calcification
c) Cartilage d) Collagen

753. Prenatal determination of osteogenesis imperfecta is done by - *(PGI June 07)*
a) Acid phosphatase
b) Alkaline phosphatase
c) Abnormal Pro-a chain

754. All are seen in osteogenesis imperfecta except-
a) Blue sclera *(AI 98)*
b) Bilateral Hip dislocation
c) Lax ligament
d) Osteppprosis..... __..... ....

755. Blue sclera is feature of- *(NEET/DNB Pattern)*
a) Osteogenesis imperfecta b) Osteopetrosis
c) Cleidocranial dysostosis d) Achendroplasia

756. Raju, a 10 yrs old child, presents with predisposition to fractures, anemia, hepatosplenomegaly and a diffusely increased radiographic density of bones. The most likely diagnosis is - *(AI 02)*
a) Osteogensis imperfecta b) Pyknodysostosis
c) Myelofibrosis d) Osteopetrosis

757. Not seen in osteopetrosis - *(AJIMSMay 08)*
a) Compression of cranial nerve
b) Osteomyelitis of mandible
c) Pancytopenia
d) Delayed healing of bone

758. Albers schonberg disease is - *(PGI June 2k, 98)*
a) Osteopetrosis b) Osteoporosis
c) Osteochondritis d) Osteomalacia

759. Housemaids knee is bursitis of - *(AIIMS May 95, NEET/DNB Pattern)*
a) Prepatellar bursa b) Infrapatellar bursa
c) Olecranon d) Ischial bursa

760. Site of TB bursitis - *(PGIDec 07, June 03)*
a) Prepatellar b) Subacromial
c) Subdeltoid d) Subpatellar
e) Trocanteric

761. Usual site of TB bursitis- *(DPGFeb. 09)*
a) Prepatellar b) Subacromial
c) Subdeltoid d) Trochanteric

738) d 739) a,d 740) c 741) c 742) c 743) d 744) a 745) a 746)b,c 747) a 748) d 749)All 750) c 751) a 752)d>a 753)c 754)b 755)a 756)d 757)None>d 758)a 759)a 760)a,b,c,e 761)d

762. Progressive stiffening of a joint is seen in -
a) Periarthritis of shoulder *(DPGFeb. 09)*
b) Osteochondritis
c) Gount
d) Ankylosis

763. Painful are syndrome is seen in all except -
a) Complete tear of supraspinatus *(AIIMS Nov 01)*
b) # greater tuberosity
c) Subacromial bursitis
d) Supraspinatus tendinitis

764. 'Tennis elbow', is characterized by - *(DPG 09)*
a) Tenderness over the medial epicondyle
b) Tendinits of common extensor origin
c) Tendinitis of common flexor origin
d) Painful flexion and extension

765. A 40 year old man was repairing his wooden shed on Sunday morning. By afternoon, he felt that the hammer was becoming heavier and heavier. He felt pain in lateral side of elbow and also found that squeezing water out of sponge hurt his elbow. Which of the muscles are most likely involved-
a) Biceps brachii and supinator *(ARMS May 02)*
b) Flexor digitorum superficialis
c) Extensor carpi radialis longus and brevis
d) Triceps brachii and anconeous

766. Pain & tenderness over the lateral condyle of humerus with a painful dorsiflexion of the wrist is indicative of - *(ARMS Nov 05)*
a) Golfer's Elbow b) Tennis Elbow
c) Pitcher's Elbow d) Cricket Elbow

767. DeQuervain's disease classically affects the -
a) Flexor pollicis longus and brevis
b) Extensor carpi radialis and extensor pollicis longus
c) Abductor pollicis longus and brevis
d) Extensor pollicis brevis and abductor pollicis longus

768. About De Quervain's disease, which of the following is correct - *(PG1 Dec 08)*
a) Pain after straining at thumb base
b) Involve extensor pollicis longus
c) Tense mass may visible
d) Steriod is used to relieve symptoms
e) Involve Abductor pollicis longus

769. In trigger finger the level of tendon sheath constriction is found at the level of - *(ARMS May 05, ARMS 96)*
a) Middle phalanx
b) Proximal interphalangeal joint
c) Proximal phalanx
d) Metacarpophalangeal joint

770. Trigger finger occurs in - *(PGI98)*
a) Rheumatoid athritis b) Trauma
c) Osteosarcoma d) Osteoarthritis

771. Most common cause of trigger finger-*(NEET/DNB*
. a) Trauma b) Alcohol; ;*Pattern)*
c) Smoking d) Drug abuse

772. Kanavel's sign is seen in - *(ARMS Dec 07)*
a) Tenosynovitis
b) Trigger finger
c) Dupuytrens contracture
d) Carpal tunnel syndrome

773. Cause of trigger finger is - *(ARMS Sept 96)*
a) Thickening of the fibrous tendon sheath
b) Following local trauma
c) Unaccustomed activity
d) All of the above

774. The following structure is involved in Dupuytreii's contracture - r *(AI94, NEET/DNB Pattern)*
a) Thickening of the palmar fasbiik-^^^;;};'
b) Thickening of the dor sal fascia.
e) Contracture of the flexor tendons
J i d) fost bums contracture ' *' * ; ; '

775. Dupuytren's contracture occur in - *(PGIDec 08)*
a) Diabetes Mellitus b) Alcohol
c) Epilepsy d) Rheumatoid Arthritis
e) Chronic Pulmonary disease

776. All are true of Dupuytren's contractrue except -
a) Usually 4th finger is involved *(PGI 99)*
b) Bilateral disease is rare
c) Surgical release is useful
d) May be associated with Pyronie disease

777. True about Dupuytren's contracture - *(PGIMay 10)*
a) A/w peyronie's disease
b) First affect index finger
c) Nodule formation & thickening of palmar fascia
d) Amputation may be required

778. A-65 years alcoholic suffering from diabetes has a flexion deformity at the right little finger over the metacarpophalangeal joint of around 15 degree. The ideal management for him would be- *(AIIMS Nov 11)*
a) Observation
b) Percutaneous fasciotomy
c) Subtotal fasciectomy
d) Total fasciectomy

779. -Felon ^
a) Infection of nail fold *(NEET/DNB Pattern)*
b) Infection of ulnar bursa v.•
c) Infection of pulp space
d) Infection of DIP joint

780. Felon most common complication -
a) Osteomyelitis *(NEET/DNBPattern)*
/ *l* b) Subungual hematoma - ■■ "
' -^-c) Infectivearthntis y-"1 ../4
d)None ... V - • * f ' v-'X- .

781. Melon seed bodies are found in which of the following condition? • *?'■ "' *(NEET/DNBPattern)*
a) Chondrocalcinosis
b) Gout ■;vvV;; * /' "■
c) Tuberculous tenosynovitis
• ' ■ ' ' d) Osteoarthritis of the wrist

762) a 763) a 764)b 765)c 766)b 767)d 768)a,c,d,e 769)d 770)a,b 771)a 772)a 773)d 774)a
775) a,b,c,e 776) b 777)a,c,d 778) a 779) c 780) a 781) c

782. True about ganglion - *(PGIDec 03)*
a) Common in volar aspect
b) Seen adjacent to tendon sheath
c) Comunicates with joints cavity and tendon sheath
d) It is Unilocular

783. The primary pathology in Athletic Pubalgia is -
a) Abdominal muscle strain *(Al 09)*
b) Rectus femoris strain
c) Gluteus medius strain
d) Hamstring strain

784. Hallux valgus is associated with all except -
a) An exostosis on the medial side of the head of the first metatarsal *(PGI Dec 00)*
b) A bunion
c) Osteoarthritis of the metatarsophalangeal joint
d) Over- riding or under- riding of the second toe by the third

MANAGEMENT IN ORTHOPEDICS

785. Recurrent dislocations are least commonly seen in-
a) Ankle b) Hip *(AI09)*
c) Shoulder d) Patella

786. Recurrent dislocation is least common in -
a) Shoulder b) Knee *(Delhi 94)*
c) Patella d)None

787. Aviator fracture is- *(COMED 09)*
a) Fracture neck of talus b) Fracturescaphoid
c) Fracture calcaneum d) Fracture5th metatarsal

788. True about eponymous fractures is/are -
a) Montegia # is # of the proximal third of ulna with radial head dislocation *(PGI Nov 09)*
b) Galeazzi # is # of the distal third of the radius with dislocation of the distal radio-ulnar joint
c) Colles # is # at cortico-cancellous junction of the distal-end of redius with dorsal tilt
d) Potts # is Trimalleolar ankle #
e) Bennet's # is Oblique intra-articular # of the base of the Ist metacarpal

789. Jefferson fracture is - *(AIIMS May 95)*
a) Fracture of atlas
b) Fracture of axis
c) Fracture of spinous process of C_7
d) Fracture of any cervical vertebra

790. Jefferson's fracture is -*(AI99, NEET/DNB Pattern)*
a) C, b)C_2
c) C_2C, d)C_2C,

791. Which of the following condition should be given most priority in case of fracture - *(PGIDec 08)*
a) Open fracture b) Dislocated fractrue
c) Vascular injury d) Malunited fracture
e) Compartment syndrome

792. The correct order of priorities in the initial management of head injury is - *(AI 92, 99)*
a) Airway, Breathing, Circulation, treatment of extra cranial injuries
b) Treatment of extracranial injuries, Airway, Breathing, Circulation
c) Circulation, airway, Breathing, treatment of extra cranial injuries
d) Airway, circulation, breathing, treatment of extra cranial injuries

793. Severely injured patient with spinal fracture and unconsciousness first thing to be done is -
a) GCS scoring *(AIIMS 95)*
b) Spinal stabilization by cervical collar
c) Mannitol drip to decrease ICT
d) Airway maintenance

794. Polytrauma patient with open bleeding wound of right thigh should be managed first of all by -
a) Tourniquet application *(PGI 94, Jipmer 99)*
b) Tight bandage application
c) Airway maintenance
d) Blood transfusion

795. Long bone fracture fixation done with -*(PGIDec 06)*
a) Intramedullary nail b) Compression plate
c) External fixation d) Screw
e) Tension band wiring

796. All of the following are indications for open reduction and internal fixation of fractures except - *(CSE 2K)*
a) Compound fracture
b) Unsatisfactory closed reduction
c) Multiple trauma
d) Intra-articular fracture

797. The contraindication to internal fixation-
a) Physeal injury *(NEET/DNB Pattern)*
b) Active infection
c) Intraarticular fracture
d) Fracture dislocation

798. Which fracture in children requires open reduction-
a) Fracture tibial epiphysis *(AIIMS 91)*
b) Fracture shaft of femur
c) Fracture both bones forearm
d) Fracture femoral condyle

799. Action of intramedullary ^{6}K' nail is - *(AI 96)*
a) Two-point fixation b) Three-point fixation
c) Compression d) Weight concentration

800. Usual treatment (s) of fracture involving articular surface is/are - *(PGI June 09, 04)*
a) Arthrodesis b) Excision
c) Skeletal traction d) Internal fixation
e) P.O.P. slab

801. Which of the following is/are not includes in management of intra-articular fracture -
a) Arthrodesis b) ExcisionfPG/ *Dec 08)*
c) Aspiration d)Kwire
e) Plaster of paris cast

802. Cock up splint is used in - *(AIIMSDec 95, Feb 97)*
a) Median nerve injury
b) Radial nerve injury
c) Ulnar nerve injury
d) Volkman's ischemic contracture

782) b,d 783) a 784) a 785) a 786) b 787) a 788)a,b,c,e 789) a 790) a 791)a,b,c,e 792) a 793) d 794) b 795)a,b,c 796)a 797)b 798)a 799)b 800)All 801)None 802)b

803. All of the following are used for giving skeletal traction, except - *(AIIMS May 06)*
a) Steimann's pin b)Kirschner'swire
c) Bohler's stirrup d) Rush pin

804. Maximum weight for skin traction -
a) 1-2 kg b) 4-5 kg *(NEET/DNB Pattern)*
c) 10-15 kg, d) 15-20 kg

805. Contraindication for skin traction - *(PGIDec 06)*
a) Dermatitis
b) Vascularity compromized status of limb
c) Abrasions
d) Hypopigmentation (vitiligo)
e) Bony deformity

806. Skeletal traction is given by -*(PGI June 09; Dec 08)*
a) K-wire b) Pavlik harness
c) Denham pin d) Steinmann's pin
e) Rush pin

807. Risser Localiser cast is used in the management of- *(AIIMS Nov 08)*
a) Kyphosis b)Spondylolysthesis
c) Idiopathic scoliosis d) Lordosis

808. Velpeau bandage and Sling and Swathe splint are used in? *(AIIMS Dec 08)*
a) Shoulder dislocation
b) Fracture scapula
c) Acromioclavicular dislocation
d) Fracture clavicle

809. Cancellous bone graft taken from - *(PGI Dec 06)*
a) Femoral condyles b) Pelvis
c) Greater trochanter d) Tibial metaphysis

810. Site for 1st order bone grafting - *(PGI June 03)*
a) Pelvis b) Tibial metaphysis
c) Medial malleolus d) Femoral condyle
e) Greater trochanter

811. Which of the following is ideal site for harvesting bone graft- *(AI08)*
a) Iliac crest b) Distal end of the humers
c) Distal end of femur d) Fibula

812. Standard site for primary bone graft - *(PGIDec 02)*
a) Pelvis b) Greater trochanter
c) Medial malleolus d) Lateral melleolus
e) Fibula

813. Tibial fracture with > 1 cm wound, slight communution and moderate crushing is - *(Jipmer 03, AMU 03)*
a) Grade I b) Grade II
c) Grade III A d) Grade III B

814. Most common organism causing infection after open fracture - *(NEET/DNB Pattern)*
a) Pseudomonas b) Staphylococcus aureus
c) Klebsiella d) Gonococcus

815. Open fracture is treated by - *(UP 98)*
a) Tourniquet b) Internal fixation
c) Debridement d) External fixation

816. Following are principles in the treatment of compound fractures except - *(Jipmer 93)*
a) Wound debridement
b) Immediate wound closure
c) Tendon repair
d) Aggressive antibiotic therapy

817. Immediate treatment of compound fracture of tibia is-
a) Intravenous antibiotics *(Delhi 97)*
b) Thorough debridement
c) Internal fixation of fracture
d) Amputation of limb

818. Internal splints (fixation devices) are used in all except-
a) Compound fractures *(Manipal 99)*
b) Multiple fractures
c) Fractures in elderly patients
d) Fracture neck of femur

819. A compound fracture is initially treated by antibiotics, wound toilet and - *(Rohtak 98)*
a) Skin cover b) External splintage
c) Prosthesis d) Internal fixation

MISCELLANEOUS

820. Periosteal reaction is not common in - *(AP 93)*
a) Syphilis b)Gout
c) Osteomyelitis d) Tuberculous dactylitis

821. Indications of arthoplasty - *(PGIDec. 04)*
a) Osteoarthritis b) Rheumatoid arthritis
c) Ankylosing spondylosis d)Gout
e) Fracture neck femur

822. Major indication (s) for arthroplasty -
a) Osteoarthritis of hip
b) Ankylosis of elbow
c) Ununited tibial fracture
d) Ununited femoral neck fracture
e) TB spine

823. Aseptic loosening in cemented total hip replacement occurs as a result of hypersensitivity response to -
a) Titanium debris *(AI04)*
b) High density polythene debris
c) N.N - Dimethyltryptamine (DMT)
d) Free radicals

824. Metal on Metal articulation should be avoided in- *(AI 10)*
a) Osteonecrosis b) Young female
c) Inflammatory arthritis d) Revision surgery

825. Most common cause of death after Total Hip Replacement is - *(AI 09)*
a) Infection b) Pneumonia
c) Anemia d) Thromboembolism

826. A patient developed breathlessness and chest pain, on second postoperative day after a total hip replacement. Echo-cardiography showed right ventricular dilatation and tricuspid regurgitation. What is the most likely diagnosis - *(AI 10)*
a) Acute MI b) Pulmonary embolism
c) Hypotensive shock d) Cardiac tamponate

803) d 804) b 805)a,b,c 806)a,c,d 807) c 808)a>b,c,d 809)a,b,c,d 810) a 811) a 812) a,e 813) b 814) a 815) b,c,d 816)b,c 817)a,b,d 818)None 819)a,b,d 820)b 821) All 822)a,b,d 823)b 824)b 825)d 826)b

827. Watson Jones operation is done for? *(AIIMSDec 08)*
a) Neglected Club foot b) Muscle paralysis
c) Valgus deformity d) Hip replacement

828. Stance phase muscle among the following is - *(PGI Dec 01)*
a) Quadriceps b)Hamsring
c) Gastrocnemius - soleus d) Tibialis anterior
e) Peroneus longus

829. Antalgic hip gait is related to which of the following- *(TAMIL NADU 94)*
a) Waddling gait b) Trendelenberg gait
c) Painful hip gait d) Short leg gait

830. Trendelenberg's gait is due to the weakness of- *(NEET/DNB Pattern)*
a) Quadriceps b) Iliopsoas
c) Sartorius d) Gluteus medius

831. A one year old child presented with multiple fractures seen in various stages of healing. The most probable diagnosis is the case is - *(AIIMS Nov 06)*
a) Scurvy b) Rickets
c) Battered baby syndrome d) Fall from height

832. An 8 yrs old child is brought by parents to the casualty with a spiral fracture of Femur and varying degree of Ecchymosis all over body. The Etiology is - *(AI00)*
a) Hit & run accident b) Battered Baby Syndrome
c) Hockey Stick injury d) Fall from height

833. A 4 year old female brought to casualty department with multiple fracture ribs, and inconspicuous history from parents. On examination show multiple bruise and healed fractures. The probable diagnosis is - *(CSE 99)*
a) Polytrauma for evaluation
b) Flail chest
c) Munchausen syndrome
d) Battered baby syndrome

834. Amputation is often not required in -
a) Gas gangrene b) Buerger's
c) Chronic osteomyelitis d) Diabetic gangrene

835. In below elbow amputation the length of stump should be - *(AIIMS May 93)*
a) 10-15 cm b) 15 -20 cm
c) 20 - 25 cm d) 5 -10 cm

836. Myodesis is employed in amputations for all of the following indications except - *(AI 09)*
a) Trauma b) Tumor
c) Children d) Ischemia

837. In flap method of amputation which structure is kept shorter than the level of amputation - *(DNB 92)*
a) Bone b) Muscles
c) Nerves d) Skin
e) Vessels

838. Tarsometatarsal amputation is also known as -
a) Chopart's amputation *(KA 99, UP 97,*
b) Lisfranc amputation *AIIMS SR 06)*
c) Pirogoffamputation
d) Symes amputation

839. Ring sequestrum is seen in - *(IN92)*
a) Typhoid osteomyelitis
b) Chronic osteomyelitis
c) Amputation stump
d) Tuberculosis osteomyelitis

840. Which of the following is true regarding a phantom limb- *(AJ94)*
a) Occurs in leprosy b) Follow amputation
c) Follow a psychiatric illness d) After filariasis

841. What is the percentage of patients who have undergone amputation which show "phantom limb" pain? *' (DPGFeb. 09)*
a) About 1% b) About 5%
c) About 10% d) 35%

842. Increased bone density in X- ray is seen in- *(PGIDec 08)*
a) Collapse cancellous bone b) Periosteal reaction
c) Paget's disease d)AVN
e) Osteomyelitis

843. Increased Bone density in X-ray seen in -
a) Increased thickening of trabeculae
b) Fracture & Collapse of cancellous bone
c) Defective mineralization
d) Myossitis ossificans
e) Relative disuse atrophy & surrounding bone response

844. Sclerosis of bone is seen in all except - *(KERALA 94)*
a) Secondaries from prostate b) Fluorosis
c) Hyperparathyroidism d) Osteopetrosis

845. Sclerotic lesion in the bone is seen in all except -
a) Osteitis fibrosa b) Osteopetrosis *(AI 91, 93)*
c) Melorheostosis d) Caffey's disease

846. Increased density in skull vault is seen in - *(PGI 90)*
a) Hyperparathyroidism b) Multiple myeloma
c) Fluorosis d) Renal osteodystrophy

847. "Rugger Jersey Spine" is seen in - *(AI 06)*
a) Fluorosis b) Achondroplasia
c) Renal osteodystrophy d) Marfan's syndrome

848. Rugger jersey spine in CRF is due to - *(PGI Dec 04)*
a) Osteomalacia
b) Trauma
c) Hyperparathyroidism
d) Aluminium osteodystrophy
e) Osteopetrosis

849. Ruptured tendon is most commonly seen in -
a) Stab injury b) Soft Tissue tumour
c) Overuse d) Congenital defect

850. Most common cause of insertional tendonitis of tendoachilles is - *(AIIMS Nov 08)*
a) Overuse b) Improper shoe wear
c) Runners and jumpers d) Steroid injections

851. There is spontaneous rupture of the Achilles tendon in an 18 year old male. It is most likely to bedue to excess stress beyond - *(DPG10)*
a) Tendon strength
b) Bone strength
c) Muscle strength
d) Musculotendinous junction strength

827)d 828)a,b,c,d 829)c 830)d 831)c 832)b 833)d 834)c 835)b 836)d 837)c>a 838)b 839)c 840)b
841) None 842) All 843)a,b 844)None>c 845)a 846)a,c,d 847)c 848)c 849)c 850)a 851)a

852. Rupture of extensor pollicis longus tendon occurs in all of the following except - *(DPG10)*
a) Rheumatoid arthritis b) Colle's fracture
c) Drummers d)De Quervains disease

853. Marble bone disease is- *(NEET/DNB Pattern)*
a) Osteoporosis b) Paget's disease
c) Osteopetrosis d) Osteogenesis imperfecta

854. Albers schonberg disease is also known as- *(NEET/DNB Pattern)*
a) Osteoprosis b) Osteopetrosis
c) 01 d): Paget's disease

855. Tissue most sensitive to radiation is - *(DPG Mar. 09)*
a) Diaphysis b) Cartilage
c) Epiphysis d) Metaphysis

856. During the surgical procedure - *(DPGMar. 09)*
a) Tendons should be repaired before nerves
b) Nerves should be repaired before tendons
c) Tendons should not be repaired at the same time
d) None of the above

857. Pollicization can be best described as - *(A108)*
a) Toe to thumb transfer b) Thumb reconstruction
c) Finger shortening d) Amputation of thumb

858. Muscle most commonly affected by congenital absence is - *(AI09)*
a) Pectoralis major b) Semimembranosus
c) Teres minor d) Gluteus maximus

859. Heterotopic ossification is a condition in which there is deposition of bone around the joints. Which of the following parameters is the most useful for this condition - *(AIIMS Nov 11)*
a) Serum calcium b) Serum phosphate
c) Serum alkaline phosphatase d) Serum PTH

860. X-ray of a young man shows hetrotopic calcification around bilateral knee joints. Next investigation would be - *(AIIMS May 07, AIO 7)*
a) Serum phosphate b) Serum calcium
c) Serum PTH d) Serum Alkaline phosphatase

861. In which of the following conditions Dactylitis CANNOT be seen - *(DPG 10)*
a) Sickle cell anaemia b) Beta thalassemia
c) Congenital syphilis d) Tuberculosis

862. Hypervitaminosis of which of the following will cause bony abnormalities-(PG/ *June 09, Dec 06, June 01)*
a) VitA b) Vit. D
c)Vit.C d) Vit. E
e) VitK

863. Wormian bones are not noted in - *(Andhra 93)*
a) Fibrous dysplasia b) Osteogenesis inperfecta
c) Cretinism d) Rickets

864. Wormian bones are seen in - *(DELHI 94)*
a) Osteogenesis imperfecta
b) Scheurmanns disease
c) Paget's disease
d) Osteoclastoma

865. Rate of newly synthesized osteoid mineralization can be best estimated by - *(AIIMS Nov 10, AI 09)*
a) Tetracycline labeling b) Alizarin red stain
c) Calcein stain d) Van kossa stain

866. Which of the following structures is fixed first during reimplantation of an amputated digit -*(AI 11)*
a) Bone b) Artery
c) Vein d) Nerve

867. Line joining ant. sup iliac spine to ischial tuberosity and passes a greater trochanter - *(AIIMS Nov 99)*
a) Nelaton's line b) Showmakersline
c) Chiene's d) Perkins line

868. "Trendelenburg sign" is positive in damage of the following nerve - *(AIIMS Nov 08, AI 9 7)*
a) Inferior gluteal nerve b) Pudendal nerve
c) Superior gluteal nerve d) Posterior tibial nerve

869. Trendelenburg's test positive in all EXCEPT -
a) Posterior dislocation of hip
b) Poliomyelitis
c) # Neck of femur
d) Tuberculosis of hip joint

870. Trendelenberg test is positive in palsy of -
a) Gluteus maximus *(NEET/DNB Pattern)*
b) Gluteus medius
c) Rectus femoris
d) Vastus medialis

871. Test for tight iliotibial band is - *(AIIMS Nov 01)*
a) Ober's test b) Osber's test
c) Simmand's test d) Chamley's test

872. The operative procedure known as "microfracture" is done for the - *(AIIMS Nov 03)*
a) Delayed union of femur
b) Non union of tibia
c) Loose bodies of ankle joint
d) Osteochondral defect of femur

873. Which is not a deep heat *therapy-(AIIMSMay 07, Nov. 11)*
a) Short wave diathermy b) Ultrasound therapy
c) Infrared therapy d) Microwave therapy

874. Post Poliomyelitis, a patient has grade n power in Gastrocnemius, grade ni is Peroneus, grade IV in Tibialis Anterior. The deformity is - *(AI 00)*
a) Calcaneovalgus b) Equino varus
c) Calcaneo varus d) Genu valgus

875. You have treated the simple and undisplaced fracture of shaft of right tibia in a nine year girl with above knee plaster cast. Parents want to know the prognosis of union of the fractured limb which was affected by polimoyelitis four years age. What is the bet possible advice will you offer to the parents ? *(AIIMS Nov 03)*
a) Fracture will unite slowly
b) Fracture will not unite
c) Fracture will unite normally
d) Fracture will unite on attaining puberty

852) d 853) c 854) b 855) c 856) a 857) b 858) a 859) c 860) d 861) b 862) a,b 863) a 864) a 865) a
866) b 867)a 868)c 869)d 870)b 871)a 872)d 873)c 874)c 875) c

876. In 3 year child with polio paralysis, tendon transfer operation is done at - *(AIIMS Dec 98)*
a) 2 months after the disease
b) 2 years after the disease
c) 6-12 months after the disease
d) After skeleton maturation

877. Tension band wiring is done in all except-
a) Fracture patella *(NEET/DNB Pattern)*
b) Fxaetoe alecranon
c) Fracture medial malleolus
d) Colie's fracture

878. Open reduction & internal fixation is done for all of the following #s except - *(AI9 7)*
a) Patella # b) Olecranon #
c) Volar Barton's# d)# Lateral condyle of humerus

879. Surgical excision is contraindicated in -
a) Olecranon process b) Patella
c) Head of radius d) Lateral condyle humerus

880. A patient has 2 months POP cast for tibial fracture of left leg. Now he needs mobilisation with a single crutch. You will use this crutch on which side -
a) Leftside b) Right side *(ARMSDec 00)*
c) Any side d) Both side

881; Which of the following fracture needs a violent force? *(NEET/DNB Pattern)*
a) Fracture Neck of femur
b) Intertrochanteric fracture
c) Clavicle fracture
d) Colies fracture

882. Spring ligament refers to - *(NEET/DNB Pattern)*
a) Plantar caieaneo navicular ligament
b) Short plantar ligament
c) Long plantar ligament
d) Deltoid ligament

883. Which of the following injuries is likely to cause a severe vascular damage? *(NEET/DNB Pattern)*
a) Closed posterior dislocation of knee
b) Elbow dislocation [posterior]
c) Fracture middle 1 /3 rd of clavicle
d) Tibial plateau fracture

884. Which of the following is a syndesmosis?
a) Superior tibiofibular joint *(NEET/DNB Pattern)*
b) Inferior tibio fibtilar joint
c) Talocalcaneal joint
d) Calcanep cuboid joint

GYNAECOLOGY & OBSTETRICS

Mahesh Bejagam

GYNAECOLOGY & OBSTETRICS

GYNAECOLOGICAL ANATOMY

1. All are related to the lateral vaginal fornix except- *(JIPMER 90)*
a) Ureters b) Mackenrodt's
c) Inferior vesical artery d) Uterine artery

2. Para -ovarian cyst are derived from- *(JIPMER 92)*
a) Wolfian duct b) Mullerian duct
c) Gartners duct d) Pronephros

3. The epithelial lining of cervical canal is - *(TN 90)*
a) Low columnar b) High columnar
c) Stratified squamous d) Ciliated columnar

4. Bartholins duct open into - *(JIPMER 92)*
a) Labia mojora
b) Labia minora
c) Lower vagina
d) Groved between labia minora and hymen

5. False about vagina is - *(TN 99)*
a) Partly or wholly derived from urogenital sinus
b) Rich in glands
c) Lined by stratified squamous epithelium
d) Posterior fornix lengthier than anterior fornix

6. Epithelial lining of Bartholins duct is- *(JIPMER 93)*
a) Columnar b) Transitional
c) Cuboidal d) Squamous

7. Venous drainage of upper part of uterus and placenta is through - *(PGI95)*
a) Ovarian vein b) Uterine vein
c) Internal iliac vein d)None

8. Clitoris develops from - *(PGI 93)*
a) Urogenital Sinus b) Labio Scrotal Swelling
c) Genital folds d) Genital tubercle

9. Scrotoum is analogus to - *(Kerala 95)*
a) Labia minora b) Labia maj ora
c) Uterus d) Vagina

10. Which of the following is Schiller positive-(yU/MS¹79,
a) Erosion b) Ectropion *DNB91)*
c) Carcinoma cervix d) All of the above

11. Lymphatics from clitoris drain into - *(PGI2000)*
a) Superficial inguinal LNs b) Deep inguinal LNs
c) Lymphnode of cloquet d) Obturator LN

12. Ovary develop from - *(PGI02, JIPMER 91)*
a) Mullerian duct b) Genital ridge
c) Genital tubercle d) Mesonephric duct
e) Sinovaginal bulbs

13. Transverse vaginal septum corresponds to - *(PGI04)*
a) External os b) Vesical neck
c) Bladder base d) Hymen
e) Above the external urethral meatus

14. True about isthmus are all EXCEPT - *(TN03)*
a) Measures 20 mm in length
b) Forms lower uterine segment
c) Mucosa similar to endometrium
d) Present between cervical mucosa and endometrial mucosa

15. Which of the following conditions is commonly encountered in the female newborn and usually requires no therapy ? *(Karnataka 03)*
a) Enlarged clitoris b) Labial fusion
c) Mucoid vaginal discharge d) Prolapsed urethra

16. Size of graffin follicle is - *(Mahara 02)*
a) 2mm b)3mm
c) 4im d) 6mm

17. The shape of a Nulliparous cervix is - *(AI07, 98)*
a) Circular b) Transverse
c) Lonitudinal d) Fimbriated

18. Bartholin's glands corresponds to - *(UP 07)*
a) Bulbourethral glands b) Urethra glands
c) Paraurethral glands d) Cowper's glands

19. The following artery is not a branch of the anterior division of internal iliac *artery-(DELHI PG Mar 09)*
a) Uterine b) Internal pudendal
c) Iliolumbar d) Vaginal

20. Before puberty, what is the ratio between the cervical length and uterine body? *(UP SC II10)*
a) 1:2 b)2 :1
c) 1:3 d) 1:41

21. During the development of female genital organs, Bartholin's gland develops from- *(Kam II)*
a) Genital fold b) Genital tubercie
c) Urogenital fold d) Urogenital sinus

22. Main support of the uterus is formed by -
a) Mackendrot's ligament *(Jipmer 11)*
b) Broad ligament
c) Fallopian tubes
d) Round ligament

23. Cervix to body ratio in a prepubertal girl -
a) 1:1 b) 2 :1 *(Jipmer 11)*
c) 1:2 d) 3 :1

24. Cortex of ovary contains all except - *(Jipmer 11)*
a) Hilus cells b) Corpus luteum
c) Primordial germ cells d) Graafian follicle

PHYSIOLOGY AND HISTOLOGY

25. The ovulatory period corresponds to - *(TN90)*
a) 14 days before menstruation
b) The day of menstruation
c) Increase in basal temperature
d) 14 days after menstruation

26. Gonadorophin is a - *(JIPMER 92)*
a) Steroid b) Lipoprotien
c) Polypeptide d) Glycoprotien

27. Maximum function of Corpus luteum occurs -
a) At ovulation *(JIPMER 93)*
b) Before ovulation
c) 3 days after ovulation
d) 9 days after ovulation

---

1) c 2) a 3)b 4)d 5)b 6) a 7) a 8)d 9)b 10) None ll)b,c 12) b 13) a 14) a
15)c 16) a 17) a 18)c 19)c 20)b 21)d 22)a 23)b 24)a 25)a 26)d 27)d

28. **The probable source of relaxin** *is-(Jipmer 91,DNB 89)*
a) Ovary b) Adrenal cortex
c) Liver d) Bartolins gland
d) Anterior pituitary gland

29. **Gonadotropins are** - *(JIPMER 78, Delhi 90)*
a) Proteins b) Glycoproteins
c) Phospholipids d)Polysaccharides

30. **Ovulation occurs** - *(Kerala 94)*
a) 14 days before next mensturation
b) 14 days after mensturation
c) Within 16 hrs. of LH surge
d) 16 days before next mensturation

31. **In the absence of fertilization and implantation the corpus luteum persists for** - *(AP 95)*
a) 2-3 days b) 6-8 days
c) 12-14 days d) 28-30 days

32. **False statement regarding hormone status in menopausal women is** - *(MAHE 98)*
a) DecresedFSH
b) Increased LH
c) Decreased estrogen
d) Decreased progesterone

33. **FSH secretion is stimulaed by** - *(MAHE 98)*
a) LHRH b)TRH
c) Testosterone d) Estradiol

34. **LH surge precedes ovulation by** - *(MAHE 98)*
a) 12 hrs. b) 24 hrs.
c) 36 hrs. d) 48 hrs.

35. **Corpus luteum functions maximally without an implantation for.....days** - *(PGI2000)*
a) 9 b) 12
c) 6 d) 15

36. **Hot flushes in postmenopausal women are best treated with which of the following** - *(AJ2002)*
a) Estrogens b)Danazol
c) OC pills d) Tamoxifen

37. **Average age range of attaining menopause is** -
a) 40-50 b) 45 - 55 *(TN 03)*
c) 55-60 d)58-68

38. **Cornification Index is maximum in** - *{TN03)*
a) Early secretory phase
b) Late proliferative phase
c) Late secretory phase
d) Early proliferative phase

39. **Endometrial biopsy is done in which phase of menstrual cycle** -
a) 5-7 days b) 12-14 days
c) 18-20 days d) 22-24 days

40. **Sertoli cells have receptors for** - *(AI04)*
a) Inhibin
b) Luteinising hormone
c) Follicle Stimulating Hormone
d) Melatonin

41. **Inhibin inhibits the secretion of which hormone** -
a) FSH b)LH *(TN04)*
c) Estrogen d) Prolactin

42. **Primary Oocyte remains in ovary in which stage-**
a) Metaphase b) Anaphase *(SGPGI05)*
c) Interphase d) Prophase

43. **In a young female of reproductive age with regular menstrual cycles of 28 days ovulation occurs around 14th day of periods. When is the first polar body extruded** - *(A1IMS May 05)*
a) 24 hrs prior to ovulation
b) Accompanied by ovulation
c) 48 hrs after the ovulation
d) At the time of fertilization

44. **After how many days of ovulation embryo implantation occurs ?** *(A1IMS 06)*
a) 3-5 days b) 7-9 days
c) 10-12 days d) 13-15 days

45. **The sensitivity of the uterine musculature is** -
a) Enhanced by progesterone *(AIIMS 06)*
b) Enhanced by estrogen
c) Inhibited by estrogen
d) Enhanced by estrogen and inhibited by progesterone

46. **In those mammals which are seasonal breeder, the females are receptive only once a year; the cycle is termed as** - *(AIIMS 06)*
a) Follicular b) Estrous
c) Menstrual d) Luteal

47. **Corkscrew shaped endomentrial glands is seen in-**
a) Early proliferative phase *(APPG 06)*
b) Late proliferative phase
c) Early secretory phase
d) Late secretory phase

48. **Following are the features of inhibin except** -
a) Nonsteroidal water soluble protein
b) Secreted by Graffian follicle *(Karn pgmee 06)*
c) Stimulates FSH secretion
d) Increased decretion of inhibin occurs in polycystic overian disease

49. **Source of progesterone during normal menstrual cycle-** *(MAHE 07)*
a) Corpus luteum
b) Stroma
c) Surface epithelium of ovary
d) None of above

50. **The best predictor of ovulation is** - *{Corned 08)*
a) Estrogen peak
b) Follicle stimulating hormone (FSH) surge
c) Onset of the LH surge
d) Preovulatory rise in progesterone

51. **Which of the following is the earliest change in the endometrium after ovulation ?** *(UPSC-II08)*
a) Secretion in the lumina of the endometrial glands
b) Subnuclear vacuolation
c) Cockscrew shaped glands
d) Stromal cells become oedematous, enlarged and polyhedral in shape

28) a 29) b 30)a 31)c 32)a 33)a 34)b 35)a 36)a 37)b 38)b 39)d 40)c 41)a
42) d 43) b 44) b 45) d 46) b 47) d 48) c 49) a 50) c 51)b

52. Ovary secretes - *(UP 08)*
a) Oestrogen & Progesterone
b) Oestogen progesteroe, Testosterone and androgens
c) FSH&LH
d) ACTH, Inhibin, TSH

53. Ovlation occurs - *(UP 08)*
a) After 14 days of menstruation
b) Before 14 days of menstruation
c) After 16 days of menstruation
d) Before 16 days of menstration

54. Endometrial biopsy is done at - *(UP 08)*
a) Premenstrualy phase b) Mid-cycle phase
c) LH Surge d) After menstruation

55. Naturally occurring estrogens are - *(PGI Dec 08)*
a) Estrone b)Estriol
c) Ethinylestradiol d) Estradiol
e) Diethylstilbestrol

56. Characteristics of the fertile phase of the menstrual cycle include all of the following except -
a) Peak levels of oestrogen *(COMED 09)*
b) Clear, abundant cervical mucus
c) Ovulation
d) Production of progesterone

57. The "fern pattern" of cervical mucus seen in the first half of menstrual cycle is because of:
a) High mucoprotein level *(UPSC-II 09)*
b) Low mucoprotein level
c) High sodium chloride level
d) Low sodium chloride level

58. After how many hours of LH surge does the ovulation occur? *(UPSC-II09)*
a) 12-24 hours b) 24-36 hours
c) 12-36 hours d) 24-48 hours

59. True about hCG - *(PGI June 09)*
a) Produced by cytotrophoblast
b) Prevent involution of corpus luteum
c) Value reach maximum level at 20 wk of pregnancy
d) Its secretion starts after 2 day of ovulation

60. True statement regarding oogenesis is/are -
a) Primary oocyte arrests in prophase of 1st meiotic division *(PGI May 10)*
b) Primary oocyte arrests in prophase of II nd meiotic division
c) Secondary oocyte arrests in Metaphase of Ist meiotic division
d) Secondary oocyte arrests in Metaphase of Ilnd meiotic division
e) 1st polar body is extruded during 1st meiotic division of primary oocytes

61. True statement regarding Implantation -
a) Takes place in Blastocyst stage
b) Occur after 7 day of fertilization
c) Occur on 5th day after ovulation
d) Takes place in morula stage

62. True about hCG- *(PGINov. 10)*
a) a subunit identical to LH, FSH & TSH
b) Causes involution of corpus luteum
c) Doubles in 7-10 days
d) Max. level seen at 60-70 days of gestation
e) Detected in serum and urine 8-9 days after ovulation

63. Which of the following is seen in the ovulatory phase-
a) Stimulation of continuation of reduction division of oocytes *(AIIMSMay 11)*
b) Inhibin A is increased
c) FSH increases steroid synthesis in granulosa cells
d) Activin causes FSH to act on granulosa cells

64. The peak level of serum LH (ng/ml) required for ovulation- *(Karn 11)*
a) 25 b) 50
c) 75 d) 100

65. During a normal pregnancy, the changes occurring in the urinary tract include the following except -
a) Increase in the Glomerular filtration rate
b) Dilatation of the ureters *(UPSCII11)*
c) Elevation and thickening of the trigone
d) Hypertonicity of the ureteric smooth muscle

66. Fertilization occurs in - *(Jipmer 11)*
a) Uterine cavity b) Infundibulum
c) Isthmus d) Ampulla

GYNAECOLOGICAL DIAGNOSIS

67. Pap smear is taken from the - *(TN 90)*
a) Lateral formix b) anterior formix
c) Posterior formix d) Any formix

68. Ultrasound is diagnostic in - *(TN 91)*
a) Endometrial carcinoma b) Cancer cervix
c) Leiomyosarcoma d) Fibroid uterus

69. All of following are indications of doing a PAP smear except - *(AT 96)*
a) >40yrs b) Pregnant female
c) Sexually active female d) Menorrhagia

70. What percentage of post menopausal ovaries are identified on transvaginal ultrasonography-
a) 60% b) 70% *(PGI 96)*
c) 80% d) 100%

71. Hysteroscopy can diagnose all, except - *(PGI 98)*
a) Asherman's syndrome b) Septate uterus
c) Adenomyosis d) TB endometritis

72. The Colposcopic features suggestive of malignancy are except - *(PGI 99)*
a) Condyloma b) Vascular atypia
c) Punctation d) White epithelium

73. Evaluation of a pt. with post menopausal bleeding done by - *(PGI June 05)*
a) Pap smear b)USG
c) Endometrial biopsy d) Dilatation & curettage

52) b 53) b 54) a 55)a,b,d 56) d 57) d 58) b 59) b 60)a,d,e 61) a,c 62)a,d,e 63) a 64) c 65) d
66) d 67) None 68) d 69) d 70) d 71) None 72) a 73)a,c,d

74. Hysteroscopy means visualization of - *(PGI05)*
a) Genital tract b) Fallopian tube
c) Uterine cavity d) Cervix
e) Abdominal cavity

75. The investigation of choice in a 55 year old postmenopausal woman who has presented with postmenopausal bleeding is - *(AI06)*
a) Pap smear b) Fractional curettage
c) Transvaginal ultrasound d)Ca-125 estimation

76. Which of the following are distension media used in Hysteroscopy - *(PGI Dec 08)*
a) Carbon dioxide b) Glycine
c) Distill water d)Air
e) Dextrose

77. Following are the indications for 'hyster-osalpinography' expect - *(DELHI PG Mar 09)*
a) Infertility
b) Pelvic infections
c) Recurrent abortions
d) Abnormal uterine bleeding

MALFORMATION OF THE FEMALE GENERATIVE ORGANS

78. To diagnose Uterus didelphys, procedure of choice is- *(AIIMS92)*
a) Laproscopy b)IVP
c) Hysterosalpingography d)USG

79. Ideal age for repair of Vaginal agenesis is-
a) 6 months b) 3 years *(A1IMS92)*
c) At puberty d) Before marriage

80. Bicornuate uterus is due to - *(PGI 98)*
a) Incomplete fusion of uterine cavity
b) Incomplete fusion of paramesonephric duct
c) Incomplete fusion of mesonephric duct
d) Incomplete formation of vagina

81. Cochleate uterus is - *(ORRISA 98)*
a) Acute antiflexion
b) Acute retroflexion
c) Acute retroversion of uterus
d) None of the above

82. Raloxifene can cause - *{APPG03)*
a) Endometrial carcinoma b) Ovarian carcinoma
c) Breast carcinoma d) Cervical carcinoma

83. Complete failure of mullerian duct lusion will result in - **(***UPPGMEE 04)*
a) Uterus didephys b) Arcuate uterus
c) Subseptate uterus d) Unicomuate uterus

84. The most important indication for surgical repair of a Bicornuate Uterus is - *{ARMSNOV05)*
a) Infertility b) Dysmenorrhoea
c) Menorrhagia d) Habitual abortion

85. Diethylstiboestrol causes the following defects except - *{APPG06)*
a) Renal anomalies b) Perifimbiral cyst
c) T-shaped uterus d) Vaginal adenosis

86. In complete mullerian duct aplasia all of the following are likely to be absent Except - *(AI08)*
a) Ovaries b) Fallopian tubes
c) Uterus d) Vagina

87. Which of the following condition present with absence of both Mullerian and Wolffian duct structures - *(AI10)*
a) Antimullerian Hormone deficiency
b) Androgen Insensitivity syndrome
c) FSH receptor defect
d) Ovotesticular syndrome

SEX & INTERSEXUALITY

88. Ttirner's syndrome is associated with - *(DNB 90)*
a) 45 Chromosomes b) Presence of Barr bodies
c) Low FSH levels d) All of the above

89. The chromosomal complement in persons with Klinefelter's syndrome is - *(Karn94)*
a) 45, XO b) 47 XXX
c) 46 XY d)47XXY

90. Barr body is seen in- *(Kerala 94)*
a) Turners syndrome b) Klinefelters syndrome
c) Testicular feminisation d)46XY

91. All are seen in testicular feminization syndrome except- *(PGI99)*
a) 46 XY b) Primary amnenorrhoea
c) Short stature d) Vagina may present

92. During sexual differentiation in males- *(Kamat 05)*
a) Leydig cells produce mullerian inhibiting substance
b) Primitive gonads differentiate into testis due to the presence of SRY gene
c) Androgen binding protein is responsible for the development of male external genitalia
d) Wolifian duct regresses

93. A 15 year old female presents with primary amenorrhea. Her breasts are Tanner 4 but she has no axillary or pubic hair. The most likely diagnosis is -
a) Turner's syndrome *(AI06)*
b) Mullerian agenesis
c) Testicular feminization syndrome
d) Premature ovarian failure

94. The treatment for a case of virilizing adrenal hyperplasia is - *(AI 06)*
a) Estrogens b)Antiandrogens
c) ACTH d) Cortisone

95. Features ofTurner's dyndrome is/are-(PG7 *June 06)*
a) Secondary amerorrhea b) Genotype XO
c) Infertility d) Streak ovary
e) Coarctation of aorta

96. Gonadal sex of the fetus is determined by -
a) Secretion of testosterone *(COMED 06)*
b) Secretion of antimullerian hormones
c) Sex determining region on the ' Y' chromosome
d) Secretion of estrogen

74) c 75) b 76) a,b,e 77) b 78) c 79) d 80) c 81) a 82) c 83) a 84) d 85)a,b 86) a 87) b
88) a 89) d 90) b 91) c 92) b 93) c 94) d 95)b,c,d,e 96) c

97. Which of the following is used for hirsutism in female expect - *(APPG 06)*
a) Spironolaotone b) Oxynandrolone
c) Finasteride d)Flutamide

98. In an adult phenotypic female, absence of uterus suggests the diagnosis of which one of the following?
a) Mayer Rokitansky Kuster Hauser syndrome
b) Congenital adrenal hyperplasia *(UPSC-II08)*
c) True hermaphrodite
d) 5a-reductase deficiency

99. The first sign of puberty in girls is - *(AI08)*
a) Breast budding
b) Growth spurt (Peak height velocity)
c) Menarche
d) Pubic and axillary hair growth

100. All of the following statements about Androgen insensitivity syndrome are true Except - *(AI 08)*
a) Patients have an XY genotype
b) Pubic hair are abundant
c) Short vagina may be present
d) Ovaries are absent

101. Androgen insensitivity syndrome true is - *(A iims*
a) Phenotype may be completely female *May 08)*
b) Predominantly ovarian component in gonads
c) Always in female
d) Testes formed abnormally and receptors are normal

102. 10 year old girl with primary amenorrhoea, absent breasts, malformed uterus. The most likely diagnosis - *(A iims May 08)*
a) MRKH syndrome
b) Turner's syndrome
c) Swyer syndrome
d) Mixed gonadal dysgenesis

103. All of the following are true about imperforate hymen except- *(DPGEE 08)*
a) It may cause hematocolpos
b) It is treated with a cruciate incision
c) It is diagnosed in the neonate
d) It may cause urinary retention

104. Mayer-Rokitansky-Kuster-Hauser syndrome consists of-
a) Ovaries, uterus fallopian tubes present
b) Uterus absent, fallopian tube ovaries present
c) All absent
d) Uterus present tubes and ovaries absent

105. Clinical feature (s) of Turner syndrome is/are all except- *(PGI June 09)*
a) Short stature
b) Cryptorchidism
c) Gonadal meladevelopment
d) Biscuspid aortic valve
e) Lymphoedema

106. Match list I (Syndrome) with list II (Conditions) and select the correct answer using the codes given below the lists - *(UPSC-II 09)*

List I (Syndrome)	**List II** (Conditions)
A. Androgen	1. Mullerian agenesis insensitivity with 46 XX syndrome
B. Mayer Rockitansky-Kuster-Hause syndrome	2. Female phenotype, 46 XY with absent Mullerian system
C. Swyer's syndrome	3. Hypogonadotrophic hypogonadism with anosmia
D. Kaliman syndrome	4. Female phenotype with 46 XY gonadal dysgenesis with patient Mullerian system

Codes:

	A	B	C	**D**
a)	3	1	4	2
b)	2	4	1	3
c)	**3**	4	1	2
d)	2	1	4	3

107. All of the following are true about MRKH (Mayer - Rokitansky - Kuster - Hauser) syndrome except- *(AIIMS Nov 09)*
a) Absent uterus b) Absent cervix
c) Absent ovary d) Absent vagina

108. A 20 years female present primary amenorrhea, absent breast, hypoplastic uterus. Most prabable diagnosis is? *(AIIMS Nov 09)*
a) Turner's syndrome
b) Mixed gonadal dysgenesis
c) Meyer Rokitansky kuster Hauser syndrome
d) Androgen insensitivity syndrome

109. Causes of primary amenorrhea are all except -
a) Rokitansky syndrome *(AIIMS May 10)*
b) Sheehan syndrome
c) Kollman syndrome
d) Turner syndrome

110. Primary Amenorrhea with absent uterus, normal breasts and scant pubic hair is seen in - *(AI 10)*
a) Mayer Rokitanski Kuster Hauser syndrome
b) Turner's syndrome
c) Androgen insensitivity syndrome
d) Noonan syndrome

111. Primary Amenorrhea with normal ovaries normal external genitalia and normal breasts is seen in -
a) Mayer-Rokitanski-Kuster-Hauser syndrome
b) Turner's syndrome *(AI 10)*
c) Androgen Insensitivity syndrome
d) Noonan syndrome

112. A nineteen-year old female has short stature, widespread nipples and primary amenorrhoe A. She most likely has karyotype of - *(DPG10)*
a) 47,XX+18 b)46.XXXY
c) 47XXY d)45XO

97) b 98) a 99)a 100)b 101)a 102)b 103)c 104)b 105)b 106)d 107)c 108)a 109)b 110)c 111) a 112) d

113. Commonest genetic defect causing gonadal failure with primary amenorrhea- *(Maharashtra 10)*
a) Kallman syndrome
b) Abnormal X chromosome
c) 21-hydroxylase deficiency
d) Turner syndrome

114. Which one of the following is not a feature of Turner's syndrome? *(UPSC-110)*
a) Webbed neck b) Horse-shoe kidney
c) Coarctation of aorta d) Mental retardation

115. True about MRKH (Mayer-Rokitansky-Kuster-Hauser) syndrome - *(PGIMay 10)*
a) Absent uterus b) Absent ovary
c) Absent vagina d) XX phenotype
e) XY phenotype

116. True about Klinefelter syndrome - *(PGIMay 10)*
a) XXY b)XO
c) Male hypogonadism d) Female hypogonadism
e) TFSH

117. A 13-year-old, obese, unmarried girl presents with the history of amenorrhea and cyclical abdominal pain. On examination, the secondary sex characters are found to be well developed. What should be the next step- *(UPSCU11)*
a) Carry out the progesterone challenge test
b) Assess the TSH and Prolactin levels
c) Carry out a per-rectal examination
d) Keep her under observation for the next three months

VULVA

118. Vulval carcinoma metastazes to which lymph group- **(.***JIPMER93)*
a) Para aortic nodes
b) Superficial inguinal nodes
c) Internal iliac nodes
d) External iliac nodes

119. True about carcinoma valva - *(PGI 04)*
a) Spreads to superficial ingunial nodes
b) Spreads to illiac nodes
c) Seen after menopause
d) Viral predisposition
e) Radiotherapy given

VAGINA

120. Nabothian follicle occurs in - *(IN 91)*
a) Erosion of cervix b) Carcinoma body of uterus
c) Carcinoma cervix d) Carcinoma vagina

121. pH of the vagina is lowest during - *(UPSC 96)*
a) Ovulation b) Menstruation
c) Pregnancy d) Puerperium

122. Most common form of vaginitis - *(Kerala 96)*
a) Senile vaginitis b) Trichomonas vaginitis
c) Gonococal vaginitis d) Monilia vaginitis

123. Mycotic vulvovaginitis is due to - *(Karn90)*
a) Candida b) Aspergillus
c) Cryptococcus d) Pseudomonas

124. Vulval candidiasis is associated *vdih-(Delhi 96,PGI89)*
a) Addison's diseaseb) Cushing's isease
c) Diabetes mellitus d) Acromegaly

125. Commonest genital infection in females i^(Kerala 96)
a) Candidiasis b)Trichomoniasis
c) Syphilis d)Gonorrhea
e) Chanchroid

126. Involvement of pelvis in a case of vaginal carcinoma of stage_____- *(AI97)*
a) I b)n
c) m d)iv

127. The maturation index (MI) on vaginal cytology is a diagnostic method for evaluating the -
a) Adequacy of cytotoxic drug therapy *(UPSC 2K)*
b) Gender of an anatomically abnormal child
c) Malignant change at squamocolumar junction of cervix
d) Endocrine status of the patient

128. Protective bacterium in normal vagina is-*(J&K01)*
a) Peptostreptococcusb) Lactobacillus
c) Gardenella vaginalis d) E. coli

129. True about Bacterial vaginosis - *{PGI June 05)*
a) Itching
b) Grey discharge
c) Clue cells found
d) Fishy odour discharge
e) Caused by Gardnerella vaginalis

130. True about trichomonus vaginalis - *{PGI June 05)*
a) Flagellated parasiteb) Fungal infection
c) Curdy white discharge d) Pruritus
e) Sexually transmitted

131. Gardenerella vaginalis infection is diagnosed by all except - *{APPGE 05)*
a) PH <4.5 b) Fishy odour
c) Clue cells d) Positive whiff test

132. A 40 years old woman presented to the gynecologist with complaints of profuse vaginal discharge. There was no discharge from the cervix on the speculum examination. The diagnosis of bacterial vaginosis was made based upon all of the following findings on microscopy except - *(AI 06)*
a) Abundance of gram variable coccobacilli
b) Absence of Lactobacilli
c) Abundance of polymorphs
d) Present of clue cells

133. Consider the following characteristics of vaginal discharge- *(UPSC 07)*
1. Green and thick 2. pH <4.5
3. Clue cells 4. Whiff test positive
Which of the above characteristics are present in bacterial vaginosis -
a) 1 and 3 only b) 2 and 3 only
c) 1 and 4 only d) 3 and 4 only

113) d 114) d 115) a,c,d 116)a,c,e *Ul)c* 118)b 119) All 120) a 121) c 122) b 123) a 124) c 125) b 126) c 127) d 128) b 129)b,c,d,e 130)a,d,e 131) a 132) c 133) d

134. With reference to vagina, which one of the following statements is not correct - *(UPSC 07)*
a) It has mucus secreting glands
b) It is supplied by uterine artery
c) It is lined by stratified squamous epithelium
d) Its posterior wall is covered by peritonium

135. Senile vaginitis is due to - *{Corned 07)*
a) Gonococcal infectionb) Cancer cervix
c) Diabetes d) Oestrogen deficiency

136. A woman presents with a fluctuant non tender swelling at the introitus. The best treatment \&-*(AI 08)*
a) Marsupialisation b) Incision and drainage
c) Surgical resection d) Aspiration

137. True statement regarding sarcoma botryoides -
a) Involvement of vagina *(PGI May 10)*
b) Grape like growth seen
c) Common in old age
d) Malignant

138. All are risk factor for vaginal candidiasis except -
a) Diabetes mellitus b) HIV *(AIIMSNov 10)*
c) Hypertension d) Pregnancy

139. Vaginal adenosis preceed - *(Jipmer 11)*
a) Clear cell carcinoma
b) Endometrial carcinoma
c) Cervical carcinoma
d) Squamous cell carcinoma of vagina

SEXUALLY TRANSMITTED DISEASES IN THE FEMALE

140. Herpes genetalis causes - *(Kerala 94)*
a) Koilocytosis in smear b) Atypical cells
c) Carcinoma cervix d) Sterility

141. In chlamydial cervicitis drug of choice is - *(Kerala*
a) Tetracycline b) Septran *96)*
c) Chlomphenicol d) Erythromycin
e) Metronidazole

142. Asymptomatic gonorrhoea in females is due to infections of - *{A197)*
a) Vagina b) Urethra
c) Endocervix d) Fundus

143. One of the following in adult female genital tract is not affected by gonococcal infections -
a) Vulva b) Vagina *{Orissa 99)*
c) Cervix d) Fallopian tube

144. An infertile woman underwent hysterosalphingogram. It showed bilateral beaded tubes with enlargement at ampulla, The organism responsible is - *{Kerala 01)*
a) Chlamydia b) Gonococci
c) Tuberculosis d) None

145. Gonococci has affinity for - *(TN 02)*
a) Columnar epithelium
b) Glandular epithelium
. c) Stratified sqamous epithelium
d) Squamous epithelium

146. True about bacterial Vaginosis - *(PGI2000)*
a) Typical whitish grey discharge
b) Metronidazole is DOC
c) "Clue cells" seen
d) Vaginal pH usually between 4 to 6
e) Highly motile organism seen on wet mount

147. True about vaginal candidiasis - *(PGI 01)*
a) Risk is not increased in pregnancy
b) Associated with intense pruritus
c) Typical "Cottage-cheese" discharge occurs
d) Most commonly by **Candida** glaberata

148. Bacterial vaginosis is characterised by - *(PGI 02)*
a) Alkaline pH b) Strawberry clot in vagina
c) Creamy discharge d) Clue cells in wet mount

149. Cervicitis is caused by - *(PGI 03)*
a) Pseudomonus b) Staphylococcus
c) Chlamydia d) Trichomonas
e) N. Gonorrhoea

150. Acute PH) is treated by - *(PGI 03)*
a) IV antibiotics (broad spectrum)
b) Drainage of TOM
c) Abdominal hysterectomy
d) Laparoscopic exploration

151. Bacterial vaginosis is characterised by - *(PGI03)*
a) PH <4.5
b) Clue cell
c) Amide test is positive
d) Lactobacillus is found abundantly
e) Sexually transmitted

152. Non gonococcal urethritis is caused by - *(PGI99)*
a) Chlamydia b)LGV
c) Syphilis d) Gardnella vaginalis

153. Treatment of choice in Gardenella vaginitis in pregnancy - *(APPG 03)*
a) Clindamycin b) Metronidazole
c) Erthromycin d) Tetracycline

154. GardenereUa infection, not seen is - *(APPG 03)*
a) pH < 4.5 b) Amine test positive
c) Discharge per vaginum d) Pruritus

155. A 30 year old woman with a bad obstetric history presents with fever. The blood culture from the patient grows gram - positive small to medium coccobacilli that are pleomorphic, occurring in short chains. Direct wet mount - *(AI04)*
a) Listeria monocytogenes
b) Corynebacterium sp
c) Enterococcus sp
d) Erysipelothrix rhusiopathiae

156. The most sensitive method for detecting cervical Chlamydia trachomatis infection is - *(All India 04)*
a) Direct fluorescent antibody test
b) Enzyme immunoassay
c) Polymerase chain reaction
d) Culture on irradiated McConkey cells

157. Whiff test is used to detect - *(APPGE 04)*
a) Trichomoniasis b) Candidial cervicitis
c) Bacterial vaginosis d) Gonococcal cervictis

134) a 135) d 136) a 137)a,b,d 138) c 139)d 140)a,c 141)a 142) c 143) b 144) c 145) a 146)a,b,c,d 147) b,c 148) d 149)b,c,d,e 150)a,b,d 151)b,c,e- 152) a 153) b 154) a 155) a 156) a 157) c

158. Which one of the following is not a characteristic feature of bacterial vaginosis ? *(UPSC-II08)*
a) Presence of clue cells b) Thick white discharge
c) Vaginal pH > 4.5 d) Fishy odour

159. Salpingitis / Endosalpingitis is best confirmed by -
a) Hysteroscopy + Laparoscopy *(AI08)*
b) X-ray
c) Hysterosalpingography
d) Sonosalpingography

160. Which is most commonly implicated in genital (vulval) warts ? *(Aiims May 08)*
a) HPV16 b)HPV 18
c) HPV31 d)HPV6

161. Clue cells are seen in - *(Aiims May 08)*
a) Bacterial vaginosis b) Candidiasis
c) Trichomoniasis d) Gonorrhoea

162. TVichomonas-true is - *(PGI June 08)*
a) Foul smelling vaginal discharge
b) Vaginal pH is 4
c) Strawbery cervix
d) Infertility
e) Abortion

163. Which of the following can be diagnosed on vaginal wet mount smear - *(PGI Dec 08)*
a) Trichomonas vaginalis b) Candida albicans
c) Herpes simplex d) N.gonorrhea
e) Atrophic vaginitis

164. Clue cells are found in ? *(AIIMS Nov 08)*
a) Candidial vaginosis b) Bacterial vaginosis
c) Trichomoniasis d) Chlamydial infection

165. Creamy fishy odor is characteristically seen in -
a) Trichomonas b)Gardnella *(AI09)*
c) Candida d) Chlamydia

166. A lady presented with creamy white vaginal discharge with fishy odour, drug of choice is -
a) Doxycycline b) Ofloxacin *(AIIMS May 09)*
c) Metronidazole d) Clindamycin

167. Genital warts in pregnancy treatment *Ss-(AHMSNov 09)*
a) Podophylin b) Salicylic acid & lactic acid
c) Cryotherapy d)Imiquinod

168. HPV vaccine is ? *(AIIMS Nov 09)*
a) Monovalent b) Bivalent
c) Quadrivalent d) Both bivalent and Quadrivalent

169. Clue cell seen in ? *(AIIMS Nov 09)*
a) Bacterial vaginosis
b) Candida
c) Trichomonas vaginalis

170. With regard to trichomonal vaginitis the following statements are true EXCEPT - *(Corned 10)*
a) Discharge is greenish and frothy
b) It is described as strawberry vagina
c) Culture of discharge is not necessary for diagnosis
d) It is treated with doxycycline

171. Clue cell is seen in - *(AIIMS Nov 10)*
a) Bacterial vaginosis b) Candidial vaginosis
c) Chlamydiasis d) Trichomonas

172. 'Clue cells' are seen in - *(All!)*
a) Bacterial Vaginosis b) Vaginal Candidiasis
c) Chlamydial vaginosis d) Trichomoniasis

173. Which of the following statements about Chlamydia trachomatis is true - *(AI 11)*
a) May be isolated an arrtificial media by culture of purulent endocervical discharge
b) Most genital chlamydial infections are symptomatic
c) Use of OCP is associated with increased ris of asymptomatic chlamydial infection
d) Penicillin is the drug of choice for treatment

174. The diagnostic criteria for bacterial vaginosis include the following except - *(UPSCII11)*
a) Vaginal pH <4.5
b) Homogenous vaginal discharge
c) Presence of clue cells
d) Positive whiff test

175. A woman, who is in the reproductively active age group, presents with a history of greenish and frothy vaginal discharge. On per speculum examination, she has multiple punctuate strawberry-like spots. What is the likely diagnosis - *(UPSC II11)*
a) Candidiasis b) Trichomoniasis
c) Gonococcal vaginitis d) Chlamydia infection

176. Clue cells are seen in - *(Jipmer 11)*
a) Bacterial vaginosis b) Trichomoniasis
c) Candidiasis d) Herpes

TUBERCULOSIS OF THE GENITAL TRACT

177. The commonest complication of pregnancy after complete treatment of genital tuberculosis is- *(AI91)*
a) Abortion b) Ectopic pregnancy
c) Malpresentation d) Intra uterine death

178. TB endometritis is caused by - *(AIIMS 98)*
a) Hematogenous spread b) Lymphatic spread
c) Retrograde spread d) Direct spread

179. The most common cause of tubal block in India is- *(AI06)*
a) Gonorrhea infection b) Chlamydia infection
c) Tuberculosis d) Bacterial vaginosis

180. Which is the most common site of involvement in genital tuberculosis - *(UPSC 06, JIPMER 86, TN 95)*
a) Uterine endometrium b) Fallopian tubes
c) Ovaries d) Cervix

181. Most common site of Ihberculosis of genital tract ?
a) Endometrium b) Ovary *(APPG08)*
c) Fallopian tube d) Cervix

158) b 159) a 160)d 161)a 162)a,c 163)a,b,d 164)b 165)b 166)c 167)c 168)d 169)a 170)d 171)a 172) a 173) c 174)a 175)b 176)a 177)b 178)c 179)c 180)b 181)c

URINARY SYSTEM

182. Stress in continence is a common symptom in -
a) Prolapse uterus b) Fibroid *(Kerala 95)*
c) Adenomyosis d)WF

183. Marshall-Marchetti-Krant surgery is done for -
a) Stress in continence *(Karn 96)*
b) Urge incontinence
c) Vesicovaginal fistula
d) Bladder obstruction

184. Bonney's test is used to demonstrate - *(DNB 91)*
a) Stress incontinence b) Urge incontinence
c) Fibroids d) True incontinence

185. Incontinence in elderly female is due to most commonly - *(CUPGEE 99)*
a) Detrusor instability
b) True stress incontinence
c) Vesicovaginal fistule
d) Outlet obstruction

186. Urethral caruncle is best treated by - *(UPSC 05)*
a) Administration of antibiotics
b) Excision followed by repeated dilatation
c) Resection and end to end anastomosis
d) Chemical cauterization

187. Kelly's plication operation done in - *(PGI June 05)*
a) Stress incontinence b) Vault prolapse
c) Rectal prolapse d) Uterine prolapse
e) Cervical incontinence

URINARY FISTULAS

188. Commonest cause of recto vaginal fistula is -
a) Following Wertheim's operation *(IN90)*
b) Pressure necrosis during labour
c) Improper repair of perineal tear
d) Abnormal presentation

189. Ureterovaginal fistula formation is common at -
a) Infundibulopelvic ligament *(PGI 96)*
b) Vaginal vault
c) Distal to uterine artery near vaginal vault
d) Distal uterine artery in cardinal ligament

190. Manifestation of uretero vaginal fistula is -*(PGI 96)*
a) Overflow incontinence b) Hydronephrosis
c) Continous incontinence d) Stress incontinence

191. One week after an extended hysterectomy, the patient leaks urine per vaginum. In spite of the leakage, she has to pass urine from time to time. The most likely cause is- *(UPSC 97)*
a) Vesico-vaginal fistula b) Ureterovaginal fistula
c) Stress incontinence d) Overflow incontinence

192. In a case of incontenence of urine, dye filled into the urinary bladder does not stain the pad in the vagina, yet the pad is soaked with clear urine. The most likely diagnosis is - *(UPSC 2K)*
a) Vesico vaginal fistula
b) Uretero-vaginal fistula
c) Urinary stress incontenence
d) Urethrovaginal fistula

193. Sonia who underwent vaginal hysterectomy and lymphnode dissection, presents with incontinence of urine and passing some amount of urine which is under her control. Most likely diagnosis -
a) Vesico vaginal fistula *(AIIMS01)*
b) Uretero vaginal fistula
c) Stress incontinence
d) Urge incontinence

194. Vesico vaginal fistula in India is most commonly due to - *(UPSC 85, PGI 88)*
a) Carcinoma cervix
b) Gynaecological surgery
c) Prolonged labour
d) Carcinoma bladder

195. A primipara who had a prolonged labour and difficult vaginal delivery three months ago presents with complaints of incontinence of loose stools and flatus from the day of delivery. The most likely diagnosis - *(UPSC 99)*
a) Chronic diarrhoea b) Recto-vaginal fistula
c) Haemorrhoids d) Complete perineal tear

196. 'BOARI'S OPERATION'is - *(AP 97)*
a) Renal pelvic flap b) Urinary diversion
c) Bladder flap d) Uretero-rectal anastanosis

197. Chassar Moir technique is used in - *{AMU 05)*
a) Vesico vaginal fistula b) Stress incontinence
c) Urethrocele d) Enterocele repair

198. In women with ureterovaginal fistula the following statements are false except - *(J&K 05)*
a) Produces free fluid in the abdominal cavity
b) 40 % heals spontaneously
c) It is associated with hydronephrosis on the affected side
d) Should be repaired as soon as diagnosed on IVP

199. Patients of Rectovaginal fistula should be initially treated with - *(AI05)*
a) Colostomy b) Primary repair
c) Colporrhaphy d) Anterior resection

200. All are treatment for SUI except - *(MAHE 07)*
a) Kelly's plication
b) Marshall - Marchett - Krants operation
c) Bursch colposuspenion
d) All of the above

201. Chassar Moir operation is done in - *(UP 07, 05)*
a) Vesicovaginal fistula b)Vesicouterine fistula
c) Urethrovaginal fistula d) Rectovesical fistula

202. In WF surgery, bladder drainage should be done for- *(DP GEE 08)*
a) 10 days b) 12 days
c) 6 days d) 14 days

203. Which is not true about WF ? *(APPG 08)*
a) Amenorrhea b) Hydronephrosis
c) Uraemia d) All

204. Which of the following leads to cyclical haematuria?
a) Vesico uterine fistula b)WF *(APPG 08)*
c) Rectovaginal fistula d)all

182) a 183) a 184)a 185)b 186)d 187)a 188)c 189)a 190)c 191)b 192)b 193)b 194)c 195)d
196) c 197) a 198) d 199) a 200) d 201) a 202) a 203) a 204) a

205. A 28 year female, after 6 month of lower segment caesarean section complains of cyclic hematuria with normal menstrual cycle. What is probable diagnosis - *(PGIDec 08)*
a) Vesicouterine fistula b) Vesical endometriosis
c) Choriocarcinoma d) Vesico vaginal fistula
e) Urethrovaginal fistula

206. The recommended non surgical treatment of stress incontinence is - *(AI09)*
a) Pelvic floor muscle exercises
b) Bladder training
c) Electrical stimulation
d) Vaginal cone / weights

207. A 52 year old lady presents with constant leakage of urine and dysuria two weeks after a complicated total abdominal hysterectomy. A diagnosis of Vesico vaginal fistula is suspected. The most important test for the diagnosis is - *(AI 10)*
a) Triple swab test b) Urine culture
c) Cystoscopy d)IVP

208. A 52 year old lady with a vesicovaginal fistula after abdominal hysterectomy is not responding to conservative management. Most useful/important next investigation is - *(AI 10)*
a) Triple swab test b) Urine culture
c) Cystoscopy d)IVP

209. A women presents to the Gynecology outpatient departemnt with history of stress incontinence. Which of the following is the treatment of choice for genuine stress incontinence - *(AI 11)*
a) Burch Colposuspension
b) Kelly's Procedure
c) Sling Suspension Procedure
d) Tension Free Vaginal Taping

THE PATHOLOGY OF CONCEPTION

210. In fertile period - *(Kerala 94)*
a) Oestrogen decreases
b) Oestrogen increases
c) Progesterone increases
d) Progesterone decreases

211. Endometrial biopsy for infertility is taken on ... day- *(JIPMER 90)*
a) 5^{th} to 7^{th} b) 12^{th} to 4^{th}
c) 23^{rd} to 26^{th} d) 9^{th} to 11^{th}

212. The effective sperm count normaly is - *(PGI80, DNB 90)*
a) 20 million/ml b) 30 million/ml
c) 40 million/ml d) 50 million/ml

213. Obselete method for testing tubal patency is - *(JIPMER 95)*
a) Hystero salpingogram
b) Chromo salpingogram
c) Rubin's test
d) None of the above

214. Which is not assisted reproduction technique - *(AI95)*
a) GIFT
b) ZIFT
c) IVF and embryonal transfer
d) Artificial insemination into uterus

215. Commonest indication of IVF is an abnormality in- *(AI95)*
a) Uterus b) Fallopian tube
c) Anovulation d)Azoospemia

216. Best investigation to assess tubal potency is -
a) Rubin's test *(IN95, AI89)*
b) Hysterosalphingogram
c) Laprotomy
d) Laproscopic chromotubation

217. The best time of the menstrual cycle for endometrial biopsy in infertility investigation is -
a) First day of menstruation *(UPSC 96)*
b) One week after the onset of menstruation
c) Just near due date of the next menstruation
d) On the 15th day of the onset on menstruation

218. Tube testing is done under - *(Karn. 95)*
a) Ketamine b) General anesthesia
c) No anesthesia d) Local anaesthesia

219. Post-coital test showing non-motile sperms in the cervial smear and motile sperms from the posterior fornix suggests - *(UPSC 97)*
a) Faulty coital practice b) Immunological defect
c) Hypospadiasis d) Azoospermia

220. The commonest indication for in vitro fertilisation
a) Tubal block (complete) *(TN 98, PGI 89, 90)*
b) Oligospermia
c) Uterine anomalies
d) Cervical incomplence

221. Most reversible from of infertility- *(PGI 97)*
a) Anovulation b) Endometrosis
c) Oligospermia d) Tubal factor

222. Asthenosperima means - *(UPSC 96)*
a) Failure of the formation of sperms
b) No spermatozoa in the semen
c) Reduction in the motility of sperms
d) Sperm count less than 20 million/ml of semen

223. The test for detecting anti sperm antibodies -
a) Post-coital test b) Palm-leaf test *(TN 99)*
c) Fern test d) Spinn Barkiert test

224. Increased FSH level in azoospermic male indicates- *(UPSC 2002)*
a) Testicular atrophy b) Hypothalamic failure
c) Cryptorchidism d) Hypospadias

225. Antisperm antibodies are usually present in the -
a) Cervix b) Vagina *(UPSC 01)*
c) Uterus d) Fallopian tube

226. Azoospermia with raised FSH level is seen in -
a) Obstruction of vas *(AIIMS92)*
b) Cryptorchidism
c) Testicular failure
d) Hypothalamic failure

205) a 206) a 207) a 208) c 209) d 210) c 211)c 212) d 213) c 214) d 215)b 216) d 217) c 218) c
219) b 220) a 221)a 222)c 223)a 224)a 225)a 226)c

227. Male infertility occurs if the sperm count is less than- *(UPSC 95)*
a) 100 mill/ml b) 75 mill /ml
c) 50mill/ml d) 20 mill/ml

228. In semen banks , semen is preserved at low temperature using - *(JIPMER 81, DNB 90)*
a) Dry ice b) Deep freeze
c) Liquid nitrogen d) Liquid air

229. Drugs used for ovulation induction - *(PGI02)*
a) Clomiphene citrate b)Danazol
c) Cyproterone acetate d) Tamoxifen

230. Cervical hostility is tested by following except- *(PGI97)*
a) Spinbarkeit b) Post coital test
c) Miller kuzrole test d) Keller test

231. Common causes of infertility are - *(PGI2000)*
a) Chlamydia b)Gonorrohea
c) Mycoplasma d) Pneumococcus

232. Persistent anovulation not treated leads to A/E -
a) Hirsutism *(PGI99)*
b) Ovarian carcinoma
c) Endomatrial carcinoma
d) Increased risk of CVS disease

233. Infertility is seen in - *(PGI02)*
a) Fibroid uterus b) Endometriosis
c) Adenomyosis d) PID

234. Fallopian tube patency is checked by - *(PGI 02)*
a) Hystrosalpingography b) Laparoscopy
c) Hysteroscopy d)USG
e) CT scan

235. Time of ovulation is detected by - *(PGI03)*
a) Urine LH b) Urine FSH
c) Urine HCG d) Senum Estradiol
e) BBT

236. Best test for measuring Graffian follicle maturation is - *(Jipmer 03)*
a) Fern test
b) Endometrial biopsy
c) Trans vaginal ultrasonography
d) Abdominal ultrasonography

237. Sonosalphingographyisdonefor- *(IN 03)*
a) Measuring basal body temperature
b) To detect pregnancy
c) Testing tubal patency
d) Determining anovulatory cycle

238. According to WHO criteria, the minimum normal sperm count is - *(AIIMS 03)*
a) 10 million/ml b) 20 million/ml
c) 40 million/ml d) 60 million/ml

239. In azoospermia, the diagnostic test which can distinguish between testicular failure and obstruction in the vas deferens is - *(UPSC 04)*
a) Estimation of FSH level
b) Estimation of testosterone level
c) Karyotyping
d) FNAC of testes

240. In the postovulatory pulse, the appearance of the endometrium of USG is - *(Bihar 03)*
a) Single line
b) Broken line
c) Single line surrounded by halo
d) Double line with halo

241. Fern test is due to - *(SGPGI05)*
a) Presence of sodium chloride under progestron effect
b) Presence of sodium chloride under estrogen effect
c) LH/FSH
d) Mucus secretion by glands

242. Post coital test (PCT) is done for- *(PGI June 05)*
a) Cervical receptivity b) Sperm motility
c) Absolute sperm count d) Viable sperm count
e) Endometrial function

243. Intrauterine insemination means implantation of- *(PGI June 05)*
a) Semen b) Washed semen
c) Million of sperm d) Fertilized ova

244. PESA / MESA is helpful in - *(Orissa 05)*
a) Pre testicular azoospermia
b) Testicular azoospermia
c) Post testicular azoospermia
d) Asthenospermia

245. Aspermia is the term used to describe - *(AI05)*
a) Absence of semen
b) Absence of sperm in ejaculate
c) Absence of sperm motility
d) Occurence of abnormal sperm

246. In the perspective of the busy life schedule in the modern society, the accepted minimum period of sexual cohabitation resulting in no offspring for a couple to be declared infertile is- *(AIIMS May 05)*
a) One year b) One and a half-year
c) Two years d) Three year

247. An Antihormonal substance used to induce ovulation is - *(AI07)*
a) Mefiprestone b) Clomiphene citrate
c) Tamoxifen d)Raloxifen

248. Aspiration of sperms from testes is done in-
a) TESA b)MESA *(A107)*
c) ZIFT d)GIFT

249. True about clomiphene citrate - *(PGI June 07)*
a) Commonly causes hyperstimulation syndrome
b) Used for ovulation induction
c) Multiple pregnancies seen in 3 - 8 % cases

250. Asherman's syndrome can be diagnosed by all except - *(AIIMS Nov 0 7)*
a) Hysterosalpingography b) Saline sonography
c) Endometrial culture d) Hysteroscopy

251. Which is a not an essential criteria according to WHO for normal semen analysis - *(AIIMSNov 07)*
a) Sperm count >20 million/ml
b) Volume > 1 ml
c) Sperm with normal morphology (strict criteria) >15%
d) Motility > 25% with rapidly progressive motility

227) d 228) c 229) a,d 230) a 231)a,b,c 232)b 233)a,b,d 234) a,c 235)a,d,e 236)c 237) c 238)b 239)a
240)a 241)b 242)a 243)a,b,c 244)c 245)a 246)a 247)b 248)a 249)b,c 250)c 251)b

252. Which one of the following is the WHO criterion for oligospermia in seminal fluid analysis ?
a) Sperm count less than 50 *miWion/HPF(UPSC-II08)*
b) Sperm count less than 40 million/HPF
c) Sperm count less than 30 million/HPF
d) Sperm count less than 20 million/HPF

253. True about PCOD - *(PGIDec 08)*
a) TLH&iFSH b)TFSH&*i*LH
c) TLH&TFSH d) Hyperinsulnaemia
e) TTSH

254. Fallopian tube dysmotility is seen in?
a) Noonan syndrome *(AIIMS Nov 08)*
b) Turner syndrome
c) Kartagener syndrome
d) Marfan syndrome

255. Best indicator of ovarian reserve is ?
a) FSH b) Estradiol *(AIIMS Nov 08)*
c) LH d)FSH/LH ratio

256. All are true about polycystic ovarian disease except?
a) Persistently elevated LH *(AIIMS Nov 08)*
b) Increased LH/FSH ratio
c) Increased dheas
d) Markedly increased prolactin

257. Which of the following is not a cause of primary amenorrhea ? *(AI09)*
a) Sheehan's syndrome b) Kallman's syndrome
c) Turner's syndrome d) Rokitansky syndrome

258. Which of the following is true about obstructive azoospermia - *(AI 09)*
a) FSH and LH b) Normal FSH and Normal LH
c) LH, Normal FSH d) FSH, Normal LH

259. True about clomiphene citrate all except - *(AIIMS*
a) Enclomiphene has antiestrogenic affect *May 09)*
b) Chance of pregnancy is three fold as compared to placebo
c) Risk of multiple pregnancy is 6-10%
d) It can also be used for male infertility with oligozoospermia

260. Intraterine Insemination is indicated in all except - *(PGI June 09)*
a) Unexplained infertility b) Endometrosis
c) Male infertility d) PCOD
e) Tubal factor infertility

261. True about PCOD - *(PGI June 09)*
a) T LH & *i* FSH b) T FSH & 4 LH
c) TLH&iFSH d) Hyperinsulinaemia
e) tTSH

262. A patient with Stein leventhal syndrome is treated by which of the following *methods-(DELHI PG Feb. 09)*
a) FSH
b) Clomiphene citrate
c) Bilateral wedge resection of ovaries
d) Progesterones

263. The most common cause of secondary amenorrhoea is- *(DELHIPGMar. 09)*
a) Polycystic ovarian disease
b) Premature ovarian failure
c) Pregnancy
d) Prolactinoma

264. The features of Sheehan's syndromes may include the following except - *(DELHI PG Mar. 09)*
a) Amenorrhoea
b) Galactorrhoea
c) Loss of pubic and axillary hair
d) Hypothyroidism

265. Polycystic ovarian syndrome is associated with the following except - *(UPSC-II09)*
a) Ovarian carcinoma
b) Endometrial hyperplasia
c) Impaired glucose tolerance
d) Dyslipidemia

266. TVue about WHO normal sperm analysis -
a) Sperm count > 20 million / hpf *(PGI Nov 09)*
b) Progressive motility > 50%
c) Normal morphology > 30%
d) Sperm count > 20 million per ml
e) Rapidly progressive motility more than 30%

267. Impaired ciliary motility in - *(AIIMS Nov 09)*
a) Nuvian syndrome
b) Kartagener's syndrome

268. A 35 yr old woman presents with primary infertility & palpable pelvic mass. Her CA-125 level is 0 U/ml. Diagnosis is - *(AIIMS May 10)*
a) Ovarian Ca b) Endometrioma
c) Tuberculosis d) Borderline ovarian tumor

269. Test for ovarian reserve - *(AIIMS May 10)*
a) LH b) LH/FSH ratio
c) FSH d) Estradiol

270. Which of the following methods for assessment of female fertility during a menstrual cycle can best predict the timing of ovulation - *(AI 10)*
a) Basal body temperature (BBT)
b) Fern test
c) Spinnbarkeit phenomenon
d) Hormonal study

271. All of the following are associated with polycystic ovarian syndrome except - *(AI 10)*
a) Ovarian carcinoma b) Endometrial carcinoma
c) Insulin resistance d) Osteoporosis

272. Best investigation to assess tubal patency is -
a) Rubin's test *(DPG10)*
b) Hysterosalpingogram
c) Laparotomy
d) Laparoscopic chromotubation

273. A 28-year old lady, Rani is suspected to have polycystic ovarian disease. Sample for testing LH and FSH are best on the following days of menstrual cycle - *(DPG 10)*
a) 14 b)8-10
c) 13-15 d) 24-26

252) d 253) a,d 254) c 255) a 256) d 257) a 258)b 259)b 260)a,d,e 261) a,d 262) b 263) c 264)b 265) a
266) b,d 267) b 268) b 269) c 270) d 271) d 272) d 273) a

274. If a patient of polycystic ovary syndrome on metformin conceives, how soon should the metformin be stopped? *(UP SCII10)*
a) Immediately following the diagnosis of pregnancy
b) After the 1st trimester
c) After the 2nd trimester
d) Before the onset of labour

275. TVue about PCOS - *(PGI May 10)*
a) High FSH/LH ratio
b) Unilateral large ovarian cyst
c) Hirsutism
d) T ed risk of DM
e) OCP is given for treatment

276. Durgs used for ovulation induction ar*e-(PGINov. 10)*
a) GnRH b) Clomiphene Citrate
c) Gonadotropins d)Letrozole
e) Danazole

277. Tubal patency is **checked by all except-***(PGINov. 10)*
a) Hysterosalpingography b) Laparoscopy
c) Folloscopy d) Colposcopy
e) Sonosalpingography

278. Intrauterine insemination is indicated in all except- *(PGI Nov. 10)*
a) Unexplained infertility b) Endometriosis
c) Male infertility d)PCOD
e) Tubal factor infertility

279. In a study it is observed that the right ovary ovulates more thant the left, all are possible explanations for the cause except - *(AIIMS Nov 10)*
a) Anatomical asymmetry
b) Difference in blood supply to both sides
c) Right handedness is more common in population
d) Some embryological basis

280. Test for ovarian reserve - *(AIIMS May 11)*
a) LH b)LH/FSH ratio
c) FSH d) Estradiol

281. All of the following hormonal observations in PCOD are true, except - *(AI11)*
a) High LH/FSH b) High Androgens
c) High Prolactin d)HighLH

282. Decreased motility of fallopian tube is seen in -
a) Churg- strauss syndrome *(AI 11)*
b) Kartagener's syndrome
c) Noonan syndrome
d) Turner syndrome

283. Which of the following is true about obstructive azoospermia - *(AI 11)*
a) T FSH and T LH
b) Normal FSH and Normal LH
c) tLH, Normal FSH
d) T FSH, Normal LH

284. Asherman's syndrome typically results from -
a) Excessive curettage during dilatation and curettage *(UPSC II11)*
b) Post-partiim haemorrhage
c) Prolonged usage of oral contraceptives
d) Use of intrauterine contraceptive device

285. The following hormonal changes mark the Polycystic Ovarian Disease except - *(UPSCII11)*
a) Hyperinsulinaemia
b) Hyperandrogenism
c) Raised LH, Raised FSH
d) Raised LH, Low-to-normal FSH

286. The absence of fructose in the seminal fluid indicates a defect of- *(UPSC II11)*
a) Testicular tubular epithelium
b) Seminal vesicles
c) Leydig cells
d) Hypothalamic-pituitary axis

CONTRACEPTIVES

287. The success rate following tubal recannalisation is low after - *(AI 91)*
a) Irwins method b) Pomeroys' method
c) Fimbriectomy d) Madlener's method

288. Contraception of choice for a working women with irregular and profuse bleeding- *(KERALA 91)*
a) IUSD b) Barrier
c) Spermicide d) Oral pills

289. Copper T acts by - *(JIPMER 91)*
a) Causing aseptic endometritis
b) Increasing cervical mucus
c) Inhibiting tubal motility
d) Inhibiting ovulation

290. Method of sterilisation least suited for Recanalisation is - *(AI 92)*
a) Clips b) Bipolar cauterisation
c) Fallopian rings d) Pomeroys technique

291. Incidence of ectopic pregnancy is highest with -
a) O.C pills b) Copper T *(AI 93)*
c) Multiload IUCD d) Progestasert

292. The drug in Norplant sub-dermal implant hormonal contraceptive is - *(KARN94)*
a) Norethisterone b) Norethynodrel
c) Medroxy - progesterone d) Levenogesterol

293. Post - coital contraceptive methods include all of the following except - *(KARN94)*
a) RU-486 b)Danzol
c) Copper-T insertion d) Novoxynol

294. Failure rate of tubectomy is minimum in- *(JIPMER95)*
a) Madlener procedure b) Parkland procedure
c) Pomeroy procedure d) Irving procedure

295. Which one of the following drugs can reduce the efficacy of low dose oral contraceptive pill -
a) Penicillin b) Tetracycline
c) Ampicillin d) Rifampicin

296. Which one of the following is a non - steroidal contraceptive - *(UPSC96)*
a) Ru486 b) Minipill
c) NET-EN d) Centchroman

274)None 275)c,d,e 276)b,c 277)d 278)a,d,e 279)c 280)c 281)c 282)b 283)b 284)a 285)c 286)b
287) c 288) d 289) a,d 290) b 291) d 292) d 293) d 294) d 295) d 296) d

297. All of following are useful post - coital contraceptives except- *(AI96)*
a) IUCD b) High dose combination pill
c) RU486 d) Progesterone only pill

298. Best contraceptive for a young unmarried female is- *(DELHI96)*
a) Oral pills b)IUCD
c) Diaphragm d) Vaginal pessary

299. Mestranol acts as a contraceptive by - *(DELHI96)*
a) Inhibiting FSH secretion
b) Inhibiting LH secretion
c) Inhibiting tubal motility
d) Inhibiting nidation

300. Amount of oestrogen in MALA-D is - *(AMU 95)*
a) 30 mg b)50mg
c) 10 mg d)80mg

301. Following is commonest constituent of contraceptive foams - *(AIIMS95)*
a) Progestrone b) Nonoxylol - 9
c) Estradiol d) Phensolone sulfate

302. Where is a missed IUCD most commonly found-
a) Inside the uterus *(CUPGEE 95)*
b) In the adominal cavity outside the uterus
c) Both are equally commonly encountered
d) None is a common site

303. AD are true about centchroman except - *(AP 96)*
a) Anti oestrogenic
b) Not a teratogen
c) Long acting pill
d) Failure is 10 per 100 women years

304. Best recanalization after tubectomy is possible with-
a) Isthmo - Isthemic anastomosis *(AI97)*
b) Isthmo - ampullary
c) Ampullo - amullary
d) Comou - isthmic

305. Commonest side effect of Cu-T - *(AIIMS 96)*
a) Bleeding b)Pain
c) Perforation d) Pelvic inflammatory disease

306. Ectopic dpregnancy is seen maximum with -
a) IUCD b) OCP *(JIPMER98)*
c) Barrier method d) Tubal sterilization

307. OCP's increases the risk of which Carcinoma -
a) Ca endometrium b)CaCx *(JIPMER 98)*
c) Breast d) Ovarian Ca

308. Absolute contra indication for copper T is -
a) Endometriosis b) Pelvis TB *(AIIMS 9 7)*
c) Anaemia d) Heart disease

309. Oral piD may prevent the development of - *(AP 97)*
a) Carcinoma breast b) Ovarian malignancy
c) Sub - mucous fibroid d) All of the above

310. Peritoneum is opened in all of the following sterilization procedures except - *(AP 9 7)*
a) Mini lap b) Laparoscopy
c) Vasectomy d) Transvaginal tubectomy

311. Nonoxynol- 9 (marketed as 'Today') is a/an -
a) Hormonal contraceptive *(UPSC 96)*
b) Intrauterine contraceptive
c) Barrier contraceptive
d) Post - coital contraceptive

312. AD of the foDowing are absolute contraindincations for IUCD insertion, except - *(UPSC 96)*
a) Pelvic infection
b) Pregnancy
c) Undiagnosed abnormal vaginal bleeding
d) Valvular heart disease

313. AD of the foDowing statements regarding lost IUCD are true except-
a) Pregnancy should be excluded before other evaluadtion is done
b) Gentle probing should be done with a uterine sound
c) Utrasonography is the best method of diagnosis
d) Laparotomy is required in all cases

314. AD of the foDowing are the advantage of Depot-provea except- *(UPSC 96)*
a) It can be given to lacting mothers
b) A 150mg dose is effective for a period of 12 weeks
c) It gives good cycle control
d) It prevents ectopic pregnancy

315. After vasectomy aspermia wiD become evident in -
a) 2 to 3 weeks b) 4 to 6 weeks *(UPSC 96)*
c) 8 to 10 weeks d) 10 to 12 weeks

316. Oral contraceptive pill containing progesterone which is given in small quantities for 30 days a month is known as- *(MAHE 98)*
a) Micro pill b) Sequential pill
c) Combined pill d) None of the above

317. A case of vasectomy is said to have failed as the vasetomised person's wife gives birth to a child ten months after the operation. Which one of the foDowing is the most probable cause - *(ICS 98)*
a) Failure of the husband to use a condom after vasectomy
b) Surgical failure
c) Recanalisation
d) Wife had extra - marital contact

318. BOling's method of contraception refers to -
a) Monitoring basl body temperature *(UPSC 99)*
b) Cervical mucus method
c) Rhythm method
d) Coituds interruptus method

319. OCP protects against ah except - *(AI 99)*
a) Hepatic adenoma b) Fibroadenoma breast
c) Ca ovary d) Uterine malignancy

320. IUCD acts by mech except- *(AIIMS 98)*
a) Ovulation inhibition
b) Chronic endometritis
c) Uterine endometrial atrophy
d) Tubal dysmotility

297) d 298) a 299)b 300)a 301)b 302)a 303)d 304)a 305)a 306)a 307)b 308)b 309)b 310)c
311) c 312)d 313)d 314)c 315)d 316)a 317)a 318)b 319)a 320)a

321. Most efficient tuboplasty \s-*(AHMS98, UPSC84,86)*
a) Isthmo - isthmic b) Isthmo ampullary
c) Fimbrial reconstitution d) Comuoplasty

322. Estrogen in the OCP causes all the following except-
a) Carcinoma in situ cervix *(TN 99)*
b) Breast carcinoma
c) Endometrial carcinoma
d) Thromoembolism

323. Best contraceptive pill during lactation - *(AP 98)*
a) Fixed dose pills b) Progesterone pills
c) Mini pills d) Long acting pills

324. The low Dose progesterone - only type of oral contraceptive acts by - *(KARNA T99)*
a) Inhibition of the midcycle surge of leteinizing hormone
b) Inhibition of follicle - stimulating hormone secretion
c) Preventing ovulation
d) Rendering cervical mucus less penetrable by sperm

325. Which contraceptive helps in preventing carcinoma cervix- *(ORRISA 99)*
a) Barrier contraceptive
b) Intra cervical device
c) Intra uterine contraceptive device
d) Oral pill

326. Which one of the following is the contraceptive method of choice for a commercial sex worker -
a) OC pills b) IUCD *(UPSC 2K)*
c) Tubectomy d) Barrier method

327. Yuzpe method is a type of - *(UPSC 2K)*
a) Post - coital hormonal contraception
b) Male contraceptive method
c) Post - coital IUCD contraception
d) Minilap sterilization

328. Oral combined contraceptive pills contain which one of the following sets of hormone - *(UPSC 2K)*
a) Ethinyl oestradiol, progestrogen and oestrone
b) Progestrogen and Ethinyl oestradiol
c) Progetrogen andoestrone
d) Oestrone and ethinyl oestradiol

329. What should be done if a woman misses taking Saheli for 4 consecutive days - *(AIMS 99)*
a) Take 4 tablets when she remembers
b) 2 tablets taken twice daily
c) Start as new cycle
d) Husband should use condoms

330. Cu - T embedded in myometrium - it is to be removed by- *(CULCUTTA2K)*
a) Hysteroscope b) Currete
c) Hook d) Laparoscopy

331. True about mifepristone is - *(UP 2K)*
a) Can be used for producing early abortions
b) Mid Luteal defect
c) Acts on intra cytoplamic receptors
d) Prevents fertilzation by aseptic inflammation

332. Machanism of action of spermicidal jelly - *(UP 2K)*
a) Acrosomal cap degeneration
b) Altered vaginal enzyme
c) Alterd cervival mucus
d) Absence of glucose transport

333. Maximum chances of failure are seen in - *(UP 2K, AIMS 98)*
a) Laproscopic yoon's ring
b) Vaginal fimbriectomy
c) Hysteroscopic tubal block
d) Pomerey's method

334. When a Cu - T is implanted in myometrium, then the treatment is - *(CUPGEE 2K)*
a) Hysteroscopic removal
b) Removal by IUCD hook
c) D&C
d) Hysterectomy

335. Post coital contraception are all except- *(DNB0I)*
a) High dose estrogen b) OCP
c) IUCD d)DMPA

336. Safe period in rhythms method is : (In a female with 28 days menstual cycle) - *(MAHE 2001)*
a) Intial 14 days
b) Later 14 days
c) First and last 7 days
d) 10 to 21 days of the cycle

337. Which one of the following is not used for contraception - *(UPSC 2002)*
a) Oestrogen - progesterone combined pills
b) Progestin pills
c) Danazol
d) Intrauterine contraceptive device

338. RU486 is - *(TN 2002)*
a) Anti progestogen b) Anti oestrogen
c) Anti androgen d) Anti gonadotropin

339. Following vasectomy for family planning, a patient should be advised to use some other method of contraception, till - *(UPSC 97)*
a) Removal of all sutures
b) Pain completely subsides
c) Two weeks
d) Eight weeks

340. Contraception of choice for a post partum village woman with one child - *(KERALA 91)*
a) Barrier b) Copper T
c) Oral pills d) Spermicide

341. Dopot medroxyprogesterone acetate is sparingly used as a contraceptive because it causes -
a) Cardio vascular complications *(ALIMS 92)*
b) Lactational failure
c) Breast cancer
d) Irregular menstrual bleeding

342. Diabetic woman with malignant retinopathy requires -
a) Permanent sterilization
b) Conventional contraceptives
c) IU devices
d) Oral pills

321)a 322)c 323)b,c 324)c,d 325)a 326)d 327)a 328)b 329)a 330)a,b,c 331)a 332)None 333)c
334) a 335) d 336) c 337) None 338) a 339) None 340) b 341) d 342) b

343. A lady with 3 living children comes with 8 wks. Pregnancy with Cu T Inutero, treatment suitable is-
a) Continue pregnancy & Remove Cu T during delevery
b) Remove Cu T and permanent sterilisation
c) Remove Cu-T *(UP 96)*
d) None

344. All of the following statements concerning methods of limiting family size, are true, except - *(UPSC 97)*
a) Women who do not breastfeed are much more likely to become pregnant than those who do
b) Globally the number of tubectomies far exceeds the number of vasectomies
c) The barrier methods (condoms and diaphragms) are perhaps the most effective at limiting family size
d) All anovulatory drugs are particularly likely to cause side effects in women over 35 years of age and women who smoke

345. IUCDs in not containdicated in - *(JIPMER 98)*
a) Previous pelvic inflammatory disease
b) Irregular periods
c) Previous LSCS
d) Ca cervix

346. Long acting IUCD's are all except - *(AIIMS 97)*
a) Progestasert b)CuT
c) Lippes loop d) Multiload

347. Absolute contra-indication of Norplant -
a) Acute thrombophlebitis *(Kerala 97)*
b) Hypertension
c) Diabetes mellitus
d) Hypercholesterolemia

348. In Cu-T $_{200}$-2OO means- *(PGI97)*
a) 200mgofCu b)200mm^{2}ofCu
c) 200cu.mm of Cu d) None of the above

349. Progestasert is effective for - *(AP 97)*
a) l year b) 2 years
c) 4 years d) 5 years

350. Copper - T with threads is visible in a case of early pregnancy. Treatment of choice - *(PGI98)*
a) Remove CU-T only
b) Suction evacuation with copper - T removal
c) Reassurance and continue pregnancy
d) Lapratomy

351. A lady with IUCD becomes pregnant with tail of IUCD being seen next course of action is -
a) MTP *(PGI 98)*
b) Remove the IUCD
c) Continue the pregnancy
d) Remove IUCD and terminate pregnancy

352. OC pills intake cause psychiatric symptoms, and abdominal pain. Diagnosis is - *(PGI 98)*
a) Acute intermettent porphyria
b) Systemic lupus
c) Thrombosis
d) Anemia

353. OC pills efficiency is reduced by simultaneous use of-
a) Rifampicin b) Carbamazepine *(PGI 98)*
c) Propranolol d) Tricyclic antidepressants

354. OCP's are contraindicated in A/E - *(PGI 99)*
a) Smoking 35 years b) Coronary occlusion
c) Polyscystic ovarian ds d) Cerebro vascular ds

355. Contraindications to IUCD are - *(PGI 2000)*
a) Pelvic infl. disease (PID)
b) Congenital uterine abnormality
c) Liver disease
d) DM
e) Heart disease

356. Which of the following statements is true about mifepristone- *(PGI 01)*
a) Also called RU-486
b) It is a 19-norsteroid
c) Acts on receptors
d) Given only intravenously
e) Used for menstrual regulation

357. Oral contraceptive causes- *(PGI 01)*
a) Carcinoma endometrium b) Carcinoma cervix
c) Bile duct proliferation d) Hepatic adenoma
e) Breast cancer

358. Absolute contraindication of OC pill is - *(PGI 02)*
a) Breast ca b) Mentally ill
c) Migraine d) Fibroid
e) Hyperlipidemia

359. Which one ofthe following is the most common problem associated with the use of condom- *(UPSC 02)*
a) Increased monilial infection of vagina
b) Premature ejaculation
c) Contact dermatitis
d) Retention of urine

360. Which one of the following intrauterine contraceptive devices has the lowest pregnancy rate-
a) Lippes' loop b) Cu - 7 *(UPSC 02)*
c) Cu T - 200 d) Levonorgestrel IUD

361. A primipara with a cardiac lesion (MI) has come on the 40th day of delivery asking for contraception. The contraceptive of choice is - **(***UPSC 02)*
a) Condom with spermicidal jelly
b) Oral contraceptive pill
c) Intrauterine contraceptive device
d) Laproscopic sterilization

362. Which one of the following hormonal contracep tive CANNOT be used during lactation -*(UPSC 02)*
a) Mini-pill
b) Norplant
c) DMPA
d) Combined oral contraceptivetives

363. Third generation oral contraceptive pills contain ing norgestrel and gestodene along with estrogens-
a) Are more lipid friendly *(UPSC 02)*
b) Decrease the risk of venous thromboembolism
c) Increase the risk of break through bleeding
d) Are not used for emergency contraception

343)b 344)c 345)a,c 346)a 347)a 348)b 349)a 350)a 351)b 352)a 353)a,b 354)c 355)a,b,d,e
356) a,b,c,e 357) b,d 358) a,e 359) c 360) d 361) a 362) d 363) a

364. Medical Termination of Pregnancy Act was passed by the parliament of India in - *(UPSC 02)*
a) 1950 b) 1965
c) 1971 d) 1981

365. Ideal time for insertion of lippes loop is -
a) Before menstruation *(Jipmer03)*
b) 2 - 3 days after period is over
c) On the 14th day of menstrual cycle
d) Any time during the cycle

366. Pearl Index is a measure of - *(TN 03)*
a) Potency of contraceptives
b) Fertility rate
c) Potency of disinfectant
d) Couple protection rate

367. Low dose progestational contraceptives primarily acton- *(AIMS 03)*
a) Oviductal motility b) Uterine endometrium
c) Cervix d) Pituitary

368. Life for as long as 10 Years is of which IUCD -
a) CuT200 b)Cu250 *(Mahara02)*
c) CuT380A d) Profestasert

369. The use of combined oral contraceptive pill is associated with an increased incidence of -
a) Bacterial vaginosis *(AIIMS03)*
b) Chlamydial endocervictis
c) Vaginal warts
d) Genital herpes

370. Contraception contraindicated in AIDS -*(Orissa 04)*
a) OCpill b) Sterilization
c) IUCD d) None

371. Which one is not true regarding Centchroman?
a) It is antiestrogenic *(UPSC 04)*
b) It acts on the endometrium
c) It is a synthetic hormone
d) It is developed in India

372. In which of the following situations it is preferable not to insert IUCD - *(UPSC 04)*
a) Post - menstrual
b) Emergency postcoital
c) Six weeks after delivery
d) Immediately following mid - trimester abortion

373. Which one of the following is not used as emergency contraception - *(UPSC 04)*
a) Levonogestrel b) Monophasic pill
c) DMPA d) Progestasert

374. Antiprogesterone compound RU - 486 is effective for inducing abortion if the duration of pregnancy is less than - *(All India 04)*
a) 63 days b) 72 days
c) 88 days d) 120 days

375. Nova T has the following - *(Bihar 03)*
a) Silver core b) Copper core
c) Platinum core d) Iron core

376. Contraceptive which is not an interceptive is -
a) Cu - T b) Norplant *(Bihar 03)*
c) RU-486 d)OC pills

377. OCP's are contraindicated in all except -
a) Intermittent vaginal bleeding *(SGPGI05)*
b) Uterine fibroids
c) H/O thromboembolism
d) Cardiac abnormalities

378. Which one of the following is longest acting IUCD
a) Progestasert b)Cu-T-380 *(AMU 05)*
c) Mirena d) Norgesterol

379. The mostappropriate drug for emergency contraception is - *(AMU 05)*
a) Misoprostol b) Ethnyl estradiol
c) Levenorgesterol d) Mifepristone

380. To avoid conception D.M.P.A. given - *(HPU 05)*
a) Monthly internals b) 3 - monthly
c) 6-monthly d)Yearly

381. Copper-T is preferably inserted postnatal after -
a) 2 weeks b)4 weeks' *(Karnat 05)*
c) 5 weeks d) 8 weeks

382. Pearl's index indicates - *(PGI June 05)*
a) Malnutrition b) Population
c) Contraceptive failure d)LBW
e) IUGR

383. Reversible methods of contraception are -*(PGI June 05)*
a) Female sterilization b)OCP
c) IUCD d) Barrier
e) Depot injection

384. Composition of Nova - T - *(PGI June 05)*
a) Copper & silver b) Copper & aluminium
c) Copper only d) Copper & Selenium
e) Copper & molybdenum

385. Contreceptive advice in lactating mother -
a) Combined pill b) Mini pill *(PGI 05)*
c) IUCD d) Barrier method
e) Depot injection

386. Absolute contraindications to the use of combined oral contraceptives include the following, except-
a) Porphyria *(J&K 05)*
b) Cerebral haemorrhage
c) Previous herpes genitalis
d) Past history of trophoblastic disease

387. Which one of the following is the ideal contraceptive for a patient with heart disease -
a) IUCD b) Depoprovera *(AI05)*
c) Diaphragm d) Oral contraceptive pills

388. The most common side effect of IUD insertion is -
a) Bleeding b)Pain *(AI05)*
c) Pelvic infection d) Ectopic pregnancy

389. Characteristics of an ideal candidate for Copper-T insertion include all of the following except -
a) Has borne at least one child *(AIMS May 05)*
b) Is willing to check IUD tail
c) Has a history of ectopic pregnancy
d) Has normal menstrual periods

364)c 365)b 366)a 367)c 368)c 369)b 370)c 371)b,c,d 372)d 373)c,d 374)a 375)a 376)b 377)b 378)b 379)c 380)b,c 381)d 382)c 383)b,c,d,e 384)a 385)b,d,e 386)c 387)c 388)a 389)c

390. In a young female of reproductive age an absolute contraindication for prescribing oral contraceptive pills is- *(AIMS May 05)*
a) Diabetes b) Hypertension
c) Obesity d) Impaired liver function

391. Use of oral contraceptives decreases the incidence of all of the following except - *(AIMSMay 05)*
a) Ectopic pregnancy
b) Epithelial ovarian malignancy
c) Hepatic adenoma
d) Pelvic inflammatory disease

392. All of the following mechanisms of action of oral contraceptive pill are true, except - *(A106)*
a) Inhibition of ovulation
b) Prevention of fertilization
c) Interference with implantation of fertilized ovum
d) Interference with placental functioning

393. Which of the following statements is correct regarding levonorgestrel releasing intrauterine system ? *(AI 06)*
a) There is increased incidence of menorrhagia
b) This system can be used as hormone replacement therapy
c) This method is useful for the treatment of endometerial hyperplasia
d) Irregular uterine bleeding can be problem initially

394. All of the following mechanisms might account for a reduced risk of upper genital tract infection in users of progestin - releasing IUDs, except -
a) Reduced retrograde menstruction *(AI 06)*
b) Decreased ovulation
c) Thickened cervical mucus
d) Decidual changes in the endometrium

395. Emergency contraception prevents pregnancy by all of the following mechanisms, except -
a) Delaying/inhibiting ovulation *(AI06,AI03)*
b) Inhibiting fertilization
c) Preventing implantation of the fertilized egg
d) Interrupting an early pregnancy

396. Which is the safest contraceptive method for a woam with sickle-cell anaemia - **(***UPSC 06)*
a) Intrauterine device
b) Low dose progesterone pill
c) Condom or diaphragm
d) Low dose oestrogen-progesterone pill

397. OCP given protection against following cancers -
a) Endometrial b) Ovary *(PGI June06)*
c) Carvix d) Breast
e) Liver

398. Spermicidal agent are - *(PGI June06)*
a) Nonoxynol b) Menfegol
c) Progestasert

399. Emergency contraception include the following except - **(** *UPSC 06)*
a) Oral contraceptive b) Copper-T
c) Laevonorgestrol tablets d) DMPA

400. Eligibility criteria for sterilization include the following except - *{UPSC 06)*
a) Age of the female should be above 22 years
b) Age of the male should be below 60 years
c) Age of the female should not be more than 45 years
d) Couple should have at least two children

401. Methods used for Laparoscopic sterilization include the following except - *(UPSC 06)*
a) Electrocoagulation b)Falopering
c) Irving d) Filchie clip

402. Which of the following IUD is used for patients with menorrhagia - *(APPG 06)*
a) C4250 b) Multiload
c) Nova T c) Progestasert (Levonorgestrol)

403. "Today" sponge contains which of the following -
a) Nonoxynol d) Delfen *(APPG06)*
c) Femshield d) Desogestrel

404. IUD CU380A life span is - *(Manipal 06)*
a) l Year b) 4 Year
c) 5 Year d) 10 Year

405. Yuzpe method is used in - *(Manipal 06)*
a) Post coital hormonal regime
b) Intrauterine contraceptive method
c) Post coital intrauterine contraceptive device
d) Tukal ligation

406. Non contraceptive benefits of OC pills may be seen in all of the following conditions except - *(AI 07)*
a) Ca endometrium
b) Ca breasts
c) Rheumatoid arthritis
d) Endometriosis

407. The following statements are true about Intrauterine devices (IUD) except - *{AI 07)*
a) Multiload Cu-375 is a third generation IUD
b) The pregnancy rate of Lippes loop and Cu - T 200 are similar
c) IUD can be used for Emergency Contraception within 5 days
d) Levonorgestrel releasing IUD has an effective life of 5 years

408. Which of the following IUCD's has a life span of 10 years - *{AI07)*
a) Cu380A b)Cu200
c) NOVA-T d) Multiload

409. Most common site for female tubal sterilization is- *{/a 07)*
a) Isthmus b) Ampulla
c) Cornua d) Infundibulum

410. The most common site of ligation in female sterilisation is - *(Aiims May 07)*
a) Isthmus b)Ampullary
c) Cornual d)Fimbrial

390) d 391) c 392) d 393) a 394) b 395) d 396) c 397) a,b 398) a,b 399) d 400) c 401) c 402) d 403) a

411. Math List I with List II and select the correct answer using the code given below the lists -

List I (Drug for indiction of ovulation	Listn (Daily dose)
A. Clomiphene	1.2.5 mg BDS
B. Metformin	2.50 mg OD
C. Bromocriptine	3.75IUOD
D. Gonadotrophin	4.500 mg TDS

Code:

	A	B	C	D
a)	3	1	4	2
b)	3	4	1	2
c)	2	1	4	3
d)	2	4	1	3

412. Which one of the following is not a correct statement regarding the use of condom - *(UPSC 0 7)*
a) Air shoud be squeezed out of the tip
b) It should be tested by inflating
c) It should be unrolled on erect penis
d) K-Y jelly may beused for lubrication

413. The levonorgestrel IUD prevents the pregnancy primarily by - *(UPSC 07)*
a) Suppressing ovulation
b) Making endometrium unreceptive
c) Making cervical mucus thick
d) Making inflammatory changes within endometrium

414. The highest incidence of ectopic pregnancy amongst contraceptive users is observed with -
a) Combined contraceptive pills *(UPSC 07)*
b) Cu-T intrauterine contraceptive device
c) Progestasert intrauterine device
d) Lippes loop intrauterine device

415. Which one of the following is the most suitable situation for prescribing the progestin only pill -
a) Perimenopausal patients *(UPSC 07)*
b) Emergency contraception
c) Lactational mother
d) Diabetic mother

416. Return to fertility is delayed after cessation of oral contraception by - *(UPSC 0 7)*
a) 2 months b) 3 months
c) 4 months d) 6 months

417. The combined oral contraceptive pills decrease the risk of the following except - *(UPSC 07)*
a) Endometrial cancer b) Ovarian cancer
c) Breast cancer d) Ectopic pregnancy

418. During pomeroy's method of female sterilization, which portion of tube is ligated - *(UPSC 0 7)*
a) Isthmus b) Ampullary
c) Isthmo-ampullary d) Cornual

419. With references to vasectomy, consider the following statements - *(UPSC 07)*
1. Non-scalpel vasectomy and conventional vasectomy have complication rates of 0.4% and 3% respectively.
2. When sperms are absent from two consecutive samples of semen, the vasectomy is considered complete for contraception

Which of the statements given above is/are correct-
a) 1 only b) 2 only
c) Both 1 and 2 d) Neither 1 nor 2

420. A 20 year old girl was raped around 13th day of her regular cycle. The best possible emergency contraception to be offered would be - *(UPSC 0 7)*
a) Centchroan tablets
b) Cu-T insertion
c) Levonorgestrel tablets
d) Ethinylestradiol tablets

421. Laparoscopic approaches are usually performed-
a) Immediately post-partum *(UPSC07)*
b) > 4 weeks post-partum
c) > 6 weeks post-partum
d) Any time

422. MIRENAis- *(AIIMSNov07)*
a) Progesterone IUCD b) Hormonal implant
c) Anti progesterone d) Used for MTP

423. Chronic treatment with tamoxifen can cause carcinoma of - (*Corned 0 7)*
a) Ovary b)Endometrium
c) Cervix d) Vulva

424. Oral contraceptive pill of choice in a lactating woman is - (*Corned 08)*
a) Monophasic pill b) Biphasic pill
c) Triphasic pill d) Mini pill

425. Cu T 380A IUCD should be replaced once in -
a) 4 years b) 6 years (*Corned 08)*
c) 8 years d) 10 years

426. Least pregnancy failure rate in - *(UP 08)*
a) IUCD
b) Oestrogen + Progesterone
c) Oestrogen alone
d) Progesterone alone

427. Which of the following statements about calendar method (Rhythm method) is false - *(AI08)*
a) Abstinence is needed for only a few days in a month
b) It is associated with no costs
c) Safe period can also be observed using temperature rhythm or mucous method
d) Ectopic pregnancy is a reported complication of calendar method

428. Least failure in sterilization occurs with - *(AI 08)*
a) Falopering b) Bipolar cautery
c) Unipolar cautery d) Hulka clip

429. Which of the following procedures is associated with maximum chance of re-canalization during surgery for reversal of tubal ligation - *(AI 08)*
a) Isthumo - isthmic anastomosis
b) Isthumo - ampullary anastomosis
c) Ampullo - ampullary anastomosis
d) Cornual obstruction

411)d 412)b 413)b,c 414)c 415)c 416)d 417)c 418)c 419)b 420)c 421)c 422)a 423)b 424)d 425) d 426) b 427) a 428) c 429) a

430. The progesterone of choice for emergency contraception is - *(AIIMS May 08)*
a) Norethisterone b) Medroxyprogesteronacetate
c) Levonorgestrel d) Desogestrel

431. Decreased ovulation/impaired ovulation caused by -
a) Minipill (Progesterone only pill) *(PGI June 08)*
b) IUCD
c) Mifepristone
d) OCP
e) Norplant

432. Emergency contraception - *(PGI June 08)*
a) Combination of estrogen & progesterone
b) Mifepristone
c) Levonorgestrol
d) Misoprostal
e) IUCD

433. Contreceptive methods with failure rate < 5 -
a) Coppt - T b) Vginal sponge *(PGI June 08)*
c) Condom d)OCP
e) Tubectomy

434. Contraindications of IUCD - *(PGI June 08)*
a) Undiagnosed vaginal bleeding
b) PID
c) Smoking
d) Obesity
e) Diabetes

435. Which intrauterine device has the longest life span?
a) Progestasert b) Mirena *(DPGEE08)*
c) CuT200B d) Norplant

436. Most common employed sterisation technique ?
a) Pomeroys b)Madlener *(APPG08)*
c) Irving d) Uchida

437. Pill given in lactation ? *(APPG 08)*
a) Minipill b) Combined pill
c) Both d)None

438. Mechanism of action of mini pill ? *(APPG 08)*
a) Rendering cervical mucus thick
b) Inhibiting ovulation
c) Both
d) None

439. Most reversible method of sterilisation ?
a) Mini lap *(APPG 08)*
b) Pomeroys method
c) Laparoscopic sterilisation
d) Hysteroscopic sterilisation

440. All of the following statements about DMPA are true, Except- *(AI09)*
a) Failure rate is 0.3 per HWY
b) Reduces Menorrhagia
c) Can be used in seizures
d) No protective effect against CA endometrium

441. The most effective contraceptive method recommended in lactating mothers is - *(AI 09)*
a) Barrier method
b) Progesterone only pill
c) Oral contraceptive pills
d) Lactational amenorrhea

442. Which of the following is a contraindication to laparoscopic sterelization - *(AI 09)*
a) Obesity b) Hiatus hernia
c) Cardiac failure d) Anemia

443. Contraindication for IUCD insertion includes -
a) Pelvic infammatory disease *(PGI June 09)*
b) Previous ectopic pregnancy
c) HIV
d) Undiagnosed vaginal bleeding
e) Liver disease

444. Method of sterilization least suited for Recanalisation is - *(DELHIPGFeb. 09)*
a) Clips b) Bipolar cauterization
c) Fallopian rings d) Pomeroy's techniques

445. Contraindications for the use of intrauterine contraceptive device include all except -
a) Pelvic inflammatory disease *(DELHI PG Mar. 09)*
b) Thromboembolic disease
c) Pelvic tuberculosis
d) Ovarian cancer

446. The failure rate of combined oral contraceptive (Estrogen+Progesterone) - *(DELHIPG Mar. 09)*
a) 1-2% b) 5-6%
c) 10-12% d) 16-18%

447. Post-coital contraception is achieved by all EXCEPT:
a) High degree of progesterone *(UPSC-H09)*
b) By administration of RU 486
c) GnRH agonist
d) Administration of prostaglandins

448. Which of the following is NOT related to the use of levonorgestrel releasing intrauterine contraceptive device ? *(UPSC-II09)*
a) Reduction of blood loss
b) Reduction of pain and dysmenorrhoea in endometriosis and adenomyosis
c) Inhibition of ovulation
d) Amenorrhoea in 50% of cases

449. What is the drug of chocie for emergency contraception? *(UPSC-II09)*
a) Yuzpe regimen (combined oral pill)
b) High dose oestrogen alone
c) Levonorgestrel only pill d)Danazol

450. Which of the following is NOT an absolute contraindication for insertion of intrauterine device (IUD)? *(UPSC-II 09)*
a) Endometrial cancer b) Severe dysmenorrhea
c) Pelvic tuberculosis d)Puerperal sepsis

451. True about use of LNGIUCD - *(PGI Nov 09)*
a) Endometriosis
b) Endometrial hyperplasia
c) Used in contraception
d) Endometrial carcinoma
e) Uterine fibroid

430) c 431) a,b,c 432)a,b,c,e 433)a,d,e 434)a,b,e 435) b 436) a 437) a 438) a 439) c 440) d 441) b 442) c 443) a,b,c,d 444) b 445) b 446) a 447) a 448) c 449) c 450) b 451)All

452. Side effect of combined oral contraceptive includes-
a) Liver disorder b) Acne *(PGI Nov 09)*
c) Cause Anaemia d) Weight gain
e) Increase risk of PID

453. Emergency contraceptive(s) is/are - *(PGINov 09)*
a) Mifepristone
b) PGF2cx
c) Copper containing IUD
d) Combined estrogen & progesterone
e) Progesterone only pills

454. Progesterone of choice in emergency contraception is- *(AIMS Nov 09)*
a) Norethisterone b) Medroxy progesterone
c) Desogestrel d) Levonorgestrel

455. Drug which interferes or hampers the effectiveness of OCP are all except - *(AIMS Nov 09)*
a) Aspirin b) Tetracycline
c) Rifampicin d) Phenytoin

456. Ideal contraceptive for lactating mothers is -
a) Barrier method *(AIMS May 10)*
b) Combined OCP
c) Lactational amenorrhoea
d) Progesterone only pill

457. A primipara with a cardiac lesion (Ml) has come on the 40th day of delivery asking of for contraception. The contraceptive choice is - *(DPG10)*
a) Condom with spermicidal jelly
b) Oral contraceptive pill
c) Intrauterine contraceptive device
d) Laparoscopic sterilization

458. Yuzpe method is a type of- *(Maharashtra 10)*
a) Emergency post-coital hormonal contraception
b) Emergency post-coital IUCD contraception
c) Male contraception
d) Reversible minilap

459. Worldwide, which is the most commonly used copper-bearing intrauterine contraceptive device?
a) Copper T-200 b) Copper T-3 80 *(UP SC II10)*
c) GyneFix d) Copper-7

460. The following are the contraindications to the use of combined oral contraceptive pills, except -
a) Breastfeeding *(UP SCII10)*
b) History of deep venous thrombosis
c) Active viral hepatitis
d) Bronchial asthma

461. Mini pill should be started on the - *(UP SCII10)*
a) First day of the cycle
b) Second day of the cycle
c) Third day of the cycle
d) Fifth day of the cycle

462. What is the sequance of events in termination of pregnancy by medical method? *(UP SCII10)*
a) Mifepristone — Bleeding—Misoprostol—USG
b) Misoprostol — Mifepristol—USG — Bleeding
c) Mifepristone — Misoprostol—Bleeding—USG
d) Mifepristone—Misoprostol—USG—Bleeding

463. The composition of Mala-N is - *(Corned. 10)*
a) Norgestrel 0.30 mg and Ethinyl Oestradiol 30 g
b) Norgestrel 3.0 mg and Ethinyl Oestradiol 3.0 mg
c) Norgestrel 0.30 mg and Ethinyl Oestradiol 30 g
d) Norgestrel 30 mg and Ethinyl Oestradiol 30 mg

464. Not a method of emergency contraception -
a) Mifepristone b)Danazole *(PGINov 10)*
c) IUCD d) Levonorgestrel
e) DMPA

465. OCPs should be not given in - *(PGINov 10)*
a) Liver disease
b) Thrombo-embolic disease
c) Dysmenorrhoea
d) Cyclic menorrhagia
e) Breast carcinoma

466. Not used in emergency contraceptions -
a) LNG intra uterine device *(AIMS Nov 10)*
b) Oral mifepristone
c) Oral levonorgesterol
d) Cu T intrauterine device

467. A 30 yrs woman 2+0, hypertension have menorrhagia. Which is best treatment for her -
a) Combined pills *(AIMS May 11)*
b) MIRENA
c) Hysterectomy
d) Transcervical resection of endometrium

468. Ideal contraceptive for lactating mothers is -
a) Barrier method *(AIMS May 11)*
b) Combined OCP
c) Lactational amenorrhoea
d) Progesterone only pill

469. Ideal contraceptive for newly married couple is -
a) Barrier method *(AIMS May 11)*
b) Combined OCP
c) IUCD
d) Progesterone only pill

470. Ideal contraceptive for a couple living in different cities meeting only occasionally - *(AIMSMay 11)*
a) Barrier method b) IUCD
c) OCP d)DMPA

471. Mifepristone may be used for all of the following Except- *(AI11)*
a) Threatened Abortion b) Ectopic pregnancy
c) Fibroids d) Molar pregnancy

472. Which of the following progesterones is preferred in combination with estrogen in Low dose Oral contraceptive pills - *(AI 11)*
a) Desogesterol b) Norethisterone
c) Norgesterel d) Levonorgestrel

473. Which of the following methods of contraception should be avaoided in women with epilespy - *(AI 11)*
a) Oral contraceptive pills b)IUCD
c) Condoms d) Diaphragm

452) a,b,d 453)a,c,d,e 454)d 455)a 456)c 457)a 458)a 459)b 460)d 461)a 462)c 463)a 464)e

474. A 37 year old multiparous woman seeks advice regarding contraception. She is suffering with menorrhagia for last one year. Hemoglobin is 8.5 gm/dl. The contraception of choice for her will be -
a) CopperT380A b)Mirena *(Kamil)*
c) Tubectomy d) None of the above

475. The containdications for Progestasert include the following except - *(UPSCII11)*
a) Pelvic Inflammatory Disease
b) Uterine fibroids
c) Previous history of ectopic pregnancy
d) Previous history of abortion

476. Which of the following is a third generation intrauterine device - *(UPSC II11)*
a) Cu-7 b) TCu-200
c) TCu-380A d) Progestasert

477. Hormonal contraceptives are contraindicated in women- *(UPSC U11)*
a) Less than 25 years of age
b) Who are normotensive
c) Who have thromboembolic disorders
d) Who have anaemia

478. Complications of vasectomy includes all except -
a) Sperm granuloma *(Jipmer 11)*
b) Infection
c) Decreased libido
d) Anti sperm antibody

479. Best contraception for lactating mother is -
a) Monophasic pill b) Biphasic pill *(Jipmer 11)*
c) Mini pill d) Combined pill

480. Best IUCD for a woman with menorrhagia -
a) Lippe's loop b)Cu-T375 *(Jipmer 11)*
c) Cu-T200 d) Levonorgestrel IUCD

481. OCP's are useful in the prevention of - *(Jipmer 11)*
a) Ca. cervix b) Ca. endometrium
c) Ca. Colon d) Ca. Breast

482. Anti-progestogen used as emergency contraceptive is - *(Jipmer 11)*
a) Mifepristone b) Desogestrel
c) Nor ethisteroned) Cerozette

DISORDERS IN MENSTRUATION

483. Physiological amenorrhoea is present in all except- *(KARNATAKA 90)*
a) Pregnancy b) Lactation
c) Pre - puberty d) Post - puberty

484. Asherman's syndrome is characterised by-(77V*90)*
a) Amenorrhoeab) Dysmenorrhoea
c) Leukorrhoea d) Metrorragia

485. Primary amenorrhoea is when - *(IN 91)*
a) Mensturation does not occur even after 18 year
b) Mensturation does not occur even after 15 year of age
c) Imperforate hymen exists
d) None of the above

486. In precoccios females, mensturation occurs -
a) After 13 years of age *(IN 91)*
b) At 13 years of age
c) Less than 10 years of age
d) Below 12 years of age

487. Which is not a feature of Dysfunctional uterine bleeding - *(JIPMER92)*
a) Tender uterus b) Uterine size of 8-10 weeks
c) Menorrhagia d) Proliferative endometrium

488. Spasmodic dysmenorrhoea is seen in -*(AIIMS 92)*
a) DUB b) Ovarian Cyst
c) Submucous fibroid d) Endometriosis

489. Precocious puberty is those who menstruate -
a) 14-16 years b) 10-12 years *(Kam 96)*
c) 12 years d) Before 10 years

490. Treatment of DUB in a young female is- *(PGI95)*
a) Hormones b)RT
c) D & C d) Hysterectomy

491. Treatment of dysfunctional uterine bleeding is except- *(Kerala96)*
a) Oral contraceptive pills b) Oestrogen
c) Progesterone d) Ovariotomy
e) Danazol

492. Progressive secondary Ammenorrhoea is associated with- *(CUPGEE96)*
a) Endometriosis b) Psychosomatic cause
c) Uterine anomally d)None

493. First investigation to be done for post menopausal bleeding - *(AP96)*
a) Endometrial biopsy b) Dilatation & Currettage
c) Fractional currettage d) Hysteroslpingography

494. Metropathic hemorrhagica is best treated by- *(TN97)*
a) Curettage of uterus b) Progestogen
c) Ostrogen d)Clomiphene

495. In a woman presenting with amenorrhoea headeche blured vision & galactorrhoea appropriate investigation - *(AI97)*
a) Prolactin levels b)LH
c) FSH d)HCG

496. Commonest type of Dysfunctional uterine bleeding- *(PGI 97)*
a) Secretory b) Proliferative
c) Hyperplastic d) Mixed

497. Bony deformities, hyperpigmentation of the skin, precocious puberty is seen in - *(AP 97)*
a) Alport's syndrome
b) McCune Albright's syndrome
c) Laurence-Moon-Biedl syndrome
d) Frohlich's syndrome

498. A 45-years old woman with diagnosis of atypical adenomatous hyperplasia of the endometrium should be treated by - *(UPSC)*
a) Progesterone
b) Danazol
c) Hysteroscopic resection of endometrium
d) Hysterectomy

474) b 475) d 476)d 477)c 478)c 479)c 480)d 481) b 482)a 483)d 484)a 485)b 486)c 487)a
488) c 489)d 490)a 491)d 492)b 493)c 494)b 495)a 496)c 497)b 498) d

Mahesh Bejagam

499. DUB is due to- *(MAHE98)*
a) Endometriosis
b) Fibroid
c) Endometrial carcinoma
d) Irregular shedding of endometrium

500. Which one of the following is the primary treatment for puberty menorrhagia in a 16 years old girl with 3 gm% Hb- *(UPSC 99)*
a) Dilatation and curettage with blood transfusion
b) Danazol with blood transfusion
c) Progestogen with blood transfusion
d) A combination of oestrogen and progestogen with blood transfusion

501. Which of the following is an example of dysfunnctional uterine bleeding - *(TN 99)*
a) Hypothyroidism b) PID
c) Cervical erosion d) Carcinoma cervix

502. A 36 old woman has noticed the absence of menses for the last 4 months. A pregnancy test is negative. Serum levels of luteinizing hormone and follicle stimulating hormone are elevated and the serum estradiol levels is low. These findings suggest -
a) Bilateral tubal obstruction *(AIIMS 99)*
b) Polycystic ovarian disease
c) Premature menopause
d) Exogenous estrogen administration

503. Cause of unilateral dysmenorrhea - *(ORRISA 99)*
a) One horn of malformed uterus
b) Endometrisis with unilateral distribution
c) Small fibroid at the utero tubal junction
d) All of the above

504. True about Rokitansky Kuster Hauser syndrome are all except - **(***.AI99)*
a) No Uterus b) No ovulation
c) No vagina d)46XX

505. All are causes of posmenopausal bleeding except-
a) Carcinoma in situ of cervix *.(PGI 2000)*
b) Ca.endometrium
c) Ca. ovary
d) Ca. Fallopian tube

506. Which of the following is not a feature of Mullerian dysgenesis - *(AIIMS2K)*
a) 46 XX karyotype b) Absent vagina
c) Absent uterus d) Ovarian agenesis

507. Post menopausal woman who is overweight, hypertensive and diabetic presents with bleeding PV. The most likely clinical diagnosis is -
a) Endocervical carcinoma *(UPSC2K)*
b) Dysfunctional uterine bleeding
c) Carcinoma endometrium
d) Senile endometritis

508. The most useful investigation in this above patient would be- *(UPSC2K)*
a) Transvaginal ultrasonography
b) Endometrial sampling
c) Doppler ultrasound of pelvis
d) CT scan of pelvis

509. A 42year old female presents presents with history of polymenorrhea for the last 6 month. She is nulliparous.What is the next step in management-
a) Hysterectomy *(AIIMS 2K)*
b) Dilatation and curettage
c) Oral contraceptive pills
d) Progesterone only pills

510. Kamala, 42 year old multiparous lady complains of polymenorrhea since a few months. Which of the following will be the first line of management for her- *(AI2002)*
a) Hysterctomy b) Dilatation & Curettage
c) TAHwithBSO d) Progesterones

511. The progestogen with the greatest haemostatic effect used in dysfunctional uterine bleeding (DUB) is -
a) Medroxy progesterone *(UPSC2001)*
b) Hydroxy progesterone
c) Norethisterone
d) Dydrogesterone

512. Treatment of puberty menorrhagia - *(PGI2002)*
a) Estrogen b) Estrogen + progesterone
c) GNRH analogues d) Dilation & curettage
e) Antiprostaglandins

513. Primary amenorhoea ia a feature of all except -
a) Turner's syndrome *(AI 97)*
b) Stein-leventhal syndrome
c) Rokitansky-Kutsner-Hauser syndrome
d) Kallman syndrome

514. A 50 year old woman nulliparous, diabetic and obese presenting with post-menopausal bleeding can be any of the following except - *(PGI 99)*
a) Carcinoma in situ of cervix
b) Carcinoma endometrium
c) DUB
d) None of the above

515. The most common histological finding of endometrium in DUB is - *(PGI 1999)*
a) Hypertrophic b) Hyperplastic
c) Cystic glandular hyperplasia d) Dysplastic

516. "Swiss-cheese" endometrium is seen in -
a) Simple endometrial hyperplasia *(PGI 2000)*
b) Cystic glandular hyperplasia
c) Proliferative endometrium
d) Endometriosis

517. Treatment for 32 yr. old multipara with dysfunction uterine bleeding (DUB) is - *(PGI 2000)*
a) Progestrogens b) Danazol
c) Prostaglandins d) Endometrial ablation
e) Hysterectomy

518. LH secretion is decreased by - *(PGI 03)*
a) Bromocriptineb) Hyperthyroidism
k ,) Prolactinoma d) Phenothiazine therapy
e) HOG

519. Causes of secondary amenorrhea are - *(PGI 01)*
a) Turner's synd b) Endometriosis
c) Asherman's synd d) Thyroiditis
e) Epilepsy

499)d 500)d 501)None 502)c 503)d 504)b 505)a 506)d 507)c 508)b 509)b 510)b 511)a,c 512)a,b 513)b 514) a 515)b 516)b 517) a 518)e 519)c,d,e

520. Puberty menorrhagia is treated by - *(PGI02)*
a) Progesterone
b) Progesterone and estrogen
c) GnRH analogues
d) Danazol
e) Surgery

521. Positive progesterone challenge test in a patient of secondary amenorrhoea, seen in - *(PGI 04)*
a) Asherman Syndrome
b) Endometrial TB
c) Hypopituitarism
d) Premature ovarian failure
e) PCOD

522. Withdrawal bleeding with progesterone seen in otherwise amenorrhoeic woman due to - *(PGI97)*
a) Hypogonadotrophic hypogonadism
b) Anovulation
c) Ovarian failure
d) TB. endometritis

523. Cause of dysfunctional uterine bleeding can be -
a) Uterine polyp *(PGI 01)*
b) Fibroid
c) Granulosa cell tumour
d) Irregular ripening or endometium
e) Irregular shedding of endometrium

524. A patient with amenorrhea had bleeding after giving a trial of progesterone. This implies -
a) Sufficient estrogen *(PGI 01)*
b) Sufficient progesterone
c) Normal ovarian function
d) Intact endometrium
e) Intact pituitary axis

525. Increased LH: FSH ratio is found in - **(***UPSC 02)*
a) Premature menopause
b) Sheehan syndrome
c) Polycystic ovary syndrome
d) Turner's syndrome

526. In Testicular Feminisation Syndrome (Anrogen Insensitivity Syndrome) Gonadectomy is indicated-
a) As soon as it is diagnosed (*UPSC 04)*
b) At puberty
c) Only when malignancy develops in it
d) When hirsutism is evident

527. Failure of bleeding after withdrawal of oestrogen indicates - (*SGPGI04)*
a) Uterine factor b) Ovarian factors
c) Pituitary factor d) Hypothalamic factor

528. Halban's disease is due to - *(JIPMER 05)*
a) Persistent corpus luteum
b) Deficient corpus luteum
c) Persistent trophoblast
d) Deficient trophoblast

529. A female presents with primary amenorrhea and absent vagina, the next investigation to be done is - *(SGPGI 05)*
a) LH/FSH assay b) Chromosomal analysis
c) Urianalysis d) Laproscopy

530. In a case of secondary amenorrhoea who fails to get withdrawal bleeding after taking estrogen and progesterone, the fault lies at the level of -
a) Pituitary b) Hypothalamus *(Karnat 05)*
c) Ovary d) Endometrium

531. Average blood loss in normal menstruation -
a) 50 ml b)80ml *(PGI June 05,*
c) 100ml d) 120 ml *JIPMER 86)*
e) 10ml

532. Initial evaluation in adolescent abnormal uterine bleeding - *(PGI June 05)*
a) Hemogram b) Platelet Count
c) USG d)D&C
e) Examination under anesthesia

533. Causes of secondary dysmenorrhoea in young female - *(PGI June 05)*
a) T.B. b) Adenomyosis
c) QN d) Endometriosis
e) Subserous fibroid

534. The most common cause of secondary amenorrhoea in India is - *(AI05)*
a) Endometrial tuberculosis
b) Premature ovarian failure
c) Polycystic ovarian syndrome
d) Sheehan's syndrome

535. The risk of Asherman syndrome is the highest if dilatation and curettage (D&C) is done for the following condition - *(AIIMS 06)*
a) Medical termination of pregnancy
b) Missed abortion
c) Dysfunctional uterine bleeding
d) Postpartum hemorrhage

536. A 13-year-old girl presents in the casualty with acute pain in the lower abdomen. She has history of cyclical pain for last 6 months and she has not attained her menarche yet. On local genital examination, a tense bulge in the region of hymen was seen. The most probable diagnosis is -
a) Rockytansky Kuster syndrome *(AIIMS 06)*
b) Testicular feminization syndrome
c) Imperforate hymen
d) Ashermna's syndrome

537. A 30-year old housewife reports with 6 months amenorrhoea. Her serum LH and FSH are high with low estradiol levels. What is the most likely cause of amenorrhoea - *(UPSC 06)*
a) Pituitary tumor
b) Polycystic ovarian disease
c) Exercise induced
d) Premature menopause

538. In cystic glandular hyperplasia what is seen -
a) Normal menstrual bleeding *(Manipal 06)*
b) Amenorrhoea and bleeding
c) Hypomenorrhoea
d) None of the above

520)a,b 521)e 522)b 523)d,e 524)a,c,d,e 525)c 526)b 527)a 528)a 529)b 530)d 531)a 532)a,b,c 533) b,d,e 534) a 535) d 536) c 537) d 538) b

539. Most common cause for postmenopausal bleeding in Indian woman is - *(AI07)*
a) Ca cervix b) Ca endometrium
c) DUB d) Ca ovary

540. HRT is useful in all except - *(AIIMSMay 07)*
a) Flushing b) Osteoporosis
c) Vaginal atrophy d) Coronary heart disease

541. Most common cause of postmenopausal bleeding in women in India is - *(AIIMSMay 07)*
a) Cancer cervix b) Cancer endometrium
c) HRT . d) Senile endometritis

542. Premature menopause occurs before the age of -
a) 40 years b) 35 years *(MAHE 07)*
c) 45 years d) 50 years

543. Child with primary amenorrhoea with negative progesterone challenge test but positive combined progesterone & estrogen test. Diagnosis may be -
a) Mullerian agenesis b) PCOD *(PGI June 07)*
c) Asherman syndrome d) Prolactinoma

544. Which of the following drugs are effective in the treatment of dysfunctional uterine bleeding when the endometrial biopsy shows a secretory pattern ?
1. Medroxyprogesterone acetate
2. Combined preparations of progestogen and oestrogen
3. Prostaglandin synthetase inhibitors
Select the correct answer using the code given below-
a) 1,2 and 3 b) 1 and 2 only
c) 2 and 3 only d) 1 and 3 only

545. Premature menopause occurs before the age of -
a) 40 years b) 35 years *(Manipal 08)*
c) 45 years d) 50 years

546. Which of the following statement (s) is/are true -
a) Primary amenorrhoea is failure of onset of menstruation beyond age of 14 *(PGI Dec 08)*
b) Secondary amenorrhoea refer to failure of occurence of menstruation for 12 months who have previously menstruated
c) Polymenorrhoea means episodes of menstruation at interval of less than 28 days
d) Oligomenorrhoea means episodes of menstruation at intervals of more than 35 days
e) Primary amenorrhoea is failure of onset of menstruation beyond age of 15 years in presence of secondary sexual development

547. A 45 yr old lady presented with recurrent uterine bleeding. On transvaginal USG thickness of endometrium was found to be 8 mm. What should be the next step in the management of this patient ?
a) Histopathology *(AIIMS Nov 08)*
b) Hysterectomy
c) Progesterone
d) OCP

548. Which of the following treatments for menorrhagia is not supported by evidence - *(AI09)*
a) Combined oral contraceptive pills
b) Progesterone
c) Tranexamic acid
d) Ethamsylate

549. A 45 year old post menopausal woman presents with vaginal bleeding. Transvaginal ultrasound reveals an endometrial thickness of 8.9 mm. The next step in the management should be - *(AI 09)*
a) Hysterectomy
b) Start progesterone therapy
c) Histopathological examination of curettage
d) Follow up sonography

550. Which of the following statement is/are true -
a) Adult female serum FSH level is 5-2.0 mU/ml
b) Normal plasma testosterone level in adult female is 20-80ng/ml *(PGI June09)*
c) Oligomenorrhoea means episodes of menstrauation at intervals of more than 35 days
d) Menorrhagia means cyclic bleeding >50ml
e) PCOD clinical features includes anovulation, obesity & infertility

551. A 55 year old woman has single episode of postmenopausal bleeding. Management of this patient includes- *(PGI June09)*
a) Pap smear
b) Endometrial biopsy
c) Wait & watch
d) Enquire about recent hormonal intake

552. A 35 years old woman with dysmenorrheal and menorrhagia of 6 months duration showed an enlarged uterus of 20 weeks which was tender. The possible diagnosis is - *(DELHIPG Feb. 09)*
a) Adenomyosis b)Firboid
c) Carcinoma endometrium d)PID

553. Match list I (Condition/endometrial pathology) with list II (Choice of treatment) and select the correct answer using the codes given below the lists- *(UPSC-II09)*

List I (Condition/ endometrial pathology	**List II** (Choice of treatment
A. Simple hyperplasia	1. Reassurance
B. Ovulatory menorrhagia	2. Progestins for 6 months
C. Puberty menorrhagia	3. Oral contraceptive pills
D. Irregular shedding	4. Hematinics

Codes:

	A	B	C	D
a)	2	3	4	1
b)	2	4	3	1
c)	1	**3**	4	2
d)	1	4	3	2

554. Which of the following treatments for menorrhagia is not supported by evidence? *(AIIMSMay 10)*
a) Tranexamic acid b) Ethamsylate
c) Combined OCP d) Progesterone

539) a 540) d 541) a 542) a 543) d 544) c 545) a 546) d,e 547) a 548) d 549) c 550)a,c,e 551)All 552) a 553) c 554) b

555. A lady presented with secondary amenorrhea 6 months after having an abortion. Her FSH levels were mesured as 6 mlU/ml what is the most probable diagnosis- *(AI10)*
a) Pituitary failure b) Ovarian failure
c) Fresh pregnancy d) Uterine synechiae

556. Metropathia hemorrhagica is best treated by- *(DPG10)*
a) Curettage of uterus b) Progestogen
c) Ostrogen d)Clomiphene

557. Hot flushes correspond to surge of-*(Maharashtra 10)*
a) FSH b)LH
c) GnRH d) Estrogen

558. A 19 year old patient came to the out patient deparment with complaints of Primary Amenorrhea. She had well developed breast and pubic hair. However there was absence of vagina and uterus. Likely diagnosis is - *(AIIMS Nov 10)*
a) XYY
b) Mullerian agenesis
c) Gonadal dysgenesis
d) Kleinfelter's syndrome

559. A 20 year average weight old female complains of ligomenorrhea along with facial hair. Preliminary investigation reveal raised free testosterone levels. Which of the following could be likely etiology -
a) Idiopathic hursutism *(AIIMS Nov 10)*
b) PCOD
c) Adrenal hyperplasia
d) Testosterone secreting tumour

560. Which of the following is not a cause of primary amenorrhea? *(AI 11)*
a) Sheehan's syndrome
b) Kallman's syndrome
c) Turner's syndrome
d) Rokitansky syndrome

561. A female with 45X0 genotype has primary amenorrhoea. Most likely diagnosis is - *(AI 11)*
a) Gonadal Dysgenesis
b) Androgen Insensitivity syndrome
c) Meyer Rokitansky Kuster Houser Syndrome
d) Congenital adrenal hyperplasia

562. Which of the following treatments for menorrhagia is not supported by evidence - *(AI 11)*
a) Combined oral contraceptive pills
b) Progesterone
c) Tranexamic acid
d) Ethamsylate

563. A 45 year old post menopausal woman presents with vaginal bleedng Transvaginal ultrasound reveals an endometrial thickness of 8.0 mm. The next step in the management should be - *(AI 11)*
a) Hysterectomy
b) Start progesterone therapy
c) Histopathological examination of curettage
d) Follow up sonogaphy

564. All of the following agents are used in the treatment of hot flashes, except - *(AI 11)*
a) Tamoxifen b) Venlafaxine
c) Gabapentin d) paroxetine

565. Precocious puberty is diagnosed when - *(Kam 11)*
a) Secondary sexual characteristics appear before 8 years, menstruation occurs before 10 years
b) Secondary sexual characteristics appear before lOyears,menstruation occurs before 8 years
c) Secondary sexual characteristics appear before 6 years, menstruation occurs before Syears
d) Secondary sexual characteristics appear before 8 years, menstruation before 6 years

566. A 40-year-old woman presents with excessive menstrual bleeding. The most appropriate first surgical treatment will be - *(UPSCII11)*
a) Hysteroscopy b) Myomectomy
c) Dilatation and curettage d) Hysterectomy

567. A 15-year-old unmarried girl presents with complaints of dysmenorrhoea for the last about one year. She achieved menarche at 12 years of age. On abdominal and rectal examination, she has no abnormality. What will be the most appropriate management - *(UPSC II11)*
a) Prescribe antibiotics
b) Prescribe clotrimazole vaginal ovules
c) Reassure her and prescribe analgesics
d) Perform dilatation and curettage

568. A 30-year-old woman with three children has dysfunctional uterine bleeding. What will be the most appropriate management - *(UPSC II11)*
a) Abdominal hysterectomy
b) Medical management with danazol
c) Transcervical endometrial resection
d) Levonorgestrel-releasing intrauterine device

569. A woman who has secondary amenorrhea experiences withdrawal bleeding following progesterone administration. What is the likely diagnosis - *(UPSC II11)*
a) Anovulation
b) Premature ovarian failure '
c) Hypothalamic amenorrhea
d) Asherman's syndrome

570. A 60-year-old woman presents with postmenopausal bleeding per speculum examination reveal no abnormality, and the Pap smear is normal. What will be the most appropriate management -
a) Keep her under observation *(UPSC II11)*
b) Administer haemostatics
c) Measure endometrial thickness with ultrasound
d) Hysterectomy

571. Pain during menstruation starting few days before menstruation and ends with menstruation is -
a) Spasmodic dy smenorrhoea *(Jipmer 11)*
b) Congestive dysmenorrhoea
c) Membranous dysmenorrhoea
d) Menorrhagia

555) d 556)b 557)a 558)b 559)c 560)a 561)a 562)d 563)c 564)a 565)a 566)c 567)c 568) d 569) a 570) c 571) b

CHORIOCARCINOMA

572. Gestational Trophoblastic tumours occur most commonly after- (*AIIMS91*)
a) Cesearean section b) Spontaneous abortion
c) Pre term delivery d) Full term delivery

573. Chorion epithelioma mostly follow- *(JIPMER 80,*
a) Abortion b) Normal labour *UPSC90)*
c) Ectopic pregnancy d)Hydatidiformmole
e) None of the above

574. Choriocarcinoma commonly metastasises to -
a) Liver b) Brain *(AIIMS 84, 94)*
c) Lungs d) Placents

575. Ayoung patient is diagnosed to have choriocarcinoma the treatment of choice is - *(MP 98)*
a) Hysterectomy
b) Chemotherapy
c) Chemotherapy followed by hysterectomy
d) Hysterectomy followed by chemotherapy

576. Tumour marker for chorio carcinoma-{7A*87,AI93*
a) HOG b)AFP *MAHE98)*
c) CEA d)Desmin

577. A 35 year old lady P2+0+0+0 is diagnosed to have choriocarcinoma. The treatment of choice is- *(ARMS 2K)*
a) Hysterectomy b) Dilation and curettage
c) Chemotherapy d) Radiation

578. A patient with choriocarcinoma, is not reponding to the usual doses of methotrexate. She is having jaundice. Which drug will you prefer for further treatment- *(AIIMS2K)*
a) Actinomycin D b) Cyclophosphamide
c) Cisplatin d) Chlorambucil

579. The ideal treatment for metastatic choriocarcinoma in the lungs in a young women is - *(PGI99)*
a) Chemotherapy b) Surgery with radiation
c) Surgery d) Wait and watch

580. True about conplete hydatidiform mole is -*(PGI 01)*
a) Chromosome pattern is XX
b) It is of maternal origin
c) Enlarged ovarian cyst occurs
d) It is common in developed countries
e) Associated with pre-eclampsia

581. Snow-storm pattern seen in - *(PGI 03)*
a) H. Mole b) Ectopic pregnancy
c) Fibroid d) Intrauterine death

582. True about H. Mole - *(PGI 03)*
a) Complete mole seen in human only
b) Trophoblastic proliferation
c) Hydropic degeneration
d) Villus pattern absent

583. Complete H. Mole are - *(PGI 03)*
a) Triploid
b) Diploid
c) Increased p-HCG
d) 2% cases may convert to carcinoma
e) Chance of malignant conversion less than partial mole

584. Bad prognostic markers of Chorio-carcinoma treatment are - *(PGI 04)*
a) Liver metastasis b) Lung metastasis
c) Previous H. mole d) High H.C.G titre
e) Chemotherapy started 12 months after pregnancy

585. Villous pattern is lost in - *(TN 03)*
a) Invasive mole b) Tubal mole
c) Hydatidiform mole d) Chorio carcinoma

586. Which of the following endocrinological condition may be associated with hydatiform mole ? *(DELHIPG Feb. 09)*
a) Hypothyroidism b) Hyperthyroidism
c) Diabetes d)Hyperprolact

587. The treatment of choice for hydatiform mole with a uterine size of 28 weeks is - *(DELHIPG Mar. 09)*
a) Suction evacuation
b) Intra-amniotic saline followed by oxytocin
c) Evacuation by misoprostol and Mifepristone
d) Methotrexate administration

588. The most common karyotype of a partial mole is-
a) Diploid 46 XX b) Diploid 46 XY *(UPSC-II09)*
c) Triploid d) Haploid

589. True about complete mole- *(PGI Nov. 10)*
a) Presence of foetal parts and cardiac activity
b) Normal unterine size
c) Beta-hCG doubling time is 7-10 days
d) Pre-eclampsia at < 24 weeks
e) PV bleeding is commonest presentation

590. Snow storm appearance on USGseen in -*(PGINov. 10)*
a) Hydatiform mole b) Invasive mole
c) Twin pregnancy d) Ectopic pregnancy
e) Choriocarcinoma

PROLAPSE

591. Urinary incontinence in utero vaginal prolapse is mostly is due to - *(ARMS 91)*
a) Detrusor instability b) Stress incontience
c) Urge incontinence d) True incontinence

592. Not a complication of prolapsed uterus - *(PGI82*
a) Carcinoma cervix *UPSC87)*
b) Elongation of cervix
c) Cystocele
d) Decubitus ulcer

593. A 25-years old nulliparous woman with third degree uterine descent but no cystocele or rectocele or rectocele or enetrocele is best treated with -
a) FothergilTs repair *(UPSC)*
b) Abdominal sling operation
c) Amputation of the cervix and reconstruction
d) Lefort's operation

594. The best way to treat decubitus ulcer in a case of genital prolapse is by - *(KARNAT99)*
a) Bedrest b) Antibiotics
c) Antiseptic dressing d) Reduction with tampoon

572) b 573) d 574)c 575)b 576)a 577)c 578)a 579)a 580)a,c,e 581)a 582)b,c 583)b,c,d 584)a,b,d,e
585) d 586) b 587) a 588) c 589) d,e 590) a 591) b 592) a 593) b 594) d

595. A 28 year old women, para3, with 2nd degee prolapse, which treatment should be done - *(A1IMS 97)*
a) FothergilPs operation
b) Wertheims
c) Pelvic floor exercise
d) Vaginal hystrectomy with pelvic repair

596. A young nulliparous woman has 3rd degree of uterovaginal prolapse without any cystocele or rectocele. There is no stress incontinence. The uterus is retroverted. Uterocervical lenth is 3 inches. All other symptoms are normal. The best treatment plan for her will be - *(UPSC 2K)*
a) Observation and reassurance till child bearing is over
b) Shirodkar's vaginal repair
c) Shirodkar's abdominal sling
d) FothergilPs opration

597. Presence of decubitus ulcer in proplapse indicates - *(UPSC 2K)*
a) Infection b) Malignancy
c) Circulatory disturbances d) Machanical trauma

598. The appropriate chocie for treatment of Nulliparous prolapse is - *(Karn 01)*
a) Sling operation b) Manchestar repair
c) Ward Mayo,s operation d) Pessry treatment

599. Indication of Manchester operation in prolapse -
a) Nulliparous *(PGI03)*
b) Women of < 35 yrs age
c) Patient who wants child bearing function
d) Congenital elongation of cervix

600. Cause of decubitus ulcer in uterine prolase is -
a) Friction b) Venous congestion *(PGI 99)*
c) Intercourse d) Trauma

601. In FothergilPs operation the following are undertaken except - *(IN 03)*
a) Amputation of cervix
b) Anterior colporrhaphy
c) Colpoperineorrhaphy
d) Plication of round ligament

602. In which condition, a rubber-ring passary is an appropriate management for a woman who is having utero-vaginal prolapse - *(UPSC 06)*
a) Old age
b) Active reproductive age
c) Early pregnancy
d) Prolapse associated with carcinoma of cervix

603. Birth trauma is a risk factor for - *(MAHE 07)*
a) Prolapse uterus b) Endometriosis
c) PID d) Abortions

604. In which one of the following conditions is sling operation done - *(UPSC 07)*
a) Multiple prolapse b) Nulliparous prolapse
c) Cystocoele d)Rectocoele

605. Which of the following are the causes of retroversion of the uterus ? *(UPSC-II08)*
1) Pelvic inflammatory diseases
2. Prolapse uterus
3. Endometriosis
Select the correct answer using the code given below-
a) 1,2 and 3 b) 1 and 2 only
c) 2 and 3 only d) 1 and 3 only

606. Which one of the following is not an operation for uterine inversion ? *(UPSC-II 08)*
a) 'O'Sullivan's b)Haultain's
c) Spinelli's d) Fentoni's

607. Among the four steps in the Manchester operation done for prolapse, which one of the following is the correct order in which they are done? *(UPSC-II 08)*
a) Amputation of cervix, D&C, Fothergill suture, haemostatis
b) D & C, Amputation of cervix, Fothergill suture, haemostatis
c) D & C, Futhergill suture, Amputation of cervix, haemostatis
d) D & C, Amputation of cervix, haemostatis, Futhergill suture

608. Pouch of Douglas with vaginal wall prolapse of uterus is known as - *(UP 08)*
a) Cystocele b) Urethrocele
c) Enterocele d) Rectocele

609. Birth trauma is a risk factor for - *(Manipal 08)*
a) Prolapse uterus b)Endometriosis
c) PED d) Abortions

610. FothergilPs repair is also known as - *(DPGEE 08)*
a) Le Fort's repair
b) Shirodkar's abdominal sling operation
c) Manchester operation
d) Khan's sling operation

611. Ligament used to maintain anteversion ? *(APPG 08)*
a) Triangular ligament b) Uterosacral ligament
c) Broad ligament d) Round ligament

612. Which of the follwoing condition is treated by Sacral colpoplexy ? *(APPG 08)*
a) Stress incontinence b) Rectovaginal fistula
c) Retroverted uterus d) Vault prolapse

613. A young nulliparous woman had 3rd degree of uterovaginal prolapse without any cystocele or rectocele. There is no stress incontinence. The uterus is retroverted. Uterocervical length is 3 inches. All other symptoms are normal. The best treatment plan for her will be - *(DELHIPG Feb. 09)*
a) Observation and reassurance till child bearing is over
b) Shirodkar's vaginal repair
c) Shirodkar's abdominal sling
d) FothergilPs operation

614. What is the most common cause of vault prolapse following hysterectomy ? *(UPSC-II 09)*
a) Chronic cough
b) Obesity
c) Diabetes mellitus
d) Failure to identify and repair enterocele

595) a 596) c 597) c 598) a 599) b,d 600) b 601) d 602) c 603) a 604) b 605) d 606) d 607) b 608) c
609) a 610) c 611)b 612) d 613) c 614) d

615. A 25-year old nulliparous woman with third degree uterine descent but no cystocele or recto-cele or enetrocele is best treated with - *(DPG10)*
a) Fothergill's repair
b) Abdominal sling operation
c) Amputation of the cervix and reconstruction
d) Lefort's operation

616. A woman of child-bearing age develops a second-degree uterine prolapse with supravaginal elongation of the cervix. What will be the most appropriate management - *(UPSC II11)*
a) Amputation of the cervix
b) Fothergill's operation
c) Vaginal hysterectomy and pelvic floor repair
d) Sling operation

FIBROMYOMA OF THE UTERUS

617. Fundul myomas commonly present as - **(***TN90)*
a) Inversion of uterus b) Dysmenorrhoea
c) Urinary retension d) Menorrhagia

618. Commonest site for fibroid is - **(***AIIMS91***)**
a) Submucous b) Intramural
c) Subserous d) Cervical

619. The precentage of myomas undergoing malignant transformation - *(AIIMS 91)*
a) 10% b) 5 %
c) 1 % d) 0.5 %

620. Treatment of choice in a perimenopausal woman with bleeding P V due to multiple fibroids is -
a) TAH with BSO **(***AIIMS 92)*
b) TAH
c) Vaginal hystrectomy
d) Enucleation of fibfoids

621. Treatment of choice in a 45 year old multipara (para 3) with a single fibroid in the uterus 12 weeks size and asymptomatic - *{AIIMS 94)*
a) Hysterectomy b) Myomectomy
c) Hysteroscopic removal d) No treatment needed

622. Calcareous degeneration occurs most commonly in which type of fibroids - *(PGI97)*
a) Submucous b) Subserous
c) Interstitial d) Cervical

623. Retention of Urine is most likely to be caused by-
a) Subserous fibromyoma **(***MP98***)**
b) Interstitial fibromyoma
c) Submucous fibromyoma
d) Posterior cervical fibromyoma

624. Red degeneration of uterine fibroid - *{MP 98)*
a) Is aseptic infarction
b) Only occurs in pregnancy
c) Causes leucopenia with lymphocytosis
d) Is due to emboli occluding the major blood vessels supplying the myoma

625. Malignant potential is most in - *{AIIMS 98)*
a) Subserous fibroid b) Submucous
c) Intramural d) Cervical fibroid

626. Which of the following is the false about fibroid ^
a) Usually malignant *{TN 99)*
b) Rare before 20 years
c) Usually asymptomatic
d) More common in nulliparous

627. Submucosal fibroid detected by - *(PGI 02)*
a) Hysteroscopy
b) Hysterosalpingography
c) USG, (transabdominal)
d) Laparscopy

628. Utrine fibromyoma is associated with - *(PGI 02)*
a) Endometriosis b) Pelvic inflammatory disease
c) Ovary Ca d) Amenorrhea
e) Tamoxifen

626. Drugs that reduce the size of fibroid are - *(PGI 03)*
a) Danazol b) GnRh
c) Ru-486 d) Estrogen
e) Progesterone

630. To start with, all fibriods are - *(PGI 98)*
a) Interstital b) Submucus
c) Subserous d) Ovarian

631. Uterine Leimyoma is LEAST likely to undergo - *(SGPGI05, AI88)*
a) Malignant change b) Hyaline change
c) Calcification d) Red degeneration

632. Red degeneration in a case of fibroid with pregnancy occurs most often during - *(SGPGI 05)*
a) First trimester b) Second trimester
c) Third trimester d) Puperium

633. Not true about Red degeneration of myomas is -
a) It occur commonly during pregnancy *(MAHA 05)*
b) Immediate surgical intervention is needed
c) Due to interference with blood supply
d) Treated with analgesics

634. A 30 year old, para two, with two live children has menorrhagia for 2 years. She was ligated 4 years back. On investivation she is found to have a 2 cm x 2 cm submucous myoma. What will be the best management option for her - *(UPSC 06)*
a) Total abdominal hysterectomy
b) Danazol 400 mg twice daily for 3 months
c) Gn RH analogues
d) Hysteroscopic myoma resection

635. Fibroid uterus may present with all of the following except- *{AI07)*
a) Amenorrhoea b) Pelvic mass
c) Infertility d) Polymenorrhea

636. All are used to shrink fibroids except -*(UP 07, 06)*
a) Estrogen b) Danazol
c) Mifepristone d) GnRH analogue

637. All are used to shrink fibroids except -*(DPGEE 08)*
a) Mifepristone b) Estrogen
c) Danazol d) GnRH analogues

615)b 616)b 617)d 618)b 619)d 620)a,b 621)a 622)b 623)d 624)a 625)a,c 626)a 627)a,b,c 628) a,b 629) a,b,c,e 630) a 631) a 632) b 633) b 634) c 635) a 636) a 637) b

638. Operative haemorrhage during myomectomy can be minimised by prior administration of - *(PGIDec 08)*
a) GnRH analogue b)OCP
c) Danazol d) LH
e) Mifepristone

639. A 26 yr women has 7 x 8 cm leiomyoma, management option include - *(PGI June 09)*
a) Followup b)OCP
c) Myomectomy d) Hysterectomy

640. The risk of sarcoma developing in a fibroid uterus is approximately- *(DELHIPGMar. 09)*
a) <1% b) 10%
c) 30% d)50%

641. Which of these can be used for uterine artery embolization for fibroid uterus ? *(UPSC-II09)*
a) Polyglactin b) Ethacridinelactate
c) Polyvinyl alcohol d) Methylene blue

642. Sarcomatous change should be suspected in case of uterine fibroid when there occurs- *(Maharashtra 10)*
a) Increase in the size b) Pain
c) Bleeding d) All of the above

643. The approximate incidence of sarcomatous changes in cases of fibroid uterus is - *(Kam 11)*
a) 0.5% b) 5 %
c) 25% d)50%

CARCINOMA CERVIX

644. A 35 years old lady with 3 children and had undergone tubal ligation shows a positive pap smear, next line of management is - *(JIPMER 90)*
a) Irradiation
b) Hysterectomy
c) Hysterosalphingo oophorectomy
d) Colposcopy and cervical biopsy

645. The commonest cause of death in carcinoma cervix is- *(A191)*
a) Septicemia b) Haemorrhage
c) Cachexia d) Renal failure

646. Best method for cancer cervix screening is- *(AI92)*
a) Pap smear b) Colposcopy
c) Biopsy d) Colpomicroscopy

647. Carcinoma cervix with involvement of upper 2/3 of vagina is stage---------- *(JIPMER 92)*
a) HA b)HB
c) HIA d)IHB

648. In young women the method of diathermy conization should be- *(JIPMER 80, DNB 90)*
a) Superfical conization b) Deep conization
c) Any of the above d) None of the above

649. The cone of tissue removed in the operation of conization consists of - *(AIIMS 78, DNB 90)*
a) All the racemose glands
b) Eroded area of the cervix
c) Some of the racemose glands
d) A+B

650. The incidence of lymphnode metastasis in carcinoma cervix stage II is - *(KARN94)*
a) 5-10% b) 15-20%
c) 2540% d) 50-60%

651. Carcinoma cervix with bilateral hydro ureter due to ureteric obstruction is stage - *(KERALA 95)*
a) I b)H
c) m d)IV

652. The most common cause of death in carcinoma cervix is - *(UPSC96)*
a) Haemorrhage b) Uraemia
c) Infection d) Metastases

653. All of following are true about carcinoma of cervix except- *(DELHI96)*
a) Commonest genital cancer in females in India
b) Blood spread is not very common
c) No cytological test is available for screening in early phase of disease
d) Disturbance of normal menstrual pattern may be the first manifestation

654. Carvical intraepithelial neoplasia III with no colposcopy activity treatment of choice - *(AP 96)*
a) Hysterecetomy b) Radiotherapy
c) Conisation d) Follow-up after 1year

655. According to FIGO classification the investigation in Carcinoma cervix are all except - *(AIIMS 96)*
a) X-Ray Chest b)IVP
c) Pelvic ultrasound d) Cystoscopy

656. Treatment of microinvasive Ca cervix in a $G_3P_QL_0A_3$ 42 year old lady - *(A197)*
a) Laser evacuation b) Hysterectomy
c) Conisation d) Wertheim's hysterectomy

657. A 30 years old lady was found to have PAP smear positive, cervical,biopsy negative, and endometrical currettage positive, next thing to do is - *(AIIMS 97)*
a) Conisation b) Hysterectomy
c) Werthiems Hysterectomy d) Repeat PAP smear

658. Investigations for carcinoma cervix in the early stage are all except - *(AP 9 7)*
a) Surface biopsy
b) Ultrasound
c) Colposcopic guided biopsy
d) Schiller's test

659. A patient with carcinoma cervix developed abdominal distension, abnormal mentation and intractable hiccoughs. The likely cause is - *(AIIMS 99)*
a) Uremia b) Brain metastasis
c) Abdominal metastasis d) Liver metastasis

660. A patient is diagnosed to have CINII. She approaches you for advice. You can definitely tell her the risk of lesion progressing to malignancy as - *(AIIMS2K)*
a) 5% b) 15%
c) 60% d)30%

638)a,c,e 639)a,b,c 640)a 641)c 642)d 643)a 644)d 645)d 646)a 647)a 648)a 649)d 650)b 651)c 652) b 653)c 654)c 655)c 656)b 657)a 658)b 659)a 660) a

661. Cone biopsy is indicated in all the following conditions except - *(AIIMS 2K)*
a) Micro invasive carcinoma
b) Indefinite diagnosis on colposcopy
c) CINm
d) Cervical metaplasia

662. Time taken for conversion of CIN cervix to invasive carcinoma is---------- years- *(J &K 01)*
a) 5 b) 10
c) 15 d)20

663. A 35 years old lady presents with post coital bleeding and foul smelling discharge is most important investigation to arive at a diagnosis is - *(MP 98)*
a) Endometrial aspiration
b) Dilation and currettage
c) Endometrial biopsy
d) Cervical biopsy

664. Treatment of choice for Ca in situ cervix is -
a) Follow-up with serial pap smear *(PGI97)*
b) Conization
c) Hysterectomy
d) Laser vaporization

665. A young lady comes with mild erosion of cervix and pap smear shows dysplasia next step is - *(PGI98)*
a) Antibiotics b)Coloposcopy
c) Cryosurgery d) Conisation

666. Rx of carcinoma in situ of cervix - *(PGI 98)*
a) Simple Hysterectomy b) Conisation
c) Laser d) Cryosurgery
e) AH

667. Cervix carcinoma arises from - *(PGI 99)*
a) Squamo columnar junction b) Isthmus
c) Cervical lip d) Internal os

668. Earliest symptom of carcinoma cervix is - *(PGI 99)*
a) Irregular vaginal bleed b) Post coital bleed
c) Foul smelling discharge d) Pain

669. Patient with CIN-II positive on pap's smear, next step will be- *(PGI2000)*
a) Repeat pap's smear
b) Cone biopsy
c) Colposcopic directed biopsy
d) Punch biopsy

670. Carcinoma cervix is more common in - *(PGI01)*
a) HIV b) Multiparity
c) Smoking d) Nulliparity
e) Family history

671. Predisposing factors for carcinoma cervix -
a) HIV b)HPV *(PGI 01)*
c) HSV d)EBV
e) CMV *

672. During cervical CA surgery to prevent the complication the vault prolapse, should treated with-
a) Total Hysterectomy *(PGI 02)*
b) Vaginal hysterectomy
c) Subtotal hysterectomy
d) Abdominal Hysteroctomy

673. In Ca cervix lymphatics drain to - *(PGI 02)*
a) Obturator
b) External iliac
c) Inguinal lymphnode
d) Femoral lymphnode
e) Hyopogastric lymphnode

674. A 26 year old female with 3 living issue having cervical erosion which bleeds to touch, diagnosis can be done by - *(PGI 03)*
a) Pap smearb) Excision biopsy
c) Hysteroscopy d) Colposcopy

675. 45 yrs old lady on punch biopsy shows carcinoma is situ of cervix. The treatment is - *(PGI 03)*
a) Conisationb) Vaginal hysterectomy
c) Diathermy d) Cryosurgeny
e) LASER

676. Most common type of human papilloma virus causing Ca Cervix are- *(PGI 03)*
a) 16&18 b) 1 & 33
c) 6&11 d)4& 14
e) 2&5

677. HPV causes- *(PGI 04)*
a) Vulval Ca b) Cervical Ca
c) Endometrial Ca d) Endometritis
e) DUB

678. Cone biopsy of cervix is indicated in - *(PGI 04)*
a) Parametrial invasion
b) Abnormal pap smear
c) Endometrial Ca
d) Endocervical curettage positive
e) Clear cell Ca

679. In carcinoma cervix, the causative etiological factor is- **(***UPSC02)*
a) Condyloma acuminata b) HPV 16,18
c) HPV 6,11 d) HSV 1 and 2

680. Finding on colposcopy suggestive of malignancy-
a) Candidiasis b) Papilloma *(Orissa 04)*
c) Punctuation d) Condyloma

681. Unsatisfactory colposcopy means -
a) Failure to visualize cervix *(Karnataka 02)*
b) Failure to visualize transformation zone
c) Failure to visualize squamous epithelium
d) Failure to visualize columnar epithelium

682. HPV which is strongly associated with carcinoma cervix is - *(SGPGI05, Kam 02)*
a) Type 6 b) Type 11
c) Type 16 d) Type 32

683. Type of papilloma virus which is strongly associated with carcinoma cervix is - *(AMU 05)*
a) 33 b)34
c) 56 d)55

684. Human papilloma virus (HPV) serotype most often associated with invasive carcinoma cervix is -
a) HPV -11 b) HPV -16 *(Kamat05)*
c) HPV-18 d) HPV-31

661) d 662) b 663) d 664)a,b,c 665) b 666) e 667) a 668) b 669) c 670)a,b,c 671)a,b,c 672) a,d 673)a,b,e
674) b,d 675) b 676) a 677) a,b 678) b,d 679) b 680) c 681) b 682) c 683) a 684) b,c

685. False statement about treatment of Ca cervix -
a) Radiotherpay is helpful in all stages *(PGIJune 05)*
b) Prognosis of surgery good if done in early cases
c) When radiotherapy given paraaortic nodes should be included
d) Chemotherapy reserved for late cases
e) From lb onwards same prognosis with both surgery & radiotherapy

686. In which of the following genital tract malignancy, the risk of metastasis to ovary is the least - *(AI06)*
a) Carcinoma cervix
b) Carcinoma endometrium
c) Carcinoma fallopian tube
d) Uterine sarcoma

687. Radical hysterectomy is done in which one of the following - *(APPG 06)*
a) Carcinoma in situ
b) Endo ca cercix stage IA
c) Micro invasive carcinoma of cervix
d) Carcinoma cervix stage IB

688. Presence of hydronephrosis in stging of carcinoma cervix uteril denotes FIGO.....disease - *(Kam*
a) Stage H-B b) Stage III-A *pgmee06)*
c) Stage III-B d) Stage IV-A

689. Most common agent responsible for Ca cervix is-
a) HPV16 b)HPV 18 *(A107)*
c) HPV31 d) HPV 33

690. Human papilloma virus is associated with this carcinoma - *(MAHE 0 7)*
a) Carcinoma cervix b) Carcinoma uterus
c) Fibroids d) None of the above

691. Poor prognostic factors in the management of cancer cervix are the following except - *(UPSC 07)*
a) Young age
b) Well-differentiated squamous cell carcinoma
c) Hydroureter
d) Adenocarcinoma

692. Commonest tumor of the cervix is- (*Corned08, TN89)*
a) Sqamous cell carcinoma b) Adenocarcinoma
c) Sarcoma d) Adenoacanthoma

693. Patient diagnosed as squamous cell intraepithelial lesion which of the following has the highest risk for progression to carcinoma - *(AIIMSNov 07)*
a) Low grade squamous intraepithelial neoplasia
b) High grade squamous intraepithelial neoplasia
c) Squamous intraepithelial neoplasia associated with HPV 16
d) Squamous intraepithelial neoplasia associated with HIV

694. Cervical smear fixation is done by - *(AIIMSNov 07)*
a) Ethyl alcohol b) Acetone
c) Xyline d) Formalin

695. A 34 year old lady who has completed her family, shows a positive Pap smear (C.I.N.III). What will be the further arrangement ? *(UPSC-II08)*
a) Wertheim's hysterectomy
b) Ward Mayo's hysterectomy
c) Simple abdominal hysterectomy
d) Cervical conisation

696. A 45 year old woman comes with Pap smear report of squamous metaplasia. What advice should be given to her? *(UPSC-II08)*
a) Colposcopy b) Cervical biopsy
c) Conization d) No treatment

697. A 45 years multiparous women, on punch biopsy shows carcinoma in site, Best treatment modalities is- *(UP08)*
a) Conisation
b) Wertheem's hysterectomy
c) Radiotherapy
d) Abdominal hysterectomy with basal saphingo ophrectomy

698. Virus associated with cancer cervix is - *(AI08)*
a) HPV b)HTV
c) EBV d)HTLV

699. Which of the following statements about squamous cell carcinoma of cervix is false - *(AI08)*
a) Common at squamocolumnar junction
b) CT scan is mandatory for staging
c) Post coital bleeding is a common symptom
d) HPV 16 and 18 are associated with high risk of carcinogenesis

700. A 35 year old female, with post coital bleeding, next step- *(AiimsMay08)*
a) Clinical examination and pap smear
b) Visual inspection with acetowhite
c) Visual inspection with lugol's iodine
d) Colposcopy directed biopsy

701. True about carcinoma in women - *(PGI June 08)*
a) Pap smear reduces incidences of Ca cervix
b) Ca cervix is M.C. malignancy in Indian women
c) Breast Ca is the M.C. malignancy in Indian women
d) Next to Cervical Ca, Lung carcinoma is next most common malignancy

702. Most cost effective and least invasive mode of treating squamous intraepithelial lesion of cervix is - *(DPGEE 08)*
a) Electrocauterization b) Cryotherapy
c) Laser therapy d) Any of the above

703. Diffence of CIS from invasive carcinoma ?
a) Age > 40 years *(APPG 08)*
b) Incidental detected
c) Bilateral
d) Histology similar to invasive

704. Risk factors for Ca cervix - *(PGIDec 08)*
a) Virginity b) Multiple sex partners
c) Genital warts d) Circumcised partner
e) Late menarche

685) e 686) a 687) d 688) c 689) a 690) a 691) b 692) a 693) b 694) a 695) d 696) d 697) d 698) a 699) b 700) a 701)a,b,c,d 702) a 703) d 704) b,c

705. Common site of origin of cervical carcinoma is/are-
a) Endocervix *(PGI Dec 08)*
b) Ectocervix
c) Squamocolumnar junction

706. All of the following investigations are used in FIGO staging of carcinoma cervix except ?
a) CECT *(AIMS Nov 08)*
b) Intravenous pyelography
c) Cystoscopy
d) Proctoscopy

707. A 35 year old female P3 + 0 is observed to have CIN grade III on colposcopic biopsy. Which of the following would be the best initial management -
a) Cryosurgery b) Conization *(AI09)*
c) LEEP d) Hysterectomy

708. TVue about staging of cervical cancer -
a) Staged clinically *(PGI June 09)*
b) When there is doubt regarding staging, earlier stage is selected
c) Carcinoma extending beyond cervix to pelvic wall is stage II
d) Stage II includes canncer extending to uterus
e) Identification of paraaortic L.N in clinical stage I makes it stage IV

709. A young lady comes with mild erosion of cervix and pap smear shows dysplasia. Next step is -
a) Antibiotics b) Colposcopy
c) Cryosurgery d)Conisation

710. Carcinoma cervix originates in the -
a) Columnar epithelium *(DELHIPG Mar. 09)*
b) Squamous epithelium
c) Transformation zone
d) Uterine isthmus

711. The most appropriate management of a 32 weeks pregnant lady with carcinoma cervix stage 2b is -
a) Chemoradiation followed by labour induction and vaginal delivery *(UPSC-II09)*
b) Labour induction, vaginal delivery followed by radiotherapy
c) Lower segment caesarean section followed by radiotherapy
d) Classical caesarean section followed by radiotherapy

712. Which one of the following histological types is the most virulent carcinoma of cervix ? *(UPSC-II09)*
a) Small cell keratinizing
b) Large cell keratinizing
c) Small cell non-keratinizing
d) Large cell non-keratinizing

713. 35 year female with post coital bleeding. Next step is? *(AIMS Nov 09)*
a) Pap smear with clinical examination
b) Visual examination with lugo L iodine
c) Visual examination with acetic acid
d) Colposcopy directed biopsy

714. A 35 yr old P 3+0 is observed to have CIN grade HI on colposcopic biopsy. Best treatment will be -
a) Cryosurgery b) Conization *(AIMS May 10)*
c) LEEP d) Hysterectomy

715. A lady undergoes total radical hysterectomy for stage lb Ca cervix. It was found that Ca extends to lower part of body of uterus and upper part of cervix. Next step of management will be - *(AIMSMay 10)*
a) Chemotherapy b) Radiotherapy
c) Chemoradiation d) Follow-up

716. Which of the following agents is most commonly associated with carcinoma cervix - *(AI 10)*
a) HPV16 b)HPV 18
c) HPV33 d) HPV 35

717. A 40 year old woman presents with abnormal cervical cytology in PAP smear suggestive oc CIN ID (HSIL). The next, best step in management is - *(AI 10)*
a) Hysterectomy
b) Colposcopy and LEEP
c) Colposcopy and Cryotherapy
d) Conization

718. The colposcopic features suggestive of malignancy are all except - *(DPG10)*
a) Condyloma b) Vascular atypia
c) Punctuation c) White epithelium

719. A patient with carcinoma cervix who has completed radiotherapy comes with uraemi A. The most common cause is- *(DPG10)*
a) Bilateral ureter invasion
b) Radiation nephritis
c) Ureteric stenosis due to radiation
d) Unconnected causes

720. In colposcopy, the following are visualized except -
a) Upper 273rd endocervix *(DPG10)*
b) Lower 173rd endocervix
c) Vault of vagina
d) Lateral fornix

721. True statement (s) regarding Ca cervix involving parametrium but not pelvic involvement -
a) Stage IIA *(PGIMay 10)*
b) Stage IIB
c) Radiotherapy should be given
d) Hysterectomy can be useful
e) Staging should be done only after cystoscopy

722. In Ca cervix low grade squamous intraepithelial lesion (LSIL) in Bethesday system involves-
a) CIN I b) CIN II *(PGIMay 10)*
c) CIN IE d) Squamous metaplasia

723. A 35 yr old P_{3+0} is observed to have CIN grade III on colposcopic biopsy. T/t includes - *(PGIMay 10)*
a) Cold knife conization
b) Hysterectomy
c) Radical hysterectomy
d) Lap assisted hysterectomy
e) LFHP

705)a,b,c 706)a 707)c 708)a,b,c 709)a 710)c 711)d 712)c 713)a 714)c 715)d 716)a 717)b 718)a 719) a 720) a 721)b,c,e 722) a 723) e

724. TYeatment of CA cervix stage lb includes -
a) Surgery b) Chemotherapy *(PGI Nov. 10)*
c) Radiotherapy d) Cryotherapy
e) T JEEP

725. Adenocarcinoma cervix is a/w - *(PGINov. 10)*
a) HPV6 b)HPV 11
c) HPV16 d)HPV 18
e) HPV51

726. TYeatment of Ca Cervix IHB *inc\ude-(AIIMSNov 10)*
a) Wertheims hysterectomy
b) Schauta's hysterectomy
c) Chemotherapy
d) Intracavity brachytherapy followed by external beam radiotherapy

727. A 35-year- old woman who has completed her family shows a positive Pap smear (Cervical intraepithelial neoplasia HI (CIN1H)). What is to be done next -
a) Simple hysterectomy *(UPSCII11)*
b) Wertheim's hysterectomy
c) Conisation
d) Cryotherapy

CARCINOMA ENDOMETRIUM (UTERUS)

728. Second stage of carcinoma endomtrium is treated by- *(AI91)*
a) Surgery
b) Radiotherapy followed by surgery
c) Chemotherapy
d) Progesterone followed by surgery

729. Commonest histology of carcinoma of endometrium is - *(Kerala 94)*
a) Squamous cell b) Clear cell
c) Adenocarcinoma d) Anaplastic carcinoma

730. The treatment of choice in Endometrial carcinoma Stage I is- *(Karn. 94)*
a) External radiotherapy
b) Intracavitary radiation
c) Hysterectomy
d) Chemotherapy

731. All are risk factor for endometrial carcinoma except- *(TN 98)*
a) Diabetes b) Hypertension
c) Obesity d) Multiparity

732. In Endometrial carcinoma lymph node spread is notto- *(AIIMS97)*
a) Paraortic b) Inguinal
c) Inferior mesentric d)Pre sacral

733. Carcinoma of the endometrium with metastasis in the deep inguinal lymphnodes is of stage -
a) I b)H *(AIIMS99)*
c) m d)IV

734. Carcinoma endometrium involving uterine cavity more than 10 cms long with early myometrial involvement is - *(AI2K)*
a) Stage la b) Stage lb
c) Stage 11a d) Stage lib

735. True about endometrial carcinoma - *(PGI 01)*
a) Predisposed by DM, hypertension & obesity
b) Adenosquamous type is commonest
c) Commonly associated with Ca. Cervix
d) Common age group affected is between 20-40 yrs

736. The most malignant endometrial carcinoma is-
a) Adeno carcinoma *(Jipmer 03)*
b) Adeno acanthoma
c) Mixed adeno squamous
d) Clear cell carcinoma

737. Endometrial Ca risk factors is/are - *(PGI 04)*
a) Hypertension b) Diavetes
c) Nulliparity d) Tamoxifen therapy
e) Multiparity

738. In a case of endometrial cancer, if metastasis is seen in the vagina, what FIGO stage it would *btr(UPSC04)*
a) Stage III a b) Stage III b
c) Stage III c d) Stage IV a

739. An 80 year old female who has never taken estrogen develops pink vaginal discharge. An endometrial biopsy shows adenocarcinoma of the endometrium. Papanicolaousmear is negative. Of the following what is the most important indicator of prognosis is ?
a) Body habitus b) Level of CA-125
c) Nutritionalstatus d) Histologic type of tumor

740. Percentage change in cystic glandular hyperplasia turning to malignancy - *(PGI June 05)*
a) 0.1 b)0.2
c) 1 d) 10
e) 15

741. The following are indications for post operative rediotherapy in a case of carcinoma endometrium except - *(AIIMS May 05)*
a) Myometrial invasion of more than half thickness
b) Positive lymph nodes
c) Endocervical involvement
d) Tumor positive for estrogen receptors

742. The risk of complex hyperplasia of endometrium with atypia progressing to malignancy in a postmenopausal woman is about - *(AIIMS May 05)*
a) 3% b) 8%
c) 15% d) 28%

743. The risk of endometrial carcinoma is the highest with the following histological pattern of endometrial hyperplasia - *(AIIMS 06)*
a) Simple hyperplasia without atypia
b) Simple hyperplasia with atypia
c) Complex hyperplasia without atypia
d) Complex hyperplasia with atypia

724) a,b,c 725)c,d,e 726) d 727) c 728) b 729) c 730) c 731)d 732) c 733) d 734) b 735) a 736) d 737) a,b,c,d 738) b 739) d 740) c 741) d 742) d 743) d

744. Indication for radiotherapy in carcinoma endometrium include all except - *(AIIMSNov 07)*
a) Pelvic node involvement
b) Deep myometrial involvement
c) Enlarged uterine cavity
d) Poor differentiation

745. Which one of the following conditions of the endometrium is associated with a significantly increased risk of development of cancer ?
a) Adenomatous hyperplasia *(UPSC-II08)*
b) Hyperplasia with atypia
c) Cystic glandular hyperplasia
d) Proliferative phase

746. At laparotomy for endometrial cancer the growth was found invading inner half of myometrium, right ovary and upper part of vagina. What is the staging?
a) II b **b)** m a *(UPSC-II08)*
c) mb d)IVa

747. A case of choriocarcinoma 30 year old having one child, presenting with growth in the uterus and single metastasis in lung (stage III score 4). What would be the appropriate treatment for her ?
a) Single agent chemotherapy *(UPSC-II 08)*
b) Multiple agent chemotherapy
c) Hysterectomy with single agent chemotherapy
d) Hysterectomy with multiple agent chemotherapy

748. What is the ideal treatment for a 55 yr female with simple hyperplasia of endometrium with atypia ?
a) Simple hysterectomy *(AI08)*
b) Medroxy progesterone acetate (MPA)
c) Levonorgesterol (LNG)
d) IUCD

749. True about FIGO endometrial carcinoma HIb -
a) Vaginal metastasis seen *(PGI June 08)*
b) Serosa involved
c) Rectum
e) Pelvis

750. Which of the following associated with endometrial cancer ? *(APPG 08)*
a) Metropathica haemorrhagica
b) Dysgermniona
c) Fibroid
d) All

751. All of the following is/are risk factor (s) for Endormentrial carcinoma except - *(PGI June 09)*
a) Multiparity
b) Obesity
c) Early menopause
d) Unopposed Estrogen therapy
e) Hypertension

752. A 80-year old female who has never taken estrogen develops pink vaginal discharge. An endometrial biopsy shows adenocarcinoma of the endometrium. Papanicolaou's smear is negative. Of the following, what is the most important indicator of prognosis -
a) Body habitus b) Level of CA-125 *(DPG10)*
c) Nutritional status d) Histologic type of tumour

753. The risk of progression to endometrial cancer from simple hyperplasia without atypia is - *(UP SC II10)*
a) 1% b) 3-5%
c) 8-10% d) 25-30%

754. Which of the following is not seen in Corpus Cancer syndrome - *(AIIMS Nov 10)*
a) Diabetes mellitus b) Hypertension
c) Obesity d) Multiparity

755. Endometrial cancer involving 50% of endometrium, extending to vagina, lymph nodes negative with positive peritoneal cytology is staged as -
a) 3a b) 3b *(AIIMS Nov 10)*
c) 3c 1 d)3c2

756. The following at risk factors for carcinoma endometrium except- *(Karn 11)*
a) Early menopause
b) Endometrial hyperplasia
c) Nulliparity
d) Obesity.

757. Endometrial carcinoma with worst prognosis -
a) Clear cell carcinoma *(Jipmer 11)*
b) Adenocarcinoma grade-II
c) Adenocarcinoma
d) Adeno acanthoma

OVARY

758. Which is not true of dermoid cyst of ovary -
a) Commonly more than 10 cm *(AI 93)*
b) Has sebaceous material
c) Bilateral in 30%
d) Lined by epithelial cells

759. Polcystic ovaries are associated with - *(Delhi 96)*
a) Hypopituitarism
b) Ovarian malignancy
c) Endometrial carcinoma
d) Adrenal cortical hyperplasia

760. The condition where glistening spots are found on tubal secosa - *(AIIMS 95)*
a) Walthead cell nests b) Metastases from ovary
c) Parovarian cysts d) Tubal fibrosis

761. A 25-year old married infertile woman having regular menstruation, fever, lower abdominal pain and dysmenorrhoea presents herself at the OPD. On examination, there are bilateral soft tender masses of "3" diameter in both fornices and uterus is of normal size. The most likely diagnosis is- *(UPSC97)*
a) Cystic ovaries b) Tubo-ovarian masses
c) Ectopic pregnancy d) Tuberculous salpingitis

762. Precocious puberty is seen with which ovarian tumour- *(PGI 98)*
a) Dermoid b) Gynandroblastoma
c) Granulosa cell tumour d) Arrhenoblastoma

744) c 745) b 746) c 747) a 748) a 749)a,b,c 750) a 751)a,c 752) d 753) a 754) d 755) b 756) a 757) a
758) a,c 759)c 760)c 761)b 762)c

763. The first step in the management of hirsutism due to stein leventhal syndrome is - *(PGI99)*
a) OCP b)HMG
c) Spironolactone d) Bromocriptine

764. In Polycystic ovarian diseases, all of the following are seen except - *(PGI 01)*
a) Endometrial carcinoma b) Increased FSH
c) Streak ovaries d) Insulin resistance
e) Hirsutism

765. Schiller-Duval body is seen in - *(PGI 01)*
a) Germ cell tumor b) Yolk-sac tumor
c) Choriocarcinoma d) Granulosa cell tumor
e) Dysgerminoma

766. PCOD which of the following is seen - *(PGI 02)*
a) Hirsutism b) 2° almenorrhoea
c) Streak ovaries d) t FSH/LH
e) t Oestrogen (E_2)

767. Ovarian reserve tests are - *(PGI 03)*
a) LH b)FSH
c) Plasma progesterone d) Endometrial biopsy

768. Theca lutein cysts seen in - *(PGI 03)*
a) H.Mole b) Choriocarcinoma
c) Theca cell hyperplasia d)PCOD
e) Ectopic pregnancy

769. True about dermoid cyst of ovary - *(PGI 03)*
a) It is a teratoma
b) Frequently undergo torsion
c) X-ray is diagnostic
d) Invariably turns to malignancy
e) Contains sebaceous materials & hair

770. Which causes torsion of ovarian tumor -*(Kerala 03)*
a) Trauma b) Uterine contraction
c) Physical movements d)All

771. Tumor marker most helpful in follow up of a case of Epithelial carcinoma of ovary is - *(Karn 02)*
a) CA-125
b) Serum Alpha Fetoprotein
c) Serum human chorionic gonadotropin
d) Human Placental Lactogen

772. A 45 year old female is having bilateral ovarian mass, ascites and omental caking on CT scan. There is high possibility that patient is having -
a) Benign ovarian tumor *(AI03)*
b) Malignant epithelial ovarian tumor
c) Dysgerminoma of ovary
d) Lymphoma of ovary

773. A 28 yr old lady, Rani, is suspected to have polycystic ovarian disease. Sample for testing LH & FSH are best taken on the following days of Menstrual cycle - *(MAHA 05)*
a) 1-4 b) 8 -10
c) 13-15 d) 24 - 26

774. The following hormone is raised in polycystic ovarian syndrome - *(AI 06)*
a) 17-OH progesterone
b) Follicular stimulating hormone
c) Luteinizing hormone
d) Thyroid stimulating hormone

775. Which of the following statements in incorrect regarding polycystic ovarian disease ? *(AI 06)*
a) Elevated LH hormone
b) Can cause infertility
c) May be associated with abnormal glucose tolerance test
d) Results in postdated pregnancy

776. Which of the following ovarian tumor is most prone to undergo torsion during pregnancy ?
a) Serous cystadenoma *(AI 06)*
b) Mucinous cystadenoma
c) Dermoid cyst
d) Theca lutein cyst

111. **Most common ovarian cyst to undergo torsion is-**
a) Benign cystic teratoma *(AI07)*
b) Dysgerminoma
c) Ovarian fibroma
d) Brenners tumour

778. Endodermal sinus tumour is assocaited with -
a) Schiller duval body *(AIIMSMay07)*
b) Multinucleate giant cells
c) R-S cells
d) Plasma cells

779. Ovarian tumour which is bilateral- *(Aiims May 07)*
a) Dysgerminoma b) Endodermal sinus tumour
c) Immature teratoma d) Embryonal cell carcinoma

780. True about sertoli cell tumours of ovary are all except- *(UP 07)*
a) Secrete male hormone
b) Secrete female hormones
c) Androblastomas
d) Gynandroblastoma

781. Most common benign ovarian tumours is - *(UP 07)*
a) Serous cyst adenoma
b) Mucinous cyst adenoma
c) Dermoid cyst
d) Brenners tumour

782. Poly cystic ovarian syndrome is characterized by all except - *(UP 07)*
a) Hyper androgenaemia
b) Normal or raised oestrogen
c) Raised LH
d) Normal FSH/LH ratio

783. The following are long term complications of PCOS (Polycystic Ovarian syndrome) except -*(UPSC-II08)*
a) Type II Diabetes mellitus
b) Cardiovascular disease
c) Endometrial cancer
d) Ovarian cancer

784. HALR-AN syndrome is found in - *(UPSC-II 08)*
a) Congenital adrenal hyperplasia
b) Luteal phase defects
c) Polycystic ovarian syndrome
d) Pheochromocytoma

763)a 764)b,c 765)b 766)a,b,e 767)b 768)a,b 769)a,b,c,e 770)a 771)a 772)b 773)b 774)c 775)d
776) c 777) a 778) a 779) a 780) b 781)c 782) d 783) d 784) c

785. A lady with CA ovary in follow up with raised CA125 level, NEXT STEP - *(Aims May 08)*
a) cr
b) PET
c) MRI
d) Clinical exam and serial follow up of CA125

786. Feminizing ovarian tumour is - *(DPGEE 08)*
a) Granulosa cell tumour b) Arrhenoblastoma
c) Hilus cell tumour d) Gynandroblastoma

787. A 35 year asymptomatic women on USG shows cyst in ovary of 7 cm with negative serology. Treatment include - *(PGI Dec 08)*
a) Laproscopic cystectom
b) Laprotomy
c) Follow up with CA 125
d) Follow up after 1-2 cycle of COP
e) Ovariotomy

788. A 25 year old married nullipara undergoes laproscopic cystectomy for ovarian cyst which on histopath reveals ovarian serous cisadenocarcinoma. What should be the next management ?
a) Serial Ca 125 measurement and follow up
b) Hysterectomy and bilaterals alpingoophorectomy
c) Unilateral salpingoophorectomy *(AIIMSNov 08)*
d) Radiotherapy

789. A patient is diagnosed with ovarian cancer and planned for staging lapratomy. Surgical staging would involve all of the following except - *(AI09)*
a) Peritoneal washings b) Peritoneal biopsy
c) Omental resection d) Palpation of organs

790. A15 15 cm ovarian cyst has been diagnosed in an 8 weeks pregnant lady. Further management includes- *(PGI Nov. 10)*
a) Only follow up without surgical intervention
b) Laparotomy at 14-16 weeks
c) Caesarean section and ovariotomy at term
d) Surgery after delivery
e) Immediate operation

791. A 35-yr old woman presents with primary infertility & palpable pelvic mass. Her Ca-125 level is 90 U/ml. diagnosis is - *(AIIMS May 11)*
a) Ovarian C a b) Endometrioma
c) Tuberculosis d) Borderline ovarian tumor

792. Call-Exner bodies are seen in the microscopic examination of the following Ovarian tumors -
a) Clear cell tumor *(Kam 11)*
b) Granulosa cell tumor
c) Hilus cell tumor
d) Theca cell tumor

CARCINOMA OVARY

793. Teratoma arises form - *(IN 91)*
a) Totipotent cells b) Mesodermal cells
c) Ectodermal cells d) Endodermal cells

794. Which is not a germ cell tumour - *(JIPMER 91)*
a) Dysgerminoma
b) Teratoma.
c) Granulosa theca cell tumour
d) Embryonal cell carcinoma

795. Post menopausal women has a 4x4 cm ovarian mass the correct line management is - *(AI 92)*
a) Wait and watch b) Surgical exploration
c) Progesterone pills d) Clomiphene therapy

796. Which ovarian cyst does not undergo malignancy-
a) Mucinous b) Papillary *(AIIMS92)*
c) Dermoid d) Granulosa Theca

797. % of ovarian tumours of non epithelial origin in childhood is - *(JIPMER 95)*
a) 20% b) 30 %
c) 40% d) 50%

798. % of malignancy of ovaries in childhood is -
a) 10 % b) 20 % *(JIPMER95)*
c) 30% d) 40 %

799. Commonest complication of mature treatoma is -
a) Torsion b) Rupture *(AI 95, AP 88)*
c) haemorrhage d) Malignancy

800. One of following are true about krukenberg tumour of ovary except - *(AI 96)*
a) Usually bilateral
b) Enlarged ovaries
c) Cystic areas in ovary
d) Signet ring cells on histology

801. Reinke crystals are seen in - *(AIIMS 95)*
a) Papillary cystadenoma b) Dermoid
c) Dysgerminoma d) Hilus cell tumour

802. Commonest type of ovarian tumour in 20-years old female is - *(AIIMS 97)*
a) Germ cell b)Epitheloid
c) Metastatic d) Sex cord

803. Granulosa cell tumour of ovary is associated with-
a) Carcinoma endometrium of uterus *(AIIMS 96)*
b) Carcinoma ovary
c) Carcinoma cervix
d) Carcinoma Vagina

804. A 30-year old multiparous woman is found to have a 5 to 6 cm cyst in one ovary the most appropriate line of management would be - *(UPSC 97)*
a) Laparotomy and cystectomy
b) Laparotomy and unilateral slpingo oophorectomy
c) Laparoscopic aspiration of the cyst
d) Observation to see if it disappears by itself in three months

805. Which one of the following is an important tumour marker in the diagnosis of endodermal sinus tumour-
a) HOG b) Ca-125 *(UPSC 99, PGI 96)*
c) LDH d) Alphafoeto protein

806. Carcinoma involving both the ovaries with rupture of the capsule and ascitic fluid cytology positive for malignant cells is of stage -*(AIIMS 99)*
a) I b)n
c) m d)iv

785) b 786) a 787) d 788) c 789) d 790) b 791) b 792) b 793) a 794) c 795) b 796) None 797) d
798) a 799)a 800)b 801) d 802)a 803)a 804) d 805) d 806) a

807. Size of ovary above which considered to bemalignant-
a) 2 cm b) 5 cm *(CMC 01)*
c) 8 cm d) 10 cm

808. Marker for ovarian cancer is - *(TN 02)*
a) Cal25 b)Ca 19-19
c) cal5-5 d) Hypercalcemia

809. Featue is USG suggestive of ovarian malignancy is- *(PGI 99)*
a) Papillary pattern b) Septations
c) Bilaterality d) Clear fluid

810. Ca 152 is the tumor marker of - *(PGI 99)*
a) Serous cystadenoma
b) Mucinous cystadenoma
c) Dysgerminoma
d) Arrhenoblastoma

811. True about yolksac tumour - *(PGI 02)*
a) Also called endodermal sinus tumour
b) Almost have elevated AFP level
c) Schiller Duval bodies seen
d) Highly malignant

812. True about Brenner tumour - *(PGI03)*
a) B/L
b) Resembles fibroma
c) Accounts for 20% of all ovarian tumors
d) Common in postmenopausal age group

813. Call-Exner bodies are found in -*(PGI03,88, UPSC*
a) Granulosa cell tumour *85, 88)*
b) Mucinous cell tumour
c) Serous cell tumour
d) Dysgerminoma
e) Ley dig cell tumour

814. Meig's syndrome is associated with - *(PGI 99)*
a) Teratoma b) Brenner tumour
c) Theca cell tumour d) Fibroma

815. Pseudomyxoma peritonei is seen in - *(PGI 98)*
a) Serous cystadenoma
b) Pseudomucinous cystadenoma
c) Mucinous cystadenoma
d) Teratoma

816. Common malilgnant germs cell tumours of ovary-
a) Choriocarcinoma *(PGI 04)*
b) Arrhenoblastoma
c) Brenner tumor
d) Serous cystadenoma
e) Teratoma

817. Chemotherapeutic drug effective in the treatment of epithelial ovarian cancer is - *{Karnataka 02)*
a) Carboplatin b)Paclitaxel
c) Cyclophosphamide d) Methotrexate

818. Commonest tumor of ovary occurring in a young woman is- *(TN03)*
a) Immature teratoma b) Yolk sac tumor
c) Endometroid tumor d) Dysgerminoma

819. Hob nail cells are seen in - *(TN 03)*
a) Hilus cell tumor b) Clear cell carcinoma
c) Dysgerminoma d) Arrhenoblastoma

820. All are true about serous cystadenoma of the ovary EXCEPT- *(UPPGMEE 04)*
a) Bilateral
b) Unilateral
c) Concentric calcifications
d) Multiloculated, sticky, gelatinous fluid

821. How much is the risk of ovarian cancer increased above normal in a woman with non antuosomal dominant genotype with one first degree relative with ovarian cancer- *(Karnataka 04)*
a) 2-3 times b) 5 times
c) 10 times d) 20 times

822. Increase Alfa-fetoprotein is seen in all except -
a) Open spina bifida *(SGPGI05)*
b) Dysgerminoma
c) Endodermal sinus tumor
d) Bronchial aplasia

823. Treatment modalities for ovarean cancers is -
a) Staging laparotomy *(SGPGI 05)*
b) Surgery
c) Chemotherapy
d) Combined approach

824. Which of the following statement is true regarding benign cystic teratoma - *{SGPGI 05)*
a) Rarely Undergo torsion
b) Metastasis is common
c) 10% are B/L & malignant
d) Contains Call-exner bodies

825. Which of the following combination is not true -
a) Call Hexner bodies-GC tumor *{AMU 05)*
b) Rokitansky bodies - teratoma
c) Schillar dual bodies - serous tumor
d) Reinke crystal - Hilus cell tumor

826. Ovarian tumor limited to true pelvis with Negative nodes histological confirmed seeding of abdominal portioned surface. The exact grading-
a) DIA b)IIIB *{HPU 05)*
c) **me** **d)v**

827. Complications of benign ovarian tumors are A/E-
a) Torsion b) Bleeding *{MAHE 05)*
c) Pseudomyxoma d) Metastasis

828. MC ovarian tumor in younger age group-(PG7*June 05)*
a) Dysgerminoma b) Dermoid
c) Mucinous cystadenoma d) Fibroma
e) Granulosa cell tumor

829. The following tumours commonly metastasis to the ovary, except - *{J&K 05)*
a) Malignant melanoma b) Stomach
c) Oesophagus d) Lymphoma

830. Chemotherapy for dysgerminoma is - *(APPGE05)*
a) Cisplatin, etopisides, belmoycin
b) Cyclophosphamide, vincristine, prednisolone
c) Adriamycin, cyclophosphamide, cisplatin
d) Methotrexate, oncovin, procarbacine

807)c 808)a 809)a,b,c 810)a,b 811)a,b,c,d 812)b,d 813)a 814)d 815)c 816)e 817)b 818)d 819)b
820) d 821)a 822)b 823)d 824)c 825)c 826)a 827)d 828)a 829)c 830) a

831. Presence of more than two germ cell layer in a tumor is called - *(Orissa 05)*
a) Dysgerminoma b) Teratoma
c) Theca cell tumor d) Seminoma

832. All of the following are the markers for malignant germ cell tumors of ovary except- *(A1IMSNov 05)*
a)CA-125 b) Alphafetoprotein
c) p-HCG d)LDH

833. The most common pure germ cell tumor of the ovary is- *(A105)*
a) Choriocarcinoma b) Dysgerminoma
c) Embryonal cell tumor d) Malignant Teratoma

834. In a case of Dysgerminoma of ovary one of the following tumor markers is likely to be raised -
a) Serum HCG *(A105)*
b) Serum alphafetoprotein
c) Serum lactic dehydrogenase
d) Serum inhibin

835. Which of the following is the most common pure malignant germ cell tumor of the ovary -
a) Choriocarcinoma *(AIIMS May 05)*
b) Gonadoblastoma
c) Dysgerminoma
d) Malignant teratoma

836. Which of the following strategy has been recommended to reduce the hereditar risk for ovarian cancer in woman with BRCA I& BRCA II mutation - *(A1IMS Nov 05)*
a) Use of Oral Contraceptive Pills
b) Screening with Transvaginal Ultrasound
c) Screening with CA-125
d) Prophylactic oophorectomy

837. In a suspected of ovarian cancer, imaging work-up is required for all of the following information, except -
a) Defection of adenexal lesion *(AI06)*
b) Characterization of the lesion
c) Staging
d) Assess respectability

838. CA-125 is a marker antigen for the diagnosis of -
a) Colon cancer b) Breast cancer *(AIIMS 06)*
c) Brain cancer d) Ovarian cancer

839. The pseudomyxoma peritonei occurs as a complication of the following ovarian tumour -
a) Serous cystadenoma *(ARMS 06)*
b) Mucinous cystadenoma
c) Dysgerminoma
d) Gonadoblastoma

840. Features of dysgerminoma are - *(PGI June 06)*
a) Unilateral b) Postmenopausal
c) Virilising d) Cut section gritty
e) T AFP

841. Cystoglandular hyperplasia is associated with- *(COMED06)*
a) Theca cell tumour b) Hilus cell tumour
c) Gynandroblastoma d) Dysgerminoma

842. Ovarian epithelial carcinoma constitutes what percent of ovarian malignancies - *(MAHE 07)*
a) 80% b) 95%
c) 60% d)70%

843. What is die most common ovarian tumour to undergo torsion - *(UPSC07)*
a) Mucinous cystadenoma
b) Serous cystadenoma
c) Dermoid
d) Brenner tumour

844. Which one of the following is not an epithelial tumour ofthe overy - *(UPSC07)*
a) Serous cystadenoma
b) Brenner tumour
c) Clear cell tumour
d) Endodermal sinus tumour

845. Which one of the following groups has only epithelial tumors of ovary ? *(UPSC-R08)*
a) Serous cystadenoma, mucinous cystadenoma, endometrioid carcinoma
b) Mucinous cystadenoma, endometrioid carcinoma, stromal cell carcinoma
c) Endometrioid carcinoma, Brenner's tumor, sex cord tumor
d) Dermoid, endometrioid carcinoma, mucinous cystadenoma

846. Sex cord stromal cell tumours do not include which one of the following ? *(UPSCRI08)*
a) Granulosa cell tumour b) Theca cell tumour
c) Arrhenoblastoma d) Brenner's tumour

847. An unmarried 20 year old girl has unilateral ovarian cyst of 7 x 8 cm. with CA125 at 500 mlU/ml. There are thick septa and papillation in cyst. On laparotomy, capsule is intact Other ovary and viscera are normal. What is the appropriate surgery for her (along with staging procedure) ? *(UPSC-R 08)*
a) Ovarian cystectomy
b) Salpingo-oophorectomy
c) Hysterectomy with unilateral salpingo-oophorectomy
d) Panhysterectomy

848. Call-Exner bodies are seen in - *(AiimsMay08)*
a) Granulosa cell tumor b) Yolk Sac tumor
c) Choriocarcinoma d) Dysgerminoma

849. Marker for granulosa cell tumor - *(Aiims May 08)*
a) CA19-9 b) CA 50
c) Inhibin d) Teratoma

850. Ovarian epithelial carcinoma constitutes what percent or ovarian malignancies - *(Manipal 08)*
a) 80% b) 95%
c) 60% d) 70%

851. Whifftestisusedfor? *(APPG08)*
a) Candida b)Gardenella
c) Trichomonas d)LGV

831) b 832) a 833) b 834) c 835) c 836) d 837) None 838) d 839) b 840) a 841) a 842) b 843) c 844) d
845) a 846) d 847)a 848)a 849)c 850)b 851)b

852. Which is a germ cell tumour ? *(APPG 08)*
a) Dysgerminoma b) Brenners tumour
c) Clear cell tumour d) Mucinous tumours

853. What is the stage of ovarian cancer with b/1 involvement with capsule intact, no ascites ?
ajlA b)IB *(APPG 08)*
c) IC d)n

854. TVue about dysgerminoma - *(PG1 June 09)*
a) Radiosensitive
b) Most common maegnant germ cell tumour
c) B/L in 80% cases
d) T AFP
e) common in postmenopausal

855. The most common ovarian neoplasm to undergo torsion is - *(DELHIPG Mar. 09)*
a) Mucinous cyst adenocarcinoma
b) Benign cystic teratoma
c) Immature teratoma
d) Dysgerminoma

856. The most characteristic presentation of fallopian tube carcinoma is - *(DELHIPG Mar 09)*
a) Mass abdomen
b) Bleeding per vaginum
c) Excessive watery discharge per vaginum
d) Pain abdomen

857. An ovarian neoplasm in a 14-year old girl is most likely to be - *(DELHI PG Mar 09)*
a) Germ cell tumor
b) Epithelial tumor
c) Sertolic Leydig cell tumor
d) Granulosa cell tumor

858. The incidence of bilaterality in a dermoid cyst is approximately- *(DELHIPG Mar 09)*
a) 10% b) 30%
c) 50% d) 70%

859. Which of the following tumor markers is most likely to be raised in a case of dysgerminoma of the ovary -
a) Serum HCG *(AI09)*
b) SerumAlphafetoprotein(AFP)
c) Serum Lactate dehydrogenase (LDH)
d) Serum CA 19-9

860. Call exner bodies seen in - *(AIIMS Nov 09)*
a) Granulosa cell tumour
b) Endodermal sinus cell tumour
c) Ovarian fibroma
d) Teratoma

861. Pain of ovarian carcinoma is referred to -
a) Back of thigh *(AIIMSMay 10)*
b) Gluteal region
c) Anterior surface of thigh
d) Medial surface of thigh

862. The pseudomyxoma peritonei occurs as a complication of the following ovarian tumour -
a) Serous cystadenoma *(DPG10)*
b) Mucinous cystadenoma
c) Dysgerminoma
d) Gonadoblastoma

863. Which tumour marker is most often elevated in ovarian granulosa cell tumour? *(UP SC II10)*
a) Inhibin b) Alpha fetoprotein
c) Beta-HCG d)CA125

864. The following features are true about Dysgerminoma EXCEPT- *(Karn 11)*
a) It is the commonest benign germ cell tumour
b) It can be associated with dysgenetic gonads
c) It can be bilateral in 10% of cases
d) It is sensitive to both chemotherapy and radiotherapy

865. Marker of endodermal sinus tumor is -*(Jipmer 11)*
a) a fetoprotein b)HCG
c) LDH d)CA-125

RADIOTHERAPY & CHEMOTHERAPY AND PHARMACOLOGY IN GYNAECOLOGY

866. Danazol is used in all except - *(JIPMER 91)*
a) Hirsutism
b) Endometriosis
c) Dysfunctional uterine bleeding
d) Fibroid

867. Danazol is not used in - *(AIIMS 92)*
a) Endometriosis
b) DUB
c) Precocious puberty
d) Endometrial Carcinoma

868. GnRH ananlogues are useful in all except -
a) Endometriosis *(AP97)*
b) Hyperprolactinemia
c) Precocious puberty
d) Menstrual disturbances

869. Clomiphene citrate is - *(AP97)*
a) Anti-androgen b) Synthetic steroid
c) Anti estrogen d) Gn RH analogue

870. Danazol is used in all of the following except -
a) Fibroadenosis of breast *(UPSC 99)*
b) Dysfunctional uterine bleeding
c) Pituitary adenoma
d) Endometriosis

871. Chronic treatment with tamoxifen can cause -
a) Ca. ovary b) Ca. endometrium *(AI99)*
c) Ca. cervix d) Germ cell tumor

872. GnRH analogue can be used for all except -
a) Fibroadenoma uterus *(AI99)*
b) Cancer prostate
c) Cancer endometrium
d) Precocious puberty

873. Danazol is a - *(CUPGEE01)*
a) Androgen derivative b) Oestrogen
c) Progesterone d) FSH derivative

852) a 853) b 854) a,b 855) b 856) c 857) a 858) a 859) c 860) a 861) d 862) b 863) a 864) a 865) a
866) a 867) d 868)b 869)c 870)c 871)b 872)c 873)a

874. Chronic treatment with tamoxifen can cause - *(UP2K)*
a) Cancer endometrium b) Cancer crevix
c) Cancer breast d) Cancer vagina

875. Commonest complication of cryotherapy is- *(AI 95)*
a) Bleeding b) Persistent watery discharge
c) Pain d) Ulceration

876. Brachytherapy is used in - *(PGI2000)*
a) Stage lbCaCx
b) Ovarian Ca
c) Stage IV Ca vagina
d) Stage 2 fallopian tube Ca

877. All of the following are advantage of using Raloxifene over estrogen in post menopausal womeirexcept-
a) Reduces fracture rates *(AI04)*
b) Avoids endometrial hyperplasia
c) Reduces incidence of venous thrombosis
d) No increase in incidence of breast carcinoma

878. Different routes of HRT treatment include A/E -
a) Transdermal patch b) Vaginal pellets
c) Injectables d) Oral *(MAHE 05)*

879. Estrogen administration in a menopausal woman increases the - *(A1IMS 06)*
a) Gonadotrophin secretion b) LDL-cholesterol
c) Bone mass d) Muscle mass

880. Drugs used for post menopausal symptoms include the following except - *(Karri pgmee 06)*
a) Conjugated estrogens b)Tibilone
c) Alendronate d)Danzol

881. Anti progesterone drug is - *(Kornpgmee 06)*
a) Cyproterone b) Mifepristone
c) Spirinolactone d)Tomoxifen

882. Oestrogen causes A/E - *(MAHE 07)*
a) Weight gain
b) Fluid and water retention
c) Disappearance of comedones
d) Venous thrombosis

883. Tamoxifen is- *(UP 07)*
a) Non steroidal antiprogesterone
b) Non steroidal antioestrogenic
c) Synthetic progestogen norethindrone
d) Competitive inhibitor of the 5 a- reductase

884. Side effect of clomephine citrate includes all except-
a) Multiple pregnancy *(AUMSNov07)*
b) Increase risk of ovarian ca
c) Multiple polycystic ovary
d) Teratogenic effect on off springs

PELVIC INFLAMMATORY DISEASES

885. Commonest organism causing Acute Salphingitis-
a) Mycoplasma b)Chalmydia *(AIIMS92)*
c) Gonococal d) Treponema

886. The following is a characteristic symptom to chronic pelvic inflammatry disease - *(MP 98)*
a) Dysuria b) Constipation
c) Backache d) Fever

887. In a patient with pelvic inflammatory disease due to tuberculosis, which of the following statements is true-
a) Mycobacterium can be grown from menstrual blood
b) Associated with infertility *(PGI 01)*
c) Ectopic pregnancy is common
d) Dysmenorrhagia
e) Associated with PID

888. TB endometritis causes infertility by - *(PGI98)*
a) Causing anovulation
b) Destroying endometrium
c) Tubal blockage
d) Ciliary dysmotility

889. Commonest cause of Pelvic Inflammatory Disease is - *(Kerala 03)*
a) TB b) UTI
c) Fungus d) Cu - T

890. Pelvic inflammatory disease is caused by all except- *(MAHA05)*
a) Schistosomiasis b) Crohn's disease
c) Syphilis d) Leprosy

891. During laparoscopy the preferred site for obtaining cultures in a patient with acute pelvic inflammatory disease is - *(AIIMS May 05)*
a) Endocervix b) Pouch of Douglas
c) Endometrium d) Fallopian tubes

892. Most common cause of pelvic inflammatory disease in virgin girls is - *(UP07)*
a) Gonorrhoea b) Chlamydia
c) Treponema pallidum d) Tubercular

893. In trichomonas - vaginalis - *(UP 07, 05)*
a) Greenish discharge
b) White curdy discharge
c) Blood stained discharge
d) Milky discharge

894. The commonest type of genital tuberculosis is -
a) Endosalpingitisb)Exosalpingitis *(Corned 07)*
c) Endometritis d) Interstitial salpingitis

895. True about genital infection in Bacterial vaginosis -
a) Clue cells present *(PGI Nov 09)*
b) Gardnerella is causative organism
c) Pruritus seen
d) Grey & foul smelling discharge
e) Erythema

896. A homogenous white non-inflammatory discharge that smoothly coats the vaginal walls and vestibules with positive AmsePs criterion is characteristic of-
a) Candida albicans *(UPSC-110)*
b) Trichomonas vaginalis
c) Gardnerella vaginalis
d) Niesseria gonarrhoea

897. The commonest site of affection of genital tuberculosis is - *(Kam 11)*
a) Cervix b) Endometrium
c) Fallopian tubes d) Vagina

874) a 875) b 876) a 877) c 878) b 879) c 880) d 881)b 882) None 883) b 884) d 885) c 886) c 887)a,b,c
888) b 889) d 890) d 891) d 892) d 893) a 894) a 895)a,b,d 896) c 897) c

ENDOMETRIOSIS

898. Which is True of endometriosis - *(Jlpmer 91)*
a) Always associated with tubal blood
b) Painful
c) Amenorrhoea
d) Surgery is curative

899. Which is not used in the treatment of endometriosis-
a) Danazol b) Tamoxifen *(AI92)*
c) Medroxprogesterone d) GNRH analogues

900. In endometriosis, cause of infertility is -
a) Immobility of tubes *(Jipmer95)*
b) Anovulation
c) Tubal block
d) Destruction of the ovary

901. Symptoms of adenomyosis is - *(Kerala 95)*
a) Menorragia b) Dysmenorrhia
c) Abdominal lump d) Infertility

902. Regarding extrauterine endometriosis false is -
a) It is hormone dependent *(AIIMS94)*
b) May involve pleura and lung
c) Commonest site is ovary
d) Ovary contains cyst with clear fluid

903. A 40 year old primiparous woman suspected to be suffering from endometriosis is subjected to diagnostic laparoscopic findings indicate, uterus normal both the ovaries show presence of chocolate cysts; endometriotic deposits are seen on the round ligament right side, both the fallopian tubes and the pouch of Douglas; moderately dens adhesions are present between the fallopian tubes and the pouch of Douglas. The treatment of choice in this case is -
a) Total hysterectomy with bilateral salphingo Oophorectomy *(UPSC 97)*
b) Danazol therapy
c) Progesterone therapy
d) Figuration of endometriotic deposits

904. Treatment of Endometriosis is all except -
a) Danazol b) MPA *(AIMS 97)*
c) Gestrinone d) Tibalone

905. Treatment of adenomyosis - *(AP97)*
a) Estrogens
b) Estrogens & Prosgeterone
c) Total hysterectomy
d) Laser

906. Which of the following in the drug of choice to treat endometriosis - *(UPSC 2K)*
a) Testosterone propionate b) Norethisterone
c) Medroxy progesterone d) Danazol

907. The best method for the diagnosis of endometriosis is - *(UPSC 01)*
a) Laparoscopy b) Ultrasound
c) MRI d) Serum CA-125

908. Pain in endometriosis correlates best with -
a) Depth b) Multiple sites *(PGI2K)*
c) TCa 125 d) Stage of disease

909. Post menopausal estrogen production is due to -
a) Peripheral aromatization of androstenedione
b) Adrenal-Direct production *(PGI 2K)*
c) Ovarian tumour
d) Ovary testosterone secretion

910. Drugs used in endometriosis include - *(PGI 01)*
a) Testosterone b) Danazol
c) GnRH d) Progestogen
e) Estrogen

911. Endometriosis commonly associated with -
a) B/L chocolate cyst of ovary *(PGI 02)*
b) Adenomysis
c) Fibroid uterus
d) Luteal cyst
e) Endometritis

912. Treatment of endometriosis included - *(PGI 02)*
a) Estrogen b)Progesterone
c) OCP d) Danazol
e) GnRH

913. Which one of the following is the most common extrauterine site to be affected by endometriosis?
a) Vagina *(UPSC 02)*
b) Rectovaginal septum
c) Sigmoid colon
d) Broad ligament (except tubes and ovaries)

914. In the etiology of endometriosis Sampson's theory is - *(Jipmer03)*
a) Implantation theory
b) Coelomic metaplasia theory
c) Metastatic theory
d) Histogenesis by induction

915. Medical treatment for endometriosis includes the following, except - *(UPSC04)*
a) Gn RH analogues b) Progesterones
c) Coticosteroids d) Danazol

916. The severity of pelvic pain in endometriosis correlates best with - *(UPSC04)*
a) Number of implants b) Depth of invasion
c) Stage of disease d) Ca 125 levels

917. Endometriosis is explained by - *(SGPGI05)*
a) Sampson's Implantation theory
b) Metastatic epithelium
c) Histogensis by induction
d) Coelomic metaplasia theory

918. Treatment of endometriosis in an infertile female-
a) Danazol b)Clome *(MAHE05)*
c) GnRH analogue d) Progesterone

919. Which one of the following sites of endometriosis is not treated by medical therapy - *(UPSC 06)*
a) Rectosigmoid d)Ovarian
c) Episiotomy d) Pulmonary

920. Which one of the following drugs not used in endometriosis - *(UPSC 07)*
a) Danazol b) Pregestins
c) GnRH agonisits d) Misoprostol

898)b 899)b 900)a,b,c 901)a,b 902)d 903)a 904)d 905)c 906)d 907)a 908)None 909)a,b 910)b,c,d 911)a 912)b,c,d,e 913)d 914)a 915)c 916)None 917)A11 918)b 919)b 920)d

921. Which one of the following conditions of the endometrium is associated with a significantly increased risk of development of cancer ?
a) Adenomatous hyperplasia *(UPSC-II08)*
b) Hyperplasia with atypia
c) Cystic glandular hyperplasia
d) Proliferative phase

922. Which one of the following is the definitive treatment of Adenomyosis ? *(UPSC-II 08)*
a) LN 6-Intrauterine device b) GnRH alalogues
c) Danazol d) Hysterectomy

923. True about Endometrial carcinoma clinical stage El disease - *(PGI June 09)*
a) Vaginal metastasis
b) Para aortic L.N.involvement
c) Pelvic L.N. involvement
d) Peritoneal lavage is done
e) Inguinal L.N. involvement

924. Which of the following is most common extra uterine site to be affected by endometriosis ?
a) Vagina *(DELHI PG Feb. 09)*
b) Rectovaginal septum
c) Sigmoid colon
d) Broad ligament (except tubes and ovaries)

925. The sites of endometriosis in order of frequency are- *(Corned 10)*
a) Umbilicus, vulva, rectovaginal septum
b) Pelvic peritoneum, ovaries, laparotomy scar
c) Vagina, appendix, uterine ligaments
d) Ovaries, uterine ligaments, rectovaginal septum

926. The most common site of endometriosis is -
a) Ovary *(Karn 11)*
b) Pouch of Douglas
c) Rectovaginal septum
d) Sigmoid colon

927. Progesterone causes - *(Jipmer 11)*
a) Myometrial quiescence
b) Myometrial activation
c) Increase in oxytocin receptors
d) Causes cervical ripening

OPERATIVE GYNAECOLOGY

928. D & C is useful in the diagnosis of - *(Kerala 94)*
a) Genital TB b) Endometrial carcinoma
c) DUB d)All

929. Kelly's suture is done in - *(Calcutta 2K)*
a) Stress incontinence
b) Cervical incontinence
c) Genito-urinary prolapse
d) Vaginoplasty

930. Trans-cervical endometrial resection (TER) is used in A/E- *(PGI 99)*
a) Endometriosis b) DUB
c) Carcinoma endometrium d) Submucous fibroid

931. Ward Mayo operation is done for - *(HPU 01)*
a) Vagina hysterectomy
b) Abdominal hysterectomy
c) Perineal hysterectomy
d) Both a and b

932. Laparoscopic cholecystectomy is best avoided in patient with - *(UPSC 97)*
a) Hypertension
b) Diabetes
c) Obesity
d) COPD (chronic obstructive pulmonary disease)

933. Ureter is identified at operation by - *(AIIMS 96)*
a) Rich arterial plexus
b) Pulsatile movement
c) Relation to lumbar plexus
d) Accompanied by renal vein

934. Mini laparotomy is done in all except-*(CUPGEE 01)*
a) Ectopic pregnancy b) Internal sterilisation
c) Uterus elevations d) Tubectomy

935. In colposcopy, following are visualized except -
a) Upper 2/3rd endocervix *(PGI 97)*
b) Lower 1/3rd endocervix
c) Vault of vagina
d) Lateral fornix

936. Gas most commonly used in lap aroscopy is -
a) $C0_2$ b) $S0_2$ *(PGI97)*
c) N_2 d) 0_2

937. In suction evacution, the pressure applied is -
a) 0-11 mg Hg b) 200^00 mm Hg*(PGI 98)*
c) 400-600 mg Hg d) 600-800 mm Hg

938. 'Kelly's stitch' operation is done for -
a) Stress incontinence *(CUPGEE2K)*
b) Urge incontinence
c) Overflow incontinence
d) Neurogenic bladder

939. The intra - abdominal pressure laparoscopy should be set between - *(AIIMS 03)*
a) 5 - 8 mm of Hg b) 10 -15 mm of Hg
c) 20-25 mm of Hg d) 30 - 35 mm of Hg

940. Which surgical procedure has the highest incidence of ureteric inj ury ? *(AI06)*
a) Vaginal hysterectomy
b) Abdominal hysterectomy
c) Wertheim's hyseterectomy
d) Anterior colporraphy

941. What is the most common complication after radical hysterectomy - *(UPSC 06)*
a) Ureteral injury b) Bladder atony
c) Prolapse of vaginal vault d) Bowel dysfunction

942. All are indications for Hysterectomy except -
a) Couvelaire Uterus *(MAHE07)*
b) Rupture uterus
c) PPH not contolled by ligation of internal iliac artery
d) Twin pregnancy

921) b 922) d 923) a,b,c,d 924) d 925) d 926) a 927) a 928) d 929) a 930)a,c,d 931)b 932) c 933) b 934) a
935) a 936) a 937) c 938) a 939) b 940) c 941) a 942) a,d

943. All are indications for hysterectomy except -
a) Couvelaire uterus *(Manipal 08)*
b) Rupture uterus
c) PPH not controlled by ligation of internal iliac artery
d) None of the above

944. The ideal distension medium for operative hysteroscopy using electrocautery is - *(UP SC II10)*
a) $C0_2$ b)N-saline
c) 5% dextrose saline d) 1.5% glycine

MISCELLANEOUS (GYNAE)

945. Fixed pelvic tumour occurs in - *(TN 91)*
a) Malignancy
b) Endometriosis
c) Growth extension into ligamenta
d) All of the above

946. Systemic metastasis is commonest in - *(AIIMS 91)*
a) Ovarian Carcinoma
b) Endometrial Carcinoma
c) Choriocarcinoma
d) Carcinoma cervix

947. A 65 year old with bleeding P/V. On examination senile vaginits. Patient requires immediate -
a) Cytology and colposcopy *(UPSC 89,90)*
b) Oestrogen therapy and colposcopy
c) Cytology and fractional curettage
d) Fractional curettage

948. The incidence of stump carcinoma is - *(AIIMS 84, DNB90)*
a) 6% b) 10%
c) 16% d)20%

949. The colour of vulva in Paget's disease is -
a) Blue b) White *(AIIMS 79, DNB 91)*
c) Red d) Yellow
e) Black

950. Lesion in female child born to a mother treated with stilbesterol is - *(KERALA 94)*
a) Vaginal adenosis
b) Sarcoma Botyroides
c) Cerviacal erosion
d) Carcinoma endometrium

951. In perimenopausal women with menorrhagia we rule out carcinoma of - *(JIPMER95)*
a) Ovary b) Uterus
c) Fallopian tube d)Endometrium

952. In differential diagnosis of lump in right fornix which is not true - *(JIPMER95)*
a) Ovarian cyst b) Hydro salpinx
c) Appenicular mass d) Sub mucosal fibroid

953. Post menopausal bleeding is most commonly due to- *(KERALA 95)*
a) Carcinoma cervix b) Fibroid
c) Endometriosis d) Genital TB

954. All of the following tumour metastatize to ovary except - *(DELHI 96)*
a) Gastric carcinoma b) Colonic carcinoma
c) Cervical carcinoma d) Breast carcinoma

955. The condition of genital organs which may lead to lesions in surgical scars, rectum, lymph nodes, lung is - *(AIIMS 95)*
a) Teratoma b)Endometrosis
c) Adenomyosis d) Fibroid

956. Inheritence is a major factor in - *(CUPGEE 96)*
a) Endometrial Ca b) Cervical Ca
c) Both d) Neither

957. Diabetes predisposes to all except - *(AP 96)*
a) Moniliasis b) Trichomoniasis
c) Chlamydia d)None

958. Nabothian follicle is due to - *(TN97)*
a) Inflammation of cervical glands
b) Bartholin gland infection
c) Infection of sweat gland
d) None of the above

959. Ovarian function after hysterectomy - *(UPSC 97)*
a) Increases b) Decreases within 2-3 years
c) Remains the same d) Decreases after 5 years

960. False statement regarding carcinoma of fallopian tubes- *(TN 98)*
a) Adenocarcinoma
b) Very rare
c) Occurs in multiparous women (50-60 years)
d) Constitues about 10-20 % malignancies

961. One of the following is a congenital cyst - *(AP 97)*
a) Inclusion cyst b) Ovarian cyst
c) Gartner's cyst d)None

962. Estrogen dependent conditions are all except- *(MAHE 98)*
a) Endometriosis b) Endometrial carcinoma
c) Fibroids d) Ca. cervix

963. Suburethral metastasis is seen in - *(MP 2K)*
a) Carcinoma cervix
b) Carcinoma endometrium
c) Choriocarcinoma
d) Vaginal carcinoma

964. Gynaecological cancer unusual in young women- *(ORRISA 98)*
a)Cancer ovary b) Cancer cervix
c)Cancer vulva d) Chorio carcinoma

965. FIGO staging is used in - *(ORRISA 98)*
a) Carcinoma breast b) Bone tumour
c) Leukaemia d) Carcinoma cervix

966. Ball's operation is done for - *(ORRISA R)*
a) Ca, Cx b) Ca. ovary
c) Ca. Fallopian tube d) Pruritus vulvae

967. Characteristic feature of Cancer fallopian tube- *(MAHE 2001)*
a) Watery discharge P/V b) Hemorrhage
c) Pain d) Sepsis

968. Powder burn appearance on laparoscopy is characteristic of - *(TN2002)*
a) Endometriosis
b) Endometroid tumour
c) Epithelial ovarian tumour
d) Endometrial cancer

943) a 944) d 945)d 946)c 947)a 948)b 949)b 950)a 951)a 952)d 953)None 954)None 955)b
956) a 957) b,c 958) a 959) b 960) c,d 961) c 962) d 963) b 964) c 965) d 966) d 967) a 968) a

969. Most common cause of acute cervicitis is-
a) Streptococcus b) Gonococcus *(BHU87)*
c) E.coli d) Proteus

970. Mucin producing glands are seen in all except -
a) Vagina b) Oesophagus *(A l 98)*
c) Cervix d) Duodenum

971. Treatment of gynaecomastia is A/E - *(PGI98)*
a) Hormonal therapy
b) Simple mastectomy
c) Subcutaneous liposuction mastectomy
d) None

972. Gyanecomazia is caused by - *(PGI98)*
a) Kallman's syndrome
b) 5-a reductase deficiency
c) Androgen insensitivity
d) All of above
e) None

973. M.C. vaginal carcinoma is - *(PGI99)*
a) Squamous cell Ca b) Adeno carcinoma
c) Botroid's tumor d) Columnar hyperplasia

974. A 35 year old woman with dysmenorrhea and menorrhagia of 6 months duration showed an enlarged uterus of 20 weeks which was tender, the possible diagnosis is - *(PGI 99)*
a) Adenomyosis b) Fibroid
c) Carcinoma endometrium d) PID

975. 40 yrs female, mass in pelvis detected clinically, following investigations should be done except -
a) CT b) Laparoscopy *(PGI 2K)*
c) PAP smear d)USG

976. All are true regarding Sarcoma Botryoides except-
a) Seen in vagina *(PGI 01)*
b) Grapelike clusters are seen
c) Seen in elderly women
d) It is an adenocarcinoma
e) Famillial incidence is common

977. Gynaecomastia is seen in - *(PGI 02)*
a) Secondary syphillis
b) Lepromatons leprosy
c) HIV

978. True about CA vulva assoiciated./predisposed by-
a) Paget'disease *(PGI02)*
b) Vulval intraepithelia Neoplasis
c) Bowen's disease

979. True regarding postmenopausal osteoporosis is -
a) Decreased vitamin D *(PGI 02)*
b) Decreased serum calcium
c) Normal serum chemistries
d) Decreased vitamin C
e) Amenorrhea

980. Weiner - Reid's test is used in - *(Manipal 04)*
a) Abruptio placenta b) Placenta previa
c) Gestational diabetes d)None

981. Pseudomeig syndrome seen with - *(Manipal 04)*
a) Fibroids b) Adenomyosis
c) Ovarian tumour d) Endometriosis

982. A 47 year old woman complains of postcoital bleeding, nearly as heavy as menses. The most likely origin of her bleeding would be cervical -
a) Polyps b) Ectropion *(Kerala 04)*
c) Carcinoma d) Nabothian cysts

983. TVue about galactorrhoea - *(PGIJune 05)*
a) Found in pregnancy & lactation
b) Always B/L
c) Surgery done
d) A/W adrenal gland tumor

984. All of the following appear to decrease hot flushes in menopausal women except - *(AI05)*
a) Androgens b) Raloxifene
c) Isoflavones d) Tibolone

985. Me Donald stitch is applied in the following conditions except - *(UPSC 0 7)*
a) Incompetent os b) Septate uterus
c) Placenta previa d) Bad obstetrical history

986. Goniometer is used for - *(ARMSNov 07)*
a) Amount of vaginal secretions
b) To measure width of genital hiatus
c) Gonococcal colony count
d) Urethrovesical angle

987. Surgical staging is done for the following genital malignancies except - *(UPSC-II08)*
a) Ovarian malignancy
b) Gestational trophoblastic neoplasm
c) Endometrial carcinoma
d) Fallopian tube malignancy

988. Human Chorionic Gonadotropin (hCG) monitoring is helpful for - *(PGI Dec 08)*
a) Molar pregnancy b) Multiple pregnancy
c) Ectopic pregnancy d) Twin pregnancy
e) Choriocarcinoma

989. a Fetoprotein concentration in serum is elevated in-
a) Hepatoblastoma *(PGI Dec 08)*
b) Hepatoma
c) Endodermal sinus tumour
d) Gastrointestinal cancer
e) Cirrhosis

990. Which gynaecological malignancy is caused by HIV infection - *(PGI Dec 08)*
a) Ca Cervix b) Ca Endometrium
c) Ca Ovary d)Ca Vagina
e) Ca Breast

991. A 25-year-old patient who has had an abortion fourt months ago has come with the history of profuse vaginal bleeding. On examination. Uterus is bulky, both the ovaries are enlarged, pregnancy test is positive. What is the probable clinical diagnosis?
a) Incomplete abortion *(UPSC-II 09)*
b) Choriocarcinoma
c) Malignant ovarian tumor
d) Ectopic pregnancy

969) b 970) a 971)d 972) c 973) a 974) a 975) c 976)c,d,e 977) b,c 978)a,b,c 979) c,e 980) a 981) c
982) c 983) c 984) b 985) b 986) d 987) b 988)All 989)All 990) a 991) b

992. True statements) regarding vulval carcinoma is/ are- *(PGINov09)*
a) Squamous cell hyperplasia predisposes
b) Paget's disease of vulva predisposes
c) Lichen sclerosus is a risk factor
d) Condylomata accumulate predisposes
e) Vulval dystrophy cause invasive lesion

993. A lady with placenta previa delivered a baby. She had excessive bleeding and shock. After resuscitation most likely complication would be - *(AIIMS May 10)*
a) Galactorrhoea b) Diabetes insipidus
c) Loss of menstruation d) Cushing's syndrome

994. Clomphene citrate - True statement is -
a) Enclomiphene is anti-estrogenic *(A1IMS May 10)*
b) Increases pregnancy rate 3 times as compared to placebo
c) Incidence of twin pregnancy is 5-6%
d) It has been shown to increase fertility in oligospermic males in randomized controlled trials

995. Sentinel lymph node biopsy is most useful for which of the following gynecological malignancies-^4*/10)*
a) Carcinoma Endometrium b) Carcinoma cervix
c) Carcinoma vulva d) Carcinoma vagina

996. Inlaparoscopy, chances of hypercarbia can be reduced by keeping intraperitoneal $C0_2$ pressure -
a) 10 b) 12 *(Maharashtra 10)*
c) 13 d) 14

997. A 16-year-old girl presents with primary amenorrhoea and repeated periodic pain. On examination, a suprapubic mass is felt up to the umbilicus. The most likely diagnosis is -
a) Large ovarian cyst *(UP SCII10)*
b) Cryptomenorrhoea
c) Bladder-neck hypertrophy
d) Uterine leiomyoma

998. Clomiphene citrate - true statement is -
a) Enclomiphene is anti-estrogenic *(AlIMSMay 11)*
b) Increases pregnancy rate 3 times as compared to placebo
c) Incidence of twin pregnancy is 5-6%
d) It has been shown to increase fertility in oligospermic males in randomized controlled trials

999. Advantage of anastrozole over the other aromatase inhibitors is - *(Kam 11)*
a) Causes less gastro-intestinal side effects
b) Causes less osteoporosis
c) Has more anti-estrogenic activity
d) Has more anti-progestonic activity

1000. Fibrocystic disease is due to high levels of -
a) Estrogen b) Progesterone *(Jipmer 11)*
c) LH d) Testosterone

OBSTETRICS

OBSTETRICAL ANATOMY

1001. The Obliterated umbilical vein is called -
a) Ligamentum teres *(AIIMS 79, Bihar 90)*
b) Urachus
c) Ligamentum arterisoum
d) Falciform ligament

1002. The chromosomal complement of a primary oocyte is - *(KARNATAK 94)*
a) 23X b)23Y
c) 46XX d)46XY

1003. The second maturation divison of the human ovum occurs at the time of - *(KARN94)*
a) Fertilisation b) Implantation
c) Ovulation d) Puberty

1004. Umbilical artery pressure is - *(UPSC 96)*
a) 30 to 40 mm Hg b)60mmHg
c) 100 to 120 mm Hg d) Greater than 120 mm Hg

1005. Inplantation of fertilised ovum occurs - *(TN97)*
a) 24 hrs after entry into uterine cavity
b) 3-4 days after into uterine cavity
c) 11 days after entry into uterine cavity
d) None of the above

1006. Blighted ovum is characterised by - *(AI 98)*
a) Avasular villi b) Synctial knot
c) Hypertrophied villi d) Absent trophoblast

1007. Oogonia are derived from - *(JIPMER 92)*
a) Amnion b) Yolk sac
c) Stroma of ovary d) Germinal epithlium

1008. Weight of normal uterus is - *(BIHAR 90)*
a) 30-45 gms b) 45-60 gms
c) 60-70gm d)80-100gm

1009. Chromosomal no. of primary spermatocyte is -
a) 46XY b) 22 XY *(PGI99)*
c) 22 XX d)46XX

1010. Female pelvis as compared to the male pelvis has all except - *(PGI01)*
a) Narrow sciatic notch
b) Shallow and wide symphysis pubis
c) Suprapubic angle is acute
d) Light and graceful structure
e) Pre auricular sulcus is larger

1011. Primary oocyte- *(PGI 02)*
a) Is formed after single meiotic division
b) Maximum in number at 5th month fetus
c) Is in prophase arrest
d) Also k/a blastocyst

1012. Zygote reaches the uterine cavity as- (*Kerala 03)*
a) 32 celled b) 16 celled
c) 8 celled d) 2 celled

1013. Non stress test is contraindicated in - *(Orissa 04)*
a) IUGR b) Post maturity
c) Rh incompatibility d) PIH

992)A11 993) c 994)a 995)c 996)b 997)b 998)a 999)b 1000)a 1001)a 1002)c 1003)a 1004)b 1005)d 1006) a 1007)b 1008)b 1009)a 1010)a,c 1011)b,c 1012)b 1013)c

1014. The formation of primordial follicles in human fetus is completed by - *(Karnataka 04)*
a) 4 weeks b) 8 weeks
c) 13 weeks d) 18 weeks

1015. Ligamentum teres is formed after - *(COMED 06)*
a) Obliteration of the umbilical vein
b) Obliteration of the ductus venous
c) Obliteration of the ductus arteriosus
d) Obliteration of the hypogastric artery

1016. Living ligature of the uterus is - *(Maharashtra 10)*
a) Endometrium
b) Middle layer of myometrium
c) Inner layer of myometrium
d) Parametrium

1017. The umbilical cord normally contains -
a) Two arteries and two veins *(UP SC II10)*
b) One artery and one vein
c) Two arteries and one vein
d) One artery and two veins

PLACENTA & FETAL MEMBRANE

1018. Golden colour amniotic fluid is seen in - *(AP96)*
a) Rh incompatability b) Foetal death
c) IUGR d) Foetal distress

1019. Weight of normal placenta is - *(AI96)*
a) 250 gm b)500gm
c) 125 gm d) 350 gm

1020. Weight of placents..... % of foetus - (CMC *98)*
a) 10 b) 20
c) 30 d)45
e) 50

1021. During the uterine contraction of labour, the uterine blood flow- *{AMU87)*
a) Decreases b) Increases
c) Does not change d) Temporarily cases

1022. Saffron coloured meconium is seen in - (77V*98)*
a) Post maturity b)TB
c) Breech d) Normal in appearance

1023. The amniotic fluid is in balance by - *(PGI 01)*
a) Excretion by renal kidneys
b) Maternal homeostasis
c) Fetal intestinal absorption
d) Fetal membrane absorption
e) Fetal sweating

1024. Trophoblast give rise to - *(PGI03)*
a) Placenta b) Chorion
c) Amnion d) Decidua
e) Fetal limb

1025. Oxygenated blood from plecenta to heart in utero is by- *(PGI 97)*
a) Umbilical vein b)IVC
c) Ductus arteriosus d) None of the above

1026. The thickness of endometrium at the time of implantation is - *(PGI 99)*
a) 3-4 mm b) 20-30 mm
c) 15-20mm d) 30-40 mm

1027. All are fetal membranes except - *(IN 03)*
a) Chorion b) Amnion
c) Decidua capsularis d) Yolk sac

1028. Motile spermatozoa found on a wet mount of vaginal secretions are indicative of intercourse within the past - *(Karnataka 03)*
a) 6 hours b) 12 hours
c) 24 hours d) 48 hours

1029. Amniotic fluid at 38 weeks in normal pregnancy is - *(UPSC04)*
a) 800 cc b)1100cc
c) 1500 cc d) 1800 cc

1030. Thickened placenta is not seen in - *(Jharkand 03)*
a) Triploidy b) Syphilis
c) Rh incompatibility d) Intrauterine infections

1031. What is the pH range of amniotic fluid -
a) 5.5-6.0 b) 6.0-6.5 *(UPSC 06)*
c) 6.5-7.0 d) 7.0-7.5

1032. By which day after fertilization, is placental circulation established - *(UPSC06)*
a) 11[111] day b) 13* day
c) 15[th] day d) 17[th] day

1033. The foetal blood is separated from the syncytiotrophoblast with all except - *(UP 07)*
a) Foetal blood capillary membrane
b) Mesenchyme inter villous blood space
c) Cytotrophoblast
d) Decidua - parietalis

1034. The weight of placenta at term is - *(DPGEE 08)*
a) 500 gm b)250gm
c) lOOOgm d)750gm

1035. Match list I (Abnormality in the fetomaternal unit in placenta) with list H (Condition caused/etiological effect) and select the correct answer using the codes given below the lists - *(UPSC-II09)*

List I (Abnormality in the fetomaternal unit in placenta)	**List H** (Conditions caused/etiological effect)
A. Absence of Nitabuch's layer	1. Increased exchange of nutrients
B. Absence of secondary invasion of trophoblast & PIH	2. Adherent placenta
C. Thinning of cytotrophoblasts	3. Vasospasm
D. Future of body stalk	4. Umbilical cord

Codes:

	A	B	C	D
a)	2	1	3	4
b)	2	3	1	4
c)	4	1	3	**2**
d)	4	3	1	**2**

1014)b 1015)a 1016) b 1017)c 1018)a 1019)b 1020)b 1021)a 1022)a 1023)a,b,c,d 1024)a,b,c 1025)a 1026)a
1027)d 1028)c 1029) a 1030)a 103 l)d 1032)d 1033)d 1034)a 1035)b

1036. Which of the following embryonic structures is responsible for secretion of human chorionic gonadotrophin which could be detected in the maternal urine during early pregnancy? *(Kam 11)*
a) Amnion b) Embryobjast
c) Epiblast d) Syncytiotrophoblast

1037. Fetus is called an embryo until - *(Jipmer 11)*
a) 6 weeks b) 8 weeks
c) 10 weeks d) 12 weeks

PHYSIOLOGICAL CHANGES DURING PREGNANCY

1038. How many days after ovulation is placental circulation establishes - *(DNB 91)*
a) 18 to 21 b) 9 to 11
c) 7to9 d)30to 13
e) 40 to 43

1039. Which is not increased in pregnancy - *(UP 96)*
a) Vital capacity b) Blood volume
c) Extracellular fluid d) Weight

1040. Increased calories required during pregnancy -
a) 300 b)550 *(AIIMS97)*
c) 800 d)400

1041. Blood congulation profile in pregnacy is -
a) Increase in fibrinogen level of 10-25 %
b) Decrease in factor X, XI, XII *(AI1MS 96)*
c) Decrease in plasminogen activity
d) Increase in platelet count

1042. Which of the following is truly physiological in pregnancy - *(PGI93)*
a) Albuminuria b) Increased BP
c) Mild pedal edema d) Increased GFR

1043. In pregnancy - *(Delhi 92)*
a) Plasma fibrinogen levels are increased
b) Fibrinogen levels are decreased
c) Thyroglobulins are decreased
d) IgD are markedly increased

1044. Which of the following cardiovascular change is abnormal in pregnancy - *(PGI 2000)*
a) Enlarged cardiac shilhoute
b) Increased SI split
c) Right axis deviation of ECG
d) Early diastoic murmur
e) HR increased by 10 to 15 per minute

1045. True about various changes in pregnancy is/true
a) Fibrinogen levels are increased *(PGI 2000)*
b) Uric acid levels are increased
c) Sr. potassium is decreased
d) Sodium retention

1046. Most common cause of platelet T in pregnancy -
a) Immune b) Incidental *(PGI2000)*
c) Idiopathic d) Infection
e) Benign Gestational

1047. Which of the following is increased in pregnancy-
a) Globulin b) Fibrinogen *(PGI 01)*
c) Uric acid d) Leukocytes
e) Transferrin

1048. Insulin resistance in pregnancy is because of-
a) Human placental lactogen *(PGI 01)*
b) Thyroid hormone
c) Progesterone
d) hCG
e) Estrogen

1049. Physiological changes of pregnancy of include -
a) Insulin leves increase *(PGI 02)*
b) Increased BMR
c) Hypothyroidism
d) GH decreases
e) Blood volume decreases

1050. Regarding idiopathic cholestasis of pregnancy -
a) Deep jaundice is present *(PGI 02)*
b) Pruritus is the first symtom
c) Maximum incidence during III trimester
d) Increased liver transaminase
e) Hepatic necrosis present

1051. What are maternal physiological changes in pregenancy - *(PGI 03)*
a) Ted cardiac output b) Ted tidal volume
c) Ted vital capacity d) Ted fibrinogen
e) Ted plasma protein concentration

1052. Signs of heart disease in pregnancy - *(PGI 03)*
a) Diastolic murmur
b) Systolic murmur
c) Tachycardia
d) Dyspnea on exertion
e) Nervousness or syncope on exertion

1053. In pregnancy which is abnormal finding?
a) Venous hum *(Jipmer 03)*
b) Third heat sound
c) Diastolic murmur
d) Supra - clavicular murmur

1054. During pregnancy there is an increased respiratory sensitivity to Carbon dioxide due to higher circulating levels of - *(Karnataka 04)*
a) Progesterone b) Estrogen
c) Estriol d) Prolactin

1055. Maximum cardiac output during pregnancy is seen in - *(AI07)*
a) 1st trimester b) Ilnd trimester
c) Labour d) Immediate postpartum period

1056. A pregnant woman in HI (third) trimester has normal blood pressure when standing and sitting. When supine, blood pressure drops to 90/50. What is the diagnosis ? *(UPSC-II08)*
a) Compression of uterine artery
b) Compression of aorta
c) Compression ofIVC (Inferior Vena Cava)
d) Compression of internal iliac vessels

1036) d 1037) b 1038)a 1039)a 1040)a 1041)a 1042)c,d 1043)a 1044)c,d 1045)a,d 1046)e 1047)a,b,d,e 1048)a,b,c,e 1049) a,b 1050)b,c,d 1051)a,b,e 1052)a,d,e 1053) d 1054) a 1055) d 1056) c

1057. Which clotting factors decreases during pregnancy-
a) 1 &3 b) 11 & 13 *(COMED09)*
c) 10&13 d)7 & 8

1058. Haemodynamic changes in pregnancy include the following except - *(UPSC-II09)*
a) Increase in cardiac output
b) Increase in heart rate
c) Decrease in vascular resistance
d) Increase in mean arterial pressure

1059. Uterine blood flow at term is - *(AlIMSNov 09)*
a) 50-70 ml/min b) 100-150 ml/min
c) 175-200 ml/min d) 500-750 ml/min

1060. In pregnancy, there is a physiological increase of the- *(UP SC II10)*
a) Blood pressure in the third trimester
b) Blood viscosity
c) Cardiac output
d) Peripheral resistance of the blood vessels

1061. True statement regarding cholestasis in pregnancy-
a) Recurrs in subsequent pregnancy *(PGI May 10)*
b) Ursodeoxyholic acid relieves pruritus
c) Mild jaundice occurs in majority of patients
d) Pruritus may precedes laboratory findings
e) Serum alkaline phosphatase is most sensitive indicator

1062. True regarding changes during pregnancy?
a) Hyperplasia of parathyroid *(PGI May 10)*
b) Hyperplasia of thyroid
c) Increased Pigmentation
d) iBMR
e) T Insulin

1063. Which of the following is present normally in the urine of a pregnant women in the third trimester -
a) Glucose b) Lactose *(AlIMSNov 10)*
c) Galactose d) Fructose

1064. Which of the following haemotological parameters does not tindergo a physiological increase during normal pregnancy - *(UPSCII11)*
a) Blood volume b) Red cell volume
c) Leukocyte count d) Platelet count

1065. Which of the following regarding CVS changes in pregnancy is false? *(Jipmer 11)*
a) Blood volume increases
b) Heart rate increases
c) Cardiac output increases
d) Blood viscosity increases

ENDOCRINOLOGY IN RELATION TO REPRODUCTION

1066. In early pregnancy, level of HCG in plasma doubles every - *(DNB91)*
a) 2 days b) 4 days
c) Weekly d) Only gradually rises

1067. Fetal growth is maximally influenced by - *(A199)*
a) Insulin b) GH
c) Thyroxine d) Cortisol

1068. HCG doubles every---------- days- *(Kerala 2001)*
a) 2 b)6
c) 8 d)4

1069. The hormone responsible for the decidual and atrias Stella reaction of ectopic pregnancy is -
a) HOG b) Progesterone *(Kerala 01)*
c) Estrogen d) HPL

1070. The role of human placental lactogen is - *(AI92)*
a) Stimulate milk production
b) Fetal breast development
c) Growth of featus
d) Endocrine regulation

1071. Hormone which does not cross placenta-(M4/ZE *01)*
a) Thyroxine b) Oestrogen
c) Insulin d) None

1072. Hormonal assay in human is commonly doneby using- *(PGI98)*
a) RIA b) Densiometry
c) Flurometry d)HPLC

1073. Raised beta-HCG levels are seen in - *(PGI 01)*
a) DM b) Preeclampsia
c) Ectopic pregnancy d) Rh. incompatibility
e) Down synd.

1074. Following hormones secreted by placenta exclussively- *(PGI02)*
a) HCG b) Estrogen
c) HPL d)PRL

1075. Regarding hCG - *(PGI02)*
a) A glycoprotein
b) Has 2 subunits
c) Increases to maximum in III trimester
d) Secreted by trophoblast
e) Alfa subunit is specific

1076. Which is not secreated by placenta? *(Karala 03)*
a) HPL b)HCG
c) Prolactin d) Progesterone

1077. a and p subunits are not seen in- *(Kerala 03)*
a) FSH b)HCG
c) Prolactin d) Insulin

1078. hCG is secreted by- *(AIMS 06)*
a) Trophoblast cells b) Amniotic membrane
c) Fetal yolk sac d) Hypothalamus

1079. HCG secreted from- *(PGI June 08)*
a) Placenta b) Pancreas
c) Lung d) Liver
e) Breast

1080. In early pregnancy the doubling time of the concentration of human chorionic gonadotropin in plasma is- *(Corned 10)*
a) 1 day b) 2 days
c) 3 days d) 4 days

1057) b 1058) d 1059)d 1060)c 1061)a,b,c,d 1062)a,b,c,d 1063)a 1064)d 1065)d 1066)a 1067)a 1068)a 1069)b 1070) c 1071)c 1072)a 1073)e 1074)a,b,c 1075)a,b,d 1076)c 1077)c 1078)a 1079)a 1080)b

1081. Progesterone is associated with the following except-
a) Breast swelling *(UPSCI11)*
b) Increased myometrial contractility
c) Thermogenesis
d) Endometrial proliferation

1082. Which of the following hormones is the best indicator of maternal-foetal- placental unit -
a) Prolactin *(UPSCII11)*
b) Human placental lactogen
c) Progesterone
d) Estriol

DIAGNOSIS OF PREGNANCY

1083. At what period, cystitis (Frequency) is present in pregnancy - *(DNB 90)*
a) Before 16 weeks b) After 18 weeks
c) After 20 weeks d) After 24 weeks

1084. Urine is collectedfor examination in a pregnant female by - *(PGI90)*
a) Mid stream collection b) Suprapubic puncture
c) Catheterisation d) Early morning sample

1085. Definitive sign of pregnancy - *(A195)*
a) Uterine touffle b) Ballottment
c) Fetal heart sound d) Amenorrhea

1086. Hegar sign can be elicited in - *(Assam 95)*
a) Early pregnancy b) Late pregnancy
c) During labour d) During peurperium

1087. Palmer's sign is pregnancy refers to (8-12 weeks)-
a) Rhythmic contractions of uterus *(AP 96)*
b) Pulsations is the lat. fornix
c) Discoloration of vagina
d) None

1088. All are positive signs of pregnancy except- *(IN 98)*
a) Vomiting b) Fetal movements
c) Fetal heart sounds d)Excessive salivation

1089. The earliest diagnostic test of pregnancy - *(IN 98)*
a) Ultrasound b)BetaHCG
c) Fetal movements d) Fetal heart sounds

1090. Osiander's sign means - *(JIPMER2K)*
a) Pulsation in the lateral vaginal fornix
b) Bluish colour change in the vagina
c) Softening of the cervix
d) On bimanual palpation the finger can be approximated as if nothing is in between

1091. Palmer's sign elicits - *(Karn 99)*
a) Intermittent uterine contractions
b) Softening of cervix
c) Pulsations in fornix
d) Compresibility of isthmus

1092. In early pregnancy clinical signs of feeling the cervix and the body of bulky uterus separated because of softened isthumus at 6-10 weeks of gestation - *(Orrisa R)*
a) Goodell's sign b) Chadwick's sign
c) Piskacek's sign d) Hegar's sign

1093. Signs positive in early pregnancy are - *(PGI2000)*
a) Hegar's sign b) Palmer's sign
c) GoodelTs sign d) Osiander's sign

1094. In transvaginal ultrasound, earliest detection of gestation sac is by - *(PGI2000)*
a) 21 days after ovulation
b) 21 days after implantation
c) 28 days post ovulation
d) 14 days after ovulation

1095. Earliest detection of pregnancy by ultrasound is by- *(PGI2000)*
a) Gestation sac b) Fetal node
c) FHS d) Fetal skeleton

1096. Fetal heart acitivity can be detected by sonography at about- *(PGI 02)*
a) 5 weeks b) 6 weeks
c) 7 weeks d) 8 weeks
e) 9 weeks

1097. Changes that are found in 2nd trimester of pregnancy- *(PGI 03)*
a) Braxton-Hicks contraction b) Show
c) Lightening d) Quickening
e) Broad ligament pain

1098. Pregnancy is confirmed by - *(PGI04)*
a) Morning sickness
b) Amenorrhoea
c) Foeatal heart activity
d) Foetal movement by examiner
e) Foetal sac in USG

1099. Not a sign of early pregnancy - *(Manipal 06)*
a) Lemon's sign b) Osiander's sign
c) Piskacek's sign d) Palmer's sign

1100. The softing of the uterus with lateral implantation is known as - *(UP 07)*
a) Chadwick's sign b) Hegar's sign
c) Goodell's sign d) Piskacek's sign

1101. Which one of the following is not a sign of early pregnancy - *(UPSC 07)*
a) Goodell's sign b) Hegar's sign
c) Cullen's sign d) Palmer sign

1102. What is the gestational lage of which the maternal hCG levels are maximum in a normal pregnancy-
a) 8 to 10 weeks b) 12 to 14 weeks *(UPSC 07)*
c) 16 to 18 weeks d) After 20 weeks

1103. Expected date of delivery is calculated by all except -
a) Nine calender months plus 7 days *(UP 08)*
b) 280 days or 40 weeks
c) 266 days or 38 weeks
d) 10 lunar months

1104. Which of the following measured by clinically -
a) True conjugate *(UP 08)*
b) Obstetric conjugate
c) Diagonal conjugate
d) Transverse diameter

1081)b 1082)d 1083) a 1084)d 1085)c 1086)a 1087)a 1088)d 1089)b 1090)a 1091)a 1092)d 1093)a,b,c,d
1094) a 1095) a 1096)c 1097)a,d 1098)c,d,e 1099)a 1100)d 1101)c 1102)a 1103)c 1104)c

1105. Which of the following statment is untrue regarding fundal height - *(UP 08)*
a) Fundal height between pubic symphysis and umbilicus at 16 weeks
b) Fundal height at the level of umbilicus at 20 weeks
c) Fundal height at the level of ensiform cartilage at 36 weeks
d) Fundal height of the level of xiphistemum at 40 weeks

1106. Quickening is felt at - *(PGINov 09)*
a) 8-12 wk b) 16-20 wk
c) 20-24 wk d) 24-28 wk
e) 28-32 wk

1107. Chadwick sign means - *(Maharashtra 10)*
a) Bluish discoloration or dusky hue of the vestibule and anterior vaginal wall
b) Pulsations felt through lateral fomices
c) Softening of cervix
d) All of the above

1108. Match List-I with List-II and select the correct answer using the code given below the Lists -

List-I *(Changes of pregnancy)*	**List-II** *(Site of change)*
A. Jacquemier's sign	1. Breast
B. Chloasma gravidarum	2. Abdomen
C. Striae gravidarum	3. Uterus
D. Montgomery's tubercles	4. Vagina
	5. Face *(UP SCII10)*

Code:

	A	B	C	D
a)	5	3	4	1
b)	4	2	1	3
c)	4	5	2	1
d)	3	5	**2**	4

1109. Which of the following is the most sensitive/gold standard test for assessing p HCG in maternal serum - *(AI11)*
a) Radioimmune assay b) ELISA
c) Latex test d) Bioassay

FETAL SKULL AND MATERNAL PELVIS

1110. The shortest diameter of pelvic inlet is - *(AI 91)*
a) Obstetric conjugate b) True conjugate
c) Diagonal conjugate d)Transverse diameter

1111. Engagement of foetal head is - *(UPSC 99)*
a) When the occiput has gone below the pelvic inlet
b) When the widest diameter of the presenting part has passed through the pelvic inlet
c) When the presenting part can be push into the pelvic cavity
d) Synonymous with fixation of head

1112. Diagonal conjugate is defined as the distance between - *(UPSC 2K)*
a) Upperborder of symphysis pubis and the sacral Promontary
b) Lower border of symphysis pubis and the sacral promontary
c) Lower border of symphysis pubis and the third piece of sacrum
d) Lower border of symphysis pubis and the lip of sacrum

1113. Posterior fontanelles ossify at the age of-
a) 1 year b) 2 year *(HPU 01)*
c) 3 year d) 4 year

1114. Commonest of non-engagement at term, in primi is- *(PGI98)*
a) CPD b)Hydramnios
c) Brow presentation d)Breeach

1115. Engaging diameter of face presentation - *(PGI2K)*
a) Submentovertical b)Submentobreg
c) Mentovertical d) Suboccipitofrontal

1116. Diameter of engagement in face presentation -
a) Mentovertical *(PGI02)*
b) Submentovertical
c) Suboccipitobregmatic
d) Submentrobregmatic
e) Suboccipitovertical

1117. Most important diameter of pelvis during labour is- *(PGI02)*
a) Interspinal diameter of outlet
b) Oblique diameter of inlet
c) AP diameter of oulet
d) Intertubercular diameter

1118. The smallest diameter of the true pelvis is -*(AI 05)*
a) Interspinous diameter
b) Diagonal conjugate
c) True conjugate
d) Intertuberous diameter

1119. Engagement of foetal head is with reference to -
a) Biparietal diameter *(Korn pgmee 06)*
b) Bitemporal diameter
c) Occipito frontal diameter
d) Suboccipito frontal diameter

1120. The shortest diameter in the fetal head is -
a) Biparietal diameter *(AIIMS06)*
b) Suboccipito frontal diameter
c) Occipito frontal diameter
d) Bitemporal diameter

1121. When the vertex is well flexed presentation is -
a) Cephalic b) Vertex *(MAHE07)*
c) Face d)Brow

1122. The shortest diameter of foetal skull is - *(UP 0 7)*
a) Suboccipitofrontal b) Sub mentobregmatic
c) Mento vertical d) Subementovertical

1123. Sub pubic angle is- *(UP 07)*
a) <65° b) 65°-75°
c) 85° d) 110°-120°

1124. Face to pubes delivery is possible with which cephalic presentation - *(UPSC 0 7)*
a) Mento-anterior b) Mento-posterior
c) Occipito sacral d) Brow presentation

1105) b 1106) b 1107)a 1108)c 1109)a 1110)a llll)b 1112) b 1113) None 1114)a 1115)a,b 1116)b,d 1117)a 1118) a 1119) a 1120)d 1121)b 1122)b 1123)c 1124)c

1125. Whe the vertex is well flexed presentation is -
a) Cephalic b) Vertex *(Manipal 08)*
c) Face d)Brow

1126. Breech presentation is mostly mistaken for -
a) Face presentation b) Brow *(Manipal 08)*
c) Shoulder d) Vertex

1127. Engaging diameter in brow presentation?^/5/^ *08)*
a) Mentovertical b) Occipiti.posterior
c) Mento-anterior d) Mento-posterior

1128. Most important diameter of pelvis during labour is -
a) Interspinous diameter of outlet *(DPG10)*
b) Oblique diameter of inlet
c) AP diameter of outlet
d) Intertubercular diameter

1129. The true conjugate of the pelvic brim measures -
a) 10.5 cm b) 11.5 cm *(UP SC II10)*
c) 12.5 cm d) 13.5 cm

1130. While making a pelvic assessment in a gravid woman at term, the obstetrician can measure with the examining finger the following diameter -
a) Diagonal conjugate *(UPSCII11)*
b) True conjugate
c) Diameter of pelvic inlet
d) Obstetric conjugate

ANTENATAL CARE AND ASSESSMENT OF FETAL WELL BEING

1131. Calcium requirement per day during the third trimester of pregnancy - *(JIPMER 92)*
a) 20 mg b) 100 mg
c) 750 mg d) 1000 mg

1132. Most appropriate time for chorionic villi sampling in pregnancy is - *(AI96)*
a) 16-18 weeks b) 16-20 weeks
c) 12-14 weeks d) 9-11 weeks
e) 80-10 weeks

1133. Diagnositc serum markers in Down's syndrome are all except - *(MAHE 2001)*
a) Freeoestriol b) Alpha feto protein
c) HOG d) Progesterone

1134. Dietary supplement alone can not compensate for the increased requirement of which nutrient in pregnant women - *(AI 91)*
a) Iron b) Iodine
c) Magnesium d) Calcium

1135. Serum alpha feto protein is decreased *m-(AUMS 92)*
a) Intra Uterine death b) Downs syndrome
c) Spine difida d) Exomphalos

1136. Alfa feto proteins are not increased in - *(AI 93)*
a) Spina bifida b) Post maturity
c) Esophageal atresia d) Anencephaly

1137. ied maternal serum a-FP is seen in - *(PGI03)*
a) Multiple pregnancy b) Trisomy 21
c) Open neural tube defect d) IUD

1138. AFP is raised in A/E - *(PGI99)*
a) Polycystic kidney b) Trisomy
c) IUD d) Oesophageal atresia

1139. The most common anomaly seen with chorionic villous biopsy done in early gestation is - *(PGI99)*
a) Neural tube defects b) Limb abnormalities
c) Kidney abnormalities d)CH

1140. In pregnancy which vaccine is not given - (*UP2K)*
a) Influenza b) Rubella
c) Yellow fever d) Polio

1141. About Amniocentesis true is following except -
a) It carries risk of miscarriage *(PGI 2000)*
b) Always done as a blind procedure
c) Done between 10-18 weeks
d) Chromosomal abnormality can be detected

1142. Genetic abnormality in the fetus can be diagnosed by- *(PGI02)*
a) Maternal serum b) Maternal urine
c) Amniotic fluid d) Chorionic villi
e) Fetal blood

1143. Folic acid supplement reduces the risk of -
a) Neural tube defect *(PGI03)*
b) Toxaemia of pregnancy
c) Down synd.
d) Placenta pravia

1144. Antenatal screening is done using the following except- (77V*03)*
a) Cord blood b) Amniotic fluid
c) Chorionic-villi—dj-Peripheral-lymphocytes-------

1145. Preconceptional use of the following agent leads to reduced incidence of neural tube defects -
a) Folic acid b) Iron *(AIIMS 03)*
c) Calcium d) Vitamin A

1146. All of the following are ultrasonographic fetal growth parameters except - *(A ll India 04)*
a) Biparietal diameter
b) Head circumference
c) Transcerebellar diameter
d) Femur length

1147. Screening by using maternal serum alpha fetoproteins helps to detect all of the following except - *(All India 04)*
a) Neural tube defects b) Duodenal atresia
c) Talipes equinovarus d) Omphalocele

1148. Which of the following tests on maternal serum is most useful in distinguishing between open neural tube defects and ventral wall defects in a fetus - *(AI 04)*
a) Carcinoembryo antigen
b) Sphingomyelin
c) Alfa - feto protein
d) Pseudocholinesterase

1149. Open Neural tube defect is best diagnosed by -
a) USG *(SGPGI05)*
b) Maternal serum alfa fetoprotein
c) X-ray
d) Amniotic fluid acetycholinesterase

1125) a 1126) a 1127)a 1128)a 1129)aorb 1130)a 1131)d 1132)d 1133)d 1134)a 1135)b 1136)b 1137)b,d
113 8) b 1139) b 1140) a,b,c 1141)b 1142)a,c,d,e 1143) a 1144)d 1145) a 1146)c 1147)c 1148)d 1149)d

1150. All of the following disorders can be diagnosed antenately except - *(SGPGI05)*
a) Haemophilia b) Thalassemia
c) Sickle cell anemia d) Pernicious anaemia

1151. Chorionic villous sampling done before 10 weeks may results in - *(MAHA 05, A11MS97)*
a) Fotal loss
b) Fetomatemal haemorrhage
c) Oromandibular limb defects
d) Sufficient material not obtained

1152. In which of the following conditions would maternal serum a-fetoprotein values be the highest - *(A1IMSNOV05)*
a) Down's syndrome b) Omphalocele
c) Gastroschisis d) Spina bidida occulta

1153. Which one of the following biochemical parameters is the most sensitive to detect open spina bifida -
a) Maternal serum alpha fetoprotein *(AI05)*
b) Amniotic fluid alpha fetoprotein
c) Amniotic fluid acetyl cholinesterase
d) Amniotic fluid glucohexaminase

1154. Use of one of the following vaccination is absolutely contraindicated in pregnancy - *(AI05)*
a) Hepatitis-B b) Cholera
c) Rabies d) Yellow fever

1155. All of the following are biochemical markers included for triple test except - *(AIIMS May 05)*
a) Alfa feto protein (AFP)
b) Human chorionic gonadotropin (HCG)
c) Human Placental Lactogen (HPL)
d) Unconjugated oestriol

1156. The best time to do chorionic villous sampling is - *(AIIMS May 05)*
a) Between 6-8 weeks b) Between 7-9 weeks
c) Between 9-11 weeks d) Between 11-13 weeks

1157. The one measurement of fetal maturity that is not affected by a 'bloody tap' during amniocentesis is -
a) L/S ratio *(AIIMS Nov 05)*
b) Phosphatidyl glycerol
c) a fetoprotein
d) Bilirubin as measured by AOD 450

1158. The best period of gestation to carry out chorion villous biopsy for prenatal diagnosis is - *(AI 05)*
a) 8-10 weeks b) 10-12 weeks
c) 12-14 weeks d) 14-16 weeks

1159. Prenatal diagnosis at 16 weeks of pregnancy can be performed using all of the foilwing, except - *(AI 06)*
a) Amniotic fluid b)Maternal blood
c) Chrionic villi d)Fetal blood

1160. Which one of the following congenital malformation of the fetus can be diagnosed in first trimester by ultrasound ? *(AI 06)*
a) Anencephaly b)Inencephaly
c) Microcephaly d)Holoprosencephaly

1161. The best way of diagnosing Trisomy-21 during second trimester of pregnancy is - *(AI 06)*
a) Triple marker estimation
b) Nuchal skin fold thickness measurement
c) Chorionic villus sampling
d) Amniocentesis

1162. In the Manning scoring system of biophysical profile for fetal monitoring, which parameter is not included-
a) Fetal tone *(AIIMS 06)*
b) Fetal gross body movements
c) Oxytocin challenge test
d) Non-stress test

1163. Appropriate material for antenatal diagnosis of genetic disorders include all of the following except-
a) Fetal blood b) Amniotic fluid *(AIIMS 06)*
c) Chorionic villi d) Maternal urine

1164. A women in second trimester was found to have over distended uterus. Common causes include-(PG/ *June*
a) Wrong date b) Hydramnios *06)*
c) Distended bladder d) Twins
e) Fibromyoma

1165. Early date for detection of fetal heart - *(PGI06)*
a) 6.0-6.5 week b) 6.5-7 week
c) 7.1- 7.5 week d) 8 week

1166. Doppler ultrasonography in IUGR& preecclampsia shows notch in which artery - *(Manipal 06)*
a) Umbilical artery b) Uterine artery
c) Internal iliac artery d) Vitiline artery

1167. Nuchal translucency at 14 wks is suggestive of -
a) Downs syndrome (Trisomy 21) *(AI07)*
b) Oesophageal
c) Edwards syndrome (trisomy 18)
d) Foregut duplication cyst

1168. Amniotic fluid contains acetyl cholinesterase enzyme. What is the diagnosis ? *(Aiims May 07)*
a) Open spina bifida
b) Gastrochisis
c) Omphalocele
d) Osteogenesis imperfecta

1169. Short structured primi gravida has height less than- *(MAHE07)*
a) 140 cm b) 145cm
c) 150cm d) 135cm

1170. Ideal number of antenatal visits - *(James Pg 72)*
a) 12-14 b)6 - 8
c) 7-9 d) 10-11

1171. Minimum number of antenatal visits - *(MAHE07)*
a) 3 b) 1
c) 5 d) 6

1172. On Doppler, the most ominous high indicating foetal compromise is - *(UPSC 07)*
a) Increased pulsatility index in umbilical artery
b) Increased systolic - distolic blood flow ratio
c) Increased cerebral artery flow
d) Absent diastolic flow

1150) d 1151) c 1152)c 1153) c 1154)d 1155)c 1156)d 1157)b 1158)b 1159)d 1160)a 1161)d 1162)c 1163)d
1164) All 1165) a 1166) b 1167)a 1168)a 1169)a 1170)a 1171)a 1172)d

1173. Consider the following- *(UPSC07)*
1. A reactive non-stress test
2. Absence or declerations
3. A sinusoidal pattern

Which of the above findings in an antepartum cardiotocography indicates foetal well-being -
a) 1 and 2 only b) 2 and 3 only
c) 1 and 3 only . d) 1,2 and 3

1174. Increased AFP level seen in - *(AIIMSNov07)*
a) Down's syndrome
b) Molar pregnancy
c) Overestimated gestational age
d) Congenital nephrotic syndrome

1175. In which of the following, chorionic villus sampling procedure can be adopted for diagnosis?(77P.S'C-i/*08)*
a) Achondroplasia b) Neural tube defects
c) Marfan syndrome d) Trisomy 18

1176. Low AFPis found in- *(UP 08)*
a) Neutral tube defect b) Trisomy
c) Multiple pregnancy d) Esophageal obstruction

1177. Neural tube defects is prevented by - *(UP 08)*
a) Folic acid b) Vitamin B_{12}
c) Vitamin B_6 d) Vitamin C

1178. Which of the following conditions is not diagnosed by Chorionic Villous bipsy ? *(AI08)*
a) Neural tube defects b) Down's syndrome
c) Phenylketonuria d) Sickle cell anemia

1179. Which of the following is not correct regarding Doppler studies of the umbilical circulation? £4/ *08)*
a) Changes in flow velocity waveforms of the umbilical artery may be important in clinical management of high - risk pregnancies
b) Normal pregnancy shows a characteristic decrease in the Systolic / Diastolic (S/D) ratio with advancing gestational age
c) Maternal smoking leads to an increase in S/D ratio
d) Absence of end - diastolic flow is normal at term

1180. Which of the following dietry supplements is recommended for a pregnant lady on heparin -
a) Folic acid b) Calcium *(AI08)*
c) Zinc d)Copper

1181. Pre-conception al intake of which of the following results in decrease in incidence of neural tube defect ? *(AIMS May 08)*
a) Vit.A b) Folate
c)VitE d) Vit. C

1182. Regarding Alpha Fetoprotein true statement is -
a) Major source of fetal life is yolk sac
b) Commonly elevated in Wilm's tumor
c) Max level at 20th week
d) Half-life 5-7 days

1183. About AFP true A/E- *(PGIJune08)*
a) MS AFP detected 16-18 wks of gestation
b) Diabetic patients have raised AFP level
c) MS AFP is unrelated to the period of gestation
d) Highest fetal level seen around 13 wks

1184. TVue about chorionic villous bippsy - *(PGIJune 08)*
a) Strongly a/w fascio-mandibular defects
b) Done in 10-12 weeks
c) Rh immunoglobulin prophylaxis not necessary
d) Done to diagnose genetic disorders

1185. Ideal number of antenatal visits - *(Manipal 08)*
a) 12-14 b) 6 - 8
c) 7-9 d) 10-11

1186. Minimum number of antenatal visits -*(Manipal 08)*
a) 3 b) 1
c) 5 d)6

1187. Short structured primigravida has height less than-
a) 140 cm b) 145 cm *(Manipal 08)*
c) 150 cm d) 135 cm

1188. Biophysical profile scoring (Manning) include -
a) Nonstress test *(PGIDec 08)*
b) Fetal body movements on USG
c) Fetal breathing movements on USG
d) Contraction stress test
e) Fetal cardiotocography

1189. High risk pregnancy are - *(PGIDec 08)*
a) Height <150 cm
b) Age >3 5 year
c) Twin pregnancy
d) Previous lower segment caesarean section
e) Weight <45 kg

1190. Transabdominal CVS can be done in -
a) 7-9 weeks b) 11 -13 weeks *(AIMS May 09)*
c) 9-11 weeks d) 13-15 weeks

1191. All are true about aneuploidy except -*(AIIMSMay09)*
a) 30% of trisomy 21 fetus die in utero
b) 80% of trisomy 18 fetus die in utero
c) Occurrence of aneuploidy has no relation with the progression of mother's age
d) Not recalled

1192. The second trimester screening protocol for detection of fetal aneuploidy called the "triple screen" includes the assessment of serum levels of all except - *(DELHI PG Mar. 09)*
a) Alpha-fetoprotein
b) Chorionic gonadotropin
c) Unconjugated estriol
d) Pregnancy associated plasma protein-A

1193. Consider the following markers - *(UPSC-II09)*
1. Nuchal translucency 2. PAPP-A
3. GIT 4. InhibinA

Which of the above markers are included in the first trimester screening of Down's syndrome ?
a) 1 and 2 b) 2 and 3 only
c) 1 and 4 d) 2,3 and 4

1194. "Variable decelerations" on an electronic fetal heart rate monitor imply - *(UPSC-II 09)*
a) Umbilical cord compression
b) Fetal head compression
c) Fetal anemia
d) Uteroplacental insufficiency

1173) a 1174) d 1175)d 1176)b 1177)a 1178)a 1179)d 1180)b 1181)b 1182)a 1183)b,c,e 1184)a,b,d 1185)c
1186) a 1187)a 1188)a,b,c 1189)b,c,d H90)b 1191)c 1192)d 1193)a 1194)a

1195. Intra-uterine assessment of fetal distress is indicated by all, except - *(DELHI PG Feb. 09)*
a) Acceleration of 15/min
b) Deceleration of 30/min
c) Variable deceleration 5-25/min
d) Fetal HR < 80/min

1196. Feto-matemal transfusion is detected *by-(DELHIPG*
a) Kleihauer test b) Spectrophotometry *Feb. 09)*
c) Benzidine test d) Colorimetry

1197. Biophysical profile scoring includes *-(PGINov 09)*
a) FHR accerleration
b) Fetal breathing
c) Foetal movement
d) Placenta praevia grading
e) Uterine artery waveform

1198. Elements of the Bishop score Used for Assessment of inducibility include the following except -
a) Station *(Maharashtra 10)*
b) Fetal movements
c) Cervical dilatation
d) Cervical position

1199. Normal Biophysical Profile (Manning Score) is -
a) 8-10 b) 6-8 *(Maharashtra 10)*
c) 4-6 d) *3-4*

1200. Biophysical profile scoring includes *-(PGINov. 10)*
a) Fetal muscle tone
b) Fetal breathing movements
c) Contraction stress test
d) Placental structure
e) Amniotic fluid

1201. A 32 yr old mother who has a Down's boy is now 9 wks pregnant, she doesn't want another Down's. As her physician you should tell her - *(AIIMS Nov 10)*
a) USG at this stage will confirm presence or absence
b) Chorionic villous biopsy at this stage will confirm presence or absence
c) Triple test/maternal AFP at this stage will confirm presence or absence
d) Nothing need be done as there is minimal risk since her age is <35 yr

1202. Which of the following is the msot specific marker for Neural Tlibe Defects - *(AI11)*
a) Actylcholinesterase
b) Pseudocholinesterase
c) Alpha feto protein (AFP)
d) Human chorionic Gonadotrophin (HCG)

1203. Levels of alfa-feto-protien (AFP) in maternal serum steadily increases till - *(Kam 11)*
a) 6 weeks b) 13 weeks
c) 22 weeks d) 35 weeks

1204. 'Triple Bubble' sign during fetal ultrasonography is seen in - *(Kam 11)*
a) Diaphragmatic hernia b) Duodenal atresia
c) Jejunal atresia d) Hydrops fetalis

1205. The maternal serum alpha-fetoprotein concentration is elevated in the following conditions except- *(UPSCII11)*
a) Multiple gestation
b) Foetal neural tube defect
c) Foetal osteogenesis imperfecta
d) Gestational trophoblastic disease

1206. In the quadruple test conducted as a part of second trimester screening for Down's syndrome, the fourth marker which has been added to the triple testis- *(UPSCIIU)*
a) PAPP-A
b) Inhibin-A
c) Human Placental Lactogen (HPL)
d) Acetylcholinesterase

1207. As per the Government of India guidelines, the daily dose of elemental iron recommended for prophylaxis during pregnancy is - *(UPSCII11)*
a) 50mg/dayfor 100 days
b) 100 mg/day for 100 days
c) 150 mg/day for 100 days
d) 200 mg/day for 100 days

1208. Weight gain in pregnancy depends on ail of the following factors, Except - *(AI 11)*
a) Socioeconomic status
b) Pre- pregnancy weight
c) Smoking
d) Ethinicity

1209. Which one of the following congenital malformations of the fetus can be diagnosed earliest in a first trimester ultrasound? *(AI 11)*
a) Anencephaly b) Prosencephaly
c) Microcephaly d) Meningocele

1210. Modified biophysical profile consists of -
a) AFI & Fetal muscle tone *(Jipmer 11)*
b) AFI & Non stress test
c) Non stress test & Fetal muscle tone
d) Non stress test & Fetal breathing movements

1211. Neural tube defects can be prevented by the administration of - *(Jipmer 11)*
a) Vit-B12 b) Folic acid
c) Elementary iron d) Tetanus toxoid

1212. Best serological marker of Down's syndrome in first trimester is - *(Jipmer 11)*
a) Nuchal translucency b) Skeletal abnormalities
c) p-HCG d) Serum estriol

NORMAL LABOUR

1213. In a primigravida head engages at - *(Kerala 94)*
a) 36 weeks b) 1st stage
c) Term d) 2nd stage

1214. First stage of labour is upto - *(Kerala 94)*
a) Rupture of membranes
b) 3/5 dilatation of cervix
c) Full dilatation of cervix
d) Crowing of head

1195) a 1196) a 1197)a,b,c 1198)b 1199)a 1200)a,b,e 1201)b 1202)a 1203)d 1204)c 1205)d 1206)b 1207)b 1208) c 1209) a 1210)b 1211)b 1212)c 1213)a 1214)c

1215. Definite sign of placental separation in stage ill of partutition is - *(JIPMER 95)*
a) Gushing of blood
b) Lengthening of cord
c) Filling of placeents in vagina
d) Increase in blood pressure

1216. All of following are features of pseudocyesis except- *(A196)*
a) Enlargement of abdomen
b) Morning sickness
c) Amenorrhoea
d) Enlargement of uterus

1217. Which is not a feature of pseudocyeis -
a) Amenorrhoea *(CUPGEE96)*
b) Abdominal destension
c) Fetal heart sounds are audible
d) None

1218. Linving ligature of the uterus is - *(Orissa R)*
a) Endometrium
b) Middle layer of myometrium
c) Inner layer of myometrium
d) Perimetrium

1219. During active labour cervical dilatation per hour in primi is - *(CIP 01)*
a) 1.2 cm b) 1.5 cm
c) 1.7 cm d)2cm

1220. Assessment of progress of labour is best done by -
a) Station of head *(PG197)*
b) Rupture of membrane
c) Contraction of uterus
d) Partogram

1221. Duration of latent phase of labour is affected by
a) Early use of conduction anaesthesia & sedation
b) Unriped cervix *(PG12000)*
c) Hypertonic uterine contraction
d) Preclampsia

1222. Cardinal movements of labour are - *(PGI2000)*
a) Engagement —» descent —» flexion —> internal rotation —> exstention —> restitution —> external rotation —> expulsion
b) Engagement —» flexion —> descent —> internal rotation —> extention —> expulsion
c) Engagement —> flexion —> descent —> external rotation —> expulsion
d) Engagement —> extention —> internal rotation —> external rotation —> expulsion

1223. The graph showing relationship between cervical dilatation and duration of labour is - *(Kerala 03)*
a) Partogram b) Cervicograph
c) Growth curve d) Dilatation chart

1224. Normal partogram include the following except -
a) Cervical dilatation in X-axis *(Kampgmee 06)*
b) Descent of head in Y-axis
c) Sigmoid shaped curve
d) Alert line followed 4 hrs later by action line

1225. What is the pressure inside uterus during second stage of labour - *(MAHE 07)*
a) 100-120 mm of Hg b) 200 - 220 mm of Hg
c) 300-400 mm of Hg d)25mmofHg

1226. A G2P 1A0 presents with full-term pregnancy with transverse lie in the first stage of labour. On examination, cervix is 5 cm dilated, membranes are intact and foetal heart sounds are regular. What would be the appropriate management in this case -
a) Wait for spontaneous evolution and expulsion
b) External cephalic version *(UPSC 07)*
c) Cesarean section

1227. IV Ergotamine should be given - *(UP 08)*
a) After the delivery of shoulder
b) During breech extraction
c) In twin pregnancy, first delivery of the child
d) During face presentation

1228. Which of the following interventions is not included in active management of nird stage of labour ?
a) Administration of a Uterotonic within 1 minute of delivery *(A108)*
b) Immediate clamping cutting and ligation of cord
c) General massage of uterus
d) Controlled cord traction

1229. Which movements occurs during labor -
a) Flexion b) Extension *(PGIJune 08)*
c) Intemla roration d) Descent
e) Asynclitisms

1230. All are signs of recent delivery except-*(Manipal 08)*
a) Colostrum b) Carbunchulae myrtiformis
c) Lochia d) All of the above

1231. In an uncomplicated twin pregnancy normal delivery should be attempted in the following situation -
a) First baby-vertex and second baby transverse lie
b) Both babies and breech presentation
c) First baby transverse lie and second longtitudinal he *(Manipal 08)*
d) All of the above

1232. What is the pressure inside uterus during second stage of labor - *(Manipal 08)*
a) 100-120 mm of Hg b) 200 - 220 mm of Hg
c) 300-400 mm of Hg d)25mmofHg

1233. latent period in primigravida is ? *(APPG 08)*
a) 2 hours b) 6 to 8 hours
c) 10 to 12 hours d) 14 to 16 hours

1234. True about pain is/are characterzed by -
a) Painful Uterine contraction *(PGI June 09)*
b) Short vagina
c) Formation of the bag of waters
d) Progressive descend of presenting part
e) Dilation of cervix

1235. Indications(s) of outlet forcep is/are -
a) Membrane absent/rupture *(PGI Nov 09)*
b) Head 0 station
c) Cephalopelvic disproportion
d) Full cervical dilation
e) AP position of head

1215) a,b 1216) b,d 1217)c 1218)b 1219) a 1220)d 1221) a,b 1222)a 1223)b 1224)a 1225)a 1226)c 1227)a 1228) c 1229) All 1230) b 1231) a 1232) a 1233) b 1234) a,c,e 1235)a,d,e

1236. Prelabour pains are mediated through -
a) T11-T12 b) T2-L3 *(AIMS Nov 09)*
c) SI-S3 d)L3-L4

1237. Which of the following interventions is not recommeded in active management of third stage of labour- *(AI10)*
a) Administration of Uterotonic within 1 minut of delivery
b) Immidiate clamping, cuttingand ligation of cord
c) Gentle massage of uterus
d) Controlled cord traction

1238. Active managment of third stage labor includes all of the following except - *(AI 10)*
a) Oxytocin injection
b) Ergometrine injection
c) Controoled cord traction
d) Gentle massage of uterus

1239. After delivery of head, the delivery of the rest of the body can be hastened by - *(Maharashtra 10)*
a) Moderate pressure on uterine fundus
b) Traction on fetus in the direction of the long axis of its body
c) Traction on the head
d) All of the above

1240. ACOG defines arrest of first stage of labour as completed latent phase with uterine contractions of strength > 200 m without cervical changes for_____ *(Maharashtra 10)*
a) 1 hour b) 2 hours
c) 3 hours d) 4 hours

1241. Allowing the cord blood passage to fetus before clamping the umbilical cord should be AVOIDED to prevent- *(Maharashtra 10)*
a) Maternal alloimmunization
b) Prematurity
c) Growth retardation of fetus
d) All of the above

1242. Regarding the use of a ventouse, which one of the following statements is not correct? *(UP SC II10)*
a) In can be applied when the cervix is incompletely dilated
b) The cup should be centrally placed on the vertex
c) The largest size of the cup is preferred
d) The maximum pressure should not exceed 0.8 kg/ cm2

1243. The correct method to conduct the third stage of normal labour is - *(Corned 10)*
a) Fundal pressure
b) Bimanual massage
c) Controlled cord traction
d) Manual removal

1244. True about vaccum extraction of fetus-(PG7*May 10)*
a) Can be used in non dilated cervix
b) Can be used in incompletely dilated cervix
c) Used in Face presentation
d) Applied 3 cm post, to Anterior fontanel
e) Applied 3 cm ant. to posterior fontanel

NORMAL PUERPERIUM

1245. The bladder shoulb be empty within - *(DNB 90)*
a) 2-3 hrs of delivery b) 3-4 hrs of delivery
c) 4-5 hrs of delivery d) 6-8 hrs of delivery

1246. Strongest stimulus of lactation is by -*(JIPMER 95)*
a) Metachlopramide
b) Hot partum haemorrhage
c) Bromocriptine
d) Suckling

1247. Peurparium is the period - *(IN97)*
a) 6 weeks following delivery
b) 3 weeks following delivery
c) One week following delivery
d) None of the above

1248. Decidua is cast of in peup arium as- *(AI 97)*
a) Lochia b) Membranes
c) Placental bits d) Meconium

1249. Weight of uterus after 8 weeks of delivery -
a) 800 gms b)1000gms *(AI97)*
c) 500 gms d) 100 gms

1250. 100 % protection against conception in a lactating mother is for about - *(CMC 98)*
a) 1 month b) 2 weeks
c) 2 months d) 3 months
e) 4 months

1251. Lochia is seen for- *(AP98)*
a) 1-4 days b) 5-10 days
c) 10-14 days d) 14-21 days

1252. Which one of the following sets of conditions is attributed to normal physiology of puerperium -
a) Tachycardia and weight gain *(USPC 2K)*
b) Retention of urine, constipation and weight gain
c) Constipation, tachycardia and retention of urine
d) Retention of urine and constipation

1253. Cause (s) of retention of urine in reproductive age group - *(PGI2000)*
a) Cervical fibroid
b) Retroverted gravid uterus
c) Unilateral hydronephrosis
d) Severe UTI
e) Posterior urethral valve

1254. C.I. for breast feeding are except - *(PGI 2000)*
a) Hepatitis -B infection of mother
b) Lithium treatment of mother
c) Acute bacterial mastitis
d) Teracycline treatment of mother

1255. Initiation of lactation is affected by - *(PGI 01)*
a) Oxytocin b) Prolactin
c) HPL d) Thyroid hormone
e) Progesterone

1256. Contraindication to breast milk feeding - *(PGI01)*
a) Mother is sputum negative
b) Bromocriptine therapy for mother
c) Heavy breast engorgement
d) Ca breast
e) Mother on domperidone

1236) a 1237) b 1238)None 1239) d 1240) b 1241) a 1242) b 1243) c 1244) b,e 1245) d 1246) d 1247) a 1248) a 1249)d 1250) c 1251)d 1252)d 1253)a,b 1254) a 1255) b 1256)None

1257. TVue about fixed retroversion - *(PGI02)*
a) PE)
b) Posterior wall myoma
c) Endometriosis
d) Congenital retroversion
e) Anterior cervical myoma

1258. >1 Lactation seen in - *(PGI03)*
a) Maternal anxiety b) Antibiotic therapy
c) Cracked nipple d) Breast abscess
e) Bromocriptine therapy

1259. Pulse rate in puerperium - *(Kerala 03)*
a) Increases b) Decreases
c) Normal d) Variable

1260. About colostrum true statements are - *(PGI 03)*
a) Secreted after 10 days of childbirth
b) Rich in immunoglobulin
c) Contains more protein
d) Contains less fat
e) Daily sectretion is about 10 ml/day

1261. Lochia rubra is seen upto - *(Orissa 04)*
a) 5 days b) 10 days
c)15days d)20days

1262. The following drugs can be used to suppress lactation, except - *(UPSC04)*
a) Cabergoline b) Pyridoxine
c) High dose estrogens d) Metoclopramide

1263. Galactokinesis means - *(Jipmer 04)*
a) Sustaining lactation b) Secretion of milk
c) Ejection of milk d) Synthesis of milk

1264. Physiological chill in labour seen in-*(Manipal 04)*
a) 1st stage b) 2nd stage
c) 3rd stage d) 4th stage

1265. Postpartum decidual secretions present are referred to as - *(MAHE 05)*
a) Lochia b) Bleeding per vaginum
c) Vasa - previa d) oecidua - capsularis

1266. In puerperium the lochia seen p/v is in which of the following sequences - *(UPSC 06)*
a) Lochia alba-Lochia serosa-Lochia rubra
b) Lochia serosa-Lochia rubra-Lochia alba
c) Lochia alba-Lochia rubra-Lochia serosa
d) Lochia rubra-Lochia serosa-Lochia alba

1267. What is the maximum duration for which lactational amenorrhoea can prevent conception-
a) 1 month b) 2 months *(UPSC 06)*
c) 4 months d) 6 months

1268. In normal puerperium, all are true regarding involution of uterus except - *(UP 0 7)*
a) At the end of the 6 weeks, becomes non pregnant state
b) The number of muscle fibres is not decreased but there is substantial reduction of the myometrial cell size
c) At the end of the 4th week uterus becomes as pelvic organ
d) Weight of uretus about 60 gram at end of the weeks

1269. All are signs of recent delivery except- *(MAHE 07)*
a) Colostrum b) Carunculae myrtiformis
c) Lochia d) All of the above

1270. Following delivery, uterus becomes a pelvic organ after- *(UPSC 07)*
a) 2 weeks b) 4 weeks
c) 6 weeks d) 8 weeks

1271. Immediately after third stage of labour in a case of full-term delivery, the fundus of the uterus is -
a) At the level of Xiphistemum *(UPSC 07)*
b) At the level of umbilicus
c) Just below the level of umbilicus
d) Just above the symphysis pubis

1272. Which of the following statements about breast infections during lactation is most correct - *(AI08)*
a) Are caused by bacteria from infant's gastrointestinal tract
b) The drug of choice for treatment is Amoxicillin
c) The most common etiological organism is E. coli
d) Can lead to abscess formation for which and I & D may be required

1273. Breast milk is known to transmit - *(Manipal 08)*
a) Untreated tuberculosis b) CMV
c) Varicella d) Rubella

1274. The iron content in 100 gm of breast milk is -
a) 2 mg b) 0.2 mg *(DPG 08)*
c) 5mg d)10mg

1275. Lactation suppression in hypertensive post-partum patient is achieved by - *(COMED 09)*
a) Bromocriptine
b) Oestrogen alone
c) Oestrogen and testosterone
d) Breast binder and analgesics

1276. In the puerperium, which of the following hormonal changes are responsible for lactogenesis?
1.A sudden fall in the oestrogen levels after delivery
2. Reduction of prolactin inhibiting factor from the hypothalamus *(UP SC II10)*
3. Release of prolactin from the anterior pituitary
4. Release of oxytocin from the posterior pituitary
Select the correct answer using the code given below:
a) 1 and 2 only b) 1 and 4
c) 1,2 and 3 d) 2,3 and 4

ABORTION

1277. The following are modes of induction of midtrimester abortions except - *(IN 91)*
a) Intra amnictic saline
b) Intra amniotic prostaglandins
c) Menstrual regulation
d) Hysterotomy

1278. The best method for inducing mid trimester abortion is - *(AIIMS 91)*
a) Injection of Hypertonic Saline
b) Ethacrydine
c) Prostaglandins
d) D and C

1257) a,c,e 1258)a,e 1259)a 1260)b,c,d 1261)a 1262)d 1263)c 1264)d 1265)a 1266)d 1267)b 1268)c 1269)d 1270) a 1271)c 1272)d 1273)a 1274)b 1275)d 1276)b 1277)c 1278)c

1279. The commonest chromosomal abnormality in early spontaneous abortions is - *(KARN 94)*
a) Monosomy X b) Autosomal trisomy
c) Triploidy d) Tetraploidy

1280. All of following methods are used for MTP in 2nd trimester except - *(DELHI 96)*
a) Intra - ammotic saline b) Prostaglandins
c) Hysterotomy d) Menstrual regulation

1281. All are true regarding menstrual regulation except -
a) It comes under MTP act *(AP 96)*
b) Blood loss is less
c) Done within 2 weeks
d) General - anesthesia not needed

1282. Induction of abortion is best by - *(AIIMS96)*
a) Oxytocin b)PGE_2gel
c) Stripping of membrane d) Oestrogen

1283. A 25 years old female reports in the casualty with history of amenorrgoea for two and half monts and abdominal pain and bleeding per vaginum for one day. On examination, vital parameters and other systems are normal. On speculum examination, bleeding is found to come from Os. On bimanual examination, uterus is of 10 weeks size, soft and Os admits one finger. The most likely clinical diagnosis is - *(UPSC 99)*
a) Threatened abortion b) Missed abortion
c) Inevitable abortion d) Incomplete abortion

1284. Which one the following statements regarding MTP is incorrect - *(UPSC 99)*
a) It is governed by the Act of 1971
b) The MTP Act permits termination of pregnancy for medical reasons only
c) It can be performed by trained personnel
d) It should be done only in those places which fulfill the criteria laid down in the Act

1285. Which one of the following methods of MTP is associated with the complication of coagulopathy - *(UPSC 99)*
a) Aspirotomy b) Hypertonic saline
c) Ethacridine lactate d) Prostaglandins

1286. Which of the following cannot be used for MTP in a patient with bronchial asthma - *(ORRISA 99)*
a) Prostaglandin b) Oxytocin
c) N.T.T. d) Ethacrydine

1287. Internationally accepted definition of abortion is the expulsion of the products of conception-
a) Before 28th week of gestation or 1kg (weight of foetus) *(Kerala 2K)*
b) Before 24th week of gestation or 750 gms (weight of foerus)
c) Before 20th week of gestation or 750 gms (weight of foetus)
d) Before 20th week of gestation or 500 gms (weight of foetus)
e) None of the above statements is correct

1288. Prostaglandins can be used for medical termination of pregnancy by all routes except -
a) Intravenous b) Intramuscular *(UPSC 01)*
c) Extra amniotic d) Intra amniotic

1289. Following is used in I trimester MTP- *(TN2002)*
a) Mifepristone
b) Mifoprostal
c) Mifepristone & misoprostol
d) Laminaria tent

1290. The minimum age for giving consent for medical termination of pregnancy is: *(Jipmer 95)*
a) 16 years b) 18 years
c) 20 years d) 24 years

1291. Legally rAbortion" is termination of pregnancy - *(Karnataka 01)*
a) Before 6 weeks b) Before 16 weeks
c) Before 26 weeks d) Before full term

1292. Recurrent abortion is caused by - *(PGI97)*
a) CMV b)HSV
c) Syphilis d) Toxoplasmosis

1293. Sponteneous abortion in 1st trimester is caused by- *(PGI 2000)*
a) Trisomy 21 b) Monosomy
c) Trauma d) Rh-incompatibility

1294. Cervical incompetence is characterised by -
a) **1st** trimester abortiom *(PGI 03)*
b) 2nd trimester abortion
c) Premature rupture of membrane
d) Circlage operation done

1295. Recurrent spontaneous abortion is seen in A/E -
a) TORCH agent *(PGI 03)*
b) Uterine pathology
c) Herpes
d) Balanced paternal translocation
e) None

1296. According to MTP Act, 2 doctor's opinion is required when pregnancy is - *(PGI 03, KARN 98)*
a) 10 weeks b) 6 weeks
c) > 12 weeks d) > 20 weeks
e) 8 weeks

1297. In extra-amniotic 2nd trimester medico legal termination of pregnanacy, which of the following used- *(PGI04)*
a) Ethacrydine Lactate b) Prostaglandin
c) Hypertonic saline d) Glucose
e) Urea

1298. All of the followingdrugs have been used for medical abortion, except - *(AIIMS03)*
a) Mifepristone b) Misoprostol
c) Methotrexate d) Atosiban

1299. Decidual casts bleeding per vaginum suggestive of- *(Manipal04)*
a) Inevitable abortion b) Threatened abortion
c) Tubal abortion d) None

1300. Most common cause of Abortion - *(HPU 05)*
a) Ovofoetal factor b) Maternal hypoxias
c) Uterine fibroid d) Cervical incompetence

1279) b 1280) d 1281)None 1282)b 1283)c 1284)b 1285)b 1286)a 1287)d 1288)a 1289)c 1290)b
1291) None 1292)c,d 1293)a,b,c 1294)b,c,d 1295)e 1296)c 1297)a,b 1298)d 1299)c 1300)a

1301. The medical termination of pregnancy act does not protect act of termination of pregnancies after- *(Kamat 05, AP 88)*
a) 20 weeks b) 24 weeks
c) 28 weeks d) 30 weeks

1302. Abortion is defined as "expulsion of fetus" less than-------- gms - *(MAHE 05)*
a) 500 b)800
c) 900 d) 1000

1303. Procedures done for cervical incompetence include - *(PGI03, June 06)*
a) Shirodkar's procedure
b) Me. Donald's procedure
c) Porander operation
d) Khann's sling operation
e) Abdominal sling operation

1304. A female with recurrent abortion and isolated prolonged APTT is most likely associated with -
a) Lupus anticoagulant *(Aiims May 07)*
b) DIC
c) Von wilebrand disease
d) Hemophilia

1305. A patient with a history of recurrent abortions and hypercoagulable state is likely to be suffering form- *(MAHE 07)*
a) Anti-phospholipid antibody syndrome
b) Heparin induced thrombocytopenia
c) Leiden mutain
d) Anti-thrombin 2 deficiency

1306. G3 with previous second trimester abortion presents with 22 week of gestation, abdominal pain, USG shows funneling of internal os what will be ideal management ? *(AIIMS Nov 07)*
a) Dinoprost and bed rest
b) Misoprost with bed rest
c) Fothergills suture
d) Me Donald stitch

1307. All the following are used in first trimester except -
a) Dilatation and evacuation *(Corned 08)*
b) Ru486
c) Suction and evacuation
d) Ethacrydine extra amniotic

1308. Dose of Anti-D gamma globullin following first trimester abortion is - *(Corned 08)*
a) 50 g b) 100 g
c) 200 g d)300 g

1309. Partogram is used to - *(Corned 08)*
a) Assess the fetal well-being in labour
b) Assess the conditioon of the baby at birth
c) Record the events of pregnancy
d) Assess the progress of labour

1310. Most common cause of abnormality in first trimester abortion - *(UP 08)*
a) Cervical incompetance
b) Chromosomal abnormality
c) Placental & membrane abnormality
d) Retroversion

1311. All of the following are known causes of recurrent abortion Except - *(AI08)*
a) TORCH infections b)SLE
c) Rh incompatibility d) Syphilis

1312. Treatment of cervical incompetence - *(PGI June 08)*
a) Shirodkar's stitch b) McDonald's stitch
c) B-lynch suture d) Fothergill's operation
e) Sling operation

1313. A patient with a H/o recurrent abortions and hypercoagulable state is likely to be suffering from-
a) Anti-phospholipid antibody syndrome
b) Heparin induced thrombocytopenia *(Manipal 08)*
c) Leiden mutation
d) Anti-thrombin III deficiency

1314. Incorrect about incompetent cervix ? *(APPG08)*
a) Hegar dilators used
b) Most common cause of first trimester abortion
c) Both
d) None

1315. Mifepristone may be used for all of the following Except- *(AI 09)*
a) Threatened abortion b) Ectopic pregnancy
c) Fibroids d) Molar pregnancy

1316. Recurrent abortion is/are caused by - *(PGIJune 09)*
a) Rubella b) Thrombophilia
c) Diabetic mellitus d) Syphilis
e) Chronic hypertension

1317. A pregnant woman has previous history of recurrent early pregnancy loss. Which of the following investigations should be ordered - *(PGI Nov 09)*
a) Blood glucose
b) VDRL
c) Rubella virus screening
d) Toxoplasma serology
e) Hemogram & blood grouping

1318. A lady presented with features of threatened abortion at 32 weeks of pregnancy. Which of the following statements with regard to antibiotic usage is not correct- *(AI 10)*
a) Antibiotic prophylaxis even with unruptured membranes
b) Metronidazole if asymptomatic but significant bacterial vaginosis
c) Antibiotics if asymptomatic but significant bacteremia
d) Antibiotics for preterm premature Rupture of membranes

1319. Which of the following is not an indication for antiphospholipid antibody testing? *(DPG10)*
a) 3 or more consecutive first trimester pregnancy losses
b) Unexplained cerebrovascular accidents
c) Early onset sever preeclampsia
d) Gestational diabetes

1320. Abortion is/are caused by - *(PGI May 10)*
a) Borrelia recurrentis b)HIV
c) Listeria d) Syphilis
e) HBV

1301)a 1302) a 1303)a,b 1304)a 1305)a 1306)d 1307)d 1308)a 1309)d 1310)b 1311)a 1312)a,b 1313)a
1314) b 1315)a 1316)b,c 1317)a,b,d,e 1318)a 1319)d 1320)b,c,d

1321. A **25-year-old woman with a history of three consecutive abortions has been investigated thoroughly to detemine the cause of recurrent pregnancy loss. In the absence of a demonstrable cause, what is the chance of a viable birth in subsequent pregnancy -** *(UPSCII11)*
a) Less than 20% b) 20-30%
c) 40% d) 60%

ECTOPIC PREGNANCY

1322. Ectopic pregnancy is more common in - *(PGI90)*
a) Tuboplasty b) Endometriosis
c) Copper T users d)All

1323. The expelled products in ectopic pregnancy originate from- *(JIPMER 91)*
a) Decidua basalis b) Decidua vera
c) Decidua Capsularis d) Chorionic villi

1324. Arias Stella reacion is not seem in - *(AIIMS 91)*
a) Ovarian pregnancy
b) Molar pregnancy
c) Interstital pregnancy
d) Salphingitis isthmica nodosa

1325. Best investigtion to diagnose ectopic pregnancy is - *(KERALA 94)*
a) Urine pregnancy test b) Laprascopy
c) USG d) Hysteroscopy

1326. In a young patient with abdominal pain and features most suggestive of ectopic pregnancy is -
a) Amenorrhea *(AI95)*
b) Vomiting
c) Palpation of tender adnexal mass
d) Increase beta HCG in urine

1327. Most common cause of ectopic pregnancy is -
a) IUDC b) Previous tubal disease *(AI 96)*
c) Endometriosis d) Minipill

1328. Commonest cause of ectopic gestation is -
a) Previous salphingitis *(KERALA 96)*
b) Dysfunction of cilia
c) Uterine abnormalities
d) Delayed fertilisation of ovum
e) Hydrosalphynx

1329. Ovarian pregnancy is due to - *(KERALA 96)*
a) Previous sexually transmitted infections
b) Fertilisation of ovum in ovary
c) Bicomuate uterus
d) Pelvic tuberculosis
e) None of the above

1330. Medical treatment ectopic pregnancy *\s-(AIIMS96)*
a) Methotrexate b) Progesterone
c) Oestrogen d) Adriamycin

1331. Most common cause of ectopic pregnancy is -
a) Progestasert b)Cu-T *(AIIMS 96, PGI 99)*
c) OCP d) Minipill

1332. Best modality for diagnosing unruptured tubal pregnancy - *(PGI 9 7)*
a) Abdominal USG b) Transvaginal USG
c) X-ray Abdomen d) CT scan

1333. Ectopic pregnancy differs from threatened abortion by- *(MAHE98)*
a) Minimal vaginal bleeding
b) Pain follows bleeding
c) Uterine size corresponds to gestational age
d) Manifests at an early age

1334. Most constant symptom present in undisturbed ectopic- *(PGI98, UP01)*
a) Pain in lower abdomen b) Bleeding P/V
c) Ammenorrhoea d) Hypotension
e) Retroverted uterus

1335. Diagnostic criteria for primary abdominal pregnancy- *(ORRISA 99)*
a) Spigelberg criteria b) Rubin's criteria
c) Studiford criteria d) Wrigly criteria

1336. Best endometrial reaction in ectopic pregnancy is -
a) Arias Stella reaction *(MP2K)*
b) Secretory phase
c) Decidual reaction without chorionic villi
d) Decidual reaction with chorionic villi

1337. A 22 years old nullipara presents with an unruptured ectopic pregnancy. What is thetreatment of choice -
a) Liner salpingostomy *(AIIMS2K)*
b) Salpingectomy
c) Resection and end to end anastomosis
d) Milking of the tube

1338. Which of the following is the most reliable indicator of Ectopic gestation - *(AIIMS 2K)*
a) No gestational sac in USG
b) Arias Stella reaction
c) Culdo centsesis showing blood in the posterior cul - de sac
d) Absence of the normal doubling of HCG levels

1339. Ectopic pregnancy is most commonly associated with- *(PGI 01)*
a) Endometriosis b) Congenital tubal anomalies
c) Tuberculosis d) Tubal inflammatory diseases
e) Retroverted uterus

1340. About ectopic pregnancy true statements are -
a) Rising titre of HCG *(PGI 03)*
b) Negative pregnancy test excludes the diagnosis
c) Common after tubal surgery
d) Seen in patients taking GnRH therapy
e) Common in patients taking OCP

1341. Drugs treatment of ectopic pregnancy are *-(PGI 03)*
a) MTX b)Actinomycin-D
c) HOG d) RU-486
e) Kd

1342. Which of the following drug is not used medical management of ectopic pregnancy - *(AIIMS 03)*
a) Potassium chloride b) Methotrexate
c) Actinomycin Dd) Misoprostol

1321) d 1322) d 1323)b 1324)d 1325)b 1326)d 1327)b 1328)a 1329)b 1330)a 1331)a 1332)b 1333)None
1334) a 1335) c 1336)c 1337)a 1338)a 1339)a,b,c,d 1340)a,c,d,e 1341)a,b,d,e 1342)d

1343. Spigelberg's criteria, not true- *(APPG03)*
a) Tubes and uterus normal
b) Uterus attached to broad ligament
c) No ovarian tissue lining
d) Uterus attached to pelvic wall

1344. Ectopic pregnancy lasts longer in - *(Jipmer04)*
a) Interstitial b) Isthumoampullary
c) Isthmic d)Ampullary

1345. Medical treatment of Ectopic gestation involves use of all the following drugs except - *(MAHE 05,*
a) Prostaglandins b) Methotrexate *Karn 94)*
c) RU-486 d) Dexamethasone

1346. The following drug is not helpful in the treatment of ecropic Pregnancy - *(AI05)*
a) Methotrexate b) Misoprostol
c) Actinomycin - D d)RU486

1347. Modern diagnostic aids to diagnose ectopic pregnancy - *(PGI June 06)*
a) HOG b) Transvaginal USG
c) AFP d)Gravindex

1348. A 32-year old woman with two live children was brought in emergency with the history of missed period for 15 days, spotting since 7 days adn pain abdomen since 6 hours. Her pulse was 120/min, Pallor ++, systolic BP 8 mm of Hg. There was fulness and tenderness on per abdomen examination. Copper - T thread was seen through external os on per speculum examination. On p/v examination, cervical movements were tender, uterus was anteverted, bulky and soft. There was fulness in pouch of Douglas. She is most likely suffering from - *(UPSC 0 7)*
a) Pelvic inflammatory disease
b) Missed abortion with umbilicus
c) Ruptured ectopic pregnancy
d) Threatened abortion

1349. What is the treatment of choice of unruptured tubal pregnancy with serum beta hCG titre of 200IU/ml. - *(UPSC 07)*
a) Single dose of methotrexate
b) Variable doses of methotrexate
c) Expectant management
d) Laparoscopic salpingostomy

1350. Which one of the following causes the greatest risk of ectopic pregnancy - *(UPSC 0 7)*
a) Pelvic inflammatory disease
b) Intrauterine contraceptive devices use
c) Previous ectopc pregnancy
d) Previous medical termination of pregnancy

1351. Medical management of ectopic pregnancy can be done in the following except - *(UPSC-II08)*
a) Period of gestation 5 weeks
b) |3HCG level 6000IU
c) Absent fetal cardiac activity
d) Gestational sac diameter 3 cm

1352. Commonest site of tubal pregnancy is - *(UP 08)*
a) Ampulla b) Isthmus
c) Fimbria d) Interstitial

1353. The cause of fetal death in ectopic pregnancy is postulated as - *(Aiims May 08)*
a) Vascular accident
b) Nutritional adequancy
c) Endocrine insufficiency
d) Immune response of mother

1354. Most valuable diagnostic test in a case of suspected ectopic pregnancy - *(Aiims May 08)*
a) Serial P-hCG levels
b) Transvaginal USG
c) Progesterone measurement
d) Culdocentesis

1355. True about ectopic pregnancy - *(PGI June 08)*
a) Transvaginal USG first imaging of choice
b) A/W decidual reaction
c) Doppler is of no significance
d) In ectopics intestitial ring sign seen
e) HCG level is sufficient for diagnosis

1356. Which method is most responsible for ectopic gestation - *(PGI June 08)*
a) Pomeroy b) Modified Pomeroy
c) Electrocoagulation d) Laporoscopic Hulka clips
e) Irving operation

1357. A female has history of 6 weeks amenorrhoea, USG shows no sac, serum beta HCG-1000IU/L. What would be next management ? *(AIIMSNov 08)*
a) Medical management
b) Repeat HCG after 48 hours
c) Repeat HCG after 1 weeks

1358. Indication(s) of methotrexate chemotherapy in ectopic pregnancy is/are - *(PGI June 09)*
a) Fetal cardiac activity present
b) Size<4cm
c) -hCG disease
d) Liver disease
e) Patient hemodynamically stable

1359. The drug used for medical management of ectopic pregnancy is - *(DELHIPGMar. 09)*
a) Methotrexate b) Misoprostol
c) Mifepristone d) Methyl ergometrine

1360. Spiegelberg's criteria for diagnosis of ovarian pregnancy include the following except - *(UPSC-II 09)*
a) Tube on the affected side must be intact
b) Gestational sac must occupy the position of ovary
c) Gestational sac is connected with infundibulopelvic ligament
d) Ovarian tissue should be present in the wall of gestational sac on histopathology

1361. Thbal pregnancy is/are increased by -
a) Recent oral combined pills use *(PGINov 09)*
b) IUCD use
c) Previous tubal surgery
d) Chlamydia infection
e) Previous ectopic

1343)b,c,d 1344) a 1345)d 1346)b 1347)a,b 1348)c 1349)d 1350)a 1351)b 1352)a 1353)a 1354)b
1355)a,b,d 1356)d 1357)b 1358)b,e 1359)a 1360) c 1361)b,c,d,e

1362. Most sensitive diagnosis test for ectopic pregnancy-
a) TransvaginalUSG *(AIIMSNov09)*
b) Culdocentesis
c) MRI
d) Serial monitoring of b-HCG

13 63. The pathognomonic feature of abdominal pregnancy is- *(DPG10)*
a) Fetus appears lateral to lumbar spine on X-ray
b) Small uterus
c) Fetus easily palpable
d) Positive pregnancy test

1364. Conservative treatments for tubal pregnancy include the following EXCEPT- *(Maharashtra 10)*
a) Salpingostomy b) Salpingotomy
c) Salpingectomy d) Resection and anastomosis

1365. Which one of the following is diagnosed by Spiegelberg criteria? *(UP SC II10)*
a) Molar pregnancy b) Ovarian pregnancy
c) Uterine pregnancy d) Twin pregnancy

1366. Which of the following is the most appropriate management in a ruptured tubal pregnancy?
a) Quick resuscitation followed by laparotomy and excision of the offending tube *(UP SC II10)*
b) Blood transfusion immediately after the clamps have been placed to control the bleeding
c) Autotransfusion of the fresh blood harvested from the peritoneal cavity
d) Excision of the offending tube and the ipsilateral ovary (salpingo-oophorectomy)

1367. True statement regarding ectopic pregnancy -
a) Pregnancy test positive *(PGIMay 10)*
b) (3hCG levels should be > 1000 mlU/ml for earliest detection by TVS
c) (3hCG levels should be < 1000 mlU/ml for earliest detection by TVS
d) Methotrexate is used

1368. Not true about ectopic pregnancy is -
a) Previous ectopic is greatest risk *(PGINov. 10)*
b) POP doesn't increase risk
c) Incresed risk with pelvic infections
d) Increased risk with IVF
e) IUCD use increase risk

1369. Management of unruptured tubal pregnancy includes - *(PGINov. 10)*
a) Methotrexate
b) Prostaglandins
c) Hysterectomy
d) Laparoscopic salpingostomy
e) Salpingectomy

1370. Most common site of ectopic pregnancy -
a) Ampulla of fallopian tube *(Jipmer 11)*
b) Isthmus
c) Interstitial portion of tube
d) Abdomen

TROPHOBLASTIC DISEASE

1371. Treatement of choice in vesicular mole is-*(Kerala 94)*
a) Insitu hysterectomyb) Suction evacuation
c) Methotrexate d)D&C

1372. The immediate complication of vesicular mole evacuation is - *(Kerala91)*
a) Bleeding b) Infection
c) Incomplete evacuvation d) Sepsis

1373. Confirmation of the diagnosis of vesicular mole is by - *(Kerala91)*
a) Vaginal examination b) X-rays
c) Abdominal examination d) Ultrasonogram

1374. Treatment of Hydatidiform mole in a 40 yr old women is - *(AI92)*
a) Hysterotomy b) Hystrectomy
c) Suction evacuvation d) D and C

1375. In case of Hydatidiform mole with age 40 yrs. & Completed family, the treatment of choice is -
a) Suction evacuation b) D & C *(AI96)*
c) Total hysterectomy d) Panhystectomy

1376. The point of distinction between partial mole to complete mole is - *(Delhi96)*
a) Partial mole is triploid or tetraploid
b) Partial mole is more prone to turn malignant
c) Typical of partial mole is cellular atypia
d) Partial mole shows trophoblastic proliferation with absent villi

1377. The essential investigation to be included in follow-up of hydatidiform mole is - *(Delhi 96)*
a) Ultrasound abdomen b) Chest X ray
c) Serum levels of HCG d) Serum levels of TSH

1378. Hydatidiform mole is associated with - *(AIIMS 95)*
a) Follicular ovarian cysts b) Theca lutein cysts
c) Ovarian carcinoma d) Ovarian atrophy

1379. For a multiparous 40 year old woman having molar pregnancy, the treatment of choice would be -
a) D & C followed by regular follow up *(UPSC 97)*
b) Hysterectomy
c) Hysterectomy and tubectomy
d) VAT followed by radiation

1380. Which of the following endocrinological condition may be associated with hydatiform mole -*(Orissa 99)*
a) Hypothyroidism b) Hyperthyroidism
c) Diabetes d) Hyperprolactinemia

1381. Gestational trophoblastic disease with jaundice, best drug is - *(SGPGI05)*
a) Methotrexate b) Adriamycin
c) Actinomycin-D d) Cyclophosphamide

1382. The highest incidence of Gestational Trophoblastic Disease is in - *(AI 05)*
a) Australia b)Asia
c) North America d) Western Europe

1383. Choriocarcinoma commonly metastasize to -
a) Brain b) Lung *(PGI June 06)*
c) Vagina d) Ovary
e) Cervix

1362) a 1363) a 1364)c 1365)b 1366)b 1367)a,b,d 1368)b 1369)a,b,d,e 1370)a 1371)b 1372)a 1373)a 1374)b 1375) c 1376)a 1377)c 1378)b 1379)b 1380)b 1381)c 1382)b 1383)a,b

1384. A 25 years old female was diagnosed to have choriocarcinoma management is - *(PGI June 06)*
a) Chemotherapy
b) Radiotherapy
c) Hysterectomy
d) Hysterectomy & then radiotherapy

1385. Molar pregnancy is diagnosed in - *(Manipal 06)*
a) I trimester b) II trimester
c) III trimester d) All of the above

1386. Most common gestational trophoblastic disease following hydatiform mole is - *(A10 7)*
a) Invasive mole
b) Chorio carcinoma
c) Placental site trophoblastic tumour
d) Placental nodule

1387. Hydatiform mole - characterized histologically by-
a) Hyaline membrane degeneration *(UP 07)*
b) Hydropic degeneration of the villous stroma
c) Non-proliferation of cytotrophoblast
d) Non proliferation of syncytiotrophoblasts

1388. The following conditions are associated with molar pregnancy except - *(UPSC 07)*
a) Pregnancy induced hypertension
b) Thyrotoxicosis
c) Gestational diabetes
d) Hyperemesis gravidarum

1389. The current imaging technique of choice for the diagnosis of hydatidiform mole is - *(UPSC 85 07,*
a) Computed tomography *A1IMS84,PGI88)*
b) Ultrasonography
c) Plain X-ray abdomen
d) Magnetic resonance imaging

1390. Ultrasound of a 36 year old gravida reveals small grape-like cystic structures without the evidence of a developing embryo. A diagnosis of complete hydatidiform mole is made. Further analysis is mot likely to reveal that the - *(UPSC 07)*
a) Genotype of the mole is 46 XX and is completely paternal in origin
b) Genotype of the mole is triploid
c) hCG levels are markedly decreased
d) Serum levels of alpha-fetoprotein are elevated

1391. Most common site of metastasis in choriocarcinoma-
a) Liver b)Lung *(UP 08)*
c) Kidney d) Spleen

1392. True about H. mole - *(PGI June 08)*
a) Always a/w raised uterine size for gestational age
b) Raised HCG
c) Hysterectomy in selected cases
d) Chemotherapy is the treatment of choice
e) Thyrotoxicosis

1393. Which of the following statements about partial mole is false - *(A110)*
a) Usually associated with triploidy
b) Rarely causes persistatn gestational trophoblastic Neoplasia
c) Usually present as Missed abortions
d) Can be reliably diagnosed by USG in early gestation

1394. Conversion of a complete hydatiform mole into invasive mole is indicated by all of the following except- *(AI10)*
a) Plateau HCG
b) Enlarged Uterine size
c) Persistance of Theca-lutein cysts
b) Suburethral nodule

1395. Conversion of a complete hydatiform mole into choriocarcinoma is indicated by all, except -
a) Plateau HCG levels *(AI 10)*
b) Enlarged uterine size
c) Persistance of theca lutein cysts
d) Suburethral nodule

1396. According to the FIGO staging of gestational trophoblastic tumors, a lady with choriocarcinoma having lung metastasis will belong to which stage -
a) I b)II *(Kamil)*
c) m d)IV

1397. Treatment of molar pregnancy is - *(Karn 11)*
a) Dilatation and curettage
b) Hysterotomy
c) Laparotomy
d) Suction and evacuation

1398. In a woman with molar pregnancy with a uterus size of 28 weeks, the treatment of choice is-*(UPSCII11)*
a) Medical induction with prostaglandins
b) Hysterotomy
c) Hysterectomy
d) Suction evacuation

MULTIPLE PREGNANCY

1399. Incidence of multiple pregnancy in Inida is on the increase because - *(Kerala 91)*
a) Change in diet b) Clomiphene therapy
c) Repeated MTP d) Old age of marriage

1400. Which type of Twins have the highest mortality -
a) Monoamnio tic monochrionic *(JIPMER 93)*
b) Diamniotic dichorionic
c) B inovular Twins
d) Siamese Twins

1401. Easiest method of determining zygosity is -
a) Blood grouping *(JIPMER 92)*
b) Sex of fetus
c) Placental examination
d) Amniotic fluid examination

1402. In twin pregnancy delivery by cesarean section is advocated in all the above conditions except -
a) Second twin in transverse lie position *(Karn. 94)*
b) First twin in transverse lie position
c) Monoamniotic twins
d) Weight less than 1500 gm.

1403. Double Monster, fused in pelvic region is called - *(Karn. 96)*
a) Ischiopagus b) Thoracopagus
c) Synencephalic d) None of these

1384) a 1385) a 1386)a 1387)b 1388)c 1389)b 1390)a 1391)b 1392)a,b,c,e 1393)d 1394)d 1395)None>d
1396)c 1397) d 1398)d 1399)b 1400)d 1401)c 1402)a 1403)a

1404. Most common cause of perinatal mortality in Twins- *(CMC 98)*
a) Dystonia b) Hemorrhage
c) Anaemia d) Interlocking
e) Prematurity

1405. The sepration of normally situated placenta in a case of multiple pregnancy may be due to the following except- *(Kerala 2K)*
a) Increased incidence of toxaemia
b) Sudden escape of liquor following rupture of membranes
c) Deficiency of vitamin B 12
d) Deficiency of folic acid
e) Sudden shrinkage of the uterus following delivery of the first baby

1406. Monochrorionic monoamniotic twin occurs if division occurs - *(JIPMER 2002)*
a) Before 24 hrs b) 1 -4 days
c) 4-8 days d) >8 days

1407. According to Hellins law chances of twins in pregnancy are - *(PGI2000)*
a) 1 in 60 b) 1 in 70
c) 1 in 80 d) 1 in 90
e) 1 in 10

1408. Most common type of twin pregnancy is - *(PGI 97)*
a) Vertex + transverse b) Both vertex
c) Vertex + breech d) Both breech

1409. Doppler USG in twins is used for - *(PGI 98)*
a) Twin to win transfusion b) Conjoined twin
c) Diagnosis of twins d) All of the above

1410. Multiple pregnancies occur most commonly with
a) T. Clomiphene *(TN03)*
b) T. Clomiphene and dexamethasone
c) T. Dexamethasone
d) Pulsatile GnRH therapy

1411. In superfecundation which of the following is seen-
a) Fetilization of 2 ova released at same time, by sperms released at intercourse on 2 different occasions (*Jharkand 03)*
b) Fertilization of 2 ova released at same time by sperms released at single intercourse
c) Both
d) None

1412. A double headed monster is known as a -*(SGPGI04)*
a) Diplopagus b) Dicephalus
c) Craniopagus d) Heteropagus

1413. If division of fertilized egg occurs at 4-8"* day what kind of monozygotic twin pregnancy will it give rise to- *(SGPGI 04)*
a) Diamnionic dichroionic
b) Diamnionic monochorionic
c) Monoamnionic monochrionic
d) Conjoined twins

1414. In an uncomplicted twin pregnancy normal delivery should be attempted in the following situation- *(MAHE 07)*
a) First baby - Vertex and second baby transverse lie
b) Both babies and breech presentation
c) First baby transverse lie and second longitudinal lie
d) First baby transverse lie and second frank breech

1415. What is the most common type of conjoined twin-
a) Cranippagus b) Thoracopagus *(UPSC 07)*
c) Ischiopagus d) Pygopagus

1416. Multiple pregnancy is not associated with an increased with an increased incidence of which one of the following ? *(UPSC-II08)*
a) Hyperemesis gravidarum
b) Congenital malformations
c) Pregnancy induced hypertension
d) Post date pregnancy

1417. Discordant twin complication in multiple pregancy is due to ? *(APPG 08)*
a) Twin Twin transfusion syndrome
b) Dizygotic twins
c) Fetus papyraceous
d) Monoamniotic twins

1418. Vaginal delivery may be recommended in - *(AI09)*
a) Monochorionic monoamniotic twins
b) First twin vertex, second twin breech
c) First twin extended breech, second twin vertex
d) First twin mentoanterior, and second twin breech

1419. Vaginal delivery is allowed in all of the following, Except- *(AI09)*
a) Monochorionic monoamniotic twins
b) First twin vertex and second twin breech
c) First twin extended beech an second twin vertex
d) First twin mentoanterior and second breech

1420. Vaginal delivery can be allowed in all except -
a) Monochorionic, monoamniotic twins
b) Mentoanterior *(AIIMSMaylO)*
c) Extended breech
d) Dichorionic twins with first vertex & second breech

1421. Which of the following statements about 'Multiple Pregnancy' is true - *(AI 10)*
a) Fetuses of same gender excludes dichorionicity
b) Twin peak sign is seen in dichorionicity
c) Thick separating membrane is a feature of monochorionic twins
d) Chorionicity can be reliably detected only after 16 weeks of gestation

1422. The commonest complication of twin pregnancy delivery includes - *(DPG10)*
a) Interlocking b)Abruptio-placentae
c) Post-partum haemorrhage d) Obstructed labour

1404) e 1405) c 1406)d 1407)c 1408)b 1409)d 1410)d 1411)a 1412)b 1413)b 1414)a 1415)b 1416)d 1417)a 1418)b 1419)a 1420)a 1421)b 1422)c

1423. Which of the following is not a criterion for antenatal diagnosis of Twin-Twin transfusion syndrome?
a) Oligohydramnios in donor fetus
b) Dichorionicity *(Maharashtra 10)*
c) Hemoglobin difference of > 5 g/dL between the two foetuses
d) Weight difference of > 20% between the two foetuses

1424. Monoamniotic monochorionic twins develop when the division of cell mass occurs - *(UP SC II10)*
a) Within 72 hours after fertilization
b) Between 4th and 8th day of fertilization
c) After 8th day of fertilization
d) After 2 weeks of development of embryonic disc

1425. Blood chimerism is most likely to occur in -*(AI11)*
a) Monochorionic Monozygotic twins
b) Monochorionic Dizygotic twins
c) Dichorionic Dizygotic twins
d) Singleton pregnancy

HYDRAMNIOS AND OLIGO HYDRAMNIOS

1426. Polyhydramnios is not seen in - *(Jipmer 91)*
a) Anencephaly
b) Amnion nodosum
c) Esophageal atresia
d) Tracheo esophageal fistula

1427. Bleeding is of fetal origin in - *(JIPMER 91)*
a) Placenta previa b)Vaso previa
c) Placenta accreta d) Abruptio placenta

1428. Fetal blood loss occurs in - *(AIIMS92)*
a) Uterine rupture b) Placenta previa
c) Vasa previa d) Circumvallate placenta

1429. Placenta with umbilical cord attached to its margin is called - *(Karn 99)*
a) Battledore placenta
b) Circumvallate placenta
c) Succenturiate placenta
d) Velamentous placenta

1430. Clinical signs of Hydraminos can be demonstrated when fluid collection is more than - *(Orissa R)*
a) lltr. b)21tr.
c) 31tr. d)41tr.

1431. Primary antiphospholipid syndrome is characterised by all of the following clinical features except - *(UPSC 96)*
a) Recurrent foetal loss
b) Arterial and venous thrombosis
c) Foetal cardiac abnormalities
d) Intrauterine growth retardation

1432. Oligohydramnios is associated with - *(AIIMS 85)*
a) Anencephaly b) Esophagealatresia
c) Renalagenesis d) All of the above

1433. All are associated with hydramnios except -*(PGI2K)*
a) Premature labour b) Gestational diabetes
c) Renal agenesis d) Increased amniotic fluid

1434. Causes of polyhydramnios include - *(PGI 01)*
a) Diabetes mellitus b) Preeclampsia
c) Esophageal atresia d) Renal agenesis
e) Anencephaly

1435. Causes of Hydramnios -
a) Anencephaly b) Oesophageal atresia
c) Renal agenesis d) Posterior urethral value
e) Twins

1436. Polyhydramnios is associated with all except -
a) Diabetes b) Open spina bifida
c) Multiple pregnancy d) Renal agenesis

1437. Polyhydramnios not associated with -*(AIIMSNov 07)*
a) B/L renal agenesis b) Anencephaly
c) Open spina bifida d) Tracheo esophageal fistula

1438. Non-immune hydrops fetalis is due to the following except - *(UPSC-II08)*
a) a thalassemia major
b) Functional abnormalities of heart
c) ABO incompatibility
d) Toxoplasmosis

1439. All of the following are causes of polyhydramnios except- *(DPGEE 08)*
a) Material diabetes
b) Hydrocephalus
c) Anencephaly
d) Chorioangioma of placenta

1440. Chorangioma of placenta associated with ? *(APPG 08)*
a) Oligohydramnios b)Polyhydramnios
c) Premature labour d)IUGR

1441. Which ofthe following conditions is associated with polyhydraminios - *(AI 10)*
a) Posterior Urethral valves
b) Cleft palate
c) Congenital diaphragmatic hernia
d) Bladder exstrophy

1442. Oligohydramnios is/are associated with -*(PGIMay 10)*
a) Neural tube defect b) Renal agenesis
c) Postmature birth d) Premature birth

HYPERTENSIVE DISORDERS IN PREGNANCY

1443. Drug of choice for pregnancy induced hypertension is - *(AI91)*
a) Hydrallazine b)Clonidine
c) Labetelol d) Propranolol

1444. Postpartum eclampsia starts after how many hours of delivery - *(DNB 91)*
a) 12-24 b) 24-48
c) 48-72 d) 72-96

1445. The single most effective drug in eclampsia is - *(AMU 85, PGI 78, Kerala 94)*
a) Dilantin b) Phenobarbital
c) Magnesium sulphate d) Paradehyde

1423) b 1424) c 1425)b 1426)b 1427)b 1428)c 1429)a 1430)b 1431)None 1432)c 1433)c 1434)a,c,e 1435)a,b,e 1436)d 1437)a 1438)c 1439)b 1440)b 1441)b 1442)b,c 1443)a 1444)a,b 1445)c

1446. Patient of eclmpsia on magsulph regime are monitored by all of the follwing except - *(UPSC 96)*
a) Respiratory rate
b) Urine output
c) Knee jerk
d) Serum Na and K levels

1447. One of following antihypertensives is not used in pregnancy - *(AI96)*
a) Enalapril b) Methyldopa
c) Hydralazine d) Nifedipine

1448. All of following are predictive tests for PIH except
a) Rolling over test *(AI 96)*
b) Urinary protein
c) Gain in weight > 2kg in one in one month
d) Ultrasound

1449. Cause of convulasion in ecclamopsia *(KERALA 96)*
a) Cerebral anoxia due to aterial spasm
b) Hypovolemia
c) Hypocalcemia
d) Shock

1450. Proved to be effective in the management of preeclampsia - *(PGI96)*
a) Zinc b) Calcium
c) Magnesium d)None

1451. Earliest sign of preeclampsia is - *(ARMS 96, Jipmer 98)*
a) Hypertension
b) Albuminuria
c) Paedal oedema
d) Excessive weight gain

1452. Pregnancy induced hypertention, sudden vision loss is due to - *(JIPMER 99)*
a) Retinal detachment b)CRAO
c) Vitreous hemorrhage d)CRVO

1453. A 24 year old woman with 36 weeks of pregnancy, suddenly complains of headache and blurring of vision. Her B.P is 170/110 mm of Hg. Urinary albumin is +++and fundus examination shows areas of retinal haemorrhage. The line of further management would be - *(UPSC 2K)*
a) Conservative treatment
b) Anticonvulsive therapy
c) Induction of labour
d) Caesarean delivery

1454. Eclampsia is mostly seen at - *(CULCUTTA 2K)*
a) Antepartum b) Intrapartum
c) Postpartum d) During parturition

1455. Giant's roll over test for PIH is doneat - *(ORRIS A R)*
a) 22-24 weeks b) 28-32 weeks
c) 24-26 weeks d) 32-34 weeks

1456. In PIH an impending sign of eclampsia is -
a) Visual disturbance *(PGI 98)*
b) Wt gain of 2 lb per week
c) Severe proteinuria of lOg
d) Pedal edema

1457. Which of the following seen in pre eclampsia -
a) Hypertension b) Proteinuria *(PGI 01)*
c) Convulsions d) Pedal edema
e) KJGR

1458. Drug which can be used in pregnancy with eclampsia at 32 weeks of gestation is - (<*Jipmer 03)*
a) Enalapril b) Lorsatan potassium
c) Hydralazine d)Frusemide

1459. In severe PIH, BP is - *(MAHE 05, Karn 95)*
a) 160/100 mmHg b) 150/100 mmHg
c) 160/100 mmHg d) 120/80 mmHg

1460. Not a grave sign of pre-eclampsia - *(APPGE 05)*
a) Headache
b) Decreased reflexes
c) Epigastric discomfort
d) Urine output < 600 ml/day

1461. Which of the following drug is contraidicated to treat hypertension with pregnancy - *(ARMS 05)*
a) Enalapril b) Methldopa
c) Nifedipine d) Labetolol

1462. Which of the following antihypertensives is not safe in pregnancy - *(ARMS Nov 05)*
a) Clonidine b) ACE inhibitors
c) a-methyldopa d)Amlodipine

1463. A 27-year primigravida presents with pregnancy induced hypertension with blood pressure of 150/ 100 mmHg at 32 weeks of gestation with no other complications. Subsequently, her blood pressure is controlled on treatment. If there are no complications, the pregnancy should be best terminated at - *(ARMS 06)*
a) 40 completed weeks b) 37 completed weeks
c) 35 completed weeks d) 34 completed weeks

1464. Consider the following statements - *(UPSC 06)*
The-requisites for giving magnesium sulphate in the treatment of eclampsia include -
1. More than five fits
2. Patient not being in labour
3. Availability of calcium gluconate by the side of the patient.
4. Presence of knee-jerk
a) 1 and 2 only b) 3 and 4 only
c) 1,2 and 3 d) 2, 3 and 4

1465. Pregnancy induced hypertension is hypertension that develops after - *(Karn pgmee 06)*
a) 18 weeks of pregnancy b) 20 weeks of pregnancy
c) 24 weeks of pregnancy d) 28 weeks of pregnancy

1466. The imminent treatment of eclampsia include all except- *(UP 07)*
a) Tocolytics
b) Prevention of fits
c) Contemplate delivery
d) Decreases blood pressure

1467. Most important factor in management of preecclampsia - *(PGI June 07)*
a) Severity of hypertension
b) Proteinuria

1446) d 1447) a 1448)b,d 1449)a 1450)c 1451)d 1452)a 1453)b,c 1454)a 1455)b 1456)a 1457)a,b,d,e
1458) c,d 1459) a 1460) a 1461) a 1462) b 1463) b 1464) b 1465) b 1466) a 1467) a

1468. Which of the following medications is the drug of choice for severe preeclampsia ? *(AI08)*
a) Labetalol b) Metoprolol
c) Alpha - methyldopa d) Nifedipine

1469. Risk factor for pre-eclampsia - *(PGI June 08)*
a) Chronic hyertension b) Smoking
c) Obesity d) Multiparity
e) Placenta praevia

1470. Drug of choice in eclampsia ? *(APPG08)*
a) Magnesium sulphate b) ACE inhibitors
c) Ringer lactate d)All

1471. All of the following may be seen in severe pre-eclampsia/eclampsia except ? *(AI 09)*
a) Cerebral hemorrhage b) Pulmonary edema
c) Severe bowel ischemia d) Acute renal failure

1472. A30 year priml has 36 week pregnancy B.P of patient is 160/110. Urine albumin is 3^+ & platelet count is 80000/nm^3. Management of patient includes-
a) Betamethasone *(PGI June 09)*
b) $MgS0_4$
c) Labetalol
d) Immediate caesarean section
e) Induction of labour

1473. In PIH an impending sign of eclampsia is -
a) Visual disturbance *(DELHIPG Feb. 09)*
b) Wt. gain of 2 lb per week
c) Severe proteinuria of 10 kg
d) Pedal edema

1474. The drug of choice for prevention of seizures in a patient with severe preeclampsia is - *(DELHI PG Man 09)*
a) Phenytoin b) Magnesium sulphate
c) Diazepam d) Nifedipine

1475. What is the most commonly observed fetal effect in women receiving magnesium sulphate therapy for pre-eclampsia/eclampsia - *(UPSC-II09)*
a) Respiratory depression
b) Variability in fetal heart rate pattern
c) Cerebral palsy
d) Intestinal obstruction

1476. The following changes may be seen in pre-eclampsia except- *(UPSC-II 09)*
a) Decreased antithrombin III
b) Hemodilution
c) Thrombocytopenia
d) Elevated uric acid

1477. Which of the following is seen in severe preeclampsia except - *(PGINov 09)*
a) Oliguria
b) Pulmonary oedema
c) Foetal growth restriction (IUGR)
d) Diastolic BP > 110 mmHg
e) Systolic BP≥ 160 mmHg

1478. A 27-year old primigravida presents with pregnancy induced hypertension with blood pressure of 150/ 100 mrn/Hg at 32 weeks of gestation with no other complications. Subsequently, her blood pressure is controlled on treatment. If there are no complications, the pregnancy should be best terminated at - *(DPG10)*
a) 40 completed weeks b) 37 completed weeks
c) 35 completed weeks d) 34 completed weeks

1479. Risk factors for pre-eclampsia includes -
a) Age > 35 yr *(PGIMay 10)*
b) Obesity
c) Previous h/o preeclampsia
d) Multigravida
e) Antiphospholipid syndrome

1480. True about $MgS0_4$ - *(PGIMay 10)*
a) Tocolytic
b) Used in Management of eclampsia
c) Cause neonatal respiratory depression

1481. Best regimen for Eclampsia is - *(AlIMSNov 10)*
a) MgSO^ b) Lytic cocktail
c) Phenytoin d) Diazepam

1482. A 37-year old second gravid, previous LSCS at 37 wks of pregnancy presents with blood pressure of 150/100, urine albumin++. On pelvic examination cervix is found to be soft with 50% effacement, station is - 3, pelvis adequate and cervical os is closed. Most appropriate step at the moment would be -
a) Antihypertensive regime and then induce labour
b) Wait and watch for 10 days *(AIIMS Nov 10)*
c) Induce labour spontaneously
d) Do caesarean section

1483. Which can be used in pregnancy - *(ARMSMay 11)*
a) ACE inhibitors b) Aldosterone
c) AT receptor antagonist d) Propylthiouracil

1484. Which of the following is the earliest sign of magnesium toxicity in a patient with ecclampsia on treatment with magnesium sulphate - *(AI 11)*
a) Loss of deep tendon reflexes
b) Respiratory Depression
c) Crdiac arrest
d) Decreased urine output

1485. During a routine prenatal visit, a 22-week gravid woman is found to be affected with ankle oedema and new onset hypertension. The urine analysis reveals marked proteinuria. Which of the following, if it were to occur, would substantiate the diagnosis of eclampsia - *(UPSCII11)*
a) Molar pregnancy b) Hyperuricaemia
c) Seizures d) Thrombocytopenia

1486. A pregnant woman presented with pre eclampsia. Intravenous magnesium sulphate is given. What is the first sign of hypermagnesemia? *(Jipmer 11)*
a) Loss of tendon reflex
b) Respiratory depression
c) Hypotonia
d) Hypotension

1487. Proteinuria in pre-eclampsia is due to -
a) Glomerular damage *(Jipmer 11)*
b) Degree of hypertension
c) Release of vasoconstrictors
d) Liver failure

1468) a 1469) a,c 1470) a 1471) c 1472)a,e 1473) a 1474) b 1475)a 1476)b 1477)None 1478)b 1479) AD 1480)a,b,c 1481)a 1482) d 1483)d 1484)a 1485)c 1486)a 1487)a

ANTEPARTUM HAEMORRHAGE

1488. The following is false of placenta previa - *(AI92)*
a) Associated with toxemia
b) Painless recurrent bleeding
c) Maternal blood loss
d) Severe bleeding may occur

1489. The first consideration in the treatment of placetal abruption is - *(A1IMS 79, 84)*
a) Immediate delivery
b) Administration of fibrinogen
c) Amniocentesis to establish diagnosis
d) Promt restoration of an effective circulation with I.V. fluid
e) Oxytocin to effect early delivery

1490. Expectant line of management in placenta previa is contra-inidcated in - *(Karn 94)*
a) Preterm fetus b) Live fetus
c) Breech presentation d) Active labour

1491. One of following is not true about vasa previa -
a) Blood of maternal origin *(AI96)*
b) May be a cause of antepartum hemorrhage
c) Blood of fetal origin
d) Singer's test positive

1492. In a case of antepartum hemorrhage with BP = 80/60 mmHg, treatment of choice is - *(AI 96)*
a) Blood transfusion b) Morphine
c) Placentography d) Panhystectomy

1493. All are true about abruptia placenta except - *(A1IMS 98)*
a) Absent foetal heart b) Uterine tenderness
c) Profuse bleeding d) Hypotension

1494. Covellier's uterus seen in - *(PGI98)*
a) Accidental hemorrhage
b) Pregnancy with DIC
c) Placenta previa

1495. A pregnant woman presents with a placenta pravia of a major degree. The fetus is malformed. Which of the following will be the best line on management- *(JIPMER 2K)*
a) Cesarian section b) Oxytocin drip
c) Rupture of membranes d) Instillation of PGE2

1496. A second gravida P+O+O presented 32 weeks of pregnancy with grade III placenta previa and contractions. What is the treatment of choice -
a) Bed rest and sedation *(AIIMS 2K)*
b) Bed rest and dexamethasone
c) Rest, nifidepine and dexamethasone
d) Bed rest and nifidepine

1497. A positive "Stallworthy's sign" is suggestive of which of the following conditions - *(Kerala 2K)*
a) Twin pregnancy
b) Breech presentation
c) Vesicular mole
d) Low lying placenta
e) Pregnancy induced hypertension

1498. In accidental haemorrhage, TOC - *(PGI 98)*
a) Induction of labour
b) Rx of hypofibrinogenemia then blood transfusion
c) Stimultaneous empying of uterus and blood transfusion
d) Wait and watch

1499. Couvelaire uterus is seen in - *(PGI 98)*
a) Placenta previa b) Accidental haemorrhage
c) PIH d)PPH

1500. Termination of pregnancy in placenta praevia is indicated in - *(PGI 03)*
a) Active bleeding
b) Active labour
c) Gestational age >34 wks with live fetus
d) Fetal malformation
e) Unstable lie

1501. Most common cause of placenta previa -
a) Myomectomy b) Primigraida
c) Multigravida d) Previous casanian section

1502. Causes of ante - partum hemorrhage are all except -
a) Placenta previa *(IN03)*
b) Atonic uterus
c) Abruptive placenta
d) Circumvalate placenta

1503. Antepartum hemorrhage occurs after how many weeks - *(TN 04)*
a) 12 weeks b) 18 weeks
c) 20 weeks d) 28 weeks

1504. Classical presentation of plecenta previa -
a) Anterior b) Central *(MAHE05)*
c) Lateral d) Posterior

1505. A primigravida presents to casually at 32 weeks gestation with acute pain abdomen for 2 hours, vaginal bleeding and decreased fetal movements. She should be managed by - *(AI 06)*
a) Immediate cesarean section
b) Immediate induction of labor
c) Tocolytic therapy
d) Magnesium sulphate therapy

1506. In placenta previa conservative treatment not done in case of - *(PGI June 06)*
a) Active labour b) Anencephaly
c) Dead baby d) Severe placenta previa
e) Premature fetus

1507. Couvelaire uterus present in - *(UP 07)*
a) Placenta praevia b) Abruptio placentae
c) Vas praevia d) All of the above

1508. Medial to lateral structure of Fallopina tube are -
a) Ampulla, Isthmus, Infundibulum *(UP08)*
b) Infimdibulam, isthmus, Ampulla
c) Interstitial, isthmus, ampulla, infundibulum
d) Infimdibulam, ampulla, isthmus, Interstitial

1509. Which of the following drugs is not useful in the management of postpartum hemorrhage (PPH) -
a) Mifepristone b) Misoprostol *(AI08)*
c) Oxytocin d) Ergotamine

1488) a 1489) d 1490) d 1491) a 1492) a 1493) c 1494) a 1495) a 1496) None 1497) d 1498) c 1499) b 1500)a,b,d
1501) c 1502)b 1503)d 1504)d 1505)a 1506)a,b,c 1507)b 1508)c 1509)a

1510. All are causes of antepartum hemorrhage except ? *(DPGEE 08)*
a) Battledore placenta
b) abruptio placenta
c) Circumvallate placenta
d) Placenta praevia

1511. Which of the following is true about vasa previa except ? *(AIIMS May 09)*
a) Incidence is 1:1500
b) Mortality rate of 20% with undiagnosed case
c) Associated with low lying placenta
d) Caesarian section is indicated

1512. The risk factors for placental abruption include the following except- *(DELHI PG Mar. 09)*
a) History of placental abruption in previous pregnancy
b) Hypertension
c) Diabetes mellitus
d) Preterm rupture of membranes

1513. Abortions in the second trimester mainly occur due to- *(UP SC II10)*
a) Retroverted gravid uterus
b) Congenital anomalies of the uterus
c) Congenital anomalies of the foetus
d) Hormonal deficiencies

1514. The regimen used for expectant management of placenta previa is - *(AIIMS Nov 10)*
a) Macafee & Johnson regimen
b) Brandt Andrew method
c) Credes method
d) Mcdonald's regimen

1515. Classifiction for abruptio placenta \s-*(AUMSNov 10)*
a) Page's classification b) Jhonson regimen
c) Apt staging d) Macafee regimen

1516. Which test differentiate maternal and fetal blood cell- *(AIIMS Nov 10)*
a) Apt test b) Kleihauer-Betke test
c) Bubblin test d) Osmotic fragility test

1517. All of the following are included in the expectant management of placenta praevia, except - *(A111)*
a) Cervical Encirclage
b) Anti- D administration
c) Corticosteroids
d) Blood transfusion

1518. A fourth-gravida with three living children presents at 38 weeks of pregnancy with abdominal pain and vaginal bleeding. On examination, the uterus is tense and tender, and the foetal heart sounds are absent. What is the probable diagnosis - *(UPSC II11)*
a) Accidental haemorrhage b) Placenta praevia
c) Vasa praevia d) Ectopic pregnancy

1519. Ante partum hemorrhage of fetal origin is seen in - *(Jipmer 11)*
a) Abruption placenta
b) Placenta previa
c) Vasa previa
d) Circumvallate placenta

MEDICAL & SURGICAL ILLNESS COMPLICATING PREGNANCY

1520. Unequivocal evidence of heart disease in pregnancy is - *(Kerala 91)*
a) Systolic murmur
b) Diastolic murmur
c) Diastolic thrill and murmur
d) Systolic thrill and murmur

1521. Which is not transmitted to the baby at delivery - *(JIPMER 91)*
a) Toxoplasmosis
b) gonococcus
c) Herpes simplex type II
d) Hepatitis-B

1522. Which of the following is correct about Asymptomatic bacteriuria during pregnancy - *(JIPMER 91)*
a) 5% progress to UTI
b) Seen in 20% of pregnant women
c) Not associated with Renal anomalies
d) Seen only in mulltigravida

1523. Which heart disease has the worst prognosis in pregnancy - *(AI92)*
a) Pulmonary stenosis b) MS
c) VSD d)ASD

1524. Pregnant lady on oral anticoagulants should swithch over to Heparin at - *(AIIMS 92)*
a) 6 weeks b) 12 weeks
c) 24 weeks d) 36 weeks

1525. Surgery for mitral stenosis during pregnancy is ideally done at - *(AIIMS 92)*
a) 14 weeks b) 20 weeks
c) 28 weeks d) 32 weeks

1526. A multipara with 34 weeks pregnancy tachycardia, fever hepatosplenomegaly, pallor has - *(UPSC 98)*
a) Malaria
b) Iron deficiency anaemia
c) Physiological anaemia
d) Megaloblastic anaemia

1527. Which of the following is an absolute indication for cesarian section in pregnancy associated with heart disease - *(AIIMS 2K)*
a) Pulmonary stenosis b) Coarctation of aorta
c) Eisenmenger syndrome d) Ebstein's anomaly

1528. All are correct of management of Heart disease during labour except - *{AIIMS 92)*
a) Minimal trial of labour
b) Shortening of second stage of labour
c) LSCS only for obstetrical indications
d) Induction at 38 weeks

1529. DIC is seen in - *(Kerala 94)*
a) Retained placenta b) Abruptio
c) Intra uterine death of foetus d) All

1530. The commonest pathogen responsible for acute pyelonephritis in pregnancy is - *(Karn. 94)*
a) Escherichia coli
b) Kiebsiella pneumoniae
c) Proteus mirabilis
d) Pseudomonas aeruginosa

1510) a 1511) b 1512)c 1513)b 1514)a 1515)a 1516)a 1517)a 1518)a 1519)c 1520)b,c,d 1521)a 1522)None
1523) b 1524) d 1525)a 1526)a 1527)b 1528)d 1529)d 1530)a

1531. Which of the following is not a complication of fibroid in pregnancy - *(JIPMER 95)*
a) Pre term labour b) Post partum haemorrhage
c) Abortion d) None

1532. Causes of DIC are all except- *(AI95)*
a) Abruption placentae b) Fat emboli
c) Amniotic fluid embolism d)IUD

1533. In coagulation failure serum level of fibrinogen is less than - *(Karn. 95)*
a) 150 mg b) 100 mg
c) 200mg d) 250 mg

1534. The most important cause of the coagulation failure in obstetrics is - *(Karn. 96)*
a) Intrauterine foetal death
b) Accidental haemorrhage
c) Placenta previa
d) Rupture of the uterus

1535. Drug of choice for medical termination of pregnancy in a second gravida with asthma at 16 weeks gestation is - *(UP 97)*
a) Prostaglandin
b) Ethacridine lactate
c) Hypertonic saline
d) Intra-amniotic dexamethasone

1536. Maximum maternal mortality is with-£4ZZMS'*97,06)*
a) Hepatitis B b) Hepatitis C
c) Hepatitis D d) Hepatitis E

1537. Most common heart disease in pregnancy is-
a) ASD b) Eisenmenger's *(AI97)*
c) MS d) AS

1538. Indication ofAcylovir in pregnancy- *(PGI96)*
a) Disseminated herpes
b) Chickenpox in first trimester
c) Prophylaxis in recurrent herpes
d) All of the above

1539. Mode of delivery in pregnant lady with herpes depends upon - *(PGI96)*
a) Active lesion b) Previous history
c) Cell culture d) None of the above

1540. Dessiminated intravascular coagulation is present in all except - *(AIIMS 96)*
a) Prolonged pregnancy
b) Amniolotic fluid embolism
c) Septic shock
d) Abruptio placenae

1541. Glucosuria during routine investigation of antenatal visit indicates that there is need for -
a) Gestational diabetes treatment *(UPSC)*
b) Dietary control
c) Insuline treatment
d) Glucose tollerance test screening

1542. During delivery, the risk of transmission of maternal infection to the foetus is the highest in
a) Rubella *(UPSC)*
b) Cytomegal virus
c) Herpes simplex virus
d) Human papilloma virus

1543. Pregnancy should be stongly discouraged in women with- *(UPSC)*
a) Mitral stenosis b)ASD
c) VSD d) Eisenmenger's syndrome

1544. Maternofetal transmission in toxoplasmosis occurs maximally in - *(A199)*
a) 1st trimester b) 2nd trimester
c) 3rd trimester d) At delivery

1545. In pregnancy sulfonylurea are stopped and insulin is started becuase of all except -*(AIIMS 98)*
a) Sulphonylureas cannot control sugar well due to hyperglycemia
b) Sulphonylureas predispose to hypoglycemia in infant
c) Insulin cannot cross placenta
d) Sulphonylureas causes pregnancy induced hypertension

1546. A woman, G2 PI, presents with 10 weeks gestation and history of DVT in the previous pregnancy in puerperium. The management includes all except -
a) Heparin to be started immediately *(AIIMS 99)*
b) Warfarin to be continued 6 weeks after delivery
c) Risk of thrombosis recurring is 10-12%
d) No anticoagulant needed in antenatal period

1547. The transmission of HSV to the baby is maximum at- *(AIIMS99)*
a) 1st trimester b) 2nd trimester
c) 3rd trimester d) At parturition

1548. During pregnancy corrective cardiac surgery is commonly indicated in - *(UPSC 2K)*
a) Mitral stenosis
b) Aortic stenosis
c) Atrial septal defect
d) Ventricular septal defect

1549. The best test in diabetic mother to diagnose baby' slung maturity - *(AIIMS99)*
a) Phosphatidyl inositol
b) Sphingomyelin/Lecithin ratio
c) Ultrasonography
d) None of the above

1550. Which of the following is the most dangerous cardiac lesion in pregnancy - *(AIIMS2K)*
a) Aortic stenosis
b) Mitral regurgitation
c) Pulmonary stenosis
d) Mitral valve prolapse

1551. A G2P1+0+0, Diabetic mother presents at 32 weeks of pregnancy. She gives a history of full term fetal demise during her last pregnancy. Her sugar is now controlled and the child is stable. What is the best plan of action - *(AIIMS 2K)*
a) Await spontaneous delivery
b) Induce at 38 weeks
c) Induce at 40 weeks
d) Cesarian section 38 weeks

1531) d 1532)b 1533)b 1534)b 1535)c 1536)a 1537)c 1538)d 1539)a 1540)a 1541)d 1542)c 1543)d 1544)c

1552. In valvular heart diseases complicating pregnancy the following statements are true except -
a) A closed mitral valvulotomy can be carried out if symptoms of mitral stenosis are severe *(Kerala 2K)*
b) Open heart surgery is associated with a reduction in foetal loss
c) Mitral regurgitation is usually well tolerated
d) A maternal mortality of 15% has been reported in women with critical aortic stenosis
e) It is mandatory to continue full anticoagulation in patients with mechanical valvular prosthesis

1553. The following complications are likely to increase in a case severe anaemia during the pregnancy except- *(Kerala 2K)*
a) Pre-eclampsia b) Inter-current infection
c) Heart failure d) Preterm labour
e) Sub involution

1554. Large placenta is seen in which of the following -
a) IUGR b) Syphilis *(Kerala 01)*
c) CMV d) Rubella

1555. Respiratory distrees syndrome in the new born is commonly assocaited with the following conditions except- *(UPSC2002)*
a) Diabetic pregnancy
b) Prematurity
c) Following an elective caesarean section
d) Intrauterine growth retardation

1556. In pregnancy amount of glucose used in GTT -
a) 50 mg b) 75 mg *(CMC 2001)*
c) lOOmg d) 125 mg

1557. Follicular ovarian cysts are seen in - *(Jipmer 92)*
a) Molar pregnancy b) Tubal pregnancy
c) Fibroid uterus d)Threatened abortion

1558. With iron treatment Hb increases by- *(JIPMER 98)*
a) 2 gm/week b) 1 gm/week
c) 2 gm/month d) 1 gm/month

1559. Not implicated in congenital transmission is -
a) Hepatitis A b) Toxoplasmosis*(UP 96)*
c) Herpes d) Syphilis

1560. Rh isoimmunisation is increased in all except -
a) Increased maternal age *(AIIMS97)*
b) Caesarean section
c) APH
d) Post dated pregnancy

1561. Treatment of toxoplasmosis in pregnant women is with - *(Korn 94)*
a) Spiramycin b) Suramin
c) Pyrimethamine d)Nifurtimox

1562. Commonest cardiac lesion seen pregnancy is -
a) MR b) AS *(TN95)*
c) MS d) Carctation of aorta

1563. Hydrops foetalis is seen in following except -
a) Rh incompatibility b) Syphilis *(PGI97)*
c) ABO incompatibility d) CMV

1564. In pregnancy, which type of anemia is not common in India- *(PGI 97)*
a) Vitamin B_{12} anemia
b) Folic acid anemia
c) Iron + folic anemia
d) Iron deficiency anemia

1565. Baby born to DM have following except - *(PGI 98)*
a) Hypercalcemia b) Hypokalemia
c) Hypoglycemia d) Obesity

1566. In heart disease, prophylactle forceps is applied at head station of - *(PGI 98)*
a) -1 b)+l
c) O d)+2

1567. In diabetes, which can occur in the fetus- *(PGI01)*
a) Pre-eclampsia b) Polyhydramnios
c) Fetal anomalies d) Placenta previa
e) Abruptio placentae

1568. True about indications for prevention of Rh-isoimmunization - *(PGI 01)*
a) Given to the newborn within 72 hrs. of birth
b) Required when baby is Rh^+ & mother Rh'
c) Can be helpful in ABO incompatibility
d) Can be given upto one month of age of baby

1569. True about fatty liver of pregnancy- *(PGI 01)*
a) Common in third trimester
b) Microvesicular fatty changes
c) Lysosomal injury is the cause
d) Alcohol is main cause
e) Recurrence is very common

1570. A lady presents with 16 weeks pregnancy with acute appendicitis. Management includes -
a) Conservative *(PGI02)*
b) Do early surgery
c) Appendicectomy with MTP
d) Appendicectomy after childbirth
e) Medical therapy and appendicectomy on reccurence

1571. Indications of oral glucose tolerance test (GTT) -
a) H/O DM in maternal uncle *(PGI 03)*
b) Toxaemia of pregnancy
c) Previous big baby
d) Previous H/O gestational diabetes
e) Hydropic degeneration

1572. Indication of anti-D immunoglobulin is/are -
a) Vaginal bleeding *(PGI03)*
b) ECV
c) Mid trimester abortion
d) After amniocentesis

1573. For antenatal fetal monitoring in a diabetic pregnancy all of the following are useful except- **(***Karnataka 02)*
a) Non - stress test b) Biophysical profile
c) Doppler flow study d) Fetal kick count

1574. Hypothyroidism is associated with the following clinical problems, except - **(***UPSC 04)*
a) Menorrhagia b) Early abortions
c) Galactorrhoea d) Thromboembolism

1552)b 1553)e 1554)b,d 1555)d 1556)c 1557)a 1558)b 1559)a 1560)a 1561) a,c 1562)c 1563)None
1564) a 1565) a 1566)d 1567)b,c 1568)b 1569)a,b 1570)b,c 1571)a,c,d,e 1572)a,b,c,d 1573)d 1574)d

1575. Zidovudine given for HIV in pregnancy because- *(UPPGMEE04)*
a) Decreases chance of vertical transmission
b) Decrease severity of infection transmission
c) Decrease severity of infection in mother
d) Cause no benefit

1576. A fetomaternal transfusion of more than 30 ml has been found in what percentge of women at delivery?
a) Less than 1% b) 5%
c) 10% d) 15%

1577. You are called to the operating room. The general surgeons have operated on a woman to rule out appendicitis and the signs of an abominal pregnancy with an 18 week fetus and placeta attached to the omentum. The best course of action in the case is -
a) Removal of both fetus and placenta
b) Laparoscopic ligation of umbilical cord
c) Removal of the fetus only
d) Closely follow until viability and then deliver by laparotomy

1578. Causes of non - immune hydrops fetails are all except- *(Jipmer03)*
a) Parvo virus infection b) Down's syndrome
c) a - thalassemia d) Rh - incompatibility

1579. Following renal disorder is associated with worst pregnancy outcome - *(A1IMS 03)*
a) Systemic lupus erythematosus
b) IgA neuropathy
c) Autosomal dominant polycystic kidney disease
d) Scleroderma

1580. A Para II poorly compensated cardiac patient has delivered 2 days back. You will advice her to -
a) Undergo sterilization (tubectomy) after 1 week
b) Undergo sterilization after 6 weeks *(UPSC 04)*
c) Suggest her husband to undergo vasectomy
d) Take oral contraceptive pills after 6 months

1581. Which of the following is not an indication for antiphospholipid antibody testing? *(All India 04)*
a) 3 or more consecutive first trimester pregnancy losses
b) Unexplained cerebrovascular accidents
c) Early onset severe pre - eclampsia
d) Gestational diabetes

1582. A class C diabetic patient delivers at term, it is important to check her blood sugar levels immediately postpartum, since there may be a decrease in the insulin requirements of diabetic paitents. This can be partly explained by -
a) Increased food intake
b) Decreased activity
c) Decrease in plasma chorionic somatomammotropin
d) Decrease in plasma progesterone

1583. During first trimester of pregnancy risk of fetal malformation in a pregnant woman with insulin dependent diabetes is best predicted by -
a) Blood sugar values *(Karnat 05)*
b) Glycosylated haemoglobin levels
c) Serum alpha fetoprotein levels
d) Serum unconjugated estriol levels

1584. With oral iron therapy, rise in Hb% can be seen after- *(MAHE 05)*
a) lweek b) 3 weeks
c) 4 weeks d) 6 weeks

1585. Antitubercular drug contraindicated in pregnancy - *(PGI June 05, Orrisa 98, PGI89, 01)*
a) Streptomycin b) Rifampicin
c) INH d)Ethambutol
e) Pyrazinamide

1586. The short retroviral regime administration in the peripartum period decreases the risk of vertical transmission by - *(MAHE 05)*
a) 30% b)50%
c) 65% d) 75 %

1587. In pregnancy, the most common cause of transient diabetes insipidus is - *(MAHE05)*
a) Severe pre-eclampsia b)Hydramnios
c) Multiple pregnancy d)IUGR

1588. A mother is HbsAg positive and anti HbcAg positive. Risk of transmission of hepatitis B in child is- *(MAHE 05)*
a) 20% b) 50 %
c) 0% d) 90 %

1589. Transplacental transmission of toxoplasmosis occurs maximally when - *(APPGE 05)*
a) Infection to mother occurs within 6 months before pregnancy
b) Infection to mother occurs beyond 6 months before pregnancy
c) In first trimester
d) In last trimester

1590. Which of the following test is the most sensitive for detection of iron depletion in pregnancy-^LZZMS'
a) Serum iron b) Serum transferrin *Nov 05)*
c) Serum ferritin d) Serum Erythropoitin

1591. Infants of diabetic mother are likely to have the following cardiac anomaly - *(AJ 05)*
a) Coarctation of aorta
b) Fallot's tetrology
c) Ebstein's anomaly
d) Transposition of great arteries

1592. Which of the following statements is incorrect in relation to pregnant women with epilepsy - *(A105)*
a) The rate of congenital malformation is increased in the offspring of women with epilepsy
b) Seizure frequency increases in approximately 70% of women
c) Breast feeding is safe with most anticonvusants
d) Folic acid supplementation may reduce the risk of neural tube defect

1575) a 1576) a 1577)c 1578)d 1579)a 1580)c 1581)d 1582)c,d 1583)b 1584)b 1585)a 1586)b 1587)a 1588) d 1589) d 1590) c 1591) d 1592)b

1593. The drug of choice in treatment of typhoid fever in pregnancy is - *(AIMS NOV05)*
a) Ampicillin b) Chloramphenicol
c) Ciprofloxacin d) Ceftriaxone

1594. Not complication of gestational diabetes mellitus - *(Manipal06)*
a) Hydrocephalus b) Macrosomia
c) Monilial vagintis d) Nephropathy

1595. At what period does tuberculosis flare up most commonly in a pregnant patient - *(AI06)*
a) First trimester b) Second trimester
c) Third trimester d)Puerperium

1596. Which of the following tumors is not commonly known to increase in pregnancy ? *(AI 06)*
a) Glioma b) Pituitary adenoma
c) Meningioma d) Neurofibroma

1597. Which vitamin deficient is most commonly seen in a pregnant mother who is on phenytoin therapy for epilepsy ? *(AI06)*
a) Vitamin B_6 b) Vitamin B_{12}
c) Vitamin A d) Folic acid

1598. With which of the following types of viral hepatitis infection in pregnancy, the maternal mortality is the highest? *(AIMS06)*
a) Hepatitis-A b) Hepatitis-B
c) Hepatitis-C d) Hepatitis-E

1599. Glucose tolerance test is indicated in a pregnant lady in case of - *(PGI June 06)*
a) Big baby b) Repeated abortion
c) Previous GDM d) Eclampsia
e) H/O diabetes in maternal uncle

1600. Feature of diabetes mellitus in pregnancy - *(PGI June 06)*
a) Postdatism
b) Hydramnios
c) Neonatal hyperglycemia
d) t defect
e) PPH

1601. True statements is/are - *(PGl June 06)*
a) MS surgery better avoided in pregnancy
b) MR with PHT - definite indication for termination of pregnancy
c) Aortic stenosis in young age is due to Bicuspid valve
d) Isolated TR always due to infective endocarditis
e) MS with pressure gradient 10 mmHg-indication for surgery

1602. Which one of the following is not associated with diabetes in pregnancy - *(UPSC 06)*
a) Sacral agenisis of the foetus
b) Advanced placental grading
c) Baby weight >3.5 kg
d) Hydramnios

1603. Caesarean section is preferred in - *(APPG06)*
a) Toxoplasmosis b) Herpes
c) CMV d) Varecella Zoster Virus

1604. Acute pyelonephritis in pregnancy all of the following are true except - *(Manipal 06)*
a) Left kidney is inolved in 50% of patients
b) Most common isolate is E. coli
c) More common in later 1/2 of pregnancy
d) Responds to amino glycosides

1605. Caudal Regression Syndrome is seen in babies of mothers having - *(AI 07)*
a) Gestational diabetes b)PIH
c) Cardiac disease d) Anaemia

1606. A large Baby is born. The likely complication in pregnancy is - *(AI 07)*
a) Gestational diabetes
b) Gestational hypertension
c) Cardiac disease
d) Anaemia

1607. Hypothyroidism is pregnancy is least likely associated with - *(AI07)*
a) Recurrent abortions
b) Polyhydramnios
c) Pregnancy induced hypertension (PIH)
d) Prematurity

1608. Antiepileptic which is not associated with congenital malformation when used in pregnant woman is-
a) Phenytoin b) Phenobarbitone *(AI 07)*
c) Carbamazepine d) Valproate

1609. Highest transmisstion of hepatitis B from mother to fetus occurs if the mother is infected during -
a) 1st trimester b) Ilnd trimester *(AI 07)*
c) Illrd trimester d) At the time of implantation

1610. A 9 month old pregnant lady presents with Jaundice and distension, pedal edema after delivering normal baby. Her clinical condition deteriorates with increasing abdominal distension and severe ascites. Her bilirubin is 5 mg/dl, S. alkaline phosphatase was 450 u/L and ALT (345 Iu). There is tender hepatomegaly 6 cm below costal margin and ascitic fluid shw protein less than 2 mg%. Diagnosis is - *(AIIMSMay 07)*
a) Acute fatty liver of pregnancy
b) HELLP syndrome
c) Acute fulminant, liver failure
d) Budd chiari syndrome

1611. Most common heart disease which is associated with maximum mortality during pregnancy -
a) Eisenmenger syndrome b) MS *(AIMSMay 0 7)*
c) AS d)VSD

1612. Premature baby of 34 weeks was delivered. Baby had bullous lesion on the body. X ray shows periostitis what is the next investigation -
a) VDRL for mother & baby *(AIMSMay 07)*
b) ELISA for HIV
c) PCRforT.B.
d) Hepatitis surface antigen for mother

1593) d 1594) a 1595)d 1596)a 1597)d 1598)d 1599)a,b,c,d 1600)b,d,e 1601)a,b,c,e 1602)b 1603)b 1604)a 1605) a 1606) a 1607)b 1608)b 1609)c 1610)d 1611)a 1612)a

1613. Consider the following statements - *(UPSC07)*
A woman suffering from gestational biabetes is likely to develop -
1. PIH
2. Macrosomia (foetal)
3. IUD

Which of the statements given above is/are correct-
a) 1 and 2 only b) 2 only
c) 1 and 3 only d) 1,2 and 3

1614. The screening test for gestational diabetes mellitus that has the highest sensitivity is - *(Corned 08)*
a) Glycosylated Hb
b) Blood fructosamine
c) 50 gram glucose challenge test
d) Random blood sugar

1615. Drug contraindicated in patient with rheumatic heart disease in PPH is - *(AlIMSNov 07)*
a) Oxytocin infusion b) Methyl ergometrine
c) Misoprostol d) Carboprost

1616. Highest maternal mortality is seen in following congenital heart disease - *(AlIMSNov 07)*
a) Eisenmengers complex b) Pulmonary stenosis
c) Coarctation of aorta d)VSD

1617. Causes of pruritus in 3rd trimester of pregnancy include the following except - *(UPSC-108)*
a) Prurigo gestationis
b) Obstetric cholestasis
c) Pemphigoid gestationis
d) Pruritic folliculitis

1618. Which female genital malignancy is most common in pregnancy ? *(UPSC-II08)*
a) Ovarian cancer b) Vaginal vulvar cancer
c) Endometrial cancer d) Cervical cancer

1619. Cholestasis may lead to the following complications except- *(UPSC-II 08)*
a) Intrauterine fetal death
b) Meconium stained liquor
c) Preterm labour
d) Neonatal jaundice

1620. The dermoid cyst, diagnosed at 6 weeks of pregnancy. Best treatment modalities - *(UP08)*
a) LSCS along with removal of cyst
b) Only when it undergoes torsion
c) Immediately
d) At 14-16 weeks of pregnancy

1621. Maximum incidence of congenital malformation are seen in first trimester infection crosses the placenta - *(UP08)*
a) Toxoplasmosis b) Rubella
c) CMV d) Cryptosporidium

1622. All are true about Anti phospholipid syndrome except- *(UP08)*
a) Associated with SLE
b) Thrombosis of uteroplacental vessels
c) Recurrent placental haemorrhage
d) Give false positive results in syphilis

1623. Which of the following modalities have shown best result for Pre menstrual syndrome ? *(AI08)*
a) SSRI b)Progesterone
c) Oestrogen d) Anxiolyties

1624. Which of the following congenital infections is associated with minimal teratogenic risk to the fetus- *(AI08)*
a) HIV b) Rubella
c) Varicella d) CMV

1625. A pregnant mother presents with history of delivery of a previous child with congenital adrenal hyperplasia (CAH). The best management protocol for the current pregnancy is - *(AI 08)*
a) To start prednisolone after establishing whether fetus is affected by chorionic Villous sampling
b) To start dexamethasone as soon as pregnancy is confirmed
c) To start dexamethasone after determining sex of the fetus by karyotyping
d) To start prednisolone after determining sex of the fetus with USG

1626. Diabetes in pregnancy all except -
a) Glucose challenge test is done between 24-28 week
b) 50 gm of sugar given as screening test
c) Insulin resistance improves with pregnancy
d) Diabetes control before conception is important to prevent malformation

1627. Which is the characteristic lesion of pregnancy ?
a) Vitiligo b) Pemphigus *(APPG08)*
c) Tinea versicolor d) Chloasma

1628. Specific congenital abnormality associated with DM?
a) Caudal regression syndrome *(APPG08)*
b) VSD
c) ASD
d) TOF

1629. Not a leading cause of DIC in pregnancy ?
a) Prolonged pregnancy *(APPG08)*
b) Abrubtio placenta
c) Heart disease
d) IUP

1630. True regarding asymptomatic bacteriuria in pregnancy are - *(PGIDec08)*
a) The incidence of acute pyelonephritis is high
b) T Morbidity in pregnancy
c) T Chance of premature infant
d) All antimicrobial agents cannot be given in pregnancy
e) T Risk of chronic renal lesion in later life

1631. Regarding transmission of HIV to infant from infected HIV mother, which statement is/are true -
a) Give zidovudine to mother *(PGIDec 08)*
b) 25% chance of vertical transmission
c) Avoid breast feeding
d) Vaccinate infant with OPV & MMR
e) If infant is healthy for 5 month, then infant is not infected with HIV

1613) d 1614) c 1615) b 1616)a 1617)d 1618)a 1619)d 1620)d 1621)b 1622)c 1623)a 1624)a 1625)b 1626)c 1627)d 1628) a 1629)a 1630)A11 1631)a,b,c

1632. Which of the following antibiotics are safe to treat UTI in pregnancy - *(PGI Dec 08)*
a) Aminoglycosides b) Fluroquinolones
c) Cephalosporins d) Sulfonamides
e) Tetracyclins

1633. Vasopressor of choice in pregnancy is ?
a) Ephedrine *(AIIMSNov08)*
b) Phenylephrine
c) Methoxamine
d) Mephentermine

1634. A pregnant lady acquires chicken pox 3 days prior to delivery. She delivers by normal vaginal route. Which of the following statements is true ?
a) Both mother and baby are safe *(AIIMS Nov 08)*
b) Give antiviral treatment to mother before delivery
c) Give antiviral treatment to baby
d) Baby will develop neonatal varicella syndrome

1635. Transmission of HIV from mother to child is prevented by all the following except -
a) Oral zidovudine to mother at 3rd trimester along with oral zidovudine to infant for 6 weeks
b) Vit A prophylaxis to mother *(AIIMS Nov 08)*
c) Vaginal delivery
d) Stopping breast feeding

1636. Investigation of choice in cholestasis of pregnancy?
a) Serum bilirubin levels *(AIIMS Nov 08)*
b) Serum bile acids levels
c) Serum alkaline phosphatase levels
d) Serum glutathiones transferase levels

1637. All of the following drugs can be given to a mother with lupus after 35th week of gestation, Except -
a) Chlaroquine *(AI09)*
b) Methotrexate
c) Sulphadiazine / Sulphasalazine
d) Prednisolone

1638. True about congenital diseases in diabetes mellitus is all except- * *(AIIMSMay 09)*
a) Results due to free radical injury
b) 6-10% cases are associated with major congenital abnormality
c) 1-2% of newborns are associated with single umbilical artery
d) Insulin can be given

1639. Normal pregnancy can be continued in -
a) Primary pulmonary hypertension *(AIIMS May 09)*
b) Wolf-Parkinson-White syndrome
c) Eisenmenger syndrome
d) Marfan syndrome with dilated aortic root

1640. The effect (s) of diabetic mother on infant is/are -
a) Brain enlargement as a part of macrosomai
b) Hyperglycemia in infant *(PGI June 09)*
c) First trimester abortiobn
d) Unexplained fetal death
e) caudal regression

1641. A multipara with 34 weeks pregnancy tachycardia, fever hepatosplenomegaly, pallor has -
a) Malaria *(DELHI PG Feb. 09)*
b) Iron deficiency anemia
c) Physiological anemia
d) Megaloblastic anemia

1642. Which of the following is not associated with diabetes in pregnancy? *(DELHI PG Feb. 09)*
a) Sacral agenesis of the foetus
b) Advanced placental grading
c) Baby weight >3.5 kg
d) Hydramnios

1643. The maximum chances of HIV infection being transmitted to the fetus/infant in an HIV infected mother are during - *(UPSC-II09)*
a) First trimester b) Third trimester
c) During labour d) During breastfeeding

1644. Which one of the following statements is NOT correct about obstetric cholestasis ? *(UPSC-II 09)*
a) In results in pruritis without rash
b) Associated with markedly high bilirubin and raised liver enzymes
c) It is an indication of termination of pregnancy at 37 weeks
d) Risk of recurrence is high in future pregnancies

1645. True about HIV+ve mother- *(PGI Nov 09)*
a) Caesarean section is safer than vaginal delivery
b) Vaginal delivery is safer than C.S.
c) Mother not taking ART should advised for C.S
d) Baby does not need drug therapy
e) Start ART & continue throughout pregnancy

1646. A pregnant patient with prosthetic valve should be switched to heparin in - *(AIIMS Nov 09)*
a) 32 weeks b) 36 weeks
c) 40 weeks d) Onset of labour

1647. A pregnant lady had no complaints but mild cervical lymphadenopathy in first trimester. She was prescribed spiramycin but she was non-compliant. Baby was born with hydrocephalous and intracerebral calcification. Which of these is likely cause?
a) Toxoplasmosis b)CMV *(AIIMSMay 10)*
c) Cryptococcus d) Rubella

1648. A pregnant female at 35 wks of pregnancy is disgnosed with SLE. Drugs that can be used to treat are all except - *(AIIMS May 10)*
a) Corticosteroids b) Sulphasalazine
c) Methotrexate d) Hydroxychloroquine

1649. At what gestational age should a pregnancy with cholestasis of pregnancy be terminated -
a) 34 weeks b) 36 weeks *(AIIMS May 10)*
c) 38 weeks d) 40 weeks

1650. All are seen in gestational diabetes except -
a) Previous macrosomic baby *(AIIMS May 10)*
b) Obesity
c) Malformations
d) Polyhydramnios

1632) a,c,d 1633)a 1634)d 1635)c 1636)b 1637)b 1638)c 1639)b 1640)c,d,e 1641)a 1642)b 1643)c 1644)b 1645)a,c,e 1646)b 1647)a 1648)c 1649)c 1650)c

1651. Treatment of choice for intrahepatic cholestasis in Pregnancy is - *(AI10)*
a) Cholestyramine
b) Ursodiol (Ursodeoxycholic acid)
c) Coricosteroids (Dexamethasone)
d) Antihistaminics

1652. All of the following are cardiac contraindications to pregnancy, except - *(AI 10)*
a) Eisenmenger's syndrome
b) Pulmonary hypertension
c) Coarctation of aorta
d) WPW syndrome

1653. The drug of choice to treat Chlamydia infection in pregnancy is- *(AI10)*
a) Tetracycline b) Doxycycline
c) Erythromycin d) Azithromycin

1654. The drug of choice to treat chlamydia infection in pregnancy is - *(AI 10)*
a) Tetracycline b) Doxycycline
c) Erythromycin d) Penicillin

1655. A woman presents with leakage of fluid per vaginum and meconium stained liquor at 34 weeks of gestation. The most likely organism causing infection would be - *(AI 10)*
a) Listeria monocytogenes b) Toxoplasmosis
c) CMV d) Herpes

1656. All of the following interventions are recommended to prevent mother to child transmission of HIV, except- *(AI10)*
a) Avoid Ergometrine in third stage of labour
b) Highly active antiretroviral therapy (HAART)
c) Elective caesarian section
d) Intrapartum zidovudine

1657. With reference to the transmission of HIV from mother to child, which one of the following statements is not correct? *(UP SCII10)*
a) The rate of transmission of HIV from mother to child is between 15-48%.
b) In majority of cases, transmission of virus occurs during intrapartum period
c) Single dose of 200 mg of nevirapine at the onset of labour eliminates the risk of HIV transmission to the newborn
d) HIV is transmitted through breast milk

1658. A pregnant woman presented at 28 weeks of gestation with haemoglobin level of 7 gm%; and peripheral smear reveals it to be of microcytic hypochromic type. What would be the correct option of therapy? *(UP SC II10)*
a) Blood transfusion
b) Oral iron therapy
c) Injectable iron therapy
d) Oral iron and folic acid therapy

1659. Which parenteral iron preparation does not cause anaphylaxis on intraveneous administration?
a) Irondextran b) Iron sorbitol *(UP SCII10)*
c) Iron fumerate d) Iron sucrose

1660. True statement regarding use of antiepileptic drugs in pregnancy - *(PGI May 10)*
a) Valproate is associated with NTD
b) Multiple drug should be given
c) Carbamazepine is safe
d) Phenytoin can produce foetal hydantoin syndrome

1661. Regarding H1N1 influenza in pregnancy, true statment (s) is/are - *(PGI May 10)*
a) Oseltamavir is used
b) H1N1 more dangerous in pregnancy
c) Should start t/t only after confirmation

1662. Regarding transmission of HIV to infant from infected HIV mother, which statement is/are true- *(PGI May 10)*
a) Start zidovudine during labour
b) 25% chance of vertical transmission
c) A void breast feeding
d) Vaccinate infant with OPV & MMR
e) CS cause less transmission

1663. Most common causes of maternal anaemia in pregnancy - *(PGI Nov. 10)*
a) Acute blood loss b) Iron deficiency state
c) GI blood loss d) Hemolytic anaemia
e) Thalassemia

1664. Prolactinoma in pregnancy, all are true except -
a) Most common pituitary tumor but rarely symptomatic *(AIIMS May 11)*
b) Increase in prolactin levels worse prognosis
c) Macroadenoma > 1 cm is associated with bad prognosis
d) Regular visual checkup

1665. All are seen in gestational diabetes except -
a) Previous macrosomic baby *(AIIMS May 11)*
b) Obesity
c) Malformations
d) Polyhydramnious

1666. A pregnant lady acquires chicken pox 3 days prior to delivery. She delivers by normal vaginal route. Which of the following statements is true?
a) Both mother and baby are safe *(AIIMS May 11)*
b) Give antiviral treatment to mother intra partum
c) Give antiviral treatment to baby
d) Baby will develop neonatal varicella syndrome

1667. Antiphospholipid syndrome is associated with all except - *(AIIMS May 11)*
a) Recurrent abortion b) Venous thrombosis
c) Pancytopenia d) Antibody to lupus

1668. 36 weeks pregnant diabetic female with NST non reactive. What should be done next -
a) Induction of labour
b) CS
c) Do NST after lhr
d) Proceed to biophysical profile

1651) b 1652) d 1653)d 1654)c 1655)a 1656)a 1657)c 1658)b 1659)d 1660)a,d 1661) a,b 1662)a,b,c,e 1663)a,b 1664)c 1665)c 1666)d 1667)c 1668)d

1669. Which of the following drugs should not be used in the conduct of labour in a woman with rheumatic heart disease - *(AI11)*
a) Methylergometrine b) Carboprost
c) Synctocin d) Misoprostol

1670. Which of the following is the best marker for intrahepatic cholestasis of pregnancy - *(AI 11)*
a) AST & ALT (Transaminases)
b) Bile Acids
c) Bilirubin
d) Alkaline Phosphatase

1671. All of the following drugs can be given to a mother with lupus after 35 week of gestation,Except-^47*11)*
a) Chlaroquine
b) Methotrexate
c) Sulphadiazine/ Sulphasalazine
d) Prednisolone

1672. A primigravida in first trimester was observed to be sputum positive for acid fast bacilli. She had no previous history of tuberculosis. Which of the following should be the treatment strategy -*(AI 11)*
a) Category I DOTS b) Category II DOTS
c) Category III DOTS d) Defer treatment 3

1673. Which of the following viruses is least likely to cross placenta- *(AI11)*
a) Rubella b) Herpes Simplex Virus
c) HIV d)HBV

1674. All of the following interventions are recommended to prevent mother to child transmission of HIV, Except- *(AI11)*
a) Avoid breast feeding
b) Highly Active Antiretroviral Therapy (HAART)
c) Vaginal delivery
d) Intrapartum Zidovudine

1675. Ideal time to perform screening test for gestational diabetes (in weeks) is - *(Karn11)*
a) 6-8 b) 12-14
c) 24-28 d) 36-38

1676. The perinatal complications of a diabetic pregnancy include- *(UPSC II11)*
1. Small for Gestational Age baby
2. Stillbirth
3. Hypoglycaemia
4. Respiratory distress syndrome

Select the correct answer from the code given below-
a) 1 and 4 only b) 1 and 2 only
c) 1,2 and 3 only d) 2,3 and 4 only

1677. Antimicrobial prophylaxis is essential for a woman in labour who has - *(UPSCII11)*
a) Hypertension b) Renal disease
c) Diabetes mellitus d) Heart disease

1678. In a pregnancy complicated by heart disease, which of the following is/are contraindicated -
1. External cephalic version *(UPSC II11)*
2. LSCS
3. Corrective surgery of the heart lesion
4. Prophylactic intravenous methergine at the birth of anterior shoulder

Select the correct answer from the code given below:
a) 1 only b) 1 and 3 only
c) 4 only d) 1,2,3 and 4

1679. Anti epileptic indicated in pregnancy - *(Jipmer 11)*
a) Valproic acid b) Carbamazepine
c) Trimetazadine d) Dilantin

GYNAECOLOGICAL DISORDERS IN OBS

1680. Procedure of choice in a woman with 12 wks pregnancy and atypical pap smear is - *(AI 93)*
a) Cone biopsy b) MTP with cone biopsy
c) Hystrectomy d) Colposcopy

1681. In Retroverted gravid uterus, urinary retention usually appears at - *(PGI93)*
a) 6-8 weeks b) 8-10 weeks
c) 12-14 weeks d) 16 weeks

1682. Acute urinary retention in gravid retroverted uterus occurs in - *(Kerala 95)*
a) 12-14 weeks b) 20-24 weeks
c) 16-20 weeks d) 24-28 weeks

1683. Following is the emergency management of bleeding vulvar varices during pregnancy - *(AIIMS 95)*
a) Pressure b) Cautery
c) Simple vulvectomy d) Observation only

1684. Commonest tumor in pregnancy is- *(AIIMS 96)*
a) Granulosa cell tumour
b) Mucinous cystadenoma
c) Mature dermoid
d) Fibroma

1685. The best treatment of an asymptomatic ovarian cyst in the first trimester - *(AIIMS 99)*
a) Immediate laporatomy
b) Laporatomy in second trimester
c) Laporatomy after delivery
d) Leave it alone till it becomes symptomatic

1686. Treatment of Red degeneration of fibroid in pregnancy - *(PGI 03)*
a) Analgesics
b) Laparotomy
c) Termination of pregnancy
d) Removal at caesarean section

1687. Regarding fibroid uteri - *(PGI 02)*
a) Estogen-dependant
b) Capsulated
c) Can lead to red degeneration in preganancy for which urgent surgery is required
d) Danazol used in treatment

1688. Treatment of choice for ovarian cyst in a postpartum patient is - *(AI07)*
a) Immediate removal
b) Removal aster 2 weeks
c) Removal after 6 weeks
d) Removal after 3 months

1669) a 1670)b 1671)b 1672)a 1673)b,d 1674)c 1675)c 1676)d 1677)d 1678)c 1679)b 1680)d 1681)c 1682) a 1683) d 1684) c 1685) b 1686)b,c,d 1687) a,d 1688) a

1689. In a gravid woman with placenta praevia, the following foetal complications are known to increase -
1. Congenital malformations *(UPSCII11)*
2. Intrauterine growth retardation
3. Prematurity

Select the correct answer from the code given below:
a) 1,2 and 3 b) 1 and 2 only
c) 2 and 3 only d) 1 and 3 only

1690. A pregnant woman with 16 weeks gestation is diagnosed to have an ovarian cyst of 11 cm diameter. The best timing for the removal of the ovarian cyst is- *(UPSCII11)*
a) Immediately
b) At the time of caesarean section
c) Immediately after delivery
d) Three months after delivery

PRETERM LABOUR AND INTRAUTERINE FETAL DEATH

1691. One of the following indicates death of fetus in uterus- *(Kerala 90)*
a) Spalding sign
b) Failure of uterus to enlarge
c) Blood statined discharge
d) Absence of fetal movements

1692. Intrauterine death at 36 weeks. Treatment is -
a) Continue upto term *(ROHTAK 98)*
b) Wait for spontanious expulsion
c) Syntocinon+ARM
d) Hysterectomy
e) LSCS

1693. In a preg women of 28 weeks gestation IUD is earliest demonstrated X-ray - *(PGI98)*
a) Increased flexion
b) Overlapping of cranial bone
c) Spalding's sign
d) Gas in vessels

1694. Risk of preterm delivery is increased if cervical length is - *(AI05)*
a) 2.5 cm b) 3.0 cm
c) 3.5 cm d) 4.0 cm

1695. After 28 weeks of gestation true is/are -
a) Viable *(PGI June 06)*
b) > 1000 gm
c) Lecthin/Sphingomyelin ratio > 2
d) Type II pneumocytes present
e) Phosphatidylglycerol present

1696. In a lady of 32 weeks pregnancy injection dexamehtasone is given to prevent - *(AI 07)*
a) RDS b) Neonatal convulsion
c) Neonatal jaundice d) Cerebral palsy

1697. On Transvaginal Sonography (TVS) which of the following shapes of cervix indicate imminent preterm labour - *(AI07)*
a) T b)Y
c) U d)0

1698. Nile blue sulphatase test in amniotic fluid is for- *(AIMS May 07)*
a) Lung maturity b) Kidney maturity
c) Liver maturity d) Skin maturity

1699. IUFD causes all except - *(MAHE 07)*
a) PIH b)DIC
c) Psychological upset d) Infection

1700. All are risk factors for preterm delivery except -
a) Absence of fetal fibronectin at < 37 weeks
b) Previous history of preterm baby *(MAHE 07)*
c) Asymptomatic cervical dilatation
d) Chlamydial infection of genital tract

1701. Drug given to reduce the uterine contraction during preterm labour with least side effect- *(AIMSNov 07)*
a) Ritodrine b)Nifidipine
c) Magnesiumsulphate d) Progesterone

1702. Which one of the following genital nfections is associated with preterm labour ? *(UPSC-II08)*
a) Hman Papilloma virus
b) Trichmonas vaginitis
c) Menilial vaginitis
d) Bacterial vaginosis

1703. IUFD causes all except - *(Manipal 08)*
a) PIH b)DIC
c) Psychological upset d) Infection

1704. All are risk factors for preterm delivery except -
a) Absent foetal fibronectin level at < 37 weeks
b) Previous H/o preterm baby *(Manipal 08)*
c) Asymptomatic cervical dilatation
d) Chlamydial infection of genital tract

1705. Adverse effect(s) of tocolytic agents in pregnancy is/are - *(PGI Nov 09)*
a) Pulmonary edema b)Hypoglycemia
c) Hypokalemia d) Arrhythmia
e) Hypertension

1706. Tocolytic of choice in heart *disease-(AJIMSNov 09)*
a) Nifedepine b) Atosiban
c) MgSo4 d) Salbutamol

1707. All are true about Prelabour rupture of membrane (PROM) except - *(PGIMay 10)*
a) Amnioinfusion is done
b) Amoxiclav antiobiotic should be given
c) Asceptic cervical examination
d) Steroid is used
e) Preterm labour

PREGNANCY IN Rh-NEGATIVE WOMEN

1708. In an Rh negative mother who was delivered an Rh positive baby, prophylactic anti D is indicated
a) If the indirect Coomb's Test (ICT) is negative
b) If the ICT is positive *(UPSC96)*
c) If the ICT is positive with rising titres
d) As a routine procedure

1689) a 1690) a 1691)a 1692)b 1693)d 1694)a 1695)a,b,d 1696)a 1697)c 1698)d 1699)a 1700)a 1701)d 1702)d 1703) a 1704)a 1705)a,c,d 1706)b 1707)a 1708)a

1709. In hydrops foetalis, on ultrasonography, the earliest sign is the development of foetal -
a) Pericardial effusion b) Ascites *(UPSC96)*
c) Pleurla effusion d) Skin edema

1710. Which does not cause Hydrops fetalis - *(PGI97)*
a) Syphilis b) Rh immunisation
c) ABO incompatibility d) None of the above

1711. The dose of anti D gamma globulin given after term delivery for a Rh negative mothe and Rh positive baby is - *(Kerala 2K)*
a) 50 micro gram b) 200 micro gram
c) 300 micro gram d) 100 micro gram
e) All the above doses are incorrect

1712. Most severely affected in child in Rh-iso-immunization patients - *(SGPGI05)*
a) Rh negative mother with Rh positive in 2nd child
b) Rh positive mother with Rh negative in 2nd child
c) Rh positive mother with Rh negative in 1st child
d) Rh positive mother with Rh negative in 2nd child

1713. At 28 weeks gestation, amniocentesis reveals a AOD 450 of 0.20 which is at the top of third zone of the liley curve. The most appropriate management of such a case in - *(AIIMS May 05)*
a) Immediate delivery
b) Intrauterine transfusion
c) Repeat Amniocentesis after 1 week
d) Plasmapheresis

1714. Causes of hydrops fatalis- *(PGI June 08)*
a) Parvo virus infection b) HZV infection
c) Down's syndrome d) Toxoplasma

1715. The least amount of fetal Rh+ve blood needed to cause isoimmunization in a Rh negative mother is -
a) 0.1 ml b) 0.01 ml*(DPGEE 08)*
c) 0.001ml d) 10 ml

1716. Mother's blood group is Rh-ive. Indirect Comb's is +ve. The following will be seen in baby -
a) Oligohydramnios *(PGI Nov 09)*
b) Abnormal umbilical artery waveform deceleration
c) Hydrops fetalis
d) IUGR
e) Anemia

1717. Non immune hydrops fetalis is caused by - *(AI10)*
a) CMV b) Parvovirus
c) HSV d)HIV

1718. Nonimmune hydrops fetalis is caused by all EXCEPT-
a) Parvo B19 virus *(Corned 10)*
b) Chromosomal abnormalities
c) Alpha-thalassaemia
d) ABO incompatibility

CONTRACTED PELVS

1719. CPD is best assessed by - *(TN 91)*
a) CT scan b) Ultrasound
c) Radiopelvimetry d) Bimanual examination

1720. The following is true of Naegele's pelvis -
a) Absence of one ala *(AIIMS 91, AP 96)*
b) Both alae absent
c) Kyphotic spine
d) Triradiate pelvis

1721. The following is true of Roberts pelvis - *(AI 92)*
a) Triradiate pelvis b) Single ala absent
c) Both alae absent d) Wide peovic brim

1722. True about anthrapoid pelvis, sacrosiatic notch is- *(CUPGEE99)*
a) Wide and shallow b) Wide and deep
c) Namjw and shallow d) Narrow and deep

1723. If one ala of sacrum is absent, it is called-fKara *99)*
a) Rickety flat pelvis b) Naegele's pelvis
c) Robert's pelvis d) Kyphotic pelvis

1724. Triradiate pelvis is seen in - *(PGI 97)*
a) Rickets b) Chondrodystrophy
c) Osteoporosis d) Hyperparathyroidism

1725. Dystocia dystrophia syndrome- *(APPG06)*
a) Android pelvis b) Platypelloid pelvis
c) Anthrapoid d) Gynaecoid pelvis

1726. Naegele's pelvis is - *(Manipal 06)*
a) Single pelvis ala absent
b) Both pelvis ala absent
c) Absence of 4th sacral vertebra
d) Absence of 1st sacral vertebra

1727. In Muller's maneuver to predict cephalopelvic disproportion (CPD) - *(Maharashtra 10)*
a) The vaginal finger is at ischial spine
b) The vaginal finger is at sacral promontory and thumb at the pubic symphysis
c) The vaginal finger is at tip of sacrum
d) None of the above

TRIAL OF LABOUR

1728. Trial of labour is contraindicated in - *(PGI 90)*
a) Elderly primi b) Previous cesarian
c) Malpresentation d) Occipito posterior

1729. All the following are contra-indications for Trial labour EXCEPT- *(Karnat.99)*
a) Breech presentation
b) Outlet contraction
c) Primi gravida
d) Post caesarean pregnancy

1730. Trial labour is contraindicated in all of the following except - *(APPG06)*
a) Primigravida b) Heart disease
c) Cesarean section d) PIH

1731. Oxytocin sensitivity test is used to assess the -
a) Foetal well-being *(UPSC07)*
b) Period of gestation
c) Cervical ripening
d) Uterine response for induction

1709)d 1710) c 171 l)c 1712)a 1713)c 1714)a,c,d 1715)a 1716)c,e 1717)b 1718)d 1719)a 1720)a 1721)c
1722) a 1723)b 1724)a 1725)a 1726)a 1727)a 1728)a,b,c 1729)c 1730)a 1731)d

ABNORMAL UTERINE ACTION

1732. Bandl's ring is caused by- *(A1IMS94)*
a) Uterine inertia
b) Cephalopelvic disproportion
c) Malepresentation
d) None

1733. Bandl's ring is also called as - *(PGI98)*
a) Constriction ring b) Schroeder's ring
c) Retraction ring d) Cervical dystocia

1734. Factor predisposing for face presentation -
a) Pelvic contraction *(PGI Nov 09)*
b) Anencephaly
c) Prematurity
d) Foetal goitre
e) Bicarbonate uterus

1735. A 20-year-old full-term primigravida is brought to the casualty with labour pains for last 24 hours and a hand prolapse. On examination, she has pulse 96/ min, BP 120/80 mmHg, and mild pallor. The abdominal examination reveals the uterine height at 32 weeks, the foetus in transverse lie and absent foetal heart sounds. On vaginal examination, the left arm of the foetus is prolapsed and the foetal ribs are palpable. The pelvis is adequate. What would be the best management option? *(UP SCII10)*
a) External cephalic version
b) Decapitation and delivering the baby vaginally
c) Internal podalic version
d) Lower segment caesarean section

1736. A lady presents at 37 weeks of gestation with uterine contraction and pain suggestive of labour for 10 hours. On examination cervix is persistently 1 cm dilated and uneffaced. What should be the next line of treatment? *(AI11)*
a) Sedation and wait
b) Induction with rupture of membranes
c) Augmentation with Oxytocin & Amniotomy
d) Caesarian section

1737. A pregnant mother is referred with a prolonged second stage of labour. On examination, the foetal heart sound is 120/min, and the head is at -1 station with severe moulding. What will be the most appropriate management - *(UPSC II11)*
a) Apply obstetric forceps and deliver
b) Apply ventouse and deliver
c) Perform LSCS
d) Start pitocin drip

1738. A multiparous patient presents with 36 weeks of pregnancy in labour. On examination, the cervix is fully dilated. The foetal heart rate is 170/min, and the head is at +2 station. What will be the most appropriate management - *(UPSC II11)*
a) Wait for the normal delivery
b) Apply ventouse and deliver
c) Apply forceps and deliver
d) Perform LSCS

1739. Pathological contraction ring is due to - *(Jipmer 11)*
a) Obstructed labour b) Uterine inertia
c) Preterm labor d)01igamnios

1740. Recurrent breech presentation is due to- *(Jipmer 11)*
a) Placenta previa b) Hydrocephalus
c) Septate uterus d) Short cord

MALPRESENTATION

1741. Earliest engagement is seen in... breech - *(TN90)*
a) Frank b) Complete
c) Incomplete d) Flexed

1742. The cause of of breech- *(PGI 90)*
a) hydramnoid b) Septate uterus
c) Hydrocephalus d)All

1743. Assisted breech delivery is done for - *(AI 91)*
a) Extended breech
b) Complete breech
c) Weight of baby less than 2 kg.
d) History of previous two successful breech delivery

1744. Delivery is not possible per vaginum in -
a) Mento anterior *(Jipmer 91)*
b) Sacro posterior
c) Persistent mento posterior
d) Extended breech

1745. In case of unstable lie of fetus, the placenta is usually-
a) Cornual b) Lateral wall *(AIIMS91)*
c) Fundus d) Lower segment

1746. A method of delivering the breech is - *(DNB 91)*
a) Scanzoni manoeuvre
b) Mauriceau's manoeuvre
c) Ritgen manoeuvre
d) Piper manoeuvre

1747. Most unfavourable presentation for vaginal delivery is - *(ALL INDIA 95)*
a) Mento posterior b) Mento anterior
c) Occipito posterior d) Deep transverse arrest

1748. Cord prolapse is most commonly associated with- *(CUPGEE96)*
a) Transverse lie b) Breech
c) Contracted pelvis d) Prematunity

1749. In an after coming head the following bone is perforated during decapitation - *(Karn. 96)*
a) Occiput b) Parietal
c) Palate d) Frontal

1750. Commonest cause of breech presentation - *(AI97)*
a) Prematurity b) Postmaturity
c) Oligohydramnios d) Polyhydramnios

1751. Cord prolapse is seen least in - *(JIPMER 98)*
a) Complete breech b) Frank breech
c) Knee breech d) Footing breech

1752. The treatment of choice in a primigravida at term in labour with transverse lie and cervical dilatation of 6 cm with infact membrane is - *(MP 96)*
a) Wait and watch till full dilationof Cervix
b) Internal podalic version and breech extraction
c) Lower segment caesarean section
d) Bioplar version

1732) b,c 1733) c 1734)a,b,d 1735)d 1736)a 1737)c 1738)c 1739)a 1740)c 1741)a 1742)d 1743)A11 1744)c
1745) d 1746)b 1747)a 1748)a 1749)a 1750)a 1751)b 1752)c

1753. Which of the following methods is commonly employed in delivery of aftercoming head in breech presentation - *(UPSC 97)*
a) Bum-Marshall method
b) Forcepts delivery
c) Mauriceau Smellie-veit method
d) Pinard's manoeurve

1754. a multigravida at term with transverse lie and hand prolapse with foetal heart sound of 140/min is best managed by - *(UPSC)*
a) Internal podalic version
b) Caesarean section
c) External cepphalic version
d) Breech extraction

1755. Most common congenital anomaly associated with face presentation is - *(CMC 98)*
a) Anencephaly b)Hydrammons
c) Microcephaly d) Hydrocephalus
e) Macrosomia

1756. Arrest of after coming head in breech with chin to pubis, which maneuver is used - *(PGI98)*
a) Maurice
b) Bumsmarshal
c) Pinards
d) Posterior rotation of chin and piper's forceps

1757. The complications of shoulder presentations are all of the following except - *(TN 99)*
a) Fetal death b) Uterine rupture
c) Obstructed labour d) Shoulder dystocia

1758. Following are contra indications to External Cephalic Version except - *(AIIMS 92)*
a) Contracted pelvis
b) Antepartum hemorrhage
c) Multiple pregnancy
d) Hydramnois

1759. The cause of failed external cephalic version (ECV) in a 34 weeks pregnancy is - *(Kerala 97)*
a) Oligohydramnios b) Breech
c) Hydramnios d) None of the above

1760. Which one of the following pairs of terminologies is NOT correctly matched - *(UPSC 2K)*
a) Breech delivery - Bum Marshal tech.
b) Neglected shoulder presentation - Bandle's ring or retraction ring
c) Retained placenta - True knot of cord
d) Reverse rotation to occipito sacral position - Face to pubic delivery

1761. A 30 yrs old multigravida presented with transverse lie with hand prolapse in Ilnd stage of labour with dead fetus. The treatment is - *(PGI 03)*
a) Chemical caesarean section
b) LSCS
c) Craniotomy
d) Decapitation
e) Cleidotomy

1762. Shoulder dystocia results in the following except-
a) Stemomastoid swelling *(PGI 97)*
b) Erb's palsy
c) Klumpkes paralysis
d) None

1763. Cause of death in breech delivery-(PG7*97, UPSC97)*
a) Intracranial haemorrhage b) Aspiration
c) Atlanto axial dislocation d) Asphyxia

1764. 38 weeks primi in early labour with transverse presentation TOC is - *(PGI 98)*
a) Allow for cervical dilatation
b) Internal podalic version
c) LSCS
d) Forceps

1765. Best method to deliver arms in breech - *(PGI98)*
a) Lovset's method b) Smellie veit
c) Pinard's d) Any of the above

1766. In deep transverse arrest the delivery of baby is conducted by A/E - *(PGI 99)*
a) Caesarean section
b) Vaccum extraction
c) Keilland forcep
d) Manual rotation and forcep delivery

1767. In intrauterine death with transverse lie, the following are treatment options except - *(PGI 99)*
a) Decapitation b) Evisceration
c) Craniotomy d) Caesarean section

1768. True about Frank Breech - *(PGI 02)*
a) Thigh extended, leg extended
b) Thigh flexed, knee extended
c) Both are flexed
d) Buddha's attitude
e) Common in primi

1769. Breech presentation with hydrocephalus is managed by- *(PGI02)*
a) Cesarean section
b) Trans-abdominal decompression
c) PV decompression
d) Craniotomy of aftercoming head

1770. Causes of Face presentation- *(PGI 03)*
a) Anencephaly b) Prematurity
c) Hydramnios d) Contracted pelvis
e) Placenta praevia

1771. Causes of breech presentation are- *(PGI 03)*
a) Hydrocephalus b) Oligohydramnios
c) Pelvic contracture d) Placenta praevia

1772. In a case of direct occipito - posterior position (Face to pubis delivery) most commonly encountered problem is - *(Karnataka02)*
a) Intracranial injury b) Cephalohematoma
c) Paraurethral tears d) Complete perineal tears

1773. Face to pubis delivery is common in which type of pelvis - *(Jipmer 03, PGI 97, AI97)*
a) Android b) Anthropoid
c) Platypelloid d)Gynaecoid

1753) a 1754)b 1755)a 1756)d 1757)d 1758)d 1759)a 1760)c 1761)b,d 1762)d 1763)a,d 1764)c 1765)a 1766) None 1767)d 1768)b,e 1769)c 1770)a,b,d 1771)a,b,c,d 1772)d 1773)b

1774. The commonest cause of occipito - posterior position of featl head during labour is - *(AIIMS 03)*
a) Maternal obesity b) Deflexion of fetal head
c) Multiparity d) Android pelvis

1775. The commonest cause of breech presentation is- *(AIIMS 03)*
a) Prematurity b) Hydrocephalus
c) Placenta previa d) Polyhydramnios

1776. The most common form of fetal traumatic injury incurred during breach extraction is - (*SGPGI05)*
a) Rupture of the liver
b) Rupture of the spleen
c) Intraadrenal hemorrhage
d) Intracranial hemorrhage

1777. Best treatment of Cord prolapse is - (*HPU 05)*
a) Replace the cord in vagina
b) Caesarean section
c) Immediate vaginal delivery
d) None of above

1778. A 25-year old G2P1A0 with history of previous vaginal breech delivery of a term, live baby comes with full term pregnancy with breech presentation. What is the best option - *(UPSC 06)*
a) Caesarean section
b) Assisted breech delivery
c) External cephalic version
d) Watchful expectancy

1779. Deep transverse arrest is seen in all except - *(Manipal 06)*
a) Android pelvis b) Epidural analgesia
c) Transverse lie d) Uterine inertia

1780. External Cephalic Version (ECV) is contraindicated in- *(AI07)*
a) Primigravida b) Flexed breech
c) Aaemia d)PIH

1781. Breech presentation is mostly mistaken for -
a) Face presentation b)Brow *(MAHE07)*
c) Shoulder d) Vertex

1782. Delivary of the after - coming head in breech presentation following forceps/methods are used except- *(UP 07)*
a) Wrigely's forceps
b) Kielland's forceps
c) Das's variety forceps
d) Mauriceau smellie, veit technique

1783. Techniques of delivery of after coming head in breech presentation - *(PGI June 0 7)*
a) Bums - Marshal method
b) Forceps delivery
c) Modified Mauriceau - Smellie - Veit technique
d) Lovset's maneuver

1784. When in labor, a diagnosis of occipito posterior presentation is made. The most appropriate management in this case would be -*(AiimsMay 08)*
a) Emergency CS
b) Wait and watch for progress of labour
c) Early rupture of membranes
d) Start oxytocin drip

1785. In intrauterine death with transverse lie, the following are treatment options, except -*(DELHIPG Feb. 09)*
a) Decapitation b) Evisceration
c) Craniotomy d) Caesarean section

1786. Patient with occipito posterior position. What is the management - *(AIIMS Nov 09)*
a) Wait and watch for progress of labour
b) Cesarian section
c) Oxytocin influsion
d) Rupture of membranes

1787. All of the following maneuvers are used in shoulder dystocia, except- *(AI10)*
a) Woods corkscrew maneuver
b) Me Roberts maneuver
c) Suprapubic pressure
d) Mauriceau-smellie veit maneuver

1788. The most unfavourable prognosis is of-
a) Mentoposterior position *(Maharashtra 10)*
b) Occipitoanterior position
c) Occipitoposterior position
d) Mentoanterior position

1789. Loveset maneuver is useful for management of breech with- *(Maharashtra 10)*
a) Extended legs b) Flexed legs
c) Extended arm d) Nuchal displacement of arm

1790. Match List-I with List-II and select the correct answer using the code given below the Lists -

List-1 *(Manoeuvre)*	**List-II** *(Indication)*
A. Pinard's manoeuvre	1. Delivery of the extended arms in a breech
B. Lovset's manoeuvre	2. Delivery of a foot into the vagina in a breech
C. Mauriceau-Smellie-Veit manoeuvre	3. Breech presentation at term
D. External cephalic	4. Delivery of the after-coming version head of a breech

	A	B	C	**D** *(UP SC II10)*
a)	2	4	1	3
b)	3	1	4	2
c)	2	1	4	3
d)	3	4	1	2

OBSTRUCTED LABOUR

1791. Shoulder dystocia is seen in predominantly -
a) Transverse lie b) Hand Prolapse *(TN 90)*
c) Anencephaly d) Cord around neck

1792. Anencephaly is associated with the following factor - *(Karn 96)*
a) Hydramniosb) Postmaturity
c) Prematurity d) All of these

1793. Anencephaly can best be diagnosed at (by USG) -
a) 10-12 weeks b) 12-14 weeks *(AIIMS 96)*
c) 14-16 weeks d) 16-20 weeks

1774) d 1775) a 1776)d 1777)b 1778)b 1779)c 1780)d 1781)a 1782)a 1783)a,b,c 1784)b 1785)c 1786)a
1787) d 1788)a 1789)c 1790)c 1791)c 1792)d 1793)a

1794. Anencephaly causes all except - *(TN 98)*
a) Prematurityb)Postmaturity
c) Hydramnios d)Face resentation

1795. Anencephaly is earliest diagnosed at - *(Rohtak97)*
a) 6 weeks b)10 weeks
c) 14 weeks d)18 weeks
e) 20 weeks

1796. Anencephaly is associated with all the following except- *(AIIMS2K)*
a) Face presentation
b) Adrenal gland hypertrophy
c) Hydramnios
d) Post maturity

1797. All are the risk factors associated with macrosomia except- *(AI05)*
a) Maternal obesity b) Prolonged Pregnancy
c) Previous large infant d) Short Stature

1798. Sudden hyperflexion of thigh over abdomen (Mcrobert's procedure), which of the following nerve is commonly involved - *(AIIMS Nov 08)*
a) Common peroneal nerve
b) Obturator nerve
c) Lumbosacral trunk
d) Lateral cutaneous nerve of thigh

1799. All are done in management of shoulder dystocia except- *(AIIMSNov 08)*
a) Fundal pressure b) Mcroberts manoeuver
c) Suprapubic pressure d) Woods manoeuvre

1800. A female at 37 wks of gestation has mild labour pain for 10 hours and cervix is persistently 1CM dilated but non effaced. What will be next appropriate management ? *(AIIMS Nov 08)*
a) Sedation and wait
b) Augmentation with syntocin
c) Cesarean section
d) Amniotomy

1801. A woman comes with obstructed labour and is grossly dehydrated. Investigations reveal fetal demise. What will be the management ? *(AIIMSNov 08)*
a) Craniotomy b) Decapitation
c) Cesarean section d) Forceps extraction

1802. A primi patient present's in obstructed labour with a neglected shoulder presentation. The mother shows signs of exhaustion and the fetus is dead. The treatment of choice is - *(AI09)*
a) Craniotomy b) Dcapitation
c) Cesarian section d) Wait and watch

1803. A pregnant women, previous LSCS with hematuria. Diagnosis is? *(AIIMS Nov 09)*
a) Impending scar rupture of uterus
b) Prolonged labour
c) Uretreral injury
d) Cystitis

1804. The presence of a retraction ring at the junction of upper and lower uterine segment in labour indicates-
a) Prolonged labour *(UP SC II10)*
b) Cervical dystocia
c) Obstructed labour
d) Precipitate labour

1805. 30 yrs old female comes with obstructed labour and is febrile & dehydrated with 1UFD and cephalic presentation. Which is the best way to manage -
a) Craniotomy *(AIIMS May 11)*
b) Decapitation
c) Cesarean section
d) Forceps extraction

1806. All of the following maneuvers are used in shoulder dystocia, except - *(AI 11)*
a) Woods Corkscrew Maneuver
b) Me Roberts Maneuver
c) Suprapubic Pressure
d) Mauriceau- Smellie Veit Maneuver

COMPLICATION OF 3rd STAGE OFLABOUR

1807. The causes of post partum hemorrhage in a retracted uterus - *(PGI90)*
a) Vaginal tear b) Carvical laceration
c) Retained placenta d) Atony of uterus

1808. Which is not true of placenta accreta -
a) May penetrate serosa *(JIPMER 93)*
b) Invades myometrium
c) Absence of Nitabuch membrane
d) More common in primigravida

1809. Post partum haemorrage is present when blood loss exceeds - *(UPSC 84, Karn 96)*
a) 200 cc b)400cc
c) 500 cc d) 700 cc
e) lOOOcc

1810. A 30-year old woman para 6 delivers vaginally following normal labour with spontaneous delivery of an intact placenta. Excessive bleeding continues,despite manual exploration, bimanual massage, intravenous oxytocin and administration of 0.2 mg methergin Iv, which one of the following would be the next step in the management of this patient -
a) Packing the uterus
b) Immediate hysterectomy
c) Bilateral Internal Iliac ligation
d) IM injection of PGF 2 a

1811. During PPH Intenal Iliac Ligation done at -
a) Origin of Internal iliac artery *(KARN 95)*
b) Anterior division of Internal iliac artery
c) Posterior division of Intenal iliac artery
d) Common iliac artery

1794) None 1795)b 1796)b 1797)d 1798)d 1799)a 1800)a 1801)c 1802)b 1803)b 1804)c 1805)c 1806)d 1807) a,b,c 1808)d 1809)c 1810)d 1811)b

1812. Maximum chances of post partum Haemorrhage are seen in - *(AMU95)*
a) Multiparity b) Primipara
c) Abnormal lie d)All

1813. All predispose to placenta accreta except - *(AP 96)*
a) Multiparity b) Previous ceserian
c) Placenta pracvia d) Previous D & C

1814. Atonic post partum hemorrhage occurs in all except- *(TN98)*
a) Multiple pregnancy b) Hydramnois
c) Erythroblastosis fetalis d) Prolonged labour

1815. Post partum haeorrhage is blood loss of 500 cc or more within - *(ORRISA98)*
a) 6 hors of the beginnig of 3rd stage of labour
b) 12 hors of the begining of 3rd stage of labour
c) 18 hours of the begining of 3rd stage of labour
d) 24 hours of the begining of 3rd stage of labour

1816. Atonic uterus is more common in - *(PGI97)*
a) Caesarean section b) Multi gravida
c) Primi gravida d) Breech delivery

1817. Common cause of retained placenta is - (*Jipmer 03)*
a) Atonic uterus
b) Conduction ring
c) Placenta accreta
d) Poor voluntary expulsive effort

1818. Common causeof death in inversion of uterus - (*Jipmer 03)*
a) Neurogenic shock b) Hemorrhage
c) Pulmonary embolism d) Infection

1819. All of the following used for postpartum hemorrhage except - (*APPGE 05)*
a) Misoprostol b) Carboprost
c) Mifepristone d) Methergine

1820. The following complications during pregnancy increase the risk of postpartum hemorrhage (PPH) except - *(AI06)*
a) Hypertension b) Macrosomia
c) Twin pregnancy d) Hydramnios

1821. What is the used in treatment for PPH except -
a) Oxytocin b) Carboprost (*Manipal 06)*
c) Ergometrine d)Ritodrine

1822. All are causes of atonic post partum haemorrhage except- *(UP07)*
a) Over distension of the uterus
b) Cervical teat
c) Prolonged labour
d) Constriction ring

1823. A 20 year old primigravida is admitted with-term pregnancy and labour pains. At 4.00 AM she goes into active phase of labout with 4 cm cervical dilatation. Membranes rupture during p/v examination showing clear liquor. A repeat p/v examination after 4 hours of good uretine conditions reveals as cervical dilatation of 5 cm. What should be the next step in management-
a) Reassess after 4 hours *(UPSC 07)*
b) Immediate cesarean section
c) Oxytocin drip
d) Reassess for occipitoposterior position and cephalopelvic disproportion

1824. A primigravida with full-term pregnancy in labour for one day is brought to casualty after dai handling. On examination, she is dehydrated, slightly pale; pulse is 100/minute, BP 120/80 mm Hg. Abdominal examination reveals a fundal height of 36 weeks, cephalic presentation, foetal heart absent, mild uterine contractions present. On p/v examination, cervix is fully dilated, head is at puls one station, caput with moulding present, pelvis is adequate. Dirty, infected discharge present. What would be the best management option after initial work-up -
a) Cesarean section *(UPSC 07)*
b) Oxytocin drip
c) Ventouse delivery
d) Craniotomy and vaginal delivery

1825. An elederly multiparous woman with intrauterine foetal death was admitted with strong labour pains. The patient suddenly goes in shock with cyanosis respiratory disturbances and pulmonary oedema. The most likely clinical diagnosis is - *(UPSC 07)*
a) Rupture of uterus
b) Congestive heart failure
c) Amniotic fluid embolism
d) Concealed accdental haemorrhage

1826. Risk factors for Placenta Accreta incude all of the following except - *(AI 08)*
a) Previous LSCS scar
b) Previous curettage
c) Previous myomectomy
d) Previous placenta praevia

1827. Placenta acreta a/w - *(PGIJune 08)*
a) Placenta praevia b) Uterien scar
c) Multiple pregnancy d) Multipara
e) Uterine malformations

1828. Treatment of PPH includes- *(PGI Dec 08)*
a) B-lynch suture
b) Uterine tamponade
c) Ligation of internal iliac artery
d) Ligation of external iliac artery
e) Ligation of common iliac artery

1829. Rupture uterus is most commonly encountered after which one of the following surgeries *?(UPSC-II 09)*
a) Classical cesarean b) Metroplasty
c) Myomectomy d) Hysterotomy

1830. Management of PPH includes - *(PGI Nov 09)*
a) Uterine artery ligation
b) Hysterectomy
c) Sengstaken-Blakemore ballon temponade
d) Internal iliac artery ligation
e) Laser endometrial abalation

1812) a 1813) a 1814)c 1815)d 1816)b 1817)a 1818)a,b,c 1819)c 1820)a 1821)d 1822)b 1823)d 1824)c 1825)c 1826)d 1827)a,b,d,e 1828)a,b,c 1829)a 1830)a,b,c,d

1831. B-Lynch stitch is applied on the uterus for the treatment of - *(UP SC II10)*
a) Incompetent os
b) Atonic PPH
c) Bleeding from placental bed of placenta praevia
d) Ruptured uterus

1832. Third degree perineal tear is said to have occurred when it involves - *(Karn 11)*
a) Anal sphincter b) Perineal muscles
c) Rectal mucosa d) Vaginal mucosa

1833. The most common cause of secondary postpartum haemorrhage is - *(UPSCII11)*
a) Intrauterine infection
b) Subinvolution of uterus
c) Oestrogen therapy administered to inhibit the lactation
d) Retained fragments of placenta or membranes

INJURY TO THE BIRTH CANAL

1834. In a patient with third degree perineal tear, presenting after 1 weeks, repair should be done -
a) Immediately b) 2 weeks*(AIIMS92)*
c) After 6 weeks d) After 12weeks

1835. Uterine rupture is least common with -*{JIPMER 02)*
a) LSCS
b) Classical section
c) Inverted T shaped incision
d) T Shaped incision

1836. Incidence of scar rupture in a pregnant lady with previous LSCS is - *{JIPMER 2K)*
a) 0.2% b) 0.5 %
c) 0.7% d) 0.9 %

1837. In classical caesarean section more chances of rupture of uterus is in - *{JIPMER 95)*
a) Upper uterine segment
b) Lower uterine segment
c) Utero cervical junction
d) Posterior uterine segment

1838. Cervical lacerations are most common in the- *(UPSC 96)*
a) 3 o' clock position b) 6 o' clock position
c) 9 o' clock position d) 12 o' clock position

1839. Complete perineal tear is common in - *{UPSC 02)*
a) Face to pubes delivery
b) Breech delivery
c) Internal podalic version
d) Manual removal of placenta

1840. A woman delivers a 9 - lb infant with a midline episiotomy and suffers a third degree tear. Inspection shows which of the following structures is intract - *{Karnataka 03)*
a) Anal sphincter b) Perineal body
c) Perineal muscles d) Rectal mucosa

1841. Indicators of impending uterine rupture during labour include all of the following except - *(AJ 06)*
a) Fetal distress
b) Hematuria
c) Fresh bleeding per vaginum
d) Passage of meconium

1842. EDI perineal tear is involvement of -*(Karn pgmee 06)*
a) Vaginal mucosa b) Urethral mucosa
c) Levator ani muscle d) Anal Sphincter

ABNORMALITY OF PUERPERIUM

1843. Commonest cause for puerperal sepsis is -
a) Streptococci b) Anaerobes *(Kerlala 94)*
c) Gonococci d) Staphyococci

1844. Puerperal sepsis is due to spread of infection along which route - *(AIIMS 95)*
a) Direct extension b) Arterial
c) Venous d) Lymphatics

1845. Puerperal pyrexia is fever for 24 hours or more after child birth if temperature is more than -
a) 99° F b)99.5°F *(Orrisa98)*
c) 100°F d) 100.4°F

1846. The most common site of puerperal infection is - *(JIPMER 02)*
a) Episiotomy wound b) Placental site
c) Vaginal laceration d) Cervical laceration

1847. All are complication of formula fed baby over human milk fed baby except - *(JIPMER 95)*
a) Necrotizing enterocolitis b) Otitis media
c) Hypocalcemia d) Vit K deficiency

1848. The cause of 'postpartum blues' is - *(UPSC 04)*
a) Decreased estrogen
b) Decreased progesterone
c) Increased prolactin
d) Decreased estrogen and progesterone

1849. A patient has just delivered a live baby and is referred to in state of shock. On abdominal examination, uterus is not felt. On pelvic examination, a mass is seen protruding through the vagina. What is the most likely diagnosis - *(UPSC 0 7)*
a) Cervical fibroid polyp
b) Third degree uterine prolapse
c) Acute inversion of uterus
d) Rupture of uterus

1850. Which complication you would expect during internal podalic version in case of transverse lie -
a) Uterine rupture *(AIIMS Nov 0 7)*
b) Cervical laceration
c) Uterine atony
d) Vaginal laceration

1851. Least management in Mento-posterior presentation-
a) Vaginal delivery *(UP 08)*
b) Forceps delivery
c) Manual rotation
d) Caesarean section

1831) b 1832) a 1833)d 1834)d 1835)a 1836)b 1837)a 1838)a 1839)a 1840)d 1841)bord 1842)d 1843)a,b 1844) a,b,c 1845)d 1846)b 1847)d 1848)d 1849)c 1850)a 1851)d

1852. After a full term normal delivery patient went into shock. Most probable cause is - *(AIIMS Nov 10)*
a) Inversion of uterus b) PPH
c) Amniotic fluid embolism d)Eclapsia

FETUS AND NEWBORN & THEIR DISEASES

1853. Singers Alkali denaturation test is done with -
a) Maternal Hb b) Fetal Hb *(TN91)*
c) Amniotic fluid d) Menstrual fluid

1854. Foetal Hb is different from HBA in that it is -
a) More sensitive to alkali denaturation *(DNB 91)*
b) More resistant to alkali denaturation
c) More sensitive of acid denaturation
d) All of the above

1855. Which is incorrect about cephalhematom - *(AJ 92)*
a) Does not cross suture line
b) Fluctuation is seen
c) Present of birth
d) Presents few hours after birth

1856. Internal organs in the fetus develop at -*(Kerala 91)*
a) 24wks b)12wks
c) lOwks d)6wks

1857. Fetal hemopoieisis first occurs in- *(Karn94,*
a) Yolk sac b) Liver *MAHE04)*
c) Spleen d) Bone marrow

1858. Breast feeding should be started in normal delivery- *(Kerala 94)*
a) Soon after delivery b)After2hrs
c) After 6 hrs d) After 4 hrs

1859. Alkali resistant haemoglobin is - *(Kerala 95)*
a) HbA b) HbA,C
c) HbS d)HbF

1860. Life span of neonatal RBC is - *(Assam 95)*
a) 120 days b) 100 days
c) 6 months d) one year

1861. Which is abnormal in classic haemorrhagic disease of newborn - *(UP 2K)*
a) Platelet count b) Thrombin time
c) Fibrinogen level d)APTT

1862. According to registrar society of India commonest cause of IMR in India is - *(All India 97)*
a) Prematurity
b) Diarrhoea
c) Malnutrition
d) Acute Respiratory Infection

1863. In well baby clinic a neonate is brought with liver two fingers is enlarged. The cause is - *(AIIHPH 98)*
a) Normal phenomena b) Hepatitis
c) Choledochal cyst d) Biliary atresia

1864. Commonest cause of neonatal death in India is -
a) Prematurity *(AIIMS 83)*
b) Congenital malformations
c) Metabolic disease
d) Birth injury

1865. Meconium is excreted by a new born till... day -
a) 2 b)3 *(AP88)*
c) 6 d)4

1866. The number of fontanelles present in a new born child is -
a) 1 b)2
c) 4 d)6

1867. Breathing movements and swallowing movement seen in the foetus by - *(Orissa R)*
a) 13-14 weeks b) 16 weeks
c) 12 weeks d) 20 weeks

1868. Foetal breathing movements is seen earliest at -
a) 8 weeks b) 11 weeks *(Orissa2K)*
c) 16 weeks d) 24 weeks

1869. Hematoma of the sternomastoid muscle detected in a 16 days old infant requires - *(AIIMS 02)*
a) Immediate surgical evacuation
b) Surgical intervention within 2 weeks
c) Prophylactic antibiotic therapy
d) No immediate therapy

1870. Non immune hydrops is not a feature of which of the following - *(AIIMS 2K)*
a) Chromosomal abnormalities
b) Alpha thalassemia
c) Renal malformations
d) Foetal cardiac abnormalities

1871. In non immune hydrops which of the following is NOT seen - *(AIIMS 2000)*
a) Skin oedema b) Ascites
c) Large placenta d) Cardiomegaly

1872. Fetal trisomy - 21 is associated with all of the following EXCEPT- *(Karnataka 02)*
a) Increased Nuchal skin fold thickness
b) Decreased serum alpha fetoprotein level
c) Decreased serum human chorionic gonadotropin level
d) Decreased unconjugated estriol level

1873. Rule of Hasse is used to determine - *(AIIMS 03)*
a) The age of fetus b) Height of an adult
c) Race of a person d) Identification

1874. Urine formation in intrauterine life starts at -
a) 3 months b) 4 months *(Jipmer04)*
c) 5 months d) 6 months

1875. Fetal stage starts at - *(Jipmer04)*
a) 9 weeks b) 3 weeks
c) 6 weeks d) 12 weeks

1876. Intra-uterine assessment of foetal distress indicated by - *(PGI04)*
a) Acceleration of 15/min
b) Deceleration of 30/min
c) Variable deceleration 5-25/min
d) Fetal HR<80/min
e) Fetal HR 160-180/min

1852)a,c 1853) b 1854)b 1855)c 1856)d 1857)a 1858)a 1859)d 1860)b 1861)b 1862)a 1863)a 1864)a 1865)d
1866)d 1867)c 1868)b 1869)d 1870)b 1871)d 1872)c 1873)a 1874)a 1875)a 1876)b,c,d

1877. A 25 year old woman had premature rupture of membranes and delivered a male child who became lethargic and apneic on the 1st day of and went into shock. The mother had a previous history of abortion 1 year back. On culture, her vaginal swab growth of a hemolytic colonies on blood agar was found. On staining these were found to be gram positive cocci. Which of the following is the most likely etiological agent -
a) Streptococcus pyogenes *(AI04)*
b) Streptococcus agalactiae
c) Peptostreptococci
d) Enterococcus faecium

1878. The umbilical cord stump of a newborn most frequently sloughs off about the - (.*Kerala 04)*
a) Second day after delivery
b) Fifth day after delivery
c) 10th day after delivery
d) 15th day after delivery

1879. Glucocorticoids given to a case of Preterm Labour help in reducing all of the following neonatal complications EXCEPT- *(Karnataka 02)*
a) Respiratory distress syndrome
b) Intraventricular hemorrhage
c) Necrotising enterocolitis
d) Bronchopulmonary dysplasia

1880. Which of the following is cause of non immune hydrops - *(SGPGI05)*
a) B/L renal agensis
b) Keil blood group isoimmunization
c) Rh-isoimmunization
d) Hypoproteinemia

1881. Causes of physiological jaundice- *(MAHE05)*
a) T Hb-F destruction
b) *i* Conversion of bilirubin to urobilinogen
c) Inadequate conjugation of bilirubin
d) All the above

1882. Lanugo hair appears at - *(UP 07)*
a) 4 months b) 5 months
c) 6 months d) 7 months

1883. Non immune hydrops fetalis is caused by all except- (*Corned 07, UP 2k)*
a) ParvoB 19 virus
b) Chromosomal abnormalities
c) Alpha thalassaemia
d) ABO incompatibility

1884. Consider the following statements regarding a cephalhaematoma - *(UPSC-II08)*
1. Present at birth
2. It can occur after a normal delivery
3. The commonest site is over the parietal bone
4. The bleeding is sub-periosteal

Which of the statements given above are correct in the context of cephalhaematoma ? *(UPSC-II 08)*
a) 1 and 4 b) 1 and 2 only
c) 1, 2 and 3 d) 2, 3 and 4

1885. Which is not true about cephalohaematoma ?
a) Not limited by sutures *(APPG 08)*
b) Swelling subsides in 3 months
c) Caused by periosteal injury of skull
d) None

1886. Infants born to mothers who are heavy drinkers are at increased risk of which of the following problems ?
a) Mental retardation *(COMED 09)*
b) Chronic lever disease
c) Excessive birthweight
d) Chorioretinitis

INTRAUTERINE GROWTH RETARDATION

1887. IUGR is caused by all except - *(MP 98)*
a) Rh incompatibility b) Smoking
c) DM d)CRF

1888. IUGR is characterized by a/e - *(PGI01)*
a) Polycythemia b) Meconium aspiration synd
c) HMD d) Hypocalcemia

1889. IUGR seen in - *(PGI 02)*
a) Rubella b) Syphillis
c) CMV d)Chickenpox
e) HPV

1890. True about intrauterine fetal death (TUD) -
a) Gas bubbles in great vessels *(PGI 03)*
b) halo's sign +ve
c) Overlapping of skull bone
d) -*l* Amniotic fluid volume

1891. In a case of intrauterine growth retardation, the most dependable method of determining fetal well being is - *(SGPGI 05)*
a) Ultrasonic fetal cephalometry
b) Contraction stress test (oxytocin challenge test)
c) Amniotic fluid triglyceride
d) Uteroplacental blood flow

1892. All are the causes of intrauterine growth retardation except - *(A 105)*
a) Anemia
b) Pregnancy induced hypertension
c) Maternal heart disease
d) Gestational diabetes

1893. Which of the following Doppler findigns in IUGR is associated with worst prognosis - *(AI07)*
a) Reversal of diastolic flow
b) Absence of diastolic flow
c) Absence of systolic flow
d) Dicrotic notch

1894. Birth weight of a baby can be increased by -
a) Cessation of smoking *(Aiims May 07)*
b) Aspirin
c) Ca^ and vitamin D supplement
d) Bed rest

1877)b 1878)c 1879)d 1880)a 1881)d 1882)a 1883)c 1884)d 1885)a 1886)a 1887) a,c 1888) c 1889) a,c 1890) a,c 1891)b 1892)d 1893)a 1894)a

1895. Intrauterine foetal growth retardation may be associated with the following except - *(UPSC 07)*
a) Maternal drug addiction
b) Maternal smoking
c) Foetal viral infection
d) Regular maternal aspirin intake

1896. Difference between Prematurity & IUGR that Prematurity has - *(PGI June 08)*
a) Sole creases all over feet
b) Breast module 2 mm
c) Ear cartilage well formed-good elastic recoil
d) Skin glistening thin
e) Poor muscle tone

PHARMACOTHERAPEUTBC IN OBSTETRICS

1897. Oxytocin challenge test for assessing fetal well being is contraindicated in all except - *{JIPMER 91)*
a) Placenta previa b) Previous 2 LSCS
c) Breech d) Premature labour

1898. Contraction stress *test* is used to detect - *{JIPMER 93)*
a) Fetal hypoxia b) Placenta previa
c) Hydramnois d) Cord prolapse

1899. Methylergometrine is contraindicated is- *{A1IMS97)*
a) Multiparty b) Bicomuate uterus
c) Post partum haemorrhage d) Eclampsia

1900. Oxytocin is preferred over ergometrine in -
a) Atonic uterine bleeds following delivery
b) In induction of labour *{PGI 97)*
c) Uterine bleeding following abortion
d) Following expulsion of hydatidiform mole

1901. In which of the following conditions would prophylatic methergin be contraindicated -
a) Susppected multiple pregnancy *{UPSC97)*
b) Anaemia
c) Cardiac disease
d) Rh-ve mother

1902. Halflife (biological) of oxytocin- *{J&K01)*
a) 2-3 min b) 3-4 min
c) 5-6 min d) 7-8 min

1903. Magnesium sulphate potentiates the hypotensive action of *(UPSC 97)*
a) Methyl dopa b) Nifedipine
c) Enalapril d)Hydralazine

1904. Which does not affect the foetus - *(AI98)*
a) Lytic cocktail b) Magnesium sulphate
c) Warfarin d) Phenytoin

1905. Which of the following congenital malformations is seen in a child of a mother who is on treatment with oral anticoagulants - *(AIIMS 2K)*
a) Craniofacial malformations
b) Renal agencies
c) Long bone defects
d) Chondrodysplasia punctata

1906. Paracervical block relieves pain from all but one of the following -
a) Pain from dilatation of the cervix
b) Uterine pain
c) Relieves pain from the lower third of vagina and episiotomy can by performed
d) Relieve pain from the upper third of vagina

1907. The nerve roots blocked in pudendal nerve block is- *{AI93)*
a) LI,2,3 b)L2,3
c) S 2,3,4 d)S4

1908. Drug strictly contraindicated in lactation - *(PGI 98)*
a) Lithium b) Carbamazepine
c) Penicillin d) Ovarian

1909. Concentration of $MgS0_4$ in the treatment of eclampsia in mEq/L. *(PGI 99)*
a) 7-10 b) 10-15
c) 24 d)4-7

1910. Antimalarial(s) to be avoided in pregnancy-
a) Chloroquine b) Quinine *(PGI 01)*
c) Primaquine d) Anti-folates
e) Tetracyclines

1911. Use of which of the following drug is contra - indicated in pregnancy? *{AIIMS 03)*
a) Digoxin b) Nifedipine
c) Amoxycillin d) Enalapril

1912. All of the following are known side effects with the use of tocolytic therapy EXCEPT- *{AIIMS 03)*
a) Tachycardia b) Hypotension
c) Hyperglycemia d) Fever

1913. Therapeutic level of magnesium in serum for treatment of eclampsia is - **(***UPSC 04)*
a) 2 - 7 mEq/L b) 9 -12 mEq/L
c) 15 - 17mEq/L d) 30-35 mEq/L

1914. Misoprostol has been found to be effective in all of the following except - *(AI 05)*
a) Missed abortion
b) Induction of labour
c) Menorrhagia
d) Prevention of post-partum hemorrhage (PPH)

1915. Which one of the following methods for induction of labour should not be used in patient with previous lower segment caesarean section ?
a) Prostaglandin Gel *(UPSC 06)*
b) Prostaglandin tablet
c) Stripping of the membrane
d) Oxytocin drip

1916. All are true about oxytocin except - *(MAHE 07)*
a) Causes regular uterine
b) Octapeptide
c) Promotes development of lobules of breast
d) Has ADH- like action

1917. Oxytocin-induced myometrial contractions are inhibited by all of the following except- *{Coined 07)*
a) Ergometrine b) Terbutaline
c) Magnesium d) Halothane

1895)d 1896) b,d,e 1897)c 1898)a 1899)d 1900)b 1901)a,c,d 1902)b 1903)b 1904)b 1905)a,d 1906)c 1907)c 1908) a 1909)d 1910)c,d,e 1911)d 1912)d 1913)a 1914)c 1915)b 1916)c 1917)a

1918. Which of the followng anteretroviral therapy is contraindicated in pregnancy - *(UP 08)*
a) Nevirapine b) Efavirenz
c) Lamivudine d) Stavudine

1919. All of the following agents are tocolytics except - *(A108)*
a) Ritodrine b) Salbutamol
c) Isoxsuprine d) Misoprostol

1920. All are true about oxytocin except - *(Manipal 08)*
a) Causes regular uterine
b) Octapeptide
c) Promotes development of lobules of breast
d) Has ADH like action

1921. Which of the following drug (s) is/are not tocolytic agent - *(PGI Dec 08)*
a) Magnesium sulphate b) Betamethasone
c) Ritodrine d) Nifedipine
e) Misoprostol

1922. Which of the following medications can be safely used in pregnancy - *(A109)*
a) Propythiouracil b) Methotrexate
c) Warfarin d) Tetracycline

1923. True about medroxyprogesterone acetate -
a) Glucose intolerance occur *(PGINov 09)*
b) Pregnancy rate 0.3/100 women year
c) Anemia improves
d) Wt. gain
e) 150 mg 3 monthly

1924. True about misoprostol - *(PGINov 09)*
a) PGE2
b) Administered rectally
c) Need refrigeration
d) Used in post partum haemorrhage
e) Induction of 1st TM abortion

INDUCTION OF LABOUR

1925. Partogram in pregnancy includes all of the following except - **(***UP SC 96)*
a) Uterine contraction
b) Cervical dilatation in time scale
c) Descent of foetal head in time scale
d) Non-stress Test

1926. Bishop's score include all except - **(***PGI98)*
a) Dilatation of cervix
b) Effacement of cervix
c) Contractions of uterus
d) Station of the head

1927. Cervical ripening is mainly due to the action of -
a) PGE2 b) PGF2 *(IN 99)*
c) PG12 d)PGG2

1928. Indication for induction of labour is- *(Kerala 94)*
a) Placenta previa b)PIHatterm
c) Heart disease d) Breech

1929. A.R.M. is contraindicated - *(UPSC 96)*
a) In pregnancy beyond 40 weeks
b) When the mother is RH-ve
c) When the mother is diabetic
d) When the foetus is dead

1930. Bishop scoring of more than..... indicates labour has begun- *(Assam 95)*
a) 3 b) 5
c) 6 d) 7

1931. Contraindication of induction *of\abour-(Calcutta 2K)*
a) PIH b) Bad obstetrical history
c) Dibetes d) Heart disease

1932. All of the following drugs are effective for cervical ripening during pregnancy except - *(All India 04)*
a) Prostaglandins E_2 b) Oxytocin
c) Progesterone d) Misoprostol

1933. All of the following are used for induction of labour, except - *(AIIMS 04)*
a) PGF_2 a tablet b)PGE_2 tablet
c) PGE_2gel d) Misoprostol

1934. Bishops score includes all of the following except- *(AI07)*
a) Dilatation
b) Effacement
c) Station of presenting part
d) Interspinous diameter

1935. Induction at term is indicated in all of the following except- *(AI08)*
a) Hypertension b) Diabetes Mellitus
c) Heart disease d) Renal disease

1936. Which one of the following methods for induction of labour should not be used in patients with previous lower segment caesarean section ?
a) Prostaglandin *(DELHIPG Feb. 09)*
b) Prostaglandin tablet
c) Stripping of the membrane
d) Oxytocin drip

1937. What is the maternal risk of using misoprostol for ripening of cervix during induction of labour -
a) Tachycardia *(UPSC-II09)*
b) Hypotension
c) Tachy-systole/hyperstimulation of uterus
d) Bradycardia

1938. Half-life of IVoxytocin? *(Maharashtra 10)*
a) 1 minute b) 3 minutes
c) 7 minutes d) 9 minutes

OPERATIVE OBS

1939. Vacuum extraction is done when - *(PGI 90)*
a) Cervix dilated more than 8 cm.
b) Persistent occipito posterior
c) Deep transverse arrest
d) Acute destress in Ilnd state

1940. Internal podalic version is done - *(AI91)*
a) At 32 weeks in transverse lie
b) Transverse lie of 2nd twin
c) When there is minimal amniotic fluid
d) All of the above

1941. Internal rotation occurs at the - *(TN91)*
a) Brim b) Cavity
c) Ischial spine d) Outlet

1918) b 1919) d 1920)c 1921)b,e 1922)a 1923) All 1924)b,d,e 1925)d 1926)c 1927)a 1928)a,b 1929)d 1930) c 1931)b,d 1932)c 1933)a 1934)d 1935)c 1936)b 1937)c 1938)b 1939)a,b,c 1940)b 1941)c,d

1942. The effective pressure to be achieved in vacuum extraction is - *(AIIMS92)*
a) 0.1 kg/cm^2 b) 0.4 kg/cm^2
c) 0.6 kg/cm^2 d) 1.2 kg/cm^2

1943. Classical caesarian section is indicated in all except - *(AIIMS 92)*
a) Post Mortam delivery
b) Lower segment fibroid
c) Post RVF repair
d) Post WF repair

1944. Which is an absolute indication for LSCS - *(AI93)*
a) Type IV placental previa b) Fetal Distress
c) Previous LSCS d) Breech presentation

1945. Indication for classical cesarian section is -
a) Obstructed labour *(Kerala 94)*
b) Carcinoma cervix
c) Placenta previa
d) Twin pregnancy

1946. Midline episiotomy has all the following advantage over mediolateral episiotomy except - *(Kam 94)*
a) Better healing b) Extention less common
c) Less blood loss d) Dyspareunia later is less

1947. Absolute indication for caesarean section is -
a) Dystocia (*.JIPMER95)*
b) Previous rupture of uterus
c) Breech presentation
d) Fetal distress

1948. Caesarian section is must in which type of placenta previa - *(Assam 95)*
a) Type I b) Type II ant.
c) Type III d) All of the above

1949. Incorrect about external cephalic version is -
a) Done at 34 weeks *(AP 96)*
b) Abruption of placenta is a complication
c) Done under general anesthesia
d) None

1950. Only indication for internal version nowadays is - *(JIPMER98)*
a) Brow presentation b) Face presentation
c) Second fetus of twins d) Breech

1951. On external cephalic version, fetal bradycardia occurred. The next course of action is - *(AP 97)*
a) Reversion to the original position immediately by external version
b) Internal podalic version
c) Caesarian section
d) Rupture of the membranes

1952. During suction evacuationin MTP the negative pressure of suction should be - *(UPSC)*
a) 100 to 200 mm Hg b) 200 to 300 mm Hg
c) 400 to 600 mm Hg d) 700 to 900 mm Hg

1953. In MTP the suction pressure is---------- mm Hg- *(PGI98)*
a) 100-200 b) 200-300
c) 600 - 700 d) 700 - 800 mm/Hg

1954. Vaccum extraction is C.I. in - *(PGI98)*
a) Premature babies b) Heart disease
c) Microcephaly d) Polyhydramics

1955. The preferred method for management of neglected shoulder presentation in a rural hospitalin India is-
a) Wait for spontaneous delivery *(Kerala 97)*
b) Embryotomy
c) Caesarian section
d) None of the above

1956. Outlet forceps is least likely to lead to - *(AIIMS 98)*
a) Complete perineal tear b) Extension of LMLE
c) Cervical tear d) Vuval hematoma

1957. Which of the following is the indication of internal podalic version - **(**77V *99)*
a) 2nd of the twin b) Shoulder presentation #
c) Breech d) Mentoposterior position

1958. While doing caesarean section, the lower segment of the uterus is physically identified by - *(UPSC 2K)*
a) Loose attachment of visceral peritonium
b) Dilated venous sinuses
c) Deflection of uterine artery towards upper segment
d) Thinness of its wall as compared to the upper segment

1959. Treatment for neglected shoulder presentation is- *(TN 95, UPSC 85, PGI 88)*
a) Caesarean section b) Vaginal delivery
c) Decapitation d) Eviseration

1960. Indication of classical caesarian section - *(PGI 03)*
a) Ca Cervix • b) Kyphoscoliosis
c) Previous 2 LSCS d) HSV infection
e) Contracted pelvis

1961. Contra-indication of Vacuum Extraction - *(PGI04)*
a) Prematurity b) Brow presentation
c) Foetal distress d) Floating head
e) Undilated cervix

1962. Classical Caesarian Section is not indicated in -
a) Lower segment *(Kerala 03)*
b) Carcinoma Cx
c) Fibrid uterus
d) Central placenta previa

1963. Which statement is true regarding VENTOUSE (Vacuum Extractor) - *(AIIMS 03)*
a) Minor scalp abrasions and subgaleal hematomous to new bom are more frequent than forceps
b) Can be applied when fetal head is above the level of ischial spine
c) Maternal trauma is more frequent than forceps
d) Cannot be used when fetal head is not fully rotated

1964. Ventouse application, the prerequisite is- *(APPGE*
a) Full dilatation of cervix b) Station +2 *04)*
c) Premature d) Head engaged

1965. A case of central placenta praevia with anencephaly foetus should be delivered by - *(SGPGI05)*
a) Caesarean section
b) Induction of labour
c) Hall breech extraction
d) Application of Willet's forceps

1942) None 1943)c 1944)a 1945)b,c 1946)b 1947)None 1948)c 1949)c 1950)c 1951)a 1952)c 1953)c 1954) a 1955) c 1956)None 1957)a 1958)a 1959)c 1960)a,e 1961) All 1962)d 1963)a 1964)d 1965)a

1966. What is the graphical record of cervical dilatation in centimeters against duration of labour in hours called- *(UPSC06)*
a) Partogram b) Pictogram
c) Hysterograph d) Amniograph

1967. Contraindications to ventouse delivery include all of the following except - *(COMED06)*
a) Fetal coagulopathies
b) Extreme prematurity
c) Mento transverse position
d) Occipito transverse position

1968. Indication for internal podalic version in modern obstetrics -
a) 2nd twin with transverse lie
b) Anencephaly
c) 1 st twin with transverse lie
d) Breech presentation

1969. In modern obstetrics, the internal podalic version is indicated in the presence of - *(UPSC-II08)*
a) Transverse lie with obstructed labour
b) 2nd transverse twin
c) Cord prolapse with live baby
d) Extended breech presentation

1970. Which of the following is not a contraindication of vaginal delivery after previous cesarean section (CS)? *(AI08)*
a) Previous classical C/S
b) No vaginal delivery in the past
c) Breech presentation ,
d) Puerperial infection in previous pregnancy

1971. Not a contraindication for external cephalic version?
a) Breech presentation *(APPG 08)*
b) Obstructed labour
c) Oligohydramnios
d) First baby of twin pregnancy

1972. Indications for caesarean section in pregnancy are all except - *(AIIMS May 09)*
a) Eisenmenger syndrome
b) Aortic stenosis
c) M.R.
d) Aortic regurgitaion

1973. A woman delivers a 9 lb infant with a midline episiotomy and suffers a third degree tear. Inspection shows which of the following structures is intact - *(DELHIPG Feb. 09)*
a) Anal sphincter b) Perineal body
c) Perineal muscle d) Rectal mucosa

1974. The estimated risk of uterine rupture is a woman with a previous lower segment uncomplicated cesarean section is approximately -
a) 0.5-2% b) 4-6% *(DELHIPG Mar. 09)*
c) 8-10% d) 14-16%

1975. The following are contra-indications to External Cephalic Version except - *(DPG10)*
a) Contracted pelvis
b) Ante-partum haemorrhage
c) Multiple pregnancy
d) Hydramnios

1976. The indications of an elective caesarean section include all of the following, except - *(UP SC II10)*
a) Placenta praevia
b) Cephalopelvic disproportion
c) Previous lower segment caesarean section
d) Carcinoma cervix

1977. Risk of scar rupture in classical caesarean section is- *(Corned 10)*
a) 0.5 to 1.5% b) 1.5 to 4%
c) 4 to 9% d) 10 to 12%

1978. Pre-requisites for forceps delivery are all EXCEPT-
a) Adequate analgesia *(Kam11)*
b) Fully dilated cervix
c) Relaxed uterus
d) Ruptured membranes

1979. The commonly used frequency range in obstetrical ultrasonography is - *(Karn11)*
a) 3.5-5KHz b) 20-25 KHz
c) 3.5-5 MHz d) 20-25 MHz

DIAGNOSIS IN OBSTETRICS

1980. Investigation contraindicated in antenatal expectant mother is - *(TN91)*
a) X-rays b) Ultrasound
c) Urine examination d) Blood examination

1981. Crown-Pump length of 120 mm means the gestational age is - *(JIPMER91)*
a) 10 weeks b) 14 weeks
c) 20 weeks d) 24 weeks

1982. Which of the following is not an indication of Amnniocentesis for Chromosomal detection -
a) Diabetes melitus *(JIPMER91)*
b) Previous Down's child
c) Maternal age more than 35
d) Parents with Chromosomal anomaly

1983. Patogram help in the detection of - *(JIPMER 92)*
a) PPH
b) Abruption placetae
c) Obstracted labour
d) Incordinate uterine action

1984. Radiological investigations in a female of reproductive age should be restricted to - *(AI93)*
a) Peroid of menstruation
b) First 10 days of menstrual cycle
c) Last 10 days of mentrual cycle
d) 10^{th} to 20^{th} day of cycle

1985. Early deceleration pattern on cardiotocography indicates -. *(JIPMER 93)*
a) Head compression b) Fetal distress
c) Cord prolapse d) Hypoxia

1986. To diagnosis foetal well being of foetus, most reliable method - *(UPSC 97)*
a) L:S ratio b)HPL levels
c) Kick test d) Ultrasound

1966) a 1967)d 1968)a 1969)b 1970)c 1971)d 1972)a 1973)d 1974)a 1975)d 1976)c 1977)c 1978)c 1979)c
1980) a 1981) c 1982)a 1983)c 1984)b 1985)a 1986)d

1987. Maternal serum Alpha Feto Protein (MSAFP) raised in all the following conditions except - *(Kam. 94)*
a) Spina bifida b) Multiple pregnancy
c) Omphalocele d) Down's syndrome

1988. X-ray abdomenin pregnancy is- *(Kerala 95)*
a) Harmful to the foetus
b) to assess gestational age
c) To localise placenta
d) To rule out congenital anomalies

1989. Hydrocephalus in the foetus is diagnosed by -
a) Large frontanellae with widely separated sutures as felt on PV examination *(Kerala 95)*
b) High floating head
c) Serial ultrasound
d) CPD

1990. Best investigation to diagnose foetal age is -
a) Serial Ultrasound *(Kerala 95)*
b) Aminocentesis
c) Fundal height measurement
d) X-ray *

1991. Screening for Down's syndrome should be done in the age group_____ in pregnancy - *(AIIMS 94)*
a) 30
b) 35
c) All in the reproductive age group
d) None

1992. All of following are indications for X-ray pelvimetry in pregnancy except - *(AI96)*
a) Severe CPD
b) Breech presentation in a primigravida
c) Suspected outlet contraction
d) Previous caesarian section

1993. All of following are true about fetal distrees expect- *(AI 96)*
a) Mecorium stained liquour
b) FHS < 100 mint.
c) Scalp blood pH 7.3
d) Excessive fetal movements

1994. The best investigation for dating pregnancy is -
a) Crown rump length at 9 weeks *(Delhi96)*
b) BPD at 18 weeks
c) Abdominal circumference at 24 weeks
d) BPD at 24 weeks

1995. Earliest fetal anomaly to be detected by USG -
a) Hydrocephalous *(Karn.95)*
b) Anencephaly
c) Achondroplasia
d) Spina bifida

1996. Antenatally the measurement most useful in ultrasound- *(AP96)*
a) Crown Rump Length b) Femur length
c) BPD d) Abd. circumferance

1997. Cord compression causes_____deceleration -
a) Early b)Late *(AP 96)*
c) Variable d) None

1998. Increased acetyl cholinesterase in amniotic fluid is seen in - *(AI97)*
a) Neural tube defect
b) Renal agenesis
c) Tracheo oesophageal fistula
d) HJGR

1999. Detection of Fetal abnormalities is possible by all except- *(AI97)*
a) Maternal blood b) Fetal blood
c) Amnion d) Decidua (maternal)

2000. Manning score for fetal well being includes all except- *(AI97)*
a) Non stress test
b) Oxytocin Challenge test
c) Breathing movements
d) Body movements of fetus

2001. Determination of gestational age in 1st trimester by USG- *(PGI96)*
a) Crown-Rump length
b) Biparietal diameter
c) Abdominal cocircumferance
d) Femur lengths

2002. While assessing foetal wall being by cardiotocography signiflcans is attached to -
a) Late decelaration *(AIIMS 96)*
b) Early decelaration
c) Sinusoidal wave
d)Variable decelartion

2003. Foetal heart can be detected earliest with transvaginal sonography at (from the last menstrual period)^ *(Kerala 97)*
a) 35 days b) 38 days
c) 53 days d) 46 days

2004. All are signs of fetal distress except - *(PGI 97)*
a) Tachycardia
b) Bradycardia
c) Decreased scalp pH
d) Increase fetal movements

2005. Chorionic villi biopsy is not helpful in -*(AIIMS97)*
a) Phenyliketonuria b) Thalassemia
c) Neural tube defects d) Haemophilia

2006. All are used for Karyotyping in amniocentesis except- *(AI 99)*
a) Monocyte b) Lymphocyte
c) Fibroblast d) Amnion cells

2007. Acetyl cholinesterase assay can be used to diagnose- *(AI 99)*
a) Open neural tube defect b) Oesophageal atresia
c) Duodenal atresia d) Biliary atresia

2008. Triple test for Down's syndrome is by using all except- *(AI99)*
a) Maternal HCG b) Maternal estriol
c) Maternal a feto protein d) Maternal HPL

2009. AFP levels are highest in - *(AIIMS 98)*
a) Foetal serum b) Placenta
c) Amniotic fluid d) Maternal serum

1987)d 1988) All 1989)a 1990)a 1991)b 1992)a,d 1993)c 1994)a 1995)b 1996)a,d 1997)c 1998) a 1999)c,d 2000) b 2001) a 2002) a,c,d 2003) d 2004)None 2005) c 2006) a 2007) a 2008) d 2009) a

2010. Cardiac activity of the fetus seen by ultrasound by- *(TN99)*
a) 4 weeks b) 5 weeks
c) 6 weeks d) 7 weeks

2011. Normal crown - rump length at birth is - *(AP98)*
a) 20-25cms. b) 38-50 cms.
c) 80-72 cms. d) 78-85 cms.

2012. The postion used for bimanual examination in the out-patient department is- *(Korn. 90)*
a) Lithotomy placenta
b) Supine position
c) Sim's position
d) Dorsal position with thighs flexed

2013. The most specific finding in amniotic fluid to diagnose neural tube defect is.....- *(AIIMS 99)*
a) Acetyl choline esterase
b) Acetyl glucosamine
c) Cysteinase
d) Glucose oxidase

2014. Chronic villous sampling is done at - *(Orissa R)*
a) 4-6 weeks b) 7-8 weeks
c) 9-11 weeks d) 12-13 weeks

2015. Normal size of CBD on USG in pregnancy -
a) 2-4 mm b) 6-9 mm *(DNB01)*
c) 10-15mm d) 15-20 mm

2016. External genitalia earliest diagnosed by USA by- *(J&K2001)*
a) 10 weeks b) 14 weeks
c) 16 weeks d) 18 weeks

2017. Fetal Hypoxia is assessed by - *(A.I. 89)*
a) Scalp blood pH
b) Alpha feto protein levels
c) Fetal heart monitoring
d) None

2018. Fetal Respiratory movements occur earliest at -
a) 12 wks b) 16 wks *(JIPMER 91)*
c) 20 wks d) 11 wks

2019. Indication of fetal distress is - *(Kerala 94)*
a) Decrease in fetal scalp blood pH
b) Meconium staining
c) Late deceleration of heart rate
d) All of the above

2020. Fetal bradycardia is defined as - *(TN 99)*
a) Less than 100 beat/min
b) Between 100 and 200 beat/min
c) Less than 120 beat/min
d) Less than 120 beat/min for a period of 15 min of continuous monitoring

2021. Fetal scalp blood pH less than-------is abnormal -
a) 725 b) 7.3 *(AMC 2K, JIPMER 91)*
c) 735 d)7.4

2022. Mannigs score includes - *(PGI01)*
a) Fetal movements
b) Respiratory movements
c) Placental localization
d) Fetal tone
e) Fetal heart rate

2023. A drop in fetal heart rate that typically lasts less than 2 minutes and is usually with umbilical cord compression is called - *(AIIMS 03)*
a) Early deceleration
b) Late deceleration
c) Variable deceleration
d) Prolonged deceleration

2024. Earliest ultrosound sign of pregnancy in a transabdominal ultrasound scan is -
a) Visible gestational sac *(Karnataka 03)*
b) Apparent embryonic structures
c) Fundal endometrial thickening
d) Identifiable cardiac movements

2025. Which of the following explanations is NOT an explanation for decreased variability of the fetal heart rate tracing - *(Karnataka 03)*
a) Fetal "sleep state" b) Prematurity
c) Barbiturate ingestion d) Fetal stimulation

2026. Variable decelerations on electronic fetal monitoring in a woman who is in labour indicates-
a) Congenital heart disease *(COMED 06)*
b) Compression of head
c) Administration of sympathomimetic drugs to the mother
d) Umbilical cord compression

2027. Amniocentesis is best diagnostic if done in_____ weeks - *(DELHIPG Feb. 09)*
a) 8-10 b) 12-14
c) 16-18 d) 20-22

2028. Chorionic villi biopsy is not done before 9 weeks because of - *(DELHIPG Feb. 09)*
a) Abortion
b) Feto-matemal risk of hemorrhage
c) Limb malformation
d) Too little material

2029. TVue about amniocentesis - *(PGINov 09)*
a) Spinal needle is used b) Fetoscope is used
c) Done b/w 12-16 wks. d) Done b/w 15-20 wks.
e) Fetal loss in the procedure is more than 5%

2030. The presence of increased levels of which of the following in amniotic fluid is an indicator of open neural tube defect in the fetus? *(AIIMS May 10)*
a) Phosphatidylesterase
b) Acetyl cholinesterase
c) Pseudocholineesterase
d) Butyrylcholineesterase

2031. Which of the following is the most specific marker for Neural tube defects - *(AI10)*
a) Actylcholinesterase
b) Pseudocholinesterase
c) Alpha feto protein (AFP)
d) Human chorionic Gonadotrophin (HCG)

2032. AFP is raised in - *(AI 10)*
a) Teratoma b) Yolk sac tumor
c) Choriocarcinoma d) Dysgerminoma

2010)c 201 l)b 2012)d 2013)a 2014)c 2015)c 2016)a 2017)a,c 2018)d2019)d 2020)d 2021)a 2022)a,b,d 2023) c 2024) c 2025) d 2026) d 2027) c 2028) c 2029) a,c 2030) b 2031) a 2032) b

2033. Increased Nuchal Translucency at 14 weeks gestation is seen in - *(AJ10)*
a) Turner's syndrome b) Down's syndrome
c) Hydrocephalus d) Skeletal dysplasia

2034. Earliest fetal anomaly to be detected by USG- *(DPG10)*
a) Hydrocephalous b) Anencephaly
c) Achondroplasia d) Spina bifida

2035. Serum AFP (alpha fetoprotein) levels are increased at 16 weeks of pregnancy in all the following conditions, except - *(UP SC II10)*
a) Gastroschisis b) Neural tube defects
c) Multiple pregnancies d) Down's syndrome

2036. Abnormal foetal heart-rate patterns on electronic foetal monitoring include the following, except -
a) Bradycardia < 120/minute lasting for 15 minutes
b) Tachycardia > 170/minute lasting for 15 minutes
c) Early decelerations *(UP SC II10)*
d) Late decelerations

MISCELLANEOUS (OBS)

2037. Study of fetal parts in first trimester with least radiation hazard - *(TN 90)*
a) X-ray abdomen b) Pelvimetry
c) CT scan d) Ultrasound

2038. Multiparity is associated with all except - *(AI91)*
a) Pregnancy induced hypertension
b) Anaemia
c) Post partum haemorrhage
d) Malpresentation

2039. Which vaccine is not indicated during pregnancy-
a) Polio b) *lyph\od(JIPMER91)*
c) Rubella d)TT

2040. Large of date baby may be due to - (*JIPMER92)*
a) Beckwith syndrome b) Diabetic mother
c) Genetic predisposition d)All

2041. Which is more common in primigravida than multigravida - *(AIIMS92)*
a) PPH b) Placenta previa
c) Malpresentation d) Hyperemesis

2042. Post term labor is seen in - *(AIIMS92)*
a) Hydramnois b)PED
c) Anencephaly d) Multiple pregnancy

2043. Post term pregnancy is that which continues beyond- *(AIIMS92)*
a) 300 days b) 294 days
c) 280 days d) 270 days

2044. Stain used for maturity assessment of amniotic fluids cells - *(JIPMER93)*
a) Leishman's stain b) Sudan red
c) Nile blue sulfate d) Congo red

2045. What is the value of color index in microcytic hypochronic anemias associated with pregnancy -
a) One b) Less than one *(AIIMS 91)*
c) More than one d) Three
e) Four

2046. There is steady fall in serum iron at - *(PA180)*
a) 12^{th} week b) 20^{th} week
c) 24^{th} week d) 28^{th} week
e) 32^{nd} week

2047. Blood will interfere with the nitrazine test for detecting ruptured membrances because-(DM? *90)*
a) It is acid
b) It is alkaline
c) It contains increased amounts of sodium chloride
d) In contains decreased amounts of sodium chloride
e) It reacts with the normal flora of vaginal bacteria to give an acid reaction

2048. Foetal requirement of iron is -*(AIIMS 78, DNB 90)*
a) 200 mg b)300
c) 400 d)500

2049. Which of the following is not used in DIC -
a) Heparin *(AIIMS 90, Bihar 89)*
b) Epsilon amino caproic acid
c) Blood transfusion
d) Intravenous fluids

2050. The first investigation to be done if a woman reports with post term pregancy is - *(JIPMER 95)*
a) Ultra sonography b) Vaginal examination
c) Blood glucose profile d) X-ray abdomen

2051. In postmaturity which among the following does not occur - *(AIIMS 94)*
a) Fetal distress b) Hydraminios
c) Transverse lie d)None

2052. A patient had undergo suction evacuation for 10 weeks pregnancy. Three days later she came back with profuse vaginal bleeding and abdominal pain. The most likely diagnosis is - *(UPSC96*).
a) Uterine atony b) Cervical injury
c) Retained products d) Uterine perforation

2053. Increased gestational period is associated with following congenital anomaly - *(Delhi 96)*
a) Spina bifida b) Anencephaly
c) Meningomyelocele d) Omphalocele

2054. Elderly primi is above - *(Karn 96)*
a) 30 years b) 35 years
c) 37 years d) 45 years

2055. All of the following are high risk pregnancies except - *(AIIMS 85)*
a) Twins
b) Previous history of postmaturity
c) Threatened abortion
d) Previous history of manual removal of pacenta

2056. The condition where a thin walled sac. develop in myometrium often containing fetal parts -
a) Uterus didelphys *(AIIMS 95)*
b) Uterine incarceration
c) Hernia of uterus
d) Uterine sacculation

2057, Routine pelvic examination is contrainidicated in- *(AIIMS 85)*
a) Carcinoma cervix b) Cord prolapse
c) Placenta previa d)PIH

2033)b 2034)b 2035)d 2036)c 2037)d 2038)a 2039)c 2040)d 2041)d 2042)c 2043)b 2044)c 2045)b 2046)b
2047)b 2048)b 2049)b 2050)a 2051)b,c 2052)c2053)b 2054)a 2055)b 2056)d 2057)c

2058. Premature rupture of membrane is rupture -
a) At less than 32 weeks *(AI97)*
b) Before onset of labour
c) Before 2nd stage of labour
d) All of the above

2059. In a 24-28 weeks prenancy with premature rupture of membrane you will always give -
a) Steroids b) Antibiotics *(PGI96)*
c) Tocolytics d) Analgesia

2060. "Chemical pregnancy" means - (*UPSC97)*
a) Negative beta HCG and absent gestational sac
b) Positive beta HCG and present gestational sac
c) Positive beta HCG and absent gestational sac
d) Negative beta HCG and crenated sac margin

2061. Indications for termination of pregnancy in hyperemesis gravidarum include all except -
a) Jaundice *{AP 97)*
b) Oliguria
c) Neurologoical complications
d) Encephalopathy

2062. Opthalmoscopic examination is indicated in all of the following except - *{AP 9 7)*
a) Pre-eclampsia b) Placenta praevia
c) Hyperemesis gravidarum d) Raised I.C.T.

2063. Early cord clamping is done is all except - *(MP 98)*
a) Rhisoimmunizationb) Foetal asphyxia
c) Postmaturity d) Prematurity

2064. A primigravida is fully dilated with vertex presentation. The head is well rotated and the station is +2. There is late deceleration on foetal heart monitoring. If the pelvis is adequate, the most appropriate management in this case would be- **(***UPSC99)*
a) Waiting for spontaneous delivery
b) Forceps delivery
c) Vacuum extraction
d) Caesarean section

2065. Fundal height is more than period of gestation in all except - *(Rohtak 98)*
a) Hydramnios b) IUD
c) Twin pregnancy d) Hydratidiform mole
e) Uterine myoma

2066. Vitamin which is taken to prevent neural tube defect in fetus - *{AI 99)*
a) Thiamin b) Folic acid
c) Pyridoxine d) Vitamin C

2067. Diagnostic test for predicting congenital anomaly in a diabetic pregnancy is - *{AIIMS 98)*
a) HbAc b)Frutasamine
c) AmnioticAFP d) Serum AFP

2068. If a patient comes with complaints of post dated pregnancy what is the first thing that you will do
a) USG *{JIPMER2K)*
b) NST
c) Review the menstrual history once more
d) X-ray abdomen

2069. Single umbilical artery is associated with all of the following except - *(UPSC 2K)*
a) Polyhydramnios
b) Advanced maternal age
c) Foetal growth retardation
d) Increased incidence o foetal malformation

2070. A primipara presented at 10 weeks of gestation with lower abdominal pain. On examination, there was pallor and lower abdominal tenderness. What is the likely possibility - *(AIIMS 99)*
a) Ruptured ectopic b) Twisted ovarian cyst
c) Red degeneration d) Acute appendicitis

2071. 22 year old Devi, presents with shock and minimal spotting per vagina. The most likely diagnosis is - *(AI2K)*
a) Threatened abortion b) Ruptured ectopic
c) Twisted ovarian cyst d) Ruptured lutein cyst

2072. All are seen in non immuno hydrops fetalis except- *(MP 2K)*
a) Pericardial effusion b) Large placenta
c) Skin edema d) Ascites

2073. All of the following are part of manning's criteria except - *{AIIMS 2K, MP 2K)*
a) Foetal resiratory movements
b) Non stress test
c) Foetal body movements
d) Vibroacoustic stimulation

2074. Leela 22 yrs old primipara presents with post dated pregnancy. First thing you would like to do is- *(AIIMS 01)*
a) Ultrasonography b) Review mentrual history
c) Induce labour d)LSCS

2075. Smoking in pregnancy causes - *{CUPGEE2K)*
a) RJGR b)PM
c) APH d)PPH

2076. pH of amniotic fluid at later weeks of gestation - *{TN02)*
a) 4.5 b)6.5
c) 7 d)7.2

2077. Supine hypotensive syndrome occurs in - *{PGI 02)*
a) Obesity b) Ascites
c) Early pregnancy d) Advanced pregnancy
e) Immediately following delivery

2078. Pregnant women who have had five or more previous babies differ from those who have had none in that they have a greater risk of- *(AMC 85)*
a) Developing anaemia
b) Complications due to Rhisus incompatibility
c) Malpresentation
d) Involuntary passing of urine while coughing or laughing
e) All of the above

2079. Head's Reflex is due to stimulation of - *(AIIMS 91)*
a) J. Receptors
b) Irritant receptors of lungs
c) Pleural stretch receptors
d) Diaphragmatic nerves

2058)b 2059)b 2060)c 2061)b 2062)b 2063)c 2064)b 2065)b 2066)b 2067)a 2068)c 2069)b 2070)a 2071)b 2072) None 2073) d 2074) b 2075) a,c 2076) d 2077) d 2078) e 2079) b

2080. Gas in great vessels of foetus indicate - *(Kerala 94)*
a) Fetal distress b) Post mature fetus
c) Fetal death d) Premature fetus

2081. Vaginal delivery in subsequent pregnancy can be permitted in all of the following patient situations except- *(MP 98)*
a) Previous LSCS for antepartum hemorrhage
b) Pervious LSCS for transverse lie
c) Myomectomy done 2 year back
d) Repair of vesico vaginal fistula

2082. A 26 year old women in the first trimester of pregnancy has been admitted with retching and repeated vomiting with large haematemesis. Her pulse rate is 126/minute and blood pressure is 80 mm Hg systolic. The most likely diagnosis is -
a) Mallory-Weiss syndrome *(UPSC95)*
b) Bleeding from oesophageal varices
c) Peptic ulcer
d) Hiatus hernia

2083. ARM **is contraindicated in -** *(PGI98)*
a) PL previa b) Hydramios
c) Acc.Hem d) Twins

2084. Spalding's sign is seen **in -** *(PGI99)*
a) Stillborn b) Live bom
c) Premature d) Dead born

2085. Adult hemoglobin appears in fetus at the gestational age of (in weeks) - *(PGI 2000)*
a) 5^{th} b) 10^{th}
c) 15^{th} d)20^{th}
e) 25^{th}

2086. Which of the following is associated with hydrocephalus- *(PGI 01)*
a) Diabetes melitus b) Pre eclampsia
c) Abruptio placentae d) Breech presentation
e) Spina bifida

2087. Delayed labour occurs in - *(PGI 01)*
a) Early use of epidural anesthesia with analgesia
b) Early use of analgesia
c) Unripened cervix
d) Preeclampsia
e) Use of sedative early in course of labor

2088. USG s/o fetal death - *(PGI 01)*
a) 'Halo' sign of head b) Heart beat absent
c) Spalding sign d) Hegar's sign

2089. Pyometra is seen in - *(PGI 02)*
a) Stenosing veriety of cervical carcinoma
b) Senile vaginitis
c) Senile endometritis
d) Endometriosis
e) Abnormalitis of uterus

2090. Alady^of 150 cm height with Hb of llgm%, BP of 160/110 mm Hg & 12 kg gain during her pregnancy delivered an IUGR baby, the causes in this case are -
a) Maternal infection b) Short stature *(PGI 03)*
c) Hypertension d) wt. gain
e) Hb%

2091. Differential diagnosis of Hyper emesis gravidarum-
a) Gastritis b)U.T.I. *(PGI 03)*
c) Toxaemia of pregnancy d) Reflux oesophagitis

2092. 1 HCG level seen in - *(PGI 04)*
a) Down syndrome b) DM
c) Multiple pregnancy d) Ectopic pregnancy
e) Oesophageal atresia

2093. Vaginal delivery is contra - indicated in -
a) Central placenta praevia *(Jipmer03)*
b) Previous LSCS
c) Eclampsia
d) Ante - partum hemorrhage

2094. Abortifadent causing ototoxicity is - *(TN03)*
a) Lead b) Quinine
c) Mercury d) Ergot

2095. B **Lynch suture is applied on -** *(AI03)*
a) Cervix b) Uterus
c) Fallopian tubes d) Ovaries

2096. A woman in her first pregnancy reports that she **smokes one pack** of **cigarettes** a **day. An** ultrasound **is ordered in the thirty second week** of **the** pregnancy **to evaluate for which of the following -** *(Kam 03)*
a) Amniotic fluid volume b) Fetal size
c) Fetal abnormalities d) Fetal.motion

2097. Maximum permissible radiation dose **in** pregnancy **is-** *(AIMS 03)*
a) 0.5 rad b) 1.0 rad
c) 1.5 rad d) 3.0 rad

2098. A lady comes with 8 weeks amenorrhea, shock & past history of TB diagnosis is - *(Jharkand 03)*
a) Ruptured ectopic b) Septic Shock
c) DIC d)None

2099. Maturation index during pregnancy - *(APPGE04)*
a) 0,40,50 b) 50,40,0
c) 0,0,100 d) 0,95,5

2100. improvident mother is- *(AMU 05)*
a) Mother having three children & lost one
b) Mother having three children & lost two
c) Mother with all children lost
d) Mother giving birth to quadruples

2101. MMR is expressed in - *(PGI June 05)*
a) Per 1,000 live birth b) Per 10,000 live birth
c) Per Lac live birth d) Per 10 Lac live birth

2102. Banana & Lemon sign seen in which fetal anomalies - *(PGI June 05)*
a) Neural tube defects b) Hydrops fetalis
c) Twins d)IUD
e) Down syndrome

2103. All the following can cause DIC during pregnancy except - *(AIMS May 05)*
a) Diabetes mellitus b) Amniotic fluid embolism
c) Intrauterine death d) Abruptio placentae

2104. A multipara with previous LSCS comes at 38 weeks pregnancy in shock. DD includes - *(PGI June 06)*
a) Placenta previa b) Abruptio placenta
c) Rupture uterus

2080)c 2081)d 2082)a 2083)b 2084)d 2085)e 2086) d,e 2087)a,b,c,e 2088)b 2089)a,b,c 2090)c 2091)a,b,d
2092)d 2093)a 2094)b 2095)b 2096)b 2097)a 2098)a 2099)d 2100)c 2101)a 2102)a 2103)a 2104)a,b,c

2105. Obesity in pregnancy causes all of the following complication except - *(Manipal 06)*
a) Abnormal uterine action
b) Fetal neural tube defect
c) Precipitate labour
d) Venous thrombosis

2106. With reference to syndromic approach in reproductive tract infections, consider the following statements - *(UPSC 07)*
1. Single drug can be used for treatment
2. The diagnosis of exact disease is not relevant
3. The management is disease specific
4. This is an important part of family Health Awareness compaign

Which of the statements given above are correct
a) 1 and 2 only b) 1 and 3 only
c) 2 and 4 only d) 1,2,3 and 4

2107. The risk of Monogolism in a mother at the age of 20 years is 1 : 3000. What would be this ration when she is 45 years old - *(UPSC 07)*
a) 1:6000 b) 1:3000
c) 1:1040 d) 1: 50

2108. The Kleihauer test for detecting foetal erythrocytes is based on the fact that - *(UPSC 0 7)*
a) Adult erythrocytes are larger than those of foetus
b) HbA has higher oxygen affinity than HbF
c) HbF is more resistant acid elution that HbA
d) HbA takes up erythrosin stain less than HbF

2109. Age of gestation when ovaries and testis are first distinguishable - *(Corned 07)*
a) 4 weeks b) 8 weeks
c) 12 weeks d) 16 weeks

2110. Blood in urine in a patient in labour, diagnosis is -
a) Impending scar rupture b) Urethral injury
c) Obstructed labour d) Cystitis

2111. Minimum duration between onset of symptoms and death is seen in - *^(AI09)*
a) APH b) PPH
c) Septicemia d) Obstructed labor

2112. Macrosomia is/are associated with - *(PGINov 09)*
a) Gestational diabetes mellitus
b) Maternal obesity
c) Hypothyroidism
d) Hyperbilirubenemia
e) Foetal goitre

2113. Weight gain in pregnancy depends on all of the following factors, except - *(AI10)*
a) Socioeconomic status b) Prepregnancy weight
c) Smoking d)Ethinicity

2114. Aprimipara presented at 10 weeks of gestation with lower abdominal pain. On examination there was pallor and lower abdominal tenderness. What is the likely possibility? *(DPG10)*
a) Ruptured ectopic b) Twisted ovarian cyst
c) Red degeneration d) Acute appendicitis

2115. Most common cause of rupture uterus?
a) Separation of previous caesarean scar
b) Internal version *(Maharashtra 10)*
c) Excess dosage of oxytocin
d) Complicated manual removal of placenta

2116. Common cause of "Sepsis syndrome" in obstetrics includes- *(Maharashtra 10)*
a) Antepartum pyelonephritis
b) Puerperal infection
c) Chorioamnionitis
d) All of the above

2117. Match List-I with List-II and select the correct answer using the code given below the Lists -

List-I *(Pregnancy complications)*	**List-II** *(Therapy)*
A. Anti-phospholipid syndrome	1. Intravenous immunoglobulins
B. Acute toxoplasmosis	2. Ursodeoxycholic acid
C. Unexplained pregnancy losses	3. Low-dose aspirin and heparin
D. Cholestatic jaundice	4. Spiramycin

Code: *(UP SCII10)*

	A	B	C	D
a)	2	4	1	3
b)	2	1	4	3
c)	3	4	1	**2**
d)	3	1	4	2

2118. The following drugs can cause osteoporosis, except-
a) GnRH analogue b)Danazol *(UP SCII 10)*
c) Corticosteroid d) Mefiprostone

2119. Prolong latent phase is/are seen in - *(PGIMay 10)*
a) Placenta praevia b) Unripe cervix
c) Abruptio placentae d) Excessive sedation
e) Early epidural analgesia

2120. D/D of acute abdomen in pregnancy are all except- *(PGI Nov. 10)*
a) Cystitis b) Threatened abortion
c) Cervical incompetence d) Appendictis
e) Ruptured ectopic

2121. Vaginal delivery can be allowed in all except -
a) Monochrionic, monoamniotic twins
b) Mentoanterior *(AIIMS May 11)*
c) Extended breech
d) Dichorionic twins with first vertex & second breech

2122. In a neonate the skin of soles and palms is showing yellow discoloration, approximate level of serum bilirubin (mg/dl) will be - *(Karn 11)*
a) 5-7 b) 10
c) 12 d) >15

2123. A nulliparous woman presents with acute lower abdominal pain. She has a history of missed periods. The ultrasound examination shows an empty uterus. The cervical movements are very tender. The vital signs are stable. How will you manage her -
a) Treat her as a case of Pelvic Inflammatory Disease
b) Perform a laparotomy *(UPSC II11)*
c) Admit her for observation
d) Perform a laparoscopy

2105)c 2106)c 2107)d 2108)c 2109)b 2110)c 2111)b 2112) a,b 2113) c2114)a 2115)a 2116)d 2117)c 2118)b,d 2119) c,d,e 2120) c 2121) a 2122) d 2123) d

Recent Years NEET/DNB Questions

2124. MC ovarian tumors originate from-
a) Mullerian epithelium *(NEET/DNB Pattern)*
b) Stroma
c) Germ cells
d) Connective tissue

2125. OC pills decrease the risk of-*(NEET/DNB Pattern)*
a) Stroke b) CVD
c) Endometrial ca d) Hepatic adenoma

2126. HRT improves - *(NEET/DNB Pattern)*
a) Bone density b) Coronary artery disease
c) Dementia d) Endometrial cancer

2127. OC pills must be started on -*(NEET/DNB Pattern)*
a) 5th day b) 3rd day
c) 1st day d) When menses cease

2128. HIV positive couple with pregnant female, contraceptive of choice is - *(NEET/DNB Pattern)*
a) Abstinence b) Condoms
c) No restrictions d) OCPs

2129. Exclusive complication of monochorionic twins -
a) Cord entanglement *(NEET/DNB Pattern)*
b) Twin to twin transfusion
c) Discordant growth
d) Abortion

2130. 1st sign of IUD - *(NEET/DNB Pattern)*
a) Spalding sign
b) Air in heart
c) Hyper flexion of spine
d) Egg shell cracking feel of the fetal head

2131. Fetal cells can be detected in maternal blood using-
a) Dct *(NEET/DNB Pattern)*
b) let
c) Kleihauer betke test
b) Bubble test

2132. Fetal exsanguination can occur if -
a) Vasa previa *(NEET/DNB Pattern)*
b) Placenta praevia
c) Polyhydramnios
d) Oligohydramnios

2133. 34 wks pregnancy, polyhydramnios is present when volume is greater when - *(NEET/DNB Pattern)*
a) 2000cc b) 1500cc
c) lOOOcc d) 500cc

2134. Modified BPP includes - *(NEET/DNB Pattern)*
a) Non stress test (NST)
b) Amniotic fluid index (AFI)
c) Both
d) None

2135. Olighydramnios, causes include -
a) DM *(NEET/DNB Pattern)*
b) Esophagal atresia
c) Rh isoimmunisation
d) Renal agenesis

2136. Not transmitted congenitally - *(NEET/DNB Pattern)*
a) HSV b) HTV
c) Candida d) Rubella

2137. MC cause of neonatal congenital infection -
a) CMV *(NEET/DNB Pattern)*
b) Rubella
c) Toxoplasmosis
d) HSV

2138. Caesarean section is recommended for -
a) Rubella infected mother *(NEET/DNB Pattern)*
b) HSV infected mother
c) CMV infected mother
d) Measles infected mother

2139. MC congenital malformation of DM in neonates -
a) NTDs *(NEET/DNB Pattern)*
b) Hydrocephalous
c) Sacral agenesis
d) Multicystic kidneys

2140. A women is diagnosed with cervical carcinoma stage 2b, treatment of choice is -
a) Hysterectomy *(NEET/DNB Pattern)*
b) Chemoradiation
c) Primary radiation
d) None of the above

2141. Management of neglected shoulder presentation is- *(NEET/DNB Pattern)*
a) Vaginal delivery b) Caesarean section
c) External version d) Internal version

2142. The diagnosis of uterine anomalies is -
a) Hysterosalpingography *(NEET/DNB Pattern)*
b) MRI
c) CT Scan
d) Plain radiography

2143. Most common cause of pyometra -
a) Endometritis *(NEET/DNB Pattern)*
b) CA endometrium,
c) Ca cervix
d) Radiation

2144. Fetal trunk movements in third trimester is -
a) Less perceived by nullipara
b) Increased in IUGR *(NEET/DNB Pattern)*
c) Are more pronounced
d) None of the above

2145. PPH treatment of choice is -*(NEET/DNB Pattern)*
a) PGE2 b) PGE1
c) PGF2 alpha d) Oxytocin

2146. Fetal wt at 20 wks - *(NEET/DNB Pattern)*
a) 150 gms b) 200 gms
c) 300 gms d) 400 gms

2147. Strawberry cervix is found *in-(NEET/DNB Pattern)*
a) Trichomoniasis b) Candidiasis
c) Bacterialvaginosis d) Gonorrhoea

2148. Spiegelberg criteria is for - *(NEET/DNB Pattern)*
a) Cervix b) FallopianTubes
c) Ovaries d) Uterus

2124)a 2125)c 2126)a 2127)c 2128)b 2129)b 2130)b 2131)c 2132)a 2133)a 2134)c 2135)d 2136)c 2137)a
2138)b 2139)a 2140)b 2141)b 2142)a 2143)a 2144)c 2145)c 2146)c 2147)a 2148)c

2149. Largest skull diameter is -
a) Mento vertical *(NEET/DNB Pattern)*
b) Occipito - frontal
c) Suboccipito - frontal
d) Suboccipito - bregmatic

2150. Ideal contraceptive in RHD -*(NEET/DNB Pattern)*
a) Barrier b) IUCD
c) OCPs d) DMPA

2151. Recent biomarker for early detection of surface epithelial tumours of ovary -*(NEET/DNB Pattern)*
a) Ca 125, b) Ca 19=9,
c) Ca 15-5, d)Osteopontin

2152. Bartholin's glands lie *m* relation i© vaginal orifice-
a) Posterior *(NEET/DNB Pattern)*
b) Anterior
c) Anterolateral
d) Posterolateral

2153. 48 yr, 7 day post hysterectomy fever, burning micturition with dribbling off urine but able to pass mine **voluntarily -** *(NEET/DNB Pattern)*
a) WF b) UVF
c) Urge incontinence d) Stress incontinence

2154. **Most common symptom in** ectopic **pregnancy -**
a) Abdominal pain *(NEET/DNBPattern)*
b) Bleeding per vagina
c) Amenorrhoea
d) Fainting attacks

2155. Cervical cytology smear reveal CIN2- next step-
a) Colposcopy *(NEET/DNBPattern)*
b) Cryocautery
c) Hysterectomy
d) Laser ablation

2156. In what condition does vulvectomy has to be performed sometimes - *(NEET/DNBPattern)*
a) Granuloma inguinale
b) Chlamydia trachomitis
c) Herpes simplex
d) Candidial infection

2157. First radiological evidence off **intrauterine death of fetus -** *(NEET/DNB Pattern)*
a) Spalding sign
b) Air in heart
c) Hyper flexion of spine
d) Crowding of the ribs shadow

2158. Which test is used to determine presence of fetal cells in maternal circulation -
a) Apt test *(NEET/DNB Pattern)*
b) Kleihauer betke test
c) Indirect coombs test
c) Bubble test

2159. Vasa previa may lead to - *(NEET/DNB Pattern)*
a) Rupture of membranes b) Fetal exanguination
c) Fetal death. d) All of the above

2160. HPV infects first which cells in cervix -
a) Basal and parabasal cells *(NEET/DNB Pattern)*
b) Corneal cells
c) Granulosa cell
d) Spinus cells

2161. Clue cells are - *(NEET/DNB Pattern)*
a) Epithelial cells b) Lymphocytes
c) Neutrophils d) Macrophages

2162. Which is distinguishing feature of complete mole from partial mole - *(NEET/DNB Pattern)*
a) Hydropic changes in proliferating villi
b) Proliferation of blood vessels into villi
c) Mutation of p-57 gene in chorionic cells
d) Presence of fetus

2163. Which is associated with least chances off ectopic pregnancy- *(NEET/DNB Pattern)*
a) Tubectomy b) IUCD
c) Oral contraceptive pills d) Tubal ligation

2164 Not a **feature ©f MELLP. syndrome -**
a) Hemolysis *(NEET/DNBPattern)*
b) Elevated liver enzymes
c) Low platelet count
d) Renal failure •

2165. Most sensitive to detect prenatal neural tube defect
a) AFP *(NEET/DNBPattern)*
b) Sphingosme
c) Human gonadotropin
d) USG

2166. In FIGO staging of cancer cervix investigation includes all except - *(NEET/DNBPattern)*
a) CT scan b) PET scan
c) MR! d) Laparoscopy

2167c What is the contraindication of laparoscopic sterilization - *(NEET/DNBPattern)*
a) Post partum state
b) Post MTP
c) Gynaecologic malignancies
d) 3 previous child birth

216$o What distinguishes placental site trophoblastic tumor from Choriocarcinoma -
a) LowHCG *(NEET/DNBPattern)*
b) Low HCG and low HPL
c) High HCG and low HPL
d) High HCG and high HPL

2169. Palm leaf appearance of cervical mucus is caused by- *(NEET/DNBPattern)*
a) Oestrogen b) Progesterone
c) FSH d) Testosterone

2170. Rate limiting dose of radiotherapy to rectum and bladder in gynaecologic malignancies -
a) 4000cGy *(NEET/DNBPattern)*
b) 5000cGy
c) 6000cGy
d) 7000cGy

2149)a 2150)a 2151)a 2152)d 2153)b 2154)a 2155)a 2156)a 2157)b 2158)b 2159)d 2160)a 2161)a 2162)a 2163)c 2164)d 2165)a 2166)d 2167)a 2168)a 2169)a 2170)b

2171. Woman presenting with chlymadial vaginal discharge needs - *(NEET/DNB Pattern)*
a) Ciprofloxacin b) Doxycyclin
c) Metronidazole d) Azithromycin

2172. Fetal blood loss is more fn -*(NEET/DNB Pattern)*
a) vasa previa
b) placenta previa
c) placental abruption
d) circumvallate placenta

2173. **Monochorionic** monoamsiiotac placenta develops if **division** takes pake - *(NEET/DNB Pattern)*
a) Before 72 hrs b) Between 4th & 8th day
c) After 8th day d) After 2 weeks

2174. Oligohydraminos is associated with all except -
a) Sacral agenesis *(NEET/DNB Pattern)*
b) Polycystic kidney
c) Renal agenesis
d) PROM

2175. HCG is secreted by - *(NEET/DNB Pattern)*
a) Trophoblast cells b) Amniotic membrane
c) Fetal yolk sac d) Hypothalamus

2176. **Size of uterus in inches is -***(NEET/DNB Pattern)*
a) 5X4X2 b) 4X3X1
c) 3X2X1 d) 4X2X1

2177. The amount of blood loss in each menstrual cycle **is about -** *(NEET/DNB Pattern)*
a) lOcc b) 35cc
c) 50cc d) lOOcc

2178. **Beading is seen in** case **of genital** TB **in women in-** *(NEET/DNB Pattern)*
a) Tubes b) Ovary
c) Cervix d) Vagina

2179. Commonest cause of postpartum hemorrhage in multipara is - *(NEET/DNB Pattern)*
a) Fibroid b) Retained placenta
c) Uterine atony d) Uterine perforation

2180. In puerperial period sepsis is M/C due to -
a) Uterine infection *(NEET/DNB Pattern)*
b) Ovarian infection
c) Vaginal infection
d) All of the above

2181. Pt with low testosterone & low count will show can show all exept - *(NEET/DNB Pattern)*
a) Decreased FSH
b) Decreased LH
c) Increased FSH
d) Obstruction of spermatic duct

2182. Beaded feel of fallopian tube on hsg is seen in -
a) TB *(NEET/DNB Pattern)*
b) Chlamydia
c) Gonococcal infection
d) Syphillis

2183. At 9 wk best measure to calculate the gestational age - *(NEET/DNB Pattern)*
a) BPD b) CRL
c) Fetal femer length d) Embryonic movements

2184. Cause of fibroid torsion - *(NEET/DNB Pattern)*
a) Infection b) Site of origin
c) Both d) None

2185. Cause of infertility in hypothyroidism-
a) Decrease prolactin *(NEET/DNB Pattern)*
b) Increased prolactin
c) Both
d) None

2186. First sign off wound dehiscence in **uterine rupture** during pregnancy - *(NEET/DNBPattern)*
a) Tachycardia b) PV discharge
c) Bloody micturition d) Bradycardia

2187. Gestational sac on usg is first seen at_____wks fromLMP- *(NEET/DNBPattern)*
a) 2 b) 4
c) 5 d) 6

2188. 51 yr ff with abdominal mass & ascites. On H/P ovarian Ca is +ve for - *(NEET/DNB Pattern)*
a) Ca 125 b) Ca 19-9
c) AFP d) hCG

2189. Laproscopic tubal ligation contraindication -
a) Post partum state *(NEET/DNBPattern)*
b) Post MTP
c) Gynaecologic malignancies
d) 3 previous child birth

2190. Therapeutic level of serum magnesium needed to treat pre-eclempsia - *(NEET/DNBPattern)*
a) .1-2 Meq / 1 b) 3-4 Meq / 1
c) 4-7 Meq /1 d) .7-9 Meq/ 1

2191. **Estrogen Level in follicular phase off Menstrual Cycle-** *(NEET/DNBPattern)*
a) 100-200 pg/ml b) 200-300 pg/ml
c) 300-400 pg/ml d) 400-500 pg/ml

2192. An 18 yrs young female presents with primary amenorrhea, cyclic abdominal pain and voiding difficulties. On examination breast and pubic hair are well developed but vagina can't be appreciated. Diagnosis is - *(NEET/DNBPattern)*
a) Mayer-Rokitansky-Kauster Syndrome
b) Turner syndrome
c) Noonan sundrome
d) Kallmann syndrome

2193. Methotrexate is used in Ectopic Pregnancy when-
a) Patient is Hemodynamically Stable *(NEET/DNB*
b) Serum hCG level >3000 IU/L *Pattern)*
c) Tubal diameter > 4 cm without fetal cardiac activity
d) None of the above

2194. Call Exner bodies are found in -
a) Granulosa Cell Tumour *(NEET/DNB Pattern)*
b) Embryonal cell carcinoma
c) Choriocarcinoma
d) Androblastoma

2195. Amount of blood passed through placenta on delayed cord clamping - *(NEET/DNB Pattern)*
a) 50-100 ml b) 100-200 ml
c) 120-150 ml d) 150-180 ml

2171)d 2172)a 2173)c 2174)a 2175)a 2176)b 2177)b 2178)a 2179)c 2180)a 2181)d 2182)a 2183)b 2184)b 2185)b 2186)c 2187)c 2188)a 2189)a 2190)c 2191)a 2192)a 2193)a 2194)a 2195)a

2196. Test to detect maternal sensitization -
a) Direct coombs test *(NEET/DNB Pattern)*
b) Indirect coombs test
c) Both
d) None

2197. Fetal lung maturity is signified by -
a) L:S > 2 *(NEET/DNB Pattern)*
b) >37 weeks gestation
c) level of phosphatidyl choline
d) non reactive NST

2198. Amniotic fluid quantity at birth (ml) -
a) 500 b) 1000 *(NEET/DNB Pattern)*
c) 1500 d) 2000

2199. 1996 ASRM classification of endometritis includes - *(NEET/DNB Pattern)*
a) Intensity of pain b) Location
c) Size d) Number

2200. Hemodynamic change in pregnancy are all except-
a) Increased systemic vascular resistance
b) Increased blood volume *(NEET/DNB Pattern)*
c) Plasma volume
d) Cardiac output

2201. Heart disease in pregnancy, most common -
a) ASD b) MS *(NEET/DNB Pattern)*
c) VSD d) MR

2202. Highest mortality in pregnancy -
a) Eisenmenger syndrome *(NEET/DNB Pattern)*
b) Fallot's tetrology
c) Coarctation of aorta
d) Marfan's syndrome

2203. Uretheral discharge is seen in-*(NEET/DNB Pattern)*
a) Gonorrhea b) Chylamydia
c) Herpes d) Candida

2204. Jacquemier sign is - *(NEET/DNB Pattern)*
a) Softening of cervix
b) Bluish discoloration of anterior vaginal wall
c) Mucous discharge
d) Increased pulsations

2205. In A-P , oval pelvis is - *(NEET/DNB Pattern)*
a) Android b) Platypoid
c) Anthropoid d) Gynecoid

2206. HIV maximum transmission occurs during -
a) Childbirth *(NEET/DNB Pattern)*
b) Breast feeding
c) labour
d) Antepartum

2207. Not a laproscopy instru*ment-(NEET/DNB Pattern)*
a) Trocar b) Pneumoperitoneum needle
c) Doyen's retractor d) Fiberoptic camera

2208. Ovarian cancer drugs used are -
a) Paclitaxel + doxorubicin *(NEET/DNB Pattern)*
b) Cisplatin + doxorubicin
c) Docetaxel + doxorubicin
d) Paclitaxel + cisplatin

2209. Pregnancy changes are all except -
a) Respiratory alkalosis *(NEET/DNB Pattern)*
b) Paco2 decreased
c) Pa o2 increased
d) Systemic vascular resistance increases

2210. G2 female in first trimester with first child lOyrs of age getting chicken pox. Next step is -
a) Varicella vaccine *(NEET/DNB Pattern)*
b) Oral acyclovir
c) Both
d) None

2211. Non-contraceptive metabolic effect of estrogen are all except - *(NEET/DNB Pattern)*
a) Increased fatty acids
b) Increased plasma lipid and lipoproteins
c) Increased total cholesterol
d) Decreased HDL

2212. Commonest cause of anovulatory infertility -
a) PCOS *(NEET/DNB Pattern)*
b) TB
c) Endometriosis
d) Thyroid dysfunction

2213. Sarcoma botyroides in vagina is seen in which age- *(NEET/DNB Pattern)*
a) Less than 8yrs b) 8-16 yrs
c) 16-24 yrs d) > 24 yrs

2214. Interspinous diameter - *(NEET/DNB Pattern)*
a) 10.5 cm b) 11 cm
c) 11.5 cm d) 12 cm

2215. 35 weeks pregnancy, painless blood discharge, most likely diagnosis is - *(NEET/DNB Pattern)*
a) Placentaprevia b) Abruptio placenta
c) Ectopicpregnancy d) None

2216. Curdy vaginal discharge is seen in which infection-
a) Bacterial vaginosis *(NEET/DNB Pattern)*
b) Candidiasis
c) Trichomoniasis
d) Chlamydia

2217. In pregnancy which is the most common test for HIV- *(NEET/DNB Pattern)*
a) PCR b) CD4 cell count
c) ELISA d) Western blot

2218. WF in obstructed labour is repaired -*(NEET/DNB Pattern)*
a) Immediately b) 3 weeks
c) 3 months d) 6 months

2219. In total abdominal hysterectomy following are removed - *(NEET/DNB Pattern)*
a) uterus
b) uterus & cervix
c) uterus , cervix & fallopian tube
d) uterus, cervix, fallopian tube & ovary

2220. GnRH analogue are all except -*(NEET/DNB Pattern)*
a) Soserelin b) Gonadorlein
c) Goserelin d) Buserelin

2196)b 2197)a 2198)b 2199)b 2200)a 2201)b 2202)a 2203)a 2204)b 2205)c 2206)a 2207)c 2208)d 2209)d 2210)b 2211)d 2212)a 2213)a 2214)a 2215)a 2216)b 2217)b 2218)c 2219)b 2220)a

2221. Cervical carcinoma is due to *UP\-(NEET/DNBPattern)*
a) 6, 8 b) 16, 18
c) 30,32 d) 15, 17

2222. Anemia in pregnancy is most commonly due to -
a) Nutritional *(NEET/DNB Pattern)*
b) Hemorrhage
c) Hereditary
d) Bone marrow insufficiency

2223. Procedure done in vault prolaps -
a) Manchester operation *(NEET/DNB Pattern)*
b) Fothergills operation
c) Khanna's abdominal sling operation
d) Le forte operation

2224. Biophysical profile includes all except -
a) NST *(NEET/DNB Pattern)*
b) Muscle tone
c) Amniotic'fluid
d) Acetyl choline level

2225. PID is most commonly caused *by-(NEET/DNB Pattern)*
a) Chlamydia b) Mycoplasma
c) Tubercular bacillus d) E. Coli

2226. Investigation for postmenopausal bleed are all except- *(NEET/DNB Pattern)*
a) PAP smear b) Laproscopy
c) Fractional curettage d) Ultrasound

2227. H. mole karyotype is - *(NEET/DNB Pattern)*
a) 46XY b) 46XX
c) 45XX d)45XY

2228. Staging of ca cervix with endometrial involvement-
a) Stage 1 b) Stage 2 *(NEET/DNB*
c) Stage 3 d) Stage 4 *Pattern)*

2229. Staging of endometrial ca with involvement of paraaortic lymph node involvement -
a) niC b) IIB *(NEET/DNB Pattern)*
c) IIIA d) IIIB

2230. Ovarian carcinoma chemotherapy for epithelial - *(NEET/DNB Pattern)*
a) BBC b) CHOP
c) MOPP d) None of the above

2231. Amiotic fluid at 36-38 weeks -*(NEET/DNB Pattern)*
a) 500 b) 1000
c) 1500 d) 2000

2232. Fallopian tube tuberculosis -
a) Most common type of genital TB
b) Size of the tubes is unchanged
c) Is asymptomatic *(NEET/DNB Pattern)*
d) Primary focus of infection is always in fallopian tubes

2233. Least diameter of gynecoid pelvis is -
a) Transverse *(NEET/DNB Pattern)*
b) Oblique
c) Diagonal conjugate
d) Obstetric conjugate

2234. FIGO staging in endometrial Ca with paraaortic lymph node - *(NEET/DNB Pattern)*
a) III b b) III c
c) IV a d) IV b

2235. FIGO staging with cervical carcinoma involving parametrium- *(NEET/DNB Pattern)*
a) Ha b) lib
c) nia d) Illb

2236. Role of lactobacilli in vaginal secretions -
a) To maintain alkaline pH *(NEET/DNB Pattern)*
b) To maintain acidic pH
c) Nutrition
d) None

2237. Most common degeneration of fibroids -
a) Calcareous b) Hyaline*(NEET/DNB Pattern)*
c) Red d) Cystic

2238. Definitive management of adenomyosis is -
a) GNRH analogue *(NEET/DNB Pattern)*
b) Danazole
c) LH
d) Hysterectomy

2239. Drug commonly used in t/t of endometriosis -
a) LH b) GnRH *(NEET/DNB Pattern)*
c) MPA d) FSH

2240. Duration of contraception after DMPA is -
a) 21 months b) 1-3 months *(NEET/DNB*
c) 3-6 months d) >6 months *Pattern)*

2241. Methergin is given for prophylaxis of -
a) Anemia *(NEET/DNB Pattern)*
b) Cardiac disease
c) Renal disease
d) Lung disease

2242. Investigation of choice in post menopausal bleeding- *(NEET/DNBPattern)*
a) PAP smear b) Laproscopy
c) Fractional curettage d) Ultrasound

2243. Gold standard diagnostic technique for diagnosis of endometriosis - *(NEET/DNBPattern)*
a) Laproscopy b) Ca 125 level
c) Ultrasound d) MRI

2244. Markedly deflexed head of baby causes which diameter to engage - *(NEET/DNBPattern)*
a) Occipitofrontal b) Suboccipitorontal
c) Mentovertical d) Submentovertical

2245. Hegar sign all are true except -
a) Bimanual palpation method
b) Difficult in obese *(NEET/DNBPattern)*
c) Can be done at 14 weeks
d) Present .in 2/3rd of cases

2246. All of the following occurs because of prostaglandin use except - *(NEET/DNBPattern)*
a) Excess water retention
b) Flushes
c) Increased motility of bowel
d) Nausea

2247. HRT is given in - *(NEET/DNBPattern)*
a) Symptomatic postmenopausal women
b) Following hysterectomy
c) Because a women has asked for it
d) All of the above

2221)b 2222)a 2223)d 2224)d 2225)a 2226)c 2227)b 2228)b 2229)a 2230)a 2231)b 2232)a 2233)d 2234)b
2235)b 2236)b 2237)b 2238)d 2239) b 2240)c 2241)a 2242)c 2243)a 2244)a 2245)c 2246)a 2247) d

2248. New born can be given breast milk after how much time following normal *deM\ery-(NEET/DNB Pattern)*
a) Half hour b) 1 hours
c) 2 hours d) 3 hours

2249. Ectopic pregnancy highest likely cause -
a) IUCD *(NEET/DNBPattern)*
b) PID
c) Artificial fertility technique
d) Tubal damage

2250. Bartholin cyst treatment of choice -
a) Excision *(NEET/DNBPattern)*
b) Antibiotics
c) Marsupialization
d) Drainage

2251. Prolapsed of uterus in nulliparous women, treatment is - *(NEET/DNBPattern)*
a) Sling usedinvolving rectus sheath
b) Anterior colporrhaphy
c) posterior colporrhaphy
d) Manchester operation

2252. A pregnant woman in first trimester has four fold rise in IgG against toxoplasmosis, it indicates -
a) Protective antibodies *(NEET/DNBPattern)*
b) Acute infection
c) Chronic infection
d) None of the above

2253. Women with menorrhagia IUCD of choice -
a) NOVAT *(NEET/DNB Pattern)*
b) LNGIUD
c) Mirena
d) Gyne fix

2254. In pregnancy cardiac output increases by what %-
a) 40-50 % *(NEET/DNB Pattern)*
b) 30-40 %
c) 20-30%
d) 10-20%

2255. In pregnancy plasma volume increased maximum at what gestational age? *(NEET/DNB Pattern)*
a) 10 wks b) 20 wks
c) 25 wks d) 30 wks

2256. Spinnaker is maximum shown at which phase -
a) Menstrual phase *(NEET/DNB Pattern)*
b) Ovulatory
c) Post ovulatory
d) Pre follicular

2257. Most common puerperal infection is because of -
a) Anaerobic streptococcus *(NEET/DNB Pattern)*
b) Staphylococcus
c) E. Coli
d) Klebsiella

2258. Most of ectopic pregnancies are at ampulla as -
a) It is the narrowest part *(NEET/DNB Pattern)*
b) Tubal movements are least here
c) Salpingitis produces least crypts here
d) Plicae are most numerous here

2259. Deep transverse arrest is seen in- *(NEET/DNB*
a) Android pelvis b) Gynaecoid *Pattern)*
c) Anthropoid d) Platypoid

2260. Ca ovary with left supraclavicular LN, stage is-
a) **IV** b) III *(NEET/DNB Pattern)*
c) D d) I

2261. Asherman syndrome false *is-(NEET/DNB Pattern)*
a) Associated with menstrual irregularities
b) Progesterone challenge test is negative
c) Synechiae formation in uterus
d) May be secondary to TB

2262. Rarest **presentation is -** *(NEET/DNBPattern)*
a) Cephalic b) Breech
c) Shoulder d) Vertex

2263. Drug of choice for pneumocystis carinii in pregnancy- *(NEET/DNBPattern)*
a) SMZ/TMP b) Primaquine
c) Dapsone d) Pentamidine

2264. **Emergency contraceptive should must be started with in how much time after unprotected intercourse**
a) 24 hrs b) 48 hrs *(NEET/DNB Pattern)*
c) 72 hrs d) 96 hrs

2265. contraction stress test false is -
a) Oxytocin not used *(NEET/DNBPattern)*
b) Invasive method
c) Detects fetal well being
d) Negative test is associated with good fetal outcome

2266. Maximum chance of transmission during delivery-
a) **HSV** b) **CMV** *(NEET/DNB Pattern)*
c) **VZV** d) Rubella

2267. External version is done after -*(NEET/DNB Pattern)*
a) 34 weeks b) 36 weeks
c) 38 weeks d) 40 weeks

2268. 35 year old with history of repeated D&C. She now has secondary ammenorhea. What is your diagnosis-
a) Hypothyroidism *(NEET/DNB Pattern)*
b) Kallman syndrome
c) Sheehan's syndrome
d) Ashennan's syndrome

2269. Drug causing abruption *p\acenta-(NEET/DNB Pattern)*
a) Methadone b) Cocaine
c) Amphetamine d) Fluoxetine

2270. Drug of choice in premenstrual syndrome -
a) Antipsychotics b) SSRI *(NEET/DNB Pattern)*
c) OCP d) Depo progesterone

2271. Fertile period of female is measured by -
a) LH b) FSH *(NEET/DNB Pattern)*
c) Estrogen d) Oxytocin

2272. Antihypertensive of choice in pregnancy is -
a) Methydopa *(NEET/DNB Pattern)*
b) Labetolol
c) Hydralizine
d) CCB

2248)a 2249)b 2250)c 2251)a 2252)b 2253)c 2254)a 2255)d 2256)b 2257)a 2258)d 2259)a 2260)a 2261) b

2273. I pill is used when - *(NEET/DNB Pattern)*
a) Accidental sexual exposure
b) OCP forgotten
c) Of choice in young
d) All of the above

2274. 35 yr old with 4 months amenorrhea with increased FSH, decreased estrogen. What is the diagnosis-
a) Premature ovarian failure
b) PCOD *(NEET/DNB Pattern)*
c) Pituitary failure
d) Hypothalamic failure

2275. NST, what is seen except - *(NEET/DNB Pattern)*
a) Variability b) Acceleration
c) Time period d) Oxytocin

2276. Post menopausal HRT decreases incidences of which malignancy - *(NEET/DNB Pattern)*
a) Breast b) Colorectal
c) Ovarian d) Endometrium

2277. Most common malignant ovarian tumor -
a) Dysgerminoma *(NEET/DNBPattern)*
b) Germ cell tumour
c) Serous cystadenocarcinoma
d) Yolk sac tuomour

2278. Least common presentation of twins -
a) Both vertex *(NEET/DNBPattern)*
b) Both breech
c) Both transverse
d) First vertex and 2nd transverse

2279. Which is not feature of HELLP syndrome -
a) Hemolysis *(NEET/DNBPattern)*
b) Elevated liver enzymes
c) Low platelet count
d) Renal failure

2280. Menstrual regulation effective up to- *(NEET/DNB Pattern)*
a) 14 days b) 21 days
c) 4 weeks d) 6 weeks

2281. Best test to quantify fetomaternal hemorrhage in Rh isoimmunisation is - *(NEET/DNB Pattern)*
a) UPT b) DCT
c) Kleinhauser test d) Indirect coombs

2282. Most common cause of salpingitis- *(NEET/DNB Pattern)*
a) Chlamydia b) Mycoplasma
c) Tubercular bacillus d) E. Coli

2283. Jacquemeirs sign - *(NEET/DNBPattern)*
a) Softening of cervix
b) Bluish discoloration of anterior vaginal wall
c) Mucous discharge
d) Increased pulsations

2284. Best to diagnose unruptured ectopic pregnancy -
a) Scopy b) UPT *(NEET/DNBPattern)*
c) USG d) Culdocentesis

2285. Most common site of endometriosis -
a) Ovary b) FT *(NEET/DNBPattern)*
c) Colon d) LSCS Scar

2286. Presenting part in transverse lie- *(NEET/DNB Pattern)*
a) Shoulder b) Face
c) Vertex d) Brow

2287. Definitive indication of LSCS - *(NEET/DNB Pattern)*
a) Mento ant b) Persistent mento post
c) Occipito posterior d) Vertex

2288. Normal weight of term placenta in gms -
a) 300 b) 500 *(NEET/DNB Pattern)*
c) 700 d) 1000

2289. Severely anemic pregnant patient in cardiac failure. Choice of transfusion - *(NEET/DNB Pattern)*
a) Platelets b) Packed cells
c) Whole blood d) Exchange transfusion

2290. Hydops fetalis is due to - *(NEET/DNB Pattern)*
a) Rh mismatch b) Hyperproteinemia
c) Placental hypoplesia d) All of the above

2291. Caput succedaneum indicates that fetus was alive till-
a) Immediately after birth *(NEET/DNB Pattern)*
b) Till 2-3 days after birth
c) 2-3 weeks after birth
d) 2-3 months after birth

2292. CVS change in pregnancy- *(NEET/DNB Pattern)*
a) Slight right axis deviation in ECG
b) Slight left axis deviation in ECG
c) Diastolic murmur
d) Pulse rate is decreased

2293. 5 month pregnant female, which of the following is true - *(NEET/DNB Pattern)*
a) 50% have soft systolic murmur
b) Cardiac output is reduced
c) Systemic vascular resistance is increased
d) Increase in CVP

2294. Hydronephrosis is seen in which stage of Ca cervix-
a) 2a b) 2b *(NEET/DNBPattern)*
c) 3a d) 3b

2295. Endometrial carcinoma involving cervix, stage is-
a) 1 b) 2 *(NEET/DNBPattern)*
c) 3 d) 4

2296. Maximum cardiac output in pregnancy is seen at-
a) 28 weeks b) 32 weeks *(NEET/DNB Pattern)*
c) 36 weeks d) 38 weeks

2297. 6year old son of pregnant women is suffering from chicken pox. Which of the following is given to pregnant women - *(NEET/DNBPattern)*
a) Acyclovir
b) Acyclovir 4- immunoglobin
c) Only immunoglobin
d) Vaccination

2298. MTP by medicine recognised by Govt of India upto- *(NEET/DNBPattern)*
a) 70 days b) 63days
c) 49 days d) 45days

2299. All are causes of anovulatory amenorrhoea exept-
a) PCOD *(NEET/DNBPattern)*
b) Hyperprolactemia
c) Gondal dysgenesis
d) Drugs

2273)a 2274)a 2275)d 2276)b 2277)c 2278)c 2279)d 2280)a 2281)c 2282)a 2283)a 2284)a 2285)a 2286)a
2287)c 2288)b 2289)b 2290)a 2291)a 2292)a 2293)a 2294)d 2295)b 2296)b 2297)c 2298)b 2299)c

2300. After delivery upto which week is known as puperium-
a) 2 weeks b) 4 weeks *(NEET/DNB Pattern)*
c) 6 weeks d) 8 weeks

2301. Vacuum delivery produces -*(NEET/DNB Pattern)*
a) Chingon b) Cephalhematoma
c) Both d) None

2302. External cephalic version is now a days done at -
a) 34 weeks b) 36 weeks *(NEET/DNB Pattern)*
c) 38 weeks d) 40 weeks

2303. Antithyroid of choice in pregnancy -
a) Methimazole b) PTU *(NEET/DNB Pattern)*
c) Carbamizole d) Beta blockers

2304. Weight of fetus at 20 wks gestation -
a) 150 gms b) 200 gms *(NEET/DNB Pattern)*
c) 300 gms d) 400 gms

2305. Placenta praevia, false is - *(NEET/DNB Pattern)*
a) Most common cause of APH
b) Painful vaginal bleeding
c) Usg is the investigation of choice
d) Increased maternal age is a risk factor

2306. Most common cause of pyometra is- *(NEET/DNB*
a) Endometritis b) CA endometrium *Pattern)*
c) Ca cervix d) Radiation

2307. PAP smear from cervix shows HSIL grade CIN, next step is - *(NEET/DNB Pattern)*
a) Coagulation b) Conization
c) Colposcopy & biopsy d) Cryosurgery

2308. pH of vagina in pregnant woman is usually -
a) 4.0 b) 4.5 *(NEET/DNB Pattern)*
c) 5 d) >5

2309. Diagnosis of adenomyosis is made by -
a) Histopathology *(NEET/DNB Pattern)*
b) Ultrasound
c) MRI
d) Laproscopy

2310. Definitive treatment for severe preeclampsia is -
a) Mgso4 *(NEET/DNB Pattern)*
b) Delivery of the baby
c) Antihypertensive drugs
d) Rest

2311. Treatment for young woman with prolapsed uterus is - *(NEET/DNB Pattern)*
a) Sling operation
b) Anterior colporrhaphy
c) Posterior colporrhaphy
d) Manchester operation

2312. Decidual reaction is due to which hormone -
a) Progesterone b) Estrogen *(NEET/DNB Pattern)*
c) LH d) FSH

2313. Min dose of estrogen in OCPs in micrograms -
a) 10 b) 20 *(NEET/DNBPattern)*
c) 30 d) 40

2314. Prophylactic methergin given for -
a) Induction of labour *(NEET/DNB Pattern)*
b) Induction of abortion
c) To stop excess bleeding from uterus
d) All of the above

2315. What is false about post menopausal state -
a) LowLH *(NEET/DNB Pattern)*
b) Low estrogen
c) High FSH
d) High androgen

2316. DOC for malaria in *pregaancy-(NEET/DNB Pattern)*
a) Chloroquin b) Quinine
c) Primaquin d) Artesunate

2317. Exclusively Fetal blood loss occurs in -
a) Vasa previa *(NEET/DNB Pattern)*
b) Placenta praevia
c) Polyhydramnios
d) Oligohydramnios

2318. For uterine prolapse in pregnanacy, Ring pessery can be inserted upto - *(NEET/DNB Pattern)*
a) 12 weeks b) 14 weeks
c) 16weeks d) 18 weeks

2319. Least failure rate is of - *(NEET/DNB Pattern)*
a) OC pills b) IUDs
c) Condom d) DMPA

2320. Mentovertical diameter of fetal skull is -
a) 9.5 cm b) 10 cm *(NEET/DNB Pattern)*
c) 11.5 cm d) 14 cm

2321. Enzymes responsible for conversion of androgen into estrogen are all except -*(NEET/DNB Pattern)*
a) Aromatase
b) Sulphatase
c) Fumarase
d) 3 beta hydroxy steroid dehydrogenase

2322. Failure rate of Pomeroy's method of tubal ligation is - *(NEET/DNB Pattern)*
a) 0.2% b) 0.4%
c) 0.6% d) 0.8%

2323. Maximum success after reversal of tubal ligation-
a) Cauterization *(NEET/DNB Pattern)*
b) Pomeroy's technique
c) Clip method
d) Fimbriectomy

2324. Not a method for delivery of after-coming head of breech - *(NEET/DNB Pattern)*
a) Forceps method
b) Bums and Marshall method
c) Malar flexion and shoulder traction
d) Half hand method

2325. In a postmenopausal female, which hormone increases - *(NEET/DNB Pattern)*
a) FSH b) Estrogen
c) GH d) None of the above

2326. Initial drug for ovarian *cancer-(NEET/DNB Pattern)*
a) Carboplatin b) Doxorubicin
c) Ifosfamide d) Methotrexate

2327. If 300 microgram anti D is given to mother , amount of blood it will neutralise - *(NEET/DNB*
a) 30 ml b) 40 ml *Pattern)*
c) 50 ml d) 60 ml

2300)c 2301)c 2302)b 2303)a 2304)c 2305)b 2306)a 2307)c 2308)d 2309)d 2310)b 2311)a 2312)a 2313)b
2314)c 2315)a 2316)a 2317)a 2318)d 2319)a 2320)d 2321)c 2322)b 2323)c 2324)d 2325)a 2326)a 2327)a

2328. Which does not indicate fetal lung maturity -
a) Reactive NST *(NEET/DNB Pattern)*
b) Gestation 37 weeks
c) Presence of phosphatidyl choline
d) L/S ratio

2329. Best test for ovulation - *(NEET/DNB Pattern)*
a) Serum estrogen b) Serum progesterone
c) Both d) None

2330. Tdap vaccine is give in between which weeks of pregnancy - *(NEET/DNB Pattern)*
a) 10-I6weeks b)l 7-22 weeks
c) 22-26 weeks d) 27-30 weeks

2331. Which is least injured in gynaecological procedures-
a) Ureter at pelvic brim *(NEET/DNB Pattern)*
b) Renal pelvis
c) Urinary bladder
d) Ureter at infundibulopelvic ligament

2332. Which of the following cannot be treated by laproscopy - *(NEET/DNB Pattern)*
a) Ectopic pregnancy
b) Sterilization
c) Non descent of uterus
d) Genital prolapsed

2333. Which of following most commonly clinically used-
a) Diagonal conjugate *(NEET/DNB Pattern)*
b) Ant post diameter of inlet
c) Transverse diameter of outlet
d) Oblique diameter of pelvis

2334. Most suitable type of pelvis in female -
a) Gynaecoid *(NEET/DNB Pattern)*
b) Android
c) Anthropoid
d) Platypelloid

2335. Active management of 3rd stage of labour is helpful in prevention of - *(NEET/DNB Pattern)*
a) Atonic PPH b) Secondary PPH
c) Uterine inertia d) APH

2336. Palmer sign is related to -
a) Contraction of uterus *(NEET/DNB Pattern)*
b) Dusky hue of ant vaginal wall
c) Bluish discolouration of ant vaginal wall
d) Increased pulsations felt through lateral fornix

2337. In a baby born to a diabetic mother all are seen except- *(NEET/DNBPattern)*
a) Malformations b) Macrosomia
c) Growth restriction d) Heart failure

2338. Not a cause for secondary amenorrhea -
a) Pregnancy *(NEET/DNBPattern)*
b) PCOD
c) Hyperprolactinaemia
d) Turner syndrome

2339. Spinbarket is maximum shown in which phase -
a) Menstrual phase *(NEET/DNBPattern)*
b) Ovulatory
c) Post ovulatory
d) Pre follicular

2340. DOC for cholera in pregnancy *\s-(NEET/DNB Pattern)*
a) Furazolidone b) Tetracycline
c) Doxycycline d) Azithromycin

2341. GTT in pregnancy is indicated when if fasting blood sugar is above - *(NEET/DNB Pattern)*
a)80gm/100ml b)85gm/100ml
c) 90 gm/100 ml d)95gm/100ml

2342. Treatment of stage IIIB in Ca cervix is -
a) Wertheim's hystrectotomy *(NEET/DNB Pattern)*
b) Mitra operation
c) Chemoradiation
d) Primary radiotherapy

2343. Polyhydramnios - *(NEET/DNB Pattern)*
a) 2000cc b) 1500cc
c) lOOOcc d) 500cc

2344. Most common cause *ofAshermzn-(NEET/DNB Pattern)*
a) PPH b) Tubercular endometritis
c) Amenorrhea d) Oligomenorrhea

2345. Early amniocentesis is done at-*(NEET/DNB Pattern)*
a) 6-12 weeks b) 12-15 weeks
c) 15-20 weeks d) 20-25 weeks

2346. Most common cause of vulval hematoma -
a) Episiotomy *(NEET/DNB Pattern)*
b) Vault rupture
c) Lower segment uterine rupture
d) Rupture of paravaginal sinuses

2347. Which condition internal podalic version is done-
a) Transverse lie in 2nd twins
b) Breech presentation *(NEET/DNB Pattern)*
c) Both
d) None

2348. Least common type of twins -*(NEET/DNB Pattern)*
a) Diamniotic-dichorionic twins
b) Diamniotic -monochorionic twins
c) Monoamniotic-monochorionic twins
d) Conjoined twins

2349. Caput succedeum is said to occur in baby -
a) Within 24 hrs *(NEET/DNB Pattern)*
b) 2-3 days
c) 2-3 weeks
d) 2-3 months

2350. All of the following are used in hysteroscopy except-
a) $C0_2$ b)0_2 *(NEET/DNB Pattern)*
c) Normal saline d) Dextrose

2351. OCP decreases risk of - *(NEET/DNB Pattern)*
a) Cervical ca b) Endometrial ca
c) Vaginal ca d) Liver carcinoma

2352. Progesterone only pill not given after -
a) 24 hrs b) 48 hrs *(NEET/DNB Pattern)*
c) 72 hrs d) 96 hrs

2353. Regarding erythroblastosis fetalis all is true except-
a) Rh haemolytic disease *(NEET/DNB Pattern)*
b) Severe anemia
c) Hypoplasia of placental tissue
d) Hypoproteinaemia

2328)a 2329)b 2330)d 233l)b 2332)c 2333)a 2334)a 2335)a 2336)a 2337)d 2338)d 2339)b 2340)d 2341)d
2342)c 2343)a 2344)a 2345)c 2346)a 2347)a 2348)d 2349)a 2350)b 235l)b 2352)a 2353)c

2354. Regarding HCG all are true except -
a) It is a glycoprotein *(NEET/DNB Pattern)*
b) Chemically similar to LH
c) Secreted by syncytiotrophoblasts of placenta
d) Inhibits adrenal steroidogenesis

2355. Vasectomy reversal in primary infertility is done within how many years of vasectomy -
a) 5yrs b) 6yrs *(NEET/DNB Pattern)*
c) 7yrs d) 8yrs

2356. Hegar sign is seen in how many weeks- *(NEET/*
a) 6-10 weeks b) 10-14 weeks *DNB Pattern)*
c) 14-18 weeks d) 18-22 weeks

2357. Implantation occurs on which day of menstrual cycle - *(NEET/DNB Pattern)*
a) 6th day b) 10th day
c) 15th day d) 20th day

2358. Indication of classical caesarean section -
a) Cervical cancer *(NEET/DNB Pattern)*
b) Contracted pelvis
c) Non re-assuring FHR
d) None

2359. Location of Bartholin cyst is -*(NEET/DNB Pattern)*
a) Junction of anterior 2/3rd and posterior l/3rd of labium majus
b) Junction of anterior l/3rd and posterior 2/3rd of labium majus
c) Junction of anterior and posterior halves of labium majus
d) None of the above

2360. Vaginal pH before puberty is -
a) 7 b) 6 *(NEET/DNB Pattern)*
c) 4.5 d) 5

2361. Carcinoma cervix screening are all except -
a) PAP smear *(NEET/DNB Pattern)*
b) Liquid based cytology
c) CT and MRI
d) Acetowhite areas

2362. TB uterus all is true except -
a) Mostly secondary *(NEET/DNB Pattern)*
b) Increase incidence of ectopic pregnancy
c) Involvement of endosalpinx
d) Most common is ascending infection

2363. Lactating mother OCP of choice -
a) Progestin only pil *(NEET/DNB Pattern)*
b) Combined OCP
c) Estrogen only pill
d) None

2364. Clotting factors change in pregnancy -
a) Fibrinogen level is increased
b) Platelet level is increased *(NEET/DNB Pattern)*
c) Factor XII level is decreased
d) Factor XI level is increased

2365. Maximum amount of 0_2consumption increased in pregnancy is - *(NEET/DNB Pattern)*
a) 20% b) 30 %
c) 40 % d) 50 %

2366. Antihypertensive contraindicated in pregnancy -
a) Labetalol *(NEET/DNB Pattern)*
b) Hydralazine
c) Methyl dopa
d) ACE inhibitors

2367. Strongest support of uterus is -
a) Mackenrodt's ligament *(NEET/DNB Pattern)*
b) Broad ligaments
c) Round ligaments
d) Uterosacral ligaments

2368. Consumption coagulopathy is seen with -
a) Abruption placenta *(NEET/DNBPattern)*
b) Placenta previa
c) Placenta accrete
d) Retained placenta

2369. For hormonal assessment, sample is taken from-
a) Anterior wall *(NEET/DNBPattern)*
b) Lateral wall
c) Posterior wall
d) Fornix

2370. Vaginal emphysematous bulla, which is false -
a) Presents with vaginal discharge
b) Leads to ulceration *(NEET/DNBPattern)*
c) Usually occur in pregnant patients
d) May occur secondary to genital tract infections

2371. Most common congenital defect is - *(NEET/DNB*
a) Cataract b) PDA *Pattern)*
c) ASD d) Phenylketonuria

2372. Not a tocolytics - *(NEET/DNB Pattern)*
a) Diazepam b) Mag sulphate
c) Indomethacin d) Terbutaline

2373. Strawberry cervix is seen *m-(NEET/DNB Pattern)*
a) Trichomonas b) Chlamydia
c) Gonococcal infection d) Candida

2374. Ballard score is used asses -*(NEET/DNB Pattern)*
a) Brain development of child
b) Gestational age of child
c) Lung maturation of the child
d) Viability of the child

2375. After pregnancy, blood volume normalises after -
a) 1 week b) 2 weeks *(NEET/DNB*
c) 3 weeks d) 4 weeks *Pattern)*

2376. Quadruple test does not include - *(NEET/DNB*
a) MSAFP b) Total hCG *Pattern)*
c) PAPA d) Inhibin A

2377. Cervical cancer 4mm deep invasion and 7 mm spread, stage is - *(NEET/DNB Pattern)*
a) IA b) IA1
c) IA2 d) IB

2378. Main hormone acting upon uterus to initiate labour-
a) Oxytocin b) Estrogen *(NEET/DNB*
c) Progesterone d) Cortisole *Pattern)*

2379. Viable fetus age limit is - *(NEET/DNB Pattern)*
a) 120 days b) 140 days
c) 210 days d) 240 days

2354)d 2355)a 2356)a 2357)d 2358)a 2359)a 2360)a 2361)c 2362)d 2363)a 2364)a 2365)c 2366)d 2367) a
2368)a 2369)b 2370)b 2371)c 2372)a 2373)a 2374)b 2375)b 2376)c 2377)c 2378)a 2379)b

2380. True about dysgerminoma -
a) Highly aggressive *(NEET/DNB Pattern)*
b) Managed conservatively in young girls
c) Usually seen in old patients
d) Secrets make sex hormones

2381. Least chance of cord prolapse is seen in -
a) Vertex b) Breech *(NEET/DNB*
c) Transverse d) Compound *Pattern)*

2382. Which of the following is considered normal in pregnancy-
a) Platelets count 80000 *(NEET/DNB Pattern)*
b) WBC 12000
c) Total protein 1 OOgm
d) Fibrinogen level 150mg/dl

2383. Chicken pox in first trimester, treatment is - *(NEET/DNB Pattern)*
a) VZ1G b) Oral acyclovir
c) Varicella vaccine d) All of the above

2384. Obstetric cholestasis is characterized by -
a) Manifests usually in 1st trimester
b) Most common cause of jaundice in pregnancy
c) Pruritus is the main symptom
d) Recurrence rate is low *(NEET/DNB Pattern)*

2385. Drug of choice for ovulation inductin -
a) Clomiphene b) FSH *(NEET/DNB Pattern)*
c) LH d) Hcg

2386. Polyhydraminos in 34 weeks is defined as -
a) 800 ml b) 1500 ml *(NEET/DNB*
c) 1000 ml d) 2000 ml *Pattern)*

2387. Complete mole is - *(NEET/DNB Pattern)*
a) 46XY b) 46XX
c) 45XY d) 45 XX

2388. Ca cervix IIIBis treatment of choice \s-*(NEET/DNB*
a) Radiotherapy b) Chemotherapy *Pattern)*
c) Chemoradiation d) Surgery

2389. Post menopausal endometrial thickness -
a) 1-3 mm b) 3-5 mm *(NEET/DNB*
c) 5-7 mm d) 6-8 mm *Pattern)*

2390. Torsion of ovary is most commonly seen in - *(NEET/DNB Pattern)*
a) Dermoid cyst b) Granulosa cell tumour
c) Dysgerminoma d) Yolk sac tumour

2391. Pomeroy technique is for - *(NEET/DNB Pattern)*
a) Tubal ligation b) Laprscopy
c) Hysteroscopy d) Minilaparotomy

2392. For gestational sac is seen by TVS at -
a) 5 weeks b) 6 weeks *(NEET/DNB*
c) 7 weeks d) 8 weeks *Pattern)*

2393. Choriocarcinoma diagnosis is by - *(NEET/DNB*
a) USG b) CT *Pattern)*
c) MRI d) X-RAY

2394. Chemotherapy for choriocarcinoma, DOC is - *(NEET/DNB Pattern)*
a) Methotrexate b) Cyclophosphamide
c) Cisplatin d) Doxorubicin

2395. In a34-36 week pregnancy, what is Amniotic fluid index-
a) 15 b) 20 *(NEET/DNB Pattern)*
c) 25 d) 30

2396. Side effect of progesterone only pill are all except-
a) Irregular bleeding *(NEET/DNB Pattern)*
b) Amenorrhea
c) Decreased lactation
d) Weight gain

2397. Depot DMP, all are true except -
a) Dysmenorrhea *(NEET/DNB Pattern)*
b) Dyslipidemia
c) Do not prevent STDs
d) Can be given in breast cancer

2398. Hyperstimulation syndrome, true is -
a) Usually seen in late pregnancy *(NEET/DNB*
b) hCG is the treatment of choice *Pattern)*
c) Raised LH is responsible in PCOD
d) Vascular permeability is decreased

2399. AID is the term used to describe the artificial insemination achieved by using sperms of -
a) Husband b) Donor *(NEET/DNB*
c) Both d) None *Pattern)*

2400. Sheehan's syndrome is - *(NEET/DNB Pattern)*
a) Pituitary necrosisb) Pituitaryadenoma
c) Adrenal necrosis d) Adrenaladenoma

2401. True for PCOD is - *(NEET/DNB Pattern)*
a) Increased FSH b) Increased LH
c) Increased SHBG d) Increased FSH/LH ratio

2402. A patient comes with 6 weeks amenorrhoea and features of shock - *(NEET/DNBPattern)*
a) Ectopic pregnancy b) H. Mole
c) Twin pregnancy d) None of the above

2403. Ca cervix staging done by -*(NEET/DNB Pattern)*
a) CT b) MRI
c) Clinical findings d) Histopathology

2404. Sheehan's syndrome is due to -
a) Ovarian necrosis *(NEET/DNBPattern)*
b) Hypothalamus necrosis
c) Pituitary necrosis
d) Thyroid necrosis

2405. Most effective in detecting neural tube defect -
a) AFP b) MRI *(NEET/DNBPattern)*
c) CT d) Ultrsound

2406. Recurrent abortion not due to -
a) Chromosomal defects *(NEET/DNBPattern)*
b) TORCH infection
c) Luteal phase defects
d) Poorly controlled diabetes

2407. Partogram is not used to monitor -
a) cervical dilatation *(NEET/DNBPattern)*
b) uterine contractions
c) descent of head
d) fetal lung maturity

2408. AFP is increased in which ovarian tumor -
a) Choriocarcinoma *(NEET/DNBPattern)*
b) Granulose cell tumour
c) Sarcoma
d) Endodermal sinus tumour

2380)b 2381)a 2382)b 2383)b 2384)c 2385)a 2386)d 2387)b 2388)c 2389)a 2390)a 2391)d 2392)a 2393)a 2394)a 2395)c 2396)c 2397)d 2398)c 2399)b 2400)a 2401)b 2402)a 2403)c 2404)c 2405)a 2406)b 2407)d 2408) d

2409. Lichen sclerosis of vulva false is -
a) It is infective *(NEET/DNB Pattern)*
b) Usually occurs in old age
c) May b associated with autoimmune diseases
d) Due to decreased estrogen

2410. Which antibiotic can be safely used in pregnant women - *(NEET/DNB Pattern)*
a) Tetracycline b) Erythromycin
c) Isoniazid d) Chloremphenicol

2411. treatment of stage IIB of cervix is - *(NEET/DNB*
a) Chemoradiation b) Hysterectomy *Pattern)*
c) Radiation d) Chemotherapy

2412. Diabetes mellitus in pregnancy is diagnosed by-
a) Fasting blood glucose *(NEET/DNB Pattern)*
b) 50 mg oral GTT
c) 100 mg oral GTT
d) 150 mg of oral GTT

2413. Implantation normally occurs in - *(NEET/DNB*
a) Ampulla b) Body of uterus *Pattern)*
c) Cervix d) Ovaries

2414. Normal sperm motility normal according to WHO is - *(NEET/DNB Pattern)*
a) > 20% b) > 30%
c) > 40% d) > 50%

2415. Transmission of HTV infection from infected mother to child occurs most commonly *durṁg-(NEET/DNB*
a) Antenatal stage b) Before delivery *Pattern)*
c) During labour d) During lactation

2416. Early amniocentesis is done at - *(NEET/DNB*
a) 5-10 weeks b) 10-15 weeks *Pattern)*
c) 15-20 weeks d) 20-24 weeks

2417. Not a support of uterus - *(NEET/DNB Pattern)*
a) Urogenital diaphragm
b) Pubocervical ligament
c) Perineal body
d) Levator ani muscle fibers

2418. Commonest cause of PPH *is-(I* *VEET/DNB Pattern)*
a) Uterine atony b) Traumatic
c) Retained tissues d) Blood coagulopathy

2419. Radical hysterectomy is named after -
a) Wertheim's b) John dark *(NEET/DNB*
c) Meigs d) Mitra *Pattern)*

2420. Drug not used commonly for menorrhagia -
a) Methergin b) Clomiphene *(NEET/DNB*
c) Danazole d) NS AIDS *Pattern)*

2421. Age group for dysgerminoma is - *(NEET/DNB*
a)10-20yrs b) 30-40 yrs *Pattern)*
c) 50-60 yrs d) >60 yrs

2422. What is seen in luteal phase - *(NEET/DNB*
a) Increased progesterone levels *Pattern)*
b) Decreased progesterone levels
c) Decreased estrogen level
d) None of the above

2423. Partial mole, not true is:-
a) Fetus is present *(NEET/DNB Pattern)*
b) Diffuse trophoblastic hyperplesia
c) Theca lutein cysts uncommon
d) Uterine size is less then date

2424. OC pills decrease risk of - *(NEET/DNB Pattern)*
a) Stroke b)CVD
c) Endometrial ca d) Hepatic adenoma

2425. Induction/Trial of labour is contraindicated in -
a) Heart disease of Pregnancy
b) Hypertensive disease of pregnancy
c) Abruption placenta *(NEET/DNB Pattern)*
d) IUGR

2426. Classical C section indicated *ṁ-(NEET/DNB Pattern)*
a) CA Cervix b) Central placenta praevia
c) Failed induction d) Fetal distress

2427. Not given in pregnancy - *(NEET/DNB Pattern)*
a) ENALAPRIL b) Labetalol
c) Hydralazine d) Nifedipine

2428. Minipill, side effect is - *(NEET/DNB Pattern)*
a) Break through Bleeding b) PID
c) Endometrial CA d) Thromboembolism

2429. Latschko's operation - *(NEET/DNB Pattern)*
a) WF b) Prolapse
c) Vesicouterine fistula d) Uretihrovaginal fistula

2430. Regeneration of Endothelium after menstruation takes about - *(NEET/DNB Pattern)*
a) 2 days b) 5 days
c) 10 days d) 15 days

2431. Tocolytics can be given in -*(NEET/DNB Pattern)*
a) Placenta Praevia b) Placenta accerta
c) Pre term labour d) Eclampsia

2432. Therapeutic level of magnesium for treatment of pre-eclampsia should be - *(NEET/DNB Pattern)*
a) 2-3 meq/1 b) 4-7.5 meq/1
c) 7.5-10 meq/1 d) 10-15 meq/1

2433. Max estrogen Level in Menstrual Cycle *is-(NEET/DNB*
a) 100-200 pg/ml b) 200-300 pg/ml *Pattern)*
c) 300-400 pg/ml d) 400-500 pg/ml

2434. Methotrexate is used in Ectopic Pregnancy when-
a) Patient is Hemodynamically Stable
b) hCG level is >4000iu/ml *(NEET/DNB Pattern)*
c) Tubal diameter <5 cm
d) When there is intrabdominal hemorrhage

2435. Dye used in Hysterosalpingography-/MsiiT/Ž)iVB
a) Conray 420 b) Renografin-60 *Pattern)*
c) Toluidine blue d) None of the above

2436. Ergometrine is contraindicated in -
a) Third stage of labour with heart disease
b) Third stage uterine bleeding
c) Both *(NEET/DNBPattern)*
d) None

2437. mcc ectopic pregnancy - *(NEET/DNB Pattern)*
a) IUCD b) PID
c) POP d) Tubal surgery

2438. Which surgery usesrectus sheath to prevent prolapsed- *(NEET/DNBPattern)*
a) Khanna operation b) Purandare operation
c) Shirodkaroperation d) Le Forte repair

2439. DOC for eclampsia is- *(NEET/DNBPattern)*
a) Methyl dopa b) Labetalol
c) Mag. sulphate d) Hydralazine

* *

SURGERY

WOUNDS, TISSUE REPAIR & SCARS

1. Keloid scars is made up of -
a) Dense collagen b) Loose fibrous tissue
c) Granulamatous tissue d) Loose areolar tissue

2. Primary closure of incised wounds must be done within.....- *(KERALA 87)*
a) 2 hrs b) 4 hrs
c) 6 hrs d) 12 hrs
e) 16 hrs

3. The tensile strength of wound reaches that of normal tissue by - *(PGI 88)*
a) 6 weeks b) 2 months
c) 4 months d) 6 months

4. The worst position for scars is - *(PGI88)*
a) Back b) Shoulder
c) Sternum d) Abdomen

5. The best scars are seen in... ..... - *(PGI 88)*
a) Infants b) Children
c) Adults d) Very old people

6. Patient has lacerated untidy wound of the leg and attended the casualty after 2 hours. His wound should be - *(AIIMS 84)*
a) Sutured immediately
b) Debrided and sutured immediately
c) Debrided and sutured secondarily
d) Cleaned and dressed

7. Following are required for wound healing except -
a) Zinc b) Copper *(AI93)*
c) Vitamin C d) Calcium

8. Wound healing is worst at - *(AI93)*
a) Sternum b) Anterior neck
c) Eyelid d) Lips

9. When is the maximum collagen content of wound tissue - *(PGI81, ROHTAK87)*
a) Between 3rd to 5th day
b) Between 6th to 17th day
c) Between 17th to 21st day
d) None of the above

10. If suture marks are to be avoided, skin sutures should be removed by - *(JIPMER 81, AMC 89)*
a) 72 hours b) 1 week
c) 2 weeks d) 3 weeks

11. What is true about keloids - *(JIPMER 95)*
a) It appears immediately after surgery
b) It appears a few days after surgery
c) It is limited in its distribution
d) It is common in old people

12. Keloid is best treated by - *(UPSC 95)*
a) Intrakeloidal injection of triamcinolone
b) Wide excision and grafting
c) Wide excision and suturing
d) Deep X-ray therapy

13. A patient with grossly contaminated wound presents 12 hours after an accident. His wound should be managed by - *(UPSC 96)*
a) Thorough cleaning and primary repair
b) Thorough cleaning with debridement of all dead and devitalised tissue without primary closure
c) Primary closure over a drain
d) Covering the defect with split skin graft after cleaning

14. Delayed wound healing is seen in all except- *(AP 96)*
a) Malignancy b) Hypertension
c) Diabetes d) Infection

15. The following statement about keloid is true -
a) They do not extend into normal skin
b) Local recurrence is common after excision
c) They often undergo malignant change
d) They are more common in whites than in blacks

16. Fibroblast in healing wound derived from -
a) Local mesenchyme b) Epithelium *(PGI98)*
c) Endothelial d) Vascular fibrosis

17. In the healing of a clean wound the maximum immediate strength of the wound is reached by -
a) 2 - 3 days b) 4 - 7 days
c) 10 -12 days d) 13 -18 days

18. Management of an open wound seen 12 hrs. after the injury- *(AIIMS 87)*
a) Suturing b) Debridement and suture
c) Secondary suturing d) Heal by granulation

19. Degloving injury is- *(KERALA 2K)*
a) Surgeon made wound b) Lacerated wound
c) Blunt injury d) Avulsion injury
e) Abrasive wound

20. The best cure rate in keloids is achieved by -
a) Superficial X - ray therapy *(UPSC 2001)*
b) Intralesional injection of triamcinolone
c) Shaving
d) Excision and radiotherapy

21. A clean incised wound heals by - **(***Delhi 92)*
a) Primary intention b) Secondary intention
c) Excessive scarring d) None of the above

22. In treatment of hand inj uries, the greatest priority is- *(AI96)*
a) Repair of tendons
b) Restoration of skin cover
c) Repair of nerves
d) Repair of blood vessels

23. During the surgical procedure - *(AIIMS 83)*
a) Tendons should be repaired before nerves
b) Nerves should be repaired before tendons
c) Tendons should not be repaired at the same time
d) None is true

24. 'Limb salvage' primarily depends on - *(AIIMS 97)*
a) Vascular injury b) Skin cover
c) Bone injury d) Nerve injury

---

l)a 2)c 3)None 4)c 5)d 6)c 7)None 8)a 9)c 10)b ll)b 12)a 13)b 14)b 15)b
16) a 17) d 18) b 19)d 20)d 21)a 22)b 23)b 24)a

25. In an open injury toileting and debridement, muscle viability is detected by - *(PGI03)*
a) Colour of the muscle b) Muscle size
c) Muscle function d) Muscle contractility
e) Punctate bleeding spots on cut edge

26. All of the following favour postoperative wound dehiscence except - **(***Kamat 05)*
a) Malignancy
b) Vitamin B complex deficiency
c) Hypoproteinaemia
d) Jaundice

27. The tensile strength of the wound starts and increases after - **(***MAHE 05)*
a) Immediate suture of the wound
b) 3 to 4 days
c) 7-10 days
d) 6 months

28. Prevention of wound infection done by -
a) Pre-op shaving *(PGI June 05)*
b) Pre-op antibiotic therapy
c) Monofilament sutures
d) Wound apposition

29. Abbey-Estlander flap is used m the reconstruction of -
a) Buccal mucosa b) Lip *(AI05)*
c) Tongue d) Palate

30. The Vitamin which has inhibitory effect on wound healing is - **(***MAHE 05)*
a) Vitamin-A b)Vitamin-E
c) Vitamin-C d) Vitamin B-complex

31. Elective cholecystectomy is - **(***APPG 06)*
a) Clean contaminated b) Clean
c) Dirty d) Contaminated

32. In a sutured surgical wound, the process of epithelialization is completed within - *(UPSC 07)*
a) 24 hours b) 48 hours
c) 72 hours d) 96 hours

33. Which one of the following surgical procedures is considered to have a clean-contaminated wound ?
a) Elective open cholecystectomy for cholelithiasis
b) Herniorrhaphy with mesh repair
c) Lumpectomy with axillary node dissection
d) Appendectomy with walled off abscess

34. Fibroblast in healing wound is derived from- *(UPSC-II08)*
a) Local mesenchyme b) Epithelium
c) Endothelium d) Vascular fibrosis

35. Reactionary hemorrhage occurs within -
a) 1-2 days b) 2-7 days *(DP GEE 08)*
c) < 24 hours d) After 7 days

3 6. Which of the following is not absorbable suture -
a) Catgut b) Polyamide *(APPG 08)*
c) Polygalactyl d) Polyester

37. All of the following statements about necrotizing fascitis are true, except - *(AI 09)*
a) Infection of fascia and subcutaneous tissue
b) Most commonly caused by Group A beta hemolytic streptococci
c) Most common site is perineum followed by trunk and extremities
d) Surgical debridement is mandatory

38. True about wound healing - *(PGI June 09)*
a) Infected wound heal by primary intention]
b) Deep dermal wound heal by scar formation
c) Wound contraction is found in healing by secondary intention
d) More intense nfamantory response in primary intention

39. Which of the following is a scoring system for severity of wound infection, and is particularly useful for surveilance and research - *(UPSC-II09)*
a) Apgar score
b) Glasgow scoring system
c) Southamptom grading system
d) ASA classification

40. Which one of the following organisms is not associated with synergistic gangrene -*(UPSC-II 09)*
a) Escherichia b) Staphylococcus
c) Clostridium d) Peptostreptococcus

41. True about chronic wound - *(PGINov 09)*
a) Found in DM
b) Always require surgical treatment
c) May associated with vascular compromise
d) Monofilament sutures prevent infection
e) Any wound that does not heal within 3 month

42. Condition associated with Panniculitis is/are -
a) Pancreas cancer *(PGI Nov 09)*
b) Chronic pancreatitis
c) Acute pancreatitis
d) Pancreatic divisum
e) Posttraumatic pancreatitis

43. Which of the following is a nonabsorbable suture?
a) Polypropylene b) Catgut *(Maharashtra 10)*
c) Polyglactin d) Polydioxone

44. Hypertrophic scar is characterized by the following, except- *(UPSCII10)*
a) It is non-familial
b) It outgrows the wound area
c) It involves the flexor surface
d) It is not related to the race

45. Match List-I with List-II and select the correct answer using the code given below the Lists -

List-I (Agent)	*List-II (Name/Example)*
A. Polymeric film	1. Benzoyl benzoic acid
B. Debriding agent	2. Vandase streptokinase
C. Biological membrane	3. Opsite tegaderm
D. Enzymatic agent	4. Porcine skin amnion

Code: *(UPSCII10)*

	A	B	C	D
a)	1	2	3	4
b)	3	1	4	2
c)	3	1	2	4
d)	1	2	4	3

25) a,d 26) b 27) b 28)b,c,d 29)b 30) b 31) a 32)b,c 33) a 34) a 35) c 36) d 37) c 38)b,c
39) c 40) a 41)a,c,d,e 42)a,c,d 43) a 44) b 45) b

46. IVue about surgical wounds - *(PGINov. 10)*
a) No antibiotics required in clean surgery
b) Incision of abscess is done in contaminated wound
c) Spillage of stomach content converts a clean/ contaminated case to a contaminated case
d) In clean/contaminated wounds infections rate is 10%
e) Hernia repair is contaminated wound

47. Tidy wounds inflicted by sharp instruments and containing no devitalised tissues are expected to heal by- ***(UPSCII11)***
a) Secondary healing b) Primary healing
c) Formation of contracture d) Skin grafting

48. Tissue suturing glue contains- *(NEET/DNB Pattern)*
a) Cyanoacrylate b) Ethanolamine oleate
c) Methacrylate d) Polychloroprene

49.; * Z-pIasty ideal angle is - 5;. *''(l^ff&I^^hftem)^*
11 a) 30 degrees b) 45 degrees
H! c) 60 degrees d) 90 degrees

FLUID & ELECTROLYTE

50. Complication of total parenteral nutrion include - *(NIM86, AIMS 87)*
a) Hyperglycemia b) Hyperkalemia
c) Hyperosmolar dehydration d) Azotemia
e) All of the above

51. The highest concentration of potassium is in -
a) Plasma b) Isotonic saline *(AIIMS85)*
c) Ringer lactate d) Darrow's solution

52. Which does not occur in the first week of IV hyperalimentation - *(AI89)*
a) Weightgain b) Uremia
c) Jaundice d) Ketosis

53. Pitting edema indicates an excess of.... litres of fluid in tissue spaces - *(PGI 88)*
a) 2.5 b)3.5
c) 4.5 d)5.5

54. In patients subsisting entirely on parenteral fluids, there is weight loss of.... daily - *(PGI 88)*
a) 50gm b)150gm
c) 200 gm d)250gm

55. Condition which does not cause metabolic acidosis -
a) Renal failure *(AIIMS 84)*
b) Ureterosigmoidostomy
c) Pancreatic or biliary fistula
d) Pyloric stenosis

56. Albumin infusion for parenteral use is restricted because-
a) It is costly *(AIIMS 84)*
b) Carcinogenic
c) Does not raise oncolic pressure
d) All of the above

57. Following TPN, one expects weight gain after -
a) 2 days b) 7 days *(AIIMS 84)*
c) 4 weeks d) 6 weeks

58. Following fistulous conditions give rise to maximum fluid and electrolyte imbalance-/4ZZMS' *85)*
a) Distal ileal b) Gastric
c) Duodenal d) Sigmoid

59. The minimum amount of proteins needed for positive nitrogen balance is - *(PGI 85)*
a) 20-30 gm/day b) 35-40 gm/day
c) 50 gm/day d) 60 gm/day

60. Highest concentration of potassium is seen in -
a) Jejunum b) ileum *(AIIMS 92)*
c) Duodenum d) Colon

61. Deficiency of following elements is seen with hyperalimentation except - *(JIPMER 93)*
a) Calcium b) Phosphates
c) Zinc d) Magnesium

62. Hypochloremic alkalosis is a complication of-
a) Congenital pyloric stenosis *(Delhi 89, 91)*
b) Vomiting
c) Haematemesis
d) Aspirin intoxication

63. The disadvantage of elemental diets in children include - *(AIIMS 81, PGI 86)*
a) Hypertonic dehydration b) Lower caloric input
c) Dumping syndrome d) High nitrogen input

64. 20 mEq (mmol) of potassium chloride in 500 ml of 5% dextrose solution is given intravenously to treat- *(PGI 81 AIIMS 84)*
a) Metabolic alkalosis b) Respiratory alkalosis
c) Metabolic acidosis d) Respiratory acidosis

65. Haemaccel contains - *(PGI 81, AIIMS 84)*
a) Albumin b) Degraded gelatin
c) Calcium d) Sodium

66. In the immediate post operative period, body potassium is - *(JIPMER 86, AMU 86)*
a) Exchanged with calcium
b) Exchanged with magnesium
c) Retained in body
d) Excreted excessively

67. Low molecular weight dextran is contra indicated in
a) Foetal distress syndrome *(AIIMS 81, PGI 81)*
b) Cerebrovascular accident
c) Electrical bums
d) Thrombocytopenia

68. The commonest cause of metabolic alkalosis is - *(Karn. 94)*
a) Cancer stomach b) Pyloric stenosis
c) Small-bowel obstruction d) Diuretics

69. Commonest cause of metabolic alkalosis in surgical pateient is - *(JIPMER 95)*
a) Antacid therapy
b) Gastric outlet obstruction
c) Hyperventilation due to head injury
d) Steroid treatment

70. Hyponatremia in multiple myeloma is -/*Kerala 95)*
a) True b) Relative
c) Absolute d) Pseudo

46)a,c,d 47) b 48) a 49) c 50)a,b,d 51) d 52) a 53) c 54) b 55) d 56) a 57) b 58) c 59) d

71. **During nutritional assessment of a surgical patient, the status of muscle protein is indicated by which one of the following parameters -**
a) Serum albumin *(UPSC 95)*
b) Triceps skinfold thickness
c) Mid-arm circumference
d) Hb level

72. **C.V.P. (Central Venous Pressure) and pulmonary wedge pressure give an accurate assessment of all the following except -** *(UPSC 95)*
a) Tissue perfusion b) Volume depletion
c) Volume overload d) Myocardial function

73. **In a case of acute trauma best guidline for quick replacement of fluids is -** *(AIIMS 94, A196)*
a) Pulse b)Hb
c) Urine Output d) C.V.P.

74. **All of the following are indication of total parentral nutrition except -** *(AIIMS 95)*
a) Post-operative ileus
b) Enterocolic fistula
c) Acute pancreatitis
d) Entenocuatneous fistula

75. **In a patient with multisystem trauma, the presence of hypotension along with elevated central venouspressure is suggestive of -** *(UPSC 97)*
a) Upper airway obstruction
b) Major abdominal bleed
c) Cardio-pulmonary problem
d) Spinal cord injury

76. **Following TPN, weight loss is seen -** *(Orissa 99)*
a) Up to 7 days b) 7-10th day
c) 10-15th day d) 15th day onwards

77. **Which of the following is the best method to assess the adequacy of replacement -** *(AIIMS 2K)*
a) Decrease in thirst
b) Increase in urine output
c) Blood pressure
d) Increased Pa 0_2

78. **In a person who has fasted for 5 days all are seen except-** *(AIIMS98)*
a) GH levels decreased
b) Glucose tolerance decreased
c) Immunoreactive insulin decreased
d) Free fatty acids(plasmal) increased

79. **Content of Na^+ in ringer lactate is---------meq/1-**
a) 154 b) 12 (*TN 99)*
c) 130 d) 144

80. **Body water content in percentage of body weight is lowest in -** *(Orissa98)*
a) Well-built man b) Fat woman
c) Well nourished child d) Fat man

81. **Fructose is not used in IV infusion as it cause -**
a) Irritability *(AIIMS89)*
b) Mental retardation
c) Increased erythrocyte protoporphyrin
d) Increased urinary coproporphyrin

82. **Water content in infant-** *(Orissa R)*
a) 60-70% b) 75-80%
c) 80-90% d)> 90%

83. **Insensible daily water loss is -** *(PGI88)*
a) 500-600ml b) 800-1000 ml
c) 1000-1500 ml d) 2000 ml

84. **Sodium content of one litre of isotonic saline is -**
a) 140mEq b)154mEq *(PGI 88)*
c) 40 mEq d) 70 mEq

85. **TPN may be complicated by -** *(AIIMS 80,81)*
a) Obstructive jaundice b) Hyperosteosis
c) Hypercalcemia d) Pancreatitis

86. **Blood loss during major surgery is best estimated by-** *(PGI 99)*
a) Visual assessment
b) Suction bottles
c) Transesophageal USG Doppler
d) Cardiac output by thermodilution

87. **Persistent vomiting in G.O.O. causes -** *(PGI 02)*
a) Hyponatremic hyperchloremia occur
b) Hypernatremia without -led C1‘ alkalosis
c) Hypokalemic metabolic alkalosis
d) Paradoxical aciduria

88. **In IV hyperalimentation, we give -** *(PGI02)*
a) Hypertonic saline b) Fats
c) Amino acids d) Dextrose
e) LMW dextran

89. **A postoperative patient with P^H 7.25, MAP (mean arterial pressure) 60 mm of Hg treated with -**
a) I. V. sodium bicarbonate *(PGI 03)*
b) Only normal saline
c) Fluid therapy with CVP monitoring
d) fluid restriction

90. **For a patient of Gastric outlet obstruction, the OPD fluid management is -** *(PGI 03)*
a) Normal saline
b) Hypertonic saline
c) Na bicarbonate to counteract aciduria
d) Hypotonic saline without potassium
e) Normal saline with potassium

91. **Best vein for total p arenteral nutrition is -***(Mahara*
a) Sibcoavoam vein b) Femoral vein *02)*
c) Brachial d) Saphenous

92. **Critical pH in Mendelson syndrome -** *{Orissa 04)*
a) 2.5 b)3.0
c) 3.5 c)4.0

93. **The commonest cause of water intoxication in surgical patients is due to -** *{COMEDK05)*
a) Colorectal wash with plain water
b) Syndrome of inappropriate secretion of ADH
c) Irrigation during transurethral resection of prostate
d) Excessive infusion of 5% glucose

94. **Complications of TPN -** *{PGI June 05)*
a) Aspiration pneumonia b) Hypokalemia
c) Hypoglycemia d) Hyperglycemia
e) Hyponatremia

---

71)c 72)a 73)c 74)None 75)c 76)a 77)b 78)a 79)c 80)b 81)None 82)b 83)b 84)b
85) c 86) b 87) c,d 88)b,c,d 89) c 90) a,e 91) a 92) a 93) d 94)b,c,d

95. Recognized complication frequently a/w enteral feeding - *(PGI June 05)*
a) Constipation b) Diarrhea
c) Aspiration pneumonia d) Hypoglycemia
e) Hypernatremia

96. Consider the following - *(UPSC 07)*
1. Arginine 2. Nucleotides (RNA and DNA)
3. Fatty acids 4. Glutamine
Which of the above immuno-nutrients are required more in the conditions of stress ?
a) 1 and 3 only b) 2 and 4 only
c) 1,2 and 3 only d) 1,2,3 and 4 only

97. A patient undergoes a prolonged and complicated pancreatic surgery for chronic pancreatitis. Most preferred route for supplementary nutrition in this patient would be - *(AI08)*
a) Total parental nutrition
b) Feeding gastrostomy
c) Feeding Jejunostomy
d) Oral feeding

98. Parenteral nutrition is not used in - *(PGI June 08)*
a) Enterocutaneous fistula b) Bums
c) Crohn's disease d) Ileus
e) Pancreatitis

99. True about TPN - *(PGI June 08)*
a) Carbohydrate forms about 40% of energy source
b) In abdominal injury early parenteral nutrition should be started.
c) Proteins forms 60% of energy source
d) Lipids form 20% of energy source

100. Which of the following is not a complication of Total Parenteral Nutrition - *(AIIMS Nov 08)*
a) Metabolic bone disease
b) Essential fatty acid deficiency
c) Congestive cardiac failure
d) Hypophosphatemia

101. Complications of total p aren ter al nutrition include all except - *(COMED 09)*
a) Hyperglycaemia
b) Hypoglycaemia
c) Hypochloraemic alkalosis
d) Electrolyte abnormalities

102. Which of the following is not an important cause of hyponatremia - *(Manipal 09)*
a) Gastric fistula
b) Excessive vomiting
c) Excessive sweating
d) Prolonged Ryle's tube aspiration

103. In a patient of total parenteral nutrition daily monitoring is done with - *(DPG10)*
a) Body weight b) Plasma protein
c) CBC d) Plasma osmolality

104. Which of the following nutrients are not included in Total Parental Nutrition - *(AI 11)*
a) Lipids b) Carbohydrates
c) Proteins d) Fibers

105. The complications of prolonged parenteral hyperalimentation may include the following except- *(UPSCII11)*
a) Cholestatic jaundice b) Hyperphosphataemia
c) Hyperosmolar acidosis d) Hyperammonaemia

BLOOD TRANSFUSION

106. Half life of factor 8 is - *(PGI 88)*
a) 4 hours b) 8 hours
c) 34 hours d) 48 hours

107. Massive transfusions results in - *(PGI 88)*
a) DIC b) Hypothermia
c) Hypercalcemia d)Thrombocytope

108. ncompatible blood transfusion is diagnosed in a patient under deep anaesthesia by - *(IN90)*
a) Increased capillary blood loss
b) Persistent fall of B.P.
c) Allergic dermatitis
d) Increased B.P.

109. Stored plasma is deficient in - *(PGI 79, DNB 90)*
a) Factors 7 and 8 b) Factors 2 and 5
c) Factors 5 and 8 d) Factors 7 and 9
e) None of the above

110. Rosenthal's syndrome is seen in deficiency of factor-
a) n b) V *(AIIMS 81, DNB 91)*
c) DC d)XI

111. Which of the following is better indicator of need for tranfusion - *(AIIMS 80, UPSC 8 7)*
a) Urine output b) Haematorcrit
c) Colour of skin d) Clinical examination

112. Blood platelets in stored blood do not remain functional after.....hrs. - *(PGI 81, 88, AIIMS 86)*
a) 24 b) 48
c) 72 d)96

113. Cryoprecipitate is a rich source of - *(PGI 79, AIIMS 85)*
a) Thromboplastin b) Factor VIII
c) Factor X d) Factor VII

114. The maximum life of a transfused R.B.C. is -
a) One hour b) One day *(Jipmer80, DNB89)*
c) 15 days d) 50 days
e) 100 days

115. Massive blood transfusion is defined as - *(PGI95)*
a) 350 ml in 5 min b) 500 ml in 5 min
c) 1 Litre in 5 min d) Whole blood volume

116. How long can blood stored with CPD - A -
a) 12 days b) 21 days *(JIPMER93)*
c) 28 days d) 48 days

117. Massive transfusion in previous healthy adult male can cause hemorrhage due to - *(PGI98)*
a) Increased tPA
b) Dilutional thrombocytopenia
c) Vitamin K deficiency
d) Decreased Fibrinogen

95) b,c 96) d 97)c 98)b 99)d 100)c 101)b 102)d 103)a 104)d 105)b 106)b 107)a,b,d
108) a,b 109) c 110)d lll) b 112)a 113)b 114)d 115)d 116)c 117)b

118. Mismatched blood transfusion in anaesthesia present as - *(PGI2000)*
a) Hyperthermia & hypertension
b) Hypotension & bleeding from site of wound
c) Bradycardia & hypotension
d) Tachycardia & hypertension

119. Platelets can be stored at - **(***AIIMS Nov 05)*
a) 20-24° C for 5 days b) 20-24° C for 8 days
c) 4-8° C for 5 days d) 4-8° C for 8 days

120. Which one of the following blood fractions is stored at - 40°C?- *(UPSC06)*
a) Cryprecipitate b) Human albumin
c) Platelet concentrate d) Packed red cells

121. With reference to fresh frozen plasma (FFP), which one of the following statements is not correct ?
a) It is used as volume expander *(UPSC-II08)*
b) It is stored at -40°C to -50°C
c) It is a source of coagulation factors
d) It is given in a dose of 12-15 ml/kg body weight

122. Stored blood which has been preserved in a blood bank is deficient in which of the following coagulation factors - *(UPSCII11)*
a) II only b) II and VII
c) V and VIII d) IX and X

SHOCK

123. Features of hypovolemic shock are all except -
a) Oliguria b) Bradycardia *(NIMHANS 86)*
c) LowB.P d) Acidosis

124. Blood clot the size of a clenched first is roughly equal to - *(PGI 88)*
a) 250 ml. b) 350 ml.
c) 500ml. d) 600 ml.

125. Following is the most important factor in the management of shock - *(AIIMS 84)*
a) Blood pressure
b) Cardiac output
c) CVP to 8 cm of water
d) Deficiency of effective circulation

126. Cortisol level returns to normal.....after haemorrhage - *(AIIMS 91, Orissa 98)*
a) 2 weeks b) 10 days
c) 7 days d) 3 days

127. One of the following is earliest indication of concealed acute bleeding - *(AI95)*
a) Tachycardia b) Postural HT
c) Oliguria d) Cold clammyfingers

128. The most important cause of the death in septic shock is - *(JIPMER 80)*
a) DIC b) Respiratory failure
c) Renal d) Cardiac

129. Shock is clinically best assessed by - *(PGI97)*
a) Urine output b)CVP
c) BP d) Hydration

130. In Glasgow Coma Scale all of the following are considered except - **(***Jipmer 03)*
a) Eye opening b) Verbal response
c) Motor response d) Sensory response

131. The first permanent molar erupts between - (*Kam*
a) 8 -10 years b) 6 - 7 years *03)*
c) 11-12 years d) 12-14 years

132. Differentiating features between sepsis and trauma are - *(PGI June 06)*
a) T Energy requirement b) Catabolism
c) Insulin resistance d) Fluid loss

133. IV fluid replacement (volume & rate) in a trauma patient is determined by - *(PGI June 06)*
a) Urine output b) Chest condition
c) CVP d)BP
e) Blood Hb%

134. All of the following are indicators of adequacy of pre-operative resuscitation except -
a) C-reactive protein level *(DELHIPG Mar. 09)*
b) Consciousness level
c) Urine output
d) Hematocrit level

135. Mangled Extremity Severity Score (MESS) includes all of the following except? *(AIIMS May 11)*
a) Shock b) Ischemia
c) Neurogenic injury d) Energy of injury

INFECTION

136. Golden period for treatment of open wounds is ..... hours - *(AIIMS 86,88)*
a) 4 b)6
c) 12 d)24

137. Hypotension in a case of gas gangrene is best treated by - *(JIPMER 8 7)*
a) Ringer Lacatete b) Normal saline
c) Plasma d) Whole blood

138. Commonest form of actinomycosis is -*(JIPMER 87,*
a) Facio cervical b) Thoracic *PGI 88)*
c) Right iliac fossa d) Liver

139. Regarding tuberculous lymphadenitis which is correct -
a) Seen in children and young adults
b) Seen in the aged
c) History of contact or drinking infected milk
d) Mostly cervical
e) All are the correct

140. Which is not true of carbuncle - *(JIPMER 86)*
a) Infective gangrene of subcutaneous tissue
b) Caused by staphylococcus
c) Diabetics are more prone
d) Caused by streptococcus
e) Pencillin and excision of necrotic tissue treatment of choice

118)b 119) a 120) a 121)a 122)c 123)b 124)c 125)d 126)d 127)a 128)d 129)a 130)d 131)b
132) None 133)a 134)a 135)c 136)a 137)a 138)a 139)a,c,d 140)d

141. The sensitivty of Casoni's test is - *(AP 84*
a) 50% b) 60% *KERALA 87)*
c) 75% d) 90%
e) 95%

142. Sardonic grin is associated with - *(AIIMS 87)*
a) Rabies b) Tetanus
c) Bell's palsy d) Hemiplegia

143. Tetanus is caused by - *(PGI88)*
a) Cl.Tetani b)Cl.Welchii
c) Cl. edematiens d) Cl. Septicum

144. Commonest cause of cellulitis is - *(PGI 88)*
a) Staphylococcus b) Streptococcus
c) E. coli d) Hemophilus

145. Foaming liver is seen in - *(PGI 88)*
a) Organophosphorus Poisoning
b) Actinomycosis
c) Gas gangrene
d) Anthrax

146. Erysipelas is caused by - *(PGI 88)*
a) Staph aureus b) Staph albus
c) Strep pyogenes d) Hemophilus

147. Hyperbaric oxygen is useful in - *(PGI 88)*
a) Tetanus b) Gas gangrene
c) Frostbite d) Vincents angina

148. Commonest form of anthrax is - *(PGI 88)*
a) Wool sorters disease b) Alimentary type
c) Cutaneous type d) None of the above

149. Malignant pustule occurs in - *(PGI 88)*
a) Melanoma b) Gas gangrene
c) Ovarian tumour d) Anthrax

150. Actinomycosis is sensitive to - *(PGI 88)*
a) Streptomycin b) Nystatin
c) Pencillin d) Lodox - uridine

151. Globi is seen in..... leprosy - *(PGI 88)*
a) Tuberculoid b) Lepromatous
c) Borderline d) Borderline tuberculoid

152. Which of the following parts of the body is not affected by leprosy - *(PGI 88)*
a) Testes b) Ovary
c) Nasal mucosa d) Axilla

153. Leonine facies is seen in..... leprosy - *(PGI88)*
a) Tuberculoid b) Bordedfline
c) Lepromatous d) Borderline tuberculoid

154. Most commonly affected peripheral nerve in leprosy is - *(PGI 88)*
a) Ulnar b) Radial
c) Medial d) Lateral Popliteal

155. Moth eaten alopecia is seen with - *(PGI 88)*
a) Leprosy b) Syphilis
c) Fungal infection d) Cylindroma

156. Moon's molars seen with - *(PGI 88)*
a) Syphilis b) Leprosy
c) Amyloidosis d) Actinomycosis

157. Which of the following about yaws is incorrect -
a) Caused by treponema pertunae *(PGI88)*
b) Spread by direct contact
c) Sexully transmitted
d) Penicillin is used as treatment

158. Scrum pox is seen among.....players - *(PGI88)*
a) Football b) Hockey
c) Rugby d) Chess

159. Which of the following is incorrect regarding carbuncle- *(PGI 88)*
a) Staphylococcal infection
b) Diabetes present
c) Males more common
d) Common before age of 40

160. Following are true of erysipelas except *(AIIMS 84)*
a) Streptococcal infection
b) Contagious and infectious
c) Margins are raised
d) Common in tropics

161. Chronic thick walled pyogenic abscess may be due to the following except - *(AIIMS 84)*
a) Presence of a foreign body
b) Prolonged antibiotic therapy
c) Virulent strains of organism
d) Inadequate drainage

162. Following may be premonitary symptoms of tetanus except - *(AIIMS84)*
a) Sleeplessness b) Anxious expression
c) Urinary incontinence d) Headche

163. Ampicillin prophylaxis is given in - *(PGI 86)*
a) Rectal surgery b) Splectonomy
c) Head and neck surgery d) Biliary surgery

164. Treatment of spreading streptococcocal cellulitis is- *(PGI86)*
a) Erythromicin b) Pencillin
c) Tetracycline d) Chloramphenicol

165. A patient with a fistula and chronic pus discharge from lower face and mandible is most commonly suffering from - *(KERALA89)*
a) Dental cyst b) Vincent's angina
c) Ludwigs angina d) Actinomycosis

166. Multiple fistula in ano commonly occurs *in-(TN 91)*
a) Tuberculosis b) Gonococcal protocolitis
c) IGV d) Colloid carcinoma of rectum

167. Meical management of Hydatid disease is indicated in- *(AI92)*
a) Pregnancy b) Infected Hydatid cyst
c) Moribund patients d) Multiple pertoneal cyst

168. Thymus gland abscess seen in congtenital syphilis is called - *(PGI 80, AIIMS 86)*
a) Fouchier's abscess b) Politzeri abscess
c) Douglas abscess d) Dubois abscess

169. The HIV virus can be transmitted by the following routes, except- *(KARN 94)*
a) Homosexual contact b) Intact skin
c) Matemofoetal d) Needle prick

141) d 142) b 143) a 144)b 145) c 146)c 147) b,c 148) c 149) d 150)c 151)b 152) b 153)c 154) a
155)b 156) a 157)c 158) c 159) d 160) b,d 161)c 162)c 163)d 164) b 165) d 166)a,c 167) c 168) d 169) b

170. The high risk groups for transmission of HIV virus include the following except - *(KARN 94)*
a) Homosexuals b) Haemophiliacs
c) Children of HIV mothers d) Health care workers

171. Treatment of contaminated wound in Gas Gangrene is- *(JIPMER95)*
a) Debridement of wound
b) Systemic penicillin
c) Metronidazole Administration
d) Peroxide dressings

172. A carbuncle is treated by - *(UPSC 95)*
a) Incision and drainage
b) Cruciate incision and deroofing
c) Antibiocs alone
d) Wide excision

173. Painless effusions in joints in congenital syphilis is called - *(A195)*
a) Clutton's joints b) Banton's joints
c) Charcot's joints d) Synovitis

174. A mentally retarded child aged 12 years has multiple, painful, discharging shiny white lesions around the anus. Which of the following is the most probable diagnosis - *(UPSC 9 7)*
a) Lupus vulgaris b) Carcinoma
c) Syphilitic condyloma d) Haemorrhoids

175. A boil is due to staphylococcal infection of -*(UP 97)*
a) Hair follicle b) Sweat gland
c) Subcutaneous tissue d) Epidermis

176. Incubation period of gangrene is - *(ORRISA 98)*
a) 1 -3 days b) 4 - 6 days
c) 6 - 8 days d) More than 8 days

177. In AIDS, ly mphadenop athy is most often due to -
a) TB *(PGI97)*
b) Lymphoma
c) Non specific enlargement of lymph node
d) Kaposi's sarcoma

178. Round worm causes following except - *(PGI97)*
a) Gall stone b) Cholangitis
c) Hemobilia d) Pancreatitis

179. TVue about cellulitis of lower limb- *(PGI2000)*
a) Infection of skin & subcutaneous tissue
b) Fever & malaise are common
c) Margins are distinct
d) External wound always present
e) Inv. site is red & hot

180. Fallman's balanitis is caused by - *{Kerala 03)*
a) Trichomonas b) Candida
c) H. Ducreyi d)None

181. When do we have to start antibiotics to prevent post-operative infection? (*Jipmer 03)*
a) 2 days before surgery
b) After surgery
c) 1 week before surgery
d) 1 hour before surgery & continue after surgery

182. Non surgical infections in surgical patients -
a) un *{PGI 04)*
b) LRTI
c) Superficail thrombophlebitis
d) Wound cellulites
e) Clostridium difficile a diarrhea

183. False regarding carbuncle is - *{Kerala 04)*
a) Staphylococus infection
b) Painful condition
c) Males more commonly affected
d) Common before age of 40

184. Universal (standard) precautions to be observed by surgeons for the prevention of hospital acquired HIV infection include the following except - *{UPSC 05)*
a) Wearing gloves and other barrier precaution
b) Washing hands on contamination
c) Handling sharp instruments with care
d) Pre-operative screening of all patients of HIV

185. Regarding antibiotics true are - *(PGI June 06)*
a) No prophylaxis for clean contaminated surgery
b) No prophylaxis for gastric ulcer surgery
c) Prophylaxis for colorectal surgery
d) Local irrigation with antibiotic contraindicated when systemic antibiotics given

186. Period of onset in tetanus refers to the time between-
a) First injury to spasm *{Karnataka pgmee 06)*
b) First symptom to spasm
c) First spasm to death
d) Trismus to laryngeal spasm

187. All the following are true regarding R5 strain of HIV except- *{Karnataka pgmee 06)*
a) Utilizes CCR5 Co-receptor
b) Predominates in late stages of HIV
c) Transmits HIV efficiently
d) Infects microglial cells

188. Preferred time for prophylactic antibiotic administration for surgery - *(PGI June 09)*
a) 1 day before surgery
b) At the time of induction of anaesthesia
c) I.V. during surgery
d) I.M. before 6 hr
e) Orally given

189. In a surgical patient, the causes of non-surgical infection are all except - *(DPG10)*
a) Lower respiratory tract infection
b) Wound infection
c) Clostridium difficile diarrhea
d) UTI

190. False about cellulitis - *(PGINov. 10)*
a) Caused by Strep, pyogenes
b) Causes SIRS
c) Localized infection
d) Abscess if any should be managed conservatively
e) I & D of abscess should be done

170)d 171)a,b 172)a,d 173)a 174)c 175)a 176)a,b 177)c 178)None 179)a,b,c,e 180)d 181)d
182)a,b,e 183)d 184)d 185)c 186)b 187)b 188)b 189)b 190)c,d

191. A patient is diagnosed with gas gangrene of the foot. Best management would be - *(NEET/DNB Pattern)*
a) Hyperbaric oxygen
b) Polyvalent gas gangrene antitoxin
c) Amputation of the involved limb
d) Antibiotics with surgical debridement

192. Best skin disinfectant for central line insertion is - *(NEET/DNB Pattern)*
a) Povione iodine b) Alcohol
c) Cetrimide d) Chlorhexidine

193. Best treatment for gas gangrene -
a) Surgical debridement *(NEET/DNB Pattern)*
b) Debridement with tetanus toxin
c) Debridement with iv penicillin
d) Debridement with polyvalent antitoxin

TRANSPLANTATION

194. Commonest complication of immunosuppression is - *(NIMHANS 86, JIPMER 87, A188)*
a) Malignancy b) Graft rejection
c) Infection d) Thrombocytopenia

195. Highest chance of success in renal transplant is seen when the donor is the - *(NIMHANS 86, JIPMER 87)*
a) Identical twin b) Father
c) Mother d) Sister
e) Husband

196. Commonest indication for liver transplantation in infant is - *(JIPMER 87, AI89)*
a) Alcoholic cirrhosis b) Biliary cirrhosis
c) Primary hemochromatosis d) Biliary atresia

197. Principal cause of death in renal transplant patients - *(AIIMS 86, PGI86, UPSC 88)*
a) Uremia b) Malignancy
c) Rejection d) Infection

198. Following drugs are known immunosuppressive agent except - *(AIIMS84)*
a) Prednisolone b) Cephalosporin
c) Azathioprine d) Cyclosporin-A

199. Transplantation of kidney from mother to son is an example of - *(AIIMS84)*
a) Autograft b) Allograft
c) Isograft d)Xwnograft

200. Site of transplantation in Islet cell transplant for diabetes mellitus - *(PGI84)*
a) Forearm muscles
b) Pelvis
c) Thigh
d) Injected into the portal vein

201. Graft from sister to brother is - *(JIPMER 90)*
a) Isograft b) Allograft
c) Autograft d) Heterograft

202. Amputated digits are preserved in- *(AI 92)*
a) Cold saline b) Cold Ringer Lactate
c) Plastic bag in ice d) Deep freezer

203. An Isograft indicates transfer of tissues between -
a) Unrelated donors *(AI 93)*
b) Related donors
c) Monozygotic twins
d) From the same individual

204. Investigation of choice in the early phase of renal transplant- *(Kerala97)*
a) IVP b) Retrograde cystourethrogram
c) Ultrasonogram d) CT scan

205. Hyperacute graft rejection is caused by- *(Rohtak 97)*
a) Preformed antibodies b) T- lymphocytes
c) Macrophages d) B - lymphocytes
e) Mast cells

206. Infection in renal transplant patient is usually caused by - *(Rohtak98)*
a) CMV b)HTV
c) Herpes d) Salmonella
e) Pneumococcus

207. Most common type of renal transplantation in India is-
a) Allograft b) Autograft *(AI99)*
c) Isograft d) Xenograft

208. Most important HLA for organ transplantation and tissue typing - *(MAHE 98)*
a) HLA-A b)HLA-B
c) HLA-C d)HLA-D

209. HLA matching is not necessary in which of the following organ transplantation - *(JIPMER 02)*
a) Liver b) Bone marrow
c) pancreas d) Kidney

210. Renal transplantation is most commonly done in -
a) Chr. glomerulonephritis *(PGI97)*
b) Bilateral staghorn calculus
c) Horse shoe kidney
d) Oxalosis

211. Steroids are used in transplantation - *(TN 03)*
a) To prevent graft rejection
b) To prevent infection
c) To speed up recovery
d) To enhance immunity

212. Which of the following drugs is not a part of the 'Triple Therapy' immunosuppression for post-renal transplant patients ? *(AI 06)*
a) Cyclosporine b) Azathioprine
c) FK506 d) Prednisolone

213. Trasplantation of which one of ''the following organs is most often associated with hyper-acute rejection?-
a) Heart b) Kidney *(UPSC06)*
c) Lungs d) Liver

PLASTIC & RECONSTRUCTIVE SURGERY, SKIN LESIONS

214. Cock's peculiar tumour is - *(UPSC 86,NIMHANS 87, Kerala 87, TN 90)*
a) Papilloma
b) Infected sebaceous cyst
c) Cylindroma
d) Sqaumous cell carcinoma

191) d 192)d 193)c 194)c 195)a 196)d 197)d 198)b 199)b 200)d 201)b 202)c 203)c 204)c 205) a 206) a 207)a 208)d 209)a 210)a 211)a 212)c 213)b 214)b

215. Cause of persistance of a sinus or fistulae includes-
a) Foreign body *(JIPMER 86)*
b) Non dependent! drainage
c) Unrelieved Obstruction
d) Presence of malignancy
e) All of the above

216. Premalignant conditions of the skin include -
a) Bowen disease b) Pagel's disease of nipple
c) Leukoplakia d) Solar keratosis *(JIPMER 86)*
e) All of the above

217. Melanoma should be excised with a margin of-
a) 2 cm b) 5 cm *(UPSC 88)*
c) 7 cm d) 10 cm

218. Hidradenitis suppuragtive is found to occur in- *(JIPMER 86, AIMS 87)*
a) Axilla b) Circumanal
c) Scalp d) Groin

219. The best dressing is ■ . *(PGI88)*
a) Opsite b) Amnion
c) Tulle grass d)Skin

220. The term universal tumour refers to - *(PGI 88)*
a) Adenoma b) Papilloma
c) Fibroma d) Lipoma

221. Hydrocele is a type of cyst - *(PGI 88)*
a) Retention b)Distension
c) Exudation d) Traumatic

222. Sebaceous cyst does not occur in the.... - *(PGI 88)*
a) Scalp b) Scrotum
c) Back d) Sole

223. Commonest site for rodent ulcer is - *(PGI 88)*
a) Inner canthus b) Outer canthus
c) Angle of mouth d) Cheek

224. Squamous cell carcinoma can arise *from-(PGI88)*
a) Long standing venous ulcers
b) chronic lupus vulgaris
c) Rodent ulcer
d) All of the above

225. The best results in treatment of capillary nevus have been achieved by - *(AIIMS 84)*
a) Full thickness skin graft b) Dermabrasion
c) Tatooing d) Argon laser treatment

226. Full thickness skin graft can be taken from the following sites except - *(AIIMS 87)*
a) Elbow b) Back to neck
c) Supraclavicular area d) Upper eyelids

227. Keratoacanthoma is - *(AIIMS 85)*
a) A type of basal cell carcinoma
b) Infected sebaceous cyst
c) Self healing nodular lesion with central ulceration
d) Pre-malignant disease

228. Acanthossis nigricans is seen with - *(PGI 88)*
a) Colonic carcinoma
b) Freckle
c) Squamous cell carcinoma of skin
d) Carcinoma breast

229. Skin flap is used in all except - *(AIIMS 89)*
a) Bone b) Tendon
c) Bum wound d) Cartilage

230. Free skin graft is rejected on - *(AIIMS89)*
a) Muscle b)Fat
c) Deep fascia d) Dermis

231. Kaposi sarcoma is seen in - *(AI91)*
a) Leukemia b) Lymphoma
c) AIDS d) Cytomegalovirus infections

232. Which of the following is a regressing tumour -
a) Portwine stain b) Strawberry angioma *(AI91)*
c) Venous angioma d) Plexiform angioma

233. Sebaceous cyst occurs in all except - *(TN91)*
a) Face b) Scrotum
c) Scalp d) Palm and soles

234. Skin graft for facial wounds is taken *from-(AIIMS92)*
a) Medial aspect of thigh b) Cubital fossia
c) Groin d) Post auricular region

235. Spontaneous regression is seen in all *except-(AI93)*
a) Salmon patch b) Small Cavernous hemangioma
c) Portwine stain d) Strawberry angioma

236. The best skin graft for open wounds is - *(AI93)*
a) Isograft b) Homograft
c) Allograft d) Autograft

237. Dercum's disease is commonest in the - *(PGI80,*
a) Face b)Arm *AIIMS84)*
c) Back d) Thigh

238. Margins of squamous cells carcinoma is -*(JIPMER*
a) Inverted b) Everted *81,Delhi 86)*
c) Rolled d) Undermined

239. Salmon patch usually disappears by age- *(PGI80,81,*
a) One mouth b) One year *UPSC 89)*
c) Puberty d) None of the above

240. Most severe form of malignant malenoma is -
a) Superficially spreading *(Kerala 94)*
b) Nodular infiltrating type
c) Those arising in lower limb
d) Those in choroid

241. Calcifying epethelioma is seen in - *(JIPMER 95)*
a) Dermatofibroma b) Adenoma sebaceum
c) Pyogenic granuloma d)Nevo cellular nevus

242. Best treatment of strawberry angioma \$-*(JlPMER 95)*
a) Sclerosants b) Corticosteroids
c) Masterly inactivity d) Excision

243. Cock's pepculiar tumour is - *(UPSC 95)*
a) Secondary to osteomylitis of skull bones
b) Secondary to infected sebaceous cyst
c) Secondaries in skull bones from cancer thyroid
d) Epithelioma of scalp

244. Basal cell carcinoma is common in - *(AI95)*
a) Head and Neck b)Legs
c) Chest d) Upper limbs

245. Marjolin's ulcer is - *(TN 95)*
a) Squamous cell carcinoma from scar
b) Adenoma of scar
c) Tuberculous ulcer
d) Amoebic ulcer

215)e 216)e 217)a 218)a,b,d 219)d 220)d 221)c 222)d 223)a 224)d 225)d 226)None 227)c 228) a,d 229) c 230)None 231)c 232)b 233) d 234) d 235)b,c 236) d 237) c 238)b 239)b 240)b 241) None 242) c 243) b 244) a 245) a

246. Boil can occur at all sites except - *(IN 95)*
a) Pinna b) Skin
c) Scalp d) Palm

247. The organism causing destruction of skin grafts is- *(PGI95)*
a) Streptococcus b)Staphylococcus
c) Pseudomonas d) Clostridium

248. Which of the following characterise a Demoid Cyst-
a) Chessy material
b) Presence of columiner epithelium
c) Tooth
d) Air

249. All are features of Gummatous ulcer except-£4P *96)*
a) Punched out edges b) Syphylitic in nature
c) Wash leather slough d) Erythematous base

250. Eleven month old child presents with erythematous lesion with central clearing which has been decreasing in size - *(AI97)*
a) Strawberry angioma
b) Nevus
c) Portwine stain
d) Cavernous haemangioma

251. 11 are true statement about malignant melanoma except- *(AI97)*
a) Clark's classification used for prognosis
b) Women have better prognosis
c) Acral lentigenous have better prognosis
d) Limb perfusion is used for local treatment

252. Graft is not taken up on the *ioUoydng-(AIIMS 96)*
a) Fat b) Muscle
c) Deep fascia d) Skull bone

253. Prognosis of malignant melanoma depends on- *(JIPMER98)*
a) Grade of tumor b) Spread of tumor
c) Depth of invasion d) Metastasis

254. Man sustained an injury with loss of skin cover exposing bone of 10x10 cms. The best treatment is -
a) Full thickness graft *(AIIMS 99, 96,*
b) Pedicle graft *MAHE 05)*
c) Amnion
d) Split thickness skin graft

255. Skin graft survival in the first 48 hrs is dependent on- *(AIIMS 99)*
a) Random connection between host & donor capillaries
b) Plasmatic imbibition
c) Saline in dressing
d) Development of new blood vessels

256. Skin grafting is not done in infection with-*(MP 2K)*
a) Pseudonmonas aeroginosa
b) Staph. Aureus
c) Beta hemolytic streptococci
d) E. coli

257. Frost bit is treated by- *(AMC2K)*
a) Rapid rewarming b) Slow rewarming
c) IV pentoxyphiline d) Amputation

258. Worst prognosis in Melanoma is seen in the subtype-
a) Superficial spreading *(Kerala 2001)*
b) Nodular Melanoma
c) Lentigo Maligna Melanoma
d) Amelanotic Melanoma

259. Lentigo maligna is most commonly seen in -
a) Face b) Trunk *(AIIMS 01)*
c) Sole d) Leg

260. The subdermal plexus forms the vascular basis for -
a) Randomised flaps *(JIPMER 2002)*
b) Axial flaps
c) Mucocutaneous flaps
d) Vasciocutaneous flaps

261. Least malignant melanoma is - *(Kerala 2001)*
a) Lentigo malignab) Superifcial spreading
c) Nodular d) Amelanotic

262. Regarding hemangiomas following are true -
a) Salmon patch disappears after the age of one
b) Port wine stain present throughout life
c) Salmon patch-on forehead midline and over occiput
d) all are correct

263. True about marjolins ulcer is - *(PGI97)*
a) Ulcer over scar b) Rapid growth
c) Rodent ulcer d) Painful

264. Commonest cancer in burn scar is - *(PGI97)*
a) Sq. cellCa b) Fibrosarcoma
c) Adenoa Ca d) Adeno-squamous Ca

265. Prognosis of melanoma depends on - *(PGI98)*
a) Stage
b) Depth of melanoma on biopsy
c) Duration of growth
d) Site

266. In pigmented basal cell carcinoma, treatment of choice is - *(PGI 98)*
a) Chemotherapy b) Radiotherapy
c) Cryosurgery d) Excision

267. Diagnostic procedure for basal cell Ca - *(PGI 98)*
a) Wedge biopsy b) Shave
c) Incisional biopsy d) Punch biopsy

268. Split skin graft can be applied over - *(PGI 99)*
a) Muscle b)Bone
c) Cartilage d) Eyelid

269. Which is/are not absorbable suture - *(PGI2000)*
a) Vicryl b) Catgut
c) Polyethylene d) Polyacramide
e) Polypropylene

270. Trophic ulcers are caused by - *(PGI 02)*
a) Leprosy b) Buerger's disease
c) Syringomyelia d) DVT
e) Varicose veins

271. True about Marjolins ulcer - *(PGI 03)*
a) Develops in long standing scar
b) Sq cell Ca develops
c) Slow growing lesion
d) Also know as Baghdad sore
e) Common in Black races

246) d 247) a 248) a,c 249) d 250) a 251)c 252) d 253) c 254) b 255) b 256) c 257) b 258) d 259) a
260) a 261) a 262) d 263) a 264) a 265)a,b,d 266) d 267) a 268) a 269)c,d,e 270) a,c 271)a,b,c

272. Chronically lymphoedematous limb is predisposed to all of the following except - *(.AI04)*
a) Thickening of the skin
b) Recurrent soft tissue infections
c) Maijolin's ulcer
d) Sarcoma

273. Treatment for pyoderma gangrenosum is - *(JH03)*
a) Steroids b) I.V. antibiotics
c) Surgery + antibiotics d) Surgery alone

274. Which of the following materials for implants will evoke least inflammatory tissue response - *(SGPGI04)*
a) Polypropylene b) Bovine collagen
c) Polygiactin d) Cotton

275. Malignant melanoma most often develops from- *(SGPGI 05)*
a) Hairy naevus b) Junctional naevus
c) Intradermal naevus d) Blue naevus

276. The best cosmetic results for large capillary (port wine) hemangiomas are achieved by - **(***UPSC 05)*
a) Excision and split-thickness skin
b) Laser ablation
c) Cryosurgery
d) Tattooing

277. Which one of the following is not included in the treatment of malignant melanoma - *(UPSC 05)*
a) Radiation b) Surgical excision
c) Chemotherapy d) Immunotherapy

278. The most common malignancy found in Marjolin's ulcer is - *(AI06)*
a) Basal cell carcinoma
b) Squamous cell carcinoma
c) Malignant fibrous histiocytoma
d) Neurotrophic malignant melanoma

279. The tumor, which may occur in the residual breast or overlying skin following wide local excision and radiotherapy for mammary carcinoma, is -
a) Leiomyosarcoma *(AI 06)*
b) Squamous cell carcinoma
c) Basal cell carcinoma
d) Angiosarcoma

280. Dacron vascular graft is - *(AI 06)*
a) Nontextile synthetic b) Textile synthetic
c) Nontextile biologic d) Textile biologic

281. The type of tumour is Marjolin's ulcer -*(PGIJune 06)*
a) Squamous cell carcinoma b) Adenocarcinoma
c) Basal cell carcinoma d) Fibrosarcoma
e) Mixed tumour

282. Which one of the following statements about Mesh Skin Grafts is not correct? - *(UPSC 06)*
a) They permit coverage of large areas)
b) They allow egrees of fluid collections under the graft)
c) They contract to the same degree as a grafted sheet of skin)
d) They "take" satisfactorily on a granulating bed)

283. In the Clatke[1] s level of tumor invasion for malignant melanoma level 3 refers to - (*COMED 06)*
a) All tumar cells above basement membrane
b) Invasion into reticular dermis
c) Invasion into loose connective tissue of papillary dermis
d) Tumor cells at junction of papillary and reticular dermis

284. Moh's Micrographic excision for basal cell carcinoma is used for all of the following except -
a) Recurrent Tumour *(Karnataka 06)*
b) Tumor less than 2 cm in diameter
c) Tumors with aggressive histology
d) Tumors with perineural invasion

285. Split skin grafts in young children should be harvested from - *(UPSC 0 7)*
a) Buttocks b) Thigh
c) Trunk d) Upper limb

286. Chronic Burrowing ulcer is caused by - *(AI 07)*
a) Microaerophilic streptococci
b) Peptostreptococcus
c) Streptococcus viridans
d) Streptococcus pyogenes

287. Basal cell carcinoma spread by - *(MAHE07)*
a) Lymphatics b) Haematogenous
c) Direct spread d) None of the above

288. Wolfe grafts is- *(UP07)*
a) Full thickness skin grafts
b) Partial thickness skin grafts
c) Split-skin grafts
d) Pedicled flap

289. Marjolin ulcer - *(PGI June 07)*
a) Ca in maijolin's is squamous cell ca
b) Chronic venous insufficiency
c) Basal cell carcinoma
d) arise from base of the ulcer

290. The commonest clinical pattern of basal cell carcinoma is - *(Corned 08)*
a) Nodular b) Morpheaform
c) Superficial d)Keratotic

291. Which one of the following is not a wound closure technique? *(UPSC-II08)*
a) Partial thickness skin graft
b) Composite graft
c) Vascular graft
d) Musculo-cutaneous graft

292. Which of the following is a non-absorbable sutrue ?
a) Polypropylene b) Vicryl *(AJ08)*
c) Catgut d) Polydioxanone

293. Abbe-Estlander Flap is used for - *(AI 08)*
a) Lip b) Tongue
c) Eyelid d)Ears

294. Abbey estender flap is based on - *(Aiims May 08)*
a) Lingual artery b) Facial artery
c) Labial artery d) Internal maxillary artery

272) c 273) c 274)a 275)b 276)b 277)a 278)b 279)d 280)b 281)a 282)c 283)d 284)b 285)b 286) a 287) c 288) a 289)a,b,c 290) a 291) c 292) a 293) a 294) c

295. Chronic Burrowing ulcer is caused by -
a) Microaerophilic streptococci *(AIIMSMay08)*
b) Peptostreptococcus
c) Streptococcus viridans
d) Streptococcus pyogenes

296. True about malignant melanoma - *(PGI June 08)*
a) Lymphatic spread
b) Lymph node biopsy is done always
c) Block dissection to be done when sentinel node is involved
d) Microsatellitism

297. 'Take in' of split skin graft occurs when -
a) Tight dressing is applied *(PGI Dec 08)*
b) Excessive discharge from wound
c) p hemolytic streptococcus infection is present
d) Wound bed not vascularised

298. TVue statement (s) regarding hypertrophic scar -
a) Grow beyond wound margin *(PGI Dec 08)*
b) More common in female
c) Not familial
d) Rarely subsides
e) Not race related

299. The most common malignancy found in Marjolin's ulcer is - *(DELHIPG Feb. 09)*
a) Basal cell carcinoma
b) Squamous cell carcinoma
c) Malignant fibrous histiocytoma
d) Neutrophic malignant melanoma

300. Match list I (Characteristic feature) with list II (Scar type) and select the correct answer using the codes given below the lists - *(UPSC-II09)*

List I (Characteristic feature)	**List II** (Scar type)
1. Not familial	1. Bum scar
2. Kundah	2. Hypertrophic scar
3. Lower Silem	3. Tattooed scar
4. Particles or dirt, soot	4. Keloid scar implanted in wound

Codes:

	A	B	C	D
a)	3	1	4	2
b)	2	4	1	3
c)	3	4	1	2
d)	2	1	4	3

301. Full thickness graft can be obtained from all of the following except - *(AIIMS Nov 09)*
a) Axilla b) Groin
c) Supraclavicular area d) Elbow

302. Cock's peculiar tumor is - *(AIIMS Nov 10)*
a) Basal cell CA b) Squamous cell CA
c) Ulcerated sebaceous cyst d) Cylindroma

303. Tumor with perineural invasion - *(AIIMSNov 10)*
a) Adenocarcinoma b) Adenoid cystic Ca
c) Basaal cell ca d) Squamous cell ca

304. A Wolfe graft is a - *(UPSC II11)*
a) Partial thickness skin graft
b) Pinch skin graft
c) Small full thickness skin graft
d) Pedicle graft

BURNS

305. Exposure treatment is done for burns of the -
a) Upper limb b) Lower limbs *(JIPMER 87)*
c) Thorax d) Abdomen
e) Head & neck

306. Rule of nine to estimate surface area of a burnt patient was introduced by - *(AIIMS 84)*
a) Mortizkaposi b) Alexander Wallace
c) Joseph lister d) Thomas barclay

307. Deep skin burns is treated with - *(AIIMS 91)*
a) Split thickness graft
b) Full thickness graft
c) Amniotic membrane
d) Synthetic skin derivatives

308. In burns heat loss is by/ due to - *(PGI 80, DELHI 80,92)*
a) Dilatation of veins
b) Shock
c) Exposed area by evaporation
d) None of the above

309. The cold water treatment of burns has the disadvantageng that it increase the chances of -
a) Pain b) Exudation *(PGI 81, AIIMS 83)*
c) Infection d) None of the above

310. An adult whose both lower limbs are charred along with genitalia has---------- burns •*(PGI 80, AIIMS 84)*
a) 18% b) 19%
c) 36% d) 37%

311. Pus in burns form in - *(PGI 79, DELHI 89)*
a) 2-3 Days b) 3-5 days
c) 2-3 weeks d)4

312. One of folowing is not seen in severe burns -*(AI96)*
a) Hypovolemia b) Sepsis
c) Duodenal ulcer d)Hyperthemia

313. Undue restlessness in a patient during the immediate post burn period is often a manifestitation of- *(Karn 95)*
a) Hypoxia b)Hypovolemia
c) Hyperkalemia d) Anxiety

314. Calculate the percentage of burns on the head, neck and face in a child of one year - *(A.I. 88)*
a) 10% b) 16%
c) 13% d) 15%

315. All requires hospitalization except - *(AI 91)*
a) 5% Bums in children
b) 10% Scalds in children
c) Electrocution
d) 15% Deep bums in adults

295) a 296) a,b,c,d 297) None 298) c,e 299) b 300) b 301) a 302) c 303) b 304) c 305) e 306) b 307) a
308) c 309) c 310) d 311)a 312)d 313)d 314)None 315)a

316. Late deaths in burns is due to - *(PGI99)*
a) Sepsis b) Hypovolemia
c) Contractures d) Neurogenic

317. Burns with vesiculation, destruction of the epidermis and upper dermis is - *(PGI 99)*
a) 1st degree b) 2nd degree
c) 3rd degree d) 4th degree

318. True about burns - *(PGI 2000)*
a) Hyperglycemia is seen in early bums
b) Child with bums should have damp dressing
c) Chemical powder bums should be kept dry
d) 3rd degree bums are painfull

319. Head & neck involvement in burns in infant is -
a) 9% b) 18% *(PGI 2000)*
c) 27% d) 32%

320. Metabolic derangements in severe burns are all except- *(PGI 2000)*
a) Tcortico steroid secretion
b) Hyperglycaemia
c) t secretion of HC1
d) Neutrophil dysfunction

321. Superficial burns; true is/are - *(PGI01)*
a) Always requires skin grafting
b) Dry & inelastic
c) Blister formation
d) Painless
e) Can be healed within 7 to 10 days

322. True statement about burn resuscitation -*(PGI03)*
a) Colloid preferred in initial 24 hrs
b) Colloid preferred if burnt area is > 15 % of total BSA
c) Half of the calculated fluid given in initial 8 hrs.
d) Diuretics should be given to all pt of electric bum.

323. A burn patient is referred when - *(PGI 04)*
a) 10% superficial bum in child
b) Scald in face
c) 25% superficial bum in adult
d) 25% deep bum in adult
e) Bum inplam

324. The ideal temperature of water to cool the burnt surface is - **(***UPSC 02)*
a) 15° b) 10°
c) 8° d) 6°

325. Indications for specialist referral in burns -
a) > 20% superficial bum in adult (*PGI 04)*
b) Only palms
c) Scalds on head and face
d) 10% bums in infants
e) 10% deep bums in adult

326. The best guide to adequate tissue perfusion in the fluid management of a patient with burns, is to ensure a minimum hourly urine output of - *(Kam 04)*
a) 10-30 ml b) 30-50 ml
c) 50-70ml d) 70-100 ml

327. A third degree cirumferential burn in the arm and forearm region, which of the following is most important for monitoring - *{U.PP. G.M.E.E. 04)*
a) Blood gases
b) Carboxy-oxygen level
c) Macroglobiunria cryoglobinuria
d) Peripheral pulse and circulation

328. In 3rd degree burns, all are seen except -
a) Vesicles are absent (*UPPGMEE04,*
b) Painful *PGI 99)*
c) Leathery skin
d) Reddish due to Hb infiltration

329. IV rules for burns- **(.***MAHE05)*
a) % body surface area X weight in pounds X 4 = Volume in ml
b) % body surface area X weight in Kgs X 4 = Volume in Lts
c) % body surface area X weight in Kgs X 5 = Volume in ml
d) % body surface area X weight in Kgs X 4 = Volume in ml

330. In a patient with the burn wound extending into the superficial epidermis without involving the dermis would present with all of the following except -
a) Healing of the wound spontaneously without scar formation (*SGPGI05)*
b) Anaesthesia at the site of bums
c) Blister formation
d) Painful

331. What is the most important aspect of management of burn injury in the first 24 hours ? *(UPSC 07)*
a) Fluid resuscitation b) Dressing
c) Escharotomy d) Antibiotics

332. Treatment of burns includes - *(PGI June 08)*
a) No bandage to head & neck
b) Immediate application of ice cold water
c) Superficial bums without blister-no need of dressing
d) Escharotomy done for peripheral circumscribed lesions

333. Most common cause of death due to burns in early period is ? *(APPG 08)*
a) Sepsis b) Hypovolemic shock
c) Both d^ None

334. A 50 year female has 2 deep bum involving 45% total body surface area (TBSA). Regarding her management which of the following statement (s) is/are true -
a) Give rapid normal saline infusion *(PGIDec 08)*
b) Half of the calculated fluid should be given in initial 8 hr
c) 9 litre of Ringer's lactate should be given in first 24 hr
d) Urine output should be maintained at 25-30 ml/hr
e) CVP line should be inserted

335. What are true regarding 20 deep *bum-(PGIDec 08)*
a) Blanch on pressure b) Erythema
c) Dry white colour d) Painless
e) Predispose to hypothermia

316)a 317)b 318)a 319)b 320)c 321)c,e 322)c,d 323)b,d,e 324)a 325)A11 326)b 327)d 328)b 329)d
330) b 331) a 332)a,c,d 333) b 334)b,c,e 335) c,e

336. True about thermal burn injury - *(PGI June 09)*
a) Outermost layer is zone of stasis
b) Middle layer is zone of hypermia
c) inner layer is zone of coagulation
d) Hypermia is due to vasodilation
e) Zone of stasis is associated with vascular damage

337. Fever in burnt patient is cause by - *(PGI June 09)*
a) Septicemia
b) Due to hypermetabolism
c) Toxin released by dead tissue
d) Dead product

338. Which of the following statement(s) is/are about postburn neck contracture - *(PGI June 09)*
a) Occur because of conservative management of deep bum
b) Treated by flaps
c) Oblliteration of cervicomental angle
d) Dental abnormalities may be present
e) Never develop in deep dermal bum

339. A tumour arising n a burns scar is likely to be -
a) Basal cell carcinoma *(COMED09)*
b) Squamous cell carcinoma
c) Malignant melanoma
d) Fibrosarcoma

340. Fever in burnt patient is caused by - *(PGI Nov 09)*
a) Septicemia
b) Due to hypermetabolism
c) Decreased sweating
d) Release of pyrogens from dead product
e) Dehydration

341. An adult whose both lower limbs are charred along with genitalia has.....burns - *(DPG10)*
a) 18% b) 19%
c) 36% d)37%

ARTERIAL DISORDERS

342. Maximum tourniquet time for the upper limb is -
a) 1/2 hour b) 1 hr *(JIPMER 87)*
c) 1-1/2 hrs. d)2hrs
e) 2-1/2 hrs

343. Thromboembolism after pelvic surgery is usually from the veins - *(AI89)*
a) iliac b)Calf
c) Femoral d) Pelvic

344. Most common cause of death in patients with Burger's disease is - *(AIIMS 87)*
a) Gangrena b) Pulmonary embolism
c) Myocardial infarction d) Carcinoma lung

345. Which of the following best responds to sympathectomy- *(JIPMER 86)*
a) Burger's disease b) Hyperhydrosis
c) Raynaud's disease d) Acrocyanosis

346. Intermittent claudication at the level of the hip indicates - *(PGI 87)*
a) Popliteal artery occlusion
b) Bilate iliac artery occlusion
c) Common femoral occlusion
d) superficial femoral artery occlusion

347. The artery commonly involved in cirsoid aneurysm is- *(PGI 88)*
a) Occipital b) Superficial temporal
c) Internal carotid d) External carotid

348. Plusating tumours include all except - *(PGI 88)*
a) Bone sarcoma
b) Osteoclastoma
c) Secondaries from hyper nephromas
d) Secondary from prostate

349. Preferred material for femoro popliteal bypass -
a) Dacron b) PTFE *(PGI 89)*
c) Saphenous vein d)Gortex

350. Most common cause of aneurysm of abdominal aorta is - *(AI 96, Jipmer 80, Delhi 89)*
a) Trauma b) Atherosclerosis
c) Syphilis d) Cystic medial necrosis

351. The most common complication of an aortic aneurysm size 8 cm is - *(Delhi, PG 96)*
a) Rupture b) Intramural thrombosis
c) Embolism d) Calcification

352. Management of a cause of iliac artery embolism requires - *(JIPMER 81, UPSC 86)*
a) Embolectomy
b) Injection of vasodilators
c) Hypotensive therapy
d) Sympathectomy

353. Intermittent-claudicatin is caused by - *(TN89)*
a) Venous occlusion b)Arteria insufficiency
c) Nerual compression d) Muscular dystrophy

354. Burger's disease is seen in - *(PGI 88)*
a) Only male b) Age less than 40
c) Age more than 40 d) Smoker

355. In the abdomen, aneurysms of the .... commonly occur next only to the aorta.... - *(PGI 88)*
a) Internal iliac artery
b) External iliac artery
c) Splenic artery
d) Inferior mesentric artery

356. CongenitalA-V fistulas in the thigh will be associated with all except - *(PGI 89)*
a) Increased cardiac output
b) Increased skin tempreture
c) Gigantism of limb
d) Superficial venous engorgement

357. In extraperitoneal approach, to left sympathectomy the following may be injured -
a) Ureter b) Gonadal vessels
c) A+B d)IVC

336)b,e 337)a,b 338)a,b,c,d 339)b 340)a,b 341)d 342)c 343)c 344)c 345)b 346)b 347)b 348)d 349)c
350) b 351) a 352) a 353)b 354)a,b,d 355) c 356)b 357) c

358. Lumbar sympathectomy is indicated in - *(IN90)*
a) Intermittent claudication
b) TAO with skin changes
c) Burger's disease
d) Raynaud's disease

359. Commonest site of throboangitis obliterans is -
a) Femoral artery b) Popiteal artery *(AI90)*
c) iliac artery d) Pelvic vessels

360. IVeatment of acute femoral embolus is- *(AIIMS 91)*
a) Warfarin
b) Heparin
c) Immediate embolectomy
d) Embolectomy after 5 days bed rest

361. Ganglion which is spared in Lumbar sympathetomy is - *(JIPMER92)*
a) LI b)L2
c) 13 d)L4

362. Vessels most commonly involved in thrombo angitis obliterans - *(AIIMS92)*
a) ilio-femoral
b) Aorto-iliac
c) Femoro popliteal
d) Arterior and Posterior tibial

363. Following are used in treatment of Buergers disease except - *(AI93)*
a) Trental b) Anticoagulation
c) Sympathectomy d) Antiplatelets

364. For aortic graft the best material available is - *(JIPMER 81, Delhi 79,92)*
a) Dacron b) Artery
c) Vein d)None

365. In a lumbar sympathectomy the sympathetic chain in its usual position is likely to confused with the - *(PGI81, AIIMS 80,82)*
a) Ureter b) Psoas minor
c) Genitofemoral nerve d) Ilioinguinal nerve
e) Lymphatics

366. Bullet wounds near major blood vessels should be explored only if - *(PGI81, AMC 85)*
a) The extremity is cold
b) The fingers or toes are paralysed
c) The pulse is weakened
d) There in no pulse
e) In all cases regardiess of physical findings

367. A knitted Dacron artery graft - *(PGI 99, AIIMS 84)*
a) Is not porous
b) Is eventually dissolived by tissue reaction
c) Never gets infected
d) Can be easily incised and the opening resutured

368. The sequence of symptoms in pulmonary embolism is - *(JIPMER 89, DNB 90)*
a) Fever, pain, dyspnoea
b) Fever, dyspnoea
c) Dysponea, pain, haemoptysis
d) Dysponea, cough, purulent sputum

369. A useful through temporary improvement in a patient's ischaemic foot can be attained by giving intravenously - *(PGI 79, Delhi 84)*
a) 10% Mannitol b) 10% Dextrose
c) Dextran 40 d) Dextran 100

370. Diabetic gangrene is due to - *(Kerala 94)*
a) Ischema
b) Increased blood glucose
c) Altered defence by host and neuropathy
d) All of the above

371. All are true about Embolic Arterial occlusion except-
a) No previous history *(JIPMER 95)*
b) Muscles are unaffected
c) Pulse is absent
d) Anaesthesia is present

372. All are true about Raynauds phenomena except -
a) Exposure to cold aggravate *(Kerala 95)*
b) Spasm of vessels
c) More common is females
d) Atherosclerosis of vessels

373. The commonest site of iodgement of a pulmonary embolus is in the territory at - *(UPSC 95)*
a) Rt. lower lobe b) Rt. upper lobe
c) Lt. lower lobe d) Lt. upper lobe

374. Kaposi sarcoma is commonly seen in - *(AMU95)*
a) Upper limbs b) Lower limbs
c) Head and Neck d) Trunk

375. Which of the following causes meximum bleeding-
a) Partial arterial severing *(PGI 95)*
b) Complete arterial severing
c) Artery caught between fractured ends of bones
d) Intimal tear

376. In a 40 years old male thrombus in the common femoral artery is because of - *(AIIMS 9 7)*
a) Atheroma
b) Thrombangits obliterans
c) Reynauds disease
d) Abdominal mass

377. One of the following is not indicated for arterial leg ulcer - *(PGI 96)*
a) Debridement b)Elevationof limb
c) Head end of bed is raised d) Low dose aspirin

378. Not used as graft material in peripheral vascular disease - *(PGI 97)*
a) Dacron graft b)Vein
c) PTFE d)PVC

379. The commonest cause of arterio-venous fistula is-
a) Penetrating injury *(MP 97, AI88)*
b) Congenital
c) Neoplasmic invasion of an artery and adjacent vein
d) Aneurysm of the artery eroding a vein

380. AV fistula leads to all except - *(AIIMS 98)*
a) Sinus tachycardia b) Increased preload
c) Cardiac arrythmias d) Increased cardiac output

381. Commonest peripheral aneurysm is - *(SCTIMS98)*
a) Popliteal b) Femoral
c) Carotid d) iliac

358)b,c 359)None 360)c 361)a 362)d 363)b 364)a 365)b,c,e 366)c,d 367)d 368)c 369)c 370)d 371)b
372) d 373) d 374)b 375)c 376)a 377)b 378)d 379)b 380)c 381)a

382. Popliteal aneurysm-All are true except-
a) Presents as a swelling behind the knee *(SCTIMS 98)*
b) Presents with symptoms due to complication
c) Surgery is indicated in case of complication
d) Uncommon among peripheral aneurysm

383. Graft used in infra inguinal by pass is - *(Jipmer 2K)*
a) PIPE b) Dacron
c) Autologous vein d) Autologous artery

384. True about Erythrocyanosis except - *(A.P 96)*
a) Affects young girls
b) Cold peripheries
c) Palpable pulses
d) Ulceration & gangrene of fingers

385. Diabetic gangrene is due to A/E - *(TN 86)*
a) Vasospasm
b) Atherosclerosis
c) Peripheral neuritis
d) Increased sugar in blood

386. Pseudo aneurysms are most commonly due - *(Jipmer 93)*
a) Atherosclerosis b) Trauma
c) Congenital deficiency d) Infections

387. Bilateral pulseless disease in upper limbs in caused by- *(PGI97)*
a) Aortoarteritis b) Coarctation of aorta
c) Fibromusculardysplsia d) Buerger's disease

388. AV fistula causes - *(PGI98)*
a) i Diastolic b) T Venous return
c) *i* Venous congestion d) T Systolic filling

389. Nicoladoni branham sign is - *(PGI98)*
a) Compression cause bradycardia
b) Compression cause tachycardia
c) Hypotension
d) Systolic filling

390. Abdominal Aneurysm is characterized by all except- *(PGI 2000)*
a) Elective surgery complication should be < 5%
b) Emergency surgery complication < 10%
c) Rarely asymptomatic before rupture
d) Bigger the size it is more prone to rupture

391. Dissection of which artery is seen in pregnancy -
a) Carotid artery b) Aorta *(PGI 2000)*
c) Coronary A d) Femoral artery

392. Buerger's disease affects all except - *(PGI 01)*
a) Small arteries b) Small veins
c) Medium size arteries d) Multiparity
e) First pregnancy after 30 years

393. Buerger's disease is associated with - *(PGI 02)*
a) Smoking b) Poor nutrition
c) Alcohol d) Prolonged standing
e) Superficial thrombophlebitis

394. True regarding AV fistula is - *(PGI 02)*
a) Leads to cardiac failure
b) Causes local gigantism
c) Can cause ulcers
d) Cause excess bleeding on injury
e) Closes spontaneously

395. True statement of Brerger's desease is/are-fPG/ *04)*
a) Small and mdeium sized vessels involved
b) Commonly involves upper limb than lower limbs
c) Common in male
d) Common in female

396. In which one of the following conditions Dactylitis CANNOT be seen- *{UPSC 02)*
a) Sickle - cell anemia b) Beta thalassemia
c) Congenital syphilis d) Tuberculosis
e) Sarcoidosis

397. Complications arising out of A - V fistula done for renal failure include the following except -
a) Infection *{Jipmer 03)*
b) Thrombosis
c) High output cardiac failure
d) Necrosis of the distal part

398. Not seen in sudden onset peripheral arterial occlusion - *{Kerala 04, PGI 98, 2K)*
a) Pain b) Rubor
c) Pallor d) Anesthesia

399. Drug used for Burger's disease - *{MAHE 05)*
a) Xanthinol micotinate b) Propranolol
c) GIN d) All the above

400. Pseudoarterial aneurysm in drug abuser's seen in -
a) Radial b) Brachial *{PGI June 05)*
c) Femoral d) Carotid
e) Pedal

401. Syndrome of internal iliac artery occlusion manifested by - *{PGI June 05)*
a) Pain in calf
b) Absent pulse at the dorsalis pedis artery
c) Intermittent claudication
d) Gangrene

402. The most common cause of peripheral limb ischaemia in India is - *{AIIMSNOV05)*
a) Trauma b) Altherosclerosis
c) Buerger's disease d) Takayastu's disease

403. Lumbar sympathectomy is of value in the management of - *(AI05)*
a) Intermittent claudication
b) Distal ischaemia affecting the skin of the toes
c) Arteriovenous Fistula
d) Back pain

404. The most common cause of acquired arteriovenous fistuala is - *(AI 06)*
a) Bacterial infection b) Fungal infection
c) Blunt trauma d) Penetrating trauma

405. Etiopathogenesis of diabetic foot include the following except - *(UPSC 07)*
a) Myelopathy b) Osteoarthropathy
c) Microangiopathy d) Infection

406. Fogarty's catheter is used for - *(UPSC07)*
a) Drainage of urinary bladder
b) Parenteral hyperalimentation
c) Removal of embolus from blood vessels
d) Ureteric catheterisation

382)d 383)c 384)c 385)a 386)b 387)a 388)b 389)a 390)b,c 391)b 392)d,e 393)a,e 394)a,b,c,d
395) a,c 396) b 397) d 398) b 399) a 400) c,d 401) b,c 402) b 403) b 404) d 405) a 406) c

407. Pseudoaneurysms in IV drug abusesrs seen commonly in - *(PGI June 0 7)*
a) Brachial artery b) Radial artery
c) Femoral artery

408. Treatment of femoral artery naeurysm -
a) Ultrasound guided compression of the neck of aneurysm *(PGI June 07)*
b) Thrombin injection
c) Bypass graft repair

409. Which one of the following is not a symptom of atherosclerotic occlusive disease at the bifurcation of aorta (Leriche syndrome) ? *(UPSC-II08)*
a) Claudication of the buttock and thigh
b) Claudication of the calf
c) Sexual impotence
d) Gangrene localized to the feet

410. A young male presented with dyspnea, bleeding and petechial hemorrhage in the chest after 2 days following fracture shaft of the femur right side. Most likely cause is - *(UP 08)*
a) Air embolism
b) Fat embolism
c) Pulmonary thrombo embolism
d) Amniotic fluid embolism

411. Aortic transaction true about - *(PGI June 08)*
a) Most commonly A/w deceleration injury
b) High morality
c) Surgery difinitive treatment
d) Aortography gold standard

412. Psuedoaneurysm in I.V. drug abusers is commonly found in - *(PGI Dec 08)*
a) Radial artery b) Brachial artery
c) Femoral artery d) External iliac artery
e) Dorsalis pedis artery

413. Acute vascular ischemia mainfests as -
a) Pulselessness b) Paralysis *(PGIDec 08)*
c) Flushing d) Anaesthesia
e) Coolness

414. A drug abuser developed pseudoanerysm. What of the following is/are should include in the treatment modalties - *(PGI Dec 08)*
a) Ligation of involved vessel & wide surgical debridement
b) Exposure & ligation with subsequent revascularisation
c) Direct interposition graft with synthetic material in groin for revascularisation
d) Direct interposition graft with autogenous graft
e) Selective revascularisation using remote iliofemoral bypass

415. Most common site of peripheral aneurysm -
a) Femoral artery b) Radial artery *(AIIMS Nov 08)*
c) Popliteal artery d) Brachial artery

416. The Hunterian Ligature operation is performed for- *(AIIMSNov 08)*
a) Aneurysm b) Varicose veins
c) A V fistulas d) Acute arterial ischemia

417. Popliteal artery pulsations are difficult to feet because-
a) It is not superficial *(AI09)*
b) It does not cross prominent bone
c) It is not superficial and does not cross prominent bone
d) Its pulsations are weak

418. Intermittent claudication is defined as - *(AI 09)*
a) Pain in muscle at rest only
b) Pain in muscle on first step
c) Pain in muscle on exercise only
d) Pain in muscle on last step

419. A patient with critical lower limb ischemia presents with-
a) Intermittent claudication *(AI09)*
b) Intermittent claudication and gangrene
c) Rest pain and ischemic ulcers
d) Intermittent claudication and ischemic ulcers

420. Lumbar sympathectomy is of value in the management of - *(AI09)*
a) Intermittent claudication
b) Distal ischemia affecting the skin of the toes
c) Arteriovenous fistula
d) Back pain

421. Sympathectomy is indicated in all following conditions except - *(AI09)*
a) Ischemic ulcers b) Intermittent claudication
c) Anhidrosis d) Acrocyanosis

422. Pseudoclaudication is caused by - *(AI09)*
a) Femoral artery stenosis
b) Popliteal artery stenosis
c) Lumbar canal stenosis
d) Radial artery stenosis

423. Best material for below inguinal arterial graft is -
a) Saphenous vein graft (upside - down) *(AI 09)*
b) FIFE
c) Dacron
d) Teflon

424. Commonest part of subclavian artery to be affected by stenosis is - *(AI 09)*
a) First part b) Second part
c) Third part d) Equally affected

425. The most common site of rupture of abdominal aortic aneurysm is - *(AI 09)*
a) Laterally into the left retroperitoneum
b) Laterally into the right retroperitoneum
c) Posteriorly into the posterior retroperitoneum
d) Anteriorly into the peritoneum (Intraperitonial)

426. True about Kasabach syndrome - *(PGINov 09)*
a) May be due to complication of portwine stain
b) Coagulopathy occurs
c) Due to complication of hemangioma
d) Thrombocytopenia present

427. Most common artery involved in pancreatic pseudoaneurysm - *(PGINov 09)*
a) Gastroduodenal artery
b) Inferior pancreatico-duodenal artery
c) Gastric artery
d) Splenic artery
e) Hepatic artery

407)c 408)a,b,c 409)d 410)b 411)a,b,c,d 412)a,b,c 413)a,b,d,e 414)a 415)c 416)a 417)c 418)c 419)c 420) b 421) c>b 422) c 423) a 424) a 425) a 426)b,c,d 427) d

428. Most common cause of abdominal aortic aneurysm is- *(AI10)*
a) Atherosclerosis b) Trauma
c) Syphilis d)Vasculitis

429. The deficiency of all the following factors increases the incidence of thrombus formation except -
a) Lipoprotein A b) Protein-C *(DPG10)*
c) Anti-thrombin III d)Protein-S

430. A patient presents with claudication in both buttocks and has impotence. The clinical examination reveals bruit over lower abdomen. What is the clinical diagnosis? *(UP SC II10)*
a) Bilateral iliac artery occlusion
b) Aortoiliac occlusion
c) Bilateral iliofemoral occlusion
d) Bilateral femoropopliteal occlusion

431. The normal ankle brachial pressure index (ABPI) is 1.0. A value of 0.8 suggests - *(UP SCII10)*
a) Good flow
b) Some degree of arterial obstruction.
c) Impending gangrene
d) Presence of collaterals

432. TVue about ischemic rest pain - *(PGIMay 10)*
a) More in night
b) MC in calf muscle
c) Increse upon elevation of limbs
d) Relieved by dependent position
e) Often associated with trophic changes

433. All are true about intermittent claudication except -
a) Most common in calf muscle *(PGI May 10)*
b) Pain is positional
c) Atherosclerosis is important predisposing factor
d) Relieved by rest

434. TVue regarding management of diabetic foot -
a) Strict diabetic control *(PGIMay 10)*
b) Venous system is commonly involved
c) Topical antibiotics are used
d) Early amputatio should done
e) Diabetic ulcers are tropic ulcers

435. When a patient suffers from critical limb ischemia, the ankle-brachial pressure index (ABPI) is less than-
a) 1.0 b)0.9 *(UPSCIIU)*
c) 0.7 d)0.3

436. Which is NOT true about femoral artery cannulation - *(AIIMSMay 11)*
a) Common femoral artery is cannulated
b) Single wall puncture is indicated in those with normal coagulation profile
c) Femoral artery is catheterised at medial third of femoral head
d) Seldinger technique is used both for femoral artery and vein

437. Tor doing CABC* Allen test is done to test which vessel - *(NEET/DNB Pattern)*
a) Ulnar artery b) Radial artery
c) Saphenous vein d) Internal mammary artery

AMPUTATION

438. Re-implantation time for lower limb is -
a) 6 hrs b) 4 hrs *(Kerala 97)*
c) 8 hrs d) 10 hrs

439. Stump pain is relieved by - *(Kerala 97)*
a) Continuous tapping over the stump
b) Warming up the stump
c) Using steroids
d) Using analgesics

440. For replantation surger, the detached digit or limb is best preserved in cold - *(UPSC 2K)*
a) Glycerol b) Distilled water
c) Hypertonic saline d) Isotonic saline

441. During reconstruction of an amputated limb which of the following is done first? *(AIIMSNov 10)*
a) Arterial repair b) Venous repair
c) Fixation of the bone d) Nerve anastomoses

VENOUS DISORDERS

442. Earliest sign of deep vein thrombosis *is(AIIMS 87)*
a) Calf tenderness b) Rise in temperature
c) Swelling of calf muscle d) Homan's sign

443. Injectionsclerotherapy for varicose veins is by using- *(PGI88)*
a) Phenol b) Absolute alcohol
c) 70% alcohol d) Ethanolamine oleate

444. White leg is due to - *(TN90)*
a) Femoral vein thrombosis and lymphatic obstruction
b) Deep femoral vein thrombosis
c) Lymphatic obstruction only
d) None of the above

445. All of the following are seen in deep vein thrombosis except- *(AI90)*
a) Pain b) Discolouration
c) Swelling d) Claudication

446. The following is the commonest site for venous ulcer- *(AIIMS91)*
a) Instep of foot b) Lower 1/3 leg and ankle
c) Lower 2/3 of leg d) middle 1/3 of leg

447. The most important perforator of the Lower limb is between - *(AI92)*
a) Long saphenous and posterior tibial vein
b) Short saphenous and posterior tibial vein
c) Short saphenous and popliteal vein
d) Long saphenous and femoral vein

448. Pulsating varicose vein in ayoung adult is due to-
a) Arteriovenous fistula *(AIIMS92)*
b) Sapheno femoral incompetence
c) Deep vein thrombosis
d) Abdominal tumour

449. Which is not used in treatment of Superficial venous thrombosis - *(AIIMS92)*
a) Immediate anticoagulation
b) Rest and elevation
c) Analgesics
d) Treat assosiated malignancy

428)a 429)a 430)b 431)b 432)A11 433)b 434)a,c,e 435)d 436)b 437)b 438)c 439)None 440)d
441) c 442) a 443) d 444) b 445) d 446) b 447) d 448) a 449) a,b

450. Most common complication of varicose vein stripping is - *(JIPMER 78., AIMS 79,92)*
a) Infection b) Haemorrhage
c) Ecchymosis d) Thrombo embolism

451. An operated case of varicose veins has a recurrence rate of - *(AIMS 80, AP 89)*
a) About 10% b) About 25%
c) About 50% d) Over 60%

452. What is acceptable in the management of femoral vein thrombosis - *(AIIMS81, PGI86)*
a) Bed rest and spiral elastic bandages
b) A venogram
c) Thrombectomy
d) Embolectomy
e) A mobin udin umbrella inserted into the vein

453. Operations for varicose veins are best accomplished by - *(PGI 81, AIMS 84, 86)*
a) Stripping
b) Multiple subcutaneos ligatures
c) Subfascial ligatures
d) Division and ligation at the superficial venous system

454. A 60-years old male has been operated for carcinoma of caecum and right hemicolectomyhas been done. On the fourth post - oprative day, the patient develops fever and pain in the legs. The most important clinical entity one should lookfor is - *(UPSC 96)*
a) Urinary tract infection
b) Intravenous line infection
c) Chest infection
d) Deep vein thrombosis

455. All of following may be predisposing factors for deep vein thrombosis except - *(AIIMS 95)*
a) Oral contrceptives b) Nephrotic syndrome
c) Sickle cell anemia d) Thrombocytosis

456. The duration of heparin therapy in deep vein thrombosis is - *(CUPGEE 96)*
a) 7-10 days b) 15-20 days
c) 3-4 days d) 1 month

457. Cocket& Dodd's operation is for- *(AP96)*
a) Saphenofemoral flush ligation
b) Subfascial ligation
c) Deep vein thrombosis
d) Diabetic foot

458. In obstruction of inferior vena cava there is -*(AI97)*
a) Prominent thoraco epigastric vein
b) Caput medusa
c) Hemorrhoids
d) Esophageal varices

459. Most common site for venous thrombosis -*(JIPMER*
a) Popliteal vein b) Soleal vein *98)*
c) Femoral vein d) Internal iliac vein

460. Deep vein thrombosis is caused by all except -
a) Lower limb trauma *(AIMS 98)*
b) Hip and pelvic surgery
c) Subungual melanoma
d) Cushing's syndrome

461. Which of the following test is used to detect perforator incompetence in varicose- *(JIPMER 2K)*
a) Trendelenberg test b) Fegan's test
c) Morissey's test d) Homan's test

462. The deficiency of all of the following factors increases the incidence of thrombus formation except -*(UPSC*
a) Lipoprotein A b) Protein - C *2K)*
c) Anti - thrombin III d) Protein - S

463. The most common vein to get thrombosed is the- *(AIMS 99)*
a) Long saphenous b) Short saphenous
c) Both d) Posterior tibial

464. Brodie -Trendlenburg test demonstrates-
a) Mid - thigh perforation *(ORRISA 98)*
b) Deep vein thrombosis
c) Sapheno — femoral incompetence
d) Calf perforators

465. An intern was doing saphenous cannulation for a burns pareint. Then the jpatient developed sudden onset of pain along the medial border of the correponding foot. Which nerve must have been accidentally ligated - *(AIMS 2K)*
a) Sural nerve b) Deep peroneal nerve
c) Saphenous nerve d) Genicular nerve

466. In DVT all are seen except *(CMC 2001)*
a) High fever b) Increased temperature at site
c) Pain d) Tenderness

467. An obese patient develops acute oedematous lower limb following a Pelvic surgery. Deep vein thrombosis is suspected . The most useful investigation in this case would be - *(UPSC 2002,*
a) Doppler imaging *Jipmer 98, 92, PGI 97,*
b) Fibrinogen uptake *AIMS 92)*
c) Venography
d) Plethysmography

468. In a patient on anticoagulant therapy, the INR is maintained at - *(UPSC 2002)*
a) 1.5 to 2.5 times the normal
b) 2.5 to 3.5 times the normal
c) 3.5 to 4.5 times the normal
d) 4.5 to 5.5 times the normal

469. In diabetic ulcer, following site is involved-fPG*/97)*
a) Heel b) Head of metatarsal
c) Webs d) Tips of toes

470. For prophylaxis of deep vein thrombosis used is -
a) Warfarin *(PGI97)*
b) Heparin
c) Pneumatic shock garment
d) Graded stocking

471. Which is true regarding Trendelenburg operation - *(PGI 01)*
a) Sripping of the superficial varicose vein
b) Flush ligation of the superficial varicose vein
c) Ligation of the perforators
d) Ligation of small tributaries at the distal end of superficial varicose vein
e) Ligation of short saphenous vein

450) c 451) a 452) a,c 453) a 454) d 455) c 456) a 457) b 458) a 459) b 460) c 461) a 462) a 463) d
464) c 465) c 466) a 467) a 468) b 469)a,b,d 470) b 471) b

472. For which of the following venous abnormality is surgery indicated - *(PGI01)*
a) Deep vein incompetence with DVT
b) Deep vein incompetence without DVT
c) V Aricosity > 3 cm
b) Varicosity < 3 cm
e) Saphenofemoral incompetence

473. Migratory thrombophlebitis is seen most commonly with- *(PGI 02)*
a) Pancreatic ca b) Testicular ca
c) Gastric ca d) Breast ca
e) Liver ca

474. Brodie-Tredenlenburg test is positive in - *(PGI02)*
a) Sapheno-Femoral incompetence
b) Perforator competence above knee
c) Deep vein incompetence
d) Perforator competence below knee
e) SVT

475. Varicose veins are seen in - *(PGI 02)*
a) DVT b) Superficial venous thrombosis
c) AV fistula d) Prolonged standing
e) Obesity

476. Gold standard diagnostic test in varicose veins is
a) Photoplethysmography (*Jipmer 03)*
b) Duplex imaging
c) Ultrasonography
d) Radio - labeled fibrinogen study

477. The initial therapy of documented deep venous thrombosis in a post operative case is -
a) Subcutaneous heparin therapy *{Karnataka 03)*
b) Intravenous heparin therapy
c) Thropmbolytic therapy with urokinase
d) Aspirin therapy

478. Which one of the following reagents is not used as sclerosant in the treatment of bleeding varices -
a) Ethyl alcohol b) Ethanolamine oleate *(ICS 05)*
c) Phenol d) Sodium morrhuate

479. Site of diabetic for ulcer - *(PGI June 05)*
a) Medial malleolus b) Lateral malleolus
c) Heel d) Head of metatarsal
e) Head of toes

480. Which of the following statements is true regarding fat embolism - *(AlIMSNov 05)*
a) Most patients with major trauma involving long bones have urinary fat globules
b) All patients with urinary fat globules develop fat embolism
c) Peak incidence of respiratory insufficiency for pulmonary fat embolism is around day 7 after injury
d) Heparin as an anticoagulant decreases mortality and morbidity in fat embolism syndrome

481. Which of the following is true about varicocele except ? *(Manipal 06)*
a) Incompetent valves of testicular vein are responsible for varicocele
b) 90% are on the left side
c) Asymptomatic cases require surgery
d) Femoral catheterization with spermatic vien ablation is done in recurrence

482. Which one of the following is the investigation of choice for suspected deep vein thrombosis of the lower extremity ? *(UPSC 0 7)*
a) Radioactive labelled fibrinogen uptake
b) Ascending contrast phlebography
c) D-dimer estimation
d) Duplex ultrasonography

483. With reference to varicocele, which one of the following is not true of it ? *(UPSC 0 7)*
a) Varicosity of cremestric veins
b) Left side is affected usually
c) Feels like a bag of worms
d) May lead to infertility

484. All are done for a case of deep vein thrombosis except-
a) Thrombolytic therapy b) Bandage *(MAHE 07)*
c) Heparin d) Bed rest

485. Cocket & Dodd's operation is performed for which one of the following ? *(UPSC-II08)*
a) Sapheno femoral flush ligation
b) Subfascial ligation
c) Deep vein thrombosis
d) Diabetic foot

486. Which of the following conditions disappear spontaneously in first year of life ? *(APPG 08)*
a) Port wine stain b) Naevus flammeus
c) Salmon's patch d) Strawberry haemangioma

487. The most common cause of superficial thrombophlebitis is - *(A109)*
a) Intravenous catheters/infusion
b) DVT
o) Varicose veins
d) Trauma

488. 'SEPS' is a procedure used for - *(AI09)*
a) Veins b) Arteries
c) Lymphatics d) AV fistula

489. Under normal conditions venous refilling occurring through arterial inflow alone takes_____ when the limb at rest - *(Maharashtra 10)*
a) 5-7 seconds b) 8-10 seconds
c) 11-15 seconds d) 20-30 seconds

490. Trendelenburg's operation is done for -
a) Varicocele *(UPSCII10)*
b) Primary varicose veins
c) Deep vein thrombosis with varicose veins
d) Arteriovenous fistula

491. Tl*ue about venous ulcer - *(PGIMay 10)*
a) Always stripping done
b) Always examine deep venous system
c) Biopsy should be taken from chronic ulcer
d) A/w Klippel- Trenaunary syndrome

472) b,c,e 473) a 474) a 475)a,c,d,e 476) b 477) b 478) a 479)c,d,e 480) a 481) c 482) d 483) a 484) d
485) b 486) c 487) a 488) a 489) d 490) b 491)b,c,d

492. Match List I with List II and select the correct answer using the code given below the Lists - *(UPSCII11)*

List I (Name of the perforators)	Listn (Site of Perforators)
a) Boyd's	1. 5 cm above the calcaneus
b) Dodd's	2. Mid thigh
c) Cockett's	3. Below the knee
d) Bassi's	4. Above the ankle

Code:

a)	4	3	1	2
b)	3	**2**	1	4
c)	3	2	4	1
d)	4	3	**2**	1

LYMPHATIC SYSTEM

493. Malignant cell in Hodgkin's lymphoma is - *(AIIMS*
a) Reed stemberg cell b) Lymphocytes *85)*
c) Histiocyte d) Reticulum cells

494. Chronic lymphedema predisposes to all except - *(PGI89)*
a) Lymphangiosarcoma b) Maijolins ulcer
c) Recurrent infections d) Thickening of skin

495. Commonest cause of unilareral pedal edema in india is - *(AI90)*
a) Filariasis b) Post traumatic
c) Post irradiation d) Milroy's disease

496. All are true about congenital lymphedema except-
a) It is bilateral *(AI 91)*
b) Involve lower limb
c) Almost always manifests before puberty
d) Acute lymphangitis may occur

497. The commonest cause for lymphedema of upper limb is- *(AI91, 92)*
a) Filariasis b) Congenital
c) Neck surgery d) Post mastectomy irradiation

498. Milroys disease is - *(JIPMER92)*
a) Edema due to filareasis
b) Post cellulitic lymphedema
c) Congenital lymphedema
d) Lymphedema following surgery

499. Investigation of choice in detecting small para-aortic lymph node is - *(JIPMER92)*
a) Ultra sound scan b) CT scan
c) Lymphangiography d) Arteriography

500. Milroys disease is lymphedema which is -*(AMU 85)*
a) Familial b) Follows filariasis
c) Follows erysipelas d) A sequele to white leg

501. Lymphangiography of the leg is performed by -
a) An injection of sodium diatrizoate (Hypaque) subcutaneously between the toes
b) Injecting sodium diatrizoate retrogradely under pressure into a small vein on the dorsum of the foot
c) Dissecting lymphatics through an incision on the dorsum of the foot
d) The use of an infusion pump

502. Finding the cause of unilateral lympoedema of the leg includes - *(JIPMER 78,79, PGI 85)*
a) Taking a family history
b) Looking for chronic infection in the foot
c) Looking for early malignant disease of the testis
d) Looking for filariasis
e) Performing a casoni test

503. Treatment of Acute lymphangitis requires -
a) Antibiotic and rest *(JIPMER 81, AMC 84)*
b) Immediate lymphangiography
c) Immediate multiple incisions
d) No special treatment

504. Total dose of radiation in Hodgkins dosease is - *(JIPMER95)*
a) 500 -1000 rad b) 1000 - 2000 rad
c) 3000 - 5000 rad d) 5000 - 7000 rad

505. The most important prognostic indicator of Hodgkin's lymphoma is - *(TN95)*
a) Lymphocytic predominance histology
b) Visceral involvement
c) Hepatic involvement
d) Involvement of spleen

506. Diagnosis of Hodgkin's disease is confirmed by -
a) CT scan *(PGI97)*
b) Bone marrow biopsy
c) Lymph node biopsy
d) Lymphangiography

507. Grade I lymphedema means- *(JIPMER2K)*
a) Pitting edema upto the ankle
b) Pitting edema upto the knee
c) Non-pitting edema
d) Edema disapearing after overnight rest

508. Lymphovenous anastomosis is done for - *(PGI97)*
a) Filarial lymphoedema
b) Lymphoid cyst
c) Cystic hygroma
d) Malignant lymphoedema

509. True about lymphangioma - *(PGI 03)*
a) It is a malignant tumour
b) It is a congenital sequestration of lymphatic
c) Cystic hygroma is a lymphangioma
d) Laser excision is done
e) Sclerotherapy is commonly done

510. The most common site of lymphangiosarcoma is
a) Liver *{UPSC04)*
b) Spleen
c) Post mastectomy edema of arm
d) Retroperitoenum

511. Commonest cause of A/C Lymphadenitis in India -
a) Barefoot walking *(MAHE05)*
b) TB
c) Staphylococcal skin infection
d) Lymphoma

512. All of the following soft tissue sarcomas have a propensity for lymphatic spread except-*(AiimsNov 05)*
a) Neurofibrosarcoma b) Synovial sarcoma
c) Rhabdomyosarcoma d) Epitheloid sarcoma

492)c 493)a 494)b 495)a 496)None 497)a 498)c 499)b 500)a 501)c 502)a,b,d 503)a 504)c 505) None 506)c 507)d 508)a 509)b,c 510)c 511)c 512)a

513. A 40 year old man presented with a flat 1 cm * 1 cm scaly, itchy black mole on the front of thigh. Examination did reveal any inguinal lymphadenopathy. The best course of management would be -
a) FNAC of the lesion *(UPSC 07)*
b) Incision biopsy
c) Excisional biopsy
d) Wide excision with inguinal lymphadenectomy

514. In India, what is the most common cause of unilateral lymphoedema of lower limb ? *(UPSC 07)*
a) Lymphoedema tarda
b) Carcinoma of penis with metastatic nodes
c) Filariasis
d) Tubercular lymphadenopathy

515. Lympho-venous anastomosis is done for-
a) Filarial lymphedema *(UPSC-II09)*
b) Lymphoid cyst
c) Cystic hygroma
d) Malignant lymphedema

516. All are true about cystic hygroma except - *(DPG10)*
a) Pulsatile
b) May cause respiratory obstruction
c) Common in neck
d) Present in birth

517. True about primary lumphoedema - *(PGINov. 10)*
a) Lymphangiosarcoma may occur
b) AAV Milroy's disease
c) Onset b/w 2-35 years indicates lymphoedema tarda
d) Onset >35 years indicates praecox variety
e) Prevalence is 2%

TRAUMA

518. Treatment of choice for stab injury caecum -
a) Caecostomy *(AI89)*
b) Ileo-transverse anastomosis
c) Transverse colostomy
d) Sigmoid colostomy

519. Blunt inj uries to the abdomen - *(JIPMER 82,80)*
a) May cause peritonitis
b) Rarely need urgent laparotomy
c) May cause intestinal obstruction
d) May cause gastroduodenal ulceration

520. Haemostasis in scalp wound is best achived by -
a) Direct presure over the wound *(AIIMS 79,*
b) Catching and crushing the *PGI85)*
bleeders by haemostats
c) Eversion of galea aponeurotica
d) Coagulation of bleeders

521. In penetrating injury of abdomen commonly affected is- *(AIIMS 94)*
a) Liver b) Large bowel
c) Duodenum d) Small intestines

522. Initial treatment in a management of trauma -
a) Airway b) IV fluids *(PGI 96)*
c) Fracture stabilisation d) Do not shift

523. Death in blunt trauma chest is due to - *(AIIMS 98)*
a) Rupture oesophagus
b) Tracheobronchial injury
c) Pulmonary contusions
d) Chylothorax

524. A12 hour old bullet injury to the left colon is ideally treated by- *(AIIMS 99)*
a) Primary closure without drainage
b) Primary closure with drainage
c) Resection of affected segment with upper segment colostomy and lower segment as a mucus fistula
d) Primary repair with loop colostomy

525. What is the management of a case of bullet injury to left side of the colon presenting at 12 hours after incident - *(AIIMS 2K)*
a) Primary closure
b) Proximal colostomy and bringing out the distal part as a mucus fistula
c) Resection and primary anastomosis
d) Proximal defunctioning colostomy

526. Which one of the following veins should be avoided for intravenous infusion in the managment of abdominal trauma - *(UPSC 2001)*
a) Cubital b) Cephalic
c) Long saphenous d) External jugular

527. Which one of the following is not a part of the Revised Trauma score - *(UPSC 2001)*
a) Glasgow coma scale
b) Systolic blood pressure
c) Pulse rate
d) Respiratory rate

528. In severe injury, first to be maintained is -*(PGI97)*
a) Hypotension b) Dehydration
c) Airway d) Cardiac status

529. MC abdominal organ injured in blunt trauma abdomen is - *(PGI 99)*
a) Spleen b) Liver
c) Pancreas d) Stomach

530. Investigation of choice for blunt trauma abdomen in instable patient - *(PGI 2000, AIIMS 87)*
a) X-ray abdomen b) USG
c) Diagnostic Peritoneal lavage d) MRI
e) CT scan

531. A 30 year old female comes with hypovolemic shock after blunt trauma of the abdomen. An emergency USG of abdomen shows splenic tear. Which of the following is to be done - *(PGI 01)*
a) CECT of the abdomen
b) Diagnostic lavage of peritoneal cavity before proceeding
c) Monitor patient to assess for progression
d) Immediate surgery
e) Chest X-ray

513)c 514)c 515)a 516)a 517)a,b 518)b 519)b 520)a 521)d 522)a 523)b 524)c 525)b 526)d 527) c 528)c 529)a 530)b 531) d

532. In traumatic transection of the femoral artery and vein, which among the following should be done -
a) Femoral artery repair with vein ligation *(PGI01)*
b) Repair of artery and vein
c) Ligation of femoral artery
d) Below knee amputation
e) Repair of artery with contralateral sympathectomy

533. A patient sudden headache and vomiting & unconciousness, diagnosis is - *(PGI01)*
a) Subarachnoid h'ge b) Intracerebral h'ge
c) Subdural h'ge d) Extradural h'ge

534. Commonly injured in blunt abdominal injury is -
a) Midileum b)Prox. jejunum *(PGI 01)*
c) Midjejnum d) Distal ileum
e) Ileocecal junction

535. In traumatic injury to common femoral vein & external femoral artery, which among the following should be done - *(PGI 03)*
a) Ligation of both artery & vein
b) Repair of artery & vein
c) Below knee amputation
d) Repair of artery and contralateral sympathectomy
e) Sclerotherapy

536. After sustaining trauma, a pt. developed persistent hypotension with CYP16 mm H_20 with BP 90/60 mmHg & pulse 140/min, diagnosis is - *(PGI 03)*
a) Cardiac tamponade b) Pericardial effusion
c) Tension pneumothorax d) Lung laceration
e) Pulmonary embolism

537. A pt developed haemoperitoueum following RTA, with BP 90/60 & pulse 140/min which of the following to be done - *(PGI 03)*
a) DPL to be done
b) Liver is the MC organ to rupture
c) USG is better than CT Scan
d) X-ray to be taken in supine position
e) Urgent surgery to be done

538. A pt. after sustaining RTA, developed # left shaft of femur with guarding & rigidity in the abdomen. Following is to be done - *(PGI 03)*
a) X-ray of left lower limb & USG abdomen
b) Start IVF, Ryle's tube & catheterization
c) Stabilize the # & monitor the pt and do surgery if necessary later on
d) Grouping & cross matching of two unit of blood
e) Stabilize the # only

539. A 30 yrs old gentleman after sustaining road traffic accident present in emergency with BP 100/60 mmHg, Pulse 120 min and C.T. shows splenic laceration at inferior border, after 2 units of blood transfusion, patients conditions are - BP 120/70 mmHg and pulse 84/min; the next line of management is - *(PGI 03, ICS 98)*
a) Laparotomy
b) Splenorrhaphy
c) Continue the conservative treatment and take subsequent measures on monitoring the pt.
d) Splenectomy
e) X-ray abdomen and aspiration

540. A person following a road-traffic accident presented emergency with lacreration of iliac On examination there was swelling of inguinal region and distal pulsation was felt; internal iliac artery was normal, common iliac and external femoral artery was normal but common femoral vein is transected. Treatment of choice is - *(PGI 03)*
a) Vein repair with continuity
b) Sclerotherapy
c) Ligation of femoral artery and vein
d) Amputation below knee

541. Which one of the following is not a principle followed in the management of missile injuries -
a) Excision of all dead muscles (*UPSC04)*
b) Removal of foreign bodies
c) Removal of fragments of bone
d) Leaving the wound open

542. Seat belt causes injury to - **(***Manipal 04)*
a) Duodenum
b) Head injury due to wind screen
c) Thorax d)All

543. All of the following are used for gradation of coma is 'Glasgow coma scale' except - **(***SGPGI05)*
a) Eye opening b) Motor response
c) Verbal response d) Heart rate

544. Mild head injury is having glassgow coma scale of -
a) 3-5 b)5-8 *{SGPGI05)*
c) 8-10 d) 10-15

545. According to the Glasgow Coma Scale (GCS), a verbal score of lindicates - *(AI05)*
a) No response
b) Inappropriate words
c) Incomprehensible sounds
d) Disoriented response

546. Which of the following is not a component of Glasgow Coma Scale ? *(AI 06)*
a) Eye opening b) Motor response
c) Pupil size d) Verbal response

547. Total score in Glasgow Coma Scale of a conscious person is - *(AI 06)*
a) 8 b)3
c) 15 d) 10

548. Protein metabolism after trauma is characterized by the following except - *(UPSC 0 7)*
a) Increased liver gluconeogenesis
b) Inhibition of skeletal muscle breakdown by interleukin 1 and tumour necrosis factor
c) Increased urinary nitrogen loss
d) Hepatic synthesis of acute phase reactants

549. Abdominal compartment syndrome is characterized by the following except - *(UPSC 0 7)*
a) Hypercarbia and respiratory acidosis
b) Hypoxia due to increased peak inspiratory pressure
c) Hypotension due to decrease in venous return
d) Oliguria due to uretic obstruction

532) a,b 533) a 534)b,e 535)b 536) a,c 537) c,e 538)a,b,d 539) c 540) a 541) c 542) a 543) d 544) d 545) a 546) c 547) c 548) b 549) d

550. Preferred incision for abdominal exploration in Blunt injury abdomen is - *(AI07)*
a) Always Midline incision
b) Depending upon the organ
c) Transverse incision
d) Paramedian

551. A patient sustained Traumatic injury to major abdominal vessels. It has been planned to explore the suprarenal Aorta, the Caeliac Axis, the superior mesentric artery, and the left renal artery. What maneurve for exposure is recommended - *(AI07)*
a) Cranial visceral Rotation
b) Caudal visceral Rotation
c) Left medial visceral Rotation
d) Right medical visceral Rotation

552. Best prognostic factor for head injury is - *(A107)*
a) Glasgow coma scale b)Age
c) Mode of injury d) CT

553. Base of the skul fractrue presents with invovlement of the petrous temporal bone, which of the following important sign- *(UP 07)*
a) Subconjuctive haemotoma
b) CSF rhinorrhoea
c) Raccon eyes
d) Battle sign

554. Diagnosis of traumatic rupture of diaphragm -
a) Laparoscopy *(PGI June 07)*
b) Chest X ray
c) Diagnostic peritoneal lavage

555. What is the first step taken in case of multiple inj uries of face and neck ? *(UPSC-II08)*
a) Blood transfusion b) IV fluids
c) Reconstruction d) Maintenance of airways

556. A male patient with blunt trauma abdomen is hemodynamically stable. What is the next line of management - *(AI08)*
a) Observation
b) Further imaging of abdomen
c) Exploratory laparotomy
d) Laproscopy

557. A young patient presents with a massive injury to proximal duodenum, head of pancreas and distal common bile duct The procedure of choice in this patient should be - *(AI 08)*
a) Roux-en-Y anastonmosis
b) Pancreaticoduodenectomy (Whipple's operation)
c) Lateral tube jejunostomy
d) Retrograde jejunostomy

558. True about blunt abdominal trauma with splenic rupture - *(PGI June 08)*
a) Kehr's sign-discoloration around umplicus
b) Spleen is most common organ to be involved
c) Splenectomy is treatment of choice for splenic rupture
d) Cullen's sign seen

559. True about abdominal compartment syndrome -
a) 1 Cardiac output *(PGI Dec 08)*
b) 1 Urine output
c) 1 Pulmonary capillary wedge pressure
d) ! Venous return
e) 1 Systemic vascular resistance

560. True about diaphragmatic injury - *(PGIDec 08)*
a) Advise diagnostic laproscopy
b) Chest X-ray is useful
c) Conservative management is done in most cases
d) Late complication is herniation of abdominal content
e) All penetrating diaphragmatic injury must be repaired via chest

561. A person after pelvic fracture, could not pass urine. On examination bladder is not palpable. What is probable diagnosis - *(PGI Dec 08)*
a) Posterior urethra repture with retension of urine
b) Rectourethral injury
c) Intraperitoneal rupture of bladder
d) Extraperitoneal rupture of bladder

562. A man comes to emergency with stab injury to left flank. He has stable vitals. What would be the next step in management - *(AIIMS Nov 08)*
a) CECT b) Diagnostic peritoneal lavage
c) Laprotomy d) Laproscopy

563. A man with blunt injury abdomen after road side accident has a blood pressure of 100/80 mm Hg and a pulse rate of 120 bpm. Airway has been established and respiration has been stabilized. Next best step in management is - *(AI 09)*
a) Immediate blood transfusion
b) Blood for cross matching & IV fluids
c) Ventilate the patient
d) Rush the patient to the OT

564. Which of the following is used to define Penetrating Neck Inj ury? *(AIIMS May 09)*
a) 2 cm depth of wound
b) Injury to vital structures
c) Breach of platysma
d) Through and through wound

565. Glasgow coma scale include - *(PGI June 09)*
a) Eye opening b) Verbal response
c) Motor response d) Sensory response
e) Swallowing reflex

566. True regarding presentation (s) of thoracic duct inj ury - *(PGI June 09)*
a) Electrolyte disbalance b) Lymphedema
c) Lymphopenia d) Dehydration
e) Chylothorax may be present

567. True about indication of celliotomy in blunt trauma-
a) Peritoneal air on imaging *(PGI June 09)*
b) Severe hypotension
c) Grade I spleen damage
d) Grade II liver damage
e) patient with positive diagnostic lavage

550)a 551)c 552)a 553)d 554)a,b 555)d 556)b 557)b 558)b 559)a,b,d 560)a,b,d 561)c,d 562)a 563) b 564) c 565)a,b,c 566)a,c,d,e 567)a,b,c

568. What is the investigation of choice in a patient with blunt abdominal trauma with hematuria-
a) Ultrasonography of abdomen *(UPSC-II09)*
b) Contrast enhanced tomography
c) Intravenous urogram
d) Retrograde urogram

569. Traumatic diaphragmatic injury except -
a) Left side rupture d/t weak left hemidiaphragm at point of entry of embryonic origin *(PGI Nov 09)*
b) Most commonly due to trauma
c) Smaller tear - heal spontaneously & surgery is not required
d) Abdominal approach is the most favoured
e) Mask ventilation is encouraged in pt. with massive visceral herniation

570. All are true about Flail chest, except -
a) Fracture of atleast 3 ribs *(AIIMS Nov 09)*
b) If overlapping of fractured ribs with severe displacement is seen then patients are treated surgically with open reduction and fixation
c) PaO2<40 with FiO2>60 treated with intubation and PEEP
d) Paradoxical movement may not be seen in conscious patients

571. In a patient with head injury, eye opening is seen with painful stimulus, localizes the pain and there is inappropriate verbal response. What would be the score on Glasgow coma scale - *(AIIMSNov 09)*
a) 8 b)9
c) 10 d) 11

572. Blunt injury abdomen, patient was hemodynamically stable, next investigation - *(AIIMS Nov 09)*
a) X-ray abdomen b) Barium swallow
c) FAST d)DPL

573. Commonest organ injured in blast injury is -
a) Lung b) Liver *(AIIMS May 10)*
c) Spleen d) Pancreas

574. In blunt trauma abdomen what should be the approach for doing laparotomy - *(AIIMS May 10)*
a) Depends on organ injured
b) Always midline incision
c) Always transverse
d) Depends upon type of injury

575. Best prognostic factor for head injury is -
a) Glassgow coma scale *(AIIMS May 10)*
b) Age
c) Mode of injury
d) CT findings

576. In order to expose the coeliac axis, left renal artery, superior mesenteric artery and abdominal aorta in a case of trauma, which of the following is performed-
a) Left medial visceral rotation *(AIIMS May 10)*
b) Right medial visceral rotation
c) Cranial visceral rotation
d) Caudal visceral rotation

577. A man with blunt abdominal trauma with h/o pelvic fracture has presented to ER. He has passed only few drops of blood per meatus and no urine in the past 8 hrs. His bladder is palpable per abdomen. Which of the following is correct? *(AIIMSMay 10)*
a) Anuria due to hemorrhagic shock
b) Urethral injury
c) Ureteral rupture leading to extravasation of urine in retroperitoneum
d) Bladder rupture

578. According to the Bismuth/Strasberg classification 'Cystic blow out' is classified as - *(AI10)*
a) TYPE A b)TYPEB
c) TYPEC d)TYPED

579. Trauma and Injury Severity score (TRISS) includes-
a) GCS+BP+RR b) RTS + ISS +Age *(AI 10)*
c) RTS + ISS+GCS d) RTS + GCS + BP

580. A 27 year old patient presented with left sided abdominal pain to the emergency room; 6 hours after an RTA. He was hemodynamicaly stable and FAST postive. Contrast Enhanced CT (CECT) scan showed grade III splenic laceration. What will be the most appropriate treatment - *(AI 10)*
a) Splenectomy
b) Splenorrhaphy
c) Splenic artery emblization
d) Conservative management

581. A 27 year old patient presented with left sided abdominal pain to the emergency room, 6 hours after an RTA. He is hemodynamically stable and FAST positive. A CECT (contrast enhanced CT) scan shows a contrast blush along with a grade III laceration. What will be the most appropriate management -
a) Splenectomy *(AI 10)*
b) Spenorrhaphy
c) Splenic artery embolization
d) Conservative management

582. A lady presented in the emergency department with a stab injury to the left side of the abdomen. She was hemodynamically stable and a contrast enhanced CT scan revealed a laceration in spleen. Laparoscopy was planned however the patient's p02 suddenly dropped as soon as the pneumoperitoneum was created. What is the most likely cause - *(AI 10)*
a) Gaseous embolism through splenic vessels
b) Injury to the left lobe of the diaphragm
c) Inferior vena cava compression
d) Injury to colon

583. Which of the following grading methods is used to evaluate the prognosis/outcome after subarachnoid hemorrhage - *(AI 10)*
a) Glassgow coma scale
b) Hess and Hunt scale
c) Glasgow-Blatchford bleeding score
d) Intracerebral hemorrhage score

568) b 569) c,e 570) d 571) c 572) c 573) a 574) b 575) a 576) a 577) b 578) a 579) b 580) d 581)c 582) a 583) b

584. Initial treatment in the management of trauma is -
a) Airway maintenance b) IV Fluids *(DPG10)*
c) Fracture stabilization d) Do not shift

585. Treatment of Simple rib fracture includes following except- *(Maharashtra 10)*
a) Analgesics b) Physiotherapy
c) Early ambulation d) Strapping of chest

ORTHOPAEDICS

586. Healing is slow below the Knee joint because of -
a) Poor vascularity *(JIPMER91)*
b) Increased movement
c) Weight bearing
d) Decreased subcutaneous Fat

587. In hand injuries first to be repaired is - *(AI95)*
a) Bone b) Tendon
c) Muscle d) Nerve

588. Bony metastasis in children is commonest with -
a) Wilm's tumour b) Neuroblastoma *(PGI89)*
c) Lymphoma d) Rhabdomyosarcoma

589. Reparative granuloma of Jaw is treated by -
a) Antibiotics *(AIIMS 90)*
b) Wedge resection
c) Resection and bone grafting
d) Curettage

590. Clicking jaw is due to - *(KERALA 90)*
a) Lax temporomandibular joint
b) Fracture mandible
c) Fracture maxilla
d) Dislocation of symphysis mentii

591. Commonest site for chondroma in vertebral canal is-
a) Thoracic b) Cervical *(HPMER92)*
c) Sacro- coccygeal d) Lumbar

592. Treatment of choice in giant cell reparative granuloma is - *(PGI 81, AIIMS 92)*
a) Curettage b) Wide excision
c) Excision d) Radiotherapy

593. The following bone tumour may cause dural deposits without causing bony changes -*(PGI 79, AIIMS 81,85)*
a) Hodgkin's lymphoma b) Multiple myeloma
c) Secondararies d) Fibrous dysplasia

594. Riding Breeches deformity is collection of fat on -
a) The medial aspect of upper arms *(PGI 81*
b) On the medial thighs *AIIMS 84)*
c) Over the femoral trochanters of the thighs
d) Drooping buttocks

595. What is the percentage of patients who have undergone amputation which show "phantom limb" pain -
a) About 1% b) About 5% *(AIIMS80, DNB*
c) About 10% d) 35% *90)*

596. Following an operation for hallux valgus, the most satisfied patients are those who had - *(AIIMS 80,81,*
a) An associated hammer toe *AMU 89)*
b) Pain
c) Metatarsus primus varus
d) An associated bunionette

597. In a case with infection in heel space -
a) The infection is due mostly to infection of pad of fat in the heal *(PGI 80, AMU 85)*
b) The usual cause is treading of a thorn or any other sharp pointe object in it
c) Oedema around the ankle may be present
d) Drainage through incision on plantar aspect of heel should be done

598. Psoas spasm not seen in - *(PGI 96)*
a) Septic arthritis hip joint b) Lumbar TB
c) TB of hip j oint d) All of the above

599. Dentigerous cyst arises from - *(UPSC)*
a) The root of a caries tooth
b) The periosteum of the fractured mandible
c) An unerupted permanent tooth
d) The sequestrum of osteomyelitis of mandible

600. Porters tip deformily is seen in - *(UPSC 89)*
a) Klumpke's paralysis b) Radial nerve injury
c) Ulnar nerve injury d) Erbs paralysis

601. Ameloblastoma of mandible most commonly arises from- *(AIIMS2001)*
a) Site of second molar b) Above the alveolus
c) Canine d) Last unerupted molar

602. Fat embolism is seen in- *(JIPMER 91)*
a) Prolonged labour b) Fracture clavicle
c) Sickle cell anemia d)CVC liver

603. Adventitious bursa is - *(MAHE 98)*
a) Found normally over any joint
b) Due to degeneration of connective tissue over a joint
c) Found over bony prominences
d) Can turn into malignancy

604. Prolapsed intervertebral disc (PID) is most common at- *(PGI 2000)*
a) $C_S C_S$ b) $D_{10} D_u$
c) $C_2 C_3$ d) $L_3 L_4$
e) Lj Sj

605. Prophylactic antibiotic (systemic) therapy is indicated in - *(PGI 04)*
a) Hip, knee joint prosthesis
b) Extermities vascular surgery
c) Small/Large bowel surgery

606. Which nerve repair is with good prognosis -
a) Ulnar nerve b) Radial nerve *(Kerala 03)*
c) Sciatic nerve d) Median nerve

607. A 64 year old hypertensive obese female was undergoing surgery for fracture femur under general anaesthesia. Intra - operatively her end tidal carbon dioxide decreased to 20 from 40 mm of Hg, followed by hypotension and oxygen saturation of 85%. What could be the most probable cause - *(AI03)*
a) Fat embolism b) Hypovolemia
c) Bronchospasmd) Myocardial infection

608. The movement at the following joint permits a person to look towards the right or left - *(AI04)*
a) Atlanto - occipital j oint b) Atlanto - axial j oint
c) C2-C3 joint d)C3-C4 joint

584) a 585) d 586)a 587)a 588)b 589)d 590)a 591)b 592)a 593)a 594)c 595)d 596)b 597)d
598) b 599) c 600) d 601) a 602) None 603) c 604) a,e 605)a,b,c 606) b 607) a 608) b

609. The management of fat embolism includes all the following except - *(AI04)*
a) Oxygen
b) Heparinization
c) Low molecular weight dextran
d) Direct pressure and elevation

610. Principles of treatment of Pyogenic infection of skeletal system are - **(***PGI June 05)*
a) Analgesics b) Antibiotics
c) Steroids d) Non-operative
e) Chemotherapy

611. 'Tennis elbow' is characterized by - **(***MAHA 05)*
a) Tenderness over the medial epicondyle
b) Tendinitis of common extensor origin
c) Tendonitis of common flexor origin
d) Painful flexion and extension

612. An 8 year old boy presents with a gradually progressing swelling and pain since 6 months over the upper tibia. On X-ray, there is a lytic lesion with sclerotic margins in the upper tibial metaphysis. The diagnosis is - (*.MAHA 05)*
a) Oeteogenic sarcoma b) Osteoclastoma
c) Brodie's abscess d) Ewing's sarcoma

613. Allen's test is useful in evaluating - *(AI 06)*
a) Thoracic outlet compression
b) Presence of cervical rib
c) Integrity of palmar arch
d) Digital blood flow

614. Pelvic fracture is associated with - *(NEET/***Spl**
a) Intraperitoneal bladder rupture *Pattern)*
b) Extraperitoneal bladder rupture
c) Anterior urethral injury
d) None

NERVOUS SYSTEM

615. Signs of cerebral compression are all except -
a) Bradycardia *(UPSC 86, KERALA 87*
b) Hypotension *JIPMER 88)*
c) Papilloedema
d) Vomiting

616. Surgery is not useful in - *(JIPMER 81, DNB 89)*
a) Cerebral oedema b) Depressed fracture
c) Extral dural haemorrhage d) Subdural haemorrhage

617. In a patient with head injury black eye associated with subconjunctival haemorrhage occurs when there is - *(UPSC 87)*
a) Fracture of floor and anterior cranial fossa
b) Bleeding between the skin and galea aponeurotica
c) Haemorrhage between galoea aponeurotica and pericranium
d) Fracture of greater wing of sphenoid bone

618. Plexiform neurofibromatosis commonly affects...
a) Facial nerve (*JIPMER 87)*
b) Trigeminal nerve
c) Peripheral nerve
d) Glossopharyngeal nerve

619. The commonest extradural tumous is - *(NIMHANS*
a) Neurofibroma b) Glioma *86)*
c) Meningioma d) Metastasis

620. Patient with a history of fall presents weeks later with headache and progressive neurological deterioration, the diagnosis is - **(***AI89***)**
a) Acute subdural hemorrhage
b) Extradural hemorrhage
c) Chronic subdural hemorrhage
d) Fracture skull

621. Commonest site of meningocele - *(AI89)*
a) Lumbosacral b) Occipital
c) Frontal d) Thoracic

622. In causalgia, the nerve most commonly affected area- *(AIIMS 86, 88)*
a) Radial and ulnar b) Median and sciatic
c) Radial and peroneal d) ilioinguinal and sural

623. Plexiform neurofibromatosis commonly affects the.... nerve - *(PGI 88)*
a) *T* b) 5^{th}
c) 6^{th} d) 8^{th}

624. The treatment of post traumatic epilepsy is -
a) Mannitol infusion *(AIIMS 84)*
b) Immediate corticosteroids
c) Long term anticonvulsants
d) Long term corticosteroids

625. Following are the features of raised intracranial tension except - *(AIIMS 84)*
a) Altered sensorium b) Papilloedema
c) Convulsions d) Tachycardia

626. Facial nerve palsy is seen in the following fracture
a) Anterior cranial fossa *(AIIMS 84)*
b) Middle cranial fossa
c) Cranialvault
d) Posterior Cranial Fossa

627. Lowest incidence of cerebral tumours is seen in- *(AIIMS 85)*
a) Occipital b) Frontal
c) Temporal d) Parietal

628. Commonest orbital tumour causing exophthalmos is - *(AIIMS 87)*
a) Glioma b) Meningioma
c) Hemangioma d) Neuroblastoma

629. Musculo skeletal abnormality in neurofibromatos is - *(PGI 86)*
a) Hypertrophy of limb b) Scoliosis
c) Cafe au lait spots d) Pseudo arthrosis
e) All

630. Dumbell tumour is seen in - *(Kerala 89)*
a) Meningioma b) Neurofibroma
c) Epidendymoma d) Thymoma

631. Scalp hemmorrhage is best controlled by - *(IN89)*
a) Electrocautery b) Pressure
c) Ligation of vessels d) Eversion of galea

632. Tinnels sign indicates - *(Kerala 91)*
a) Atrophy of nerves b) Neuroma
c) Injury to nerve d) Regeneration of nerves

609) d 610)b 611) b 612)c 613)c 614)b 615)b 616)a 617)a 618)b 619)d 620)c 621)a 622)b
623) b 624) c 625)d 626)b 627)a 628)a 629)e 630)b 631)b 632)d

633. The most important clinical finding in a case of head injury is - ^ **(***JIPMER 91)*
a) Pupillary dilatation
b) Level of consciousness
c) Focal neurological deficit
d) Fracture skull

634. Management of extradural hemorrhage is -
a) Antibiotics *{AIMS 93)*
b) Immediate evacuvation
c) Evacuvation after 24 hrs.
d) Observation

635. Lumbar sympathectomy is done for- *{JIPMER93)*
a) Gangrene foot b) Rest pain
c) Intermittent Claudications d) Skin Ulcerations

636. Bilateral phrenic nerve palsy is caused by -
a) Carcinoma bronchus *(PGI80, Delhi 79, 93)*
b) Polio
c) Medullary carcinoma thyroid
d) paget's disease

637. The nerve of Kuntz is an important landmark in -
a) Lumbar sympathectomy *(PGI 79, Delhi 84)*
b) Cervicodorsal sympthectomy
c) Obturator neurectomy
d) Splanchnicetomy
e) Hemiormaphy

638. Features of extradural haemorrhage include all except-
a) Severe hypotension *(AIIMS 82, AP 87)*
b) Deteriorating consciousness
c) Fixed dilated pupil on the same side
d) Fracture line crossing the temporal bone

639. A dome shaped skull with a high forehead in the infancts with slight hydrocephalus (Olympian brow) is seen in - *(JIPMER 81, AMU88)*
a) Marasmusb) Congenital syphilis
c) Rickets d) Arnold chiari syndrome

640. After an open injury, the optimum time for nerve suture is - *(AIIMS 78,79, PGI85)*
a) Immediately b) Within one month
c) 1-2 month d) 2-4 month
e) When wound is free from infection

641. Brain abscess may be due to following- *(AIMS 81,*
a) Chronic suppurative otitis media *AMC 85)*
b) Chronic lung abscess
c) Trauma
d) Any of the above

642. Immediate surgery is indicated in - *(Kerala 95)*
a) Extradural b) Subdural
c) Intracerebral d) Brain laceration

643. A one month old female child has swelling over the back in the sacral region. There is no cough impulse in the swelling. X-ray examination shows erosion of the coccyx. The most likely clinical diagnosis would be - *(UPSC 95)*
a) Meningocele b) Lipoma
c) Sacro-coccygeal teratoma d) Neurofibroma

644. Commonest cause of carpal tunnel syndrome is -
a) Malunited code's fracture *{AI95)*
b) Rheumatoid arthritis involving flexor retinaculum
c) Myxoedema
d) Pregnancy

645. An elderly man who has had a trival history of head injury three months ago, develops headache and turns unconscious. On examination, he is found to have fixed left dilated pupil and right hemiplegia. What is the most likely diagnosis - *{UPSC 96)*
a) Contusio-cerebril
b) Extradural hematoma
c) Chronic subdural hematoma
d) Brain abscess

646. Sympathectomy is not useful in - *{AIMS 96)*
a) Causalgia b) Raynaud's disease
c) Rest pain d) Intermittent claudication

647. In Neuroblasotmas the most common presentation is- *{AI98)*
a) Lytic lesion in skull with suture diasthesis
b) Lung metastasis
c) Renal invasion
d) Secondaries in brain

648. All produce carpal tunnel syndrome except - *{Kerala*
a) Code's# b)Acromegaly *98)*
c) Addisons disease d) Hypothyroidism

649. Most common cuases of sub-dural haematoma -
a) Middle meningeal artery tear *{SCTIMS98)*
b) Rupture of superior cerebral vein
c) Internal carotid artery tear
d) None of the above

650. Commonest spinal tumour is - *{SCTIMS98)*
a) Meningioma b)Ependynoma
c) Neurofibroma d) Neuroblastomas

651. In patient of head injuries with rapidly increasing intracranial tension without haematoma, the drug of choice for initial management would be - (*UPSC*
a) Lasix b) Steroids *2K)*
c) 20% Mannitol d) Glycine

652. Neurofibromatosis presents as all of the following except - *{UPSC 01)*
a) Elephantiasis neuromatodes
b) Plexiform neuroma
c) Von Recklinghausen's disease
d) Lymphadenovarix

653. Which of the following is primary neurogenic tumour - *(JIMPER90)*
a) Meninginoma b) Glioblastoma
c) Acoustic neuroma d) Neuroblastoma

654. Glioblastoma multiforme may occur in the following except - *(Delhi 93)*
a) Cerebrum of adult
b) Brain stem of child
c) Spinal cord of adult
d) Adrenal medulla of child

633) b 634) b 635)b>d>a 636) b 637) b 638) a 639) b 640) e 641) d 642) a,b 643) c 644) d 645) c 646) d 647) a 648) c 649) b 650) c 651)c 652) d 653) d 654) d

655. The parasitic infection capable of producing spinal cord compression is/are - *(AIIMS 81,Delhi 83)*
a) Leishmaniasis b) Wuchereriasis
c) Echinococcosis d) Amoebiasis

656. The following are CNS findings of CO_z narcosis - **(***PGI90)*
a) Excitement b) Increased pH of CSF
c) Decreased pH of CSF d) Papilledema

657. Peripheral nerves can withstand Ischemia upto -
a) 30 minutes b) 1 hour *(JIPMER 93)*
c) 2 hours d) 4 hours

658. Commonest intramedullary spinal tumours is-
a) Secondaries b) Neurofibroma *(PGI 85)*
c) Ependymoma d) None of the above

659. Battle's sign is seen in - *(JIPMER 90)*
a) Fracture middle cranial fossa
b) Fracture base of skull
c) Fracture anterior cranial fossa
d) All of the above

660. Premature filling of veins is a manifestation in cerebral angiography of - *(AIIMS 78, AMU 85)*
a) Trauma
b) Brain tumour
c) Arteriovenous malformation
d) Arterial occlusion

661. In normal pressure hydrocephalus seen are all except- *(PGI97)*
a) Convulsion b) Ataxia
c) Dementia d) Incontinence

662. Lucid interval is seen in - *(PGI97)*
a) Extra dural haemorrhage
b) Intra dural haemorrhage
c) Intra cerebral haemorrhage
d) Subarachnoid haemorrhage

663. Esthesio neuroblastoma arises from - *(PGI 97)*
a) Olfactory N b) Maxillary N
c) OpthalmicN d) Nasociliary N

664. Earliest feature of sudden increase in ICT in infant is- *(PGI97)*
a) Boggy swelling of fontanelle
b) Papilloedema
c) Paralysis
d) Seizures

665. Neurofibromatosis is associated with - *(PGI 98)*
a) Papillary Ca b) Islet cell tumour
c) Pheochromytoma d) Glucagonoma

666. Meningomyelocele patient after being operated developed hydrocephalus due to - *(PGI98)*
a) Arnold chiari malformation
b) Injury to absorptive surface
c) Central canal injury
d) Arachnoidal block

667. Extradural haematoma is associated with what % of severe trauma - *(PGI98)*
a) 36% b) 10%
c) 77% d) 96%

668. Most common presentation of intracranial aneurysm is - *(PGI 98)*
a) Coarctation of aorta b) Systemic hypertension
c) Hypotension d) Intracranial haemorrhage

669. Opsomyoclonus is encountered as C/F of - *(PGI 98)*
a) Meningioma b) Neuroblastoma
c) Neurofibromatosis d) Excision

670. The CNS tumor present with calcification - *(PGI99)*
a) Oligodendroglioma b) Astrocytoma
c) Medulloblastoma d) Phaeochromocytoma

671. Psychiatric symptoms, true except - *(PGI 2000)*
a) More common with supra than infratentorial tumors
b) More common with slow growing
c) More with temporal than frontal lobe tumours
d) More with brain stem lesions

672. True about Hemangioma of head &neck - *(PGI 01)*
a) Are very common b) Sturge Weber synd
c) High output failure d) Thrombocytopenia

673. Suprasellar calcification with polyuria seen in -
a) Langerhan cell histocytosis *(PGI 02)*
b) Medulloblastoma
c) Pinealoma
d) Craniopharyngioma
e) Astrocytoma

674. A person developes altered sensorium following headache and vomiting. Diagnosis is - *(PGI 02)*
a) Intracerebral hemorrhage
b) Subarachnoid hemorrhage
c) Hysteria
d) Botulism
e) Epilepsy

675. Neurosurgical treatment of epilepsy usually involves, removal of epileptic focus from which lobe- *(Kam 03)*
a) Frontal lobe b) Temporal lobe
c) Occipital lobe d) Parietal lobe

676. All of the following conditions are known to cause diabetes insipidus except - *(AIIMS 04)*
a) Multiple sclerosis b) Head injury
c) Histiocytosis d) Viral encephalitis

677. Best treatment of subdural haemotoma in a deteriorating patient - *(HPU 05)*
a) By I/V Mannitol b) Oxygenation
c) Use of steroids d) Surgical evacuation

678. Which one of the following is the most common site of Berry aneurysm - **(***UPSC 05)*
a) Vertebro-basilar artery
b) Origin of posterior communicating artery
c) Anterior communication artery
d) Anterior choroidal artery

679. The most common neurologic abnormality that occurs with head injury is - *(Karnat 05)*
a) Hemiplegia b) Ocular nerve palsy
c) Altered consciousness d) Convulsion

655) c 656) c 657) None 658) c 659) a,b 660) c 661) a 662) a,b 663) a 664) b 665) c 666) a 667) b 668) d
669) b 670) a 671) b,d 672)a,b,c 673) d 674) b 675) b 676) a 677) d 678) c 679) c

680. Vidian Neurectomy is indicated in - *(MAHE 05)*
a) Glossopharyngeal neuralgia
b) Trigeminal neuralgia
c) Vasomotor rhinitis
d) Atrophic rhinitis

681. The following methods are used to lower the intracranial pressure in patients with head injury except- *(ICS 05)*
a) Hyperventilation b) Administration of Mannitol
c) Hypothermia d) Administration of Nifedipine

682. A person has been brought in casualty with history of road accident. He had lost consciousness transiently and then gained consciousness but again became unconscious. Most likely, he is having brain hemorrhage of- *(AUMSNOV05)*
a) Intracerebral b) Sub arachnoid
c) Sub dural d) Extra dural

683. The earliest manifestation of increased intracranial pressure following head injury is - *(A105)*
a) Ipsilateral pupillary dilatation
b) Contralateral pupillary dilatation
c) Altered mental status
d) Hemiparesis

684. The most preferred approach for pituitary surgery as the present time is - *(AI06)*
a) Transcranial b) Transethmoidal
c) Trans-sphenoidal d) Transcallosal

685. Which of the following will manifest as "patchy meningitis" heamorrhaegica Interna -
a) Epidural haematoma *(Manipal 06)*
b) Subdural haematoma
c) Subarachonoid haemorrhage
d) Brain infraction

686. Chronic subdural haematoma refers to collection present for a period of - *(Karnataka PGMEE 06)*
a) 7 days b) 6 months
c) 1 year d) 21 days

687. Thickened peripheral nerves are seen in all the following conditions except -
a) Hansen's neuropathy
b) Amyloid polyneuropathy
c) Diabetic neuropathy
d) Refsum's disease

688. Lcid interval is classically seen in - *(Corned 07)*
a) Intracerebral haematoma
b) Acute subdural haematoma
c) Chronic subdural haematoma
d) Extradural haematoma

689. A20 year old male come to casuality with head injury. Examination reveals normal counsciousness, clinically normal and blood in the tympanic membrane. Most likely cause is - *(UP 08)*
a) Extradural haemorrhage
b) Sudural haemorrhage
c) Intraventricular haemorrhage
c) Complete basilar fracture

690. Duret haemorrhage is/are seen in - *(PGIDec 08)*
a) Conjunctiva b) Middle ear
c) Endothelium of heart d) Brain
e) Lung

691. A 45 year - male presents with abrupt onset pain, weakness, loss of contour of shoulder and muscle wasting on 5th day of tetanus toxoid immunization. Likely cause is - *(AIIMS May 09)*
a) Hysterical
b) Radial nerve entrapment
c) Brachial plexus neuritis
d) Thoracic outlet syndrome

692. A patient presents with sudden headache and vomiting and unconsciousness. The diagnosis is -
a) Subarachnoid hemorrhage *(DELHIPG Feb. 09)*
b) Intracerebral hemorrhage
c) Subdural hemorrhage
d) Extradural hemorrhage

693. In a patient with head injury black eye associated with subconjuctival hemorrhage occurs when there is - *(DELHIPG Feb. 09)*
a) Fracture of floor and anterior cranial fossa
b) Bleeding between the skin and galea aponeurotica
c) Hemorrhage between galea aponeurotica and peri cranium
d) Fracture of greater wing of sphenoid bone

694. In patient of head injuries with rapidly increasing intracranial tension without hematoma, the drug of choice for initial management would be -*(DELHIPG*
a) Lasix b) Steroids *Feb. 09)*
c) 20% Mannitol d) Glycine

695. Duret haemorrhage is/are seen in - *(PGI Nov. 10)*
a) Conjunctiva b) Middle ear
c) Encardium of heart d) Brain
e) Lung

696. Which is an ominous sign in case of severe head injury - *(PGINov. 10)*
a) Development of diabetes insipidus
b) Anisocoria
c) New focal deficit
d) Depressed skull fracture
e) Decorticate posturing

697. About cranial trauma false is - *(AIIMSNov 10)*
a) Raccoon eyes seen in subgaleal hemorrhage
b) Depressed skull # is associated with brain injury at the immediate area of impact
c) Carticocavemous fistula occur in base skull #
d) Post traumatic epilepsy seen in 15%

698. A patient with head injury opens eyes of painful stimulus, used inappropriate words, and localizes pain.What is his GCS score? *(AI 11)*
a) 8 b) 10
c) 12 d) 14

680) c 681) d 682) d 683)c 684)c 685)b 686)d 687)c 688)d 689)d 690)d 691)c 692)a 693)a 694) c 695) d 696) b,e 697) a 698) b

699. In a head inj ury victim, which of the following is the most common initial manifestation of an increasing intracranial pressure - *(UPSCII11)*
a) Change in the consciousness level
b) Ipsilateral pupillary dilatation
c) Contralateral pupillary dilatation
d) Hemiparesis

CLEFT UP & CLEFT PALATE

700. Hynes pharyngoplasty is used to improve a child's - *(JIPMER 81, AMU89)*
a) Appearance b) Teething
c) Speech d) Feeding

701. Rhinoplasty is usually done at the age (years) of - until the nose is fully grown-*(JIPMER 81A1IMS86)*
a) 6 years b) 12 years
c) 16 years d) 25 years

702. Cleft palate is repaired around - *(JIPMER 8 7)*
a) Soon after birth b) After one month
c) After 3 months d) After 1-1/2 years

703. Pierre Robbin syndrome is - *(A1IMS 85)*
a) Cleft palate with syndactly
b) Cleft palate with mandibular hypoplasia and respiratory obstruction
c) Cleft lip with mandibular hypoplasia
d) Cleft lip

704. Commonest type of cleft lip is - *(Aiims 91)*
a) Bilateral b) Midline
c) Combined with cleft palate d) Unilateral

705. Rhytidectomy operation involves - *(Jipmer 92)*
a) Correction of nasal defects
b) Removal of wrinkles in forehead
c) Straightening of curved penis
d) Correction of prouting Lips

706. In cleft lip operation all the stitches are removed on - *(PGI81, 82, AIIMS 85, PGI92, DNB 91)*
a) 2nd day b) 4th day
c) 10th day d) 14th day

707. Unilateral clefts are most common on - *(PGI80,*
a) Leftside b) Right side *(PGI 80,*
c) Median d) None of the above

708. The following is the method for operating cleft lip except - *(JIP. 81, AIIMS 86)*
a) LeMesurier's method b) Tennison's method
c) Millard's method d) Wardill's method

709. Cleft lip is due to non fusion of - *(PGI2001)*
a) Maxillary process with lateral nasal process
b) Maxillary process with medial nasal process
c) Maxillary process with mandibular process
d) All of the above

710. Unilateral cleft lip is associated with - *(PGI99)*
a) Posterior displacement of alar cartilage
b) Columella elongated
c) Always cleft palate
d) Defective sucking

711. Pierre Robin Sequence includes - *(PGIDec 08)*
a) Glossoptosisb) Airway obstruction
c) Cleft lip d) Micrognathia
e) Heart anomaly

712. With respect to surgical repair of cleft palate, the soft palate is first repaired, ideal tune for which is _
a) 12 monthsb) 9 months *(Maharashtra 10)*
c) 6 months d) 3 months

713. A four-month-old baby has cleft lip and palate. How would you manage the baby? *(UP SC II10)*
a) Immediate repair of the lip
b) Immediate repair of the lif) and palate
c) Delayed repair of the lip and palate until 2 years
d) Delayed repair of the lip and palate until preschool age

714. True about cleft palate - *(PGIMay 10)*
a) Surgery should be done at 1 year
b) 50% recover speech after operation
c) A/w hearing loss
d) A/w cleft lip in 45%

MAXILLO FACIAL INJURIES

715. Mandible is comonly fractured - *(JIPMER 87)*
a) At the neck of the condyle
b) Through the angle
c) Through the carmine fossa
d) At the middle

716. Le Forte II facial fracture implies - *(AIIMS 84)*
a) Fracture running through alveolar ridge
b) Fracture running through midline of the palate and zygomatico maxillary suture
c) Fracture running through zygomatic process of the maxilla floor of orbit root of nose on one side only
d) Similar to C but on both sides

717. A 20 year old man is hit on the eye with a ball. On examination there is restriction of lateral and upward gaze and diplopia. There is no obvious visible sign of injury to the eye ball, but there is some enophthalmos, the likely diagonosis is -
a) Zygoma fracture *(AIIMS 85)*
b) Maxillary fracture
c) Blow out fracture of the orbit
d) Injury to lateral rectus

718. Best treatment of this condition will be -*(AIIMS 85)*
a) Do nothing and assurance
b) Explore the orbit
c) Ophthalmic exercise to correct diplopia
d) Reinsertion of lateral rectus muscle

719. Fracture manidble with edentulous jaw is best treated with - *(U.P.P.G.M.E.E. 04)*
a) External fixator b) Minerva-plaster
c) Interdental wiring d) Intermaxillary elastic traction

720. Best view for mandile is - *(UP 07)*
a) Antero-posterior b) Lateral
c) Oblique d) Orthopentomogram

699) a 700) c 701)c 702)d 703)b 704)c 705)b 706)b 707)a 708)d 709)b 710) a 711)a,b.e
712)c 713)a 714)a,c,d 715)a 716)d 717)c 718)b 719)a 720)d

721. Which is the most common type of skull fracture -
a) Linear fracture *(NEET/DNB Pattern)*
b) Depressed fracture
c) Comminuted fracture
d) Pond fracture

ORAL CAVITY

722. Commonest site of carcinoma tongue - *(AI88)*
a) Apical b) Lateral borders
c) Dorsum d) Posterior 1/3
e) Faucio lingual

723. Dentigenous cyst arises from- *(AI88, JIPMER 87)*
a) An unerupted tooth
b) Apex of an infected tooth
c) Nasopalatine cysts
d) Solitary bone cyst
e) Multi locular keratocytes

724. Carcinoma tongue less than 2 cm is treated by -
a) Excision *(JIPMER 87)*
b) Radiotherapy
c) Chemotherapy
d) Excision and Radiotherapy
e) Excision and Chemotherapy

725. Treatment of choice for carcinoma of lip of less than 1 cm is - *(Kerala 87, AI 90)*
a) Radiation b) Chemotherapy
c) Excision d) Radiation and Chemotherapy

726. Predisposing factors for development of oral carcinoma is - *(JIPMER 88)*
a) Smoking b) Alcohol
c) Syphilis d) All of the above

727. A full thickness loss of middle one third ofthe upper lip is best reconstruted by - *(AIIMS 84)*
a) Naso labial flap b) Cheek flap
c) Abbey flap d)Estlander'sflap

72$. A patient with cheek cancer has a tumour of 2.5 cm located close to and involving the lower alveolus. A single mobile homolateral lymphnode measuring 6 cm is palpable. The TNM stage is -
a^NjM, b)$T_2N_2M_0$ *(AIMS85)*
c) T_2NjM_0 d)$T_4N_2M_0$

729. In the reconstruction following excision of previously irradiated cheek cancer, the flap will be -
a) Local tongue *(AIIMS 85)*
b) Cervical
c) Forehead
d) Pectoralis major myocutaneous

730. Commonest site of carcinoma tongue is - *(TN 89)*
a) Dorsum b) Ventral aspects
c) Anterior 2/3 lateral aspect d) Tip

731. What is Ranula - *(TN 91)*
a) Retension cyst of sublingual gland
b) Retension cyst of submandibular gland
c) Extravasation cyst of sublingual glands
d) Extravassation cyst of submandibular glands

732. Commonest type of oral malignancy is - *(AI 92, 91 PGI88)*
a) Melanoma
b) Squamous cell carcinoma
c) Adeno carcinoma
d) Basal cell carcinoma

733. Which is not true of Carcinoma *tongue-(AIIMS 92)*
a) Lateral border is involved
b) Cervical lymph node involvement
c) Commonly adeno carcinoma
d) Tobacco chewing is a risk factor

734. Painless ulcer of the tongue is due to - *(PGI 79, 80,*
a) Dyspepsia b) Syphilis *UPSC87)*
c) Tuberculosis d) None of the above

735. Commonest premalignant condition of oral cancer- *(AI95, 96)*
a) Leukoplakia b) Apthous ulcer
c) Syphylitic ulcer d) Erythroplakia

736. Most common type of oral carcinoma is - *(AI96)*
a) Lip b) Cheek
c) Tongue d) Palate

737. Lymphatic metastasis of buccal carcinoma first involves..... nodes - *(AI97)*
a) Submandibular b) Submental
c) Jugulodigastric d) Juguloomohyoid

738. Anatomical structure injured in excision of ranula - *(PGI96)*
a) Lingual vein b) Lingual artery
c) Submandibular duct d) Parotid duct

739. Not a carcinogenic for cancer of Head & Neck- *(PGI96)*
a) Alcohol b) Smoking
c) Tobacco d) Unflourinated water

740. 60 year old man present with an ulcer on lateral margin of tongue also complains of ear pain, most probable diagnosis is - *(PGI96)*
a) Dental ulcer b) Carcinomatous ulcer
c) Tuberculosis ulcer d) Syphilitic ulcer

741. Cancrum oris -all are true except- *(PGI 97)*
a) Associated with malnutrition
b) Inflammatory swelling
c) Associated with vitamin deficiency
d) Treatment is excision and skin grafting

742. Patient with T3N2AMO lower alveolar Ca requires- *(AIIMS98)*
a) Surgery b) Surgery + Radiotherapy
c) Radiotherapy d) Chemotherapy

743. Trismus in oral cancer patients is severe in whom was treated with - *(Karnatak99)*
a) Surgery and Radiotherapy
b) Chemotherapy alone
c) Surgery alone
d) Not related to treatment

744. Impacted wisdom teeth may produce referred pain vis- *(Orissa99)*
a) Lingual nerve
b) Facial nerve
c) Branch of the auriculo temporal nerve
d) None of the above

721)a 722)b 723)a 724)a 725)c 726)d 727)c,d 728)None 729)d 730)c 731)a 732)b 733)c 734)b
735) a 736)a 737)a 738)c 739)d 740)b 741)None 742)a 743)a 744) c

745. Areas of carcinoma of oral mucosa can be indentified by staining with - (*PGI79, BHU85)*
a) 1 % zinc chloride b) 2 % silver nitrate
c) Gentian violet d) 2 % toluidine blue

746. Carcinoma of the tongue- (*JIPMER81, UPSC85)*
a) Occurs most commonly on the lateral border of the middle third of tongue
b) Metastasized readily to cervical lymph nodes
c) Is usually radiosensitive
d) Treated surgically should include homolateral neck dissection except for very small lession
e) All of the above

747. All are true about cancrum oris except - *(PGI97)*
a) Associated with malnutrition and vitamin deficiency
b) Follows chronic infection
c) Involves jaw
d) Treatment is excision and skin grafting with tubed pedicle graft

748. Gum tumour with 2 contralateral mobile lymphnode in cheek comes under - *(PGI99)*
a) $T_3N_2M_0$ b)$T_2N_2M_0$
c) $T_4N_2M_0$ d)$T_3N_3M_0$

749. Epulis arises from - *(PGI 99)*
a) Enamel b) Root of teeth
c) Gingiva d) Pulp

750. All predisposes to oral cancer except - *(PGI 99)*
a) Erythroplakia b) Leukoplakia
c) Submucosal fibrosis d) Lichen planus

751. True statement (s) about oral cancer is/are -
a) Most common in buccal mucosa *(PGI 04)*
b) Metastasis uncommon
c) Respond to Radiotherapy
d) Surgery done
e) Syphilis and dental irritation predisposes

752. Radiographic finding of floating teeth can be seen in - *(.Karnataka 02)*
a) Ectodermal dysplasis
b) Cleido cranial dysplasia
c) Osteopetrosis
d) Histiocytosis - X

753. Carcinoma of lip is characterized by the following except that - *(UPSC 07)*
a) 90% of the lip cancers occur on the lower lip
b) The most common site of origin is the Vermillion border
c) 2 cm x 2 cm cell carcinomas can be treated by V shaped excision and primary closure
d) Since lymph noded metastases are common after a radical dissection of neck is mandatory

754. What is the most frequent tooth to be impacted ?
a) Lower third molar *(UPSC 07,*
b) Upper third molar *Karn 98)*
c) Lower canine
d) Upper premolar

755. A 70 years males presented with asymptomatic white patch on oral cavity following application of the denture. Treatment of choice is - *(UP 08)*
a) Low dose radiotherapy
b) Biopsy of the all the tissues
c) Ascertaining the denture is fit incompletely
d) Antibiotics

756. The most common cyst of the oral region is - *(DPGEE 08)*
a) Dentigerous cyst b) Keratosis cyst
c) Dermoid cyst d) Periapical cyst

757. Which one of the following statements is correct in case of squamous cell carcinoma of the lip -
a) Lymph node metatases occur early *(UPSC-II09)*
b) More than 90% of cases occur on the upper lip
c) Lesion often arises in the areas of persistent hyperkeratosis
d) Radiotherapy is considered inappropriate treatment for these lesions

758. In a patient of carcinoma tongue, the infiltration of which muscle causes ankyloglossia - *(UPSC-II 09)*
a) Styloglossus muscle b) Genioglossus muscle
c) Mylohyoid muscle d) Palatoglossus muscle

759. Which is not true of Carcinoma tongue? *(DPG10)*
a) Lateral border is involved
b) Cervicallymph node involvement
c) Commonly adenocarcinoma
d) Tobacco chewing is a risk factor

760. A middle-aged man presents with a lower jaw swelling. Clinically, there is expansion of the left ramus and the X-ray mandible shows soap bubble appearance. What is the clinical- diagnosis?
a) Keratocyst *(UP SC II10)*
b) Adamantinoma
c) Aneurysmal bone cyst
d) Odontogenic myxoma

761. Which of the following statements about 'Ranula' is most correct - *(AI11)*
a) It is type of Epulis
b) It is a cystic swelling in the floor of mouth
c) It is a type of thyroglossal cyst
d) It is a type of mucus retention cyst

762. A patient presents with cheek ca of 2.5 cm size close to and involving the alveolus with a single mobile cervical lymph node of 6 cm size. What is the TNM staging- *(NEET/DNB Pattern)*
a) T3N2 b)T3 N3
c) T4N2 d)T4N3 *

SALIVARY GLANDS

763. Warthins tumour is - *(AI 88)*
a) Malignant neoplasm
b) Rapidly growing
c) Gives a hot pertechnetate scan
d) Cold pertechnetate scan

745) d 746) e 747) b 748)a,b,c 749) c 750) d 751)b,c,d,e 752) d 753) d 754) a 755) c 756) d 757) d 758) b
759) c 760) b 761)b 762)d

764. The parotid duct is known is - *(AP 84)*
a) Wharton's duct b) Stenson's duct
c) Duct of santorini d) Duct of wirsung

765. Sjorgen's syndrome refers to disease of -
a) Parotid glands *(AIIMS 85)*
b) Thyroid disease
c) Parathyroid glands
d) Multiple endocrin e neoplasia

766. Treatment of choice for mixed parotid tumour is -
a) Enucleation *(TN89)*
b) Superficial parotidectomy
c) Radial parotidectomy
d) Wide excision

767. Patotid tumour which spreads perineurally is -
a) Mucoepidermoid carcinoma *(PGI84)*
b) Epidermoid carcinoma
c) Carcinoma in pleomorphic adenoma
d) Adenoid cystic carcinoma

768. Treatment of submandibular salivary gland duct calculi is - *(TN90)*
a) Excision of submandicular gland
b) Opening the duct at the frenulum
c) Opening the duct and removal of calculus
d) Excision of gland and duct

769. Adenolymphoma refers to - *(TN91)*
a) Warthin's tumour b) Pleomorphic adenoma
c) Adenocarcinoma d) Adenocystic carcinoma

770. In Submandibular gland surgery. The nerve least likely to be injured is - *(JIPMER 93)*
a) Inferior alveolar nerve
b) Hypoglossal nerve
c) Lingual nerve
d) Mandibular branch of facial nerve

771. Inflammatory enlargement of deep lobe of parotid gland is seen in - *(PGI81, Delhi 92)*
a) Post pharyngeal wall b) Supratonsillar area
c) Anterior tonsillar pillar d) Tonsillar fossa/bed

772. Mixed parotid tumour arises from - *(PGI80,*
a) Epithelium *Delhi 87, 88)*
b) Epithelium + Mesenchymal
c) Mesenchymal
d) None of the above

773. Most common tumour of minor salivary glands is -
a) Muco epidermoid carcinoma *(Keala 94)*
b) Mixed tumour
c) Squamous cell carcinoma
d) Epithelioma

774. Which of the following group constitue Frey's syndrome- *(Karn. 94)*
a) Hyperhydrosis, enophthalmos and miosis
b) Anhidrosis, enophthalmos and miosis
c) Redness and sweating over the auriculotemporal during meal
d) Pain over the distribution of teh auriculotemporal during meal

775. Best treatment for pleomorphic adenoma -
a) Radiotherapy *(JIPMER 95)*
b) Chemotherapy
c) Superficial paratidectomy
d) Complete parotid resection

776. In a case of parotid swelling the diagnostic procedure of choice - *(AIIMS 94)*
a) FNAC b) Superficial parotidectomy
c) Enucleation d) Excision biopsy

*111***. Commonest tumour is parotid gland is -** *(TN95,*
a) Adenoma *AI91)*
b) Pleomorphic adenoma
c) Squamous cel carcinoma
d) Warthin's tumour

778. Stones are maximum in - *(AMU 95, UPSC87)*
a) Parotid \ b) Submandibular
c) Pancreas d) Sublingual

779. Most of the parotid tumor are managed by -
a) Total parotidectomy *(AI97)*
b) Radical parotidectomy
c) Superficial parotidectomy
d) Radical parotidectomy & Neck dissection

780. During parotid surgery injury to the nerve which results in Frey's syndrome is - *(PGI 96)*
a) Auriculotemporal Nerve b) Great auricular Nerve
c) Mandibular Nerve d) Buccal Nerve

781. The nerve sacrificed in parotid sugery - *(AP 98)*
a) Auriculotemporal b)Facial
c) Buccal d) Cervice facial

782. A bacterial pyogenic parotitis is found most commonly in which of the following - *(Orissa 99)*
a) Mumps
b) Debilitation after major surgery
c) Drug reaction (iodine mumps)
d) Uveoparotid fever

783. Commonest site of ectopic salivary tumour-
a) Tongue b) Cheek *(CUPGEE 02,*
c) Neck d) Palate *AIIMS85)*

784. In surgery of submandibular salivary gland, nerve often involved - *(PGI 9 7)*
a) Hypoglosal b) Glossopharygneal
c) Facial d) Lingual

785. All are true for plemorphic adenoma except-
a) Arises from parotid *(PGI 99)*
b) May turn into malignant
c) Minor salivary glands involved
d) None

786. Mucoepidermoid carcinoma of parotid arises from- *(PGI 99)*
a) Secretory cells b) Excretory cells
c) Myoepithelial cells d) Myofibril

787. Treatment of choice in mixed tumor of parotid gland-
a) Superficial parotidectomy *(PGI2000)*
b) Total parotidectomy
c) Radiotherapy
d) Chemotherapy

763) c 764) b 765)a 766)b 767)d 768)c 769)a 770)a 771)d 772)b 773)a 774)c 775)c 776)a
777) b 778) b 779) c 780) a 781)b 782) b 783) b 784)a,c,d 785) d 786) a 787) a

788. True statement (s) about salivary gland tumours-
a) Pleomorphic adenoma can arise in submandibular gland *(PGI04)*
b) Warthim's tumour arises from submandibular gland
c) Pleomorphic adenoma is most common tumour of sub mandibular gland
d) Acinic cell Ca is most malignant
e) Frey's syndrome is due to injuiy of auriculotemporal nerve

789. Which of the following statement regarding salivary neoplasm is correct - *{SGPGI05)*
a) 60-80% are malignant
b) 80% of benign are pleomorphic
c) Warthin is malignant tumor
d) Tumors of submandibular gland are common

790. In which one of the following conditions the Sialography is contraindicated - *(AI05)*
a) Ductal calculusb) Chronic parotitis
c) Acute parotitis d) Recurrent sialadenitis

791. In which of the following locations, Carcinoid tumor is most common - *(AI 05)*
a) Esophagus b) Stomach
c) Small bowel d) Appendix

792. A Warthin's tumour is - *{AIIMS May 2005)*
a) An adenolymphoma of parotid gland
b) A pleomorphic adenoma of parotid
c) A carcinoma of the parotid
d) A carcinoma of submandibular salivary gland

793. Mixed tumors of the salivary glands, are - *(AI 06)*
a) Most common in submandibular gland
b) Usually malignant
c) Most common in parotid gland
d) Associated with calculi

794. Sialosis refers to - *(Karnataka PGMEE 06)*
a) Bilateral parotitis
b) Sjogren's syndrome
c) Non inflammatory parotid enlargement
d) Bilateral salivary duct ectasia

795. Which of the following nerves lies closest to the Wharthin's duct - *{Corned 07, AIIMS 87, Delhi 86,*
a) Hypoglossal b) Lingual *PGI 81)*
c) Chorda tympani d) Facial

796. The most common tumor of the minor salivary gland is - *{Corned 08)*
a) Mucoepidermoid carcinoma
b) Acinic cell carcinoma
c) Adenoid cystic carcinoma
d) Pleomorphic adeno carcinoma

797. Which of the following is not a landmark for facial nerve during parotid surgery ? - *(AI08)*
a) Digastric muscle
b) Inferior belly of omohyoid
c) Tragal pointer
d) Retrograde dissection of distal branch

798. All of the following are anatomical markers for localization of facial nerve during parotid surgery, except- *(DPGEE08)*
a) Posterior belly of Digastric
b) Mastoid process
c) Inferior belly of omohyoid
d) Bony external auditory meatus

799. Regarding pleomorphic adenoma of salivary gland true statement (s) is/are - *(PGI Dec 08)*
a) Parotid gland is most commonly involved
b) Malignant transformation does not occur
c) Also called mixed tumour
d) More commonly found in Men than women
e) Superficial parotidectomy is treatment of choice

800. All of the following statements about lymphoepethelioma of the parotid gland are true, except - *(AI 09)*
a) Parotid gland is the most common site of Lymphoepethelioma in the Head & Neck region
b) It is associated with EBV infection
c) It is highly radiosensitive
d) It is a type of squammous cell carcinoma

801. Acinic cell carcinoma is found in - *(UP SCII10)*
a) Thyroid b) Salivary glands
c) Breast d) Stomach

802. True about parotid tumor - *(PGIMay 10)*
a) Facial nerve involvement indicates malignancy
b) Pleomorphic adenoma is MC variety
c) Malignant disease is MC veariety
d) Superficial parotidectomy is the treatment of choice

E,N,T

803. Glomus tumour arises from - *(AI 91)*
a) Ectoderm b)Endoderm
c) Mesoderm d) Neuroectoderm

804. Commonest manifestation of Ca. nasopharynx -
a) Nasal blockage *(JIPMER 93)*
b) Epistaxis
c) Squint
d) Secondaries in neck

805. Nasopharyngeal carcinoma originates in -
a) Posterior pharyngeal wall *(AIIMS97)*
b) Posterior wall of septum
c) Fossa of Rosenmuller
d) Superior meatus

806. The Sucque-Hoyer canal in related to - *(AIIMS81)*
a) Post-Mastectomy lymphanigiosarcoma
b) Leimyous cuits
c) Active junctional nerve
d) Glomus tumour

807. Which among the following is a feature of fracture of zygoma - *(PGI 99)*
a) Diplopia b) Epistaxis
c) Bell's palsy d) Frey's syndrome

788)a,e 789)b 790)c 791)c 792)a 793)c 794)c 795)b 796)c 797)b 798)c 799)a,c,e 800)a 801)b 802) a,b,d 803) c 804) d 805) c 806) d 807) a

808. Predisposition for carcinoma ethmoid sinus is by- *(PGI2000)*
a) Wood dust b) Thorotrast
c) Vinyl chloride d) Nitrosamines

809. What is the narrowest part of the respiratory tract in children?- *(UPSC 06)*
a) Glottis b) Subglottic area
c) Trachea d) Carina

810. Which one of the following is the primary defect in Pierre Robin syndrome? (*UP SC 06)*
a) Micrognathia b) Glossoptosis
c) High arched palate d) Cleft palate

811. Dentigerous cyst arises from -*(DELHIPG Feb. 09)*
a) The root of a caries tooth
b) The periosteum of the fractured mandible
c) An unerupted permanent tooth
d) The sequenstrum of osteomyelitis of mandible

NECK

812. Structures preserved in functional radical dissection of the neck - *(AIIMS 87)*
a) Int. jugular vein b) Stemomastoid
c) Lymph nodes d) Accessory nerve

813. Earliest tumour to appear after bith *is-(JIPMER 87)*
a) Stemomastoid tumour b) Cystic hygroma
c) Branchial cyst d) Lymphoma

814. Most common site for thyroglossal cyst is -
a) Suprahyoid *(NIMHANS 86, JIPMER 87)*
b) Subhyoid
c) Beneath the foramen ceacum
d) floor of mouth
e) Level of circoid

815. Cystic compressible, translucent swelling in the posterior triangle of neck - *(AI89)*
a) Cystic hygroma b) Branchial cyst
c) Thyroglossal cyst d) Dermoid cyst

816. Treatment of cystic hygroma is - *(JIPMER 88)*
a) Surgical excision b) Injection of sclerosants
c) Irradiation d) Masterly inactivity

817. Sistrunk's operation is used in- *(TN 89)*
a) Parotid tumour b) Thyroglossal fistula
c) Thyroglossal cyst d) Branchial fistula

818. Adson's test is positive in - *(KERALA 89)*
a) Cervical rib b) Cervical spondylosis
c) Cervical fracture d) Cervical dislocation

819. Radical neck dissection involves removal of all except - *(PGI89)*
a) Omohyoid b) Internal jugular vein
c) Submandibular galnd d) Tail of parotid

820. Which of the following does no move on deglutition-
a) Subligual dermoid *(AI 91)*
b) Thyroid nodule
c) Pretracheal lymphnode
d) Thyroglossal cyst

821. The brilliantly transilluminant tumour in the neck maybe- *(AI 91)*
a) Branchial cyst b) Thyroglossal cyst
c) Stemomastoid tumour d) Cystic hygroma

822. Thyroglossal fistula develops due to -*(KERALA 91)*
a) Developmental anomaly
b) Injury
c) Incomplete removal of thyroglossal cyst
d) Inflammatory disorder

823. Which of the following is not excissed in Radical neck dissection - *(AIIMS 93)*
a) Internal jugular vein b) Spinal accessory nerve
c) Extamal carotid artery d) Stemomastoid Muscle

824. Secondaries in the neck with no obvious primary malignancy is most often due to - *(JIPMER 93)*
a) Ca. stomach b) Ca. Larynx
c) Ca. Nasopharynx d) Ca. thyroid

825. Radical dissection of neck includes all except -
a) Cervical lymph nodes *(JIPMER 80, DELHI 89)*
b) Stemocleido mastoid
c) Phrenic nerves
d) Internal jugular vein

826. Regarding cervical rib, which statement is correct -
a) It always connects to the scalene tubercle by a fibrous band *(AIIMS 81, PGI 82)*
b) It passes through the apex of the supraclavicular triangle
c) It causes pressure on the ulnar nerve
d) Pain is often located in the forearm

827. Which is never a cause of thyroglossal fistula -
a) Infection of thyroglossal cyst *(PGI 81, AIIMS 85)*
b) Inadequate removal of thyroglossal cyst
c) Congenital
d) None of the above

828. The most common site of the internal opening of a branchial fistula is at the - *(UPSC 95)*
a) Lateral nasopharyngeal wall
b) Fossa of rosemuller
c) Ginfivo - labial sulcus
d) Tonsiller fossa

829. Which neck swelling moves on swallowing -
a) Submandibular salivary gland
b) Thyroid gland
c) Supraclavicular lymph gland
d) Stemomastoid tumour

830. All are true about cystic hygroma except -
a) Pulsatile *(AMU 95)*
b) May cause respiratory obstruction
c) Common in neck
d) Present at birth

831. In modified radical neck dissection, structure not preserved is - *(PGI 96)*
a) Stemocledomastoid b) Internal jugular vein
c) Accessory nerve d) Submandibuar gland

832. Hyoid bone is closely associated to which - *(AI98)*
a) Bronchogenic cyst b) Thyroglossal cyst
c) Cystic hygroma d)Ranula

808)a 809)b 810)a 81 l)c 812)a,b,d 813)b 814)b 815)a 816)a 817)b,c 818)a 819)a,d 820)a 821)d
822)c 823)c 824)c 825)c 826)c,d 827)c 828)d 829)b 830)a 831)d 832)b

833. Which of the following swellings moves as protrusion of tongue - *(ROHTAK98)*
a) Thyroglossal cyst b) Branchial cyst
c) Ranula d) Cyst in hyoid bone
e) Odontogenous cyst

83 4. Cystic hygroma - *(SCTIMS 98)*
a) Should be left alone
b) Excision of cyst at an early age
c) Spontaneous regression
d) Manifests in 2nd - 3rd decade

835. Commonest site of branchial cyst - *(AI88)*
a) Lower 1/3 of stemomastoid on anterior border
b) Lower 1/3 of stemomastoid on posterior border
c) Upper 1/3 of stemomastoid on anterior border
d) Upper 1/3 of stemomastoid on posterior border

836. A 75 year old woman underwent neck exploration for hyperthyroidism 5 years ago, and a parathyroid adenoma was excised. At present she is recovering from a myocardial infarction 6 weeks ago, and she is in mild congestive heart failure, her electrocardiogram shows a slow atrial fibrillation. Measurment of her serine calcium shows a level of 13.0 mg/dl and urine calcium is 300 mg/24 hrs. Studies suggest a small mass in the paatracheal position behind the right clavicle. Appropriate management at this time is - *(AI2002)*
a) Observation and repeat serum calcium in two months
b) Repeat neck exploration
c) Treatment with technetium - 99 m
d) Ultrasound guided alcohol injection in the mass

837. Precancerous lesion of the larynx include-/PG/ *87)*
a) Kerarosis laryngis b) Pachyderma laryngis
c) Laryngis sicca d) Scleroma

838. Trotters triad is seen in - *(PGI85)*
a) Angiofibroma
b) Nasopharyngeal carcinoma
c) Laryngeal carcinoma
d) Growth in fossa of rosenmuller

839. All are true about cystic hygroma except -*(PGI99)*
a) Aspiration is diagnostic
b) 50% present at birth
c) Presents as posterior cervical swelling
d) Sequstration of lymphatic tissue

840. True about cystic hygroma - *(PGI 2000)*
a) Congenital sequestration of lymphatics
b) Resolves spontaneouly by 5 year of age
c) Common in upper l/3rd of lateral neck
d) Surgery is the treatment of choice

841. In the management of thyroglossal cyst - *(PGI 02)*
a) Central portion of hyoid excised
b) Sternothyroid muscle dissected
c) Isthmusectomy e subtotal thyroidectomy
d) Strap muscle of neck

842. True of carotid body tumor is - *(PGI 02)*
a) Non-chromaffin paraganglioma
b) Good prognosis
c) Rarely metastasises
d) Similar to mixed parotid tumor

843. Thoracic outlet syndrome is characterized by -
a) Wide variation of symptoms *(PGI 03)*
b) X-ray neck can alone diagnose
c) Cold exposure & exercise can precipitate
d) Absent radial pulses
e) Surgery is the treatment of choice

844. True about carotid body tumor- *(PGI 04)*
a) Arises from pharyngeal wall
b) Arises from baroreceptor cells.
c) Commonly seen in high altitude habitants
d) 10% have family history
e) FNAC is diagnostic

845. Excision of Hyoid bone is commonly done us -
a) Sublingual dermoid *(HPU 05, PGI 88)*
b) Branchial fistula
c) Branchial cyst
d) Thyroglossal cyst

846. Commonest treatment of Branchial cyst - *(HPU 05)*
a) Cystectomy b) Aspiration
c) Excision d) Nothing done

847. In which one of the following prineural invasion in head and neck cancer is most commonly seen -
a) Adenocarcinoma *(AI 05)*
b) Adenoid cystic carcinoma
c) Basal Cell Adenoma
d) Squamous cell carcinoma

848. Which of the following best represents[fi] ranula[9] -
a) A type of epulis *(AIIMS May 2005)*
b) A thyroglossal cyst
c) Cystic swelling in the floor of mouth
d) Forked uvula

849. Which of the following statements best represents Ludwing's angina - *(AIIMSMay 2005)*
a) A type of coronary artery spasm
b) An infection of the cellular tissues around submandibular salivary gland
c) Oesophageal spasm
d) Retropharyngeal infection

850. True about Branchial cyst is - *(Aiims May 07)*
a) Cysts are more common than sinuses
b) Mostly arises from 2nd branchial system
c) Causes dysphagia and hoarseness
d) Sinus should always be operated

851. True about branchial cyst - *(PGI June 07)*
a) Seen deep to lower 1/3 of stemoleidomastoid
b) Wall consists of lymphoid tissue
c) filled with straw coloured fluid with cholesterol crystals

833)a 834)b 835)c 836)d 837)a,b 838)b 839)a 840)a,d 841)a 842)a,b,c 843)a,c 844)c,d 845)d
846) c 847) b 848)c 849)b 850)b 851)b,c

852. Structures not removed in radical neck dissection-
a) X nerve *(PGIJune07)*
b) XI nerve
c) Tail of parotid
d) Parotid and post-auricular nerve

853. Which one of the following is the most common tumour to produce metastasis to cervical lymph nodes? *(UPSC-II08)*
a) Glottic carcinoma
b) Nasopharyngeal carcinoma
c) Carcinoma base of tongue
d) Carcinoma lip

854. Which vital structure is preserved during radical dissection - *(UPSC-II08)*
a) Vagus nerve b) Submandibular gland
c) Strenocleidomastoid d) Internal jugular vein

855. Which of the following is used to define penetrating neck inj ury - *(AI08)*
a) 2 cm depth of wound
b) Injury to vital structures
c) Breach of platysma
d) Through and through wound

856. In which of the following head and neck cancers, is lymph node metastasis least common-*(A iims May 08)*
a) Tongue b) Buccal mucosa
c) Hard palate d) Lower alveolus

857. Which is incorrect about cystic hygroma ?
a) Brilliantly translucent *(APPG08)*
b) Radiotherapy
c) Sclerotherapy with Bleomycin
d) Sclerotherapy with actinomycin

858. In Post radical neck dissection shoulder syndrome, all are seen except - *(AIIMS Nov 08)*
a) Restricted range of movement
b) Pain
c) Shoulder drooping
d) Normal electromyographic finding

859. True about branchial anomaly - *(AIIMSNov 09)*
a) Cysts are more common than sinuses
b) For sinuses surgery is not always indicated
c) Cysts present with dysphagia and hoarseness of voice
d) Most commonly due to 2nd branchial remnant

860. True about branchial anomaly - *(AIIMSMay 10)*
a) Cysts are more common than sinuses
b) For sinuses surgery is not always indicated
c) Cysts present with dysphagia and hoarseness of voice
d) Most commonly due to 2nd branchial remnant

861. About congenital torticollis all are true except -
a) Always associated with breech extraction
b) Spontaneous resolution in most cases
c) 2/3rd cases have palpable neck mass at birth
d)Uncorrected cases develop plagiocephaly

862. Brilliantly transilluminant swellings are all except? *(AIIMS Nov 10)*
a) Hydrocele b) Meningeocele
c) Lipoma d) Cystic hygroma

863. Consider the following statements: Branchial cy sts-
1. Are associated with tracks passing between the carotid bifurcation. *(UPSC II11)*
2. usually present in early adulthood.
3. Occur along the lower one-third of the anteromedial border of the sternocleidomastoid muscle.
4. Develop from the vestigial remnants of the fourth branchial cleft.

Which of the statements given above are correct -
a) 2, 3 and 4 only b) 1,3 and 4 only
c) 1,2,3 and 4 d) 1,2 and 3 only

864. The "Subclavian steal syndrome" occurs due to -
a) Occlusion/stenosis of the vertebral artery
b) Occlusion/stenosis of the carotid artery
c) Occlusion of the subclavian artery proximal to origin of vertebral artery *(UPSCII11)*
d) Occlusion of the subclavian artery distal to origin of vertebral artery

865. Following block dissection of the neck, a person is unable to move his head upward and to side ways. Which of the following nerve is injured -
a) Vagus *(NEET/DNB Pattern)*
b) Spinal accessory nerve
c) Glossopharyngeal nerve
d) Cranial part of accessory nerve

THYROID GLAND

866. Therapy of choice for diffuse toxic goitre in a patient over 45 years - *(IIPMER 8 7)*
a) Surgery
b) Antithroid drugs
c) Radio iodine
d) Antithyroid drugs first followed by surgery

867. Symptoms of endemic goitre are all except -*(IIPMER 86)*
a) Cold intolerance b) Hoarseness
c) Dysphagia d) Heat intolerance

868. What percentage of cold thyroid nodules are malignant - *{JIPMER 8 7)*
a) 70-80% b) 50-60%
c) 40-50% d) 10-20%

869. Complications of therapy with radioactive iodine includes - (*UPSC 87, 88)*
a) Thyroid malignancy b) Hypothyroidism
c) Leukemia d) All of the above

870. In thyrotoxicosis which of the following is seen -
a) Pretibial myxedema b) Glycosuria (77V*89)*
c) Unilateral exophthalmos d)All

871. Restrosternal tumour cause - (77V *89)*
a) Bluish discolouration of the face
b) Edema of face
c) Can occur in thyroid tumours
d) All

852) a,c,d 853) b 854) a 855) c 856) c 857) b 858) d 859) d 860) d 861) a 862) c 863) d 864) c 865) b 866)c 867)None 868)d 869)b 870)d 871)d

872. Commonest presenting complaints of medullary carcinoma thyroid is - *{PGI84)*
a) Diarrhoea b) Dysphagia
c) Hoarsness d) Flushing

873. Hypothyroidism with increased TSH levels is seen in- *{PGI 90)*
a) Sheehan's syndorme
b) Lithium corbonate therapy
c) Post radioiodine ablation
d) Endemic goitre

874. All of the following regarding papillary carcinom thyroid is true except - *{AI90)*
a) Multicentric origin
b) Secondaries to lymphnodes
c) Slowing growing
d) Bony metastasis in early stage

875. Protein bound iodine measures secretory function of thyroid in ah the following circumstances except
a) Nephrotic syndrome *{AI 90)*
b) Following hemithyroidectomy
c) During ampicillin therapy
d) Asthamatics on ephedrine

876. Serum calcitonin level is raised in - *{AI91)*
a) Papillary ca. thyroid b) Medullary ca. thyroid
c) Follicular ca. thyroid d) Anaplastic ca. thyroid

877. Which malignancy of thyroid is cuased by Radiation- *{JIPMER 91)*
a) Papillary carcinoma b) Anaplastic Ca
c) Follicular Ca d) Medullary Ca

878. Metastasis through lymphatics is common is -
a) Medullary carcinoma *(AIIMS 92, 82)*
b) Papillary carcinoma
c) Follicular carcinoma
d) Anaplastic carcinoma thyroid

879. Malignancy in a multinodular goitre is most often -
a) Anaplastic C a b) Follicular Ca *(AI93)*
c) Medullary Ca d) Papillary Ca

880. Treatment of choice in cold nodule of thyroid -
a) Subtotal thyroidectomy *{JIPMER 93)*
b) Wait and watch
c) 1131
d) Hemithyroidectomy

881. The only reason for operating in case of thyroiditisis-
a) To prevent cancerous degeneration *{JIPMER 79,*
b) For relief of pain in neck and ear *AIIMS 86)*
c) To overcome pressure on trachea or oesophagus
d) To cure the toxic reaction
e) If there is auto immune reaction

882. Thyroid carcinoma- *{PGI82, UPSC87)*
a) Is often associated with hypothyroidism
b) Often produces hyperthyroidism
c) Is usually euthyroid
d) Occurs in toxic nodules

883. All are true about Hashimoto's thyroiditis except -
a) Antithyroid microsomal antibodies *{Kerala 95)*
b) Antithyroid nuclear antibodies
c) Anti TSH receptor anitbodies
d) Increased level of thyroid hormones

884. A 21 year old woman has 3 cm node in the lower deep cervical chain on the left. The biopsy is interpreted as revealing normal thyroid tissue in a lymph node. The most likely diagnosis is -
a) Subacute thyroiditis *(UPSC 95)*
b) Metastatic carcinoma thyroid
c) Hashimoto's disease
d) Lateral aberrant thyroid

885. The carcinoma of thyroid associated with hypocalcemia is - *(AIIMS 94)*
a) Papillary cancer b) Medullary cancer
c) Follicular cancer d) Anaplastic

886. Hurthle cells are seen in - *(AI95)*
a) Hashimoto's thyroiditis
b) Granulomatous thyroiditis
c) Reidel's struma
d) Acute thyroiditis

887. All of the following are symptoms of hyperthyroidism except - *(UPSC 96)*
a) Voracious appetite b) Cold intolerence
c) Emotional distrubance d) Sleeplessness

888. The treatment of non-functioning thyroid nodule in a 40-year old male should be - *(UPSC 9 7)*
a) Radiotherapy b) Cortisone
c) Surgical excision d) Large dose of iodine-131

889. Toxic adenoma on scaning appear as - *(JIPMER 98)*
a) Hot nodule b) Cold nodule
c) Warm nodule d) Neutral

890. A 56-year old lady is found to have to hard,nodular painless swelling in the thyroid region diagnosis in this case is best established by - *(UPSC 9 7)*
a) Ultrasoundscan b)F.N.A.C.
c) CT Scan d) Radioactive iodine scan

891. Two hours after sub-total thyroidectomy for thyrotoxicosis, young woman rapidly becomes agitated and complains of increasing difficulty in breathing. Her pulse rate rises and central cyanosis is noticed on examination, her neck is found to be tensely swollen beneath the stiches. The most appropriate managemment in this case would be -
a) Intranasal oxygen *{USPC97)*
b) Passing an endotracheal tube in the ward
c) Removing sutres from all layers in the ward and evacuation of the hematoma
d) Immediate transfer of the patient to the operation theatre for tracheostomy

892. Young female with proptosis, intolerance to heat with increased T3 and T4 - *(AIIMS 98)*
a) Diffuse thyroid nodule b) Adenomatous giotre
c) Reidles struma d) Hashimoto's thyroiditis

872)a 873)b,c,d 874)d 875)a 876)b 877)a 878)b 879)b 880)d 881)c 882)c 883)b 884)d 885)b 886) a 887)b 888)c 889)a 890)b 891)c 892) d

893. Scabard trachea is seen in - *(Karnat99)*
a) Thyroid cancer b) Thyroiditis
c) Goitre d) All the above

894. FNAC is useful in all of the following tumors of thyroid except - *(AJ 95, MAHE 95)*
a) Papilary carcinoma b) Anaplastic carcinoma
c) Thyroiditis d) Follicular carcinoma

895. A newborn with a goiter large enough to cause dyspnoea is best treated with- *(AIMS 81, 84)*
a) Sulfonamides b) Tracheostomy
c) T_3 d) Iodides

896. In retrosternal goiter, most common presenting feature is - *(PGI97)*
a) Dysphagia b) Stridor
c) Dyspnoea d) Sup. vena caval syndrome

897. Cervical lymph node involvement in papillary ca thyroid, best treatment is - *(PGI97)*
a) Radio active iodine b) Chemotherapy
c) Radical neck dissection d) Steroid

898. A patient comes with single thyroid nodule initial investigation of choice is - *(PGI 97)*
a) FNAC b) Thyroid function test
c) Radio nuclide scan d) MRI

899. Metastasis in thyroid gland come most commonly from carcinoma of - *(PGI 98)*
a) Testis b) Prostate
c) Breast d) Lungs

900. True about papillary carcinoma thyroid is-*(PGI 99)*
a) Comprises 10-15% of all thyroid cancers
b) Cells have intranuclear vacuolation
c) Amyloid deposition seen
d) Encapsulated

901. Which of the following is true regarding medulary carcinoma of the thyroid - *(PGI 01)*
a) Arises from parafollicular cells
b) Secretes calcitonin
c) Occurs in families
d) Amyloid in stroma
e) Commonly malignant

902. Which of the following factors contribute to the development of duodenal ulcer - *(PGI 01)*
a) ^{131}I b) ^{I25}I
c) "Tc d)32p
e) Strontium

903. True about anaplastic Ca of thyroid- *(PGI 04)*
a) Common in eiderly
b) Surrounding neck tissues are free
c) Lymphatic infillration occurs
d) p53 mutation

904. Indication of surgery in a case of Thyroid swelling is/are - *(SGPGI 04)*
a) Cosmetic b) Pressure symptoms
c) Myxoedema d)pain
e) Swelling with symptoms

905. Treatment of papillary Ca of Thyroid with bony metastasis - *(PGI04)*
a) Radiotherapy
b) Radioiodine
c) Near total thyroidectomy with radiotherapy
d) Near total thyriodectomy with radioiodine & radiotherapy

906. Indications of thyroidectomy- *{PGI04)*
a) Cosmetic b) Neoplastic
c) Myxederma d) Pressure effects
e) Lymphocytic throiditis

907. In pregnancy- *(APPGE04)*
a) Radioiodine contraindicated
b) Thiouracil is contraindicated
c) Surgery is contraindicated
d) None

908. A 32 year old male with painless lymph node in cervical region. Lymph node biopsy shown normal thyroid gland features. The thyroid is normal on palpation clinically. The diagnosis is - *(Nimhans 05)*
a) Lateral aberrant thyroid
b) Papillary carcinoma thyroid
c) Follicular carcinoma thyroid with metastatic lymph nodes
d) None of the above

909. All of the following are early life threalening complications of thyroid operation except -
a) Tracheomalacia and collapse of the larynx
b) Wound hematoma with compression of the trachea
c) Hypocalcemia *{SGPGI 05)*
d) Thyroid storm

910. Carcinoma arising from thyroid follicles -
a) Medullary carcinoma-thyroid *{MAHE 05)*
b) Papillary carcinoma-thyroid
c) Anaplastic carcinoma-thyroid
d) Hurthle cell carcinoma-thyroid

911. Treatment of Medullary Ca of thyroid with lymph node metastasis - *{PGI June 05)*
a) Subtotal thyroidectomy + Radioiodine
b) Subtotal thyroidectomy + Radiotherapy
c) Neartotal thyroidectomy + Radioiodine
d) Neartotal thyroidectomy + Radiotherapy
e) Total thyroidectomy + Radiotherapy

912. Compared to follicular Ca, papillary Ca of thyroid have - *{PGI June 05)*
a) More male preponderance
b) B/L
c) Local recurrence common
d) Increased mortality
e) Increased lymph node metastasis

913. In video assisted thoracoscopic surgery for better vision the space in the operative field is created by -
a) Self retaining retractor *{MAHA 05)*
b) $C0_2$ insufflation
c) Collapse of ipsilateral lung
d) Rib spacing

893) d 894) d 895) b 896) c 897) c 898) a 899) c 900) d 901)All 902) a 903)a,c,e 904)a,b,e 905) d 906)a,b,d 907)a 908)b 909)c 910)d 911)e 912)b,c,e 913)c

914. Which is not an indication of thoracotomy -
a) Massive pneumothorax (*MAHA05)*
b) Pulmonary cantusion
c) Bleeding more than 200 ml/hr. in thoracotomy tube
d) Oesophageal rupture

915. The treatment of choice for Anaplastic carcinoma of thyroid infiltrating trachea and sternum will be -
a) Radical excision *(AIIMSNov05)*
b) Chemotherapy
c) Radiotherapy
d) Palliative/Symptomatic treatment

916. Which of the following is the commonest tumour of thyroid - *(A1IMS Nov 05, PGI86)*
a) Anaplastic carcinoma b) Follicular carcinoma
c) Papillary carcinoma d) Medullary carcinoma

917. A 45 year old male presents with 4X 4 cm, mobile right solitary thyroid nodule of 5 months duration. The patient is enthyroid. The following statements about his management are true except -
a) Cold nodule on thyroid scan is diagnostic of malignancy
b) FNAC is the investigation of choice
c) The patient should undergo hemithyroidectomy if FNAC report is inconclusive
d) Indirect laryngoscopoy should be done in the preoperative period to assess mobility of vocal cords

918. Complications of total thyroidectomy include all except - *(A1IMSMay 2005)*
a) Hoarseness b) Airway obstruction
c) Hemorrhage d) Hypercalcaemia

919. Thoracic extension of cervical goitre is usually approached through - *(AIIMSMay 2005)*
a) Neck
b) Chest
c) Combined cervico-thoracic route
d) Thoracoscopic

920. The following statements about thyroglossal cyst are true, except - *(AJ 06)*
a) Frequent cause of anterior midline neck masses in the first decade of life
b) The cyst is located within 2 cm of the midline
c) Incision and drainage is the treatment of choice
d) The swelling moves upwards on protrusion of tongue

921. Which of the following is not a histological variant of thyroid neoplasm ? **(***A107)*
a) Follicular b) Merkel cell
c) Insular d) Anaplastic

922. All of the following are true about lymphoma of the thyroid except - **(***A107)*
a) More common in females
b) Slow growing
c) Clinically confused with undifferentiated tumours
d) May present with respiratory distress and dysphagia

923. A 20 yr old girl presents with 9 month history of neck swelling with thyrotoxic symptoms. On investigation increased T4 and decreased TSH with palpable 2 cm nodule was found. Next investigation will be - *(Aiims May 07)*
a) USG b) Thyroid scan
c) Radioactive iodine uptake d) CT scan

924. This thyroiditis is also known as "Painless Thyroiditis"- *(MAHE 07)*
a) Subacute lymphocytic b) Dequervain's
c) Hashimoto d) Riedel

925. There was a sudden increases in the size of thyroid swelling along with pain. Most likely cause is -
a) Hemorrhage within the cyst (Thyroid) *(MAHE 07)*
b) Malignant change
c) Nodular goiter
d) Colloid goiter

926. Variant of papillary carcinoma thyroid -
a) Medullary b) Warthin *(PGI June 07)*
c) Columnar cell d) Insular
e) Diffuse sclerosing

927. Papillary Ca thyroid - *(PGI June 07)*
a) Most common thyroid cancer
b) Psammoma bodies seen
c) Encapsulated
d) Blood borne metastasis is common

928. Thyroid storm after operation is due to -
a) Inadequate control of hyperthyroidism
b) Massive bleeding (*Corned 07)*
c) Recurrent laryngeal nerve injury
d) Postoperative infection

929. Thyroid carcinoma with pulsating vascular skeletal metastasis is - **(***Corned 07, AI95)*
a) Follicular b) Anaplastic
c) Medullary d) Papillary

930. Pendred's syndrome is due to a defect in *~(Corned 08)*
a) Chromosome 7p b) Chromosome 7q
c) Chromosome 8p d) Chromosome 8q

931. A central midline neck swelling is noted in a 4 yr old girl posted for tonsillectomy. The swelling is, painless, mobile, and cystic, just below the hyoid bone of size 2 x 1.1 x 1 cm. U/S showed a thick walled cystic lesion. Management would include -
a) Surgical removal *(AIIMSNov 07)*
b) Antibiotics
c) Percutaneous aspiration
d) Chest X-ray

932. Vocal cord palsy in thyroid surgery is due to inj ury to- *(UPSC-II08)*
a) Superficial laryngeal nerve
b) Recurrent laryngeal nerve
c) Ansa cervicalis
d) Vagus nerve

914)b 915)d 916)c 917)a 918)d 919)a 920)c 921)b 922)b 923)b 924)a 925)a 926)c,e 927)a,b 928) a 929) a 930) b 931) a 932) b

933. FNAC is useful in all the following types of thyroid carcinoma except -
a) Papillary b) Follicular
c) Anaplastic d) Medullary

934. Most common histological type of the thyroid carcinoma is - *(AI08)*
a) Medullary type b) Follicular type
c) Papillary type d) Anaplastic type

935. Complications of Hemithyroidectomy include all of the following except - *(AI 08)*
a) Hypocalcemia
b) Wound hematoma
c) Recurrent laryngeal nerve palsy
d) External branch of superior laryngeal nerve palsy

936. Investigation of choice in discrete thyroid swelling is- *(DPGEE08)*
a) Isotope scans b) Ultrasonography
c) Autoantibody titres d)FNAC

937. About papillary carcinoma what is/are true -
a) Often encapsulated *(PGIDec 08)*
b) Prognosis bad
c) Lymph node metastases is common
d) Can metastaize to lung
e) Multiple foci of tumour is seen

938. Regarding anaplastic carcinoma which statements (s) is/are true - *(PGIDec 08)*
a) Common in elderly
b) Associated with P53 mutation
c) Surrounding neck tissue is usually free
d) Radiotherapy cures
e) Lymphatic spread occur

939. Treatment of Medullary Carcinoma thyroid -
a) Surgery and Radiotheryapy *(AIIMS Nov 08)*
b) Radiotherapy and Chemotherapy
c) Surgery only
d) Radioiodine ablation

940. Which of the following would be the best treatment for a 2cm thyroid nodule in a 50 year old man with FNAC revealing it to be a papillary carcinoma -
a) Hemithyroidectomy *(AI 09)*
b) Subtotal thyroidectomy with modified neck dissection
c) Near total thyroidectomy with modified neck dissection
d) Hemithyroidectomy with modified neck dissection

941. A person has fever & pain in thyroid gland. True statement is/are - *(PGI June 09)*
a) T & t level normal b) T ESR
c) tTSH d) It is due to T.B
e) Radioactive iodine uptake is ed

942. A 21 years old woman has 3 cm node in the lower deep cervical chain on the left. The biopsy is interpreted as revealing normal thyroid tissue in a lymph node. The most likely diagnosis is - *(DELHIPG Feb. 09)*
a) Subacute thyroiditis
b) Metastatic carcinoma thyroid
c) Hashimoto's disease
d) Lateral aberrant thyroid

943. Sistrunk's operation consists of -*(DELHI PG Man 09)*
a) Excision of hyoid bone and cone of tongue muscle
b) Excision of hyoid bone and the cyst
c) Excision of central part of hyoid bone and cone of tongue muscles upto foramen caecum
d) Excision of cyst only

944. Hashimoto's thyroiditis - True are A/E -
a) Follicular destruction *(AIIMS May 10)*
b) Increase in lymphocytes
c) Oncocytic metaplasia
d) Orphan Annie eye nuclei

945. All of the following are early life threatening complications of thyroidectomy (instead of thyroid)-
a) Tracheomalacia and collapse of the larynx
b) Wound hematoma with compression of the trachea
c) Hypocalcemia *(DPG10)*
d) Thyroid storm

946. Symptoms of thoracic outlet syndrome are produced due to compression of_____nerve roots. -
a) C5, C6 b) C6, C7 *(Maharashtra 10)*
c) C7,C8 d)C8,Tl

947. A patient with multinodular goitre suddenly developed pain and difficulty in breathing. Which of the following types of thyroid carcinoma is most likely to cause this comphcation?-(Ma/2<2ras7tfra *10)*
a) Papillary carcinoma b) Follicular carcinoma
c) Medullary carcinoma d) Anaplastic carcinoma

948. About papillary carcinoma true statement is/are-
a) Radiation is a risk factor *(PGIMay 10)*
b) Multifocal
c) Hematogenous spread is common
d) Distant metastasis is seen
e) More common in iodine deficient area

949. Features (s) of meduallary carcinoma thyroid -
a) Arises from parafollicular cells *(PGINov. 10)*
b) Amylodi stroma is present on histology
c) 10-26% cases are familial
d) Diarrhoea occurs
e) Total thyroidectomy is preformed

950. In which of the following conditions Radioactive iodine (Irradiation) can be used in grave's disease -
a) Recurrence b) Age > 40 years *(PGI Nov. 10)*
c) Eiderly d) Pregnant
e) Presence of associated co-morbidities

951. Which of the following is true - *(AIIMS May 11)*
a) Colloid goitre mostly presents as hyperthyroidism
b) Thyroid storm, the clinical features are primarily due to increased thyroxine
c) Excess calcium intake can lead to hyperthyroidism
d) Goitre more than 5 percent of population is endemic goitre

933) b 934) c 935)a 936)d 937)c,d,e 938)a,b,e 939)c 940)c 941)b,e 942)d 943)b 944)d 945)c
946) d 947) b 948)a,b,d,e 949) All 950)b,c,e 951)d

952. Hashimoto's thyroiditis - True are A/E -
a) Follicular destruction *(AIIMS May 11)*
b) Increase in lymphocytes
c) Oncocytic metaplasia
d) Orphan Annie eye nuclei

953. Which of the following would be the best treatment for a 2 cm thyroid nodule in a 50 year old man with FNAC revealing it to be a papillary carcinoma -
a) Hemithyroidectomy *(AIIMS May 11)*
b) Total thyroidectomy with left sided modified neck dissection
c) Near total thyroidectomy with radiotherapy
d) Hemithyroidectomy with modified neck dissection

954. Treatment of Medullary Carcinoma thyroid -
a) Surgery and Radiotherapy *(AIIMS May 11)*
b) Radiotherapy and Chemotherapy
c) Surgery only
d) Radioiodine ablation

955. A well differentiated follicular carcinoma of thyroid can be best differentiated from a follicular adenoma by- *(All!)*
a) Hurthle cell change
b) Lining of tall columnar and cuboidal cells
c) Vacular invasion
d) Nuclear features

956. A 75-year-old lady is diagnosed of having a thyroid malignancy. Her serum calcium is low. What is the. most likely explanation? *(UPSC111)*
a) She has developed metastasis to the parathyroid
b) She has Follicular carcinoma
c) She has Papillary carcinoma
d) She has Medullary carcinoma

957. For thyroglossal cyst M.C. site is -
a) Suprahyoid *(NEET/DNB Pattern)*
b) Subhyoid
c) Foramen caecum
d) At thyroid isthmus

PARATHYROID & ADERNAL GLANDS

958. Commonest cause for hyperparathyroidism is -
a) Single adenoma *(AI89)*
b) Multiple adenoma
c) Single gland hyperplasia
d) Multiple gland Hyperplasia

959. Most common cause of hypercalcemic crisis is -
a) Parathyroid adenoma *(AIIMS 87)*
b) Parathyroid hyperplasia
c) Carcinoma breast
d) Pagest's disease

960. Commonest symptom of pheochromocytoma is- *(UPSC 88)*
a) Palpitation b) Headache
c) Sweating d) Dyspnoea

961. Hypoparathyroidism occurs as a result of -
a) Idiopathic atrophy of parathyroids *(TN 91)*
b) Following surgery
c) Thyroditis with secondary atrophy of parathyroids
d) All of the above

962. Hypocalcemia in immediate post - op period following excission of parathyroid adenoma is due to- *(AIIMS 92)*
a) Stress b) Increased uptake by bones
c) Hyper calciuria d) Increased calcitonin

963. In parathyroid crisis with sudden elevations of calcium over 16 mg /100 cc; the treatment consist of- *(AIIMS 80, UPSC 84)*
a) Intravenous vitamin D
b) Parathyroidectomy for removal of adenoma
c) Thyrocalcitonin
d) Intravenous bicarbonate
e) All of the above

964. Hyper parathyrordism is characterised by the following except- *(PGI80, AMU88)*
a) Generalised osteoporosis b) Renal calculi
c) Hypercalcaemia d) Osteosclerosis

965. Palpalation on the costovertebral angle produces pain and tenderness in acute adrenal insufficiency. This is- *(AIIMS 87,89)*
a) Rotch's sign b) Rossolimo's sign
c) Rogoff's sign d) Osier's sign

966. A patient has hypocalcaemia which was the result of a surgical complication. Which operation could it possibly have been - *(JIPMER 89, UPSC 86)*
a) Nephrectomy b) Thyroidectomy
c) Gastrectomy d) Vocal cord tumour biopsy

967. The symptoms of Hyperparathyroidism include -
a) Constipation & muscle weakness *(AIIMS 81,*
b) Anorexia & weight loss *PGI 85)*
c) Polydipsia & polyuria
d) All of the above

968. Commonest cause of for cushings syndrome is -
a) Adrenal adenoma b) Carcinoma *(Kerala 95)*
c) Hyperplasia d) Atrophy

969. A known patient with renal stone disease developed pathological fractures along with abdominalpain and certain psychiatric symptoms. He should be investigated for - *(UPSC 96)*
a) Polycystic kidney
b) Renal tubular acidosis
c) Hyperparathyroidism
d) Paget's disease of bone

970. Not seen in Neuroblastoma is - *(UP 96)*
a) Diarrhoea b) Proptosis
c) Splenomegaly d) Bone involvement

971. In phaeochromocytoma, the urine will contain -
a) VMA b) HIAA *(CUPGEE96)*
c) Both d)None

952) d 953) b 954) c 955) c 956) d 957) b 958) a 959) c 960) b 961) b>a 962) b 963) b,c 964) d 965) c
966) b 967) d 968) c 969) c 970) c

972. False statement about pheochromocytoma -
a) 10% are bilateral *(AI97)*
b) Arises from chromaffin cells
c) Extra adrenal tumor -increased nor adrenaline levels
d) Increased VMA levels in urine

973. Opsoclonus - Myoclons is a phenomenon seen in -
a) Wilms tumor b) Neuroblastoma *(PGI97)*
c) Meningioma d) Cortical tuberculoma

974. Most common presentation of hyperparathroidism is - *(AIIMS97)*
a) Gallstone
b) Subtle neurological and psychatric symptoms
c) Abdominal pain
d) Swelling in the neck

975. A patient presented with episodic hypertension and headache, with a thyroid nodule the investigation of choice is - *(A1IMS 9 7)*
a) Urinary 5 - HIAA
b) Urinary catecholamines + aspiration of nodule
c) ESR
d) Thyroid scan

976. Hypocalcaemia is a feature of all the following except- *(UPSC 2K)*
a) Chronic renal failure
b) Hypoparathyroidism
c) Pseudo hypoparathyroidism
d) Total thyrodectomy

977. After thyroidectomy pt. developed stridor within 2 hrs. All are likely cause of stridor except -
a) Hypocalcemia *(AIIMS01)*
b) Recurrent laryngeal nerve palsy
c) Larynogomalacia
d) Wound hematoma

978. Hypertension is seen in all except - *(PGI97)*
a) Adrenal tumors b) Phaeochromocytoma
c) Conn's syndrome d) Neuroblastoma

979. Neuroblastomas - good prognositc factor is -*(PGI 2K)*
a) N-myc amplication b) RAS oncogene
c) Hyperdiploidy d) Translocations

980. Young female presents with hypertension e in VMA >14 mg/dl, associated with - *(PGI 02)*
a) Modullary Ca Thyroid
b) Von Hippel Lindau disease
c) Sturge weber syndrome
d) Grav's disease
e) Neurofibromatosis

981. Primary hyperparathyroidism caused by -*(PGI 02)*
a) Pararhyroid hyperplasia b) Adenosis
c) MEN 1 d) Thyrotoxicosis
e) CRF

982. True about MEN-I - *(PGI 04)*
a) T VMA in urine b) T Calcitonin
c) Hypergastrinemia d) Hyperprolactinaemia
e) *i* Ca^{2+}

983. MEN-2 A includes A/E - *(PGI 04)*
a) Ganglioneuromas
b) Cutaneous Lichenoid amyloids
c) Mutation in RET in chromosome 10
d) Parathyroid adenoma
e) Adrenal adenoma

984. Hypoparathyroidism following thyroid surgery commonly occurs within - **(***AIIMS 03)*
a) 24 hours b) 2 - 5 days
c) 7 -10 days d) 2 - 3 weeks

985. Treatment of hypertensive crisis in pheochromocytoma - **(***PGI June 05)*
a) Phentolamine b) Hydralazine
c) Guanethidine d)Salmeterol
e) Methohexitone

986. Indication for surgery in a case of adrenal incidentaloma - *(MAHE 0 7)*
a) Size >5 cm b) Bilateral adrenal metastasis
c) Functional tumor d) All of the above

987. Incidentaly findings, in CT scan, a 3cm adrenal mass, which of the following is not done - *(UP 08)*
a) Adrenalectomy
b) Dexamethasone suppression test
c) Measurement of catecholamines
d) Midnight plasma cortisol

988. Indication for surgery in a case of adrenal incidentaloma- *(Manipal 08)*
a) Size >5 cm b) B/L adrenal metastasis
c) Functional tumor d) All of the above

989. Which one of the following is not a CT feature of Adrenal adenoma? *(AIIMS Nov 10)*
a) Low attenuation
b) Homogeneous density and well defined borders
c) Enhances rapidly, contrast stays in it for relatively longer time and washes out late
d) Calcification is rare

BREAST

990. Retromammary abscess arises from -
a) Tuberculous rib *(Jipmer 86,87, Kerala 87)*
b) Infected hematoma
c) Chronic empyema
d) All of the above

991. Most malignant type of carcinoma breast is -
a) Paget's disease *(NIMHANS86, JIPMER 87)*
b) Anaplastic carcinoma
c) Scirrhous's carcinoma
d) Atrophic Scerrhous carcinoma
e) Mastitis carcinomatosa

992. In radical mastectomy the structures preserved are all except - *(JIPMER 97)*
a) Axillary vein b) Cephalic vein
c) Nerve to serratus anterior d) Pectoralis minor

971) a 972) None 973)b 974)c 975)b 976)None 977)a 978)None 979)c 980)a,b,c,e 981)a,b,c 982)a,c,d
983) a 984) b 985) a 986) d 987) a 988) d 989) c 990) d 991) e 992) d

993. Estrogen receptor studies in carcinoma breast is done on- *(JIPMER 87)*
a) Blood b) Urine
c) Tumour tissue d) Ovary

994. Secondary deposits from carcinoma breast is commonest in - *(AI89)*
a) Lung b) Liver
c) Brain d)Bone

995. Risk factor for carcinoma breast - *(AI 89)*
a) Fibroadenoma on one side
b) Sister dead from cancer breast
c) Jewish origin
d) All

996. Bleeding per nipple is seen in *(AI 89)*
a) Duct papilloma b) Pagets
c) Fibroadenoma d) Carcinoma breast

997. Paeu d' Orange is due to - *(AI 89)*
a) Infiltration of cooper's ligament
b) Subcutaneous lymphatic involvement
c) Infiltration of the nipple
d) Infiltration of tumour to chest wall

998. Commonest site for carcinoma of the breast -
a) Lower inner quadrant b) Nipple
c) Upper inner quadrant d) Upper outer quadrant

999. Gynaecomazia may be seen in patients with all except- *(UPSC88)*
a) Cimetidine therapy b) Cirrhosis of liver
c) Klinefelter's syndrome d) Turner's syndrome

1000. Bloody nipple discharge is usually associated with- *(AIMS87)*
a) Lactation b) Galactocele
c) Early lactation d) Intraductal papilloma

1001. Acute mastitis commonly occurs during -*(UPSC 86,*
a) Pregnancy b) Puberty *JIPMER 88)*
c) Lactation d) Infancy

1002. Peaude orange is seen in- *(PGI88)*
a) Carcinoma breast b) Fibroadenoma
c) Chronic abscess d) Mondor's disease

1003. Cracked nipple may be- *(AIMS84)*
a) Due to syphilitic chancre
b) Cause of retention cyst
c) Pagets disease of nipple
d) For runner of breast abscess

1004. Blood stained nipple discharge suggest-*(AIMS 84)*
a) Fibroadenosis b) Fibroadenoma
c) Duct papilloma d) Plasma cell mastitis

1005. Reconstruction of the breast following total mastectomy for cancer is done ideally by using -
a) Distant tube pedicvle *(AIMS84)*
b) Opposite breast
c) Trapezius myocutaneous flap
d) Latissmus dorsi myocunaneous flap

1006. The commonesy type of breast cancer is -
a) Ductal b) Comedo *(AIMS 85, PGI84)*
c) Lobular d) Sarcoma

1007. Greenish discharge from the nipple is suggestive of- *(UPSC 88)*
a) Carcinoma b) Duct papilloma
c) Duct carcinoma d) Fibrodenosis

1008. Fibroadenoma of the breast are - *(TN 89)*
a) Fixed mass b) Diffuse mass
c) Multiple duffuse mass d) Solitary mobile mass

1009. Breast examination is done yearly in patients with -
a) Multiple fibroadenoma *(PGI88)*
b) Family history of ca. breast
c) Carcinoma cervix
d) Endometrial carcinoma

1010. Carcinoma breast is seen in - *(PGI 88)*
a) Nulliparity
b) Positive family history
c) High socio economic status
d) AH

1011. In fibroadenosis, the highest risk of malignancy is seen in - *(AIMS91)*
a) Fibrosis b) Epitheliosis
c) Asenosis d) Cyst formation

1012. Treatment of choice in pagets disease of nipple is- *(AIMS91)*
a) Mastectomy b) 5-FU ointment
c) Irradiation d) Antibiotic cream

1013. In Radical mastectomy, which is spared -
a) Pectoralis major *(AIMS92)*
b) Pectoralis minor
c) Axillary lymph nodes
d) Supraclavicular lymph nodes

1014. Which one predisposesto Breast cancer -
a) Adenosis b) Fibrosis *(AIMS 92)*
c) Blue domed cysts d) Epitheliosis

1015. A blood stained discharge from the nipple means that the patient may have - *(JIPMER 86, UPSC 86)*
a) Papilloma of the nipple b) Fibroadenoma
c) Duct papilloma d) Duct ectasia

1016. Treatment of cysto sarcoma phylloids is -
a) Radical mastectomy *(Kerala 94, 87,*
b) Incisssional biopsy *AI90)*
c) simple mastectomy
d) Modified radical mastectomy

1017. Post operative radiotherapy in breast is given for -
a) To prevent metastasis *(JIPMER95)*
b) Ablation of remnant of cancer tissue
c) To prevent recurrence
d) Prevents distal metastasis

1018. Complication of post mastectomy lymph accumulation is - *(JIPMER95)*
a) Metastases of cancer b) Recurrence
c) Lymphosarcoma d)Pain

1019. True about pagets disease of the nipple is -
a) Always there is underlying carcinoma *(Kerala 95)*
b) Often bilateral eczema of nipple seen
c) Histology reveals giant cells
d) Highly malignant

993) c 994) d 995)b,c 996)a,d 997)b 998)d 999)d 1000)d 1001)c 1002)a,c 1003)dl004)c 1005)d 1006)a
1007) None 1008)d 1009)b,d 1010)d 1011)b 1012)a 1013)d 1014)d 1015) c,d 1016) c 1017) c 1018)c 1019)a

1020. Stage $T_1N_0M_0$ in breast cancer indicates-(T/PSC *95)*
a) Tumor more than 2 cms in diameter without axillary nodes and absent metastasis
b) Tumour 2 cms or less without axillary nodes and no metastasis
c) Tumour fixed to the chest wall without axillary nodes or distant metastasis
d) Tumour fixed to the underlying muscle with no nodes in axilla but with distant metastasis .

1021. Paget's disease of nipple is treated by - *(Al 95)*
a) Radiotherapy
b) Biopsy and simple mastectomy
c) Radical mastectomy
d) Chemotherapy

1022. Which one of the following statements is true of cystosarcoma phylloides - *(UPSC 96)*
a) It is a malignant tumour
b) It often metastasises to axillary nodes
c) It is usually bulky and may fungate through the skin
d) It is treated by radical mastectomy

1023. All of following cause gynecomastia except -*(Al 96)*
a) Klinefelters syndrome b) Cirrhosis
c) Leprosy d) Undescended testis

1024. All of following may be causes of massive enlargement of breast except - *(A11MS 95)*
a) Elephantiasis
b) Diffuse hypertrophy
c) Schirrous carcinoma
d) Cystosarcoma phylloides

1025. Of the following the most significant risk factor for developing breast cancer is - *(KARNAT96)*
a) The presence of sclerosing adenosis
b) Nulliparity
c) Atypical lobular hyperplasia
d) Atypical ductal hyperplasia

1026. An adolescent boy present himself with bilateral prominence of the breasts and wants the breasts to be removed. Which one of the following incisions would be ideal - *(UPSC 9 7)*
a) Radial incision
b) Incision along the areolar margin
c) Submammary incision
d) Elliptical incision

1027. A 50-years old woman complains of intermittent bleeding from the left nipple over the past 3 months. No mass is palpable, but a bead of blood can be expressed from the nipple. The ideal procedure in this case would be - *(UPSC 9 7)*
a) Cytological examination of discharge and if no malignant cells, to be kept under careful observation
b) Segmental excision of breast
c) Microdochotomy
d) Simple mastectomy

1028. A mobile, variegated large lump in the breast of a 20-year old female is most likely to be due to -
a) Medullary carcinoma *(UPSC 97)*
b) Inflammatory carcinoma
c) Cystosarcoma phylloides
d) Lobular carcinoma

1029. Prognosis of Breast cancer is best determined by -
a) Axillary node involvement *(AIIMS 97,*
b) Skin infiltration *Kerala 89)*
c) Size of the tumour
d) Estrogen receptor status

1030. In patey's mastectomy the step not done -
a) Nipple & areola removed *(PGI96)*
b) Sorrounding normal tissue of tumour is removed
c) Pectoralis major removed
d) Pectoralis minor removed

1031. 40 years old female with a 2cms nodule in the breast & a proved metastatic node in the axilla, treatment is - *(PGI 96)*
a) Quadrantectomy
b) Mastectomy with local radiotherapy
c) Patey's with adjuvant chemotherapy
d) Halstedt's operation with tacoxifen

1032. Single most prognostic factor in breast carcinoma - *(Al 98)*
a) Age of patient b) Lymph node status
c) Site of primary d) Invasion

1033. In radical mastectomy which of the following is preserved - *(AP 97)*
a) Pectoralis minor b) Pectoralis major
c) Cephalic vein d) None

1034. Paget's disease of the nipple is - *(AP 97)*
a) Infection b) Dermatitis
c) Neoplasia d)Hypopigmer

1035. Following are true of Paget's disease of breast except- *(Karnat98)*
a) Usually bilateral
b) Associated intraductal carcinoma
c) Prognosis good in absence of lump
d) Treatment simple mastectomy with axillary clearance

1036. Regarding breast carcinoma all are true except -
a) Prevalence 21.2/100,000 population *(AIIMS 98)*
b) Median age of presentation 42 yrs
c) More common in muslims
d) Family history is present

1037. Pre-menstrual fullness in breasts in 21 years old unmarried female is - *(AIIMS 98)*
a) Galactocele b) Fibroadenoma
c) Fibroadenosis d) Breast cancer

1038. Greenish discharge of nipple is seen in- *(AIIMS 98)*
a) Duct ectasia b) Duct Papilloma
c) Fibro adenoma d) Ca breast

1020)b 1021) b 1022)c 1023)d 1024)c 1025)c,d 1026)b 1027)c 1028)c 1029)a 1030)c 1031)c 1032)b
1033) c 1034) c 1035) a 1036) c 1037) c 1038) a

1039. A distressing complication of radical mastectomy is - *(ORRISA99)*
a) Paralysis of the fifth finger of the hand
b) Oedema of the arm
c) Loss of sensation of the medial side of the arm
d) Frequent skin infections of the hand on the affectecd side

1040. Breast conservative surgery is done in all except -
a) Young patients *(UP2K)*
b) Ductal carcinoma in situ
c) Lobular carcinoma
d) Infiltrating ductal carcinoma

1041. A 45 years old lady presents with a lump in her right breast. The lump is 4 cms in diameter with evidence of cutaneous oedema (peau d' orange), not fixed to pectoralis major muscle. The axillary lymph nodes are not enlarged. What is the status of T in T.N.M. classification. *(ICS2K)*
a) T,>2 b) T_2 is 2-5
c) T_3>5 d) T_4 is any size

1042. Moderately increased risk for invasive breast carcinoma is associated with which of the following-
a) Sclerosing adenoma *(Kerala2K)*
b) Apocrine metaplasia
c) Duct Ectasia
d) Atypical ductal hyperplasia
e) Fibro adenoma

1043. Statistically important risk factors identified for breast cancer - *(PGI2002)*
a) Early age at marriage
b) Females of non vegetarian diet
c) Those who have not breast fed their children
d) Smoking

1044. Paget's disease of breast following are true except -
a) Treated by simple mastectomy *(PGI 97)*
b) Represents underlying malignancy
c) Presents as eczema
d) Cytology diagnostic

1045. Blood stained discharge from nipple is indicative of- *(PGI97)*
a) Intra alveolar papilloma b) Duct ectasia
c) Paget's disease d) Lobular Ca

1046. Peaud'orange is due to - *(PGI98)*
a) Skin involvement
b) Contraction of ligaments
c) Lymphatic permeation
d) Bacterial infection

1047. 4 cm breast tumour with 2 ipsilateral involved lymphonodes com under - *(PGI 99)*
a) T_3N_i b)T_3N_2
c) T_2Nj d)T_4N_1

1048. All are indicators of malignancy in a mammography except - *(PGI 99)*
a) Nodular cacification b) Speckled margin
c) Attenuatedarchitecture d) Irregular mass

1049. 4 cm breast nodule with ipsilateral mobile LN in axilla staging - *(PGI 2000)*
a)T_2N,M_0 b)$T_2N_2M_0$
c) T,N_1M_0 d)T_3N_2M,

1050. Conservative surgery in breast cancer is not to be done in- *(PGI 01)*
a) Low socio-economic status
b) Age > 40 years
c) Multicentricity
d) Lymph node involvement in axilla
e) Family history of breast cancer

1051. Breast cancer is epidemiologically commoner with-
a) Smoking b) Nulliparity *(PGI 01)*
c) Oral contraceptives d) Multiparity
e) First pregnancy after 30 years

1052. Bleeding from nipple is seen in - *(PGI 01)*
a) Fibroadenoma b) Duct ectasia
c) Ductal papilloma d) Chronic breast abscess
e) Ca. breast

1053. About Mondor's disease - *(PGI02)*
a) Superficial thrombophlebitis
b) Lymphatic infiltration tumour cell
c) Cord like apperance of subcutanous veins
d) Occurs all over the body

1054. Ca Breast stage I and II managed by - *(PGI 02)*
a) Total mastectomy
b) Modified radical mastectomy
c) Lumpectomy and axillary clearance
d) Lumpectomy axillary clearance and radiotherapy

1055. Which of the following indicate Ca breast -*(PGI 02)*
a) Serous discharge b) Recent retraction of nipple
c) Ulceration of nipple d) Cracked nipple
e) Cellular atypia

1056. Breast conservation surgery not indicated -*(PGI 02)*
a) Large pendular breast
b) SLE
c) Diffuse microcalcification
d) Bilateral carcinoma
e) Family history

1057. Breast carcinoma is seen in women who - *(PGI02)*
a) Consume fatty food
b) Have early menopause
c) Smoke
d) Have multiple sex-partners
e) Did not breastfeed their children

1058. True about adjuvent therapy in Breast Ca -*(PGI03)*
a) Prognosis better if given in young female
b) - survival by 20 %
c) Nodal status positive gives good result
d) Hormone receptor positive gives good result
e) Not associated with - survival

1059. Lymphatic drainage of breast- *(PGI 03)*
a) Axillary b) Supraclavicular
c) Internal mammary d) Mediastinal
e) Celiac

1039)b 1040)c 1041) d 1042)d 1043)c 1044)d 1045)b 1046)c 1047)c 1048)a 1049)a 1050)a,c 1051)a,b,e
1052) b,c,e 1053)a,c 1054)b,d 1055)d,e 1056)a,b,c 1057)a,e 1058)a,b,c,d 1059)a,b,c

1060. Breast lump is best diagnosed by - *(PGI03)*
a) FNAC b) Bilateral mammography
c) USG d)CECT of breast
e) Chest X-ray

1061. True statement (s) about nipple discharge is/are
a) Mammography is diagnostic *(PGI 04)*
b) Cone excision done in single intraductal tumour
c) Mammography done when duct papilloma is > 4.5cm
d) Red discharge indicate malignancy
e) Blue-black discharge indicate duct ectasia

1062. True about screening mammography - *(PGI04)*
a) Indicated in 50-70 years of age
b) Mortality reduced by 30%
c) Radiation due to mammography can cause carcinoma
d) MRI is better than mammography
e) USG is better than mammography

1063. In a mammogram all of the following are features of carcinoma breast except - **(***UPSC 02)*
a) A solid lesion with ill defined adge or stellate configuration
b) True microcalfication
c) Areas of macrocalcification
d) Increased skin thickness

1064. Flap commonly used in breast reconstruction is -
a) Serratus anterior b) TRAM *(IN03)*
c) Flap from arm d) Delto pectoral flap

1065. Use of tamoxifen in carcinoma of breast patients does not lead to the following side effects -
a) Thromboembolic events *(AIIMS 03)*
b) Endometrial carcinoma
c) Cataract
d) Cancer in opposite breast

1066. A 75 year old hypertensive lady has a 2x2 cm infiltrating duct cell carcinoma in the subareolar region. There are no palpable lymph nodes and distant metastases. However, she had been treated for pulmonary tuberculosis 20 year ago. The best cause of management for her would be - *(UPSC 04)*
a) Modified radical mastectomy followed by radiotherapy
b) Modified radical mastectomy followed by 6 cyctes of chemotherapy
c) Breast conservation surgery followed by radiotherapy
d) Modified radical mastectomy followed by hormone therapy

1067. Indian file pattern is seen in breast cancer type - *(APPGE 04)*
a) Intraductal b) Infiltrating lobular
c) Infiltrating ductular d) Infiltrating ductular

1068. The most frequently used procedure for diagnosing palpable breast masses is - *(SGPGI05)*
a) Core-cutting needle biop sly
b) Fine needle aspiration
c) Excisional biopsy
d) Incisional biopsy

1069. Commonest cause of blood discharge from the nipple is- *(SGPGI 05)*
a) Duct carcinoma
b) Duct papilloma
c) Chronic cystic mastitis
d) Cystosarcoma phyllodes

1070. With reference to mammography, which one of the following statements is correct - *(UPSC 05)*
a) A baseline study should be done for all women at age 30
b) It uses less radiation energy than a chest X-ray
c) It should be part of the regular follow up of a woman following therapy for unilateral breast cancer
d) It provides an effective substitute for biopsy of suspicious lesions

1071. Treatment of choice for Phylloides *tximoY-{MAHE 05)*
a) Excision b) Radical mastectomy
c) Radiotherapy d) Chemotherapy

1072. True about lymphatic spread of Ca breast -*(PGI June*
a) Axillary nodes are most commonly involved *05)*
b) Internal mammary nodes are also involved
c) If supraclavicular L.N. is involved, then it is N3
d) Axillary nodes are treated by surgical resection

1073. True about duct ectasia - *(PGI June 05)*
a) AAV smoking
b) puckering of skin over the breast seen
c) Abscess formation seen
d) Treated by mastectomy

1074. Breast cancer is conservatively treated by following methods - *(PGI June 05)*
a) It is based on relative size of breast tumor
b) Radiotherapy is given
c) Chemotherapy is given
d) Surgery is best modality of treatment

1075. Features, which are evaluated for histological grading of breast carcinoma, include all of the following except - *(AIIMS Nov 05)*
a) Tumour necrosis b) Mitotic count
c) Tubule formation d) Nuclear pleomorphism

1076. In Patients with breast cancer, chest wall involvement means involvement of any one of the following structures except - *(AIIMS Nov 05)*
a) Serratus anterior b) Pectoralis Major
c) Intercostal Muscles d) Ribs

1077. A blood stained discharge from the nipple indicates one of the following - *(AI05)*
a) Breast abscess b) Fibroadenoma
c) Duct Papilloma d) Fat Necrosis of Breast

1078. In patehy procedure - *(SGPGI 05)*
a) Removal of both pectoralis major & minor
b) Removal of pectoralis minor and preservation of pectoralis major
c) Pectoralis minor is divided
d) Both (major & minor) are preserved

1060) a 1061)a,b,d,e 1062)a,b,c I063)c 1064)b 1065)d 1066)d 1067)b 1068)b 1069)b 1070)c 1071)a 1072) All 1073)a,b,c 1074)a,b,d 1075)a 1076)b 1077)c 1078)b

1079. Treatment of hormone dependent fungating carcinoma of breast with secondaries in the lung in a female patient aged 30 years is - *(MAHE 05)*
a) Simple mastectomy followed by oophorectomy
b) Radical mastectomy followed by oophorectomy
c) Adrenalectomy
d) Lumpectomy followed by castration

1080. The most important prognostic factor in breast carcinoma is - *(AI06)*
a) Histological grade of the tumor
b) Stage of the tumor at the time of diagnosis
c) Status of estrogen and progesterone receptors
d) Over expression of p-53 tumour suppressor gene

1081. In which of the following types of breast carcinoma, would you consider biopsy of opposite breast -
a) Adenocarcinoma-poorly differentiated *(AI 06)*
b) Medullary carcinoma
c) Lobular carcinoma
d) Comedo carcinoma

1082. lyiectomy literally means - *(DNB 06, 91)*
a) Excision of a lump b) Excision of a breast
c) Excision of LN d) Excision of skin

1083. Which sutures are preserved in Scanlon's modified raical mastectomy - *{Karnataka pgmee2006)*
a) Lateral pectoral nerves
b) Level III nodes in axilla
c) Pectoral fascia
d) Nipple and the areola

1084. In which of the following types of carcinoma breast, comedo growth pattern is seen? *(Karn 06)*
a) Ductal carcinoma in situ
b) Medullary catcinoma
c) Lobular carcinoma in situ
d) Infiltrating lobular carcinoma

1085. The following is a maker of Paget's disease of the mammary gland - *{AI07)*
a) S-100 b) HMB 45
c) CEA d) Neuron specific enolase

1086. All of the following statements about Gynaecomastia are true except - *{AI07)*
a) Subcutaneous mastectomy is the initial treatment of choice
b) Seen in liver disease
c) There may be estrogen / testosterone imbalance
d) Can be drug induced

1087. 30 yrs female presented with unilateral breast cancer associated with axilary lymph node enlargement Modified radical mastectomy was done, further treatment plan will be - *(Aiims May 07)*
a) Observation and followup
b) Adriamycin based chemotherapy followed by tamoxifen depending on estrogen/progesterone receptor status
c) Adriamycin based chemotherapy only
d) Tamoxifen only

1088. Surgery for periductal mastitis - *(MAHE 07)*
a) Hadfield's operation
b) Patey's mastectomy
c) Modified radical mastectomy
d) None of the above

1089. *True* **about breast carcinoma in men -**
a) Estrogen receptor positive *(PGI June 07)*
b) Associated with gynaecomastia
c) Radiotherapy contraindicated due to close proximity to chest wall

1090. Aromatase inhibitors in Ca breast - *(PGI June 07)*
a) Letrozole b) Anastrozole
c) Exemestane d) Tamoxifen

1091. Consider the following statements regarding Paget's disease of the breast - *(UPSC-II08)*
1. It is a malignant disease
2. Diagnosis can be established by scrape cytology
3. Lymph nodes involvement is an associated clinical feature
4. Treatment of choice is simple mastectomy

Which of the statements given above is/are correct-
a) 1,2 and 4 only b) 1,2 and 3 only
c) 3 and 4 only d) 1,2, 3 and 4

1092. A 25 year old female complains of discharge of blood from a single duct in her breast. The appropriate treatment is - *(AI 08)*
a) Radical excision b) Microdochectomy
c) Radical mastectomy d) Biopsy to rule out carcinoma

1093. True about treatment of early breast carcinoma -
a) Aromatase inhibitors are replacing tamoxifen in premenopausal women *(Aiims May 08)*
b) Postmastectomy radiation therapy is given when 4 or more lymph nodes are positive.
c) Tamoxifen is not usėful in post-menopausal women
d) In premenopausal women, multidrug chemotherapy is given in selected patients.

1094. Treatment for periductal mastitis - *(Manipal 08)*
a) Hadfield's operation
b) Patey's mastectomy
c) Modified radical mastectomy
d) Radical mastectomy

1095. Prognosis of breast carcinoma is best determined by?
a) Oestrogen/progesterone receptors *(APPG08)*
b) Axillary lymph node status
c) Clinical assessment
d) CT

1096. Distressing Complication after modified radical mastectomy ? *(APPG 08)*
a) Lymphedema b) Axillary vein thrombosis
c) Seroma d) Death

1097. True about galactorrhoea - *(PGIDec 08)*
a) Always B/L
b) Found in pregnancy & lactation
c) Associated with prolactinoma & other endocrinopathies
d) Surgery is done
e) Hypothyroidism can cause galactorrhoea

1079)a 1080)b 1081)c 1082)a 1083)a 1084)a 1085)c 1086)a 1087)b 1088)a 1089)a,b 1090) a,b,c 1091)d
1092)b 1093)b 1094)a 1095)b 1096)a 1097)c,d,e

1098. Ipsilateral supraclavicular lymphnodes are positive in a patient of Ca Breast. Stage is - *(AIIMSNov 08)*
a) n b)HIB
c) me d)iv

1099. A women noticed mass in her left breast with bloody discharge. Histopathology revealed duct ectasia. Treatment is - *(AIIMS Nov 08)*
a) Simple mastectomy b) Microdochotomy
c) Lobectomy d) Hadfield operation

1100. Triple assessment for C A Breast includes - *(AI09)*
a) History, Clinical examination and mammogram
b) History, Clinical examination and FNAC
c) USG, Mammogram and FNAC
d) Clinical examination, Mammogram and FNAC

1101. Moderately increased risk of invasive Breast carcinoma is associated with which of the following benign lesions of the breast - *(AI 09)*
a) Sclerosing adenosis
b) Atypical lobular hyperplasia
c) Apocrine metaplasia
d) Squammous metaplasia

1102. A well differentiated follicular carcinoma of thyroid can be best differentiated from a follicular adenoma by- *(AI09)*
a) Hurthle cell change
b) Lining of tall columnar and cuboidal cells
c) Vascular invasion
d) Nuclear features

1103. Blood stained nipple discharge is seen in- *(PGI June*
a) Breast abscess b) Fibroadenoma *09)*
c) Ductal papilloma d) fat necrosis

1104. True regarding male breast Ca - *(PGI June 09)*
a) MC lobular type
b) Estrogen receptor positive
c) H/O gynaecomastia may be present
d) Paget's disease of nipple is more common in male than female
e) Undescended testes is a risk factor

1105. The most important prognostic factor in carcinoma breast is - *(DELHIPG Feb. 09)*
a) Size of tumour
b) Skin involvement
c) Involvement of muscles
d) Axillary gland involvement

1106. Rare histological variants of carcinoma breast with better prognosis include all except -
a) Colloid carcinoma *(DELHIPG Mar. 09)*
b) Medullary carcinoma
c) Inflammatory carcinoma
d) Tubular carcinoma

1107. Which type of breast cancer is most likely to be bilateral- *(UPSC-II09)*
a) Infiltrating duct carcinoma
b) Paget's disease of breast
c) Lobular carcinoma of breast
d) Medullary carcinoma of breast

1108. Which one of the following is NOT a correct statement with reference to locally advanced carcinoma breast-
a) It constitutes the bulk of patients of carcinoma breast in India *(UPSC-II09)*
b) Patients are staged as T_3 or T_4 with any N, without distant metastasis (M_q)
c) Neoadjuvant chemotherapy downgrades the disease
d) Radical mastectomy is the treatment of choice

1109. In a patient with breast cancer, the following are poor prognostic factors except - *(UPSC-II 09)*
a) High grade
b) Absence of epidermal growth factor receptor
c) Aneuploid status
d) Age less than 35 years

1110. Lymph node first involved in Ca breast is/are-(PG7
a) Axillary b) Internal mammary *Nov 09)*
c) Supraclavicular d) Contralateral axillary

1111. Paget's disease of breast, true are - *(PGINov 09)*
a) Intraductal carcinomab) Mastectomy needed
c) Malignant d) Bilateral

1112. Breast conservative surgery is done in all except -
a) Young patients *(DPG10)*
b) Ductal carcinoma in situ
c) Lobular carcinoma
d) Infiltrative ductal carcinoma

1113. In patients with breast cancer, chest wall involvement means involvement of any one of the following structures except - *(DPG 10)*
a) Serratus anterior b) Pectoralis'Major
c) Intercostal Muscles d) Ribs

1114. Mondor's disease is - *(Maharashtra 10)*
a) Superficial thrombophlebitis of breast
b) Fat necrosis in breast
c) Postradiation breast and arm edema
d) Skin infection over the breast

1115. In carcinoma breast, adjuvant radiotherapy is indicated after modified radical mastectomy in all of the following, except - *(UP SC II10)*
a) ER, PR hormone receptor negative tumour
b) Tumour size more than 5 cm
c) Positive margins
d) More than four positive axillary lymph nodes

1116. Which of the following does not alter the'T' stage in breast cancer? *(UP SCII10)*
a) Peaud'orange
b) Skin ulceration
c) Pectoral muscle involvement
d) Serratus anterior muscle involvement

1117. Treatment with herceptin in breast cancer is indicated for - *(UP SC II10)*
a) ER receptor+ve tumours
b) PR receptor +ve tumours
c) K: 67 stain +ve tumours
d) Tumours with over-expressed C-erb B-2 protein

1098)c 1099)d 1100) d 1101)b 1102)c 1103)c 1104)b,c,e 1105)d 1106)c 1107)c 1108)d 1109)c 1110)a,b llll)a,b,c 1112) c 1113)b 1114)a 1115)a 1116)c 1117)d

1118. True about leiomyosarcoma breast - *(PGINov JO)*
a) Axillary lymph mode dissection is mandatory
b) Well encapsulated
c) Follow up not required
d) Mastectomy is mainstay treatment
e) Metastasize by lymphatic channel

111 9. Risk factor for C A breast - *(PGINov 10)*
a) OCP b) BRCA-1 mutation
c) Nulliparity d) Multiparity
e) Family history

1120. BRC A1 gene is located on? *(AIIMSMay 11)*
a) Chromosome13 b) Chromosome 11
c) Chromosome 17 d) Chromosome 22

1121. Gynaecomastia may occur in the following conditions except- *(UPSCI11)*
a) Physiologic response to puberty
b) Primary hypogonadism
c) Primary aldosteronism
d) Choriocarcinoma testis

1122. A patient has a 6-cm breast tumour with mobile, clinically positive, ipsilateral axillary lymph nodes and no evidence of distant metastasis. The stage of the breast cancer is - *(UPSCII11)*
a) Stage I b) Stage II b
c) Stage III a d) Stage III b

1123. Following radical surgery for the carcinoma of breast, reconstruction of the breast can be performed by using the following procedures except-
a) Silicon implants *(UPSC II11)*
b) Latissimus dorsi flap (LD flap)
c) Transversus abdominis muscle flap (TRAM flap)
d) Deltopectoral flap

1124. A patient presents with a unilateral ca breast of 4 cm size with skin ulceration involving the nipple. On palpation axillary lymph nodes are positive. FNAC showed intraductal ca. Management would involve- *(NEET/DNB Pattern)*
a) Breast conserving procedure
b) Simple mastectomy
c) Modified radical mastectomy
d) Palliative treatment

1125. A 35 yr female with ductal ca in situ of breast What is best possible management - *(NEET/DNB Pattern)*
a) Breast conservative surgery
b) Simple mastectomy
c) Modified radical mastectomy
d) Radical mastectomy

1126. Which of the following test is unable to differentiate between 'in situ* breast cancer and invasive disease - *(NEET/DNB Pattern)*
a) Core needle biopsy b) FNAC
c) Excisional biopsy d) None

1127. 40 yr old female presented with breast lump of size 4 cm with involvement of skin and mobile palpable axilary LN, FNAC of lesion showed intraductal carcinoma. What is the initial management, of for this pt ? *(NEET/DNB Pattern)*
a) Radiotherapy;
b) Neo-adjuvant chemotherapy
c) Modified radical mastectomy
d) Simple mastectomy

1128. Triple Assessment for CA Breast includes all ; e x c e p t - . , *(NEET/DNB Pattern)*
a) Breast self examination b)USG
c) FNAC d)Mammogram ;

1129. What is true about HER2/neu overexpression in Ca breast - *(NEET/DNB Pattern)*
a) Good prognosis
b) Responds well to taxanes
c) Responds well to monoclonal antibodies
d) Seen only in breast cancer

1130. Standard views for mammography are -
a) AP and Lateral *(NEET/DNB Pattern)*
b) AP and Medio-lateral oblique
c) Cranio-caudal and Medio-lateral view
d) Cranio-caudal and Medio-lateral oblique

1131. A 35 yr female with ductal ca in situ of breast with diffuse microcalcifications. What is best possible management - *(NEET/DNB Pattern)*
a) Breast conservative surgery -
b) Simple mastectomy
c) Modified radical mastectomy ,
d) Radiotherapy

1132. After mastectomy, breast reconstruction is done by- *(NEET/DNB Pattern)*
a) Pectoralis major myocutaneous flap
b) Deltoid myocutaneous flap
c) Serratus anterior flap
d) Latissimus dorsi myocutaneous flap

1133. A patient presents with breast ca. Inspection shows Peaud* orange appearance. What is the T stage of the tumor- *(NEET/DNB Pattern)*
a) T2 b)T3
c) T4a d) T4b

1134. A female presents with ductal ca in situ of breast with diffuse microcalcifications on mammography. She also gives family history of breast ca. What is best possible management - *(NEET/DNB Pattern)*
a) Breast conservative surgery
iO Simpleinast^tomy:^-;^;;^-:^
c) Modified radical mastectomy
d) Radiotherapy

1135; Radiotherapy after mastectomy would not be required in which of the following case scenarios of breast ca - *(NEET/DNB Pattern)*
a) Large tumor
b) Metastasis
c) Axillary nodal involvement
d) Positive margins

1118) b,d 1119)b,c,e 1120)c 1121)c 1122)d 1123)d 1124)c 1125) a 1126)b 1127)b 1128) a 1129)c 1130) d 1131)b 1132)d 1133)d 1134)b 1135)b

1136. Paget's disease of breast following are true except-
a) Treated by wide excision *(NEET/DNB Pattern)*
b> Represents underlying malignancy
c) Presents as eczema
^Wl?A)>IUsually associated with lobular ca in situ -
1[37/InradicaImasl^toinythe structurespreserved are
all except- *(NEET/DNBPattern)*
a) Axilary vein b) Cephalic vein
c) Nerve to serratus anterior d) Pectoralis minor

THORAX

1138. A patient with mesothelioma, which of the following are seen in - *(PDI8 7)*
a) Associated with asbeestos
b) Hemorrhagec pleural effusion
c) Hypoglycmemia
d) All of the above

1139. Best treatment of tension pneumothorax is -
a) Immedisate letting out of air *(A1IMS 89)*
b) Wait and watch
c) Rib resection
d) Underwater drainage

1140. Commonest posterior mediastinal tumour is - *(UPSC 85, NIM. 87, AIMS 87, Keral 87)*
a) Lung cystb) Neurofibroma
c) Dermoid d) Thyroid
e) Thymic tumour

1141. The treatment of choice in severe flail chest-(S4/ *89)*
a) IPPV b) Strapping
c) Wiring′ d) Nasal oxygen

1142. Spontaneous pneumothorax exceeding..... % of chest cavity should have a chest tube inserted -
a) 10 b) 25 *(AIMS 84)*
c) 45 d)60

1143. Commonest symptom associated with thoracic outlet syndrome is - *(PGI8 7)*
a) Intermittent claudication
b) Pain on radial distribution
c) Pain in ulnar distribution
d) Gangrene

1144. Following is true of eventration of diaphragm -
a) It ia a developmental defect *(AIMS 84)*
b) Early surgery is treatment
c) Defect is usually muscular
d) Diagnosed mostly clinically

1145. Emphysema may be found in the following conditions- *(Kerala 98)*
a) Chest injury b) Tracheostomy
c) Surgical wound d)All

1146. In pneumothorax due to blunt injury, treatment of choice of - *(AIMS 92)*
a) Observation b) Pneumonectomy
c) Thoracotomy d) Intercostal drainage

1147. The organism most frequently related to mediastinal fibrosis is - *(AIMS 81, PGI 85)*
a) Actinomycosis b) Histoplasma
c) Hansen bacillus d) Staphylococcus

1148. In a patient of mesothelioma, one often finds -
a) Hypoglycaemia *(PGI 79, 80, AIMS 84)*
b) An association with asbestosis
c) Haemorrhagic pleural effusion
d) Clubbing of fmgers
e) All of the above

1149. Failure of establish adequate drainage in an empyema with a bronchopleural fistula present is indicated by- *(JIPMER 81, AMC 85)*
a) Drainage less than 100 c.c. per day
b) haemorrhagic drainage less than 100 c.c. per day
c) The development of haemoptysis
d) Continued productive cough with purulent material
e) All of the above

1150. The immediate treatment of choice in most cases of flail chest is - *(PGI 81, AMC 86)*
a) Analgesics b) Positive pressure ventilation
c) Tracheostomy d) Breathing excercises

1151. Meig's syndrome consists of the following except -
a) Ascites *(Karn. 94)*
b) Hydrothorax
c) Benign ovarian tumour
d) Malignant ovarian tumour

1152. Most common cause of cold abscess of chest wall is-
a) Pott's spine *(TN95)*
b) TB abscesses of chest wall
c) TB or ribs
d) Intercostal lymphadenitis

1153. Broncholithiasis means - *(Kerala96)*
a) Calcified lymphnodes eroding into bronchus
b) Foreign body calciifed in bronchus
c) Lithium deposition in bronchial wall
d) A hamartoma

1154. What is the 1st thing to be done to a patient with tension pneumothorax- *(C UPGEE 96)*
a) Insertion of wire bore needle in the inter costal space
b) Water seal drainage
c) Leave the patient at rest for air to be absorbed
d) None

1155. Tenson pneumothorax due to fracture rib is treated by- *(PGI 96)*
a) Strapping
b) Tube drainage
c) IPPV
d) Internal fixation with open reduction

1156. Emergency treatment of tension pneumothorax in the causality Department is - *(PGI 96)*
a) Chest X-ray
b) Puncture by wide lose needle
c) Tube drainage
d) IPPV

1136) d 1137) d 1138) d 1139)a 1140)b 1141)a 1142)b 1143)c 1144) a,c 1145) d 1146)d 1147)b 1148)e 1149)d
1150) a 1151) d 1152) a 1153)a 1154)a 1155)b 1156)b

1157. Cause of death in blunt trauma chest is -
a) Pulmonary laceration *(AIIMS 96)*
b) Rupture of oesophagus
c) Rupture thoracic duct
d) Tracheo bronchial rupture

1158. Commonest lesion in middle mediastinum - *(AIIMS 96)*
a) Congenital cyst b) Lipoma
c) Aneursym d) Neurogenic tumours

1159. All are seen in Thoracic outlet syndrome except -
a) Mass in the Neck *(PGI97)*
b) Wasting of foream muscles
c) Adson's test positive
d) Pallor

1160. Thymectomy cause - *(TN 98)*
a) Failure of rejection of transplanted organs
b) Myastheina gravis
c) Autoimmune disorders
d) None of the above

1161. Tension pneumothorax results in - *(ICS 98)*
a) Alkalosis
b) Increased cardiac output
c) Decreased venous return
d) All of the above

1162. Trauma to diaphragm, true is - *(AIIMS 98)*
a) Usually bilateral
b) Left side more common
c) Conservatively managed
d) Results in pneumothrorax usually

1163. Thoracotomy is indicated for all except - *(AIIMS 98)*
a) Esophageal laceration
b) Bleeding > 200 ml/hr
c) Massive air leak
d) Pulmonary contusions

1164. In congenital diaphragmatic hernia all are seen except-
a) Common on left side *(JIPMER 99)*
b) Abdominal distension
c) Can be detected antenatally
d) Heart beat shifted to right

1165. Morgagni hernia - *(AP 98)*
a) Hernia between the costal and sternal part of the diaphragm
b) Hernia through the pleuriperitonial canal
c) Hernia through the lumbar triangle
d) Hernia through inguinal canal

1166. About diaphragmatic hernia all are true except -
a) Most commonly right sided & anteriorly *(MP 2K)*
b) Unilateral pulmonary agenesis
c) Mediastinal shift
d) Gastric volvulus commonly associated

1167. Which of the following is the best site for intercostal drainage in a case of pleural effusion - *(AI02)*
a) Second intercostal space midclavicular line
b) Fifth intercostal space just lateral to vertebral column
c) Fifth intercostal space in midclavicular line
d) Seventh intercostal space in midaxillary line

1168. One of these muscles is not cut in postero-lateral thoracotomy - *(PGI 98)*
a) Serratus anterior b) Pectoralis major
c) Latissimus dorsi d) Rhomboidus major

1169. The most common primary tumour of mediastinum-
a) Lymphoma b) Teratoma *(Jipmer92)*
c) Neurogenic tumour d) Thymoma

1170. Most common mediastinal tumour is - *(Kam94)*
a) Lymphoma
b) Neurofibroma
c) Thymic tumour
d) Secondaries from bronchial carcinoma

1171. Valvoplasty done in following except - *(PGI97)*
a) Coarctation of aorta b)PS
c) MS d)AS

1172. Regarding pectus excavatum all are true except -
a) Gross CVS dysfunction *(PGI 97)*
b) Decrease in lung capacity
c) Cosmetic deformity
d) Depression in chest

1173. The ideal treatment for hemothorax of blood loss greater than 500 ml/hour - *(PGI99)*
a) Wait and watch
b) Needle aspiration
c) Intercostal tube
d) Open thoracotomy with ligation of vessel

1174. Absolute contraindications of heart transplantation
a) HTV infection *(PGI2000)*
b) Age > 60 years
c) Irreversible pulmonary hypertension
d) Significant pulmonary vascular disease
e) Malignancy

1175. About hemothorax- *(PGI02)*
a) Seen in choriocarcinoma
b) Supine posture is better than erect posture
c) Needle aspiration may be needed for diagnosis
d) Thoracotomy is always done

1176. Treatment of rib fracture - *(PGI 02)*
a) Immediate thoracotomy b)IPPV
c) Analgesics d) Strapping
e) ICWSD

1177. Rx of Haemorrhoids- *(PGI 03)*
a) Banding b) Ligation
c) Cryocoagulation d) Coagulation
e) Photocoagulation

1178. Posterior mediastinal tumours - *(PGI03)*
a) Neuroblastoma b) Bronchogeniccyst
c) Neuroenteric cyst d) Lymphoma
e) Anterior thoracic meningioma

1179. True about Flail chest - *(PGI 04)*
a) # of 3 or 4 ribs
b) Chestwall moves inwards during inspiration
c) Mechanical Ventilation always needed
d) Mediastinal shift
e) Ultimately leads to respiratory failure

1157) d 1158) a 1159)b 1160)a 1161)c 1162)b 1163)d 1164)b 1165)a 1166)a 1167)d 1168)b 1169)c 1170)d
1171) a 1172) a 1173)d 1174)a,c,e 1175)a,b,c 1176)b,c 1177)a,b,c,e 1178)a,b,c,d 1179)a,b,e

1180. Anterior mediastinal tumors is/are - *(PGI04)*
a) Thymoma b) Aortic aneurysm
c) Bronchogenic Cyst d) Lymphoma
e) Bochdalek hernia

1181. Empyema necessities is defined as so when -
a) Plural empyema is under pressure (*UPSC02)*
b) Pleural empyema has ruptured into bronchus
c) Pleural empyema has ruptured into the pericardium
d) Pleural empyema is showing extension to the subcutaneous tissue

1182. In a patient with one episode of Spontaneous pneumothorax, Which is advised - *(Jharkand 03)*
a) Stop diving b) Stop smoking
c) Stop flying d)All

1183. The four points of probe placement in Focused Abdominal Sonogram for trauma (FAST) in blunt thoraco-abdominal trauma are - *(Karnataka 04)*
a) Epigastrium (R) hypochondrium, (L) Lower chest, hypogastrium
b) Epigastrium, (R) and (L) Hypochondria, (R) Iliac fossa
c) Epigastrium, (R) and (L) Lumbar regions, hypogastrium
d) Hypogastrium (R) and (L) Lumbar regions, (R) lower chest

1184. Treatment of choice for Tension pneumothroax is -
a) Immediate IC tube drainage (*SGPGI05)*
b) Continuous aspiration by needle
c) Intermittent aspiration by needle
d) Thoractomy with repair of leakage

1185. TRUE regarding management of traumatic pneumothorax is - *(SGPGI05)*
a) Immediate ICD tube insertion
b) CT-scan should be done to confirm pulmonary leak
c) Intermittent needle aspiration
d) Sealed

1186. Treatment of choice for medullary carcinoma of thyroid to - *(AIIMS May 2005)*
a) Total thyroidectomy b) Partial thyroidectomy
c) I^{131} ablation d) Hemithyroidectomy

1187. Which of the following statement is true regarding subclavian steal syndrome - *(AIIMS Nov 05)*
a) Reversal ofblood flow in the ipsilateral vertebral artery
b) Reversal ofblood flow in the contralateral carotid artery
c) Reversal ofblood flow in the contralateral vertebral artery
d) Bilateral reversal ofblood flow in the vertebral arteries

1188. Aman is brought to casualty who met with RTA. He sustained multiple rib fractures with paradoxical movement of chest. Management is - *(PGI June 06)*
a) Tracheostomy
b) Consult cardiothoracic surgeon
c) Strapping
d) Intermittent positive pressure ventilation
e) No intervention required

1189. Tumours of anterior mediastinum include the following except - *(UPSC07)*
a) Thymoma b) Lymphoma
c) Germ cell tumour d) Schwanoma

1190. Steering wheel inj ury on chest of a young man reveals multiple fractures of ribs and paradoxical movement with severe respiratory distress. X-ray shows pulmonary contusion on right side without pneumothorax. What is the initial treatment of choice? *(UPSC07)*
a) Immediate internal fixation
b) Endotracheal intubation and mechanical ventilation
c) Thoracic epidural analgesia and 02 therapy
d) Stabilization with towel clips

1191. Which of the following is not a complication of surgery for thoracic outlet syndrome -
a) Pneumothorax *(AiimsMay07)*
b) Brachial plexus injury
c) Lymphocutaneous fistula
d) Long thoracic nerve injury

1192. Most common tumor of anterior mediastimum is-
a) Thymoma b) Lymphoma *(MAHE 07)*
c) Germ cell cumor d) Thyroid tumors

1193. The commonest anterior mediastinal tumour is -
a) Aneurysm of descending aorta (*Corned 07)*
b) Neurogenic tumour
c) Thymoma
d) Bronchogenic cyst

1194. Heimlich valve is used for drainage of - (*Corned 08)*
a) Pneumothoraxb) Hemothorax
c) Emphyema d) Malignant pleural effusion

1195. The following are indications for performing thoracotomy after blunt injury of the chest, except -
a) 1000 ml drainage after placing an intercostal tube
b) Continuous bleeding through intercostal tube of more than 200 ml/hour for three or more hours
c) Cardiac tamponade *(UPSC-II08)*
d) Rib fracture

1196. What is the treatment of choice in severe flail chest?
a) IPPV b) Strapping *(UPSC-II 08)*
c) Wiring d) Nasal Oxygen

1197. Decision regarding surgery in a case of hemothorax due to blunt trauma chest should be based on -
a) Chest symptoms *(AI08)*
b) Hemodynamic status
c) Nature of chest tube output
d) X-ray finding

1198. Most common tumor in the posterior mediastinum is- *(AI08)*
a) Neurofibroma b) Teratoma
c) Lymphoma d) Bronchogenic cyst

1199. True about chest trauma - *(PGI June 08)*
a) ECG done in all cases a/w sternal fracture
b) Under water seal drainage if a/w pneumothorax
c) X-ray chest investigation of choice
d) Urgent surgery needed in all cases

1180) a,b,d 1181) d 1182) d 1183)c 1184)a 1185)b 1186)a 1187)a 1188)d 1189)d 1190)b 1191)c 1192)a
1193) c 1194) a 1195)d 1196)a 1197)b>c 1198)a 1199)a,b,c

1200. Most common posterior mediastinal tumour is -
a) Dermoid b) Neurofibroma *(DPGEE 08)*
c) Lipoma d) Lymphoma

1201. Thoracic outlet syndrome is primarily diagnosed by- *(AI09)*
a) Clinical Evaluation b) CT scan
c) MRI d) Angiography

1202. Which one of the following statements is NOT correct regarding thoracic inlet syndrome-
a) Radial nerve is involved *(UPSC-II09)*
b) Resection of first rib is effective treatment
c) Physiotherapy and position exercises relieve symptoms
d) Neurological signs and symptoms are common

1203. An entity of pneumothorax which leads to build up of positive pressure within the hemithorax, leading to collapse of lung, flattened diaphragm, mediastinal shift to contralateral side and eventually the venous return to the right side of heart is compromised is known as - *(UPSC-II 09)*
a) Primary spontaneous pneumothorax
b) Tension pneumothorax
c) Haemo-pneumothorax
d) Secondary spontaneous pneumothorax

1204. The organism most frequently related to mediastina fibrosis is - *(DPG10)*
a) Actinomycosis b) Histoplasma
c) Hansen's bacillus d) Staphylococcus

1205. False about FTaUcliest - *(NEEf/DNS Pattern)*
a) # of 3 or 4 contiguous ribs in atldasfS locations
b) Chestwall moves inwards during inspiratium
c) Mechanical Ventilation always needed
d) Can lead tp respiratory tailuie

Ipf6v Ija erecipqstare commonest site of foreign body in bronchus - *(NEET/DNB Pattern)*
a) Right lower lobe b) Right upper lobe
c) Carina d) Left lower lobe

1207. True about Flail chest - *(NEET/DNB Pattern)*
a) # of two or more ribs
b) Paradoxical respiration on the side of flail
M) Intubation is contraindicated
d) No treatment needed

LUNG

1208. Bronchogenic carcinoma which produce paraneoplastic syndrome - *(KERALA 8 7, AI88)*
a) Squamous cell carcinoma b) Oat cell carcinoma
c) Adeno carcinoma d) Large cell carcinoma

1209. Commonest symptom of carcinoma bronchus is- *(AP 84, KERALA 87)*
a) Hemoptysis b) Dyspnoea
c) Cough d) Wheezing
e) Pain

1210. Blood stained sputum may be the only symptom in- *(KERALA 90)*
a) Bronchietasis b) Carcinoma bronchus
c) Adenoma brounchus d) Pulmonary T.B.

1211. Intralobar sequestration of lung is commonest in the - *(JIPMER 81 UPSC 89)*
a) Apical segment of upper lobe
b) Medial segment of middle lobe
c) Lateral basal segmentof lower lobe
d) Posterior basal segment of lower lobe

1212. Extralobar bronchogenic cysts may communicate with the following except - *(JIPMER 80, AMU 89)*
a) Oesophagus b) Stomach
c) Brounchus d) None of the above

1213. Complication to PEEP include all except-(PG/*81, UPSC* *87)*
a) Pulmonary oedema b) Emphysema
c) Cardiogenic shock d) Pneumonia

1214. The greatest incidence of bronchopleural fistula is foilwing - *(PGI80, DELHI 88)*
a) Segmental resection b) Lobectomies
c) Pneumonectomies d) Thorocotomy

1215. The most common type of bronchogenic carcinoma is - *(AIIMS 82, DNB 89)*
a) Epidermoid b) Anaplastic
c) Alveolar d) Bronchoalveolar

1216. Most common symptom of bronchial adenoma is -
a) Chest pain b) Cough *(AI 96)*
c) Recurrent hemoptsis d) Weight loss

1217. The lung tumour responding best to radiotherapy-
a) Small cell anaplastic *(CUPGEE 96)*
b) Squamous cell CA
c) Adeno CA
d) All respond equally well

1218. The first step when doing a penumononectomy for cancer of the bronchus is to - *(UP 97)*
a) Ligate the pulmonary vein
b) Ligate pulmonary artery
c) Divide the brounches
d) Perform lymphnode clearance

1219. In small cell carcinoma of the lung one of the following is not seen - *(KERALA 97)*
a) Hypercalcemia b) Hyponatremia
c) Watery diarrhoea d) Hypokalemia

1220. True about bronchial adenoma - *(AI98)*
a) 10-15% of all lung tumour
b) Mostly malignant
c) Recurrent haemoptysis
d) Peripherally located

1221. Sequestrated lung is suplied most commonly by- *(Kerala 98)*
a) Bronchial arteries b) Descending aorta
c) Subclavian artery d) Intercostal arteries

1222. Diagnosis of lung sequestration by -*(JIPMER 2K)*
a) *CT* b) Angiography
c) MRI d) X-ray

1200) b 1201)a 1202)a 1203)b 1204)b 1205)c 1206)a 1207)b 1208)b 1209)c 1210)c 1211)d 1212)c 1213)b
1214) b 1215) a1216)c 1217)a 1218)b 1219)c 1220)c 1221)b 1222)a

1223. Which one of the following types of bronchogenic carcinoma is most likelyto cavitate ? - *(UPSC 96, AIIMS 89)*
a) Adenocarcinoma
b) Bronchoalveolar carcinoma
c) Oat cell carcinoma
d) Squamous cell carcinoma

1224. Pseudochylous pleural effusion is most often seen in- *(AIIMS 78, PGI81)*
a) T.B. b) Lymphoma
c) Ca.lung d) Filariasis

1225. IVC filter is used in following except- *(PGI 97)*
a) Massive emboli b) Negligible size of emboli
c) Repeated emboli d)None

1226. In pulmonary embolism, fibrinolytic therapy is responsible for - *(PGI 97)*
a) Risk of haemorrhage b) Prognosis good
c) Massive emboli d) All of the above

1227. In pancoast tumor, following is seen except-(PG7*98)*
a) Homer's syndrome b) Rib erosion
c) Haemoptysis d) Pain in shoulder and arm

1228. Complication of empyema are A/E- *(PGI 99)*
a) Empyema necessitans b) Bronchopleural fistula
c) Osteomyelitis d) Pneumonia

1229. A foreign body completely obstructing the right main bronchus causes - *(PGI99)*
a) Decreased ventilation perfusion ratio (VRF)
b) Increased ventilation in left lung
c) Perfusion doubles in right lung
d) Increased VF ratio in right lung

1230. Least common site of lung abscess is - *(PGI 99)*
a) Left upper lobe b) Left lower lobe
c) Right upper lobe d) Right low lobe

1231. All are elaborated by small cell carcinoma lung, except - *(PGI2000)*
a) ADH b)ACTH
c) 5-HT d) Noradrenaline

1232. Most diagnostic of pulmonary emboli is -*(PGI2000)*
a) Segmental perfusion defects corresponding to abnormal chest X-ray
b) Multiple segmental perfusion defect with normal chest X-ray and ventilation scan
c) Normal chest X-ray
d) Tenting of diaphragm

1233. Hoarseness secondary to bronchogenic carcinoma is usually due to extension of the tumour into -
a) Vocal cord *(UPSC 02)*
b) Superior laryngeal nerve
c) Left recurrent laryngeal nerve
d) Right vagus nerve

1234. A young man with tuberculosis presents with massive recurrent hemoptysis. For angiographic treatment which vascular structure should be evaluated first- *(AIIMS 03)*
a) Pulmonary b) Bronchial artery
c) Pulmonary vein d) Superior vena cava

1235. The most important consideration in a patient with borderline pulmonary function requiring lung resection is - *(Karnataka 03)*
a) The amount of nonfunctioning lung tissue to be removed
b) The amount of functioning lung tissue to be removed
c) Experience of the surgical team
d) Elevated pulmonary artery pressure

1236. All are been in Pancoast syndrome except -
a) Brachial plexus involvement *(HPU05)*
b) Dyspnoea
c) Clubbing
d) Myasthenia gravis

1237. Most common sets of Metastases of carcinoma bronchi- *(HPU05)*
a) Liver + Bones b) Prostate
c) Kidney d) Breast

1238. The most common histological type seen in branchogenic carcinoma is - **(***UPSC 05, MP 97)*
a) Small cell carcinoma b) Large cell carcinoma
c) Squamous cell carcinoma d) Adenocarcinoma

1239. Clinical manifestations of bronchogenic carcinoma include the following except - (7*CS 05)*
a) Hoarseness of voice due to involvement of left recurrent laryngeal nerve
b) Homer's syndrome
c) Diaphragmatic palsy due to infiltration of phrenic nerve
d) Gastroparesis due to vagal involvement

1240. All of the following statements regarding bronchial cysts are true except - **(***MAHA 05)*
a) Seen in mediastinum b) 50-70% occur in lung
c) Are commonly infected d) Multilocular

1241. Which needle is used for pleural *biopsy-{Comed 07)*
a) Vin Silvermann's b) Abram's
c) Abraham's d) Osgood's

1242. The most common benign tumor of the lung is -
a) Hamartoma b) Alveolar adenoma *{Corned 08)*
c) Teratoma d) Fibroma

1243. A 80 years old male presented with lung abscess in left upper zone. Best treatment of modalities is -
a) Antibiotics according to organisms *(UP 08)*
b) Surgical drainage
c) Tube thoracostomy
d) Wait and watch

1244. All are true regarding mesothelioma except?
a) Bilaterally symmetrical *(AIIMS May 11)*
b) Associated with asbestos exposure
c) Histopathalogy shows biphasic pattern
d) Occurs in late middle age

1245. Inhaled foreign bodies are more likely to get lodged in the right main bronchus because - *(UPSCII11)*
a) Left main bronchus is wider and shorter
b) Left main bronchus is narrow and wide
c) Right main bronchus is shorter, wider and nearly vertical
d) Right main bronchus is shorter, narrower and lies horizontally in relation to trachea

1223) d 1224)c 1225)b 1226)a 1227)c 1228)d 1229)a 1230)a 123 l)d 1232)b 1233)c 1234)b 1235)d 1236) d 1237) a 1238) d 1239)d 1240)b,c,d 1241)b 1242)a 1243)a 1244)a 1245)c

HEART & PERICARDIUM (C-V-S.)

1246. Most common congenital defect associated with pulmonary stenosis is - *(AIIMS 85)*
a) ASD b)VSD
c) Patent foramen ovale d)PDA

1247. Unsucessful external cardiac massage is due to all except - *(AIIMS 84)*
a) Intrinsic cardiac failure b) Hypovolumia
c) Tension pneumothorax d) Cardiac tamponade

1248. Tausing - Blalock shunt is used in - *(AIIMS 92)*
a) TAPVD b)VSD
c) PDA d) Tetralogy of fallot

1249. Fasle about mitral valvotomy for mitral stenosis is -
a) Is best performed between the age of 20-50 years
b) Should be considered when the symptoms are aggravated by pregnancy *(AMU 86, 91)*
c) Is indicated in persistent congestive heart failure
d) Gives good results when the mitral valve is immobile

1250. Which nerve is easliy injured at PDA ligation -
a) Phrenic *(PGI85, JIPMER 85,*
b) Sympathetic trunk *AIIMS 85)*
c) Cardial nerves
d) Recurrent laryngeal

1251. Rashkind's balloon septostomy is done in -
a) Coarctation of aorta *(PGI 81, DNB 90)*
b) Patent ductus arteriosus
c) Transpostion of great vessels
d) Fallot's tetralogy

1252. Most common artery used for coronary artery bypass graft is - *(Rohtak 97)*
a) Int. Mammary artery b) Intercostal artery
c) Radial artery d) Dorsalis pedisartery
e) Brachial artery

1253. Blood loss is least in trauma to which chamber of heart- *(JIPMER 99)*
a) Right atrium b) Right Ventricle
c) Left Atrium d) Left Ventricle

OESOPHAGUS

1254. About achalasia cardia all are correct except -
a) Mostly in women (*AP 84, Kerala 86, 88, JIP, 98)*
b) Dilated esophagus narrowing to a point
c) Heller's operation treatment of choice
d) Not premalignant condition

1255. During esophagoscopy, the area in the esophagus mostly perforated is - *(PGI 88)*
a) At aortic arch
b) Mid esophagus
c) At cricopharyngeus muscle
d) At esophagogastric junction

1256. Commonest cause of esophageal perforation is -
a) Acid ingestion b) Hyperemesis *(PGI87)*
c) Instrumentation d) Carcinoma infiltrating

1257. Mallory weiss syndrome often occurs in - *(PGI 87)*
a) Patient who abuse analgesics
b) Children
c) Pregnant females
d) Patients with hiatus hernia

1258. Hiatus hernia is treated by - *(TN89)*
a) Surgery when medical treatment has failed
b) Nissen's fundoplication
c) Medical treatment only
d) None of the above

1259. Which structure corsses the esophagus at 25 cm from the incisor teeth - *(PGI 88)*
a) Arch of aorta b) Bifurcation of trachea
c) Lt. bronchus d) Left subclavian artery

1260. Commonest benign tumour of the eosophagus -
a) Leiomyoma b) Papilloma *(PGI88)*
c) Adenoma d) Hemangioma

1261. Which drug is used for Achalasia cardia - *(TN90)*
a) Nifedipine b) Propranolol
c) Atenolol d) Bethnecol

1262. All are true of achalasia cardia except -
a) Dysphagia *(JIPMER 90)*
b) Aspiration pneumonitis
c) Mecholyl test is hyposensitive
d) X-ray finding of dilated esophagus with a narrow end

1263. Heller's operation is done in - *(AI90)*
a) Achalasia cardia b) Pyloric stenosis
c) Hirschsprung's disease d) Crohn's disease

1264. Gastro esophageal reflux is best diagnosed by -
a) Barium swallow b) Barium meal *(AIIMS92)*
c) Endoscopy d) Ultrasound

1265. Barrets ulcer is due to - *(JIPMER 93)*
a) Ischemia b) Ectopic gastric mucosa
c) Bile reflux d) Reflux esophagitis

1266. Radiologic feature suggestive of Achalasia cardia is-
a) Absence of gastric air bubble *(AIIMS 79, PGI 78)*
b) Air fluid level in mediastinum
c) Sigmoid esophagus
d) All the above

1267. Which figures-are very important to the oesophagoscopist - *(PGI 81, AIIMS 86)*
a) 10,20 and 30 b) 15,25 and 40
c) 20,30 and40 d) 25,35 and 45
e) 25,35 and 50

1268. The aim of preventing reflux oesophagitis by repairing hiatus hernia is achieved by -*(AIIMS 79,Rohtak 87)*
a) Bringing the stomach inferior to diaphragm
b) Reconstitution of the angle of Hill
c) Repair of defect in diaphragm
d) All of the above

1269. After surgical treatment of carcinoma Esophagus, replacement of esophagus is done with - *(AIIMS 81,*
a) Left colon b) Right colon *AP89)*
c) Stomach d) Jejunum
e) All of the above

1246) a 1247)b 1248)d 1249)d 1250)d 1251)c 1252)a 1253)d 1254)a,d 1255)c 1256)c 1257)a,c,d 1258)a,b 1259) a,c 1260) a 1261)a 1262)c 1263)a 1264)None 1265)b,d 1266)d 1267)b 1268)d 1269)e

1270. Maximum dilatation of esophagus occurs in -
a) Carcinoma at gastro esophageal junction
b) Achalasia cardia *{Kerala 94)*
c) Stricture at lower end
d) CRUST syndrome

1271. True about carcinoma eosphagus is - *{Kerala 94)*
a) Most common site is lower end
b) Both adeno and squamous cell carcinoma occur
c) Commonest histology is adenocarcinoma
d) More common in females

1272. Second swallowing in barium meal studies is found in- *{JIPMER 95)*
a) Pharyngeal pouch b) Achalasia cardia
c) Scleroderma d) Reflux esophagitis

1273. A 55-year old male has retero-sternal discomfort unrelated to physical exertion. Pain gets worse after lying down there is partial relief with antacids. The most likely diagnosis is - *{UPSC96)*
a) Ischaemic heart disease
b) Carcinoma oesophagus
c) Achalasia cardia
d) Hiatus hernia

1274. Feature of Achalasia cardia (cardiospasm) include all of the following except - **(***UPSC 96)*
a) Increasing difficulty in swallowing, more for liquids than for solids
b) Regurgitant vomiting
c) Dilated end elongated oesophagus
d) Filling defect and "rat-tail" deformity on barium study

1275. In mallory Weiss syndrome, where is the mucosal tear located - *{CUPGEE 96)*
a) Gastric cell anaplastic
b) Squamous cell CA
c) Gastro-oesophagal junction
d) Near gastric pylorus

1276. Dysphagia lusorum is due to obstruction due to -
a) Vascular rings b) Psychogenic *{AP96)*
c) Foreign body d)None

1277. In majority of patient with eosophageal leaks in thoracic cavity of less than 12 hours duration, the treatment of choice is- *{UPSC 97)*
a) Primary closure, drainage and antibiotics
b) Early oesophagogastrorstomy
c) Exclusion and diversion of continuity
d) Total oesophagectomy and gastric pull up

1278. All statement of Barret's esophagus are true except-
a) Metaplasia with intestinal columnar cells
b) Metaplasia with gastric fundus cells *{AIIMS 97)*
c) Carcinoma in situ formation
d) Increased incdence of squmaous cell carcinoma

1279. Adenocarcinoma of oesophagus is seen in- *{AIIMS 96)*
a) Barret's oesophagus b)Achlasia cardia
c) Scleroderma d) Menetriers diesease

1280. Investigation of choice for reflux oesophagittis -
a) Endoscopy *{JIPMER 98, PGI98,*
b) Barium swallow *CO MED 07)*
c) 24 hrs acid output
d) Echocardiogram

1281. Not true about p;ummer vinson syndrome is -
a) Occures in elderly males *{AIIMS 97)*
b) Post cricoid Web
c) Predispose to hypopharynx malignancy
d) Koilonychia

1282. Common site for esophageal perforation is -
a) Thoracic esophagus above arch *{AIIMS 96)*
b) Below arch
c) Cervical esophageal
d) Esophageal gastric junction

1283. The commonest cause ofhematemesis and malena- *{IN98)*
a) Oesophageal varies b) Chronic peptic ulcer
c) Acute peptic ulcer d) Carcinoma of stomach

1284. 3rd constriction of the oesophagus is at the level of-
a) Left bronchus crossing the aorta *{CMC 98)*
b) Where it pierces the diaphram
c) Junction of oesophagus and stomach
d) Cricopharynx

1285. Regarding adenocarcinoma oesophagus which is true- *(4198)*
a) Common in upper 1/3
b) Caused by barrets oesophagus
c) Common in children
d) Most common type of carcinoma

1286. Following are radiological evidence of Achalasia cardia except - *{Karnat 98)*
a) Smooth narrowing of oesophagus
b) Dilated tortous oesophagus
c) Absence of air in the fundus
d) Exaggerated peristalsis

1287. Following Ivor lewis operation for esphageal cancer of lower l/3rd, death is due to - *{AIIMS 98)*
a) Myocarditis b) Anastomolic leak
c) Pulmonary atelectasis d) Flap necrosis

1288. The pharyngeal diverticulum is a protrustion of mucosa between - *{UPSC 2K)*
a) The two parts of inferior constrictor muscle of the pharynx
b) The two parts of middle constrictor muscle of the pharynx
c) The two parts of the superior constrictor mucle of the pharynx
d) Cricopharyngeal and posterior part of suprahyoid membrane

1289. Peptic oesophagitis - *{UPSC2K)*
a) Is effectively demonstrated by barium swallow
b) Is always associated with hiatus hernia
c) Can be readily confirmed by oesophagoscopy
d) Is associated with the production of higher than normal amounts of gastric acid

1270) b 1271) a,b 1272)a 1273)d 1274)d 1275)c 1276)a 1277)a 1278)d 1279)a 1280)c 1281)a 1282)c
1283) b 1284)b 1285)b,d 1286)d 1287)b 1288)a 1289)None

1290. Best flap for eosphagus repair - *(CMC Vellore)*
a) Colon b) Stomach
c) Jejunum d) Latismus dorsi

1291. In eosphageal perforation all are seen except-
a) Pain b) Bradycardia *(UP2K)*
c) Fever d) Hypotension

1292. Which of the following statements regarding plummer Vinson syndrome is not *true-(Kerala 2k)*
a) It is otherwise known as Patterson-Brownkeliy disease
b) Iron deficiency anaemia is probably the basic cause
c) It occurs exclusively in men
d) Achlorhydria is usually present
e) Prone to post circoid cancer

1293. A patient presents with dysphagia of 4 weeks durattion. Now he is able to swallow liquid food only. Which of the following is the one investigation to be done - *(PGI2K)*
a) Barium studies are the best in this case
b) Upper GI endoscopy is to be done
c) CT Scan is needed
d) Esophageal manometry
e) USG abdomen

1294. Length of alimentary Canal from Oral Cavity to gastro esophageal Junction is - *(AIIMS 92)*
a) 15 Cm b)25Cm
c) 30 Cm d)40Cm

1295. Motility in the upper third of the oesophagus is decreased in except - *(DNB 89)*
a) Pseudobulbularpalsy b) Chagas disease
c) Myasthenia gravis d) Scleroderma
e) Cricopharyngeal carcinoma

1296. Corkscrew oesophagus is seen in - *(PGI97)*
a) Diffuse oesophageal spasm
b) Achalasia cardia
c) Ca. oesophagus
d) Pulsion diverticulum

1297. Mallory weiss syndrome in partial thickness rupture occurs at - *(PGI97)*
a) Gastric cardia
b) Oesophagus mucosa
c) Gastro oesophageal junction
d) Gastroduodenal junction

1298. Investigation of choice in upper GI bleeding is -
a) Ba swallow b) X-ray
c) Endoscopy d) Ultrasound

1299. In dysphagia lusoria true is - *(PGI97)*
a) Esophagela web
b) Aberrant vessels
c) Oesophageal stricture
d) Oesophageal carcinoma

1300. Schatazki's ring is - *(PGI 98)*
a) Mucosal ring ata sq-columnar in
b) Muscular ring
c) Dysphagia is the symptom
d) Inflammatory structure

1301. During sclerotherapy (by endoscopy), following are complications except - *(PGI 98)*
a) Hepatic encephalopathy b) Perforation
c) Stenosis d) Fibrosis

1302. Ca oesophagus is characterized by following except-
a) Adenocarcinoma *(PGI98)*
b) Middle 1/3 affected
c) Dysphagia is characteristic
d) Pernicious anemia often present

1303. Connective tissue disorder which is associated with gastroesophageal reflux is - *(PGI99)*
a) SLE b) Scleroderma
c) Behcet's syndrome d) Dermatomyositis

1304. About mallory weiss sydrome true is - *(PGI 99)*
a) Gastrointestinal reflux
b) Obesity
c) Tumour at gastroesophageal junction
d) Seen in alcoholics

1305. Esophageal carcinoma is not predisposed by- *(PGI 99)*
a) Achalasia b) Scleroderma
c) Corrosive intake d) Barret's esophagus

1306. True about sliding esophageal hernia in all cases -
a) Esophagus always shor *(PGI 99)*
b) Cardia goes through hiatus
c) Cardia and fundus goes through hiatus
d) Peritoneal sac goes with paraesophageal hernia

1307. The commonest type of tracheo-esophageal fistula is-
a) Proximal end blind; distal end communicating with trachea *(PGI 99)*
b) Distal end; blind proximal end communicating with trachea
c) Both ends blind
d) Both ends open

1308. Investigation of choice for dysphagia forsolids -
a) Barrium swallow b) Endoscopy *(PGI 2K)*
c) X-ray chest d) C.T. scan

1309. Patterson Brown Kelly syndrome is characterised by all except - *(PGI 2K)*
a) Lower oesophageal web
b) Iron deficiency andema
c) Common in adult female
d) Premalignant

1310. In achalasia cardia, true is - *(PGI2K)*
a) Pressure at distal end T with no peristalis
b) Low pr. at LES with no periotalins
c) Pressure > 50 mm Hg with peristalis

1311. Reflux esophagitis is prevented by- *(PGI01)*
a) Long intrabdominal esophagus
b) Increased intraabdominal pressure
c) Right crus of diaphragm
d) Increased intrathoracic pressure

1312. In ca esophagus predisposing factors - *(PGI02)*
a) Tylosis b) Smoking
c) Lye stricture d) Reflux erophagitis
e) Plummer vilson syndrome

1290)b 1291) b 1292)c 1293)b 1294)d 1295)d,e 1296)a 1297)a 1298)c 1299)b 1300)a,c 1301)a 1302)d
1303)b 1304) d 1305)b 1306)b 1307)a 1308)b 1309)a 1310)a 1311)a,b,c 1312)A11

1313. True about Ca esophagus - *(PGI03)*
a) MC in middle l/3rd
b) Adenocarcinoma is common variety
c) Carcinoma develops at the achalasia segment
d) Smoking is a risk factor
e) Endoscopy is the investigation of choice

1314. A 60 yrs old pt presenting with dysphagia of 6 wks duration with solid foods now can swallow only liquids. Investigations done to diagnose here -
a) CkR b) Ba Swallow *(PGI 03)*
c) Endoscopy d)USG
e) CTScan

1315. IVue about Barret's esophagus - *(PGI03)*
a) Premalignant
b) Predispose to sq. cell Ca
c) Can be diagnosed by seeing under endoscope
d) Biopsy is necessary to diagnose
e) Stricture may be present in high esophagus

1316. *True* **about upper GL bleedding** *(PGI 03)*
a) Malaena is the only symptom
b) Bleeding occurs beyond the ampula of vater
c) Endoscopy can best diagnose it
d) Peptic ulcer is the MC cause
e) -ed BUN

1317. Lower oesophageal sphinter is relaxed by -*(PGI 03)*
a) Alcohol b) Coffeine / Tea
c) Diazepam d) Antacid

1318. True about Barrett's oesophagus - *(PGI 03)*
a) Sequence of prolonged GE.R.
b) It is premalignant
c) Lower oesophageal mucosa is replaced by intestinal type of epithelium
d) Varocose veins are seen
e) Predisposes to squamous cell Ca of esophagus

1319. Intermittent dysphagia is caused by - *(PGI 04)*
a) Stricture
b) Reflux esophagitis
c) Achalasia cardia
d) Pharyngeal diverticulm
e) Diffuse esophageal spasm

1320. Dysphagia lusoria is due to - *(PGI 2000)*
a) Oesophageal webs
b) Abnormalities of Arch of Aorta
c) Aortic aneurysm
d) Enlarged left atrium

1321. LES sphineter is relaxed by - *(PGI 02)*
a) Nitrates b)HL blockers
c) Morphine d) Atropine
e) Calcium channel blockers

1322. True about achalasia cardia is - *(PGI 02)*
a) Dysphagia is a presenting symptom
b) The cause is the absence of Auerbach's plexus
c) Esophagectomy is the treatment
d) Motility-improving agents are used in treatment
e) Barium swallow shows irregular filling-defect in lower esophagus

1323. TYue about Barrets esophagus - *(PGI 04)*
a) Prone to adenocarcinoma
b) Squamous to columnar metaplasia
c) Squamous carcinoma
. d) Lump in the throat

1324. Which one of the following treatment modalities is not used for management of acute blood loss due to ruptured esophageal varices - **(***UPSC 04)*
a) Endoscopic sclerotherapy
b) Endoscopic band ligation
c) Octreotide
d) Propranolol

1325. Amyl nitrate inhalation test is used to detect -
a) Carcinoma esophagus *(COMEDK 05)*
b) Achalasia cardia
c) Oesophageal diverticulum
d) Transeoesophageal fistula

1326. An old man presenting to the Emergency following about of prolonged vomiting with excessive haematemesis following alcohol ingestion is likely to suffer from - **(***UPSC 05)*
a) Mallory-Wesis syndrome
b) Oesophageal varices
c) Gastric cancer
d) Bleeding disorder

1327. Complications of "reflux esophagitis" -*(MAHE 05)*
a) Stricture b) Schatzki's ring
c) Barrett's esophagus d) All of above

1328. Predisposing factors of Ca esophagus-(PG/ *June 05)*
a) Tylosis b) Achalasia
c) Barrett'sesophagus d) Hiatus hernia
e) Corrosive ingestion

1329. Malignant tracheo-esophageal fistula best treated with - *(PGI June 05)*
a) Radiotherapy b) Chemotherapy
c) Stenting d)Tube
e) Surgical correction

1330. Boerhove's syndrome, true about - *(PGI June 05)*
a) Iatrogenic
b) Silent manifestation
c) Presented with acute chest pain
d) Treatment is surgical

1331. Which of the following surgical approach was first described by Orringer for the management of carcinoma esophagus - *(J & K 05)*
a) Tranhiatal
b) Thoracoscopic
c) Left thoracoabdominal
d) Right thoracoabdominal

1332. The most common complication seen in hiatus hernia is - *(AI05)*
a) Oesophagitis b) Aspiration pneumonitis
c) Volvulus d) Esophageal stricture

1313)a,b,d,e 1314) All 1315)a,c,d,e 1316)c,d,e 1317)a,b,c 1318)a,b,c 1319)d,e 1320)b 1321) a,d,e 1322)a,b,d 1323) a,b 1324) d 1325)b 1326)a 1327)d 1328)a,b,c,e 1329)c 1330)c,d 1331)a 1332)a

1333. Features of Barrett's esophagus are - *(PGI June 06)*
a) Metaplasia
b) Always gastric type of epithelium
c) Adenocarcinoma more common
d) Present as patchy or ring involvement

1334. Regarding oesophagoscope true are - *(PGI June 06)*
a) Incisor acts as fulcrum
b) Compresses posterior tongue
c) Lifts epiglottis
d) Tip is in pyriform fossa
e) Inserted from right side

1335. Which is the most reliable diagnostic method for staging the oesphageal cancer? - **(***UPSC 06)*
a) MRI b) Endoscopic ultrasound
c) CT scan d) Thoracoscopy

1336. The most common type of Tracheo-Oesophageal Fistula is- *(MAHE07)*
a) Esophageal atresia without tracheoesophageal fistula
b) Esophageal atresia with proximal tracheoesophageal fistula
c) Esophageal atresia with distal tracheoesophagea fistula
d) Esophageal atresia with proximal and distal fistula

1337. Boerhaave's syndrome is due to - *(UP 07)*
a) Drug induced esophagus perforation
b) Corrosive injury
c) Spontaneous perforation
d) Gastro-esophageal reflux disease

1338. Esophageal carcinoma is predisposed by -
a) Achalasia b) Scleroderma
c) Corrosive intake d) Barret's esophagus

1339. Causes of esophageal carcinoma - *(PGI June 07)*
a) Tylosis b) Reflux esophagitis
c) Lye ingestion

1340. All are features of Plummer-Vinson syndrome except- **(***Corned 07)*
a) Oesophageal webb) Iron deficiency
c) Achalasia cardia d) Dysphagia

1341. Transhiatal esophagectomy was planned for adenocarcinoma of lower end of esophagus. The approach would be in the following order -
a) Abdomen-Neck *(AIIMS Nov 07)*
b) Abdomen-Thorax-Neck
c) Neck-Thorax-Abdomen
d) Abdomen-Thorax

1342. When a 'spontaneous perforation' of the oesophagus occurs as a result of severe barotrauma while a person vomits against a closed glotts, what is the condition known as - *(UPSC-II08)*
a) Maltory-Weiss syndrome
b) Plummer Vinsion syndrome
c) Kartergener syndrome
d) Boerhaave syndrome

1343. Mallory-Weiss tear occurs at - *(UPSC-II08)*
a) Gastro-oesophageal juction
b) Duodeno-jejunal flexure
c) Ileo-caecal junction
d) Colo-rectal junction

1344. Commonest site of oesophagus carcinoma is -
a) Upper 2/3 b) Middle 1/3 *(UP 08)*
c) Lower 1/3 d) Crico-esophageal junction

1345. Early stage of carcinoma esophagus is diagnosed by-
a) Barium meal b) Trans oesophageal USG
c) MRI d) Fluoroscopy *(UP 08)*

1346. Increasing difficulty in swallowing both for solids & liquids in a women with bird's beak appearance in X-ray seen in - *(PGI June 08)*
a) Achalasia cardia b) Carcinoma
c) Reflux esophatitis d) Barret's esophagus
e) Esophagitis

1347. 30 years of women comes with dysphagia for both solid & liquids & barium swallow shows Parrot beak appearance. On esophageal manometry, increased LES pressure. Management includes -*(PGI June 08)*
a) Nitrates b) Ca channel blockers
c) Botulinum toxin d) Myotomy

1348. True about hiatus hernia - *(PGI June 08)*
a) Surgery indicated in all symptomatic cases of para-esophageal
b) Para-esophageal type is more complicated
c) Para-esophageal type is common type
d) Common in infants

1349. The defect in achalasia cardia is present in -
a) Myenterich plexus of auerbach *(Manipal 08)*
b) Meissner's plexus
c) Kesselbach's plexus
d) Mesentric plexus

1350. The most common type of tracheoesophageal fistula is - *(Manipal 08)*
a) Esophageal atresia without tracheoesophageal fistula
b) Esophageal atresia with proximal tracheoesophageal fistula
c) Esophageal atresia with distal tracheoesophageal fistula
d) Esophageal atresia with proximal and distal tracheoesophageal fistula

1351. Best test to diagnose gastroesophageal reflux disease and quantify acid output is - *(AIIMSNov 08)*
a) Esohagogramb) Endoscopy
c) Manometry d) 24 hr pH monitoring

1352. Non progressive contraction of esophagus are -
a) Primary b) Secondary *(AI09)*
c) Tertiary d) Quaternary

1353. All of the following statements about Zenker's diverticulum are true Except - *(AI 09)*
a) Acquired diverticulum
b) Lateral X-rays on Barium swallow are often diagnostic
c) False diverticulum
d) Out pouching of the anterior pharyngeal wall, just above the cricopharyngeus muscle

1333) a,c,d 1334)b,d,e 1335)b 1336)c 1337)c 1338)a,c,d 1339)a,b,c 1340)c 1341)a 1342)d 1343)a 1344)a 1345) a 1346) a 1347)a,b,c,d 1348)a,b 1349)a 1350)c 1351)d 1352)c 1353)d

1354. Most common cause of esophagitis *is-(AILMSMay 09)*
a) Alcohol b) Smoking
c) Spicy and hot food d) Esophageal reflux

1355. Not a predisposing factor for Ca esophagus -
a) Diverticula *(AIIMSMay09)*
b) Human papilloma virus
c) Mediastinal fibrosis
d) Caustic ingestion

1356. Which of the following statements) is/are true about trauma inj ury - *(PGI June 09)*
a) Seat belt can cause pancreato- duodenal injury
b) Late death is caused by sepsis
c) Damage control surgery (DCS) is used to control major bleeding & to prevent contamination of peritoneal cavity.
d) In DCS the abdomen is closed in layer to prevent evisceration
e) In DCS, laprotomy is decided based on patient prognosis

1357. True about oesophageal injury - *(PGI June 09)*
a) Barium swallow is diagnostic
b) Treatment is primary repair
c) MC after penetrating injury
d) Mortality increased if repair delayed beyond 24 hr
e) Can lead to medasitinal collection

1358. Commonest benign tumour of the esophagus -
a) Leiomyoma b) Papilloma *(DELHIPG Feb.*
c) Adenoma d) Hemangioma *09)*

1359. A patient present with dysphagia of4 weeks duration. Now he is able to swallow liquid food only. Which of the following is the one investigation to be done ? *(DELHIPG Feb. 09)*
a) Barium studies b) Upper GI endoscopy
c) CT scan d) Esophageal manometry

1360. The site of mucosal tear in MaOory-Weiss syndrome is- *(COMED09)*
a) Stomach b) Small intestine
c) Colon d) Oesophagus

1361. Heller's operation is done for - *(COMED 09)*
a) Achalasia cardia b) Pyloric stenosis
c) Hirschsprung's disease d) Crohn's disease

1362. True about mallory weiss tear- *(PGINov 09)*
a) Hamman mediastinum
b) Esophagus perforates at all layers
c) Auscultation - Crunching sound
d) Symptoms improves after conservative Mx
e) Longitudinal tear at junction of esophagus & stomach

1363. True about Boerhoeve's syndrome - *(PGINov 09)*
a) MC at lower l/3rd
b) Hematemesis is early symptoms
c) Acute chest pain
d) Surgically treated
e) Operation is done after 24 hr

1364. Barrett's esophagus shows - *(AIIMSMay 10)*
a) Intestinal dysplasia
b) Intestinal metaplasia
c) Squamous cell metaplasia
d) Columnar cell metaplasia

1365. Dysphagia which is more for liquids than for solids in a 25-year-old female strongly suggests the possibility of - *(UPSC-110)*
a) Pseudobulbar palsy
b) Achalasia of oesophagus
c) Carcinoma of oesophagus
d) Corrosive induced oesophageal stricture

1366. A 45-year-old man presented with regurgitated food particles eaten several days earlier. He has foul smelling breath and occasional dysphagia for solid fooD. What is the probable diagnosis? *(UPSC-110)*
a) Gastric outlet obstruction
b) Zenker's diverticulum
c) Scleroderma
d) Diabetic gastroparesis

1367. Dysphagia lusoria is a condition which results from-
a) Oesophageal atresia *(UP SC II10)*
b) Aberrant right subclavian artery
c) Oesophageal web
d) Corrosive stricture

1368. True about Schatzki's ring - *(PGINov. 10)*
a) Has skeletal muscle
b) Located at lower esophagus
c) Causes dysphagia
d) Contain all layers of oesophagus

1369. Non progressive contraction of Esophagus are -
a) Primary b) Secondary *(AIIMSMay 11)*
c) Tertiary d) Quaternary

1370. A 30-year-old woman complains of suprasternal dysphagia only for, solids. She also has a long-standing untreated menorrhagia leading to iron deficiency anaemia. What is the most probable cause for her dysphagia? *(UPSC111)*
a) Pharyngeal pouch b) Carcinoma oesophagus
c) Dysphagia lusoria d) Patterson-Kelly syndrome

1371. Curling's ulcer is seen in - *(NEET/DNB Pattern)*
L: **a)** Drowning --■> / t^b)Bums
c) Electric shock, d) Intracranial tumor

1372. NottrueabbutBarrett's esophagus |§§ ^
a) Metaplasia of cells *(NEET/DNB Pattern)*
b) Predisposes to SCC
c) Precancerous condition
d) Intestinal type is the most common type

1373. True about achalasia cardia, all except -
a) Elevated resting LES tone
b) Increased baseline intraesophageal pressure
c); .Increased; f^lhaj^l'^^t&Mc^Jwavesr^in the esophagus *(NEET/DNBPattern)*
d) Increased risk of squamous cell ca

1354) d 1355) c 1356)a,b,c,e 1357) AH 1358)a 1359)b 1360)a 1361)a 1362)d,e 1363)a,c,d 1364)b 1365)b
1366)b 1367) b 1368)b,c 1369)c 1370)d 1371)b 1372)b 1373)c

STOMACH & DUODENUM

1374. The most usuful method to diagnose cuse of upper GI haemorrhage is - (*PGI80, UPSC 84)*
a) Barium study b) Celiac angiography
c) Gastric biopsy d) Endoscopy

1375. All of the following are common cuases of haematemisis except - (*AIIMS 82, DNB 88)*
a) Chronic peptic ulcer b) Pernicious anemia
c) Esophageal varices d) Carcinoma of stomach

1376. Uncommon cause of upper GI bleed - *(PGI96)*
a) Varices b) Erosive gastritis
c) Peptic ulcer d) Carcinoma stomach

1377. Commonest site of peptic ulcer perforation - *(UPSC 86, KERALA 86, AI86)*
a) Anterior aspect of the first part of duodenum
b) Posterior aspect of the 1 st part of duodenum
c) Greater cuvature of the stomach
d) Lesser curvature of the stomach
e) Anterior apect of 2nd of duodenum

1378. Treatment of Zollinger Ellison syndrome- *(AI88)*
a) Total gastrectomy with removal of tumour
b) Partial gastrectomy
c) Excision of tumour alone
d) H_2 receptor antogonist

1379. Curlings ulcer is seen in - *(AI 88)*
a) Bums patients
b) Patients with head injuries
c) Zollinger Ellison syndrome
d) Analgesic dmg abuse

1380. Most common site for carcinoma stomach is -
a) Prepyloric *(KERALA 87, AP 85, UPSC 88,*
b) Body of stomach *KERALA 94)*
c) Fundus
d) Lesser curvature

1381. Operability in carcinoma stomach is indicated by all except- *(PGI 86)*
a) Involvement of omental nodes
b) Involvement of lymphnodes at the celiac axis
c) Lymphnode at porta hepatis
d) Solitary metastatic nodule in the liver
e) Krukenberg tumour

1382. Percentage of patient with perforated peptic ulcer who show free gas under the diaphragm -
a) 100% b) 75%
c) 50% d)90%

1383. Duodenal blowout following a Bilroth gastrectomy most commonly occurs on the.....day- *(AIIMS 87)*
a) 3rd b) 2nd
c) 6th d) 19th

1384. Which of the following does not occur in chronic pyloric obstru ction - *(BHU 88)*
a) Acid urine b) Alkaline urine
c) Hypokalaemia d) Hypochloremia

1385. In pyloric stenosis the following changes occur-
a) Hypokalemic hyponatremic alkalosis *(AIIMS 84)*
b) Hyperkalaemia
c) Acidosis with hyponartremic alkalosis
d) Hyperchloremic acidosis

1386. Commonest stomach tumour which bleeds -*(PGI88)*
a) Adenocarcinoma b) Squamous carcinoma
c) Leiomysarcoma d) Fibrosarcoma

1387. Regarding acute dilation of stomach which is incorrect - *(PGI 88)*
a) Occurs with fracture femur
b) Occurs with plaster
c) Resolves spontaneosly without treatment
d) Hypophophatemia is to be avoided

1388. Commonest operation done for peptic ulcer with gastric outlet obstruction is - *(KERALA 89)*
a) Truncal vagotomy with pyloroplasty
b) Highly selective vagotomy with pyloroplasty
c) Truncal vagotomy with gastrojejunostomy
d) Gastrojejunostomy

1389. Which of the following regarding hypertrophic pyloric stenosis is correct - *(PGI 89)*
a) More in female infants
b) 4-6 months after birth
c) Billious vomiting
d) Hypochromic Metabolic alkalosis

1390. The treatment of Hodgkin's disease of stomach is -
a) Gastric resection *(Karnataka 89)*
b) Gastric resection and chemotherapy
c) Puurely medical
d) None of the above

1391. Commonest cause of death in peptic ulcer patients is- *(AI90)*
a) Perforation b) Hemorrhage
c) Pyloric stenosis d) Maliganancy

1392. All of the following predispose to gastric carcinoma except - *(AI 90)*
a) Achlorhydria b) 'O' blood group
c) Pernicious anaemia d) Post gastrectomy

1393. Linitis plastica is commonly seen in - *(AI91)*
a) Ca. stomach b) Sarcoidosis
c) Lymphoma d) Leiomyosarcoma

1394. G-cells are present mostly in- *(TN91)*
a) Fundus b)Cardia
c) Pyloric antrum d) Body

1395. Precancerous condition of the stomach is -*(Kerala*
a) Lipoma b) Linitis plastica *91)*
c) Atrophic gastritis d) Hyperacidity

1396. The commonest earliest complication of TV and GJis- *(AIIMS91)*
a) Stomal obstruction b) Panalytic ileus
c) Gastric leak d) Anastomotic Hemorrhage

1397. Malignant transformation is commonly seen in - *(AIIMS91)*
a) Stomal ulcer
b) Gastric ulcer
c) Chronic Duodenal ulcer
d) Post bulbar ulcer

1374) d 1375) b 1376)d 1377)a 1378)c 1379)a 1380)d 1381)e 1382)b 1383)None 1384)b 1385)a 1386)c
1387) c 1388)c 1389)d 1390)d 1391)b 1392)b 1393)a 1394)c 1395)c 1396)d 1397)None

1398. Hour glass stomach is seen in - *(AIIMS 92)*
a) Gastric carcinoma b) Gastric ulcer
c) Gastric Lymphoma d)Corrossive Strictures

1399. Most common benign tumour of the stomach is -
a) Adenoma b) Lipoma *(PGI93)*
c) Hamartoma d) Leiomyoma

1400. Gastric Acid secretion is inhibited by - *(AI93)*
a) Gastrin b) Alkaline pH
c) Vagal stimulation d) Somatostatin

1401. All the following predispose to Carcinoma stomach -
a) Menetriers disease b) Chronic gastritis
c) Gastric polyp d) Gastric erosion

1402. Erosive gastritis commonly occurs at - *(JIPMER 93)*
a) Body b) Fundus
c) Lesser curvature d) Antrum

1403. Endoscopy is useful in diagnosis of peptic ulcer in following sutuations except - *(JIPMER 79, PGI80)*
a) Post bulbar ulcer b) Stomal ulcers
c) Giant duodenal ulcer d) Duodenal erosion

1404. Deverticulum of the stomach - *(PGI 79, UPSC 86)*
a) Pain is the main symptom
b) Usually at cardiac end
c) Usually on posterior surface
d) Inversion is the satisfactory treatment
e) All of the above

1405. Anemia is greater in which of the following gastric resection - *(PGI 81, AMU 85)*
a) Billorth II
b) Billorth I
c) Both of the above are equal
d) Neither of the above

1406. The most frequent symptom of gastric diverticulum is - *(AIIMS 81, PGI 82)*
a) Epigastric pain b) Haematemesis
c) Vomiting d) Pain relieved by food

1407. All of the following may be features of a silent carcinoma of the body of the stomach except -
a) Obstructive jaundice *(JIPMER 80, AMU89)*
b) Ascites
c) Dysphagia
d) Krukenberg's tumours

1408. In congenital pyloric stenosis the defect usually lies in - antrum - *(AIIMS 78, PGI 83)*
a) Nerve fibres
b) Circular muscle fibres
c) Longitudinal muscle fibres
d) Mucosa

1409. The following are the complications of trichobezoars except- *(AIIMS 89, AMU89)*
a) Haematemesis b) Perforation and peritonis
c) Obstruction d) Malignancy

1410. If the mucosa was accidentally opended at operation (Ramstedt) it is wise not to feed the child orally for- *(AIIMS 70, AMU 90)*
a) 12 Hours b) 24 Hours
c) 48 Hours d) 1 week

1411. The operation of choice in congentital pyloric stenosis is - *(AIIMS 80, DELHI 83, AP 89, Jipmer 81, PGI 9 7)*
a) Pyloroplasty
b) Pyloromyotomy
c) Gastro-jejunostomy
d) Gastro duodenostomy

1412. Prensenting symptom of carcinoma stomach is -
a) Bleeding b) Obstruction *(AIIMS8JAP 90)*
c) Perforation d) Weight loss

1413. Investigation of choice in peptic ulcer perforation is - *(KERALA 94)*
a) USG b) X-Ray abdomen
c) Paracentasis d) CT scan

1414. About 6-8 hours after peptic perforation the disappearance of abdominal wall rigidity is due to -
a) Cessation of acid secretion in the stomach
b) Revival from initial shock *(UPSC 95)*
c) Dilution of acid in the peritonial cavity
d) Fatigue of reflex arc.

1415. Best prognosis in carcinoma stomach is - *(AI 95, AIIMS 89, 92)*
a) Superficial spreading
b) Ulcerative
c) Lintis Plastica
d) Polypoidal fungating

1416. What complication commonly occurs in anterior duodenal ulcer - *(TN 95)*
a) Bleeding b) Penetration
c) Perforation d) Stricture formation

1417. A person who had undergone gastrojejunotomy suddenly develops severe diarrhoea. Which should be suspected - *(IN 95)*
a) Gastric carcinoma b) Tb abdomen
c) Gastrojejunocolic fistula d) Gastric amoebiasis

1418. A 35 - year old male who had chronic duodenal ulcer for the last six years presents with worsening of symtomps loss of periodicity of symptoms pain on risingin the morning sense of epigastric bloating and post - prandial vomiting. The most likely cause of the worsening of his symptoms is the development of -
a) Posterior penetration *(UPSC 96)*
b) Gastric outlet obstruction
c) Carcinoma
d) Pancreatitis

1419. All of the following are indications for surgery in a case of duodenal ulcer except - *(UPSC 96)*
a) Acute perforation of ulcer
b) Pyloric stenosis
c) Massive haemorrhage
d) Typical periodicity

1420. The operation wherein the stump of the stomach is durectly anastomosed to the stump ofthe duodenum is called- *(KARNAT96)*
a) Polya gastrectomy
b) Hoffmeister gastrectomy
c) Billroth I gastrectomy
d) Billrothe II gastrectomy

1398)b 1399) a 1400)d 1401)d 1402)a,b 1403)c 1404)b,c 1405)a 1406)a 1407)c 1408)b 1409)d 1410)b 141 l)b 1412) d 1413) b 1414)c 1415)a 1416)c 1417)c 1418)b 1419)d 1420)c

1421. Which of the following is not true of Curling's ulcer-
a) Seen in burned patients *(KARNAT96)*
b) Are solitary penetrating ulcer
c) Are shallow multiple erosions
d) Has also been described in children after head injury or craniotomy

1422. TVosier's sign is - *(AP 96)*
a) Rt. supraclavicular lymph node enlargment
b) Lt. supraclavicular Lymphnode enlargement
c) Carpopedal spasm
d) Migrating Thrombophlebitis

1423. Maximal reduction in gastric acidity is achieved by- *(UPSC 97,*
a) Truncal vagotomy and pyloroplasty *PGI96)*
b) Truncal vagotomy and antrectomy
c) Partial gastrectomy
d) Highly selective vagotomy

1424. Investigation of choice for an early gastric carcinoma-
a) Endoscopic ultrasound *(AIIMS97)*
b) Stained endoscopic biopsy
c) Barium meal
d) CT scan

1425. Early gastric carcinoma uncludes all except -
a) Invasion of Mucosa
b) Invasion of Submucosa
c) Invasion of muscularis propria
d) Dysplasia

1426. Function of thick gastric mucusa is - *(AI97)*
a) Protects epithelium b) Neutralises HCL
c) Traps foreign particles d) None of the above

1427. Prognosis in a case of duodenal perforation is determined by all except - *(PGI 96)*
a) Age of the petient b) Duration of history
c) Basal pneumonia d) Peritonitis

1428. Gastro jejunostomy is an example of -*(JIPMER 98)*
a) Clean contaminated wound
b) Clean uncontaminated wound
c) Unclean uncontaminated wound
d) Unclean contaminated wound

1429. 'DUODENAL BLOWOUT' is - *(AP 97)*
a) Perforation of duodenal ulcer
b) Latrogenic
c) Complication of partial gastrectomy
d) Due to trauma

1430. Dumping syndrome occurs due to - *(AI99)*
a) Small stomach
b) Hyperosmolar load in intestine
c) Vagolytic action
d) Excesive intake of food

1431. A patient with ANTRAL Ca repeatedly vomits. No t seen is - *(AIIMS 98)*
a) Acidosis b) Hypokalemia
c) Hyponatremia d) Hypochloremia

1432. TVue about IHPS is all except - *(AIIMS 99)*
a) Males commonly affected
b) Commonly presents at 3-8 weeks
c) X-Ray shows gastric dilation and gasless small intestines
d) USG is of no use in diagnosis

1433. Gastric carcinoma involving the anrtum with lymph node involvements. The pancreas, liver, peritoneal cavity are normal. Most appropriate surgery is -
a) Total radical gastrectomy
b) Palliative gastrectomy
c) Gastrojejunostomy
d) None of the above

1434. Electrical pacemaker of stomach is situated in -
a) Fundus *(Karnataka 01)*
b) Body
c) Incisura Angularis
d) Gastro oesophageal junction

1435. H. pylori causes - *(TN 2001)*
a) Type A Gastritis b) Type B gastritis
c) Autommine d) Allergic Gastritis

1436. Highest pickup for gastro uejunocolic fistula is by- *(J&K2001)*
a) Ba swallow b)Bameal
c) Ba enema d) Ba follow through

1437. Post - Vagotomy diarrhoea can be effectively managed by - *(UPSC 2002)*
a) Steroids b) Thyroxin
c) Somatostatin analogue d) Parathormone

1438. Trichobezoar is - *(HPU 2001)*
a) Hair ball in stomach in psychiatric patient
b) Tumours of stomach
c) TB of bowel
d) Collection of worms in stomach

1439. Histologic examination of the lesion in stomach reveal fat - laiden cells, likely cause is -*(AIIMS2001)*
a) Lymphoma
b) Post gastrectomy
c) Signet - cell carcinoma stomach
d) Atrophic gastritis

1440. Minimum amount of GI bleed to cause melena is
a) 10 ml b)40ml *(PGI 78, AIIMS 79)*
c) 60ml d) 115 ml

1441. The most sensitive test to detect GI bleeding is -
a) Selective angiography *(PGI 79, AIIMS 81)*
b) Radiolabelled, erythrocyte scanning
c) I_{131} Fibrinogen studies
d) Stool for occult blood

1442. Most Severe degree of alkalosis occurs in obstruction of - *(MAHE 98)*
a) Cardiac end b) Pylorus
c) Lleocaecal region d) Colon

1443. In gastrectomy following occurs except - *(PGI 97)*
a) Calcium deficiency b) Steatorrhoea
c) Fe. deficiency d) Fluid loss

1421)b,d 1422)b 1423)b 1424)b 1425)c 1426)a 1427)c 1428)a 1429)c 1430)b 1431)a 1432)d 1433)d
1434)a 1435)b 1436)c 1437)c 1438)a 1439)c 1440)c 1441)b 1442)b 1443)d

1444. Antenatal double bubble appearance on ultrasound is due to - *(PGI97)*
a) Diaphragmatic hernia b) Duodenal atresia
c) Volvulus d) Intussusception

1445. Precancerous condition of Ca stomach is -*(PGI97)*
a) Peptic ulcer b) Chronic gastric atrophy
c) Achalasia cardia d) Curling's ulcer

1446. Deficiency of the abdominal muscle is associated with- *(PGI 99)*
a) Eagle-Barrette syndrome
b) Christopher syndrome
c) Megacystitis
d) Megaureter

1447. True about stomach carcinoma - *(PGI 2000)*
a) Weightloss is commonest feature
b) Secondaries are most commonly seen in peritoneum & omentum
c) Lymphatic & hematogenous spread are rare
d) Barrium meal is diagnostic
e) Radioresistant

1448. Artery to bleed in duodenal ulcer h'ge -*(PGI2000,*
a) Spleenic a *PGI 88, 99, AI89, UP 96)*
b) Gastroduodenal a
c) Left gastric a
d) Sup. mesenteric a

1449. Risk factor for carcinoma stomach are all except- *(PGI 2000)*
a) Blood group A b) Post gastrectomy
c) Old peptic ulcer d) Atrophic gastritis

1450. Treatment of perforated peptic ulcer includes -
a) i.v. fluids *(PGI 01)*
b) Drainage of paracolic gutter
c) Immediate surgery
d) Antacids
e) i.v. pantoprazole

1451. The investigation for duodenal ulcer is - *(PGI 01)*
a) Hypotonic duodenography
b) Barium meal
c) Barium swallow
d) Upper GI endoscopy
e) Abdominal X-ray erect view

1452. Predisposing factors for stomach carcinoma -
a) Gastric ulcer *(PGI 01)*
b) Pernicious anemia & achlorhydria
c) Hiatus hernia
d) Atrophic gastritis

1453. Which of the following factors contribute to the development of duodenal ulcers - *(PGI 01)*
a) Lysolecithin b) Gastric acid
c) Alcohol abuse d) Prostaglandins
e) Smoking

1454. Duodenal stricture is caused by - *(PGI 02)*
a) Amoebiasis b)T.B.
c) Ca pancreas d) Crohn's disease
e) Giardiasis

1455. Congeital pyloric stenosis causes - *(PGI02)*
a) Bilious vomiting
b) Non-billious vomiting
c) Projectile vomiting
d) Non projectile vomiting
e) Forceful

1456. TVue of early gastric carcinoma - *(PGI 02)*
a) Invasion of mucosa and sub-mucosa with neighbouring lymphanode
b) Invasion of mucosa and submucosa irrespective to L.N. spread
c) Radical Gastrectomy perferred
d) Endoscopic removal of lesions
e) Conservative gastrectomy

1457. Predisposing factors for gastric ca are - *(PGI 02)*
a) Atrophic gastritis b) Hyperplastic polyp
c) Adenomatous polyp d) Achlorhydria
e) Animal fat consumption

1458. Hypertrophic pyloric stenosis, true about -*(PGI 03)*
a) Common in females
b) Present after 3-5 wks of birth
c) USG can't diagnose
d) Alkalosis
e) Surgery is the TOC

1459. TVue about Ca stomach - *(PGI 03)*
a) Weight loss is the MC presentation
b) Mesenteric & peritoneal spread is early
c) Prognosis depends upon lymph node involvement
d) Spreads through haematogenous & lymphatic routes

1460. Thickened gastric folds are found in - *(PGI 03)*
a) Lymphoma b) Menetrier's disease
c) Carcinoma d) Eosinophilic gastritis
e) Giardiasis

1461. What is correct about duodenal ulcer - *{Kerala 03)*
a) 25% will occur if H. pylori is not eradicated -
b) Magnesium containing drugs may cause constipation
c) Bismuth is not used for long terms
d) None

1462. H. pylori infection causes carcinoma by which mechanism- *{TN03)*
a) Production of nitrosamines
b) Gastric metaplasia
c) Increasing acid secretion
d) Causing mutation

1463. Hpylori- *{PGI04)*
a) G - ve nonflagellate spiral organism
b) Obligate parasite on gastric mucosa
c) Does not infect duodenal mucosa
d) Antibiotics not effective
e) Causes hypergastinemia induced peptic ulcer

1464. Duodenal adeno carcinoma - *{PGI04)*
a) Most common small bowel carcinoma
b) Periampullary carcinoma
c) Jaundice & anemia - most common symptom
d) Local resection - curative

1444)b 1445)b 1446)a 1447)e 1448)b 1449)a,c 1450)a,c,e 1451)a,b,d 1452)b,d 1453)b,c,e 1454)b,c,d 1455)b,c,d,e 1456)b,c,d 1457)a,c,d 1458)b,d>e 1459)a,c,d 1460)a,b,c,d 1461)d 1462)b 1463)b 1464)a,c

1465. Gastric malignancy is predisposed with- *{Kerala 04)*
a) Blood group O b) Intestinal metaplasia
c) Gastric hyperplasia d) Duodenal ulcer

1466. Ramstedts operation is done for - *(IN04, AIIMS87)*
a) Congenital hypertrophic pyloric stenosis
b) Breast carcinoma
c) Thyroglossal cyst
d) Carcinoma stomach

1467. In which one of the following conditions is gas under diaphragm not seen - *(UPSC 05)*
a) Perforated duodenal ulcer
b) Typhoid perforation
c) After laparotomy
d) Spontaneous rupture of oesophagus

1468. The structures removed, while carrying out radial gastrectomy for a 2 x 2 cm antral adenocarcinoma, would include the following except - *(UPSC 05)*
a) Distal 2/3 of stomach with centimeter cuff of duodenum
b) Lesser and greater omentum
c) Lymph nodes along left and right gastric common hepatic and splenic arteries
d) Spleen

1469. The most commonly practiced operative procedure for a perforated duodenal ulcer is - *(Kamat 05, SGPGI05)*
a) Vagotomy and pyloroplasty
b) Vagotomy and antrectomy
c) Vagotomy and perforation closure
d) Graham's omentum patch repair

1470. Lesser curvature anterior seromyotomy is indicated in- *(MAHE05)*
a) Gastric ulcer b) Gastric CA
c) Duodenal blowout d) Duodenal uncer

1471. Eradication of H.pylori has been proved to be beneficial in the following condition except -
a) Duodenal ulcer *(ICS05)*
b) Gastric ulcer
c) Low grade MALT lymphoma
d) Hypertrophic gastritis

1472. True about gastric cancer are A/E - *(PGIJune 05)*
a) Incidence increasing worldwide
b) Incidence of upper gastric cancer increasing
c) Surgically correctable
d) Prognosis depends on the depth of the lesion than the size of the lesion

1473. All of the following are indications for surgery in gastric lymphoma except - *(AIIMS Nov 05)*
a) Bleeding
b) Perforation
c) Residual disease following chemotherapy
d) Intractable pain

1474. The most common causeof gastric outlet obstruction in India as - *(AI06)*
a) Tuberculosis b) Cancer of stomach
c) Duodenal lymphoma d) Peptic ulcer disease

1475. Features of pyloric stenosis - *(PGI June 06)*
a) Hypokalemic alkalosis
b) Peristalsis right to left
c) Commonly caused by carcinoma stomach
d) Retention vomiting present
e) Commonly females involved

1476. Characteristic of H. Pylori is/are - *(PGI June 06)*
a) Doesn't affect normal duodenal mucosa
b) Important cause for gastric ulcer
c) Protozoa
d) Antibiotics not usefùl

1477. Eradication of helicobacter pylori has been proved to beneficial in which of the following disorders of the stomach - *(COMED 06)*
a) Low grade malt lymphorqa
b) Erosive gastritis
c) Carcinoma stomach
d) Gastroesophageal disease

1478. In the Forest classification for bleeding peptic ulcler with a visible vessel or pigmented protuber ance is classified as - **(***COMED 06)*
a) FI b) Fll a
c) Fllb d) Fll c

1479. Stress ulcers is caused by all of the following except?
a) Bums (*.APPG06)*
b) Catisol therapy
c) Penicillin therapy
d) Pulmonary insufficiency

1480. True about Trichobazoers except - **(***Manipal 06)*
a) It is caused by Trichuris
b) It is a psychiatric manifestation
c) Balls of hairs in the stomach
d) Pulling the hair & sucking of hair is usually seen

1481. With reference to duodenal ulcers, consider the following statements - *(UPSC 07)*
1. They occur most often in the second part of duodenum
2. Infection with H. pylori and NS AID-induced injury account for majority of duodenal ulcer
3. Malignant duodenal ulcers are extremely rare
4. Exradication of H. pylori has greatly reduced the recurrence rates in doudenal ulcers

Which of the statements given above are correct ?
a) 1,2 and 3 only b) *2*,3 and 4 only
c) 1 and 4 only d) 1 , 2 , 3 and 4

1482. Which of the following statements related to gastric injury is not true ? *(AI07)*
a) Mostly related to penetrating trauma
b) Treatment is simple debridement and suturing
c) Blood in stomach is always related to gastric injury
d) Heals well and fast

1483. Metabolic abnormality seen in congenital hypertrophic pyloric stenosis is - *(Aiims May 07)*
a) Hypochloremic hypokalemic metabolic alkalosis
b) Hyperchlonemic hypokalemic metabolic alkalosis
c) Hypochloremic hypokalemic metabolic acidosis
d) Hyperchloremic hypokalemic metabolic acidosis

1465) b 1466) a 1467)d 1468)c 1469)d 1470)d 1471)d 1472)a 1473)d 1474)b 1475)a 1476)a,b 1477)a 1478)b 1479) c 1480) a 1481)b 1482)c 1483)a

1484. A patient comes with hematemesis and malena. On the upper GI endoscopy there was no significant finding. 2-days later the patient rebleeds. Next line of investigation is - *(Aiims May 07)*
a) Emergency angiography
b) Repeat upper GI endoscopy
c) Enteroscopy
d) Laprotomy

1485. In a highly selective vagotomy, the vagal supply is severed to - **(***Corned 07)*
a) Proximal two-thirds of stomach
b) Antrum
c) Pylorus
d) Whole of stomach

1486. Which of the following anaemias is a risk factor for the development of gastric carcinoma - (*Corned 07)*
a) Pernicious anaemia
b) Megaloblastic anaemia
c) Aplastic anaemia
d) Haemolytic anaemia

1487. Prepyloric or channel ulcer in the stomach is termed as - **(***Corned 08)*
a) type 1 b) type 2
c) type 3 d) type 4

1488. Which one of the following types of stomach cancers carries the best prognosis - *(UPSC-II08)*
a) Superficial spreading type
b) Ulcerative type
c) Linitis plastica type
d) Polypoidal type

1489. Treatment of choice in peptic ulcer grade III is -
a) Vagotomy only *(UP 08)*
b) Vagotomy and antrectomy
c) Vagotomy and pyloroplasty
d) Highly selective vagotomy

1490. An otherwise normal female presents with symptoms of flatulent dyspepsia. She was started on proton pump inhibitors, which controlled her symptoms. The next step in management of this condition should be- *(AI08)*
a) Immediate laparoscopic cholecstectomy
b) Laparotomy after 1 or 2 months
c) Wait & watch
d) Endoscopic retrograde cholangiopancreatography

1491. Metabolic abnormality seen in gastric outlet obstruction is - *(Aiims May 08)*
a) Hypochloremic, hypokalemic acidosis
b) Hypochloremic, hypokalemic alkalosis
c) Hyperchloremic, hypokalemic acidosis
d) Hypochloremic, hyperkalemic alkalosis

1492. False about Gastric lymphoma is - *(Aiims May 08)*
a) Stomach is the most common site
b) Asosciate with H. pylori infection
c) Total gastrectomy with adjuvant chemotherapy is the treatment of choice
d) 5 yr survival rate after treatment is 60%.

1493. Veins involve in stomach varices are -*(PGIDec 08)*
a) Coronary vein
b) Short gastric vein
c) Right Gastroepiploic vein
d) Left gastroepiploic vein
e) Left gastric vein

1494. Most common site of Curling's ulcer -
a) Ileum b) Stomach *(AIIMS Nov 08)*
c) Duodenum d) Esophagus

1495. Bariatric surgical procedures include -
a) Gastric Banding *(AIIMS Nov 08)*
b) Gastric Bypass
c) Biliopancreatic diversion
d) Ileal Transposition

1496. Double Bubble sign is seen with - *(AIIMSMay 09)*
a) Pyloric stenosis b) Duodenal atresia
c) Ileal atresia d) Esophageal atresia

1497. True statement (s) regarding peptic ulcer disease -
a) Anterior ulcer bleeds more commonly
b) Posteriorly perforated ulcer is always management conservatively *(PGI June 09)*
c) Anti-H. pylori drugs must be included in the treatment regime
d) H.pylori is known to increase incidence of gastric malignancies
e) Increase acid production is prerequisite for gastric ulcer

1498. All are true about gastric Ca except -*(PGI June 09)*
a) H-pylori association is present
b) D2 gastrectomy include total gastrectomy
c) Surgical non curatice lesion should not be resected
d) Pt under total gastrectomy should be given vit B12
e) Haematemesis present in majority of patients

1499. Posterior perforated ulcer on pyloric antrum cause .abcss formation in- *(PGI June 09)*
a) Greater sac b) Lesser sac
c) Pouch of morrison d) Omental bursa
e) Right subphrenic

1500. Which one of the following is NOT a feature of congenital hypertrophic pyloric *stenos\s-(UPSC-109)*
a) More common in males b) Projectile vomiting
c) Diarrhea d) Malnutrition

1501. True about gastric stump carcinoma -
a) Enterogastric reflex is the cause *(PGINov 09)*
b) Prognosis good after surgery
c) It is always adenocarcinoma in nature
d) Diffuse type is only variety

1502. True regarding gastric antral vascular ectasia (GAVE)- *(PGI Nov 09)*
a) Capillary lesion
b) Arterial type
c) Difficult to manage because of multiplicity & size
d) Best treatment argon plasma coagulation
e) Associated with chronic renal failure & iron deficiency anaemia

1484) d 1485) b 1486)a 1487)c 1488)a 1489)b 1490)c 1491)b 1492)c 1493) All 1494)c 1495)d 1496)b 1497)d 1498) e 1499) b 1500) c 1501) a 1502) a, b,e

1503. Increased risk of gastric carcinomias associated with-
a) Intestinal metaplasia *(PGINov09)*
b) Polyp - hyperplastic or adenoma
c) Atrophic gastritis
d) Corossive antral stricture
e) Eosinophilic gastritis

1504. Treatment of high lying ulcer near gastro-oesophageal junction is/are - *(PGINov 09)*
a) Pouchet procedure
b) Kelling - Madlenger operation
c) Csendes procedure
d) Total gasrectomy
e) Vagotomy & pyloroplasty

1505. Incorrect about gastric ulcer - *(PGI Nov 09)*
a) Most common on lesser curvature
b) 75% H.pylori related
c) Type IV ulcer most common type
d) Treatment is primaryly medical
e) 30% GU are associated with malignancy

1506. In a case of hypertrophic pyloric stenosis, the metabolic disturbance is - *(AIIMSNov 09)*
a) Respiratory alkalosis
b) Metabolic acidosis
c) Metabolic alkalosis with paradoxical aciduria
d) Metabolic alkalosis with alkaline urine

1507. A robust male baby with vigorous feeding and immediate vomiting at 2 months of age. Most probable diagnosis is - *(AIIMS Nov 09)*
a) Paralytic ileus
b) Hirschsprung's disease
c) Brain tumor
d) Congenital hypertrophic pyloric stenosis

1508. A 65 years old patient of coronary artery disease was on Aspirin for 2 years. He now complains of black stools. Abdominal examination is normal. What is the most probable diagnosis? *(AIIMSNov 09)*
a) Ileocecal TB b) Ca colon
c) Esophageal varices d) Duodenal ulcer

1509. Congenital hypertrophic pyloric stenosis associated with - *(AIIMS May 10)*
a) Hypokalemic acidosis b) Hypokalemic alkalosis
c) Hyperkalemic acidosis d) Hyperkalemic alkalosis

1510. An adult presented with hemetemesis and upper abdominal pain. Endoscopy revealed a growth at the pyloric antrum of the stomach. CT scan showed growth involving the pyloric antrum without infiltration or invasion into surrounding structures and no evidence of distant metastasis. At laparotomy neoplastic growth was observed to involve the posterior wall of stomach and the pancreas extending 6cm up to tail of pancreas. What will be the most apropriate surgical management - (AI10)
a) Closure of the abdomen
b) Antrectp,u amd vagotomy
c) Partial gastrectomy + Distal pancreatectomy
d) Partial gastrrectomy + Distal pancreatectomy+ splenectomy

1511. All of the following about gastrointestinal carcinoid tumors are true, except - *(AI 10)*
a) Small intestine and appendix account for almost 60% of all gastrointestinal carcinoid.
b) Rectum is spared
c) 5 year survival for carcinoid tumors is > 60%
d) Appendicial carcinoids are more common in females than males

1512. All of the following are primarily restrictive operation for morbid obesity, except - *(AI 10)*
a) Vertical band gastroplasty
b) Switch duodenal operation
c) Rouxen Y operation
d) Laparoscopic adjustable gastric banding

1513. A 35-year old male who had chronic duodenal ulcer for the last six years presents with worsening of symptoms, loss of periodicity of symptoms, pain on rising in the morning, sense of epigastric bloating and post-prandial vomiting. The most likely cause of the worsening of his symptoms is development of-
a) Posterior penetration *(DPG10)*
b) Gastric outlet obstruction
c) Carcinoma
d) Pancreatitis

1514. H. pylori infection is associated with increased risk of- *(Maharashtra10)*
a) Proximal gastric cancer
b) Carcinoma of body and pylorus of stomach
c) Carcinoma of duodenum first part
d) Carcinoma involving gastroesophageal junction

1515. Barium meal contrast radiography is better than endoscopy for diagnosing which of the following?
a) Large hiatus hernia (rolling type)
b) Linitus plastica *(Maharashtra10)*
c) Chronic gastric volvulus
d) All of the above

1516. What is the most common cause of gastric outlet obstruction in a 4-week-old baby? *(UP SC II10)*
a) Annular pancreas
b) Foreign body
c) Congenital hypertrophic pyloric stenosis
d) Duodenal atresia

1517. The transition between the stomach and duodenum is marked by - *(UP SC II10)*
a) Vein of Mayo
b) Hepatoduodenal ligament
c) Gastroduodenal artery
d) Incisura

1518. Dumping syndrome can occur after - *(UP SCII10)*
a) Billroth-II operation
b) Heller's operation
c) Whipple's operation
d) Nissen fimdoplication

1503)a,b,c 1504)a,b 1505)c,e 1506)c 1507)d 1508)d 1509)b 1510)c 1511)b 1512)b 1513)b 1514)b 1515)d 1516)c 1517)a 1518)a

1519. A 3 week old patient presenting with vomiting and failure to thrive is found to have pyloric stenosis. What should be the next step of management ? *(AIIMS May 11)*
a) Its emergency so do pyloromyotomy immediately
b) Fluid resuscitation may be delayed
c) Correction of electrolyte disturbances
d) Cardiopulmonary resuscitation

1520. Best test to diagnose gastroesophageal reflux disease and quantify acid output is - *(AIIMSMay 11)*
a) Esohagogram b) Endoscopy
c) Manometry d) 24 hr pH monitoring

1521. In a male after laparoscopic cholecystectomy, specimen is sent for histopathology which shows carcinoma gallbladder stage Tla. Appropriate management is - *(AIIMS May 11)*
a) Conservative and follow up.
b) Extended cholecystectomy
c) Excision of all port sites
d) Radiotherapy

1522. A thirty year old male presents to the Emergency Department with symptoms of epigastric pain radiating to back that wakes him up at nigh and is relieved by consuming food. He gives history of similar pain in the past which was diagnosed as perforated duodenal ulcer and treated with ometal patch surgery on two occasions. Pain before and after surgery has been contolled with proton pump inhibitors and analgesics. The likely diagnosis on this occasion is - *(AI11)*
a) Duodenal Ulcer b) Gastric Ulcer
c) Atrophic Gastritis d) Chronic Pancreatitis

1523. Which of the following statements about Gastric carcinoma are true - *(AI 11)*
a) Squammous cell carcinoma is the most common histological subtype
b) Often associated with Hypochlorhydria/ Achlorhydria
c) Occult blood in stool is not seen
d) Highly Radiosensitive tumor

1524. A 44-year-old man presents to the hospital emergency with sudden onset pain in the epigastrium and three episodes of vomiting in the last two hours. His last vomitus was slightly brownish in colour, lie is a known case of ankylosing spondylitis requiring regular medication for back pain. Which one of the following tests would best help diagnose the patient? *(UPSC 111)*
a) Upper GI endoscopy b) Ultrasound abdomen
c) Ryle's tube aspiration d) H.pylori serology

1525. Consider the following statements in respect of congenital hyper trophic pyloric stenosis - *(UPSC 1111)*
1. The condition is more common in males.
2. The investigation of choice is ultrasonography.
3. Hypertrophy is maximal in the prepyloric region.
4. The condition presents within the first week of birth

Which of the statements given above are correct?
a) 1 and 2 only b) 2,3 and 4 only
c) 1 and 3 only d) 1,2 and 4 only

1526, A 24 day neonate presents with projectile vomiting & failure to gain weight. What is the diagnosis? -
a) CHPS *(NEET/DNB Pattern)*
b) NEG
c) Duodenal atresia
M).Hirschsprung's disease ;*

1527dGastrotomyi$ *4 cy ~ (NEET/DNB Pattern)*
a)Ope.nthe:Stomachjclosed aftet^tubedifeertibn
B)QpeningfTte $tomach
y^yc) Resecting the terminal part of stomach
vs 'IB ^-Resecting theiprpxnal part of stomachy

LIVER

1528. For bleeding varices of the oesophagus the common operation operations is/are - (*AIIMS 81, DNB 89)*
a) Portocaval shunt b) Gastrectomy
c) Splenectomy d) All of the above

1529. In Budd chiari syndrome the occlusion is at the - *(Kerala 8 7, AP 86, Karn. 89)*
a) IVC b) Renal vein
c) Hepatic vein d) Spelnic vein

1530. Line of surgical divison of the lobes of the liver is -
a) F alciform ligament to the diaphragm *(AIIMS 85,*
b) Gall bladder bed to IVC *87)*
c) Gall bladder bed on the It curs of diaphragm
d) One inch to the left of falciform ligament to the IVC

1531. Honey comb liver is seen in - *(JIPMER 87)*
a) Micronodular cirrhosis
b) Dubin Johnson's syndrome
c) Actinomycosis
d) Hydatidosis

1532. The sengstaken tube must maintain a pressue of ... to stop bleeding from varices - *(JIPMER 87)*
a) 20mmHg b)25mmHg
c) 35mmHg d)45mmHg

1533. Following resection of 2/3 of the liver, regeneration is complete within - *(BHU 8 7)*
a) 2-3 months b) 8-10 weeks
c) 4-6 months d) 4-5 weeks

1534. What percentage of the blood flow to the liver is supplied by the hepatic artery - *(UPSC 86,*
a) 90% b) 20% *JIPMER 88)*
c) 40% d)60%

1535. Most common nodule found in the liver is -*(PGI87)*
a) Hepatoma b) Hamartoma
c) Hemangioma d) Cholangioadenoma

1536. Spontaneous rupture of the liver occurs in -*(BHU 88)*
a) Hepatoma b) Portal hypertension
c) Spherocytosis d) Secondary deposits

1537. Multiple liver secondaries are most common in the following cancers - *(AIIMS 84)*
a) Head of pancreas b) Stomach
c) Gallbladder d)Periampullary

1519) c 1520) d 1521)c 1522)a 1523)b 1524)a 1525)d 1526)a 1527)b 1528)a 1529)c 1530)b 1531)c 1532)c 1533)c 1534)b 1535)c 1536)a 1537)c

1538. Multiple Liver secondaries are most common in following persons - *(AIIMS84)*
a) Overweight b) Undeweight
c) Normal weight d) Short and shunted

1539. Liver malignancies can be studied by - *(PGI88)*
a) Radionurclear study b) Ultrasound
c) CT d) Laprascope
e) All

1540. Bud chiari syndrome is due to thrombosis of-
a) Infra renal IVC *(PGI88)*
b) Renal part of IVC
c) Superior mesentric vein thrombosis
d) Hepatic veins

1541. Contra indications of porta systemic shunting include- *(PGI88)*
a) Serum albumin less than 3 mg%
b) Massive ascites
c) Significant juandice
d) All of the above

1542. Drug induced portal hypertension is seen with - *(PGI 78, AIIMS 79)*
a) Vitamin A toxicity b) Methotrexate
c) Aldomet d) Valproic acid

1543. Which is the commonest incidentaloma detected in the liver - *(Kam. 94)*
a) Focal nodular hyperplasia
b) Haemangioma
c) Hepatocellular adenoma
d) Hydatid cyst

1544. A 40 year old male presents with a painless cystic liver enlargement of four years duration without fever or jaundice. The most diagnosis is-*(UPSC96)*
a) Amoebic liver abscess b) Hepatoma
c) Hydatid cyst of liver d) Choledochal cyst

1545. A 20 years old football player received a hard kick in the epigastrium. A large cystic swelling appeared in the epigastrium two weeks later. The most likely diagnosis is - *(UPSC 96)*
a) Hydatic cyst of liver
b) Amoebic liver abscess
c) Pseudopancreatic cyst
d) Haematoma of rectus sheath

1546. Regarding hepatic artery ligation which statement is false - *(Karnat. 96)*
a) The best rusults are obtained incase of haembilla
b) Not useful in primary hepatoma
c) Can cure secondary carcinoma
d) Must be coverd by massive antibiotic administration

1547. Liver biopsy is done through 8th midaxillary line to avoid- *(AI97)*
a) Lung b) Pleural cavity
c) Subdiaphragmatic space d) Gall bladder

1548. In child's criteria partial encephalopaty billirubin 2.5 mg/dl albumin 3 gm/dl controlled ascites indicates - *(PGI 96)*
a) Grade A b) Grade B
c) Grade C d) More information needed

1549. True treatment regarding hepatic amoebiasis -
a) More common in females *(PGI 96)*
b) Multiple lesions
c) Mostly treated conservatively
d) Jaundice is common

1550. Criteria for assessing prognosis of systemic portal shunt is by - *(AIIMS 96)*
a) Serum albumin b) Resistant ascites
c) Serum billirubin d) Type of shunt

1551. All are complications of hydatid cyst in the liver except- *(AP 97)*
a) Jaundice b) Suppuration
c) Cirrhosis d) Rupture

1552. Which one of the following is not a treatment of gastroesophageal variceal haemurrhage -
a) Sclerotherapy *(UPSC 01)*
b) Sengstaken tube
c) Transjugular intrahepatic portacaval shunt
d) Gastric freezing

1553. With couniard's nomenclature which one of the following segments of liver has an independent vascularisation - *(UPSC 02)*
a) Segment Ib) Segment II
c) Segment IV d) Segment VIII

1554. In hepatocellular carcinoma, factor important is -
a) Alcoholic hepatitis *(PGI97)*
b) Schistomiasis
c) Cirrhosis
d) Fasciolepsis buski infestation

1555. TrueaboutTIPSS- *(PGI98)*
a) It is a type of portocaval shunt
b) It is intrahepatic shunt
c) Performed by passing endoscopes
d) Most suitable for patient going for liver transplant

1556. Liver transplant is not possible for - *(PGI98)*
a) Liver b) Pancreas
c) Small intestine d) Cornea

1557. In non hemolytic jaundice, urobilinogen is seen in- *(PGI 99)*
a) Obstructive jaundice b) Hepatic fibrosis
c) Fatty liver d) Infective hepatitis

1558. True about carcinoma liver - *(PGI 2000)*
a) AFP increased in 70% cases
b) Resection possible in few cases only
c) USG guided biopsy is good for diagnosis
d) Aflatoxin & thorotrast are not risk factor

1559. True about amoebic liver abscess - *(PGI 2000)*
a) Frequently associated with diarrhea at presentation
b) Most common in right lobe liver
c) Can rupture into pleural cavity
d) Almost never respond to metronidazole

1560. True about pyogenic liver abscess- *(PGI 01)*
a) Single & large abscess
b) X-ray features are diagnostic
c) Serology is confirmatory investigation
d) Systemic complaints, fever & jaundice common
e) Liver enzyme abnormalities are common & severe

1538) a 1539)e 1540)d 1541)d 1542)a 1543)b 1544)c 1545)c 1546)b,c 1547)a 1548)b 1549)c 1550)a,b,c 1551) c 1552) d 1553)a 1554)a,c 1555)b,d 1556)c 1557)d 1558)a,b,c 1559)b,c 1560)a

1561. True about Hepatocellular carcinoma - *(PGI02)*
a) Most common tumour of liver
b) Resectable only in 1% cases
c) >70% of cases shows -ed AFP
d) USG guided aspiration biopsy is used for diagnosis

1562. Surgical lobes of liver are divided on the basis of -
a) Hepatic artery b) Hepatic vein *(PGI 02)*
c) Bile ducts d) Portal vein
e) Central veins

1563. True about hepatocelluar ca is - *(PGI02)*
a) Associated with HBV and HCV
b) Cirrhosis is predisposing factor
c) Fibrolamellar variety is not associated with cirrhosis
d) Low propensity of vascular invasion
e) Alcoholic cirrhosis does not predispose to HCC

1564. Portal hypertension following portal vein thrombosis are guided by - *(PGI 03)*
a) T in splenic pulp pressure
b) T in portal vein pressure
c) t in hepatic vein pressure
d) Portal vein doppler study

1565. Two most important clinical features of primary biliary cirrhosis - *(PGI 03)*
a) Generalised pruritus b) Jaundice
c) Fatigue d) Clubbing
e) Hematemesis

1566. Tumour markers of Hepatocellular carcinoma -
a) AFP b)CEA *(PGI 03)*
c) HOG d)CA-19-9
e) CA-125

1567. True about hydatid cyst of liver - *(PGI 04)*
a) Caused by E. granulosus
b) In 80% cases cyst is single
c) Blood culture helpful
d) Surgery is the only treatment.

1568. Child-pugh criteria doesnot includes - *(PGI04)*
a) Encephalopathy b) Ascites
c) Albumin d) Creatinine
e) ALT

1569. True about Hepatocellular Carcinoma - *(PGI04)*
a) Most prevalent malignancy
b) Common liver tumor
c) HBV predisposes
d) Patient present in early stage
e) Prognosis good

1570. During surgical exploration for hydrated cyst of the liver, any of the following agents can be used as scolicidal agent except - **(***UPSC 04)*
a) Hypertonic sodium chloride
b) Formalin
c) Cetrimide
d) Povidone Iodine

1571. The Couinaud's segmental nomenclature is based on the position of the - **(***AI04)*
a) Hepatic veins and portal vein
b) Hepatic veins and biliary ducts
c) Portal vein and biliary ducts
d) Portal vein and hepatic artery

1572. Vascular inflow occlusion of the liver is by -
a) Clamping the hepatic artery
b) Occluding the portal vein
c) Clamping the hepatic veins
d) The pringle manoeuvre

1573. Which of the following liver tumour has a propensity to invade the portal or hepatic vein - *{AIIMS 04)*
a) Cavernous haemangioma
b) Hepatocellular carcinoma
c) Focal Nodular hyperplasia
d) Hepatic adenoma

1574. A17 year old boy is admitted to the hospital after a road traffic accident. Per abdomen examination is normal. After adequate resuscitation, his pulse rate is 80/min and BP is 110/70 mmHg. Abdominal CT reveals 1 cm deep laceration in the left lobe of the liver extending from the dome more than half way through the parenchyma. Appropriate management at this time would be - **(***UPSC 05)*
a) Conservative treatment
b) Abdominal exploration and packing ofhepatic wounds
c) Abdominal exploration and ligation of left hepatic artery
d) Left hepatectomy

1575. The operation that precipitates portoasystemic encephalopathy is - **(***MAHE 05)*
a) Splenorenal shunt
b) Siguira operation
c) Talma-Marison Operation
d) Portacaval anastomosis

1576. Which one of the following is not correct with regard to amoebic liver abscess - **(***ICS 05)*
a) It usual occurrence is in the right lobe
b) Patient is toxic
c) Surgical drainage is always indicated
d) Extension of abscess from liver to pericardium is the most dreaded complication

1577. True about Hydatid disease - *{PGI June 05)*
a) MC site is lung
b) Pre-op Albendazole followed by surgery is the treatment of choice
c) 20% saline is scolicidal
d) Puncute, aspiration, injection & reaspiration (PAIR) done in hepatic hydatids

1578. Indication of liver transplantation A/E -
a) Biliary atresia *{PGI June 05)*
b) Sclerosing cholangitis
c) Hepatitis A
d) Cirrhosis
e) Fulminant hepatic failure

1561) c,d 1562) a,c,d 1563)a,b,c 1564)a,b,d 1565)a,c 1566)a 1567)a,b 1568)d,e 1569)c 1570)d 1571)a 1572)d 1573)b 1574)b 1575)d 1576)c>b 1577)b,c,d 1578)c

1579. A patient presented to emergency ward with massive upper gastrointestinal bleed. On examination, he has mild splenomegaly. In the absence of any other information available. Which of the following is the most appropriate therapeutic modality -
a) Intravenous propranolol *(AIIMSNov 05)*
b) Intravenous vasopressin
c) Intravenous pantoprazole
d) Intravenous somatostatin

1580. The following is ideal for the treatment with injection of sclerosing agents - *(AI05)*
a) External hemorrhoids
b) Internal hemorrhoids
c) Prolapsed hemorrhoids
d) Strangulated hemorrhoids

1581. All of the following modalities can be used for in situ ablation of liver secondaries, except - *(AI 06)*
a) Ultrasonic waves b) Cryotherapy
c) Alcohol d) Radio-frequency

1582. Indications for fine needle aspiration in liver abscess are - *(PGI June 06)*
a) Recurrent
b) Left lobe
c) Refractory to treatment after 48-72 hrs
d) > lOcms size
e) Multiple

1583. Best test to differentiate between medicals and surgical j audice is? **(***APPG 06)*
a) Akaline phosphatase
b) Bilirubin and serum enzymes
c) Enzymes
d) Ultrasound

1584. TIPSS involves percutaneous creation of a shunt between - **(***Karnataka pgmee 2006)*
a) Portal vein and vena cava
b) Portal vein and hepatic vein
c) Hepatic vein and vena cava
d) Portal vein and hepatic artery

1585. Contraindications to major hepatic resection for metastatic disease include all of the following except-
a) Total hepatic involvement (*Karn 06)*
b) Advanced cirrhosis
c) Extrahepatic tumor involvement
d) Jaundice from extrinsic ductal obstruction

1586. All are used in treatment of amoebic liver abscess except- *(MAHE07)*
a) Diloxanide furoate b) Chloroquine
c) Metronidazole d) Emetine

1587. "Crumbled egg appearance" in liver seen in -
a) Hepatic adenoma *(UP07)*
b) Chronic amoebic liver abscess
c) Hydatid liver disease
d) Haemangioma

1588. Charcot's triad - *(PGI June 07)*
a) Pain b) Fever
c) Jaundice d) Anaemia

1589. The minimum amount of normal perfused liver parenchyma to be left intact when a hepatic resection is planned is - **(***Corned 0 7)*
a) 10% b) 20%
c) 50% d) 75%

1590. The earliest symptom in primary biliary cirrhosis is- *(Corned 07)*
a) Jaundice b) Pruritus
c) Melanosis d) Vomiting

1591. Normal portal vein pressure is - *(Corned 08)*
a) <3mmHg b)3-5mmHg
c) 5-10mmHg d) 10to 1 2mmofHg

1592. In Couinaud classification, segment IV of liver is- *(AIIMS Nov 07)*
a) Caudate lobe b) Quadrate lobe
c) Right lobe d) Left lobe

1593. A surgeon excises a portion of liver to the left of the attachment of the falciform ligament. The segments that have been resected are - *(AI 08)*
a) Segment la and 4 b) Segment 1 and 4b
c) Segment 2 and 3 d) Segment 1 and 3

1594. Auxiliary orthotopic liver transplant is indicated for-
a) Metabolic liver disease *(Aiims May 08)*
b) As a standby procedure until finding a suitable donor
c) Drug induced hepatic failure
d) Acute fulminant liver failure for any cause

1595. Indication of aspiration in liver abscess A/E -
a) Left lobe abscess *(PGI June 08)*
b) Deep & less than 5 mm size
c) Multiple
d) Recurrent

1596. IVeament of hydatid cyst ? *(APPG 08)*
a) Excision of cyst
b) Percutaneous drainage
c) Conservative managment
d) None

1597. Central dot sign is seen in? *(AIIMS Nov 08)*
a) Primary sclerosing cholangitis
b) Liver Hamartoma
c) Caroli's disease
d) Polycystic liver disease

1598. Right hepatic duct drains all, except-
a) Segment I b) Segment III *(AIIMSMay 09)*
c) Segment V d) Segment VI

1599. False about hepatic duct- *(AIIMSMay 09)*
a) Left hepatic duct formed in umbilical fissure
b) Caudate lobe drains only left hepatic duct
c) Right hepatic duct formed by V and VIII segments
d) Left hepatic duct crosses IV segment

1600. Not true about choledochal cyst is -*(AIIMSMay 09)*
a) Associated with anomalous junction of the pancreatic and biliary duct.
b) Type 2 is most common
c) Surgical removal is the treatment of choice
d) If ruptures can cause biliary peritonitis

1579)c 1580)b 1581)a 1582)d 1583)d 1584)b 1585)d 1586)a 1587)c 1588)a,b,c 1589)b 1590)b 1591)c 1592)b 1593) c 1594)d 1595)b,c,d 1596) b 1597)c 1598)b 1599)b 1600)b

1601. Liver biopsy is done through 8th midaxillary line to avoid - *(DELHI PG Feb. 09)*
a) Lung b) Pleural cavity
c) Sub diaphragmatic d) Gall bladder

1602. Which of the following liver tumors always merit surgery ? *(DELHIPG Mar. 09)*
a) Hemangioma
b) Hepatic adenoma
c) Focal nodular hyperplasia
d) Peliosis hepatic

1603. In patients with cirrhosis of the liver the site of obstruction in the portal system is in *the-(Manipal 09)*
a) Hepatic vein b) Post sinusoidal
c) Extra hepatic portal vein d) Sinusoids

1604. In Budd-Chiari syndrome, the site of venous thrombosis is - *(Manipal 09)*
a) Infr a-hepatic inferior vena cava
b) Inffa-renal inferior vena cava
c) Hepatic veins
d) Portal vein

1605. A 20-year-old man presents with repeated episodes of haematemesis. There is no history of jaundice or liver decompensation. On examination, the significant findings include moderate splenomegaly and presence of esophageal varices. There is no ascites or peptic ulceration. The liver function tests are normal. What is the most likely diagnosis -
a) Extrahepatic portal venous obstruction
b) Non-cirrhotic portal fibrosis *(UPSC-I09)*
c) Cirrhosis
d) Hepatic venous outflow tract obstruction

1606. Consider the following with reference to the management of portal hypertension SURGERY:
1. Infusion of vasopressin *(UPSC-II09)*
2. General resuscitation
3. Devascularisation procedure
4. Endoscopic sclerotherapy

What is the appropriate sequence in the line of management in the event of massive variceal bleeding in portal hypertension ?
a) 1,4,2,3 b) 2,1,4,3
c) 4,2,1,3 d)3,2,1,4

1607. In orthotropic liver transplantation, which is the best way to get bile drainage in donor liver - *(A110)*
a) Donor bile duct with recipient bile duct or Roux en Y choledochojejunostomy
b) Donor bile duct with duodenum of recipient
c) Donor bile duct with jejunum of recipient
d) External drainage for few days followed by choledochojejunostomy

1608. In Budd Chiari syndrome, the occlusion is at the -
a) JVC b) Renal vein *(DPG10)*
c) Hepatic vein d) Splenic vein

1609. Following is true about Focal nodular hyperplasia (FNH) except- *(Maharashtra 10)*
a) Unusual benign tumor of liver
b) Commonly symptomatic and occurs as multiple liver nodules
c) More common in females than in males
d) Contains hepatocytes and Kupffer cells

1610. The percutaneous PAIR therapy used in the treatment of uncomplicated hepatic hydatid cyst can be associated with the following complications, except- *(UP SC II10)*
a) Urticaria b) Anaphylaxis
c) Hypotension d) Vomiting

1611. All ae true about amoebic liver abscess except -
a) Metronidazole is mainstay of treatment
b) Multifocal abscess can not be treated by aspiratio
c) More common in left side *(PGI May 10)*
d) More common in female

1612. False about hydatid cyst of liver- *(PGINov. 10)*
a) Hepatic resection is never done
b) Laparoscopic aspiration of cyst is performed
c) Most commonly located in the right liver
d) Mostly asymptomatic
e) Most common causative organism is echinococcus granulosus

1613. Not an indication for PAIR treatment in hydatid cyst - *(PGINov. 10)*
a) Size >5 cm b) Multiloculated
c) Cyst in lung d) Recurrence after surgery
e) Perforated cyst

1614. False about hepatic duct -
a) Left hepatic duct formed in umbilical fissure
b) Caudate lobe drains only left hepatic duct
c) Right hepatic duct formed by V and VIH segments
d) Left hepatic duct crosses IV segment

1615. Surgeon excises a portion of liver to the left of the attachment of the falciform ligament. The segments that have been resected are - *(AI11)*
a) Segment 1 a and 4 b) Segment 1 and 4b
c) Segment 2 and 3 d) Segment 1 and 3

1616. The prognostic indicators in a cse of portal hypertension include - *(UPSCII11)*
1. Serum globulin 2. Serum albumin
3. Serum bilirubin 4. Ascites

Select the correct answer using the code given below- *(UPSC II11)*
a) 1,2 and 3 b) 1 and 4 only
c) 2, 3 and 4 d) 3 and 4 only

1617. A 40-year old alcoholic male complains of acute pain in the epigastrium associated with vomiting for the last 10 days. On clinical examination, he is found to have a mass in the epigastrium. The most likely diagnosis is - *(UPSC 1111)*
a) Perforated peptic ulcer with sub-hepatic abscess
b) Pseudopancreatic cyst
c) Carcinoma of head of the pancreas
d) Hepatoma in left lobe of liver

1601)a 1602) b 1603)d 1604)c 1605)b 1606)b 1607)a 1608)c 1609)b 1610)None 1611)c,d 1612)a 1613) d,e 1614)b 1615)c 1616)c 1617)b

SPLEEN

1618. Most common complication post splenectomy is -
a) Formation of pseudo cyst (*UPSC86,*
b) Injury to tail of pancreas *JIPMER 88)*
c) Left lower lobe atelectasis
d) Perforation of stomach

1619. Most common post operative complication of splenectomy is - *(BHU 88)*
a) Left side pleural effusion
b) Subphrenic abscess
c) Left lower lobe atelectasis
d) Pancreatic fistula

1620. Accidental small splenic rupture is treated with-
a) Catgut sutures *(PGI88)*
b) Silk sutures
c) Omental patch
d) Catgut suturing with omental patch
e) Splenectomy

1621. The spleen contains about.....% of the total blood volume- *(PGI 85)*
a) 1 b)2
c) 5 d)7

1622. The most reliable radiological evidence of splenic rupture - *(PGI 85, Jipmer 86,87)*
a) Obliteration of psoas shadow
b) Elevation of left diaphragm
c) Indendation of gastric fundic shadow
d) Fracture ribs of the left lower side
e) Obliteration of splenic outline

1623. Most common complication of splenectomy is -
a) Pancreatic leak *(AIIMS92)*
b) Pulmonary complications
c) Pneumococcal peritonitis
d) Hemorrhage

1624. Splenosis means - *(PGI 79, AIIMS 85)*
a) Infection of spleen
b) Presence of acessory spleens
c) Rupture of spleen and distribution of its tissue on peritoneum
d) Non-functioning spleen

1625. Splenic vein thrombosis is best treated by -
a) Splenectomy *(USPC 97)*
b) Porta-caval shunt
c) Spleno-renal shunt
d) Mesenterico-caval shunt

1626. All of the following are features of splenic rupture except - *(TN 99)*
a) Obliteration of psoas shadow
b) Obliteration of splenic outline
c) Elevation of left diaphragm
d) Obliteration of colonic air bubble

1627. One of the following does not cause increase in the size of spleen in later stages - *(MANIPAL 01)*
a) Sickle cell anaemia b) Cirrhosis
c) Infectious mononucleosis d) Hairy cell leukaemia

1628. Splenectomy is least useful in - *(All India 89)*
a) Congenital elliptocytosis
b) Thalasemia major
c) Congenital spherocytic anaemia
d) Hereditary nonspherocytic haemolytic anaemea

1629. Splenectomy is indicated in - *(AIIMS 87)*
a) Sickle cell anemia
b) Hereditary spherocytosis
c) Hemoglobin C disease
d) Hodgkins lymphoma

1630. Removal of senescent RBC from circulation by spleen is called - *(PGI 79, JIPMER 80)*
a) Culling b) Pitting
c) Filtering d) Phagocytosis

1631. Hypersplenism is seen in - *(PGI 97)*
a) Pancytopenia b) Thrombocytopenia
c) Leukopenia d) Polycythemia

1632. After splenectomy, most common infections is- *(PGI 97, AIIMS 84)*
a) Pneumococcus b) Staphylococcus
c) Esch. coli d) Pneumocystis carinii

1633. Most common malignancy affecting spleen is -*(PGI*
a) Angiosarcoma b) Hamartoma *97)*
c) Secondaries d) Lymphoma

1634. Post splenectomy sepsis is common in -*(PGI2000)*
a) ITP b) Thalassemia
c) Hereditaryspherocytosis d) Trauma

1635. Infections encountered after splenectomy -
a) H. influenza b) Streptococcus pneumoniae
c) Klebsiela d) Neisseria *(PGI June 05)*

1636. In splenic injury conservative management is done in- *(MAHE05)*
a) Hemodynamically unstable
b) Young patients
c) Shattered spleen
d) Extreme pallor and hypotension b

1637. Positive kehrs sign is - *(Manipal 06)*
a) Haemopertionium b) Acute cholecystisi
c) Acute pancreatitis d) Amoebic abscess

1638. An evidence that splenectomy might benifit a patient with idiopathic thrombocytopenic purpura includes which of the following ? *(UPSC 0 7)*
a) A significant enlargement of the spleen
b) A high reticulocyte count
c) Patients age less than five years
d) An increase in platelet count on corticosteroid therapy

1639. What is the most common malignancy affecting spleen- *(UPSC-1I08)*
a) Angiosarcoma b) Hamartoma
c) Secondaries d) Lymphoma

1640. A patient with ITP has a platelet count of 50000 and is being planned for splenectomy. What is the best time for platelet infusion in this patient - *(AI08)*
a) 2 hours before surgery
b) At the time of skin incision
c) After ligating the splenic artery
d) Immediately after removal of spleen

1618)c 1619)c 1620)d 1621)b 1622)e 1623)b 1624)c 1625)a 1626)d 1627)a 1628)d 1629)a,b,d 1630)a 1631)a,b,c 1632) a 1633)d 1634)a,b 1635)a,b,c 1636)b 1637)a 1638)d 1639)d 1640)c

1641. During splenectomy in ITP, platelet infusion is given-
a) Immediately after ligating splenic vein*(DPGEE 08)*
b) Immediately after removal of spleen
c) After incision
d) Next day of surgery

1642. All of the following are true about OPSI (opportunistic post splenectomy infection) except -
a) Develop 1-5 year after splenectomy*(PGIJune 09)*
b) Max risk is within 1 yr of splenectomy
c) Begin with headache, myalgia *8c* fever
d) May present with severe septic shock
e) Usually not respond with antibiotic Treatment

1643. Most common cysts of the spleen are - *(AI10)*
a) Hydatid cyst b) Dermatoid cyst
c) Pseudocyst d) Lymphangioma

1644. A patient presents with fever for 3 weeks. On examination he is observed to have splenomegaly. Ultrasonography reveals a hypoechoic shadow in spleen near the hilum. Gram negative bacilli are isolated on blood culture. Which of the following is the most likely causative organism - *(AI 10)*
a) Cytomegalovirus b) Toxoplasmosis
c) Salmonella d) Lymphoma virus

1645. Most common infections after splenectomy are -
a) Capsulated bacteria *(DPG10)*
b) Uncapsulated bacteria
c) Gram positive sepsis
d) Gram negative bacteria

1646. Management of grade 3 splenic trauma in a stale child- *(PGINov.10)*
a) Embolization b) Partial splenectomy
c) Total splenectomy d) Conservative

GALL BLADDER & BILE DUCT

1647. Following tumours have the best prognosis -
a) Carcinoma gall bladder *(AIIMS 84)*
b) Carcinoma pancreas
c) Hepatoma
d) Cholangiocarcinoma of the CBD

1648. Commonest type of gall stone is - *(Kerala 87)*
a) Cholesterol stone b) Pigment
c) Mixed d) All are equally common

1649. Percentage of gall stones which are radio opaque -
a) 10% b) 20% *(JIPMER 86)*
c) 30% d) 50%
e) 80%

1650. Which of the following is not a component of Saint's triad - *(PGI86)*
a) Gall j stones b) Diverticuli coli
c) Crohn's disease d) Hiatus hernia

1651. Common bile duct stones will manifest all except -
a) Distended gall bladder b) Jaundice *(AI89)*
c) Itching d)Clay coloured stools

1652. A 40 year old lady is found to have a symptomatic galls sotnes. The treatment of choice *is-(AIIMS 85)*
a) Observation b) Cholecystostomy
c) Cholecystectomy d) Fat free diet

1653. The following can be done in obstructive j aundice - *(PGI 88)*
a) Vitamin K injections b)Vitamin C injections
c) Dehydration therapy d) Extamal drainage

1654. Bile is concentra in the gall bladder to..... times -
a) 5 b) 10 *(PGI 88)*
c) 20 d)50

1655. The components of Saints triad are - *(PGI 88)*
a) Gall stones b) Mesentric cysts
c) Hiatus hernia d) Diverticulosis

1656. In cholangitis, the organism mostly responsible is - *(PGI88)*
a) E.coli b) Streptococcus
c) E. Histolytica d) Clostridium

1657. The gall bladder is capable of distending.....ml. -
a) 10 b) 20 *(PGI 88)*
c) 40 d)50

1658. Association of carcinoma gall bladder with gall stones is about - *(PGI 85)*
a) 50% b)70%
c) 90% d) 20 %

1659. Best investigative modality for gall bladder-
a) OCG b)PTC *(PGI 85)*
c) Ultrasound d) Intravenous cholangiogram

1660. Triad of Jaundice, chills and fever occur in -*(AI 90)*
a) CBD stones b) Post cholecystectomy
c) Acute hepatitis d) Pancreatitis

1661. Which does not contribute to Enterobiliary Fistula- *(JIPMER 91)*
a) Duodenal ulcer b) Gall stones
c) Gastric ulcer d) Carcinoma gall bladder

1662. After a routine cholecystectomy, malignancy is detected in the gall bladder, the next line of treatment is- *(AIIMS 91)*
a) Right partial hepatectomy
b) Chemotherapy via hepatic artery
c) Hepatic wedge resection
d) Regular follow up

1663. Commonest association seen in carcinoma gall bladder- *(AIIMS 91)*
a) Peritoneal deposits
b) Duodenal infiltration
c) Secondaries liver
d) Cystic node involvement

1664. Incidence of gall stone disease is increased in all of the following except - *(AI 92)*
a) Truncal vagotomy b) Jejunal resection
c) ileal resection d) Right Hemicolectomy

1665. Strawberry gallbladder is seen in - *(JIPMER 81)*
a) Gangrene of gallbladder
b) Porcelain gall baldder
c) Adenomatosis
d) Cholesterolosis

1641) a 1642)b 1643)a 1644)c 1645)a 1646)a,dl647)c 1648)c 1649)a 1650)c 1651) a 1652)c 1653)a,d 1654)a,b 1655) a,c,d 1656) a 1657) d 1658) c 1659) c 1660) a 1661) c 1662) d 1663) c 1664)a,b,d 1665) d

1666. Cholangiocarcinoma histologically resembles -
a) Sq. cell type *{AIIMS 79, Delhi 79, 92)*
b) Colloid cell type
c) Schirrhous type
d) Columnar cell type

1667. Which of the following is the commonest site for impaction of the gall stones - *(JIMPER 81,87 A1IMS 84)*
a) Common hepatic duct
b) Ampulla of vater
c) Retroduodenalportion of common bile duct
d) Supradodenal portion of common bile duct

1668. Gall stones do not contain- *{JIPMER 81, AMU 86)*
a) Oxalate b) Cholesterol
c) Phosphate d) Carbonate

1669. Graham Cole test refers to - *{ARMS81, AP 89)*
a) Oral cholecystography
b) Intravenous cholangiography
c) Pre-oprerative cholangiography
d) Post-operative cholangiography
e) Tomography

1670. Gall stones are composed of all except -*{Kerala 94)*
a) Oxalates b) Bile salts
c) Choesterol d) Bile pigments

1671. Inability to visualise gall bladder in OCG is due to -
a) Malabsorption *{Kerala94)*
b) Poor functioning of gall bladder
c) Non functioning of liver
d) All

1672. Investigation of choice in gall bladder stone is - *{Kerala94)*
a) USG b) X-ray abdomen
c) OCG d) Intravenous cholangiogram

1673. Cholesterosis - *{Karn94)*
a) Disease of defective metabolism of choline
b) Concerned with epithelial tumours of brain'
c) Diffuse deposition of cholesterol in mucosa of gall bladder
d) Disease concerned with obstructive jaundice

1674. Cholesterol gall stones are due to - *{JIPMER 95)*
a) Decreased motility of Gall bladder
b) Hypo secretion of bile salts
c) Hypercholesterolemia
d) All of the above

1675. best suture for common bile duct is - *{JIPMER 95)*
a) Synthetic absorbable synthetic
b) Synthetic non-absorbable
c) Non-synthetic absorbable
d) Non-synthetic non-absorbable

1676. Contra indication for laproscopic cholecystectomy is all except - *{Kerala 95)*
a) Shrunken liver b) Previous laprotomy
c) Emphysema d) Obese individual

1677. Charot's triad is seen in - *{AI96)*
a) Acute pancreatitis b) Hemobilia
c) Stone in bileduct d) Chronic cholecystitis

1678. The most common malignancy after cholecystectomy is of - *(DELHI PG 96)*
a) Colon b) Stomach
c) Pancreas d) Ileum

1679. Following are true about choledochal cyst except
a) Presents mostly in childhood *{ARMS 96)*
b) Presents jaundice abdomen, mass abdomen pain
c) Congenital weakness of gall bladder wall
d) Treatment is cystojejunostomy

1680. After exploration of common bile duct, the T-Tube is removed on which of the following days - *{Karnat 96)*
a) 3 postop.day b) 4 postop.day
c) 12 postop.day d) 6 postop.day

1681. An ultrasound examination shows dilated intrahepatic biliary channels with a small gall bladder. The most likely possibility is -*{Karn 96,94)*
a) Gall baldder stone
b) Pancreatic calculus
c) Common bile duct stone
d) Carcinoma of the head of the pancreas

1682. The most common cuase of suppurative cholangitis is- *(UP 97)*
a) Stone in common bile duct
b) Cancer of the ampulla of vater
c) Choledochal cyst
d) Empyema of gall bladder

1683. All of the following increase the risk of gallbladder carcinoma except - *(ARMS 9 7)*
a) Chronic pancreatitis b) Choledochal cyst
c) Chloronchis d) Ulcerative colitis

1684. Investigation of choice of case of obstructive jaundice- *(AI97)*
a) USG b) Pain X-ray
c) CT scan d)ERCP

1685. Treatment of choice of choledochal cyst - *(PGI96)*
a) Hepatic transplantation
b) Cystojejunostomy
c) Excision of cyst with hepatojejunostomy
d) Gastrojejunostomy

1686. After surgery, a small left over stone in the CBD is best treated by - *{Kerala 9 7)*
a) ERCP
b) ESWL
c) Heparinised saline through T tube
d) Repeat surgery

1687. 'STRAWBERRYGALLBLADDER'is- *{AP97)*
a) Adenoma gall bladder
b) Acute cholecystitis
c) Cholesterosis
d) Carcinoma gall bladder

1688. Treatment of choice of a CBD stone of 2.5 cms size, diagnosed 2 years after cholecystectomy -
a) Choledochotomy and T tube *(A199)*
b) Dormia basket
c) Transduodenal sphincterotomy
d) Supraduodenal choledochotomy

1666) c 1667)b 1668)a 1669)a 1670)a 1671)d 1672)a 1673)c 1674)d 1675)c 1676)a 1677)c 1678)b 1679)c 1680) c 1681) c 1682) a 1683)a,b,c,d 1684) a 1685) c 1686) a 1687) c 1688) c

1689. In a post-cholecystectomy patient, who develops bile leakage due to CBD TEAR 5 days pot-op, with NO T-TUBE INSERTED at the time surgery ideal treatment is - *(AIIMS98)*
a) ERCP procedure with stent
b) Hepaticojejunostomy
c) Primary repair after reopening abdomen
d) Ultrasound guided insertion of drain

1690. Cholangiography viaT-tube done after how many days of cholesystectomy - *(TN99)*
a) 1-5 days b) 5-9 days
c) 10-14 days d) 15 -20 days

1691. Gallstones- *(Orissa98)*
a) Are about twice as common in men as in women
b) There is an increased incidence of stones in diabetics
c) About 80-90 % of gall stones are radio-opaque
d) Are usually more than 50 mm in diameter

1692. Regarding stones in gall bladder the following are true except - *(Kerala2k)*
a) Mixed stones are common in the west
b) In Saints Triad diverticulosis of colon and hiatus hernia coexist
c) Is a risk factor in the development of GB carcinoma
d) 90 % of gall stones are radio-opaque
e) A mucocele of GB is cuased by a stone impacted in the Hartmann's pouch

1693. The substance usedof OCG is - (*PGI87Kerala 88)*
a) Iapanoic acid
b) Sodium diltrozite
c) Meglumine iodothalamate
d) Biligraffin
e) Dianosil

1694. Dye used in IV cholangiography is - (*PGI86)*
a) Dianosil b) Conray
c) Biligraffin d) Myodil

1695. What is more appropriate for diagnosis of CBD stones- *(PGI 97)*
a) Ultrasonography b)ERCP
c) OCG d) IV cholangiography

1696. All are seen in hemobilia except- *(PGI 99)*
a) Shock b) Colicky pain
c) Melena d) Jaundice

1697. Which among the following does not lead to pigment gallstones - *(PGI 99)*
a) TPN b) Clonorchis sinensis
c) Hemolytic anemia d) Alcoholic cirrhosis

1698. The treatment of gall stone ileus is - *(PGI 99)*
a) Cholecystectomy alone
b) Removal of obstruction
c) Cholecystectomy, closure of fistula and removal of stone by enterotomy
d) Cholecystectomy with closure of fistula

1699. Features of healthy gallbladder on laprotomy are -
a) Typical "sea-green" colored *(PGI2000)*
b) Wall in thin & elastic
c) Cannot be emptied
d) Not easily visible

1700. Which of the following statements is true regarding cholangitis - *(PGI 01)*
a) Increased leucocyte count
b) Increased transaminases
c) Increased bilirubin
d) Increased alkaline phosphatase
e) Association with fever and chills

1701. Gallstones may be complicated by which among the following- *(PGI 01)*
a) Pancreatitis b) Choledocholithiasis
c) Acute cholecystitis d) Carcinoma stomach
e) Carcinoma pancreas

1702. Treatment for common bile duct stone is y -*(PGI01)*
a) ESWL
b) Exploration of bile duct and recovery of stones
c) Bile duct stenting
d) Nasobiliary drainage
e) Percutaneous drainage

1703. Acalculous cholecystitis is caused by - *(PGI 01)*
a) Diabetes mellitus b) Total parenteral nutrition
c) Tuberculosis d) Anemia
e) Malignancy

1704. Which of the following are histopathological features of Extra hepatic Biliary Atresia - *(PGI 01)*
a) Bile lakes
b) Hepatocyte ballooning degeneration
c) Marked bile duct proliferation
d) Fibrosis of hepatic duct
e) Parenchymal cholestasis

1705. Better prognostic factor for operation of biliary duct obstruction in newborn are - *(PGI 01)*
a) No passage of bile
b) Size of ductule > 200 micron
c) Weight of baby > 3 kg
d) Preterm baby
e) Age of 8 weeks

1706. A patient having multiple Gall stones and shows 8 mm dilation and 4 stones in CBD, best treatment modalities are - *(PGI 02)*
a) Cholecystectomy with choledecholithotomy at same setting
b) ESWL
c) Cholecystectomy and wait for ERCP
d) Sphicterotomy and then cholecystectomy
e) Cholecystectomy and after 14 days sphincterono done

1707. CBD stone may present with - *(PGI02)*
a) Increased bilirubin b) TWBC count
c) T livers enzymes d) Fever with rigors
e) Hepatomegaly

1689) a 1690) c 1691)b 1692)d 1693)a 1694)c 1695)b 1696)a 1697)a 1698)b 1699)a,b 1700) All 1701)a,b,c 1702) All 1703)a,b,c,e 1704)c,d,e 1705)b,e 1706)a,d 1707)a,b,c,d

1708. True about gall stones - *(PGI02)*
a) More common in female
b) Gall stones, haitus hernia, CBD stones form Saints triad
c) Limely bile precipitated
d) Lithotripsy always done

1709. Regarding Ca gallbladder - *(PGI02)*
a) Squamous cell ca is the most common
b) Present with jaundice
c) Good prognosis
d) Gallstones predispose
e) 65% survival after surgery

1710. On 7th postoperative day after laparoscopic cholecystectomy, pt. developed rt. upper abdominal pain and 10 cm X 8 cm collection. Treatment consists of- *(PGI 03)*
a) Immediate laparotomy
b) Percutaneous drainage
c) Laparotomy & surgical exploration of bile duct and T tube insetion
d) Laparoscopic cystic duct ligation and percutaneous drain
e) Roux-en-Y loop hepatojejunostomy

1711. Charcot's triad consists of - *(PGI 03)*
a) Biliary colic b) Jaundice
c) fever with rigor d) Hypotension
e) Pancreatitis

1712. Bile ductopenia seen in - *(PGI03)*
a) GVHD b) Alcoholic hepatitis
c) Autoimmune hepatitis d) Cirrhosis
e) Sclerosing cholangitis

1713. On 5th postoperative day after laparoscopic cholecystectomy, a 50 years old lady presented with rt. upper quadrant pain with fever and 12 cm subhepatic collection on CT and ERCP shows cystic duct leak. The best management is - *(PGI 03)*
a) Immediate laparotomy
b) Percutaneous drainage of fluid
c) Leparatomy and surgical exploration of bile duct and T-tube insertion
d) Laparoscopic cystic duct ligation & percutaneous drain
e) Roux en loop hepatojejunostomy

1714. Vanishing bile duct syndrome is seen in - *(PGI 03)*
a) Chronic viral hepatitis
b) Sarcoidosis
c) Lymphoma
d) Non-cirrhotic portal fibrosis
e) Alcoholism

1715. A patient presenting with H/O diarrhea for several years with recent onset pruri tus & tAlkalline Phosphatase, normal SGOT/PT & abnormality; the diagnosis is - *(PGI 04)*
a) Hodgkins Lymphoma b) Sclerosing cholangitis
c) Chronic Hepatitis d) Autoimmune Hepatitis
e) virald Hepatitis

1716. A 69 year old male patient having coronary heart disease was found to have gall bladder stones white undergoing a routine ultrasound of the abdomen. There was no history of colic or jaundice at any time. What is the best treatment advice for such a patient for his gall bladder stones - *(AIIMS 04)*
a) Open cholecystectomy
b) Laparoscopic cholesystectomy
c) No surgery for gall bladder stones
d) ERCP - aridremoval of gall bladder stones

1717. A retained stone impacted in distal common bile duct is seen on T- tube cholangiogram. What is the best management of stone- *(UPSC 04)*
a) Dissolution therapy
b) Operative removal
c) Endoscopic sphincterotomy and stone extraction
d) No active treatment is required

1718. Clinical features of choledochal cyst in adult are -
a) Pain, lump and intermittent jaundice *(UPSC 04)*
b) Pain, fever and intermittent jaundice
c) Pain, lump and progressive jaundice
d) Pain, fever and progressive jaundice

1719. The ideal treatment of stenosis of sphincter of Oddi is- *(SGPGI04)*
a) Transduodenal sphincteroplasty
b) Endoscopic sphincterotomy
c) Choledochojejunostomy
d) Choledochoduodenostmy

1720. Laproscopic cholecystectomy is largely preferred for all of the following reasons to conventional laparotmy except - *(SGPGI04)*
a) Decrease pain
b) Decreased incidence of bile duct injuries
c) Smaller scar
d) Decreased stay in hospital

1721. "Limeybile" is- *(Karnataka 04)*
a) Present in the CBD
b) Thin and clear
c) Like toothpaste emulsion in the gall bladder
d) Bacteria rich

1722. The treatment of choice for a mucocele of gallbladder is - *(AIIMS 04)*
a) Aspiration of mucous
b) Cholecystectomy
c) Cholecystostomy
d) Antibiotics and observation

1723. A 30-year old lady is found to have gall stones. She is asymptomatic and has never had any jaundice or dyspeptic symptoms is the past. The best course of management for her would be - **(***UPSC 05)*
a) Dissolution therapy
b) Extra corporeal lithotripsy
c) Cholecystectomy
d) To wait till she becomes symptomatic

1708) a 1709) b,d 1710)b,d,e 1711)a,b,c 1712)a 1713) b,d 1714) b 1715) b 1716)c 1717)c 1718)c 1719)a 1720)b 1721)c 1722)b 1723)d

1724. Which of the following factors in bile juice is responsible for preventing the precipitation of cholesterol and formation of gallstones - (*ICS 05)*
a) High alkaline condition
b) High concentration of bicarbonates
c) Bile salts
d) Bile pigments

1725. True about primary sclerosing cholangitis are A/E-
a) Fibrosing cholangitis of bile duct (*PGI June 05)*
b) Periductal onion skin appearance
c) Cirrhosis never occurs
d) Jaundice seen
e) AAV ulcerative colitis

1726. Factors a/w gall bladder Ca- *{PGI June 05)*
a) Chronic cholesteral stone b) Hyperlipidemia
c) Chronic gall bladder disease d) Hepatitis
e) Porcelain gall bladder

1727. A 50 year old lady with history of jaundice in the past has presented with right upper quadrant abdominal pain. Examination and investigations reveal chronic calculous cholecystitis. The liver function tests are within normal lilmits and no ultrasound examination the common bile duct is not dilated. Which of the following will be the procedure of choice in her-
a) Laparoscopic cholecystectomy *(J & K 05)*
b) Open choledocholithotomy with CBD exploration
c) ERCP ± cholecystectomy followed by laparoscopic cholecystectomy
d) Laparoscopic cholecystectomy followed by ERCP ± choledocholithotomy

1728. Most common type of cancer gall bladder in a patient with gallstones - *{APPGE 05)*
a) Adenocarcinomab) Squamous carcinoma
c) Adenocarcinoma d) None

1729. Regarding bile duct injuries following Cholecystectomy which of the following statement is false - *(AIMS Nov 05)*
a) The incidence following open cholecystectomy is in the range of 0.2 - 0.3%
b) The incidence rate following Laparoscopic Cholecystectomy is three times higher than the rates following Open cholecystectomy
c) Untreated cases may develop secondary biliary cirrhosis
d) Routine use of 'open' technique of laparoscopic port insertion has resulted in a decline in the incidence of postlaparoscopic cholecystectomy bile duct injuries

1730. Acalculous cholecystitis can be seen in all the following conditions except - *(AIMSNov 05)*
a) Enteric fever b) Dengue haemorrhagic fever
c) Leptospirosis d) Malaria

1731. All of the following are true for patients of ulcerative colitis associated with primary sclerosing cholangitis (PSC), except - *(AI05)*
a) They may develop biliary cirrhosis
b) May have raised alkaline phosphatase
c) Increased risk of hilar Cholangiocarcinoma
d) PSC reverts after a total colectomy

1732. The initial investigation of choice for a post cholecystectomy biliary stricture is-*(AIMSMay 05)*
a) Ultrasound scan of theabdomen
b) Endoscopic cholangiography
c) Computed tomography
d) Magnetic resonance cholangiography

1733. The treatment of choice for an 8 mm retained common bile duct (CBD) stone is - *(AIMSMay2005)*
a) Laparoscopic CBD exploration
b) Percutaneous stone extraction
c) Endoscopic stone extraction
d) Extracorporeal shock wave lithotripsy

1734. Which of the following is not an indication for cholecystectomy - *{AIMS May 2005)*
a) 70-year old male with symptomatic gallstones
b) 20-year old male with sickle cell anaemia and symptomatic gallstones
c) 65-year old female with a large gallbladder polyp
d) 55-year old with an asymptomatic gallstone

1735. A patient of post-cholecystectomy biliary stricture has undergone an ERCP three days ago. Following this she has developed acute cholangitis. The most likely organism is - *(AI 06)*
a) Escherichia colli
b) Bacillus fragilis
c) Streptococcus viridans
d) Pseudomonas aerogenosa

1736. Which one of the following statements is *incorrect* regarding stones in the common bile duct ? *(AI 06)*
a) Can present with Charcot's triad
b) Are suggested by a bile duct diameter > 6 mm of ultrasound
c) ERCP, sphincterotomy and balloon clearance is now the standard treatment
d) When Removed by exploration of the common bile ducts the T-tube can be removed after 3 days

1737. Biliary stricture developing after laparascopic choice-cystectomy usually occurs at which part of the common bile duct - *(AI 06)*
a) Upper b) Middle
c) Lower d) All side with equal frequency

1738. Absolute indication for choledochotomy -*(PGI June 06)*
a) Gallstone ileus b) Gallstone pancreatitis
c) Fever d) Jaundice
e) Palpable CBD stone

1739. Which of the following are causes for cholecystitis except ? *{APPG 06)*
a) Estrogen b) OCP
c) Diabetes mellitus d) Obesity

1724)c 1725) c 1726)a,c,e 1727)d 1728)a 1729)d 1730)d 1731)d 1732)c 1733)c 1734)d 1735)a 1736)d 1737)a 1738)e 1739)c

1740. Sentinel node of gall bladder is - (*Manipal 06)*
a) Virchow's nodes b) Iris nodes
c) Clouquet node d) Lymphnode of lund

1741. The procedure of choice for elective removal of CBD stones for most patients is - (*.Karn 06)*
a) Open choledocholithotomy
b) Endoscopic choledocholithotomy
c) Laparoscopic choledocholithotomy
d) Percutaneous choledocholithotomy

1742. The predominant constituent of the pale yellow gall stones in the gall bladder is - (*Corned 07)*
a) Mucin glycoproteinb) Calcium carbonate
c) Cholesterol d) Calcium phosphate

1743. Haemobilia is characterized by all except- *(Comed 07)*
a) Jaundice b) Biliary colic
c) Melaena d) Fever

1744. The Reynold's pentad of fever, jaundice, right upper quadrant pain, septic shock and mental status change in typical of - (*Corned 08)*
a) Cholangitis b) Hepatitis
c) Cholecystitis d) Pancreatitis

1745. In a survey, many children are examined and were found to have urogenital abnormalities. Which congenital anomaly is associated with increased risk of bladder carcinoma? *(AIIMS Nov 0 7)*
a) Medullary sponge kidney b) Bladder exstrophy
c) Unilateral renal agenesis d) Double ureter

1746. Common bule duct injuries are most commonly seen in-
a) Radical gastrectomy *(UPSC-II08)*
b) Penetrating injuries of abdomen
c) ERCP & sphincterotomy
d) Laparoscopic cholecystectomy operation

1747. A 88 years male patients presented with end stage renal disease with coronary artery block and metastasis in the lungs. Now presents with acute cholecystitis, patients relatives needs treatments to do something - *(UP 08)*
a) Open cholecystectomy
b) Tube cholecystostomy
c) Laproscopic cholecystectomy
d) Antibiotics then elective cholecystectomy

1748. A 60 year old females presented with hematuria and diagnosed transitional cell carcinoma of bladder stage T_r NjM_0. Best treatment modalities is -
a) Transurethral resection *(UP 08)*
b) Transurethral resection and intravesical chemo-immunotherapy
c) Total cystectomy and pelvic lymphadenectomy
d) Systemic chemotherapy

1749. In cholecystecomy, fresh plasma should be given -
a) Just before operation *(UP 08)*
b) At the time of operation
c) 6 hours before operation
d) 12 hour after operation

1750. A 45 year old female presents with symptoms of acute cholecystisis. On USG there is a solitary gallstone of size 1.5 cm. Symptoms are controlled with medical management Which of the following is the next most appropriate step in the management of this patient -
a) Regular follow up *(AI 08)*
b) IV Antibiotics
c) Laparoscopy cholecystectomy immediately
d) Open cholecystectomy immediately

1751. Most common type of choledochal cyst ? *(APPG08)*
a) Type 1 b) Type 2
c) Type 3 d) Type 6

1752. Which is not true about PBC ? *(APPG.08)*
a) No increase in risk of hepatocellular carcinoma
b) Often asyptomatic
c) Elevated IgM
d) Positive antimitochondrial antibody

1753. Bile strictures are seen in - *(PGIDec 08)*
a) Cholelithiasis b) Malignancy
c) Post operative d) Worm infestation
e) Acute pancreatitis

1754. In a male after laparoscopic cholecystectomy, specimen is sent for histopathology which shows carcinoma gallbladder stage lb. Appropriate management is - *(AIIMS Nov 08)*
a) Conservative and follow up.
b) Extended cholecystectomy
c) Excision of all port sites
d) Radiotherapy

1755. Most common site of cholangiocarcinoma?
a) Distal biliary duct b)Hilum *(AIIMSNov 08)*
c) Intrahepatic duct d) Multifocal

1756. Risk factors for malignant change in an asymptomatic patient with a gall bladder polyp on ultrasound include all of the following, Except -
a) Age > 60 years *(AI 09)*
b) Rapid increase in size of polyp
c) Size of polyp > 5 mm
d) Associated Gall stones

1757. Which of the following statements about acalculous cholecystitis is incorrect ? *(DELHIPG Mar. 09)*
a) Manifestation of disturbed microcirculation in critically ill patient
b) Prolonged parenteral nutrition can be causative
c) It is life threatening condition
d) Cholecystectomy is not indicated

1758. Which of the following is not a component of Reynolds' Pentad in toxic cholangitis ?
a) Right upper quadrant pain *(DELHI PG Mar. 09)*
b) Confusion
c) Septic shock
d) Markedly elevated transaminases

1759. Saccular diverticulum of extrahepatic bile duct in choledochal cyst is classified as - *(COMED 09)*
a) Type I b) Type II
c) Type III d) Type IV

1740)d 1741)b 1742)c 1743)d 1744)a 1745)b 1746)d 1747)b 1748)b 1749)a 1750)c 1751)a 1752)a 1753)a,b,c,d 1754)c 1755)b 1756)c 1757)d 1758)d 1759)b

1760. In the management of symptomatic benign prostatic hyperplasia with finesteride the period of trial required for determining a satisfactory response is-
a) 1 Month b) 2 Months *(COMED 09)*
c) 4 Months d) 6 Months

1761. The most common complication of transurethral resection of the prostate is - *(COMED 09)*
a) Erectile dysfunction
b) Retrograde ejaculation
c) Urinary incontinence
d) Urethral stricture disease

1762. Which of the following is NOT associated with elevation of prostatic specific antigen -*(COMED 09)*
a) Acute prostatitis
b) BPH
c) Prostatic intraepithelial neoplasm
d) Prostatic needle biopsy

1763. Which one of the following is NOT a common feature of bile duct stone - *(UPSC-II09)*
a) Obstructive jaundice
b) Itching
c) Clay colored stools
d) Distended gallbladder

1764. A young patient develops high grade fever with chills and rigors, mild jaundice and acute pain in the upper abdomen following cholecystectomy. On examination, she was jaundiced, toxic, haemodynamically stable and having vague fullness upper abdomen. What is the most probable diagnosis - *(UPSC-II 09)*
a) Localised collection of bile in peritoneal cavity
b) Iatrogenic ligation of common bile duct
c) Duodenal injury
d) Acute pancreatitis

1765. The following are complications of gallstone except- *(UPSC-II 09)*
a) Hemobilia b) Cholangitis
c) Biliary enteric fistula d) Acute pancreatitis

1766. Consider the following - *(UPSC-II 09)*
1. Cholesterosis
2. Adenomyomatosis
3. Polyposis
4. Cholelithiasis

To which of the above does cholecystoses refer to:
a) 1,2 and 3 b) 1 and 3 only
c) 2, 3 and 4 d) 1 and 3 only

1767. A 50-year-old diabetic patient with asymptomatic gallstone (>3 cm) will be best treated by-
a) Early surgery *(UPSC-II 09)*
b) Bile salt treatment
c) ESWL
d) Waiting till it becomes symptomatic

1768. Rigler's triad includes - *(PGINov09)*
a) Pheumobilia b) Ectopic stone
c) Cholangitis d) Intestinal obstruction
e) Biliary stenosis

1769. True about Biliary cystic adenocarcinoma -
a) CT scan is used for diagnosis *(PGINov 09)*
b) CA 19-9 is elevated
c) Intrahepatic location
d) Extrahepatic location
e) Common in male

1770. True about cystic duct stump stone are A/E -
a) Stone cause of postop pain *(PGINov 09)*
b) Re-cholecystectomy is the definite treatment of choice
c) ERCP is the investigation of choice to diagnose
d) Basket extraction is the Mx of choice
e) Oral Ursodeoxycholic acid relieves symptoms remarkably

1771. Risk factor for cholangiocarcinoma all except -
a) Chronic typhoid carrier *(AIIMSNov09)*
b) Chronic ulcerative colitis
c) Parasitic infestation
d) Choledocholithiasis

1772. Laparoscopic cholecystectomy done in a patient with cholelithiasis. Pathology report shows adenocarcinoma with invasion of muscular layer. CT was normal. Further t/t is - *(AIIMSNov 09)*
a) Wait and regular follow up
b) Wedge hepatic resection with lymph node dissection
c) Excise all port sites
d) Radiotherapy

1773. A patient with ITP has a plalelet count of50,000 and is being planned for splenectomy. What is the best time for platelet infusion in this patient - *(AI10)*
a) 2 hours before surgery
b) At the time of skin incision
c) After ligating the splenic artery
d) Immediately after removal of spleen

1774. All the following increase risk for cholangiocarcinoma except - *(DPG10)*
a) Ulcerative colitis b) Gall stones in CBD
c) Sclerosing cholangitis d) Chlonorchis

1775. An ultrasound examination shows dilated intrahepatic biliary channels with a small gall bladder. The most likely possibility is - *(DPG 10)*
a) Gall bladder stone
b) Pancreatic calculus
c) Common bile duct stone
d) Carcinoma of the head of the pancreas

1776. 'Strawberry gall bladder[9] is seen in -
a) Cholesterosis *(Maharashtra 10)*
b) Porcelain gall bladder
c) Necrosis of gall bladder
d) Gall bladder carcinoma

1777. Primary sclerosing cholangitis is associated with -
a) Ulcerative cholangitis *(Maharashtra 10)*
b) Retroperitoneal fibrosis
c) Reidel's thyroiditis
d) All of the above

1760)d 1761)b 1762)d 1763)d 1764)b 1765)a 1766)a 1767)a 1768)a,b,d 1769)A11 1770)b,e 1771)d 1772)b 1773)c 1774)b 1775)c 1776) a 1777)d

1778. Pneumobilia can be seen in - *(UP SCII10)*
a) Mirizzi's syndrome b) Acute pancreatitis
c) Gallstone ileus d) Carcinoma gallbladder

1779. Which one of the following is not a component of Charcot's triad? *(UP SCII10)*
a) Pain b) Fever
c) Vomiting d) Jaundice

1780. T/t of CBD stone includes - *(PGIMay 10)*
a) Endoscopic papillotomy b)ERCP
c) Ursodeoxy cholic acid d) Hepatojejunostomy
e) Choledochotomy

1781. Not included in Charcot's triad? *(AIIMSNov 10)*
a) Fever b) Pain
c) Jaundice d) Gallbladder lump

1782. Organism associated with fish consumption and also causes carcinoma gallbladder - *(AIIMSNov 10)*
a) Gnathostoma
b) Anglostrongyloidosis cantonensis
c) Clonorchis sinensis
d) H. dimunata

1783. On abdominal ultrasound gall bladder shows diffuse wall thickening with hyperechoic nodules at neck and comet tail artifacts. The most likely diagnosis will be -
a) Adenomyomatosis
b) Adenocarcinoma of gall bladder
c) Xanthogranulomatous cholecystitis
d) Chelesterol crystals

1784. Risk factors for malignant change in an asymptomatic patient with a gall bladder polyp on ultrasound include all of the following, except -
a) Age > 60 years *(AIIMS May 11)*
b) Rapid increase in size of polyp
c) Size of polyp > 5 mm
d) Associated Gall stones

1785. Most common site of cholangiocarcinoma- *(AIIMS*
a) Distal biliary duct b)Hilum *May 11)*
c) Intrahepatic duct d) Multifocal

1786. The technique of laproscopic cholecystectomy was first described by? *(AIIMS May 11)*
a) Erich Muhe b) Phillip Moure
c) KurtSemm d) Eddie Reddick

1787. Survival in unresectable GB ca is? *(AIIMSMay 11)*
a) 4-6 months b) 8-10 months
c) 1 yr d) 12-24 months

1788. Regarding laproscopic cholecystectomy, which of the following statements is correct - *(UPSCII11)*
a) It is primarily done for cholecystitis in the third trimester of pregnancy
b) It is associated with higher rate of bile duct injuries than open cholecystectomy
c) It is contraindjcated in acute cholecystitis
d) It is safer than open cholecystectomy in patients with cardiorespiratory disease

1789. The following constitute the Saint's triad except -
a) Gall stones b) Jaundice *(UPSC II11)*
c) Hiatus hernia d) Colonic diverticulosis

1790. Most common cause of obstructive jauridice>
a) Periampullary carcinoma *(NEET/DNB Pattern,*
b) Carcinoma gall bladder *AIIMS NOV96, 94,*
c) Carcinoma head ofpancreas *AI98, 2K)*
d) CBD stones

1791. What is choledocholithotomy - *(NEET/DNB Pattern)*
a) Removal of ureteric stone
b) Removal of gall stone
c) Removal of gall bladder
d) Removal of common bile duct stone

1792. Which of the following drug is used for medical treatment of gall stones - *(NEET/DNB Pattern)*
a) Clemastine fumarate b) Mizolastine
c) Lovastatin d) Ursodeoxycholicacid

1793. In a patient of acute cholecystitis, referred pain to the shoulder is k/a - *(NEET/DNB Pattern)*
a) Murphy's sign b) Gray Turner sign
c) Boa's sign d) Cullen's sign

1794. Pringle maneuver to arrest hemorrhage is -
a) Clamping of portal vein *(NEET/DNB Pattern)*
b) Clamping of hepatic artery
c) Clamping of hepatic vein
d) Clamping of hepatoduodenal ligament

PANCREAS

1795. Which one is not Ranson's prognostic criteria in acute pancreatitis - *(AI88)*
a) Age over 55 years
b) Blood glucose more than 200 mgs %
c) WBC more than 16000/mm^3
d) Serum calcium more than 8 mg %

1796. The treatment of annular pancreas is - *(AIIMS 85)*
a) Gastrojejunostomy
b) Duodeno duodenostomy
c) Duodenojejunostomy
d) Gastroduodenostomy

1797. Most common cause of acute pancreatitis is- *(JIPMER87)*
a) Biliary tract diseases b) Alcoholism
c) Post traumatic d) Idiopathic

1798. Treatment of pseudocyst of pancreas include- *(JIPMER87)*
a) Cystogastrostomy b) Cystojejunostomy
c) Cystocolostomy d) Excision of the cyst
e) All of the above

1799. Whipple's triad in insulinoma includes -
a) Hypoglycemia below 45 mg % *(JIPMER 86)*
b) An attack of hypoglycemia in the fasting stage
c) Symptoms relieved by glucose
d) all of the above

1778) c 1779) c 1780)a,b,c,e 1781)d 1782)c 1783)a 1784)c 1785)b 1786)a 1787)a 1788)b 1789)b 1790)d 1791) d 1792)d 1793)c 1794)d 1795)d 1796)b,c 1797)a 1798)a,b,d 1799)d

1800. Most common cause of pancreatic pseudocyst formation is- *(AIIMS86, 87)*
a) Trauma b) Pancreatitis
c) Neoplastic d) None of the above

1801. Pain relief in chronic pancreatitis can be obtained by destruction of - *(UPSC 8 7, 88)*
a) Celiac ganglia
b) Vagus nerve
c) Anterolateral column of spinal cord
d) None of the above

1802. Which of the following about acute pancreatitis is true - *(PGI88)*
a) Pain last for several hours
b) Serum amylase levels correlates with severity of attack
c) Common in alcoholics
d) Low serum calcium levels indicate good prognosis

1803. The complication least likely to occur in a pseudocyst of the pancreas is - *(Kerala 90)*
a) Hemorrhage b) Torsion
c) Infection d) Carcinomatous change

1804. Commonest type of pancreatic carcinoma is-
a) Acinar cell carcinoma *(AI92)*
b) Ductal adenocarcinoma
c) Islet cell carcinoma
d) Mucinous carcinoma

1805. Treatment of congenital cyst of head of pancreas - *(PGI 83, AMC 86)*
a) Total excision
b) Partial excision
c) Marsupialization
d) Observe and medical treatment

1806. In Mucoviscidosis of the pancreas the commonest defect is in the - *(JIPMER 80, AIIMS 89)*
a) Jejunum b) ileum
c) Ascending d) Descending colon

1807. Leukocytic infiltraton in islet cells of pancrease is characterstically seen in some cases of -
a) Juvenile diabetes *(PGI81, AMU87)*
b) Diabetic ketosis
c) Systemic mucoviscidosis
d) Haemorrhage pancreatic necrosis

1808. All are seen in chronic calcific pancreatitis except
a) Diabetis mellitus *(Kerala 96)*
b) Fat malabsorption
c) Hypercalaemia
d) Recurrent adbominal pain
e) Increasd incidence of pancreatic carcinoma

1809. All are features of pesudopancreatic cyst, except
a) Follows acute pancreatitis *(AI97)*
b) Lined by false epithelium
c) May regress spontaneously
d) Treatment of choice is percutaneous aspiration

1810. Serious complication in pancreatic pseudocyst include all of the following except - *(UPSC 97)*
a) Intracystic haemorrhage
b) Secondary infection
c) Calcification in the cyst wall
d) Rupture of the cyst

1811. All are true about pseudopancreatic cyst except -
a) Common after acute pancreatitis - *(AI 98)*
b) Present as adbomen mass
c) Increased serum amylase
d) Mostly present in head of pancreas

1812. A chronic alcoholic with epigastric pain was submitted to ERCP which showed chain of lakes' appearnace of main pancreatic duct treatment of choice is - **(***MAHE 98)*
a) Lateral pancreaticoj ejunostomy
b) Distal pancreaticoj ejunostomy
c) pancreatectomy
d) Proximal pancreaticojejunostomy

1813. In Whipple's operation all are removed except -
a) CBD b) Portal vein *(AIIMS 98)*
c) Head of pancreas d) Duodenum

1814. Most sentitive investigation of pancreatic carcinoma is - *(PGI 88)*
a) Angiography b)ERCP
c) Ultrasound d) CT scan

1815. Whipples triad is seen in - *(PGI97)*
a) Islet cell tumour b) Ca head pancreas
c) Argentaffmoma d) Cholangiocarcinoma

1816. Inverted "3" sign seen in - *(PGI97)*
a) AmpullaryCa b) Insulinoma
c) Ca. head pancreas d) Ca. stomach

1817. Treatment of annular pancreas is - *(PGI 97)*
a) Excision of head of pancreas
b) Duodenojejunostomy
c) Excision of tail of pancreas
d) Any of the above

1818. Treatment of pseudopancreatic cyst is - *(PGI 97)*
a) Endoscopic drainage
b) Percutaneous drainage
c) Internal drainage (surgical)
d) Pancreatectomy

1819. Which is not a feature of pancreatic ascites -
a) Low protein *(PGI 99)*
b) Somatostatin is the drug of choice
c) Communication with pancreatic duct in 80%
d) Raised amylase levels

1820. TVue about pancreatic carcinoma - *(PGI2000)*
a) Head is the most common site
b) Pain is the most common symptom
c) Obstruction ofbile & pancreatic secretion is common
d) 80% cases respond well to resection

1821. Investigation to diagnose carcinoma head of pancrease are/is - *(PGI 2K)*
a) Hypotonic duodenogram b) X-ray abdomen
c) USG d) Endoscopy
e) C.T. Scan

1800)b 1801)a 1802)a,c 1803)dl804)b 1805)c 1806)b 1807)a 1808)c 1809)d 1810)c 1811)d 1812)a 1813)b 1814) b 1815)a 1816)c 1817)b 1818)A11 1819)a 1820)a,c 1821)a,c,d,e

1822. Common cause (s) of acute pancreatitis is/are -
a) Alcohol b) Gall stone *(PGI2K)*
c) Primary billiary cirrhosis d) L-asparginase

1823. True about acute pancreatitis a/e *(PGI2K)*
a) Gallstones & alcohol are common
b) Sr. amylase levels increase after 72 hrs. of attack
c) Can cause secondary pleural effusion
d) Can present with shock

1824. Which of the following is the most common site for the carcinoma of pancreas - *(PGI2000)*
a) Head b) Ampulla
c) Body d)Tail

1825. Commonest complication of pancreatic pseudocyst - *(PGI 2000, AIMS 84)*
a) Rupture b) Infection
c) Pressure on viscera d) Hemorrhage

1826. Gold standard test in insulinoma - *(PGI 2000)*
a) CT scan b) Ultrasound
c) MRI d) Arteriography

1827. True about pseudocyst of pancreas - *(PGI 01)*
a) Is a true cyst
b) Common with penetrating trauma abdomen
c) Treated with cystogastrostomy if size > 2 cm
d) Can present from mediastinum to pubis
e) Contains a wall of fibrous granulation tissue

1828. True about ZES (gastrinoma) - *(PGI 01)*
a) Gastrin levels > 1000 pg/ml
b) B AO (Basal acid output) >15 meq/hr
c) Somatostatin is inhibitor of HCL secretion
d) Omeprazole is helpful
e) Secretin increases gastrin secretion in Zollinger Ellison Syndrome

1829. True about pancreatic Ca - *(PGI 02)*
a) M.C. symptom is pain
b) Ca head of pancreas causes obstruction of both pancreatic and billiary duct
c) Smoking predisposes
d) Family H/O familial adenomatous polyposis syndrome

1830. Annular pancreas true about - *(PGI 02)*
a) Complete or partial rotation failure
b) Congenital
c) Normal histology
d) Interstromal cell proliforation
e) Surgical correction should be done

1831. True increase in islet cell - *(PGI02)*
a) Nesdioblastoma b) Type II DM
c) Insulinoma

1832. Pancreatitis caused by - *(PGI 02)*
a) Ascending chlongitis b) Ted PTH
c) CBD stone d) Alcohol
e) Starvation

1833. Acute pancreatitis is caused by - *(PGI02)*
a) Gallstones b) Alcohol
c) Starvation d) Hypercalcemia
e) Hypertriglyceridemia

1834. Investigation done in Ca pancreas are - *(PGI 03)*
a) Hypotonic duodenography b) X-ray abdomen
c) Endoscopy d) C.T. Scan
e) Ba-fallow through

1835. True about acute pancreatitis - *(PGI04)*
a) Alcohol is the MC cause
b) 20-25% needs surgical treatment
c) CECT is preffered over USG in diagnosis
d) Serum Amylase is diagnostic
e) Grey Turner sign seen around the umpilicus

1836. The following conditions are indicative of surgery in acute pancreatitis - **(***UPSC 04)*
a) Acute fluid collection
b) Persistent pseudocyst pancreas
c) Pancreatic abscess
d) Infective pancreatic necrosis

1837. Increased amylase levels in pleural fluid are seen in - **(***BIHAR 03)*
a) Malignancy b) Pancreatitis
c) Oesophageal rupture d)All

1838. Major complication of cysto gastrostomy for pseudo pancreatic cyst is - **(***COMEDK 05)*
a) Infection b) Obstruction
c) Fistula d) Haemorrhage

1839. All are features seen in Chronic Pancreatitis except-
a) Chronic persistent pain (*HPU05)*
b) Diarrhoea, Steatorrhoea
c) Calcification
d) Paralytic ileus

1840. The preferred bypass procedure in case of non resectable carcinoma of head of pancreas is -
a) Cholecystojejunostomy (*MAHE05)*
b) Cholecystogastrostomy
c) Choledochoduodenostomy
d) Choledochojejunostomy

1841. Gastrinoma a/w - *{PGI June 05)*
a) Diarrhoea
b) Constipation
c) Achlorhydria
d) Multiple superficial gastric ulcers
e) Gastric atrophy

1842. Insulinoma is most commonly located m which part of the pacreas - **(***MAHA 05)*
a) Head b) Body
c) Tail d) Equally distributed

1843. Pancreatitis that has good prognosis - *(APPGE 05)*
a) Gallstone pancreatitis
b) Post operative pancreatitis
c) Alcoholic pancreatitis
d) Chronic pancreatitis

1844. All of the following are features of Zollinger Ellison syndrome except - *{AIMS Nov 05)*
a) Intractable peptic ulcers
b) Severe diarrhoea
c) Beta cell tumours of the pancreas
d) Very high acid output

1822)a,b 1823)b 1824)a 1825)b 1826)b 1827)d,e 1828)A11 1829)b,c 1830)a,b,c,e 1831)a,c 1832)b,c,d 1833)a,b,d,e 1834)a,c,d 1835)c 1836)b,d 1837)d 1838)d 1839)d 1840)a 1841) a 1842)d 1843)a 1844)c

1845. All the following can be used to predict severe acute p ancreatitis except - *(AIIMS Nov 05)*
a) Glasgow score ≥ 3
b) APACHE II score ≥9
c) CT severity score ≥ 6
d) C - reactive protein <100

1846. True in Pancreas trauma - *(PGIJune06)*
a) Solitary involvement common
b) Blunt injury usual cause
c) Always surgery needed
d) Amylase T in 90% cases
e) HRCT is investigation of choice

1847. Commonly seen pancreatic endocrinal tumour - *(PGI June 06)*
a) Insulinoma b) Somatostatinoma
c) Gastrinoma d) Glucagonoma
e) Vipoma

1848. What is the most common surgical complication following whipple procedure ? *(UPSC 0 7)*
a) Disruption of pancreatic anastomosis
b) Biliary peritonitis
c) Disruption of gastric anastomosis
d) GI bleeding

1849. Vascular complications of acute pancreatitis include the following except - *(UPSC 0 7)*
a) Splenic vein thrombosis
b) Splenic artery aneurysm
c) Gastroduodenal artery aneurysm
d) Middle colic artery thrombosis

1850. Most common complication after ERCP is -
a) Acute Pancreatitis *(AiimsMay07)*
b) Acute cholangitis
c) Acute cholecystitis
d) Duodenal perforation

1851. Severity of acute pancreatitis correlate with levels of all of the following except - *(Aiims May 07)*
a) Glucose b) Amylase
c) Transaminase d) Calcium

1852. Most common tumour of pancreas is - *(UP 07, TN89)*
a) Adeno-carcinoma
b) Squamous cell carcinoma
c) Adeno-squamous cell carcinoma
d) Duct cell adeno carcinoma

1853. Best prognosis in carcinoma of pancreas in the region of - *(UP 0 7)*
a) Head b) Tail
c) Body d)Periampullary

1854. "Chain of lakes" appearance seen in - *(UP 07, 05)*
a) Acute pancreatitis
b) Chronic pancreatitis
c) Carcinoma pancreas
d) Strawberry gall bladder

1855. Cullen's sign - *(UP07)*
a) Bluish disclolouration of the flanks
b) Bluish discolouration in the umbilicus
c) Migratory thrombophelebitis
d) Subcutaneous fat necrosis

1856. Which of the following is the most common non-alcholic cause of acute pancreatitis - (*Corned 07)*
a) Thiazides b) Hypercalcaemia
c) Hyperlipidaemia d) Gall stones

1857. Which of the following organs is the most common site of origin of the tumour associated with the Zollinger-Ellison syndrome - (*Corned 07)*
a) Duodenum b) Lymph nodes
c) Spleen d) Pancreas

1858. The commonest cause of acute pancreatitis is -
a) Biliary calculi b) Alcohol abuse *(Corned 07)*
c) Infective d) Idiopathic

1859. Grey Turner's sign (flank discoloration) is seen in - (*Corned 08)*
a) Acute pyelonephritis b) Acute cholecystitis
c) Acute pancreatitis d) Acute peritonitis

1860. Which one of the following is the management of pancreatic abscess - *(UPSC-II08)*
a) Needle aspiration b)Gastro-cystos
c) External drainage d)Jejuno-cystos

1861. Carcinoma of pancreas associated with - *(UP 08)*
a) Hypoglycemia
b) Syndrome of inappropriate secretion of ADH
c) Erythropoisis is due to erythropoietin
d) Hypercalcemia

1862. A chronic alcoholic presents with abdominal pain radiating to the back that responds to analgesics. At evaluation the pancreatic duct was found to be dilated and stones were noted in the tail of pancreas. The most appropriate management is - *(AI08)*
a) Pancreatic tail resection
b) Pancreaticojejunostomy
c) Percutaneous removal of stone
d) Medical management

1863. A chronic alcoholic presents with repeated episodes of severe intractable abdominal pain. At evaluation the pancreatic duct was found to be dilated and stones were noted in the tail of pancreas. The most appropriate management is - *(AI 08)*
a) Pancreatic tail resection
b) Pancreatico Jejunostomy
c) Percutaneous removal of stone
d) Medical management

1864. Zollinger Ellison syndrome true about A/E -
a) Surgery is to be done *(PGI June 08)*
b) Exocrine tumour
c) Endocrine disorder
d) Secretory diarrhoea seen
e) Metastasis seen

1865. Which of the following statements about Pancreatic Carcinoma is not true - *(AI 09)*
a) Mutation in P53 gene is associated in 75% of cases
b) Hereditary Pancreatitis significantly increases the risk
c) Median survival in locally advanced (stage III) disease is 3 - 6 months
d) Five year survival after curative pancreaticoduodenectomy is 15 - 20%

1845)d 1846)d,el847)a 1848)c 1849)d 1850)a 1851) b 1852)d 1853)d 1854)b 1855)b 1856)d 1857)a 1858)a 1859)c 1860)c 1861)a 1862)d 1863)b 1864)b 1865)c

1866. The advantage of bladder drainage over enteric drainage after pancreatic transplantation is better monitoring of - *(AI 09)*
a) HBA 1C levels b) Amylase levels
c) Glucose levels d) Electrolyte levels

1867. Sister Mary Joseph nodule is most commonly seen with - *(AIIMS May 09)*
a) Ovarian cancer b) Stomach cancer
c) Colon cancer d) Pancreatic cancer

1868. Commonest complication of Pseudocyst of the pancreas is - *(DELHIPG Feb. 09)*
a) Commonest into peritoneum
b) Rupture into colon
c) Hemorrhage
d) Infection

1869. Which of the following types of pancreatitis has the best prognosis - *(Manipal 09)*
a) Alcoholic pancreatitis
b) Gall stone pancreatitis
c) Post operative pancreatitis
d) Idiopathic pancreatitis

1870. Consider the following prognostic parameters of acute pancreatitis - *(UPSC-II09)*
1. Rise in blood urea nitrogen over 5 mg/dl
2. Hematocrit decrease over 10%
3. Base deficit more than 4 mmol/lit
4. Blood glucose over 10 mmol/lit
Which of the above parameters are important during initial 48 hours ?
a) 1 and 2 only b) 2 and 3 only
c) 1,2 and 3 d) 1,3 and 4

1871. Which ofthe following is NOT an indication for surgical intervention in acute pancreatitis - *(UPSC-II09)*
a) Acute fluid collection b) Pancreatic necrosis
c) Pancreatic abscess d) Diagnostic dilemma

1872. True about gastrinoma are all except - *(PGINov 09)*
a) Located mostly in pancrease
b) Unusal located ulcer
c) 90%beningn
d) Hypersecretion of gastric acid

1873. Middle segment pancrectomy avoided in -
a) Cystadenoma *(PGI Nov 09)*
b) Tumors of head of pancreas
c) Tumors of tail of pancreas
d) Tumor of neck of pancreas

1874. All are true for annular pancreas except -
a) Upper GI series is IOC *(PGI Nov 09)*
b) Duodenal obstruction present
c) ERCPisdone
d) Non - rotation of gut
e) Treatment is division of ring

1875. All are true about insulinoma except -
a) Usually asymptomatic & need no treatment
b) Usually small & multiple *(PGINov 09)*
c) Diazoxide & octreotide reduce insulin synthesis
d) Most common site is pancreas
e) 90% are Benign

1876. Treatment of choice for annular pancrease is -
a) Division of pancreas *(AI10)*
b) Duodenoduodenostomy
c) Duodenojejunostomy
d) Roux-en-Y loop

1877. A lady presented with recurrent attacks of giddiness and abdominal pain since three months. Endoscopy was normal. Her fasting blood glucose was 40 mg % and insulin levels were elevated. CT abdomen showed a well defined 8 mm enhancing lesion is the head of pancreas, with no other abnormal findings. What should be the treatment plan for this patient -
a) Whipple's operation *(AI 10)*
b) Enucleation
c) Enucleation with radiotherapy
d) Administration of streptozotocin

1878. Gold standard test for for insulinoma -
a) 72 hr fasting test *(AIIMS May 11)*
b) Plasma insulin levels
c) C-peptide levels
d) Low glucose levels <30 mg/dl

1879. Which of the following statements about Pancreatic Carcinoma is not true? *(AIIMS May 11)*
a) Mutation in P53 gene is associated in 75% of cases
b) Hereditary Pancreatitis significantly increases the risk
c) Median survival in locally advanced (stage III) disease is 3-6 months
d) Five year survical after curative pancreaticoduodenectomy is 15-20%

1880. Not true about mucinous cystadenoma pancreas-
a) Microcystic adenoma *(AIIMS May 11)*
b) Lined by columnar epithelium
c) Pre malignant
d) Focus of ovarian stroma in it

1881. A lady present with three day history of epigastric pain radiating to back. Serum amylase levels were observed to be normal while USG abdomen reveals gall bladder stones and an enlarged pancreas. CT scan was done which clinched the diagnosis. Which ofthe following is the most likely diagnosis - *(AI 11)*
a) Acute Cholecystitis b) Acute Pancreatitis
c) Acute Appendicitis d) Acute Peritonitis

1882. A fifty year old lady presents with two year history of recurrent abdominal pain with radiation to her back. Pain is severe in intensity, and refractory to simple analgesics. Ultrasound and Contrast Enhanced CT scan (CECT) confirmed the diagnosis and showed a dilated pancreatic duct. Which of the following is the likely recommended surgical procedure of choice? *(AI 11)*
a) Vagatomy with Antrectomy
b) Vagotomy with Gastrolejunostomy
c) Whipple's Procedure
d) Longitudinal Pancreatico Jejunostomy

1866) b 1867)b 1868)d 1869)b 1870)d 1871)d 1872) a,c 1873) b,c 1874) e 1875)a,bl876)c 1877)b 1878)a 1879)c 1880) a 1881)b 1882)d

1883. Zollinger-Ellison syndrome is characterised by the following except - *(UPSC111)*
a) Profound gastric hypersecretion
b) Large diarrhoea with occasional steatorrhoea
c) Hypocalcaemia
d) Hvpergastrinaemia

1884. In acute pancreatitis, surgery is indicated in which one of the following conditions - *(UPSC II11)*
a) Acute fluid collection
b) Acute pseudocyst
c) Sterile pancreatic necrosis
d) Infected pancreatic necrosis

1885. Most common complication of acute and chronic pancreatitis is - *(NEET/DNB Pattern)*
a) Portal vein thrombosis b) Pancreatic abscess
c) Pseudocyst d) Pancreatic head mass

1886. Most common cause of chronic pancreatitis- *(NEET/DNB Pattern)*
a) Gall stones
b) Tropical pancreatitis
e) Pancreasdivisium
d) Alcohol ,

1887. WhaT is common in both acute and chronic pancreatitis? ; *(NEET/DNB Pattern)*
a) Pseudocyst b) Abscess formation
c) 'DIC 7 d) Pancreatic head mass

PERITONEUM

1888. Commonest type of mesentric cyst is - *(JIPMER 87)*
a) Enterogenous b) Chylolymphatic
c) Dermoid d) Urogenital remnant

1889. Primary peritonitis with pneumococcus is associated with - *(UPSC 86, JIPMER 88)*
a) Lymphomas b) Nephrotic syndrome
c) Carcinoids d) None of the above

1890. Treatment of pouch of Douglas abscess is -
a) Laparotomy *{UPSC 87, 88)*
b) Posterior colpotomy
c) Antibiotics
d) Extraperitoneal drainage

1891. Generalised diffuse peritonitis has been compared to second and third degree burns of - *{AIIMS 84)*
a) 13% b)30%
c) 45% d) 60 %

1892. Early surgery is indicated in - *(PGI86)*
a) Amoebiasis peritonitis b) Biliary peritomitis
c) Typhoid peritonitis d) All

1893. Which of the following is not characteristic of visceral pain - *(PGI89)*
a) Poor localisationb) Diffuse in nature
c) High thresholdd) Very rapid adaptation

1894. Most common site for intra abdominal abscess following laparotomy is - *(AIIMS 92)*
a) Sub hepatic b) Subphrenic
c) Pelvic d) Paracolic

1895. Most common cause of generalised peritonitis is a 40 year old adult male is - *{AIIMS 92)*
a) Enteric perforation
b) Ruptured liver abscess
c) Duodenal Ulcer perforation
d) Perforated Ca stomach

1896. Correct about subphrenic abscess is -
a) Rarely chest symptoms *{PGI 81,Delhi 86)*
b) Toxaemia
c) Rarelly toxaemia
d) No sign and symptoms

1897. Odourless peritoneal fluid is noticed in-
a) Perforated petic ulcer *{AMC81, AP 89)*
b) Perforated ileum
c) Perforated appendix
d) T.B. Peritonitis

1898. The commonest cuase of acute mesentric adenitis is - *{JIPMER 81, AMU87)*
a) Tuberculosis b) Brucellosis
c) Pneumococcal infection d) Idiopathic

1899. Idiopathic retroperitoneal fibrosis involves first of aU - *{AIIMS 90, DNB 90)*
a) Stomach b) Duodenum
c) Kidneys d) Ureter
e) Urethra

1900. Which mesentric cyst whose removal entrails removals of part of gut - *{TN 95)*
a) Chylolymphatic cyst b) Enterogenous cyst
c) Dermoid d)All

1901. The most favoured treatment for a pelvic abscess in cul-de-sac is - *{Delhi 96)*
a) Laparotomy b) Colpotomy
c) Extemall&D d) Antibiotics

1902. Intra-abdominal calcificaition in a plane X-ray abdomen is most often seen in - *{Karn 95)*
a) Meconium ileus
b) Meconium peritonitis
c) Meconium plug syndrome
d) Necrotising enterocolitis

1903. Best investigation for air in peritoneal cavity is -
a) USG b) Laparotomy *{CMC 98)*
c) Laparoscopy d) X-ray abdomen-erect view
e) CT scan

1904. "Peritoneal mice" is - *{AP97)*
a) Pseudomyxoma peritonei
b) Appendices epiploicae
c) Peritoneal seedings of tumour
d) Endometriosis

1905. The "Mesenteric cyst" - *{AP 97)*
a) Moves parallel to the mysentery
b) Moves perpendicular to the mesentery
c) Is secondary tumour
d) Is fixed and immobile

1883)c 1884) d 1885)c 1886)d 1887)a 1888)b 1889)b 1890)b 1891)c 1892)b,cl893)d 1894)a 1895)c 1896)b
1897) a 1898) d 1899)d 1900)b 1901)b 1902)b 1903)d 1904)b 1905)b

1906. Ormond's disease is - *{Kerala 98)*
a) Idiopathic lymphadenopathy
b) Retractile testis
c) Idiopathic retroperitonial fibrosis
d) Idiopathic mediastinitis

1907. Gas most suited for laproscopy is - **(***Rohtak 97)*
a) Air b) Nitrogen
c) GO d) Oxygen
e) Carbon dioxide

1908. Advantage of carbon dioxide in laproscopy are all excpet - *{Rohtak 9 7)*
a) Non-irritant b) Non-inflammable
c) Minimally absorbed d) No tissue reaction
e) None

1909. Colopotomy is done to treat- *{AP 98)*
a) Ischeorectal abscess b) Pelvic abscess
c) Appendicular abscess d) Perianal abscess

1910. Which one of the following statements regarding Meconium peritonitis is NOT correct - *{UPSC2K)*
a) It is a septic peritonitis
b) It develops in later intra-uterine life or during or just after delivery
c) This condition should always be considered when a baby is bom with tense abdomen
d) Plain X-ray abdomen of this condition reveals calcification on liver and spleen

1911. The following are true regarding ascites except -
a) Only when the amount of fluid *{Kerala 2k)* present exceeds 1500 ml. It can be recognised clinically
b) Shifting dullness is absent when there is a very large accumulation of fluid
c) In Cirrhosis there is obstmction to the venous outflow of the liver due to obliterrative fibrosis of the intra hepatic venous bed
d) A transudate has a protein content of greater than 30 gms. Of protein per litre
e) In Meig's syndrome it is associated with pleral effusion and solid fibroma of ovary

1912. Mucinous peritoneal fluid - *(PGI2K)*
a) Carcinoma stomach b) Leimyo sarcoma
c) Teratoma ovary d) Mucocele of appendix

1913. Malignant change in lipoma is most common is -
a) Thigh b) Nape of neck *(2000 R)*
c) Retroperitoneum d)Back

1914. The commonest organism seen in peritonitis \s-*(IN01)*
a) Escherichia coli b) Clostridium welchii
c) Staphylococci d) Klebsiella

1915. Retractile mesentertis may be seen in-*(Nimhans 86)*
a) Ormonds's disease b) Gardner' syndrome
c) Turner's syndrome d) Down's syndrome

1916. Regarding primary peritonitis which of the following is correct- *{JIPMER 88)*
a) Caused by pneumococcus
b) Often oxygen
c) Steroids
d) No treatment is necessary

1917. Pseudochylous ascites occurs in -*(PGI80, JIPMER 81)*
a) Cirrhosis b) Hyperlipidemia
c) Filariasis d) Malignant ascites

1918. Localised idiopathic fibrosis is seen in all of the following except- *(UPSC 2001)*
a) Riedel's struma b) Hypertrophic scar
c) Sclerosing cholangitis d) Panniculitis

1919. True about mesenteric cysts is - *(PGI 97)*
a) Enterogenous cyst is commonest type
b) Recurrence is common after enucleation
c) Mensentric cyst are usually multiple
d) Enucleation is the treatment of choice of chylolymphatic cyst

1920. In pneumoperitoneum following are seen except -
a) Hypertension b) Bradycardia *(PGI97)*
c) Tachycardia d) Hypercapnia

1921. Treatment of ruptured pneumo-peritoneum, as a result of colonoscopy in a young patient is -*(PGI 98)*
a) Temporary colostomy b) Closure + lavage
c) Permanent colostomy d) Symptomatic

1922. Meconium peritonitis occurs - *(PGI99)*
a) Just before birth b) Just after birth
c) Before and after birth d) Due to birth trauma

1923. Mucinous peritoneal fluid is found in - *(PGI2000)*
a) Carcinoma stomach b) Leimyosarcoma
c) Teratoma ovary d) Mucocele of appendix

1924. Mucinous ascites is seen in - *(PGI 2000)*
a) Stomach Ca b) TB
c) Nephrotic syndrome d) Cirrhosis

1925. In which of the following conditions is air under both sides of diaphragm visualized - *(PGI 01)*
a) Perforated Meckel's diverticulum
b) Uterine rupture following illegal abortion
c) Perforation of duodenal ulcer
d) Liver abscess
e) Ruptured appendix

1926. Peritonitis with air under both diaphragmatic domes, possibility is/are - *(PGI 01)*
a) Duodenal perforation
b) Perforation of appendix
c) Meckle's perforation
d) Liver abscess rupture
e) Uterine perforation (during procedure for abortion)

1927. True about pseudomyxoma peritonei - *(SGPGI04)*
a) Seen in male only
b) Cytoreductive surgery needed
c) Always appendicectomy needed
d) Radiation therapy given
e) Locally malignat tumor

1928. Pseudomyxoma peritone- *{PGI04)*
a) Males more common than females
b) Appendix should be removed in all cases
c) Chemotherapy is effective
d) Not malignant

1906)c 1907)e 1908)c 1909)b 1910)a 1911)a,d 1912)a,d 1913)c 1914)a 1915)a 1916)a 1917)d 1918)b
1919) d 1920)b 1921)b 1922)c 1923)a 1924)a 1925)a,b,c,e 1926)a,c 1927)b,c,e 1928)b,c

1929. When gas filled cysts are found in subserosa or submucosa of small intestine or colon, it is called -
a) Pneumatosis cystoids intestinalis (*,AMU05)*
b) Crohn's disease
c) Ulcerative colitis
d) Mesenteric cyst

1930. Layers which are penetrated with trochar & cannula in production of pneumoperitoneum are -
a) Skin & superficial fascia (*PGIJune05*)
b) Deep fascia
c) Rectus abdominis
d) Transversus abdominis
e) Rectus sheath

1931. Apart from Escherichia coli, the other most common organism implicated in acute suppurative bacterial peritonitis is - *(AI06)*
a) Bacteroides b) Klebsiella
c) Peptostreptococcus d) Pseudomonas

1932. Commonest site from where pseudomyxoma peritonei arise - *(PGI June 06)*
a) Ovary b) Appendix
c) Pancreas d) Stomach
e) Colon

1933. Commonest sites of intraabdominal abscess -
a) Subphrenic *(PGI June 06, Jipmer 86, 87)*
b) Paracolic
c) Pelvis
d) Retroperitoneal
e) Between loops

1934. Which of the following complication is not seen with peritonitis - **(***Manipal 06)*
a) Renal failure b) Residual abscess
c) Endoxic shock d) Bone marrow suppression

1935. A 25 years old female presents with pyrexia for ten days, develops acute pain in periumblical region spreading all over the abdomen. What would be the most likely cause ? *(UPSC07)*
a) Perforation peritonitis due to intestinal tuberculosis
b) Generalised peritonitis due to appendicular perforation
c) Typhoid enteric perforation and peritonitis
d) Acute salpingo-oophoritis with peritonitis

1936. Most pathognomic in pelvic abscess is - *(UP 07)*
a) Constipation b) Mucopurulent discharge
c) Loose stool d) Bleeding

1937. All are true about Pseudomyxoma peritnonei except-
a) Common in male *(UP07)*
b) Associated with ovary tumours
c) Yellow jelly collection of fluids
d) Appendicetal adeno carcinoma

1938. 'Gas' in the tissue should be differenciates with -
a) Pseudomyxoma peritonei *(UP07)*
b) Pseudomonas infection
c) Clostridium nouyi
d) Non clostridial infection

1939. Sub acute spontaneous peritonitis in cirrhosis patients the polymorphonuclear cells are - *(UP 08)*
a) More than 200 cells/cumm
b) More than 300 cells/cumm
c) More than 400 cells/cumm
d) More than 500 cells/cumm

1940. All are true about pseudomyxoma peritonei except -
a) Associated with ovarian tumours *(DPGEE 08)*
b) Appendicitis
c) Yellow jelly collection of fluid
d) Common in male

1941. Most common site of intraperitoneal abscess is -
a) Right superior intraperitoneal spac*q* *(DPGEE 08)*
b) Right inferior intraperitoneal space
c) Left superior intraperitoneal space
d) Left inferior intraperitoneal space

1942. Most common site of intra peritoneal abscess ?
a) Morrison's pouch *(APPG 08)*
b) Omental bursa
c) Pelvic region
d) Left subhepatic pouch

1943. Pseudomyxoma peritonei arises from -
a) Carcinoma ovary *(PGI Dec 08)*
b) Ovarion cyst
c) Ovarian dermoid
d) Adenocarcinoma colon
e) Mucocele of appendix

1944. Not associated with fat necrosis - *(PGI June 09)*
a) Liposuction b) Radiotherapy
c) Mammoplasty d) Carcinoma breast
e) Following trauma

1945. Infection of all the following structures can be cause Psoas Abscess except - *(DELHIPG Mar. 09)*
a) Vertebrae b) Appendix
c) Hip joint d)Ribs

1946. Which of the following statements about preoperative optimization for perforation peritonitis is incorrect?
a) High technology intensive care unit environment is required *(DELHIPG Mar 09)*
b) Patients may require large volume of crystalloid infusion
c) Hypovolemia and sepsis contribute to tissue underperfusion
d) Base deficit >6 is marker of significant metabolic acidosis

1947. The most common intraperitoneal abscess following peritonitis is - *(UPSC-II09)*
a) Subphrenic b) Pelvic
c) Paracolic d) Interloop

1948. Regarding Abdominal cocoon all statements are true except - *(PGI Nov 09)*
a) Common in young girl
b) Associated with liver fibrosis
c) Fibrosis of small bowel & stomach
d) Chronic peritonitis is seen
e) Seen in tropical & subtropical region

1929) a 1930)a,c,d,e 1931)a 1932)b 1933)c 1934)None 1935)c 1936)b 1937)a 1938)c 1939)a 1940)d 1941)b 1942)c 1943) a,b,d,e 1944)b,c,d 1945)d 1946)a 1947)b 1948)b

1949. The commonest site of an intraperitoneal abscess -
a) Pelvis *(Maharashtra 10)*
b) Subphrenic space
c) Periappendicular
d) Paracolic gutter

1950. A patient with stab injury to anterior abdomen presents with a tag of omentum protruding through the abdominal wall near the umbilicus. On evaluation he is hemodynamically stable and shows no signs of peritonitis. Initial management of patient should involve- *(AI11)*
a) FAST
b) Exploratory Laparotomy
c) Local Wound Exploration and Suturing
d) CECT Abdomen

1951. A patient with abdominal injury presents to the emergency department with signs of signs of peritonitis and shock. Airway and Breathing were secured and IV fluids were started with 2 large bore cannulas. The next line of management should be -
a) FAST *(AI11)*
b) Exploratory Laparotomy under general anesthesia
c) Insertion of abdominal drain followed by laparotomy
d) Laproscopy

1952. Consider the following findings with reference to a diagnostic peritoneal lavage (DPL) in a case of abdominal trauma - *(UPSCII11)*
1. 10 ml of gross blood on aspiration
2. W.B.(c) count more than 500/cu mm
3. Amylase level more than 175 lU/dL
4. R.B .(c) count more than 100,000/cu mm

The criteria for a positive DPL are:
a) 1 and 2 only b) 3 and 4 only
c) 1,2 and 3 only d) 1,2,3 and 4

1953. Burst abdomen after laprotomy takes place after - *(NEET/DNB Pattern)*
a) 1-2 days b) 7-10 days
c) Usually after 3 weeks d) After one month

SMALL & LARGE INTESTINE

1954. Complications of Meckel's diverticulum include - *(NIMH.87, Kerala 86)*
a) Hemorrhage b)Intussusception
c) Strangulation d) All are correct

1955. Which sulphonamide is used for the treatment of ulcerative colitis - *(AI 88)*
a) sulphamethiazole b) Sulphathalazole
c) Sulphaguanidine d) Salazopyrin

1956. In acute diverticulitis of the colon, the sigmoidoscopic finding is - *(Kerala 87)*
a) Mucosa is inflammed
b) Minute diverticuli seen
c) Saw toothed appearance
d) Sigmoidoscope cannot be passed beyond 15 cm

1957. Thumb printing is characteristic of -*(AIIMS 86,88,*
a) Crohn's disease b) Ischemic colitis *PGI85)*
c) LGV d) Ulcerative colitis

1958. Ulcerative colitis almost always involves the... -
a) Caecum b) Sigmoid *(AIIMS 87)*
c) Right colon d) Rectum

1959. Procedure of choice in ulcerative colitis with acute perforation is - *(AIIMS 86, 88)*
a) Defunctioning ileostomy
b) Closure of perforation
c) Proximal diversion colostomy
d) Total colectomy and ileostomy

1960. Commonest site for colonic diverticula is - *(AIIMS 8 7, AI 90, PGI 89)*
a) Ascending colon b) Sigmoid colon
c) Transverse colon d) Descending colon

1961. Diagnostic of Hirschsprungs disease is -
a) Barium enema *(JIPMER 8 7, PGI 98)*
b) Rectal examination
c) Manometry
d) Rectal biopsy

1962. Small intestine is sutured by - *(PGI 88)*
a) Non absorbable in 2 layers
b) Absorbable in 2 layers
c) Inner absorbable and outer non absorbable
d) Inter non absorbable and outer absorbable

1963. The following is true of mesentric artery thrombosis-
a) Mostely embolic in nature *(PGI 88)*
b) Shock is present
c) Extensive infarction of whole of small bowel and cecum is seen
d) Good prognosis

1964. Resection of the terminal ileum results in-*(PGI 88)*
a) Vitamin B_{12}defeciency
b) Iron defeciency
c) Increased incidence of gall stones
d) Steatorrhoea

1965. Small intestinal tuberculosis can cause - *(PGI88)*
a) Diarrhoea b) Constipation
c) Stricture d) Malabsorption

1966. The commonest congenital gastrointestinal anomaly in an infant is - *(TN 90)*
a) Malrotation b) Congenital atresia
c) Congenital megacolond) None of the above

1967. Typhoid perforation occurs during - *(AIIMS 89)*
a) I^{st} week b) 2^{nd} weeks
c) 3 rd weeks d) 4^{th} weeks

1968. Tenesmus occurs in lesions of - *(TN 90)*
a) ileum b) Right side of colon
c) Descending colon d) Sigmoid colon

1969. The following are complications of ulcerative colitis except - *(AI 90)*
a) Peptic ulceration b) Arthritis
c) Sclerosing cholangitis d) Toxic megacolon

1949) a 1950) d 1951)b 1952)d 1953)b 1954)d 1955)d 1956)a 1957)b 1958)d 1959)d 1960)b 1961)d 1962)c 1963) a,b,c 1964)a,c 1965)a,c,d 1966)b 1967)c 1968)d 1969)a

1970. Sulfonamide useful in treating ulcerative colitis is -
a) Sulfadiazine b) Sulfasalazine^/^/,)
c) Sulfamethoxazole d) Sulfadimidine

1971. All are true about villous adenoma of intestine except- *(AI91)*
a) Watery diarrhoea
b) Hypercalcemia and hyper phosphatema
c) hypokalemia
d) Prolapse of the mass

1972. Which is true regarding Hirschsprungs disease -
a) More in females *(A11MS 91)*
b) Presentation within 3 days
c) Regular dilatation is effective
d) Rectal biopsy diagnostic

1973. Treatment of choice in multiple intestinal strictures of segment of Jejumum is - *(A11MS 92)*
a) Resection and end to end anastomosis
b) Nobles procedure
c) Stricturoplasty
d) End to side anastomosis

1974. \\liich is true of Ulcerative colitis - *(A11MS 92)*
a) Sting sign of kantor positive
b) Skip lesions are seen
c) Rectum is always invlolved
d) Fistulas are common

1975. Most common indication for laparotomy in intestine T.B is - *(PGI93)*
a) Peritonitis b) Intestinal obstruction
c) Doubtful diagnosis d) Lower GI bleeding

1976. The area of the colon which is used visulalized by barium studies - *(A11MS 80, PGI 81)*
a) Sigmoid b) Hepatic flexure
c) Splenic flexure d) Caecum

1977. The most frequent congenital anomaly of the GI tract is - *(PGI 80, ARMS 80,81)*
a) Imperforate anus b) Meckel's diveticulum
c) Malrotation d) Duodenal atresia

1978. Prophylactic polypectomy is done is -*(J1PMER 81)*
a) Peutz Jegher's syndrome b) Gardner's syndrome
c) Familial polyposis d) None of the above

19379.The incidence of carcinoma of the caecum in relation to colonic adenocarcinoma is - *(PGI 79,*
a) 2% b) 4.5% *A1IMS 82)*
c) 20% d)44%
e) 62%

1980. Following procedures (except one) are done for correction of Hirschprung's disease -
a) Duhamel's b) Soave's*(JIPMER 81,*
c) Swenson's d) Bayar's *ARMS87)*

1981. In intestine, lipoma is commonest in -
a) Rectum b) Sigmoid colon *(ARMS 82,*
c) Caecum d) ileum *PGI 85)*

1982. Internal fistulas with colonic diverticulitis are most often- *(PGI 81, 89)*
a) Colovesical b) Coloenteric
c) Colocolonic d) Colovaginal
e) Coloureteral

1983. The appearance of anastamotic leakage following a low colonic anastomosis most often mainfests -
a) 1-4 days b) 5-10 days *(PGI80,ARMS85)*
c) 11-15 days d) 16-20 days
e) None of the above

1984. The most likely cause for suture leak after colon resection and anastomosis for cancer sigmoid is -
a) Subclinical malnutrition *(PGI 81, Delhi 83)*
b) Infection of anastomotic site
c) Mechanical disruption due to colonic pressure and contractility
d) Ischaemia

1985. The operative treatment in Hirschsprung's disease is only undertaken when child - *(PGI 79, TN 89)*
a) Is 2 years of age
b) Is at least 8 kg in weight and thriving
c) Has no distension of abdomen
d) Has failed to respond to conservative treatment

1986. Mass in right iliac fossa can be - *(Kerala 94)*
a) ileoceccal T.B. b) ileocecal neoplasm
c) Amoeboma d)All

1987. Diverticular disease is not common in - *(Kar. 94)*
a) Colon b) Jejunum
c) Duodenum d) Stomach

1988. False regarding invlovement in crohn's disease -
a) Anorectal area *(ARMS 94)*
b) Rectum
c) Small intestine with Rt. colon
d) Large intestine alone without involvement of small intestine

1989. Skip transmural lesions with tuberculoid granuloma seen in - *(ARMS 94, 91)*
a) Ulcerative colitis b) Crohn's
c) Tuberculosis d)Amoebiasis

1990. A 60 years old man presents with acute onset of pain in lower abdomen followed by repeated rectal bledding Ex. animation regealed pulse rate of 100 minute, BP 160/96 mm of Hg and a localised tenderness in the left hypochondrium. Stools examination reveales only a few pus cells and sigmoidoscopywas normal. Which one of the following is the most likely diagnos -
a) Idiopathic ulcerative colitis *(UPSC96)*
b) Bacillary dysentery
c) Ischaemic colitis
d) Amoebic colitis

1991. Following is least common about angiodyplasia of colon- *(AI96)*
a) Involvement of cecum
b) Involvement of rectum in 50% of cases
c) Affecting age group > 40 yrs.
d) Cause of trouble some lower G.I. hemorrhage

1992. When rectal washouts are given to Hirshsprung's disease, the following flifluid is used - *(Karn 95)*
a) 5% dextrose b) Normal saline
c) Soap solution d) Tap water

1970)b 1971) b 1972)b,d 1973)c 1974)c 1975)a,b 1976)b,c 1977)b 1978)d 1979)None 1980)d 1981)d
1982) a 1983)b 1984)d 1985)b 1986)d 1987)d 1988)b 1989)b 1990)c 1991)b 1992)b

1993. Periampullay carcinoma feature is - *(AP 96)*
a) Early jaundice b) Late jaundice
c) Hemolytic jaundice d) No jaundice

1994. Best treatment for Remission of Acute ulcerative colitis is- *(AIMS97)*
a) Sulphasalazine b) Prednisolone
c) Aminosalicyclic acid d)NSAIDS

1995. All are features of congenital megacolon except- *(AI97)*
a) Large bulky stools b) Tight anal ring
c) Pseudodiarrhoea d) Failure to thrive

1996. Best investigation for carcinoma colon *(Kerala 97)*
a) Barium enem b) Colonic biopsy
c) Clinicl examination d) Colonscopy

1997. The best investigation for colorectal carcinoma -
a) Exfoliative cytology *(Kerala 97)*
b) Air contrast barium enema
c) Ultrasound
d) Colonoscopy and biopsy

1998. In ulcerative colitis, the inflammatory process is usually confined to - *(UPSC)*
a) Mucosa alone
b) Mucosa and submucosa
c) Mucosa, submucosa and muscularis
d) Mucosa submucosa, muscularis and serosa

1999. On colonoscopy which of the following is highly malignant - *(JIPMER 98)*
a) Single pedunculated polyp
b) Multiple flat polyp about hundreds '
c) Multiple pedunculated polyp
d) Solitary flat polyp

2000. Management of Ca descending colon in a 75 year old male is - *(AIIMS 98)*
a) Total colectomy b) Left hemicolectomy
c) Defunctional colostomy d)Harmann's procedure

2001. Hirschprung's disease is treated by - *(AP 98)*
a) Colostomy
b) Excision of aganglionic segment
c) Colectomy
d) Sodium chloride wash

2002. The commonest site of perforation during colonoscopy is - *(UPSC 2K)*
a) Caecum b) Hepatic flexure
c) Splenic flexure d) Sigmoid colon

2003. Not true about hyperplastic tuberculosis -*(UP 2K)*
a) Most common site is ileo-caecal region
b) Presents as mass in right iliac fossa
c) Surgery is the treatment of choice
d) Barium studies are characteristic

2004. True about carcinoma colon is - *(UP 2K)*
a) Left side present with anemia
b) Solitary liver metastasis is not a contradindication to surgery
c) Most common site is ascending colon
d) Right side are usually stenosing variety

2005. Which of the following is true about carcinoma colon- *(AIIMS 2K)*
a) Lesion on the left side of the colon presents with features of anemia
b) Solitary metastasis in liver is not a contraindication for surgery
c) Mucinous carcinoma has a good prognosis
d) Duke's A stage should receive adjuvant chemotherapy

2006. The following regarding colostomy are true except - *(Kerala 2K)*
a) A colostomy is an artificial opening made in Large Bowel to divert the faces to the exterior
b) Temporary colostomy is established to defunction an Anastomosis
c) Permanent colostomy is formed after the resection of Rectum by the abdominoperineal technique
d) Double barreled colostomy is commonly done nowadays
e) Colostomy hernia is a common complication

2007. Most common indication for operation in tuberculosis of intestine is - *(Kerala 2001)*
a) Obstruction b) Perforation
c) Mass abdomen d)GI symptoms

2008. Antiperistalsis is seen in - *(AIIMS 91)*
a) Distal colon b) Jejunum
c) Proximal Colon d) ileum

2009. Guaiac test is used for - *(PGI82)*
a) Pentosuria b) Fructosuria
c) For occult blood in stool d) Pancreatitis

2010. Commonest site of tuberculosis of the intestines -
a) Stomach b) ileum *(AI89)*
c) Jejunum d) Colon

2011. Commenst malignancy of the small instestineis-
a) Adenocarcinoma b) Lymphoma *(PGI 89)*
c) Carcinoid d) Leiomyosarcoma

2012. Typhoid perforation is diagnosed by- *(AIIMS81,*
a) Plain X-ray of abdomen in erect posture
b) Rectal examination *BHU 87)*
c) Gastric aspiration
d) Barium enema

2013. Commonest site involved in lleocaecal T.B.
a) Intestinal wall b) Lymph node
c) Mesentery d) Intestinal mucosa

2014. Investigation of choice for small intestine tumor -
a) Ba meal follow through *(JIMPER 98)*
b) Echo
c) X-ray abdomen
d) CT scan with contrast

2015. Ulcerative colitis progressing to malignancy is characterized by following except - *(PGI 97)*
«a) Risk increases with the time
b) Prognosis worsens
c) Prognosis depends on period
d) Forms pseudopolyps

2016. Absence of myenteric ganglion is seen in -*(PGI 97)*
a) Crohn's disease b) Ulcerative colitis
c) Hirschprung's disease d) Intussusception

1993)a 1994)b 1995)a 1996)b 1997)d 1998)b 1999)b 2000)d 2001)b 2002)d 2003)c 2004)b 2005)b 2006)d
2007)a 2008)a 2009)c 2010)b 201 l)a 2012)a 2013)d 2014)a 2015)d 2016)c

2017. True about colonic organisms is - *(PGI98)*
a) Distal ileum 10^3- 10^5 org
b) Colon 10^{10}- 10^{11} org
c) First org in new bom is coliforms and streptococcus
d) Chyme in jejunum contains many bacteria

2018. In children MC type of polyp is - *(PGI 98)*
a) Juvenile polyp
b) Solitary polyp
c) Familial polyposis
d) Multiple adenomatous polyp

2019. In ulcerative colitis, Ca arises from - *(PGI98)*
a) Pseudopolyps
b) Dysplastic sites
c) Familial polyposis
d) Multiple adenomatous polyp

2020. True about duplication of intestine is- *(PGI 98)*
a) Spherical type is MC
b) Tubular type is attached longitudinally with bowel
c) Spherical cyst communicates with lumen
d) All of the above

2021. Correct about diverticulosis is - *(PGI98)*
a) Arise from diverticula of colon
b) Common in ileum
c) Protrusion of mucosa through muscular layers at point of blood vessel
d) All of the above

2022. True about appendicular rupture is A/E - *(PGI 99)*
a) Common in extremes of age
b) Common in people with Feclith obstruction
c) Early antibiotics prevent rupture
d) Appendicectomy is done always in presence of rupture

2023. Which is true about intestinal tuberculosis -
a) Common site is appendix *(PGI 99)*
b) Causes intestinal perforation
c) Commonly associated with pulmonary TB
d) Caused by mycobacterium TB

2024. Fecal soiling in children is most commonly due to -
a) Hirschsprung's disease *(PGI99)*
b) Chronic constipation
c) Rectal atresia
d) None of the above

2025. Which among the following is not pre-malignant -
a) Ulcerative colitis *(PGI 99)*
b) Peutz-jeghers syndrome
c) Villous adenoma
d) Familial adenomatoses polyopsis

2026. In extensive small bowel resection, all are seen except- *(PGI 99)*
a) Gastric hyposecretion
b) Decreased protein absorption
c) Gall stones increased
d) Oxalate stone increased

2027. Which is most malignant - *(PGI99)*
a) Villous adenoma b) Tubulovillous adenoma
c) Tubular adenoma d) Familial polyposis

2028. Not true about malignancy arising from Ulcerative colitis is - *(PGI 99)*
a) Takes atleast 10 years to develop
b) Left sided is more common
c) Associated with dysplasia of the rest of the colon
d) Younger age of onset is associated with increased chance of carcinoma

2029. Paralytic ileus is seen in - *(PGI99)*
a) Spinal cord injury b) Hypocalcemia
c) Hypermagnesemia d) Uremia

2030. True regarding cancer colon - *(PGI 2000)*
a) Obstructive features are more common with right colon
b) 40% cases at presentation show liver metastasis
c) Resection possible in 25% cases
d) More common in AIDS patients

2031. Painless lower GI bleed is seen in child with- *(PGI 2000)*
a) Meckle's diverticulum b) Rectal polyp
c) Anal fissure d) Ac. appendicitis

2032. True about enterocutaneous fistula - *(PGI2000)*
a) High output fistula drains 500 ml/day
b) Malignancy is most common cause
c) Fluid & electrolyte loss can occur
d) No skin damage

2033. True about mesenteric venous thrombosis -
a) Peritoneal signs are always present *(PGI 2000)*
b) Invariably involves long length of bowel
c) I.V. Heparin is the treatment of choice
d) Surgery can lead to short-bowel syndrome

2034. All are premalignant except - *(PGI 2000)*
a) Adenomatous polyps b) Juvenile polyps
c) Familial polyposis coli d) Peutz-jegher synd

2035. Pt with recurrent diarrhoea, pseudopolyp, lead pipe appearance on Ba enema has - *(PGI2000)*
a) Ulcerative colitis
b) Crohn's disease
c) Irritable bowel syndrome
d) Short bowel syndrome

2036. Ulcerative colitis involves - *(PGI 01)*
a) Serosa b) Lamina propria
c) Mucosa d) Circularis mescle
e) Submucosa

2037. Risk of malignancy in ulcerative colitis is more in -
a) Onset in childhood *(PGI 01)*
b) Extensive involvement of colon
c) Disrupted architecture with crypt abscesses
d) Pseudopolyps
e) Recurrence after treatment

2038. True about Hirschsprung's disease - *(PGI01)*
a) Pathology of myenteric plexus of Auerbach
b) Blood in stools
c) May involve small intestine rarely
d) Involved segment of intestine is dilated
e) Present only in infant & children

2017)b 2018)a 2019)b 2020)a,b 2021)a,c 2022)c 2023)b,c,d 2024)b 2025)b 2026)a 2027)d 2028)b 2029)a,d 2030) None 2031)a,b 2032) a,c 2033) d 2034) b,d 2035) a 2036) c,e 2037) a,b 2038) a,c

2039. True about left sided colon carcinoma - *(PGI01)*
a) Anemia b) Obstruction
c) Melena d) Feculant
e) Sigmoid spared

2040. True about Meckel's diverticulum is/are -*(PGI01)*
a) Bleeding PR
b) Can be a leading point of intussusception
c) Multiple diverticuli common
d) Visualised best by barium meal
e) Almost never requires active treatment

2041. TYue about Ca colon - *(PGI02)*
a) l/3rd of cases shows liver metastasis
b) Obstruction common in sigmoid colon
c) CEA is useful for prognostic importance
d) King's staging in done
e) Alternate bowel habit is common in Ca left colon

2042. Dietery factors associated with colon carcinoma -
a) High fiber b) Low fiber *(PGI 02)*
c) Smoked fish d) High fat intake
e) Japanese are common to develop Ca colon

2043. Thrcot's syndrome is associated with - *(PGI02)*
a) Duodenal polyps
b) Familial adenomatous polyposis
c) Brain tumors
d) Villous adenoma
e) Hyperplastic polyps

2044. Carcinoma of right colon presents as - *(PGI 02)*
a) Anemia
b) Mass in RIF
c) Bleeding PR
d) Alternate constipation and diarrhea
e) Presents with obstruction

2045. Predisposing factors for colon ca are - *(PGI02)*
a) Animal fat consumption
b) Familial adenomatous polyposis
c) Ulcerative colitis
d) Crohn's disease
e) TB

2046. Hirchprung's disease - *(PGI02)*
a) Is seen in infants and children only
b) Absence of ganglia in involved segement
c) The involved segment is the dilated colon
d) Bleeding PR is a presenting feature
e) Surgery is used in therapy

2047. Which of these are associated with increased risk of colorectal ca - *(PGI 02)*
a) More intake of animal fat b) Aspirin
c) Ulcerative colitis d) Amoebic colitis
e) Polyps

2048. When acute appendicitis is suspected, it can be confirmed by - *(PGI 02)*
a) Clinical examination b)USG
c) CT scan d) Blood counts
e) Upper GI endoscopy

2049. After Hemicolectomy, on the 6^{tb} post operative day pt. developed serous discharge from the wound. Following are to be done - *(PGI03)*
a) Dressing of the wound only
b) Start IVF
c) Do urgent Laparotomy
d) Do Ba-enema to see for anastomotic leak

2050. TYue statements about inflammatory bewel disease (IBD)- *(PGI 03)*
a) Surgery is the 1st management
b) Pouch operation is done for fulminant ulcerative colitis
c) 2 % case of chrons disease undergo malignant changes
d) Ulcerative colitis don't undergo malignant changes

2051. TYue about mesenteric vein thrombosis - *(PGI03)*
a) Peritoneal signs always present
b) Thrombobectomy is always done
c) Heparin is given
d) Surgery can lead to short bowel synd.

2052. TYue about small bowel tumour - *(PGI03)*
a) Commonly located in duodenum
b) Lymphoma is common
c) Adenocarcinoma has good prognosis
d) Palliative surgeries are done even in presence of metastasis
e) Adjuvant chemotherapy is given

2053. A 60 years old man suffering from left colon Ca presented with acute Lt. colonic obstruction the treatment is - *(PGI 03)*
a) Primary resection and Hartman's procedure
b) Defunctioning colostomy
c) Rt. hemicolectomy
d) Resection of whole Lt bowel and end to end anastomosis
e) Conservative treatment

2054. Which of the following polyps is not premaliganant-
a) Juvenile polyposis syndrome *(PGI03)*
b) Peutz jegher's syndrome
c) Ulcerative colitis
d) Familial polyposis coli

2055. TYue about neoplastic colorectal polyps - *(PGI 03)*
a) Sessile polyps > 1 cm is malignant
b) MC site is colon and rectum
c) Adenomatous polyp is premalignant
d) Tubular adenoma is malignant
e) Pseudpolyps are premalignant

2056. Appendicitis is diagnosed by - *(PGI03)*
a) TC and DLC b) X-ray abodmen
c) USG d) Colour doppler
e) Ba enema

2057. A 70 yrs old man presenting with acute pain abdomen, pulsating abdominal mass with shock; the management is - *(PGI03)*
a) 6 unit blood transfusion
b) CT scan of abdomen to diagnose the aneurysm
c) Shift the patient to O.T. immediately and exploration of abdomen
d) Laparotomy
e) Angiography to diagnose the aneurysm

2039) b 2040) a,b 2041)a,b,c,e 2042)b,d,e 2043) b,c 2044) a,b 2045)a,b,c,d 2046) b,e 2047) a,c,e 2048) a,b,c 2049) a 2050) None ore 2051)c,d 2052) d 2053)a,b,d 2054)a,b,c,e 2055) a,b,c 2056) c 2057)a,c,d

2058. True about dietary factors in colorectal carcinoma-
a) Low fiber diet *(PGI03)*
b) High fiber diet and high fat intake
c) Low fiber, high fat intake
d) Smoked fish
e) High fiber diet

2059. In case elective surgery of Ca sigmoid colon, which of the following should be done - *(PGI04)*
a) Mechanical bowel wash
b) Broad spectrum antibiotic given 48 hours before operation
c) Broad spectrum antibiotic at the time of operation

2060. True about duodenal adenocarcinoma- *(PGI 04)*
a) Commonest small intestinal tumor
b) Arises from periampullary region
c) Jaundice & anaemia found
d) 5 yr survival is 5%
e) Surgery is only curative

2061. Commonest complication of Meckel's diverticulum is- *(Kerala 03, AI91)*
a) Bleeding b) Perforation
c) Diverticulitis d) Intussusception

2062. Which of the following organisms produces signs and symptoms that mimic acute appendicitis-
a) Enteropathic Escherichia coli *(Karnataka 03)*
b) Enterobius vermicularis
c) Trichomonas hominis
d) Yersinia enterocolitica

2063. Which one of the following conditions is diagnosed by T" Pertechnetate Scintigraphy? (*UP SC 04)*
a) Pharygeal diverticulum
b) Duodenal diverticulum
c) Meckel's diverticulum
d) Colonic diverticulum

2064. Which of the following is true about carcinoma of colon- *(SGPGI OS)*
a) Left colon tumors usually present with anaemia which is severe & unyielding to treatment
b) Mucinous carcinoma has excellent prognosis
c) Duke 'A' tage tumours need adjuvant chemotherapy
d) Solitary superficial hepatic metastasis is not a contraindication for resection

2065. All are true about Gardner's syndrome except -
a) Protein losing enteropathy *(SGPGI05)*
b) Always in 5th decade of life
c) Small intestine polyp
d) Malignancy is common

2066. Rectal polyp most commonly presents *ns-(SGPGI 05)*
a) Obstruction b) Bleeding
c) Infection d) Changes into malignancy

2067. Toxic megacolon is seen in - *(SGPGI 05, NIM 86,*
a) Chronic non specific ulcerative colitis *AIIMS 87,*
b) Crohn's disease *94)*
c) Colonic diverticulosis
d) Hamartomatous polyp

2068. Rotation of sigmoid volvulus occurs - *(AMU 05)*
a) Clockwise
b) Anticlockwise
c) Initially clockwise later anticlockwise
d) Either clockwise or anticlockwise

2069. Carcinoma of the colon develops in all patients with-
a) Juvenile polyposis *(COMEDK 05)*
b) Hamartomatous polyp
c) Inflammatory polyps
d) Familial adenomatous polyposis

2070. In a patient with spontaneous biliary enteric fistula the most common site of communication with gall bladder is- *(UPSC05)*
a) Duodenum b) Jejunum
c) Ileum d) Transverse colon

2071. The most useful investigation for profuse lower gastrointestinal bleeding is - (*UPSC 05)*
a) Proctosigmoidoscopy
b) Colonoscopy
c) Double contrast barium enema
d) Selective arteriolgraphy

2072. "Cobblestone" appearance seen on colonoscope is characteristic of the following disease -*(MAHE 05)*
a) Crohn's disease b) Ulcerative colitis
c) TB colitis d) Irritable bowel syndrome

2073. The fold of Treves is - *(MAHE 05)*
a) The fold of mucous membrane projecting into the lumen of the rectum
b) The ilieo-appendicular fold of peritoneum
c) The fold of mucous membrane around the papilla ofVater
d) The fold of peritoneum over the inferior mesenteric vein

2074. Signe-de-Dance is - *(MAHE 05)*
a) Empty right iliac fossa in intussusception
b) Pincer shaped appearance in barium enema in intussusception
c) Tenderness at the McBumey's Point
d) Passing of large quantities of urine in hydronephrosis

2075. Common surgical indication in chronic inflammatory bowel disease - *(PGI June 05)*
a) Obstruction b) Malignancy
c) Massive bleeding

2076. True about small bowel diverticula - *(PGI June 05)*
a) Contains all the layers of bowel wall
b) Seen in terminal ileum
c) Radiographically not visualized
d) Surgical treatment is not required

2077. Surgical treatment of ulcerative colitis -
a) Done in late cases only *(PGI June 05)*
b) Done in cases where medical treatment fails
c) Pouch surgery done

2058) a,c,d 2059) a,c 2060)b,c,e 2061) a 2062)d 2063)c 2064)d 2065)b 2066)b 2067)a 2068)a 2069)d 2070)a 2071)b 2072)a 2073)b 2074)a 2075)a,b,c 2076)a,b 2077)A11

2078. Mr. C.P. Patel is having carcinoma colon of left side, comes to emergency department with obstruction. What will be the best treatment to be given -
a) Hartman's procedure *(MAHA 05)*
b) Defunctioning colostomy
c) Lieotransverse anastomosis
d) Transverse colostomy

2079. Peutz-Jegher syndrome-all are ture except -
a) Pigmentation of lips & oral mucosa *(APPGE05)*
b) Polyposis of jejunum
c) Radiotherapy is treatment of choice
d) Malignancy occurs rarely

2080. Snow storm ascites is seen in - *(APPGE 05)*
a) Meconium ileus
b) Hirschsprung disease
c) Ileocaecal tuberculosis
d) Pseudomyxoma peritonei

2081. The term "Left sided appendicitis" as popularly called is nothing but - **(***APPGE 05)*
a) Diverticulitis b) Ascending colitis
c) Descending colitis d) Typhilitis

2082. The diagnosis of congenital megacolon is confirmed by- *(AIIMS Nov 05)*
a) Clinical features b) Barium enema
c) Rectal biopsy d) Recto - sigmoidoscopy

2083. All of the following extraintestinal manifestations of ulcerative colitis respond to colectomy except -
a) Primary sclerosing cholangitis *(AIIMSNov 05)*
b) Pyoderma gangrenosum
c) Episcleritis
d) Peripheral arthralgia

2084. The most common facial abnormality seen in Gardener's syndrome is - *{ARMS Nov 05)*
a) Ectodermal dysplasia b) Odontomes
c) Multile osteomas d) Dental cysts

2085. All of the following are modalities of therapy for hepatocellular carcinoma except - *{ARMSNov 05)*
a) Radiofrequency ablation
b) Transarterial catheter embolization
c) Percutaneous acetic acid
d) Nd Yag laser ablation

2086. Gardener's syndrome is a rare hereditary disorder involving the colon. It is characterized by - *(AI05)*
a) Polyposis colon, cancer thyroid, skin tumours
b) Polyposis is jejunum, pituitary adenoma and skin tumours
c) Polyposis colon, osteomas, epidermal inclusion cysts and fibrous tumours in the skin
d) Polyposis of gastrointestinal tract, cholangiocarcinoma and skin tumours

2087. A new born presented with bloated abdomen shortly after birth with passing of less meconium. A full-thickness biopsy rectal biopsy finding is most likely to be present - *(AI 05)*
a) Fibrosis of submucosa
b) Hyalinisation of the muscular coat
c) Thickened Muscularis propria
d) Lack of ganglion cells

2088. Surgical indications in inflammatory bowel diseases are A/E - *(PGI June 06)*
a) Obstruction
b) Perianal complication
c) Extraintestinal complication
d) Stricture
e) Malignancy

2089. Hirschprung's disease true are - *(PGI June 06)*
a) Sometimes found in adult
b) Dilated segment involved
c) Auerbach's plexus absent
d) Sometimes involve small intestine
e) Bleeding PR is usual presentation

2090. Meckel's diverticulum, true are A/E -*(PGI June 06)*
a) Has three layers with artery
b) Heterotopic epithelium in 50-60% cases
c) Always gastric epithelium
d) May present with hemorrhage
e) When accidentally seen in laparotomy always resected

2091. Features of Blunt trauma abdomen maximum injury is to - *(PGI June 06)*
a) Proximal ileum b) Proximal jejunum
c) Midihum d) Ileocaecal junction
e) Colon

2092. Features of left side Ca colon are - *(PGI June 06)*
a) Anemia b) Obstruction
c) Altered bowel habit d) Melena
e) Feculent vomiting

2093. Commonly undergoing malignant transformation is/are - *(PGI June 06)*
a) FAP b) Crohn's disease
c) Ulcerative colitis d) Enteric colitis
e) Juvenile polyposis

2094. Inflammatory bowel disease found in children -
a) Ulcerative colitis b) Tropical sprue *(PGI June*
c) Crohn's disease d) Celiac disease *06)*
e) Cystic fibrosis

2095. Small intestinal biopsy is diagnostic in -
a) Whipple's disease *(PGI June 06)*
b) Abetalipoproteinemia
c) Celiac disease
d) Agammaglobulinemia

2096. Carcinoma sigmoid colon with obstruction Management includes - *(PGI June 06)*
a) Hartmann's procedure
b) Resection and end to end anastomosis with proximal colostomy
c) Proximal colostomy with distal ligation
d) Sub-total colectomy

2097. All of the following is seen after massive small bowel resection, except - *{APPG 06)*
a) Increase in length of the bowel
b) Villous hypertrophy
c) Mucosal hyperplasia
d) Decrease in surface area per cell

2078) a 2079) c 2080) a 2081) a 2082) c 2083) a 2084) c 2085) d 2086) c 2087) d 2088) c 2089) a,c,d 2090) c,e 2091) b,d 2092) b,c 2093) a, c 2094) a,c 2095) a,b,d 2096) All 2097) a

2098. Which one of the following gastrointestinal disorders predisposes to urolithiasis - *(UPSC 07)*
a) Peutz - Jegher's syndrome
b) Short bowel syndrome
c) Familial polyposis coli
d) Ulcerative colitis

2099. All the following polyps are premalignant except -
a) Juvenile polyposis syndrome *(AI07)*
b) Famillial polyposis syndrome
c) Juvenile polyp
d) Peutz jeger syndrome

2100. Which of the following has least malignant potential-
a) Juvenile polyps in Juvenile polyposis syndrome *(AI07)*
b) Hamartomatous polyps in peutz Jaghers syndrome
c) Adenomatous polyps in Familial colonic polyposis
d) Adenomatous polyps in HNPCC

2101. Colonic diverticulosis is best diagnosed by -
a) Colonoscopy *(AiimsMay07)*
b) Nuclear scan
c) Barium enema
d) CT scan

2102. Which of the following colonic polyps is not premalignant - *(A iims May 0 7)*
a) Juvenile polyps
b) Hamartomatous polyps associated with Peutz-Jegher's syndrome
c) Villous adenoma
d) Tubular adenomas

2103. Most common site for carcinoid tumor in the abdomen - *(MAHE 0 7)*
a) Appendix b) Liver
c) Intestines d) Pancreas

2104. Most common cause of lower gastro intestinal bleeding is - *(UP 07)*
a) Diverticulitis b) Colorectal carcinoma
c) Angiodysplasia d) Anal fissure

2105. Meckel's diverticulum is patent of - *(UP 07)*
a) Vitello intestinal duct b) Urachus
c) Oganic diaphragm d)None

2106. Crohn's disease can be seen in - *(Corned 07)*
a) Jejunum only b) Colon only
c) Terminal ileum and right side d) Mouth of anus

2107. The Mechel's diverticulum is situated within about_____ cm from the ileocecal valve -
a) 25 b) 60 *(Corned 07)*
c) 75 d) 100

2108. Cobble stone appearance is seen in - *(Corned 07)*
a) Ulcerative colitis b) Crohn's disease
c) Appendicitis d) Carcinoma rectum

2109. The commonest gastric polyp is - *(Corned 08)*
a) Hyperplastic polyp
b) Inflammatory polyp
c) Adenomatous polyp
d) Part of familial polyposis

2110. What is most common type of carcinoma of the right colon- *(UPSC-II08)*
a) Stenosingb) Ulcerative
c) Tubular d) Fungating

2111. Most common cause of colonic fistula in India at age of 27 years - *(UP 08)*
a) Crohn's diseaseb) Ulcerative colitis
c) Tuberculosis d) Carcinoma rectum

2112. Metabolic abnormality seen in large colorectal villous adenoma - *(Aiims May 08)*
a) Hypokalemic metabolic alkalosis
b) Hypokalemic metabolic acidosis
c) Chlorine sensitive metabolic acidosis
d) Chlorine resistant metabolic alkalosis

2113. Treatment of carcinoma left colon with acute obstruction - *(PGI June 08)*
a) Harman's procedure
b) Left colectomy with anastomosis
c) Proximal colostomy
d) Extended rt. colectomy with ileoanal anastomosis
e) Primary anastomosis should never be attemped

2114. String sign of kantor seen in ? *(APPG 08)*
a) Chrons discose b) Ulcerative colitis
c) Both d) None

2115. What is epicolic node ? *(APPG 08)*
a) Node draining colon b) Adjacent to aorta
c) Epitracheal node d) None

2116. Most common presentation of Meckels diverticulum ? *(APPG 08)*
a) Lower GI bleeding b) Upper GI bleeding
c) Diarrhorea d) Abdominal pain

2117. True about Hirschprung's disease - *(PGIDec 08)*
a) Aganglionic segment is contracted not dilated
b) Descending colon is most common site of aganglionosis
c) Barium enema is diagnostic
d) Is seen in infants & children only
e) Barium enema show calcification

2118. Most common cause of acute mesenteric ischemia is- *(AIIMSNov 08)*
a) Arterial thrombosis b) Venous thrombosis
c) Embolism d) Non occlusive disease

2119. Based on Epidemiological studies, which of the following has been found to be most protective against carcinoma colon - *(AI 09)*
a) High fiber diet b) Low fat diet
c) Low selenium diet d) Low protein diet

2120. All of the following genes may be involved in development of carcinoma of colon Except - *(AI 09)*
a) APC b) Beta - Catenin
c) K - ras d) Mismatch repair genes

2121. Most important prognostic factor for colorectal carcinoma is - *(AI 09)*
a) Site of lesion b) Stage of lesion
c) Age of patient d) Lymph node status

2098)b 2099)c 2100)b 2101)c 2102)a 2103)a 2104)a 2105)a 2106)d 2107)b 2108)b 2109)a 2110)b 2111)a 2112)b 2113)a,b,c,d 2114)a 2115)a 2116)a 2117)a 2118)c 2119)a 2120)None 2121)b

2122. Parastomal hernia is most frequently seen with -
a) End colostomy b) Loop colostomy *(AI09)*
c) Endlliostomy d) Loop Iliostomy

2123. Most common cause of death in Crohn's disease is due to- *(AIIMSMay09)*
a) Sepsis
b) Thromboembolic complication
c) Electrolyte disturbance
d) Malignancy

2124. Skip lesions are seen in - *(AIIMS May 09)*
a) Ulcerative colitis b) Crohn's disease
c) Typhoid d) Tuberculosis

2125. True regarding Barium study of ileocaecal tuberculosis - *(PGI June 09)*
a) String sign b) Goose neck sign
c) Rt sided obstruction d) Pulled up caecum
e) Sterllinsign

2126. True about virtual colonscopy (VC) - *(PGI June 09)*
a) Have better image than conventional colonoscopy
b) VC is performed by CT & MRI
c) Take over time than conventional colonoscopy
d) easy to take tissue sample
e) Helpful in pathology outside colon

2127. True about diverticulitis - *(PGI June 09)*
a) Occur at any age
b) Often incidental finding at operation
c) Young patient has more aggressive disease
d) Left sided colon involvement is more common
e) Operation is not for all patients

2128. Which of the following statement about edematous bowel is correct ? *(DELHIPG Mar. 09)*
a) Stapled Anastomosis is less prone to leak than hand-sewn ones
b) Continuous monolayer Anastomosis gives best result
c) As bowel edema subsides, knots become loose
d) Bowel edema results from vigorous resuscitation

2129. Which of the following about acute diverticulititis is incorrect ? *(DELHIPG Mar 09)*
a) Sigmoid is the commonest site
b) Peri-colic abscess can occur
c) Fistulization is an emergency
d) Conservative treatment may be successful in severe attack

2130. The commonest cause of significant lower gastrointestinal bleed in a middle aged person with unknown reason is - *(DELHIPG Mar 09)*
a) Sigmoid diverticula b) Angiodysplasia
c) Ischemic colitis d) Ulcerative colitis

2131. Which of the following statements about sigmoid volvulus is incorrect ? *(DELHIPG Mar 09)*
a) More common with laxative abuse
b) Non-operative treatment has no role
c) Recurrence rate around 40%
d) Sigmoid resection is definitive treatment

2132. Which of the following statements about Crohn's disease is incorrect ? *(DELHIPG Mar 09)*
a) Granuloma present frequently
b) It is separate and distinct form ulcerative colitis
c) Cigarette smoking is a risk factor
d) Rectum spared in 50% patients with large bowel involvement

2133. The short bowel syndrome is characterized by all of the following except- *(Manipal 09)*
a) Diarrhea b) Hypogastrinemia
c) Weight loss d) Steatorrhoea

2134. The following disorders are predisposing conditions for carcinoma of the colon except - *(UPSC-II09)*
a) Ulcerative colitis
b) Villous adenoma
c) Familial polyposis coli
d) Peutz-Jeghers syndrome

2135. Which ones is commonly a/w crohn's disease -
a) Cologastric b) Colourеteric*(PGINov 09)*
c) Colovesical d) Coloduodenal
e) Colovaginal

2136. All are true about Ulcerative colitis except -
a) All layer are involved *(PGI Nov 09)*
b) Malabsorption
c) Backwash ileitis in 10-15%
d) Mesalazine maintains the disease in remission
e) Rarely recurs after surgery

2137. Hirschsprung's disease is due to - *(AIIMSNov 09)*
a) Loss of ganglion cells in the sympathetic chain
b) Atrophy of longitudinal muscles
c) Failure of migration of neural crest cells from cranial to caudal direction
d) Malformed taenia coli

2138. Ileocecal tuberculosis is associated with -
a) Megaloblastic anemia *(AIIMS Nov 09)*
b) Iron deficiency anemia
c) Sideroblastic anemia
d) Normocytic normochromic anemia

2139. Which of the following colonic polyps has no risk for malignancy - *(AIIMS Nov 09)*
a) Juvenile polyps
b) Hamartomatous polyps associated with Peutz-Jegher's syndrome
c) Juvenile polyposis syndrome
d) Famillial adenomatous polyposis syndrome

2140. Which of the following colonic polyps has no risk for malignancy - *(AIIMS May 10)*
a) Juvenile polyps
b) Hamartomatous polyps associated with Peutz-Jegher's syndrome
c) Juvenile polyposis syndrome
d) Famillial adenomatous polyposis syndrome

2141. Peutz Jeghers polyps present most commonly in -
a) Rectum b) Colon *(AIIMS May 10)*
c) Esophagus d) Jejunum

2122)a 2123)d 2124)b 2125)A11 2126)a,b,e 2127)d 2128)c 2129)c 2130)a 2131)b 2132)d 2133)b 2134)d 2135)a,c,d,e 2136)a,b 2137)c 2138)a 2139)a 2140)a 2141)d

2142. All of the following genes may be involved in development of carcinoma of colon Except -
a) APC b) Beta-Catenin *(AIIMSMay 10)*
c) K-ras d) Mismatch Repair Genes

2143. Early post-operative complication of ileostomy in the post-operative period - *(AIIMS May 10)*
a) Obstruction b) Necrosis
c) Diarrhea d) Prolapse

2144. Best investigation to diagnose Meckel's diverticulum? *(Maharashtra 10)*
a) X-ray abdomen b) Ultrasonography
c) Barium study d) Tc 99m Pertectinate scan

2145. Which one of the following is not a premalignant condition for colon cancer? *(UP SC II10)*
a) Familial adenomatous polyposis coli
b) Villous adenoma
c) Ulcerative colitis
d) Hamartomatous polyps

2146. True about Hirschprung's disease - *(PGIMay 10)*
a) Aganglionic segment is contracted not dilated
b) Descending colon is most common site of aganglionosis
c) Barium enema is diagnostic
d) It is seen in infants & children only
e) Barium enema show calcification

2147. Investigation for acute abdomen includes -
a) USG *(PGIMay 10)*
b) Multidetector CT
c) Contrast enhanced CT
d) X - ray
e) Echocardiography

2148. Colonic disease can be diagnosed by all except - *(PGIMay 10)*
a) Virtual colonoscopy b) Ba enema
c) Ba swallow d) Ba follow through
e) Enteroclysis

2149. All are true statement about Meckel's diverticulum except - *(PGINov. 10)*
a) Occurs in 2% of population
b) Perforation occurs
c) Common on antimesenteric border
d) Contains ectopic gastric tissue
e) Diarrhoea very common

2150. Features(s) of Jejunal diverticula is/are -
a) T Folate absorption *(PGINov. 10)*
b) *i* Ferritin absorption
c) *i* B12 absorption
d) Urea breath test
e) Steatorrhoea

2151. True about GIST all except- *(AIIMS Nov 10)*
a) Most common in duodenum
b) Necrosis and ulceration present
c) PET is used to assess response to therapy
d) Well circumscribed

2152. Child presents with recurrent abdominal pain and bilious vomiting. Condition was diagnosed by barium follow through. Surgery was done, - mesentric widening, appendicectomy, cutting the Ladd's band. What is the diagnosis? *(AIIMS Nov 10)*
a) Recurrent Caecal volvulus
b) Mai rotation
c) Recurrent appendicitis
d) Stricture TB

2153. A 50 yr. old male presents with obstructive symptoms. Biopsy of stomach reveals Gastrointestinal stromal tumor (GIST). Most appropriate marker for GIST is-
a) CD 34 b) CD 117 *(AIIMS May 11)*
c) CD 30 d)CD 10

2154. All of the following genes may be involved in development of carcinoma of colon Except -
a) APC b) Beta-Catenin *(AIIMS May 11)*
c) K-ras d) Mismatch Repair Genes

2155. Which of the following is NOT true about FAP?
a) AR inheritance *(AIIMS May II)*
b) Screening done by sigmoidoscopy
c) Polyps develop in late adulthood
d) Epidermal cysts & osteomas may occur

2156. Based on Epidemiological studies, which of the following has been found to be most protective against Carcinoma Colon? *(AIIMS May 11)*
a) High fiber diet b) Low fat diet
c) Low selenium diet d) Low protein diet

2157. Which of the following is the terminal group of lymph node for colon? *(AIIMS May 11)*
a) Paracolic b)Epicolic
c) Preaortic d) Ileocolic

2158. Gold standard investigation for recurrent gastrointestinal stromal tumor *is-(AIIMSMay 11)*
a) MRI b)MIBG
c) USG d) PET CT

2159. Most important prognostic factor for colorectal carcinoma is - *(AIIMS May 11)*
a) Site of lesion b) Tumour size & characteristics
c) Age of patient d) Lymph node status

2160. Most common cause of acute mesenteric ischemia is- *(AIIMS May 11)*
a) Arterial thrombosis b) Venous thrombosis
c) Embolism d) Non occlusive disease

2161. Multiple Cutaneous Sebaceous adenomas are seen in- *(AI11)*
a) Gardner's syndrome b) Turcot's syndrome
c) Muir Torre syndrome d) Cowden syndrome

2162. A 70-year-old patient complains of recent change in bowel habits. His stool examination is positive for occult blood and he has anaemia. Which one of the following tumour markers would be appropriate to test in him? *(UPSC111)*
a) CA-125
b) Prostate specific antigen
c) Carcino Embryonic Antigen
d) Neuron-specific enolase

2142)b 2143)b 2144)d 2145)d 2146)a 2147)a,b,c,d 2148)c,d,e 2149)e 2150)c,e2151)a 2152)b 2153)b 2154)b 2155)a 2156)a 2157)c 2158)d 2159)d 2160)c 2161)c 2162)c

2163. The following statements regarding Meckel's diverticulum in adults are true except- *(UPSCII11)*
a) It is a remnant of omphalomesenteric duct
b) It usually presents on the anti-mesenteric border of small intestine
c) Bleeding is a common complication
d) It should be removed if detected incidentally during an abdominal exploration

2164. The most common type of intussuception is -
a) Multiple b) Colocolic *(PGI81, AP 89)*
c) Ileoileal d) Ileoilecolic

2165. VIPoma is associated with which syndrome - *(NEET/DNB Pattern)*
a) Zollinger Ellison
b) Verner Morrison
c) Carcinoid syndrome
d) Cushing's syndrome

INTESTINAL OBSTRUCTION

2166. Commonest site of intestinal atresia is in the -
(AP 86, PGI 86, NIMHANS 86, PGI 85, UPSC 87,
a) Duodenum b) Jeiunum *Jipmer91)*
c) Lleum d) Colon

2167. Predisposing factors for sigmoid volvulus are -
a) Band of adhesion *(KERALA 97)*
b) Long pelvic meso colon
c) Narrow attachment of pelvic mesocolon
d) Loaded pelvic colon
e) All of the above

2168. Most common cause of colonic obstruction is - *(AMI 86, PGI 86, UPSC 88)*
a) Volvulus b) Hernia
c) Adhesions d) Neoplasm

2169. In obstruction of the large gut rupture occurs at the..... - *(PGI 89)*
a) Cecum b) Ascending colon
c) Transverse colon d) Descending colon

2170. Commonest cause of intussusception is - *(TN 90)*
a) Submucous lipoma
b) Meckel's diverticulum
c) Hypertrophy of submucous peyer's patches
d) Polyp

2171. Commonest cause of colonic obstruction in neonates is - *(TN 90)*
a) Meconium ileus b) Aganglionic colon
c) Ileal atresia d) Volvulus

2172. Intestinal obstruction due to meconium occurs in- *(TN90)*
a) Cystic fibrosis b) Mucoviscidosis
c) Hurschsprung disease d) Ileal atresia

2173. Water loss is severe if intestinal obstruction occurs at- *(JIPMER 90)*
a) First part of duodenum
b) Third part of duodenum
c) Midjejunum
d) Ileum

2174. Which is true about Intusssusception - *(AI91)*
a) Common in neonates
b) Fever always present
c) Not associated with tumors of intestine
d) Usually relieved by barium enema

2175. The treatment of choice in duodenal atresia -
a) Gastrojejunostomy *(PGI 79, AI 89)*
b) Duodenojejunostomy
c) Bishop Koop procedure
d) Duodenoduodenostomy

2176. Best investogation of acute mechanical intestinal obstruction is - *(DELHI 89, 90)*
a) X-Ray abdomen b) Baruin enema
c) Proctosigmoidoscopy d) Flatus tube

2177. The first to appear in a cause of acute intestinal obstruction is - *(PGI 82,DNB 90)*
a) Constipation b) Colicky pain
c) Vomiting d) Distension

2178. The least common type of intussuception is -
a) Multiple b) Colocolic *(PGI 81, AP 89)*
c) Ileoileal d) Ileoilecolic

2179. Henock Schnolein Purpura may rarely cause - *(JIPMER 80,81,ALIMS 90)*
a) Intussuception b) Volvulus
c) Atrial fibrillation d) Hernia

2180. Bilious vomitting is seen in all except - *(Kerala 94)*
a) Jejunal atresia b) Volvulus of small intestine
c) Djuodenal atresia d) Pyloric stenosis

2181. Paralytic ileus is caused by - *(Kerala 94)*
a) Peritonitis
b) Hyperkalemia
c) Acute intestinal obstruction
d) Head injury

2182. Acute mechanical large bowel obstruction should be operated early because - *(UPSC 95)*
a) Electrolyte imbalance due to third space loss
b) Septicaemia from absorption of bowel contents
c) Early gangrene and perforation
d) Respiratory embarrassment to massive abdminal distension

2183. In an infant born with intestinal obstruction due to meconium ileus, one should suspect - *(UPSC 95)*
a) Hirschsprung's disease b) Mucoviscoidosis
c) Imperforate anus d) Bile duct atresia

2184. Cause of gaseous distension of abdomen in acute intestinal obstruction is - *(AIIMS 95, AI 95)*
a) Diffusion of gases from blood into intestinal lumen
b) Swallowed atmospheric air
c) Bacterial fermentation of food matter
d) Disgestion process & released gases

2185. Primary feature of small intestinal obstruction -
a) Fever *(AP 96)*
b) High peristalsis with colic
c) Abdominal distension
d) Empty rectum

2163)d 2164)d 2165)b 2166)a 2167)e 2168)d 2169)a 2170)c 2171)b 2172)b 2173)a 2174)d 2175)d 2176)a 2177)b 2178)a 2179)a 2180)d 2181)a 2182)c 2183)b 2184)b 2185)b

2186. Acute mechanical large bowel obstruction should be operated early because of the risk of -
a) Respiratory embarrassment due to abdominal distension
b) Electrolyte imbalance from vomiting *(UPSC 97)*
c) Septicaemia from bowel contents
d) Closed-loop obstruction and caecal perforation

2187. Commonest site of ischemic colitis - *(PGI97)*
a) Hepatic flexure b) Splenic flexure
c) Transverse colon d) Sigmoid colon

2188. An elderly male with history of IHD and cerebrovascular disease presented with abdominal pain, and bloody stools, the likely diagnosis will be-
a) Ulcerative colitis *(AIIMS97)*
b) Crohns
c) Acute mesentric ischaemia
d) Malignancy

2189. Treatment of choice of acute obstruction due to left sided colonic carcinoma in a 70 year old male is -
a) Left sided colectomy *(A1IMSC97)*
b) Total colectomy
c) Hartman's procedure
d) Defimctionung colostomy

2190. In colonic obstruction immediate treatment is requiredto prevent - *(PGI96)*
a) Caecal rupture b) Water imbalance
c) Abdominal distension d) Severe vomitting

2191. Best way to diagnose lower intestinal obswtruction
a) Pain abdomen *(PGI 96)*
b) Abdominal distension
c) Profuse vimitting
d) Multiple air gas shadows on X - ray

2192. For intestinal obstruction immediate operation should not be done in case of - *(CULCUTTA 2K)*
a) Post - op adhesion b) Appendix perforation
c) Volvulus d) Obstructed hernia

2193. A Neonate is brought with history of not having passed meconium on examination there is no anal opening but a dimple. Investigation of choice is -
a) X-ray erect posture (*JIPMER 90)*
b) X-ray supine posture
c) Gastrografffn study
d) Invertogram

2194. What is intussuscepiens - *(PGI97)*
a) The entire complex of intussusception
b) The entering layer
c) The outer layer
d) The process of reducing the intussusception

2195. Most common cause of acute intestinal obstruction-
a) Adhesions b) Carcinoma *(PGI 97, 88)*
c) Int. hernia d) Lymphoma

2196. Definitive treatment of sigmoid volvulus \s-*(PGI97)*
a) Surgical correction b) Colectomy
c) Enema d) Endoscopic correction

2197. Major causes of distension in intestinal obstruction
a) Gas produced by coliform organism *(PGI 98)*
b) Swallowed air
c) Diffuse from arterial surface
d) Not known

2198. Prologed Post-op ileus is best treated by- *(PGI98)*
a) Long tube insertion
b) Calcium pentonthenate
c) Laporotomy and exploration
d) Peristaltic stimulants

2199. Fluid levels are not visible in - *(PGI 98)*
a) Meconeum ileus b) Intussusception
c) Colon pouch d) Duodenal obstruction

2200. Spastic ileus is seen in - *(PGI 99)*
a) Porphyria b) Retroperitoneal abscess
c) Hypokalemia d)MI

2201. Recurrent pain abdomen with intestinal obstruction and mass passes per rectum goes in favour of -
a) Internal herniation b) Stricture *(PGI 99)*
c) Strangulated hernia d) Intussusception

2202. What are the features of colonic obstruction -
a) No passage of gas absolutely (Obstipation)
b) No passage of stools absolutely *(PGI 2K)*
c) Distention of abdomen
d) Mild fever initially
e) Fecal vomitus

2203. Recurrent obstruction, mass per rectum and diarrhoea in child - *(PGI 2000)*
a) Intussusception b) Rectal prolapse
c) Internal hernia d) Haemorrhoids

2204. In intestinal obstruction, investigations needed are-
a) Barium swallow *(PGI 01)*
b) Intestinal barium meal
c) Stomach barium meal
d) Erect X-ray abdomen
e) Supine X-ray abdomen

2205. Features of intussusception are - *(PGI 01)*
a) Pincer sign b) Target sign
c) Dove sign d) Coiled spring sign
e) Dance sign

2206. Malrotation presents as - *(PGI02)*
a) Mass abdomen b) Bleeding PR
c) Billious vomiting d) Haematomesis

2207. Acute intestinal obstruction is characterized by -
a) Vomiting is common in duodenal obstruction
b) Pain after each attack of vomiting is characteristic of ileal obstruction *(PGI 03)*
c) In colonic obstruction distension is common than vomiting
d) X-ray erect posture is diagnostic
e) Colicky pain to steady pain indicates strangulation

2208. 30 years old lady presented with acute pain abdomen, constipation and vomiting suspecting acute intestinal obstruction. The investigation of choice for the patient is - *(PGI03)*
a) X-ray abdomen erect posture b) Ba enema
c) USG d) CT scan

2186)d 2187)b 2188)c 2189)c 2190)a 2191)d 2192)a,b 2193)d 2194)c 2195)a 2196)b 2197)b 2198)c 2199) a 2200) a 2201) d 2202)a,b,c 2203) a 2204)b,c,e 2205)b,d,e 2206) a,c 2207) a,c,d 2208) a

2209. Paralytic ileus is characterized by all except -
a) No bowel sounds on auseultation *(SGPGI05)*
b) No passage of flatus
c) Gas filled loops of intestine with multiple fluid levels
d) Loops of intestine are not seen d/t loss of peristalis

2210. Intestine get strangulated most commonly in which space - *(SGPGI 05)*
a) Omental bursa b) Paraduodenal space
c) Rectouterine space d) Subphrenic

2211. Gall stone causes intestinal obstruction when it gets impacted in which part of the intestine commonly -
a) Proximal ileum b) Distal ileum
c) Duodenum d) Jejunum *(SGPGI 05)*

2212. The most common cause of perforation of the distal ileum in India is - *(UPSC 05)*
a) Tuberculosis b) Typhoid
c) Amoebiasis d) Regional enteritis

2213. Borchart's triad of acute epigastric pain, violent retching and inability to pass a nasogastric tube is seen in patients with - *(J&K 05)*
a) Achalasia cardia
b) Acute gastric volvulus
c) Jejunogastric intussusception
d) Hiatus hernia

2214. The most common site of intestinal obstruction in gallstone ileus is - *(AIIMSMay 2005)*
a) Duodenum b) Jejunum
c) Ileum d) Sigmoid colon

2215. Features of intestinal obstruction : clinically/ investigation by - *(PGI June 06)*
a) Abdominal distension b) Vomiting
c) Fluid level in X-ray >4 d) Localized tenderness
e) Diarrhea

2216. With reference to Hirschsprung's disease, which one of the following statements is correct ?
a) It is initially treated by colostomy *(UPSC 07)*
b) In the neonatal period, it is best confirmed by barium enema
c) It is associated with high incidence of genito-urinary tract anomalies
d) It is characterised by the absence of ganglion cells in the transverse colon

2217. Acute pseudo-obstruction of the colon known as-
a) Sjogren's syndrome *(UP 07)*
b) Gardner's syndrome
c) Ogilivie's syndrome
d) Peutz-jegher's syndrome

2218. Sigmoid volvulus rotation occurs - *(UP 07, 05)*
a) Clockwise
b) Anticlock wise
c) Both clock wise and anti clock wise
d) Axial in direction

2219. True about Ogilive's syndrome are all except -
a) It is caused by mechanical obstruction of the colon
b) It involves entire / part of the large colon
c) It occurs after previous surgery *(AIIMS Nov 07)*
d) It occurs commonly after narcotic use

2220. A new born girl not passed meconium for 48 hrs, has abdominal distention and vomiting. Initial investigation of choice would be - *(AIIMSNov 07)*
a) Manometry
b) Genotyping for cystic fibrosis
c) Lower GI contrast study
d) Serum trypsin immunoblot

2221. Which one of the following is the treatment of gall stone ileus - *(UPSC-II08)*
a) Cholecystectomy alone
b) Removal of obstruction
c) Cholecystectomy, closure of fistula and removal of stone by enterotomy
d) Cholecystectomy with closure of fistula

2222. Which of the following statement about volvulus is false- *(AI08)*
a) More common in psychiatric patients
b) Sigmoid volvulus is more common than caecal volvulus
c) Lower GI scopy is contraindicated in sigmoid volvulus
d) Volvulus of caecum is managed by conservative methods

2223. A new born child has not passed meconium for 48 hrs. What is the diagnostic procedure of choice ?
a) USG b) Contrast enema *(AI08)*
c) CT d)MRI

2224. Claw sign seen in ? *(APPG 08)*
a) Intussception b) Volvulus
c) Both d)None

2225. Complete Rx of intussception indicates ? *(APPG 08)*
a) Free passage of barium in the terminal ileum
b) Passage of faceus and flatus along with barium
c) Improvement of clinical condition
d) None

2226. All statements about adult instussusception are true except - *(PGI Nov 09)*
a) Idiopathic & more enteric rather than colonic
b) Lead point present in majority of cases
c) Resection of bowel is adequate for large bowel intussusception
d) Hydrostatic reduction with barium or air are done if bowel is not completely obstructed

2227. "Red currant jelly" stool in an infant is characteristic of - *(UPSC-110)*
a) Acute gastroenteritis b Rectal piles
c) Intussusception d)Fissure-in-ano

2209)d 2210)a 2211)b 2212)a 2213)b 2214)c 2215) a,b 2216) a 2217)c 2218)b 2219)a 2220)c 2221)b 2222)c 2223)b 2224)a 2225)a 2226)a 2227)c

2228. Consider the following radiological signs -
1. Claw sign in barium enema *(UP SC II10)*
2. Apple core sign in barium enema
3. Multiple fluid levels with absent caecal gas in plain skiagram of abdomen
4. Single large fluid and air level in plain skiagram of abdomen

Which of the above signs is/are suggestive of ileocolic intussusception? *(UPSCII10)*
a) 1 and 2 only b) 1 and 3 only
c) 3 only d) 1,23 and 4

2229. True about Intussusceptions in children -
a) Most common variety is ileocolic *(PGIMay 10)*
b) A/w pathological lead point
c) May be seen after viral infection
d) Canbe relieved by barium enema
e) Surgery is always indicated

2230. True statement about treatment of intussusceptions-
a) Air enema *(PGI May 10)*
b) Saline enema
c) Ba enema
d) Hydostatic reduction
e) Colonoscopy is always done to confirmdiagnosis

2231. True about colonic volvulus - *(PGIMay 10)*
a) Most common in caecum
b) Common in psychiatric pt.
c) Bird's beak sign
d) May present as intestinal obstruction

2232. Emergency operation done in cases of-
a) Volvulus *(PGINov. 10)*
b) Obstructed hernia
c) Appendicular perforation with paralytic ileus
d) Toxic megacolon
e) Colonic perforation

2233. The cecum is found to be placed below the stomach and in the midline. Which of the following abnormality must have taken place while rotation of the gut? *(AIIMS Nov 10)*
a) Non rotation b) Mai rotation
c) Reversed rotation d) Mixed rotation

VERMIFORM APPENDIX

2234. Earliest symptoms in acute appendicitis is -
a) Pain b)Fever *(JIPMER 86,87,*
c) Vomiting d) Rise of pulse rate *Kerala 87)*

2235. Commonest position of the appendix - *(JIPMER 87)*
a) Retrocecal b) Preileal
c) Postileal d)Pelvic
e) Subcecal

2236. Surgery for carcinoid of the appendix - *{AIIMS 85)*
a) Right hemicolectomy
b) Appendicectomy
c) Limited resection of the Rt. Colon
d) Rt. Hemicolectomy with 6 inches of the ileum also

2237. Mucocele of the appendix is - *(AI89)*
a) Benign tumour b) Low grade malignancy
c) Retention cyst d) Infective process

2238. A patient with Crohn's disease was opened for and an inflammed appendix found. The treatment of choice is-
a) Appendicectomy *(PGI88)*
b) ileocolic resection and anastamosis
c) Close the adbomen and start medical treatment
d) None of the above

2239. Which of the following present as acute abdomen -
a) Acute intermittent porphyria *{Karnataka 89)*
b) Tabes
c) Pneumonitis of lower lobe
d) All

2240. Oschner sherren regime is used in management of- *{JIPMER 92)*
a) Appendicular abscess b) Chronic appendicitis
c) Appendicular mass d) Acute appendcitis

2241. When the rectum is inflated with air through a rectal tube, pain and tenderness occur in the right iliac fossain case of appenidicitis. This is known as- *{AIIMS 81, AMU 85)*
a) Aaron's sign b) Battle's sign
c) Bastede's sign d) Me Burney's sign

2242. The frequent mechanism in perforation of appendix is - *{DNB 89, 91)*
a) Impacted faecolith
b) Tension gangrene due to the accumulating secretions
c) Necrosis of lymphoid patch
d) Retrocaecal function

2243. Acute appendicitis is due to - *{AIIMS 90, AMU90)*
a) Faecoliths
b) Worms of ileo-caecal region
c) Streptococcal infections
d) Abuse of puragatives
e) None of the above

2244. All of the following are early complications arising after appendicectomy for acute appendicitis except -
a) ilues *(AIIMS 81, Rohtak88)*
b) Sterility
c) Intestinal obstruction
d) Pulmonary complications

2245. All are usuful in acute appendicitis exepet -
a) Antibiotics b) Analgesics *(Kerala 94)*
c) IV Fluids d) Purgation

2246. Which of the following statments is not true of McBurney's incsion - *(Kam 94)*
a) Most suitable if the diagnosis of appendicitis is definite
b) If it is converted into a muscle cutting incision it is called Rutherford Morison's incision
c) Inguinal hernia is a sequlae of the incision
d) The incision can be extended upwards or downwards

2228) b 2229) a,b,c,d 2230)a,b,c,d 2231)b,c,d 2232)All 2233) b 2234) a 2235) a 2236) a,b 2237)a,b,c 2238) c
2239) d 2240) c 2241) c 2242) b 2243) a,b 2244) b 2245) d 2246) d

2247. A Gridiron incision becomes a Rutherford Morison's incision is extended by - *(Korn 94)*
a) Splitting the muscles laterally
b) Cutting the muscles laterally
c) Cutting the muscles medially into the rectus sheath
d) Incising vertically along the rectus muscle

2248. During appendicectomy if it is noticed that base of appendix is inflammed than further line of treatment is - *(PGI96)*
a) No appendicectomy b) No hurrying of stump
c) Hemicolectomy d) Caecal resection

2249. A 25 year old man presents with 3 days history of pain in the right lower abdomen and vomitings, patient's general condition is satisfactory and clinical examination reveals a tender lump in right iliac fossa. The most appropriate management in this case would be - *(ICS 98)*
a) Immediate appendicectomy
b) Exploratory laprotomy
c) Oschner Sherren regimen
d) External drainage

2250. An appendicular fistula is least likely to heal if -
a) The stump was sutured with vicryl *(Kerala 98)*
b) There is stenosis/narrowing of the sigmoid colon
c) Superaded infection
d) None

2251. What should be done for an incidental carcinoid of 2.5 cms size detected in the appendix- *(A1IMS 99)*
a) Right hemicolectomy
b) Appendicectomy
c) Appendiccectomy followed by yearly HIAA estimation
d) Total colectomy

2252. Diffuse peritonitis following appendicitis is usually seen- *(ICS2K)*
a) When appendicular perforation occurs early (within 24 hours)
b) When perforation occurs late (after 24 hours)
c) Particularly in non-obstructive appendicitis
d) When antibiotics are withheld

2253,. All of the following signs are not seen in acute appendicitis except - *(IN01)*
a) Rovsing's b) Murphy's sign
c) Boa's sign d) Mack wen's sign

2254. Confirmation of appendicitis - *(PGI June 07)*
a) Clinical examination b)USG abdomen
c) X-ray abodmen d) Raised TLC/DLC

2255. In a case of retrocecal appendicitis which movement aggravates pain - *(AIIMSNov 07)*
a) Flexion b) Extension
c) Medial rotation d) Lateral rotation

2256. Diffuse peritonitis in acute appendicitis is caused due to- *(NEET/DNB Pattern)*
a) 'Early rupture of appendix
b) Xate rupture 6f appendix ^
c) Fecolith
d) Old age

RECTUM

2257. Prognosis for carcinoma rectum is best assessed by-
a) Site of tumour *(AIIMS 87, Karn. 89)*
b) Histological grading
c) Size of tumours
d) Duration of the symptoms

2258. Earliest symptoms of carcinoma rectum - *(AI88)*
a) Pain b) Alteration of bowel habits
c) Bleeding PR d) Tenesmus

2259. Villous polyp of rectum manifest - *(AI89)*
a) Bleeding PR
b) Mucus diarrhoea with hypokalemia
c) Prolapse rectum
d) Obstruction

2260. Recurrent prolapse of the rectum in children is treated by - *(JIPMER 87, 88)*
a) Thiersh wiring b) Digital reposition
c) Excision d) Ripstein's operation

2261. In villous papillomas of the rectum which is lost -
a) Na+ b) Mg+ *(IN 89)*
c) K+ d)All

2262. Arterior resection is contra indicated in the following- *(PGI 90)*
a) Age more than 60 years
b) Undifferentiated carcinoma
c) Melanin in liver
d) Cancer is less than 5 cm from anorectal margin

2263. Resting Tone of Rectum is decreased in all except
a) Micturation *(AI91)*
b) Retained feaces in the rectum
c) Prolapse rectum
d) Trauma involving the perineum

2264. Best procedure in mid rectal Carcinoma is -
a) Abdomino perineal resection *(AIIMS 92)*
b) Anterior resection
c) Perineal loop
d) Transverse Colostomy

2265. The best surgical management for villous adenoma of the rectum is - *(PGI 81, AP 88)*
a) Local resection of lesion
b) Repeated sigmoidoscopy
c) Abdomino perineal resection
d) Electrolyte infusion and chemotherapy

2266. Treatment of carcinoma rectum 5 cm from anal verge without nodal metastasis is - *(Kerala 94)*
a) Abdominoperineal resection
b) Radiotherapy
c) Endoscopic resection
d) Chemotherapy

2267. Sitz Bath consists of which of the following -
a) Patient bathed in normal saline *(Karan. 96)*
b) Bathed in molten wax
c) Sits in a basin containing warm antiseptic lotion
d) Sits in a basin conatining molten wax

2247) b 2248) b 2249) c 2250) b 2251) a 2252) a 2253) a 2254)a,b2255)b 2256) a 2257) b 2258) c 2259) b 2260) d 2261) c 2262) c,d 2263) b 2264) b 2265) a 2266) a 2267) c

2268. Rectal polyps usually present with - *(UP 97)*
a) Obstruction b) Perforation
c) Bleeding d) Malignant change

2269. Solitary rectal ulcer all are true *except-(AIIMS 97)*
a) 20% have multiple ulcers
b) Most common site is midline posterior
c) Half of patients give history of digital examination
d) Commonest cause of rectal prolapse

2270. In carcinoma of anus distal margin of clearance of anal canal of at least.....- *(CMC 2001, A190)*
a) 2 cm b)5cm
c) 4cm d)7cm

2271. An AIIDS patients presents with fistula-in-ano. His CD4 count is below 50. What is the treatment of choice - *(MANIPAL 01)*
a) Seton b) Fistulectomy
c) None d) Both

2272. Muscle concerning with rectal continence is - *(PGI86, UPSC 86, NIMHANS 87, Kerala 88)*
a) Ext. sphincter b) Int. sphincter
c) Puborectalis d) Sacrococcygeous
e) iliococcygeous

2273. Sphincter saving surgery for rectal malignancy is not done in - *(PGI 01)*
a) Age over 50 years
b) Lymph node involvement
c) Infiltration of lamina propria
d) More than 4 cm from anal verge
e) High grade tumor

2274. Abdomino-perineal resection is done in colorectal Ca on the basis of - *(PGI 02)*
a) Age of patient b) Distance from anal-verge
c) Fixity of tomor d) Hepatic metastasis
e) Extent of tumor

2275. Rectal adenoma is associated with - **(***Jipmer 03)*
a) Familial polyposis coli b) Hypokalemia
c) Intussusception d)Hemorrhoids

2276. Delorme's Procedure is used for - *(SGPGI04)*
a) Rectal prolapse b) Solitary rectal ulcer
c) Rectal bilharziasis d) Proctalgia fugax

2277. The length of a standard proctoscope is - **(***TN04)*
a) 4 inches b) 6 inches
c) 8 inches d) 3 inches

2278. Which type of malignancy is found in anorectal fistula - **(***PGI June 05)*
a) Sq. cellCa b) Transitional cell Ca
c) Adeno Ca d) Columnar Ca

2279. True about rectal Ca - *(PGI June 05)*
a) MC type adenocarcinoma
b) Surgery is the treatment of choice
c) Surgical treatment indicated inspite of hepatic metastasis
d) APR done in lesions of upper zone

2280. Rectal incontinence is due to involvement of -
a) External anal sphincter *(PGI June 06)*
b) Internal anal sphincter
c) Ischiococcygeus
d) Pubococcygeus

2281. Which of the following is more aggressive rectal carcinoma - *(Manipal 06)*
a) Adencarcinoma
b) Secondary mucoid carcinoma
c) Signet ring carcinoma
d) Squamous cell carcinoma

2282. True about solitary rectal ulcer syndrome is all/ except - *(Aiims May 07)*
a) Increased muscle layer proliferation
b) Crypt distortion
c) Lamina propria infiltration with lymphocyte
d) Subepithelial fibrosis

2283. Hemangioma of the rectum - *(PGI June 07)*
a) Common tumour
b) Fatal haemorrhage seen
c) Ulcerative colitis like symptoms seen

2284. A punch biopsy shows carcinoma rectum with fixed mass. X-ray chest normal, which of the following is LEAST useful investigation - *(UP 08)*
a) Rigid protoscope b) Barium enema
c) CT chest d) MRI-abdomen and pelvis

2285. Management of rectosigmoid obstructive carcinoma in elderly frail - *(PGINov 09)*
a) Colostomy
b) Abdomino-perineal resection (APR)
c) Resection & primary anastomosis
d) Hartmann procedure
e) Laser recanalisation

2286. A young male patient presents with complete rectal prolapse. The surgery of choice is - *(AI10)*
a) Abdominal rectopexy
b) Delerome's procedure
c) Anterior resection
d) Goodsall's procedure

2287. A young office executive, on tour, presents with bright red painless bleed since 7 days and abdominal pain. External and perrectal examinations are normal. As attending general practioner what will be your next step - *(AIIMS Nov 10)*
a) Proctoscopy
b) Do a barium enema
c) Refer to surgeon for sigmoidoscopy
d) Refer to gastroenterologist for colonoscopy

ANAL CANAL

2288. Commonest type of Ano rectal abscess is -
a) Ischiorectal b) Submucous *(AIIMS85)*
c) Pelvi-rectal d) Perianal

2268)c 2269)b,c 2270)a 2271)a 2272)c 2273)d 2274)b 2275)b 2276)a 2277)a 2278)a,c 2279)a,b,c 2280)All 228 l)b 2282) c 2283) b,c 2284) a 2285)a,b,e 2286) a 2287) a 2288) d

2289. Sentinel pile indicates - *(AIIMS 87)*
a) Carcinoma rectum b) Internal haemorrhoids
c) Perianal fistula d) Anal fissure

2290. Cancer of the anus is commonly - *(JIPMER87)*
a) Adenocarcinoma b) Squamous carcinoma
c) Melanoma d) Sarcoma

2291. Below the pectineal line the lymphatic spread is to..... nodes- *(PGI89)*
a) Superficial inguinal b) Internal iliac
c) External iliac d) Para aortic

2292. Rectal examination should not be done -
a) Anal fissure *(JIPMER 90)*
b) Fistual in ano
c) Prolapsed piles with bleeding
d) Anal stenosis

2293. Treatment of Choice in 2nd degree piles is - *(AIIMS 92)*
a) Cryosurgery b) Sclerotherapy
c) Banding d) Surgery

2294. The treatment of choice in fistula in ano - *(Jipmer*
a) Anal dilatation b) Fissurotomy *93)*
c) Fistulectomy d) Fistulotomy

2295. Internal sphincterotomy is the treatment of choice for - *(JIPMER 81, AMC 86)*
a) Piles b) Fistula
c) Fissure-in-ano d) Carcinoma

2296. Internal sphincter of rectum is formed by -
a) Levator ani *(AIIMS 79, Delhi 96)*
b) Puborectalis
c) Longitudinal muscle fibres condensation
d) Circular muscles fibres condensation

2297. Treatment of primary piles is - *(Kerala 94)*
a) Surgery b) Sclerotherapy
c) No treatment d) Analgesics

2298. Best investigation to diagnose piles is - *(Kerala 94)*
a) Proctosigmoidoscopy b) Barium enema
c) Ultrasound d) Proctoscopy

2299. Ideal treatment for squamous cell carcinoma of Anal canal is - *(AIIMS 97)*
a) Pelvic exentration
b) Chemotherapy and radiotherapy
c) Chemotherapy alone
d) Abdomino perineal resection

2300. Five-day self subsiding pain is diagnostic of-
a) Anal fissure *(AP 97)*
b) Fistul-in-ano
c) Thrombosed external hemorrhoids
d) Thrombosed internal hemorrhoids

2301. Invertogram is taken after - *(2000 R)*
a) 2hrs b)4hrs
c) 6 hrs d) 8 hrs

2302. The following are true of haemorrhoids except -
a) They are arteriolar dilatations *(JIPMER 01)*
b) They are common causes of painless bleeding
c) They cannot be per rectally palpated
d) They can be banded

2303. It can be stated that the superior haemorrhoidal veins - *(AIIMS 84)*
a) Drain into the inferior mesentric vein
b) Have no valve
c) Leave the anal canal at the pactinate line
d) Cause external haemorrhoids

2304. The increased incidence of infection inthelschio rectal fossa is due to - *(AI89)*
a) Absence of deep fascia
b) Proximity to anus
c) Poor blood supply
d) Presence of fibrofatty tissue

2305. Anal carcinoma is most commonly carcinoma of type- *(PGI 97)*
a) Adeno carcinoma b) Epidermoid
c) Mixed d) None of the above

2306. TVue about melanoma of the anal canal is - *(PGI 99)*
a) Present usually as anal bleeding
b) AP resection gives better result than local excision
c) Local recurrence at the same site after resection
d) Radiosensitive

2307. Most common complication following hemorrhoidectomy is - **(***Kerala 04, AIIMS 92)*
a) Hemorrhage b) Infection
c) Fecal Impaction d) Urinary retension

2308. A 1 cm x 1 cm squamous cell carcinoma of anal canal is best treated initially by - **(***UPSC 05)*
a) Abdominoperineal resection
b) Localized resection followed by irradiation
c) Proximal colostomy followed by interstitial irradiation
d) Chemo-radiotherapy

2309. The treatment of choice for the management of carcinoma of the anal canal is - *(AI 06)*
a) Abdominoperineal resection
b) Primary radiotherapy
c) Combined radio-and chemotherapy
d) Neoadjuvant chemotherapy and local excision

2310. The treatment of choice for squamous cell anal cancer is - *(AI 06)*
a) Abdominoperennial resection
b) Laser fulgaration
c) Chemoradiotherapy
d) Platinum-based chemotherapy

2311. Which of the following statement is true about external haemorrhoids ? *(AI 07)*
a) Painful, below the dentate line
b) Painless, above the dentate line
c) Rubber band ligation is the treatment of choice
d) May be associated with a skin tag

2312. The following statement about Pilonidal sinus is true- *(AI07)*
a) More common in females
b) Mostly congenital
c) Prognosis after surgery is poor
d) Treatment of choice is surgical excision of sinus tract

2289)d 2290)b 2291)a 2292)a 2293)c 2294)d 2295)c 2296)d 2297)a,b2298)d 2299)b 2300)c 2301)c 2302)a 2303)a,b 2304)c 2305)b 2306)a 2307)d 2308)d 2309)c 2310)c 2311)a 2312)d

2313. Most common cause of anorectal abscess is -
a) Inflammation of anal gland *(MAHE 07)*
b) Folliculitis
c) Inflammation of rectal mucosa
d) Rectum

2314. High or low fistula in ano is termed according to its internal opening present with reference to -
a) Anal canal b) Dentate line *(UPSC-II08)*
c) Anorectal ring d) Sacral promontary

2315. Anal fissure best diagnosed by - *(AI08)*
a) Anoscopy
b) History and superficial clinical examination
c) PR examination
d) USG

2316. Which of the following statements is true for Nigro's regimen - *(AI 08)*
a) It is a regimen for anal canal neoplasm
b) It incorporates chemotherapy with radiation as an alternative to surgery
c) Has the advantage of preserving continence
d) All of the above

2317. A new born baby presents with absent anal orifice and meconuria. What is the most appropriate management ? *(AI 08)*
a) Transverse colostomy
b) Conservative
c) Posterior Saggital Anorectoplasty
d) Perenial V-Y plasty

2318. Most common cause of anorectal abscess is -
a) Inflammation of anal gland *(Manipal 08)*
b) Folliculitis
c) Inflammation of rectal mucosa
d) Rectum

2319. All of the following are true in management of Haemorrhoids except - *(DELHI PG Mar 09)*
a) Excisional surgery is cornerstone
b) Fiber supplementation is effective
c) Improvement in bowel function is helpful
d) Ligation with rubber bands effective

2320. True about treatment of hemorrhoids-*(PGIMay 10)*
a) Band ligation
b) 5% phenol in almond oil is used as sclerosant
c) May be resolved by diet modification
d) Hemorrhoidectomy is TOC

HERNIA

2321. Rgarding desmoid tumour which is not correct -
a) Often seen below the umbilicus *(JIPMER 87)*
b) Unencapsulated
c) More common in women
d) Metastasis does not occur
e) Highly radiosensitive

2322. Treatment of choice in desmoid tumours is -
a) Irradiation *(ARMS 85)*
b) Wide excision
c) Local excision
d) Local excision following radiation

2323. Recurrent fibroma refers to Desmoid tumor arising in - *(PGI 88)*
a) Uterus b) Scar tissue
c) Ovary d) Muscle

2324. Meckel's diverticulum is *(JIPMER 81, Rohatak87)*
a) Ductus venosus
b) Vitello intestinal duct
c) Left umbilical vein
d) Obliterated umbilical artery

2325. Slidding constituent of a large direct hernia is -
a) Bladder b) Sigmoid colon *(AI 88)*
c) Caecum d) Appendix

2326. Commonest type of hernia is - *(JIPMER 87)*
a) Femoral b) Inguinal
c) Ventral d) Epigastric
e) Hiatus

2327. Commonest type of hernia in a female is -
a) Femoral b) Inguinal *(AIIMS85)*
c) Ventral d) Hiatus

2328. Burst abdomen most commonly occurs on the -
a) 2nd day b) 3rd day *(JIPMER 86)*
c) 7 th day d) 9th day
e) 5th day

2329. Most important step in the repair of an indirect inguinal hernia is - *(JIPMER 8 7)*
a) Herniotomy
b) Narrowing of the internal ring
c) Bassini's repair
d) Transfixation of the neck of the sac

2330. The covering over an omphalocele is - *(PGI87)*
a) Skin b)Amniotic membrane
c) Chorionic membrane d) None of the above

2331. The superficial inguinal ring is a defect in-
a) Transversalis fascia *(UPSC88)*
b) Internal oblique
c) External oblique
d) External oblique aponeurosis

2332. Femoral hernia is characteristically ... the pubic tubercle - *(IN89)*
a) Lateral and below b) Medial and above
c) Lateral and above d) Medial and below

2333. Causes of recurrent hernia - *(PGI88)*
a) Absorbable suturesb) Sliding hernia
c) Missed sac d) Infection

2334. In hernia-en-glissade, the most common content is- *(ARMS89)*
a) Omentum b) Urinary bladder
c) Cecum d) Sigmoid colon

2313)a 2314)c 2315)b 2316)d 2317)a 2318)a 2319)a 2320)A11 2321)e 2322)b 2323)b 2324)b 2325)a 2326)b 2327)b 2328)c 2329)b 2330)b 2331)d 2332)a 2333)a,b,c,d 2334)d

2335. Vestigeal remnants of vitello intestinal duct include- *(JIPMER 90)*
a) Meckel's diveticulum
b) Enterocyst
c) Enteroteratoma at umbilicus
d) All

2336. Exomphalos is a disease involving - *(Keala 91)*
a) Umbilicus b) Cervix
c) Abdominal wall d) Urinary bladder

2337. Which of the following does not predispose to abdominal wall dehiscence except - *(JIPMER 92)*
a) Faulty technique
b) Malignancy
c) Raised intra abdominal pressure
d) Old age

2338. Strangulation is most common with which hernia -
a) Femoral b) Inguinal *(AI92)*
c) Obturator d) Epigastric

2339. Treatment of choice of umbilical adenoma in a new born in- *(PGI80, Delhi 81,93)*
a) Occlusion with a coin b) Strapping
c) Surgery d) Masterly inactivity

2340. "Raspberry tumour" is another name for -
a) Umbilical fistula *(PGI, BHU 85)*
b) Umbilical granuloma
c) Umbilical adenoma
d) Meckel's diverticulum

2341. Hernia with hydorcele is.... hernia - *(PGI 79,*
a) Gibbon's b)Fruber's *AIIMS84)*
c) Dobson's d)Leobel's

2342. In Moore's classification of omphalocole (examphalos), type 1 unbilical defect is less than .... cm. - *(PGI 81, AIIMS 86)*
a) 0.5 b)2.5
c) 3.5 d)4.5

2343. Henia into pouch of Douglas is..... hernia -
a) Bedard's b)Bochdaleks *(AIIMS 81,*
c) Blandin's d) Berger's *PGI84)*

2344. The treatment of choice from inguinal hernia in infants is - *(AMU 85)*
a) Herniotomy b) Hemiorrhapy
c) Truss d) Hemioplasty

2345. Exomphalos major should be operated at - *(PGI81,*
a) Birth b) 3 months of age *DNB 91)*
c) 1 year d) 3 years

2346. In examination of the patient for a hernia, it is useful to realize that - *(AIIMS 81, PGI 83)*
a) An impulse if often much better seen than felt
b) The internal abdominal ring lies 1.25 cm. above the midpoint of poupart's ligament
c) The external abdominal ring lies 1.25 cm above and external
d) None of the above

2347. A patient is advised to avoid strenous activity following herniorrhaphy for a period of -
a) One day b) One week *(AMU 86, 91)*
c) 3 weeks d) 6 weeks

2348. On an average, the distance between femoral ring and saphenous opening (length of femoral canal) is-
a) 1.25 cm b) 2.50 cm *(AIIMS81, UPSC 87)*
c) 3.75 cm d) 5.00 cm

2349. Patent vitello-intestinal duct should preferably be operated at - *(PGI 80,81, AMU 89)*
a) Birth b) 6 months of age
c) 12 months of age d) 3 years of age

2350. Which age group most often presented with jaundice due to Omphalitis in infants is - *(PGI 81,*
a) At birth b) 24-72 hours *Kerala 90)*
c) 1-3 weeks d) 3-6 weeks

2351. The patent vitello-intestinal duct most often discharges - *(JIPMER 78,79, TN 89)*
a) Mucus b) Pus
c) Urine d) Faeces

2352. Treatment of strangulated hernia is - *(Kerala 94)*
a) Observation b)Immediate surgery
c) Manual reduction d)Analgesics

2353. Which is the 1st sign of strangulation of ingunial hernia- *(CUPGEE 96)*
a) Tense b)Tender
c) Irreducible d) Redness

2354. The hernia which often stimulates a peptic ulcer is - *(Karn. 96, 94)*
a) Umbilical hernia
b) Fatty hernia of the Linea alba
c) Incisional hernia
d) Inguinal hernia

2355. Preservation of illioinguinal nerve is an important step inguinal hernia operation while - *(UPSC 97)*
a) Incising the sub-cutaneous tissue
b) Incising the extra oblique aponeurosis
c) Incising the cremasteric fascia
d) Isolating the sac

2356. While operating for obstructed inguinal hernia the sac is opened at - *(AIIMS 96)*
a) Fundus b)Neck
c) Body d) Base

2357. Raspberry tumour is- *(JIPMER 98)*
a) Neoplastic b) Inflamatory
c) Traumatic d) Congenital

2358. Hernia is prevented by - *(ROHTAK98)*
a) Scarpa's fascia b) Transversalisa fascia
c) External oblique d) Lacunar ligament
e) Rectus sheath

2359. Spigelian hernia occurs - *(AI99)*
a) Para umbically b) Supra umbically
c) Infra umbically d) At lumbar areas

2335)d 2336)c 2337)a,b,c 2338)a 2339)None 2340)c 2341)a 2342)b 2343)d 2344)a 2345)a 2346)b2347)None 2348)a 2349)b 2350)d 2351)a 2352)b 2353)a 2354)b 2355)b 2356)c 2357)d 2358)None 2359)c

2360. Inguinal and femoral hernia are differentiated by relation with - *(AIIMS 98)*
a) Pubic tubercle b) Femoral artery
c) Inferior epigastic artery d) Pectineal line

2361. Truss cannot prevent progression of which type of inguinal hernia - *(CUPGEE99)*
a) Sliding b) Littres
c) Indirect d) Direct

2362. Ventral hernia is a/an - *(AMC99)*
a) Incisional hernia b) Umbilical hernia
c) Femoral hernia d) Inguinal hernia

2363. Mayo's operation is done for - *(2000 R)*
a) Spigelian hernia b) Femoral hernia
c) Richer's hernia d) Umbilical hernia

2364. Hernia through foramenof bochdalek true is - *(PGI98)*
a) Congeniatal hernia b) In asymptomatic
c) Seen executive in males d) Least common

2365. True about femoral hernia is - *(PGI98)*
a) Occurs exclusively in females
b) Pregnancy is common cause
c) Doesn't strangulate
d) In males associated with cryptochidism

2366. Spigelian hernia - *(PGI2000)*
a) Lateral to rectus abdominis
b) Obturator intemus
c) Lies above int. oblique
d) Common in men

2367. Which of the following is not to be done in strangulated inguinal hernia - *(PGI01, 03)*
a) X-ray abdomen
b) USG scrotum
c) Aspiration of sac for confirming diagnosis
d) Immediate surgery is required
e) Hypovolemia should be corrected with i./v. fluids

2368. Which of these would you like to do for a case of strangulated hernia - *(PGI 02)*
a) X-ray abdomen
b) USG abdomen
c) Aspiration of contents of sac
d) Correction of hypovolemia
e) Prepare OT for urgent surgery

2369. True about hernia - *(PGI 03)*
a) Extra-abdominal hernia is common
b) Direct hernia usually acquired
c) Strangulation is common in femoral hernia
d) Direct hernia is acquired in old age
e) TOC for indirect inguinal hernia is surgery

2370. About hernia, false statements - *(PGI 03)*
a) In children, indirect inguinal hernia is treated medically
b) In Richter's hernia, absolute constipation seen
c) Indirect inguinal hernia is the MC type
d) Deep inguinal ring is lateral & above the puplic tubercle

2371. True about inguinal hernia - *(PGI 03)*
a) It is more common in female
b) Rt sided is more common than Lt side
c) Direct hernia is less likely to undergo strangulation
d) Femoral hernia is more common in female

2372. True statment (s) about indirect inguinal hernia-
a) 25% is bilateral *(PGI04)*
b) In children, if inguinal (indirect) hernia is present in on side, then processus vaginalis is intact on other side
c) In bubonocele sac lies in the inguinal canal
d) Equal incidence in male and female

2373. In a case of strangulated hernia management is - *(PGI June 06)*
a) USG-abdomen b) X-ray abdomen
c) Aspirate contents d) Immediate surgery
e) IV fluids

2374. Which is one of the following is not performed in Lichtenstein tension free hernioplasty? (.*Karn 06)*
a) High ligation of indirect hernia sac
b) Mesh sutured to the conjoint tendon and inguinal ligament
c) Conjoint tendon sutured to inguinal ligament
d) Spermatic cord is placed in two tails of the internal ring

2375. In the treatment of femoral hernia Lockwood's operation refers to - (.*Karnatakapgmee 06)*
a) Low operation
b) High operation
c) Inguinal operation
d) Laparoscopic surgery

2376. Umbilical hernia in a child - indication for sruger is - *(MAHE 07)*
a) Failure to disappear by 3 years
b) > 2 cm size
c) Symptomatic
d) All of the above

2377. The sac contains only a portion of the circumference of the intestine is called-(T/P *07,05)*
a) Richter's hernia b) Littre's hernia
c) Spigelian hernia d) Lumber hernia

2378. True statement regarding direct inguinal hernia - *(UP 08)*
a) Most common direct inguinal hernia in women
b) Direct hernia medial to inferior epigastric artery
c) Repair of the transvers alis fascia and the internal ring
d) Descends downwards and inwards towards the scrotum

2379. Most useful investigation in sliding hernia in female - *(UP 08)*
a) Fluroscopy b) Barium-meal
c) Palpation method d) Ultrasound

2360) a 2361) a 2362) a 2363) d 2364) a 2365) b 2366) a 2367)a,b,c 2368) d,e 2369)All 2370)a,b,d 2371)b,c,d 2372) b,c 2373) d,e 2374) c 2375) a 2376) d 2377) a 2378) b 2379) b

2380. Internal oblique, external oblique and transverses is retracted later ally in - *(Atims May 08)*
a) Classic renal approach
b) Laparoscopic approach
c) Spigelian hernia
d) ----------

2381. Which one of the following is the treatment of choice in a child with inguinal hernia - *(UPSC-II09)*
a) Bassin's repair b) Shouldice operation
c) Herniotomy alone d) Lichtenstein repair

2382. TVue about obturator hernia in adults -
a) More common in space of lorentz *(PGI Nov 09)*
b) Common in female
c) Chronic constipation risk factor
d) Surgical treatment should be done
e) May present with intestinal obstruction

2383. False about paraduodenal hernia - *(PGINov 09)*
a) Congenital
b) Found in fossa of Kolb
c) Found in fossa of Landzert
d) Common in right side

2384. Most important prognostic factor in congenital diaphragmatic hernia - *(AIIMS Nov 09)*
a) Pulmonary hypertension b) Size of hernia
c) Timing of surgery d) Gestational age

2385. Most common site of Morgagni hernia -*(AIIMSMay*
a) Right anterior b) Right posterior *10)*
c) Right anterior d) Left posterior

2386. Strangulation most commonly occurs in_____ hernia - *(Maharashtra 10)*
a) Ritcher's b) Spigelian
c) Femoral d) Sliding

2387. What is the most common hernia in females?
a) Femoral hernia *(UP SC II10)*
b) Spigelian hernia
c) Inguinal hernia
d) Obturator hernia

2388. True statement about inguinal hernia -
a) Pain indicate obstruction *(PGI May 10)*
b) Direct common in young male
c) Spigelia hernia occur through rectus sheath
d) Direct is more common
e) More common on left side

2389. Spigelia hernia is a type of hernia occurring at - *(NEET/DNB Pattern, PGI June 95, PGI June 2000)*
a) Medial border of rectus abdominis
b) Lateral border of rectus abdominis
c) Through linea alba
d) Through medial wall of inguinal canal

URINARY TRACT (General)

2390. Acute urinary retention in a male child may be due to-
a) Prostatic radiotherapy *(AIIMS 87)*
b) Urethral stricute
c) Hysteria
d) Meatal ulcer with scabbing

2391. What is oliguria - *(JIPMER 87)*
a) Excretion of less than 300ml in 24 hrs
b) Excretion of less than 500ml in 24 hrs
c) Excretion of less than 300 ml. in 12 hrs
d) Excretion of less than 100 ml. in 24 hrs

2392. Normal capacity of the renal pelvis is - *(AIIMS 87,*
a) 7ml. b) 10 ml *CMC86)*
c) 15ml d)20ml

2393. Acute onset of anuria in elderly men - *(AI89)*
a) Bilateral infarction of kidneys
b) Obstructive urinary disease
c) Acute tubular necrosis
d) Acute cortical necrosis

2394. Urinary incontinence results from all except -
a) Neurogenic bladder *(AMU 88)*
b) Vesico vaginal fistula
c) Ectopic ureter
d) Rectovesical fistula

2395. Urinary cytology is a useful screening test for the dignosis of - *(AIIMS 84)*
a) Renal cell carcinoma b) Wilm's tumour
c) Urothelial carcinoma d) Carcinoma prostate

2396. Urinary tract infection exists when the bacterial count in 1 ml. of midstream specimen of urine is -
a) 100 b) 1000 *(AIIMS 84)*
c) 10^4 d)10^5orover

2397. Majority of primary infection of the urinary tract are caused by - *(AIIMS 84, AP 85)*
a) Strep fecalis b)E. coli
c) Proteus d) Pseudomonas

2398. Isotope Renogram - *(Karn. 94)*
a) Study of renin mechanism
b) Contrast study of kidneys, ureter and bladder
c) Utilised in mapping the anatomy of kidneys
d) Graphic representation of radioactivity of kidneys

2399. On exertion urine stream increases in - *(AP 96)*
a) Prostate enlargement b) Marion's disease
c) Post, urethral valves d) Urethral stricture

2400. The most reliable urine specimen is obtained by -
a) Urethral catheterization (*UPSC05*)
b) Catheter aspiration
c) Midstream voiding
d) Suprapubic aspiration

2401. An elderly male presents with one episode of gross haematuria. All fo the following investigations are recommended for invastigating this patient except -
a) Cystoscopy (*AI07*)
b) Urine microscopy for malignant cells
c) Urine tumor markers
d) Intravenous pyelogram

2402. A 60 yr old smoker came with a history of painless gross hematuria for one day. Most logical investigation would be - *(AI 0 7)*
a) Urine routine
b) Plain X ray KUB
c) USGKUB
d) Urine microscopy for malignant cytology

2380)? 2381)c 2382)b,c,d,e 2383)d 2384)a 2385)a 2386)c 2387)c 2388)a 2389)b 2390)d 2391)a 2392)a 2393)b 2394) d 2395)c 2396)d 2397)b 2398)d 2399)d 2400)d 2401)c 2402)d

2403. A new born presents with discharge of urine from the umbilicus for 3 days. Diagnosis is - *(UP 08)*
a) Meckel's diverticulum b) Mesenteric cysts
c) Urachal fistula d) Omphalocele

2404. A new born presents with mid anterior abdominal wall defect with characteristic spontaneous disappearance at age of 4 years - *(UP 08)*
a) Patent urachus b) Omphalocele
c) Ectopia vesicae d) Umbilical hernia

2405. Most common cause of umblicus does not seperate at age of 2 years - *(UP 08)*
a) Raspbery tumour
b) Leukocyte adhesion deficiency
c) Patent urachus
d) Umblical granuloma

2406. A six yr. old female presents with constipation and urinary retention. On examination a presacral mass is noted. Most probable diagnosis is -
a) Pelvic neuroblastoma *(AiimsMay08)*
b) Rectal duplication cyst
c) Sacrococcygeal teratoma
d) Anterior sacral meningocele

KIDNEY & URETER

2407. Radio-luscent renal stones are composed of -
a) Cysteine b) Calcium phosphate *{PGI 85)*
c) Uric acid d) Xanthine

2408. Commonest type of cancer of the renal pelvis and upper ureter is - *(NIMHANS 8 7)*
a) Transitional cell carcinoma
b) Adenocarcinoma
c) Squarmous cel carcinoma
d) Nephroblastoma

2409. Spider leg appearance in IVP is suggestive of -
a) Renal cyst *(AP 84, Kerala 86, 88,*
b) Renal carcinoma *JIPMER87)*
c) Renal Tb
d) Hydronephrosis
e) Chronic renal failure

2410. Percentage of renal stoneswhich are radio opaque- *(JIPMER86)*
a) 10% b) 25
c) 37% d)75%
e) 90%

2411. Staghorn calculus is made out of - *(UPSC 97)*
a) Oxalate b) Phosphate
c) Uric acid d) Cystine

2412. Most common congenital anomaly of the upper renal tract is - *(JIPMER87)*
a) Duplication of renal pelvis
b) Duplication of ureter
c) Ectopic ureteric orifice
d) Congenital megaureter

2413. Dormia basketing is used for removal of renal calculi in the - *(JIPMER 85)*
a) Pelvic ureteric juction b) Upper 1/3 of ureter
c) Middle 1/3 of ureter d) Lower 1/3 of ureter

2414. Earliest symptom of Wilm's tumour *(JIPMER 86)*
a) Hematuria b) Pyrexia
c) Abdominal mass d) Metastases

2415. Renal tuberculosis is characterised by - *(TN89)*
a) Loin pain
b) Painful hematuria
c) Sterile acid pyuria
d) Constitutional symptoms

2416. The triad of Wilm's tumour is - *(PGI88)*
a) Hematuria b) Mass abdomen
c) Pain d) Fever
e) Weight loss

2417. Polycystic kidneys can be associated with *(PGI84)*
a) Cysts in liver lungs b) Coarcctation of aorta
c) Berry aneurysms d)All

2418. A patient with alkaline urine which is cloudy with plenty of pus cells is suffering from..... infection -
a) E. coli b) Proteus *(Kerala 89)*
c) T.B. d) None

2419. Ideal approach for renal malignancy is - *(AIIMS89)*
a) Transperitoneal
b) Retroperitoneal
c) Lumbar incision
d) Abdominothoracic incision

2420. What is the following is Radiolucent - *(AI90)*
a) Calcium phophae b) Calcium oxalate
c) Uric acid d) Cysteine

2421. All are true about WOm's tumour except- *(AI97)*
a) Fever and weakness are clinical features
b) Arises from Primitive cells
c) Haematuria almost always present
d) It presents as abdominal mass

2422. Polycystic kidney may be assocaited with cyst in all the sites except - *(AI91)*
a) Lung b) Liver
c) Pancreas d) Brain

2423. Good prognosis in Wilm's tumour is seen in -
a) 2-5 years b) Less than 1 year *(Kerala 91)*
c) Male child d) Female child

2424. Treatment of choice in polycystic kidney is - *(Kerala 91)*
a) Removal of cyst b) Nephrectomy
c) Dialysis d) Renal transplant

2425. Commonest presentation of bilateral ureteric stones- *(AIIMS91)*
a) CRF b)UTI
c) Pain d) Hematuria

2426. Incidence of Renal ectopia is- *(AI 92)*
a) 1:100000 b) 1:75000
c) 1:10,000 d) 1:1000

2403)c 2404)d 2405)b 2406)d 2407)c,d 2408)a 2409)a 2410)e 2411)b 2412)a 2413)d 2414)c 2415)c 2416)a,b,d 2417)a,c 2418)b 2419)a 2420)c 2421)c 2422)d 2423)b 2424)None 2425)c 2426)d

2427. The incidence of Liver cysts in childhood polycystic kidney disease is - *(AI92)*
a) 5% b) 10%
c) 18% d) 50%

2428. All are true regarding Wilm's tumour except -
a) Pre Operative use of ActinomycinD *(AIIMS 92)*
b) Post Operative Radiotherapy
c) Good prognosis in Infants
d) Neuroblastoma is the commonest differential diagnosis

2429. Which does not happen in Unilateral Renal Trauma - *(AIIMS92)*
a) Hypertension b) Uraemia
c) Clot formation d) Perinephric haematoma

2430. Following is true of Pyonephrosis except -
a) Commonly associated with Renal calculi
b) Always unilateral *(AIIMS92)*
c) Is a complication of Hydronephrosis
d) Follows acute pyelonephritis

2431. Which is false regarding Ureteric stones -
a) Urine is always infected *(AIIMS92)*
b) Should be removed immediately
c) Source is always the kidneys
d) Pain is referred to tip of penis in intramural stones

2432. Which is false of Hosr shoe Kidney - *(AIIMS 92)*
a) Spider like appearance in IVP
b) Ureteral Obstruction is common
c) Lower calyx is reversed
d) Heminephrectomy improves function

2433. In Renal injury following blunt injury to abdomen which is not done - *(AIIMS 92)*
a) Prophylactic nephrectomy
b) Diagnostic peritoneal lavage
c) IVP
d) Exploratory laparotomy

2434. All are true of Aberrant renal artery except -
a) Bilateral *(PGI93)*
b) Leads to hydronephrosis
c) Comon in females
d) More common on left side

2435. Subcapsular nephrectomy is indicated is -*(PGI 93)*
a) Perinephric abscess
b) Hydronephrosis
c) Pyonephrosis
d) Solitary adenocarcinoma

2436. Most common route of infection of Kidneys in T.B. is - *(AllIndia 93)*
a) Direct invastion b) Hematogenous
c) Lymphatic d) Ascending

2437. Renal collar to prevent spread of malignancy from kidney is put around - *(JIPMER 93)*
a) Aorta b)IVC
c) Renal vein d) Renal artery

2438. Most common of congenital abnormality of upper renal tract- *(PGI79, AIIMS 81, 92)*
a) Duplication of Pelvis b) Duplication of ureter
c) Horse shoe kidney d) Post caval ureter

2439. Inadvertent surgical occlusion of the ureter leato-
a) Complete renal atrophy *(PGI 80,*
b) Hematuria *AIIMS81, 87)*
c) Renal failure
d) Hydronephrosis
e) Hypertension

2440. The following are the complications of haemodialysis except - *(JIPMER 81, AIIMS 86)*
a) Hypotension b) Peritonitis
c) Hypertension d) Bleeding tendency

2441. The risk of rupture in renal artery aneurysms is -
a) Less than 1 % b) 5% *(AMU81,*
c) 20% d) 75% *JIPMER 81)*
e) None of the above

2442. Treatment of choice of ureteric colic is- *(UPSC*
a) Nitrites b) Pethidine *82,84)*
c) Adrenaline d)Regitine

2443. Renal tuberculosis originates in the - *(JIPMER 81,*
a) Renal papilla *PGI 86)*
b) Renal medulla
c) Afferent tubules
d) Efferent arteriole of glomerulus

2444. Flower 'Vase' pattern of the pelvis in an intravenous urogram is seen in - *(PGI80,AIIMS 84, Karn 96)*
a) Polycystic kidney b) Renal carcinoma
c) Horse shoe kidney d) Ectopic kidney

2445. Epidermoid carcinoma of renal pelvis is usually associated with - *(Karn. 94)*
a) Multiple papilomas b) Pelvic calculus
c) Tuberculosis of kidney d)Filariasis

2446. "Golf-hole" ureter is seen in - *(Karn. 94)*
a) Ureteric calculus
b) Ureteral polyp
c) Tuberculosis of ureter
d) Retroperitonial fibrosis

2447. Auto nephrectomy is seen in - *(JIPMER 95)*
a) Sickle cell anemia b) Renal T.B.
c) Sarcoidosis d) Lymphoma

2448. In Renal cell carcinoma which is tru*(JIPMER 95)*
a) Hypercalcemia b) Polycythemia
c) Cushings syndrome d)All

2449. Commonest site of metastasis of Wilm's tumour is-
a) Bones b) Lungs *(AIIMS 94)*
c) Liver d) Brain

2450. Regarding renal cell carcinoma what is wrong -
a) Most common is females *(AIIMS 94)*
b) Invades renal vein
c) May be associated with varicocle
d) Arises from proximal convulated tubule

2427)d 2428)a 2429)b 2430)b 2431)a,b 2432)a,d 2433)a 2434)a 2435)c 2436)b 2437)c 2438)a 2439)a,d 2440) b,c 2441) e 2442) None 2443) a 2444) c 2445) b 2446) c 2447) a 2448) d 2449) b 2450) a

2451. False regarding angiomyolipoma of kidney is -
a) Is associated with tuberous sclerosis*(AIIMS 94)*
b) Treatment is neprectomy
c) May cause hypertension
d) Usually presents with pain

2452. True about renal trauma is - *(AI95)*
a) Urgent IVP is indicate
b) Exploration of kidney to be done in all causes
c) Lumbar approach to kidney
d) Renal artery aneurysms are common

2453. Commonest metastasis in Renal Cell Carcinoma is to- *(AIIMS 97)*
a) Lung b)Bone
c) Adrenal d) Liver

2454. Not true about polycystic kidney disease is -
a) Autosomal dominant *(AIIMS 97)*
b) Progress to CRF
c) Proteinuria is common, but seldom exceeds 2g
d) Excision of the cyst is the treatment of choice and it reverses the renal function

2455. Rena trauma is best treated by - *(UPSC)*
a) Observation and supportive measures
b) Early drainage and perirenal haematoma
c) Heminephrectomy
d) Nephrostomy

2456. The most common neoplasm of kidney is -*(Kan. 98)*
a) Wilm's tumour b) Renal cell carcinoma
c) Renal adenoma d)Haemagioma

2457. Best method of confirm treatment of TB kidney -
a) IVP b) CT *(AIIMS 98)*
c) Renal angiogram d) Ultrasound

2458. Stone at lower end ofureter removed by -*(AIIMS 98)*
a) Diuretics b) Endoscopic removal
c) Lithotripsyin situ d) Antispasmodics

2459. Ectopic ureter occurs in all sites *e\cept(AIIMS98)*
a) Bladder neck b) Seminal vesicle
c) Prostate d) Bulbar urethra

2460. Most severe pain in ureteric stone is seen in cases of- *(CUPGEE 99)*
a) Oxalate stones b) Triple phosphate
c) Cystine stone d) Uric and stone

2461. Unilateral hydronephrosis is due to - *(AMC99)*
a) Bladder neck contracture b) Stricture urethra
c) Carcinoma of prostate d) Ureterocele

2462. During investigation of hydonephrosis, isotope renogram is useful mainly in - *(UPSC 2K)*
a) Detecting vesicoureteric reflux
b) Anatomical definition
c) Distinguishing between non-obstructed system
d) Identifying ectopic kidney tissue

2463. A patient was admitted with complaints of ureteric stones. He was on treatment with i.v. fluids and analgesics. Suddenly he developed radiating pain to the pubic area and medial aspect of the thigh. The stone is coming down. What is the most probable site of lodgment of the stone -
a) At renal pelvis *(AIIMS 2K)*
b) At pelvic brim
c) At the lelve of gonadal vessels
d) Intramural portion of the ureter

2464. Pseudo kidney is - *(J & K 2001)*
a) Thickened bowel loop on USG
b) Hydronephrosis
c) Unascended kidney
d) Undescended testes

2465. Drug of choice for renal colic - *{Kerala 98)*
a) Methadone b) Pentazocine
c) Voveran d)Piroxican

2466. Ectopic ureter may be frequently associated with-
a) Oliguria *(JIPMER 81, AMU 89)*
b) Dysuria
c) Bilateral hydroureter
d) paradoxical incontinence

2467. Earliest and often the only presentation of TB kidney is - *(AIIMS 78,AMU88)*
a) Increased frequency b) Pain
c) Hematuria d) Renal calculi

2468. Renal function failure is best evaluated by-
a) DTPA b) DMSA
c) Iodohippurate d) MAG-3

2469. IVP is done using - **(***PGI85)*
a) Conray240 b)Conray3080
c) Conray480 d)conray540

2470. In a patient who was has acid-fast bacilli in the urine-
a) Calcification of the bladder is common
b) Bladder diseases is associated with extensive renal disease *(AIIMS 83)*
c) Ureteric involvement causes shortening of the ureters
d) Renal disease can produce changes indentical to reflux nephropathy
e) Ureteric calculi calculi are commonly present

2471. Which of the following is diagnostic of the Rim sign in a nephrogram - *(AMU88)*
a) Phelonephritis
b) Hypernephroma
c) Polycystic kidney
d) Severe hydronephrosis

2472. In Genitourinary TB, True is - *(PGI98)*
a) Sterile pyurias consistent finding
b) AFB in early morning sample is always positive
c) MC site is pelvis
d) Commonest cause of pyelonephritis

2473. Urinary ascites is due to - *(PGI 98)*
a) Injury to bladder during birth
b) Ureteric obstruction
c) Cong, urethral atresia
d) Urethral valves

2474. Left loin nephrectomy, Str. not cut is - *(PGI 98)*
a) Trapezius b) Seratus inf post
c) Lat. dorsi d) Internal oblique

2475. The resting uretric pressure in mm - *(PGI 99)*
a) 5-7 cm *of Up* b) 15-30 cm of H_20
c) 7-10 cm of *Ufi* d) 0-5 cm of H_20

2451)b,c,d 2452)a 2453)a 2454)d 2455)a 2456)c 2457)a 2458)b 2459)d 2460)a 2461)c,d 2462)c 2463)b 2464)a 2465)c 2466)d 2467)a 2468)A11 2469)None 2470)b,c,d 2471)d 2472)a 2473)A11 2474)a

2476. Renal cell carcinoma histopathologicaly showing 'perinuclear halo'&"Plant like"structure imalignant cells - *(PGI 2000)*
a) Clear cell tumor b) Papillary Ca
c) Collecting duct. Ca d) Oncocytoma

2477. Which of the following statements is true regarding kidney tumors - *(PGI 01)*
a) Mutated VHL gene is associated with clear cell carcinoma
b) Extreme hyperdiploidy occurs
c) Extreme hypodiploidy occurs
d) Renal papillary carcinoma has defect in chromosome 8
e) Oncocytoma has defect in chromosome 11

2478. True of autosomal dominant polycystic kidney disease I and II respectiely - *(PGI 02)*
a) Chromosomes 16 and 5 b) 16 and 4
c) 11 and 5 d) 11 and 4
e) 4 and 5

2479. The substances present in the gall bladder stones or the kidney stones can be best identified by the following techniques - *(AI03)*
a) Flourescence spectroscopy
b) Electron microscopy
c) Nuclear magnetic magnetic resonance
d) X - ray diffraction

2480. A 10mm calculus in the right lower ureter associated with proximal hydroureteronephrosis is best treated with - *(AI 03)*
a) Extracorporeal shockwave lithotripsy
b) Antegrade percutaneous access
c) Open ureterolithtomy
d) Ureteroscopic retrieval

2481. Which of the following is not a contraindication for extra corporeal Shockwave Lithotripsy (ESWL) for renal calculi? *(AIIMS 03)*
a) Uncorrected bleeding diathesis
b) Pregnancy
c) Ureteric stricture
d) Stone in a calyceal diverticulum

2482. Unilateral small smooth kidney is seen in -
a) Reflux nephropathy *(Karnataka 03)*
b) Labar infarction
c) Renal artery stenosis
d) Chronic glomerulonephritis

2483. A 67 year old man presented initially after a single episode of gross painless haematuria. An excretory urogram demonstrated a 1.5 mm round filing defect in the right lower renal infundibulum. The best study to obtain next is - *(Karnataka 03)*
a) Urinary cytology b) Cystoscopy
c) Ultrasonography d) Retrograde pyelography

2484. Polycystic disease of the kidney may have cysts in all the following organs except - *(AI 04)*
a) Lung b) Liver
c) Pancreas d) Spleen

2485. The neonatal kidney achieves concentrating ability equivalent to adult's kidney by - *(AI 04)*
a) One year of age
b) Eighteen months of age
c) Three to six months of age
d) Just before puberty

2486. A 3 year old girl presents with recurrent UTI. On USG shows hydronephrosis with filling defect and negative shadow of bladder with no ectopic orifice- *(U.PPG.M.E.E. 04)*
a) Vesicoureteric reflex
b) Hydronephrosis
c) Ureterocele
d) Sacrococcygeal teratom

2487. An absent kidney is found in - *(AMU 05)*
a) 1:200 individuals b) 1:700 individuals
c) 1:1400 individuals d) 1:5000 individuals

2488. All are features of Hypernephroma except -
a) Persistent pyrexia *(HPU 05)*
b) Hematuria
c) Polycythemia
d) Lower pole involvement

2489. Forty eight hours after sustaining a blunt abdominal injury, a 15 year old boy presents with hematuria and pain in the left side of abdomen. On examination, he has a pulse rate of 96/minute with a BP of 110/70 mmHg. His Hb is 10-8 gm% with a PCV of 31%. The blood urea is 32 mg%. Abdominal examination revealed tenderness in left lumbar region but no palpable mass. The most appropriate investigation to diagnose and find the extent of renal injury would be-
a) Sonographic evaluation of abdomen *(UPSC 05)*
b) Intravenous pyelography
c) Contrast enhanced computed tomography
d) MR urography

2490. Ectopic ureter opening is not located in - *(MAHA 05)*
a) Bulbar urethra b) Prostatic urethra
c) Seminal vesicle d) Bladder neck

2491. Which of the following is not a preferred site for planning vascular access for maintenance hemodialysis ? *(AI 06)*
a) Nondominant extremity
b) Upper limb
c) RadiocephalicAV fistula
d) Saphenofemoral fistula

2492. Oxalate stones are found in - *(PGI June 06)*
a) Ethylene glycol b) Ethanol
c) Diethyl glycol d) Methyl alcohol

2493. In a patient suspected to be suffering from vesicoureteric reflex, which one of the following radiological investigations may confirm the diagnosis ? *(UPSC 07)*
a) Intravenous urography
b) Micturating cystourethrography
c) Pelvic ultrasound
d) Antegrade pyelography

2475) b 2476)None 2477) a,c 2478) b 2479) d 2480) d 248 l)d 2482) c 2483) c 2484) d 2485) a 2486) c 2487) c 2488)d 2489)c 2490)a 2491)d 2492)a 2493)b

2494. Stone which is resistant to lithotripsy -
a) Calcium oxalate *(AiimsMayQ7)*
b) Triple phosphate stone
c) Cystine stone
d) Uric acid stone

2495. Fruit Juice which helps in preventing UTI -
a) Cranberry b) Raspberry *(Aiims May 07)*
c) Orange d) Grape

2496. "Spider leg" deformity in excretory urogram occurs in - *(UP 07, AI91)*
a) Hydronephrosis b) Polycystic kidney
c) Uretrocele d) Renal agenesis

2497. Commonest cause of ureteric injury during surgical operation is - *(UP 07, 06)*
a) Abdomino-perineal resection
b) Hysterectomy
c) Prostectomy
d) Colectomy

2498. Ureteric colic characterized by all except - *(UP 07)*
a) Acute onset
b) Stillness of the patients
c) Responds to antispasmodics
d) Radiates to the groin

2499. The common organism isolated in Emphysematous pyelonephritis is - *{Corned 08)*
a) E.Coli b) Proteus
c) Pseudomonas d) Klebsiella

2500. A 23 year old male who is otherwise normal complains of mild pain in his right iliac fossa in a waveform pattern which increases during the night and he becomes exhausted and is admitted in the hospital. On examination there is mild hematuria. Urine examination reveals plenty of RBCs, 50WBCs/hpf. Urine pH is 5.5. Most likely diagnosis is- *(AIIMSNov 07)*
a) Glomerulonephritis b)Ca-Urinary bladder
c) Ureteral calculus d) Cystitis

2501. Persistent foetal lobulation of adult kidney is due to- *(AIIMS Nov 07)*
a) Congenital renal defect
b) Obstructive uropathy
c) Intrauterine infections and scar
d) Is a normal variant

2502. The typical appearance of "spider leg" on excretory urography is seen in - *(UPSC-II08)*
a) Hydronephrosis
b) Polycystic kidney
c) Medullary sponge kidney
d) Renal cell carcinoma

2503. Ureteric colic due to stone is caused by - *(AI08)*
a) Stretching of renal capsule due to back pressure
b) Increased peristalsis of ureter to overcome the obstruction
c) Irriation of intramural ureter
d) Extravasation of urine

2504. What percent of cases with blunt injury to kidney require surgical exploration - *(Manipal 08)*
a) 20% b) 90%
c) 50% d) 70%

2505. What is column of bertini in kidney ? *(APPG 08)*
a) Renal tumour
b) Tongue like papillary projection
c) Caliculus
d) None

2506. Alady present with U/L hydronephrosis on USG She is asymptomatic. Ureteropelvic drainage is normal. What is/are treatment modality for her -
a) Pyleroplasty *(PGIDec 08)*
b) Analgesia SOS
c) Underobservation
d) Follow up by USG

2507. Renal calculi associated with proteus infection -
a) Uric acid b) Triple phosphate *(AI09)*
c) Calcium oxalate d) Xanthine

2508. Which of the following is the Post - Chemotherapy based staging system in Wilm's tumor - *(AI 09)*
a) National Wilm's tumor staging system (NWTSG)
b) International society of Pediatric Oncology (SIOP)
c) AJCCTNM
d) Chadwick

2509. Most important prognostic indicator for Renal cell carcinoma - *(AIIMS May 09)*
a) Nuclear grade b) Histological type
c) Size d) Pathological staging

2510. Which one of the following is the treatment of choice for lower ureteric stone - *(UPSC-II 09)*
a) Endoscopic removal b) Diuretics
c) Drug disslution d) Laser

2511. Renal calculi associated with Proteus infection -
a) Uric acid *(AIIMS May 10)*
b) Triple phosphate
c) Calcium oxalate
d) Xanthine

2512. Wilm's tumor associated with A/E - *(AIIMSMay 10)*
a) Hemihypertrophy
b) Aniridia
c) Hypertension
d) Bilateral polycystic kidney disease

2513. A 60 yr old chronic smoker presents with painless gross hematuria of 1 day duration. Investigation of choice to know the cause of hematuria -
a) USG *(AIIMS May 10)*
b) X-ray KUB
c) Urine routine
d) Urine microscopy for malignant cytology cells

2514. Which of the following stones is hard to break by ESWL.- *(AI 10)*
a) Calcium oxalate monohydrate
b) Calcium oxalate dihydrate
c) Uric acid
d) Struvite

2494) c 2495) a 2496) b 2497) b 2498) b 2499) a 2500) c 2501) d 2502) b 2503) b 2504) a 2505) b 2506)b,c,d
2507)b 2508)b 2509)d 2510)a 2511)b 2512)d 2513)d 2514)a

2515. A 50 year old female is admitted with abdominal pain and anuria. Radiological studies revealed bilateral impacted ureteric stones with hydronephrosis. Urine analysis showed RBCs with pus cells in urine. Serum creatinine level was 16 mg/dl and urea level was 200 mmol/1 which of the following should be the immediate treatment - *(AI10)*
a) Hemodialysis
b) ' J' stent drainage
c) Lithotripsy
d) Ureteroscopic removal of stones

2516. What complication should one expect when PCNL is done through 11th intercostals space - *(AI 10)*
a) Hydrothorax b) Hematuria
c) Damage to colon d) Ramnants fragments

2517. Which of the following is the most common renal vascular anomaly - *(AI 10)*
a) Supernumerary renal arteries
b) Supmumerary renal veins
c) Double renal arteries
d) Double renal veins

2518. First autologous renal transplantation was done by -
a) Hardy b) Kavosis *(AI 10)*
c) Higgins d) Studor

2519. MEN 2A is associated with following except -
a) Medullary Thyroid Carcinoma *(Maharashtra 10)*
b) Pituitary tumor
c) Pheochromocytoma
d) Hyperparathyroidism

2520. Renal carcinoma with solitary lung secondary is best treated by - *(UP SC II10)*
a) Radiotherapy b) Surgery
c) Chemotherapy d) Immunotherapy

2521. Match List-I with List-II and select the correct answer using the code given below the Lists -

List-I (Aetiology)	List-II (Type of cyst)
A. Hamartoma	1. Enterogenous
B. Failure of connections of tubular elements	2. Urachal
C. Persistence of normal vestigial remnants	3. Polycystic kidney
D. Duplication	4. Lymphatic cyst

Code: *(UP SC II10)*

	A	B	C	D
a)	4	3	1	1
b)	4	3	1	2
c)	3	4	1	2
d)	3	4	**2**	1

2522. Indications of percutaneous nephrostomy -
a) Stone removal *(PGINov.10)*
b) Ureteral obstruction
c) Anterograde renography
d) Renal tumor resection
e) Ischemic renal failure

2523. Stone which is resistant to lithotripsy-^LKMS' *Nov 10)*
a) Calcium oxalate b) Triple phosphate stone
c) Cystine stone d) Uric acid stone

2524. A 24 yr old man presented with retroperitoneal, necrotic, heterogenous enhancing mass on CT near the hilum of the left kidney. What is the most probable diagnosis - *(AIIMS Nov 10)*
a) Metastatic germ cell tumour
b) Metastatic melanoma
c) Lymphoma
d) Metastatic transitional cell tumour

2525. Which of the following is not associated with Renal cell carcinoma - *(AIIMS May 11)*
a) Polycythemia b) Amyloidosis
c) Cushing's syndrome d) Hypertension

2526. Renal Calculi associated with proteus infection -
a) Uric Acid b) Triple phosphate
c) Calcium oxalate d) Xanthine *(AI 11)*

2527. A 55 year old smoker presents with history of five episodes of macroscopic hematuria each lasting for about 4-5 days in the past five years. Which of the following investigations should be performed to evaluate the suspected diagnosis - *(AI 11)*
a) Urine microscopy and cytology
b) X- ray KUB
c) Ultrasound KUB
d) DTPA scan

2528. A 40 year old patient with a single kidney presents with a solitary exophytic mass of 4 cm localized at its lower pole which amongst the following is the best recommended management option - *(AI 11)*
a) Partial Nephrectomy
b) Radical Nephrectomy
c) Radical Nephrectomy with dialysis
d) Radical Nephrectomy with immediate Renal Transplantation

2529. A 25-year-old hypertensive man with a history of recurrent calcium-containing renal calculi presents to the emergency department with excruciating flank pain and blood in the urine. This patient is likely to have which one of the following underlying disorders? *(UPSCI11)*
a) Chronic proteus infection
b) Factor VIII deficiency
c) Hyperaldosteronism
d) Hyperparathyroidism

2530. Most common site of genitourinary tuberculosis -
a) Kidney b) Ureter *(NEET/DNB Pattern)*
c) Bladder d) Urethra

2531. Best investigation for ureteric stones is -
a) USG b) CT *(NEET/DNB Pattern)*
c) CECT d) IVP

2515)b 2516)a 2517)a 2518)a 2519)b 2520)b 2521)a 2522)a,b,c,d 2523)c 2524)a 2525)c 2526)b 2527)a 2528) a 2529) d 2530) a 253 l)b

URINARY BLADDER

2532. Commonest cause for pulsion diverticulum of the urinary bladder is - *(JIPMER86)*
a) Benign enlargement of prostate
b) Fibrous prostate
c) Contracure of bladder neck
d) Stricture urethra

2533. Most malignant carcinoma of the bladder is -
a) Malignant villous tumour *(AP85)*
b) Solid tumour
c) Carcinomatous ulcer
d) Adenocarcinoma

2534. Most reliable investigation in bladder rupture is
a) IVP *(JIPMER87)*
b) Cystoscopy
c) Retrograde cystogram
d) Catheterisation

2535. Following is the commonest tumour of urinary bladder - *(AIIMS 84, PGI97, Jipmer 86, AI89)*
a) Papilloma
b) Adenocarcinoma
c) Transitional cell carcinoma
d) Squamous cell carcinoma

2536. Following may predispose to carcinoma bladder except- *(AIIMS 84)*
a) B-Nephthylamine b) Smoking
c) Bilharziasis d) Tuberculous cystitis

2537. It is true of carcinoma of the urinary bladder that
a) It usually occurs in childhood *(AIIMS 85)*
b) Occurs more often in aniline dye workers
c) It is located most frequently in the trigone
d) Papillary formation is rare

2538. Which is not seen in complete ecotopic vesicae -
a) Umbilical hernia *(IN89)*
b) Visible uretero vesical efflux
c) Hypospadias
d) Waddling gate

2539. The commonest bladder sone is - *(PGI 84)*
a) Triple phosphate b) Xanthine
c) Uric acid d) Cysteine

2540. The following is true about bladder stones -
a) Girls more than boys *(PGI 84)*
b) Treatment is lithopexy
c) Always forms in kidneys and passes down to bladder
d) Usually asymptomatic

2541. Bladder tumours mostly arises from - *(AI91)*
a) Mucosa b) Submucosa
c) Muscularis Mucosa d) Seorsa

2542. Thimble bladder is seen in - *(AI91)*
a) Acute tuberculosis b)Chronic tuberculosis
c) Neurogenic bladder d) Schistosomiasis

2543. All are precancerous for carcinoma bladder except- *(AI91)*
a) Tuberculosis bladder b) Aniline dyes
c) Schistosomiasis d) Chronic ulcer

2544. Bladder cancer most constantly shows which -
a) Dysuria *(AIIMS 81, Rohtak 86)*
b) Urgency
c) Increased frequency
d) Haematuria
e) Persistent & recurrent urinary infection

2545. Treatment of 'Thimble bladder' is - *(JIPMER 81, Delhi 84)*
a) Anti-tubercular treatment
b) Corticosteroids
c) ileocystoplasty
d) Anti-tubercular drugs + steroids

2546. 'Kiss cancer' of the urinary bladder is - *(AIIMS 80,81, UPSC 88)*
a) Highly malignant b) Malignant
c) Benign d) Pre-malignant

2547. In extraperitonial bladder rupture urine escapes into- *(AIIMS 94, AI93)*
a) Peritonium
b) Perivesical space
c) Below urogenital diaphragm
d) Groin

2548. About transitional cell carcinoma of bladder all of following are correct except - *(Delhi, PGI 86)*
a) Most common site is fundus
b) Prognosis is excellent if muscle layer is invaded
c) Exposure to industrial carcinogens predisposes to it
d) Most of carcinomas are flat, solid & deeply infiltrating

2549. Earliest symptom is carcinoma bladder is -
a) Frequency b) Pain *(AIIMS 96)*
c) Burning d) Haematuria

2550. Which is a normal finding in cystometry- *(PGI97)*
a) Absence of systolic detrussor contraction
b) Residual volume of 75 ml
c) Leakage on coughing
d) First sensation of urination at 300 ml

2551. 'Tear dorp'bladder is found in- *(Karn. 98)*
a) Tuberculosis b) Neurogenic bladder
c) Pelvic hematoma d) None of the above

2552. In ureterosigmoidostomy all occure except- *(JIPMER 98)*
a) Hyponatremia b) Hyperkalemia
c) Hyperchloremia d) Acidosis

2553. Regarding STONES all are true, except -
a) Uric acid is a dropped stone *(AIIMS 98)*
b) Obstruction to urinary tract is a common cause
c) Jackstone calculus is formed in alkaline pH due to urea - splitting organisms
d) Staghorn calculus is seen in alkaline urine

2554. Cystoscopic findings in TB bladder are all except -
a) Cobblestone mucosa *(PGI97)*
b) Thimble bladder
c) Golf hole ureter
d) Whitish efflux from the ureteric holes

2532)c 2533)b 2534)c 2535)c 2536)d 2537)b 2538)c 2539)None 2540)b 2541)a 2542)b 2543)a,d 2544)d 2545) a,c 2546) c 2547) b 2548)a,b,d 2549) d 2550) a 255 l)c 2552) a,b 2553) c 2554) d

2555. Sq. cell tumor of urinary bladder is due to - *(PGI97)*
a) Stone b) Schistosomiasis
c) Chr. cystitis d) Diabetes mellitus

2556. Tear-drop bladder is seen in - *(PGI99)*
a) Tuberculosis
b) Hunner's ulcer
c) Perivescial hemorrhage with rupture
d) Perivesical hemorrhage without rupture

2557. Transitional cell carcinoma of bladder is associated with- *(PGI 01)*
a) Schistosomiasis b) Naphthylamine
c) Smoking d) Tuberculosis of bladder

2558. Squamous cell ca of urinary bladder is predisposed toby- *(PGI 02)*
a) Urolithiasis b) Persistent Urachus
c) Schistosomiasis d) Polyp
e) Smoking

2559. True about transitional cell Ca of urinary bladder -
a) Smoking predisposes *(PGI 03)*
b) Schistosoma infection predisposes
c) Aniline dye workers
d) Radiation

2560. Post micturation dribbling is due to - *(AMU05)*
a) Detrusor overactivity
b) Dribbling decreases in case of urethral stricture
c) Collection of Urine in U shaped curve ofbulb of penis
d) Neurogenic bladder

2561. Which one of the following is not an intravesical chemotherapeutic agent - **(***UPSC 05)*
a) MitomycinC b)BCG
c) Epirubicin d) Thiotepa

2562. A patient Ramu presents with hematuria for many days. On investigations he is found to have renal calculi, calcifications in the wall of urinary bladder and small contracted bladder; most probable cause is- *(MAHA05)*
a) Schistosomiasis b) Amyloidosis
c) Tuberculosis d) Ca urinary bladder

2563. Which of the following is the most effective intravesical therapy for superficial bladder cancer- *(AIIMSNOV05)*
a) Mitomycin b) Adriamycin
c) Thiotepa d)BCG

2564. Urinary catheterisation indicated in case of acute retention of urine in following conditions -
a) Stricture b) Rupture *(PGI June 06)*
c) Postoperative d) Carcinoma prostate
e) Before appendicectomy in acute appendicitis

2565. Consider the following conditions -
1) Urinary flow rate less than lOcc / second
2) Residual volume of urine > lOOcc
3) Serum level of prostatic specific antigen >10 mmOl /litre
4) Trabeculated urinary bladder

Which of the above are indications of TRUP for BHP?
a) 1,2 and 3 b) 2,3 and 4
c) 1,2 and 4 d) 1,3 and 4

2566. Secondary vesical calculus refers to stones formed due to - *(Karnataka PGMEE 06)*
a) Hypercalciuria b) Injury
c) Infection d) Migrating from

2567. A 50 year old man known to have diabetes presents with, poor urinary stream, hesitancy, difficulty in micturation and failure to void completely. What is the diagnosis ? *(AI0 7)*
a) BPH b) Autonomic neuropathy
c) UII d) Atonic bladder

2568. A 50 year old man, known to have diabetes, presents with poor urinary stream, increased frequency of micturation and hesitancy. What is the most likely diagnosis - *(AI07)*
a) BPH b) Autonomic neuropathy
c) UTI d) Atonic bladder

2569. A man falls astride a penetrating object He develops retention of urine, perineal hematoma and bleeding from urinary meatus. The nature of injury would be-
a) Rupture of membranous urethra *(UPSC II10)*
b) Rupture of bulbar urethra
c) Intraperitoneal rupture of bladder
d) Extraperitoneal rupture of bladder

2570. A lady who presented with hematuria was found to have Stage II Transitional Cell Carcinoma of bladder. Which of the following statements about management of her condition is true - *(AI 11)*
a) Cystoscopic falguration is the standard treatment
b) 70% chance of requiring cystectomy in 5 years after TUR
c) History of smoking is not a risk factor
d) There is no role of chemotherapy

2571. In a patient with stage I (confined to mucosa and submucosa) transitional cell carcinoma of the urinary bladder, the recommended treatment is -
a) Trans urethral resection of bladder tumour (TURBT)
b) Radical cystectomy *(UPSC II11)*
c) Radiation therapy
d) Systemic chemotherapy

2572. Persistent urachus is a risk factor for-]
a) Transitional cell ca of bladder *(NEET/DNB*
b) Adenocarcinoma of bladder *Pattern)*
c) Squamous cell ca of bladder
d) Undifferentiated ca of bladder

2573. Diversion of urinary bladder is best done at -
a) Jejunum b) Ileum *(NEET/DNB Pattern)*
c) Cecum ^ d) Colon

PROSTATE & SEMINAL VESICLE

2574. Marion's disease is due to - *(AIIMS81, DNB 90)*
a) Muscular hypertrophy of internal sphincter of urinary bladder
b) Fibrosis of the neck of bladder
c) Vesicular diverticula
d) Vesicular calculi

2555) a,b 2556) c 2557) a,b,c 2558) a,c 2559)a,b,c,d 2560) c 2561)b 2562) a 2563) d 2564) c,d 2565) c 2566)c 2567)b 2568)a 2569)b 2570)b 2571)a 2572)b 2573)b 2574)a

2575. Medical castration is effected by - *(KERALA 90)*
a) Diethylstibesterol b) LH RH analogues
c) Gossypol d) Hanovan

2576. T.U.R. (trans urethral resection) syndrome is due to- *(UPSC 95)*
a) Hyponatremia b) Hypokalemia
c) Hypovolaemia d) Hypoxia

2577. 80 year old man underwent transurethral prostatectmy biopsy revealed foci of adenocarcinoma. Next line of management - *(AI89, AIIMS 8 7,2K)*
a) Radiotherapy b) Hormonal therapy
c) Surgery d) No further treatment

2578. Complication which commonly accompanies acute prostatitis - *(AIIMS 87)*
a) Epidymitis b) Orchitis
c) Seminal vesiculitis d) Sterility

2579. Grade I benign prostate with outflow obstruction is best treated with - *{AIIMS84)*
a) Retropubic prostatectomy
b) Transurethral resection
c) Transvesical pristatectomy
d) Androgen therapy

2580. Complimentary operation done at the time of prostatectomey is - *(UPSC 88)*
a) Vasectomy b) Circumcission
c) Hernia repair d) All of the above

2581. In carcinoma prostate with matastasis which is raised - *(TN89)*
a) ESR b) Alkaline phosphatase
c) Acid phosphatase d) Bilirubin

2582. Secondary deposits from prostatic carcinoma is commonest in - *{PGI80, AI 89, AP 89)*
a) Bone b) Kidney
c) liver d) Brain

2583. Indication for surgery in Benign prostatic hypertrophy are all except - *{JIPMER 80, AI 89, AP 85)*
a) Prostatism b) Chronic retention
c) Hemorrhage d) Enlarged prostate

2584. Most reliable indicator of carcinoma of prostate recurrence after surgery - *{JIPMER95)*
a) Prostate specific antigen b) Acid phosphatase
c) Alkaline phosphatase d)CEA-15

2585. Which is the earliest symptom of benign hypertrophy of prostate - *{Karnat96)*
a) Frequency b)Haematuria
c) Incontinence d) Strangury

2586. 70 year old man with Ca.prostate with osteoblastic secondaries in pelvis and lumbar vertebra showed well differentiated Adeno Carcinoma prostate on needle biopsy. He is idealy treated by - *{MAHE 98)*
a) Radical prostectomy b)TURP
c) Radiation d) Hormonal manipulation

2587. A patient was undergoing trans Urethral resection of Prostate. He was under spinal anesthesia using Bupivacaine. He developed preumbilical pain after 30 minutes of surgery. The probable cause could be-
a) Effect of Bupivacaine waning *{AIIMS 2K)*
b) Mesentric ischemia
c) Bladder rupture
d) meteorism

2588. A patient presents with complains of sciatica. On radioligical examination there was sclerotic lesions on his skulll. Which of the following is most likely to be elevated in this patient - *{AIIMS 2K)*
a) CEA
b) Prostate specific antigen
c) Alkaline phosphatase
d) Alpha 1 antitrypsin

2589. Which is not used in carcinoma prostate - *(PGI 97)*
a) Estrogen b) Progesterone
c) Cyproterone acetate d) Flutamide

2590. Absence of fructose in semen indicates - *(PGI 98)*
a) Obstruction to seminal vesicles
b) Obstruction at prostatic urethra
c) Vas deferens obstruction
d) Testicular failure

2591. In prostatic metastasis, the site most commonly involved is - *(PGI 99)*
a) Obturator nodes b) Perivesical nodes
c) Pre-sacral nodes d) Paraaortic nodes

2592. Which one of the following is an absolute indication for surgery in cases of benign prostatic hyperplasia- *{AI 03)*
a) Bilateral hydroureteronephrosis
b) Nocturnal frequency
c) Recurremt urinary tract infection
d) Voiding bladder pressures > 50 cm of water

2593. Semen analysis of a young man who presented with primary infertility revealed low volume, fructose negative ejaculate with azoospermia. Which one of the following is the most useful imaging modality to evaluate the cause of his infertility- *{AI 03)*
a) Color duplex ultrasonography of the scrotum
b) Transrectal ultrasonography
c) Retrograde urethrography
d) Spermatic venography

2594. Which one of the following lasers is used treatment of benign prostatic hyperplasia as well as urinary calculi- *(AI03)*
a) C02 laser b) Excimer laser
c) Ho: YAG laser d) Nd: YAG laser

2595. Screening of prostate Ca commonly done by -
a) DRE (Digital rectal exam) b) USG *{PGI June 05)*
c) MRI d)PSA
e) CTScan

2596. The following statements regarding finasteride are true except - *(AI 05)*
a) It is used in the medical treatment of benign Prosstatic hypertrophy (BPH)
b) Impotence is well documented after its use.
c) It blocks the conversion of dihydrotestosterone to testosterone
d) It is a 5-a reductase inhibitor

2575) a,b2576) a 2577)d 2578)c 2579)b 2580)None 2581)b 2582)a 2583)d 2584) a 2585)a 2586)d 2587)c
2588)b 2589)b 2590)a 2591)a 2592)a 2593)b 2594)c 2595)d 2596)c

2597. Which of the following is the most troublesome source of bleeding during a radical retropubic prostatectomy - *(AI05)*
a) Dorsal venous complex
b) Inferior vesical pedicle
c) Superior vesical pedicle
d) Seminal vesicular artery

2598. McNeal's peripheral Zone in prostate gland is the seat of - **(***Karnataka PGMEE 06)*
a) Benign Hypertrophy b) Cancer
c) Prostatitis d) Calculi

2599. 50 year old male with positive family history fo prostate cancer has come to you for a screening test. The most sensitive screening test to pickup prostate cancer is - *(AI 07)*
a) DRE
b) PSA
c) DRE+PSA
d) Endorectal coil MRI with TjW and T_2W images

2600. 60 yr old male undergoes TURP. After 3 days patient develops altered senstiveness and drowsiness. Most probable diagnosis is - *(Aiims May 07)*
a) Hypernatremia
b) Hyponatremia
c) Stroke
d) Meningitis due to spinal anaesthesia

2601. Carcinoma of the prostate arise from - *(UP 07, 05)*
a) Central zone b) Peripheral zone
c) Transitional zone d) Periurethral zone

2602. The most important use of transrectal ultarsonography (TRUS) is for - *(Corned 0 7)*
a) Screening for Ca prostate
b) Distinguishing prostate cancer from BPH
c) Systematic prostate biopsy in suspected prostate cancer
d) Guiding transurethral resection of prostate cancer

2603. The most common complication of transurethral resection of prostate (TURP) - *(Corned 07)*
a) Erectile dysfunction
b) Retrograde ejaculation
c) Urinary incontinence
d) Urethral stricture disease

2604. Which one of the following is used as an irrigation solution during transurethral resection of the prostate - *(Corned 08)*
a) 1.5% glycine b) Physiological saline
c) Ringer's lactate d) 5% dextrose

2605. Trans rectal ultrasonogram in evaluation of carcinoma prostate most useful for - *(AI 08)*
a) Taking guided biopsy
b) Identifying seminal vesicle invasion
c) Nodal sampling
d) Measuring in extent of invasion

2606. Which of the following is true about prostate cancer screening ? *(APPG 08)*
a) Digital screening along with PSA is additive
b) Prostate cancer is common among young males
c) Tumor markers are diagnosed
d) Bleeding per rectum in earliest manifestation of disease

2607. Hot flush is not associated with - *(PGIDec 08)*
a) Medical castration
b) Surgical castration
c) Ketoconazole therapy
d) Androgen receptor blockade
e) Radical prostatectomy

2608. Gleason score: all are true except - *(AIIMSNov 08)*
a) Used for grading prostate cancer
b) Scores range from 1-10
c) Higher the score, poorer the prognosis
d) Helps in planning management

2609. Assessment of patient with Prostatism include all except - *(DELHI PG Mar. 09)*
a) Rectal examination
b) Serum prostate specific antigen
c) Pressure flow urodynamic studies
d) Transrectal ultrasound scanning

2610. 50 year old male with positive family history of prostate cancer has come to you for a screening test. The most sensitive screening test to pickup prostate cancer is - *(AIIMS May 10)*
a) DRE
b) PSA
c) DRE+PSA
d) Endorectal Coil MRI with T1W and T2W images

2611. What is the optimum duration antibacterial treatment of acute bacterial prostatitis?*(UPSC-110)*
a) 3 days b) 4-6 weeks
c) 7-14 days d) 2-14 days

2612. Screening of prostate Ca is done by -*(PGINov. 10)*
a) Transrectal USG b) Digital rectal exam
c) PSA d) CT scan
e) Urodynamic study

2613. In follow up of BPH, most important indication of surgery is - *(AIIMSNov 10)*
a) Prostate size >75gm
b) Single episode of UTI requiring 3 day antibiotics
c) Cannot use medication due to hypertension
d) Bilateral hydronephrosis

2614. 60 yrs old male with poor stream of urine, post void residual urine is 400ml, b/1 hydronephrosis and prostate weighing 70 g. His urea is 120 and creat 3.5. Ideal "next immediate" step - *(AIIMSNov 10)*
a) Catheterize with Foley catheter
b) b/1 PC Nephrostomies
c) CT to rule out ca
d) MRI pelvis

2597)a 2598)b 2599)c 2600)b 2601)b 2602)c 2603)b 2604)a 2605)a 2606)a 2607)c,e2608)b 2609)c 2610)c 261 l)b 2612) b,c 2613) d 2614) a

2615. Which of the following is the most common cause of delayed urinary tract obstructive symptoms after TURP- *(AI11)*
a) Stricture of the Navicular fossa
b) Stricture of the membranous urethra
c) Stricture of the bulb of urethra
d) Bladder neck stenosis

2616. During TURP, surgeon takes care to dissect above the verumontonum to prevent inj ury to - *(AI 11)*
a) External Urethral Sphincter
b) Urethral crest
c) Prostatic Utricle
d) Trigone of bladder

2617. Gleason score: all are true except - *(AIIMSMay 11)*
a) Used for grading prostate cancer
b) Scores range from 1-10
c) Higher the score, poorer the prognosis
d) Helps in planning management

2618. BPH involves - ***(NEET/BW 'Pattern)***
a) Peripheral zone b) Central zone
c) Transition zone d) Prostate capsule

URETHRA & PENIS

2619. Features of carcinoma penins are all except -
a) Circumcision soon after birth provides total immunity *(PGI85, Kerala 87)*
b) Metastatic to inguinal nodes
c) Surgery treatment of choice
d) Transitional cell carcinoma

2620. Commonest type of hypospadias is- *(JIPMER 87)*
a) Glandular b) Coronal
c) Penile d) Penoscrotal
e) Perineal

2621. In case of pelvic fracture with urethral injury, the most important first step in management is -
a) Repair in injured urethra *(AIIMS84)*
b) Fixation of pelvic fracture
c) Treatment of shock and haemorrhage
d) Splinting urethra with catheters

2622. Posterior urethral valve are commonly observed in- *(AIIMS84)*
a) Boys b) Girls
c) Adult males d) Adult females

2623. Commonest site for post gonococcal stricture urethra is - *(AIIMS 87, Jipmer 87)*
a) Penoscrotal Jn. b) Bulb
c) Distal spongy urethra d) Membranous urethra

2624. Narrowest part of the urethra \s-*(PGI 88, Jipmer 87, AI89)*
a) Intenal meatus
b) Membranous urethra
c) Bulbous urethra
d) External meatus

2625. Circumcision is done in a child in which of the following conditions - (77V *91)*
a) Phimosis b) Recurrent balanitis
c) Paraphimosis d) All of the above

2626. Commonest late complication of traumatic rupture of urethra is - *(JIPMER 92)*
a) Diverticulamb) Retrograde ejaculation
c) Stricture d) Choradee

2627. Which is not true of Hypopadias - *(AIIMS 92)*
a) Chordee is reversed after 5 years
b) Glandular type needs no treatment
c) Circumcission should not be done
d) Surgical correction has good results in infancy

2628. Rupture of membranous Urethra occurs more commonly due to - *(AIIMS 92)*
a) Thin unsupported wall b) Fixity of Urethra
c) Angulation d) Proximity to bladder

2629. Rupture of bulbar urethra is associated with all the following except - *(AIIMS 92)*
a) Retention of Urine b) Pelvic fracture
c) Urethral hemorrhage d) Perineal hematoma

2630. Posterior urethral valves are commonly situated
a) Above verumontanum *(JIPMER 79, Delhi 93)*
b) At verumontanum
c) Below verumontanum
d) Bladder neck

2631. Penis is curved in downward direction in all types of hypospadius except - *(PGI 80, AIIMS 80)*
a) Glandular b) Coronal
c) penile d) Perineal

2632. Epispadias in relation to hypospadias -
a) Is more common *(PGI 81, UPSC 88)*
b) Less common
c) Occures with the same frequency
d) Is difficult to treat

2633. In children persistent priapism may result due to
a) Thrombosis of venous plexus *(PGI 81,*
b) Leukaemia *AIIMS 86)*
c) Wilm's tumour
d) Trauma

2634. Which type of hypospadias usually does not require any treatment - *(JIPMER 80, AMU 89,*
a) Penile b) Penoscrotal *Assam 96)*
c) Coronal d) Glandular

2635. In severe hyposadias the possibility of an intersex problem is settled by - *(AIIMS 81, AMU 8 7)*
a) Careful inspection of genitals
b) Biopsy for gonadal tissue
c) Karyotyping
d) Hormone assay

2636. Bleedig penile ulcer is seen in all except -
a) Syphilis b) LGV *(Kerala 94)*
c) Chanchroid d) Granuloma inguinale

2615) d 2616) a 2617)b 2618)c 2619)d 2620)a 2621)c 2622)a 2623)b 2624)d 2625)d 2626)c 2627)a 2628) b 2629) b 2630) c 2631) a 2632) b 2633) b 2634) d 2635) c 2636) a

2637. The cause of death from cancer penis in the terminal stages is usually by - (*Karn 94)*
a) Inanition
b) Secondaries liver
c) Lung secondaries
d) Bleeding form femoral or iliac vessels

2638. Treatment of fracture pelvis with rupture urethra is - (*Kerala 95)*
a) Supra pubic cystostomy
b) Explore and correct the fracture, repair urethra
c) Catheerisation
d) Urethrogram to access injury

2639. All of following are seen in hypospadias except -
a) Ectopia vesicae b) Hooded prepuce
c) Chordee d) Infertility *(AI96)*

2640. Palable fibrous plaque on dorsa penile shaft indicates- {*Karn 95)*
a) Paget's disease b) Potter's syndrome
c) Prehn's sign d) Peryonie's disease

2641. The following are complocations of stricture urethra except - {*Karnat 96)*
a) Perurethral abscessb) Inguinal hernia
c) Hydronephrosis d) Papilloma of bladder

2642. Commonest cuase of urethral stricture in a young person is - {*Karnat 96)*
a) Trauma b) Gonococcal
c) Syphilis d) Tuberculosis

2643. If a patient with a suspected fracture of the pelvis has some bleeding form the urethra and is unable to pass urine - {*UPSC97)*
a) He should be encouraged to pass urine after beign given antibiotics and analgesics
b) He should be immediately catheterised in the ward
c) A hot water bottle should be given followed by injection of carbachol
d) He should be prepared for surgery and catheteristion attempted in the O.T.

2644. Which of the following urethral anomaly is the most common - (*TN 99)*
a) Hypospadias b) Pin hole meatus
c) Epispadias d) Stricture urethra

2645. Circumcission is included in management of Ca penis at - (*PGI98)*
a) Gians b) Prepuce
c) Glandulo prepucial d) Shaft of penis

2646. About Ectopia vesicae, following is true except -
a) CA bladder may occur *(PGI98)*
b) Ventral curvature of penis
c) Incontinence of urine
d) Visible uretero - vesical efflux

2647. True about hypospadias is all except - *(PGI01)*
a) Bifid scrotum b) Meatal stenosis
c) Mental Retardation d) Spatulated glans
e) Dorsal chordee

2648. Hypospadias true is/are - (*PGI02)*
a) Spatulated penis
b) Ventral hood
c) Meatal stenosis
d) Opens on ventral aspect of penis

2649. True about congenital short urethra - *(PGI03)*
a) Urethra is short
b) Opening is always ventral
c) Prepuce deficient ventrally
d) Splitting of the two secrotum in the midline
e) Spatulated penis

2650. Urinary retention in child is most commonly caused by- (*PGI 03)*
a) Metal scab with ulceration
b) Post.urethral valve
c) Urethral stricture
d) Epispadius
e) Congenital short penis

2651. Posterior urethral valve is diagnosed by - *(PGI 03)*
a) MJ b)MCU
c) CT scan d) X-ray pelvis
e) USG

2652. True about Hypospadiasis - (*PGI03)*
a) Meatal stenosis
b) Dorsal hood
c) Proximal opening of meatus
d) Lateral curvature
e) Urethral stricture common

2653. Catheterisation should not be done in case of acute retention of urine due to - (*PGI 03)*
a) Benign prostatic hyperplasia (BPH)
b) Ca prostate
c) Stricture urethra
d) Rupture urethra
e) Post operative retention

2654. Urine extravasation occurs in the following case of penile urethral rupture, EXCEPT - *{Jipmer 03)*
a) Ischiorectal fossa
b) Scrotum
c) Abdominal wall
d) Below superficial fascia of penis

2655. There is a high risk of renal dysplasia in-
a) Posterior urethral valves *{AUMS03)*
b) Bladder extrophy
c) Anorectal malformation
d) Neonatal sepsis

2656. Indications of circumicision are all except -
a) Chronic balanoposthitis *(Mahara02)*
b) Jew religion
c) Carcinoma penis
d) Paraphimosis

2657. Which of the following is not a content of the pudendal canal - {*Kerala04)*
a) Pudendal nerve
b) Internal pudendal artery
c) Internal pudendal vein
d) Nerve to obturator intemus

2637) d 2638) a 2639) a 2640) d 2641) d 2642) a 2643) d 2644) a 2645) b 2646) b 2647) a,c 2648) c,d 2649) a 2650) a 2651) b 2652)a,b,c 2653) c,d 2654) a 2655) a 2656)c 2657) d

2658-. For treatment of the ectopic-vesicle, which of the following bone is divided to reach the site -
a) Pubic rami b) Iliac bone *{UPPGMEE 04)*
c) Ischium bone d) Symphysis

2659. In hypospadias all are seen except - *{UPPGMEE 04,*
a) Hooded penis *PGI99)*
b) Dorsal chordee
c) Spatulated glans
d) Meatal stenosis

2660. The recent treatment of short bridle passable stricture of urethra in the penile and bulbous urethra is - *{MAHE 05)*
a) Internal urethrotomy with Thompson-Walker's urethrotome
b) Optical internal urethrotomy
c) Syme's operation
d) Wheelhouse operation

2661. During urethral catheterization in male patients, resistance is encountered at the following sites except- *{ICS 05)*
a) Base of navicular fossa
b) Mid-penile urethra
c) Urogenital diaphragm
d) Bulbomembranous junction

2662. A patient is brought to the hospital with history of RTA8 hours back. A few drops of blood were noted at the external urethral meatus. He has not passed urine and his bladder is palpable per abdomen. What is the probable diagnosis - *{AI07)*
a) Ureteral injury with extravasations of urine in the retro peritoneum
b) Urethral injury
c) Rupture bladder
d) Anuria due to hypovolemia

2663. A yound man gets into a flight after taking beer and iskicked by the lower abdomen. There was pelvic fracture. Blood at meatus. Most likely cause is -
a) Rupture to membranous urethra *(MAHE 07)*
b) Bulbar urethral injury
c) Kidney laceration

2664. All the features of membranous urethral injury except- *(MAHE 07)*
a) blood of meatus b) Retention of urine
c) Pelvic fracture d) All of the above

2665. All are true about Peyronie's disease except -
a) Self limiting *UP 07, UP 06)*
b) Medial treatment is effective
c) Association with Dupvytren's contracture
d) Calcified plaques

2666. Optical urethroplasty is done in - *(UP 07)*
a) Congenital stricture of urethra
b) Hypospadias
c) Epispadias
d) Testicular tumour's

2667. Epispadias is associates with ? *(AI 08)*
a) Bifid pubic symphysis b) Chordee
c) Anal atresia d) Intestinal obstruction

2668. A young man gets into a fight after taking bear and is kicked by the lower abdomen. There was pelvic fracture. Blood at meatus. Most likely cause is -
a) Rupture of membranous urethra *(Manipal 08)*
b) Bulbar urethral injury
c) Bladder rupture
d) Kidney laceration

2669. All are features of membranous urethral injury except- *(Manipal 08)*
a) Blood at meatus b) Retension of urine
c) Pelvic fracture d) All of the above

2670. Smegma is secreted by - *(DP GEE 08)*
a) Tyson gland b) Brenner gland
c) Cowper's gland d) Bartholin's gland

2671. All are indications for penile angiography except -
a) Painful priapism *(AIIMS May 09)*
b) Peyronie's disease
c) Erectile dysfunction
d) Arterio-venous malformation

2672. Most frequent causes of acute retention of urine include all except - *(DELHIPG Mar. 09)*
a) Meatal ulcer with scabbing in children
b) Haemorrhoidectomy
c) Hemiorraphy
d) Fecal impaction

2673. Most common site or urethral carcinoma in men is-
a) Bulbomembranous urethra *(AI 10)*
b) Penile urethra
c) Prostatic urethra
d) Fossa Navicularis

2674. The Gray hack shunt is established between -
a) Corpora cavemoso and corporo spongiosa
b) Corpora cavernosa and saphenous vein
c) Corpora cavernosa and dorsal vein *(AI 10)*
d) Corpora cavernosa and glans

2675. Priapism in a young male could occur because of -
a) Testicular cancer *(UP SCII10)*
b) Carcinoid tumour of appendix
c) Leukaemia
d) Penile cancer

2676. True about hypospadias - *(PGIMay 10)*
a) Defect seen in ventral penis
b) Always a/w chordee
c) A/w hooded prepuce
d) Circumcision should be avoided

2677. A five year old child presents with ballooning of prepuce after micturation. Examination of penis reveals prepucial adhesions which the following the best treatment- *(AI 11)*
a) Adhesiolysis & dilatation
b) Circumcision
c) Dorsal slit
d) Conservative management

2658)b 2659)b 2660)b 2661)a 2662)b 2663)a 2664)d 2665)b 2666)a 2667)b 2668)a 2669)d 2670)a 2671)a 2672) d 2673) a 2674) b 2675) c 2676)a,c,d 2677) b

2678. Which one of the following does not indicate good prognosis in Ca penis - *(NEET/DNB Pattern)*
a) Size less than 2 cm
b) No regional lymph node metastasis
c) No invasion of subepithelial connective tissue
d) No metastases

2679. A 40 yr old patient«f pelvic injury presents with stricture bulbar urethra of 1.5 cm.length. What would be the mailagement ? *(NEET/p.Nfi Pattern)*
a) Urethral dilatat;on
b) Excision and e[illegible]
c) Patch graft urethroplasty
d) Urethrotomy

2680. A neonate presanting with ^sdtes is diagnosed having urinary asicites,^atis the most common cause - *(NEET/DNB Pattern)*
a) Bilateral PUJ obstruction
b) Infant polycystic^i^y diseas^
c) Posterior urethral valve
d) Meatal stenosis

2681. What is the best prognostic marker .olGA penis -
a) Age <40 yrs *(NEEX/WB Pattern)*
b) Lesion size < 2
c) Previous circumcision
d) Absent inguinil LN, metastasis

2682. Circumcision is contraindicatedin- *(NEET/DNB Pattern)*
a) Balanitis
b) Hypospadias
c) Paraphimosis
d) Meatal stenosis

TESTIS & SCROTUM

2683. Ectopic testis is found in all location except -
a) Lumbar b) Perineal *(AIIMS87)*
c) Intra abdominal d) Inguinal

2684. Which is not true regarding varicocele - *(Al88)*
a) Testicular veins involved
b) More common on the right side
c) May be the first feature of a renal tumaur
d) Feels like a bag of worms

2685. Commonest testicular malignancy is - *(Al89)*
a) Seminoma b) Teratoma
c) Choriocarcinoma d) Embryonal cell carcinoma

2686. Most malignant testicular tumour - *(AIIMS 87)*
a) Embryonal cell carcinoma
b) Seminoma
c) Choriocarcinoma
d) Teratoma

2687. It is true about seminoma testis that - *(AIIMS85)*
a) It commonly occurs in the 6th decade
b) An undescended testes is more liable to develop this tumour
c) Histologically it resembles dysgerminoma of the ovary
d) It is radioresistant

2688. Disseminated seminoma is treated by - *(PGI88)*
a) CT or RT and orchidectomy
b) only RT
c) Only CT
d) Retroperitoneal lymphnode dissection

2689. Regarding spermatocele which is correct - *(PGI88)*
a) Occurs in head of epididymus
b) Barley water fluid in appearance
c) Tender
d) Contain spermatozoa

2690. Testicular tumour can simulate - *(PGI88)*
a) Hydrocele
b) Hematocele
c) Acute epidydimo orchitis
d) Chronic orchitis

2691. In seminoma testis the treatment is - *(PGI 89)*
a) Surgery b) Radiotherapy
c) Chemotherapy d) Stibesterol

2692. Which of the following is the differential diagnosis of cancer testes - *(PGI 90)*
a) Hydrocele b) Hematocele
c) Spermatocele d) Granulomatous orchitis

2693. Fournier's gangrene occurs in the - *(JIPMER 90)*
a) Toes b) Scrotum
c) Fingers d) Muscles

2694. Testicular cancer is common in - *(Al 91)*
a) Ectopic testis b) Undescended abdominal testis
c) Atropic testis d) Anteverted testis

2695. Differential diagnosis of acute funicultitis with a small inguinal swelling is - *(TN 91)*
a) Undescended testes
b) Acute orchitis
c) Lymphadentis
d) Small strangulated inguinal hernia

2696. Orchitis without epididymitis is seen in - *(Al 92)*
a) Gonorrhoea b) Tuberculosis
c) Syphilis d) Chlamydia infection

2697. Which of the following closely mimics testicular malignancy - *(JIPMER 81, DELHI 79,93, PGI 93)*
a) Hydrocele b) Haematocele
c) Spematocele d) Cyst of epididymis

2698. The life of preserved semen for artificial insemination is - *(PGI 82, DNB 90)*
a) One year b) Two year
c) Five year d) Ten year
e) Fifty year f) None of the above

2699. Incompletlty descended testis is commonest on - *(JIMPER 78,79,PGI 85)*
a) Right side b) Left side
c) Both side d) Right sided only

2700. Complication of ectopic testis is - *(KERALA 94)*
a) Seminoma b) Atrophy
c) Torsion d) All

2678)a 2679)b 2680)c 2681)d 2682)b 2683)a,c 2684)b 2685)a 2686)c 2687)b,c 2688)a 2689)a,b,d 2690) a,b,c 2691)a,b,c 2692)a,b,c 2693)b 2694)b 2695)d 2696)c 2697)b 2698)d 2699)a 2700)c

2701. Torsion of the testis can be distinguished from epididymoorchitis by - *(KARN 94)*
a) Elevation of the testis relieves the pain in torsion
b) Elevation does not relieve the pain in torsion
c) Fever is more in torsion
d) Absence of tenderbess in torsion

2702. A 5-year old male child has been brought with a complaint that there is only one testis in the scrotum. On examination, it is found that the testis on the opposite side is felt in the inguinal canal. The patient should be advesed- *(UPSC96)*
a) Orchiopexy
b) To wait till puberty
c) Orchidectomy
d) Administration of androgens

2703. Seminoma testis is seen - *(ASSAM 96)*
a) Always in undescendent testis
b) Always bilateral
c) Occurs in younger
d) Occrus in elderly

2704. Testis tumor is associated with secondary hydrocele in - *(KARN 95)*
a) 1% of cases b) 10% of cases
c) 20% of cases d) 30% of cases

2705. In differential diagnosis of epididymo-orchitis & torsion it is important that - *(A1IMS 95)*
a) Elevation of testis in torson relieves pain
b) Elevation of testis in epididymo orchitis relieves pain
c) Tenderness is characteristic of torsion of testis
d) Fever is characteristic of epididymo orchitis

2706. The lymph nodes first involved in cancer of the skin of the scrotum are - *(KARNAT 96)*
a) Superfical injguinal b) External iliac
c) Paraaortic d) Gland of eloquent

2707. Subcapsular orchiectomy is done for cancer of -
a) Testes b) Prostate *(AP 96)*
c) Penis d) Urethra

2708. Which one of the following statement is true of undescended testis - *(UPSC 97)*
a) Usually descends spontaneously at puberty
b) Orchipexy to be done of no descent by puberty
c) Has a higher incidence of malignancy
d) Maintains normal sperm production

2709. Ligation of cord in orchidectomy for treatment of testicular tumor is done at - *(PGl 96)*
a) External ring b) Internal ring
c) Base of scrotum d) Just above epididiymis

2710. After the division of testicular vein for treatment of varicose vein, venous dreainage of testes is by -
a) Cremasteric veins *(PGI96, Jipmer 80,*
b) Dorsal vein of penis *Delhi 90)*
c) Pampiniform pleus
d) Internal pudendal vein

2711. Hydrocele is labelled[6]vaginal'when it is -
a) Limited to sorotum *(AIIMS96)*
b) Upto inguinal canal
c) Communicating into coelomic cavity
d) Upto deep inguinal ring

2712. Treatment of a large hydrocele in an infant -
a) Repeated aspirations *(KERALA 97)*
b) Ligation of sac at the opening if ingunal canal
c) Herniotomy
d) Eversion of sac

2713. Cause of hydrocele is infants- *(CMC 98)*
a) Pateint processus vaginalis
b) Patent gubemaculum
c) Impaired drainage
d) Epididymal cyst
e) Infection

2714. 58 years old male presenting with acute onset of varicocle on left side most prbobable cause -
a) Ca testes *(CMC 98)*
b) Epididymitis
c) Inguinal lymphnodes
d) Ca kidney

2715. Varicocele of pampiniform plexus of veins has all the following characteristics except - *(M.P 97)*
a) Negative transillumination test
b) Reducible
c) Cough impluse is present
d) Frequently on right side

2716. Most common cause of surgically treatment male infertility is - *(MAHE 98)*
a) Varicocele b) Cryptorchidism
c) Stricture urethra d) Epidydimitis

2717. Orchidopexy in an undescended testes decreases all except - *(AIIMS 99)*
a) Tumour incidence b) Epididymoorchitis
c) Torsion d) Avoid sexual ambiguity

2718. A 25 years old male who had sex recently presented with painful testes and the pain was not relieved on elevation of the testes. Find the diagnosis from the following - *(AIIMS 99)*
a) Epididymo-orchitis b) Torsion testis
c) Testicular malignancy d) Pyocele

2719. Dermoid arises from - *(PGI97)*
a) Pluripotent cell b) Totipotent cell
c) Ectoderm d) Mesoderm

2720. In testicular ca, investigation not done is - *(PGI 98)*
a) Aortography b)CT
c) Biopsy d) Serum AFP

2721. Seminoma correspond to - *(PGI 99)*
a) Choriocarcinoma b) Dysgerminoma
c) Granulosa tumor d) Leutal cyst

2722. True regarding epispadias is - *(PGI99)*
a) Always associated with dystrophy of bladder
b) Penile
c) Common congenital anomaly
d) Urethra opens on ventral side of penis

2701)b 2702)a 2703)c 2704)b 2705)b 2706)a 2707)b 2708)c 2709)b 2710)a 2711)a 2712)c 2713)a 2714)d 2715)d 2716)a 2717)a 2718)b 2719)b 2720)c 2721)b 2722)a

2723. The treatment of metastatic testicular carcinoma is
a) Bleomycin, Etoposide, Cisplatin *(PGI99)*
b) Vinblastine, Etoposide, Cisplatin
c) Doxorubicin, 5-FU mercaptopurine
d) Methotrexate, 5-FU, Vincristine

2724. Germ cell tumours of testis are - *(PGI 01)*
a) Seminoma b) Teratoma
c) Ley dig cell tumour d) Gynandroblastoma
e) Rhabdomyoma

2725. Predisposing factor of Testicular germ cell tumor -
a) Cryptorchidism *(PGI 03)*
b) Testicular feminization syndrome
c) Klinefelter's syndrome
d) Radiation
e) Trauma

2726. Testicular tumour markers are - *(PGI 03)*
a) b-HCG b)AFP
c) LDH d) CA-125
e) CEA

2727. Stage-II testicular teratoma is treated by -
a) Orchidectomy + RPLND *{AMU 05)*
b) Orchidectomy + Chemotherapy
c) Orchidectomy
d) Radiotherapy

2728. Testicular tumour most sensitive to radiation is- *{UPSC 05)*
a) Teratoma b) Lymphoma
c) Mixed germ cell tumour d) Seminoma

2729. A16 - year old boy presents with acute onset pain in the left testis. The following statements about his management are true except - *{AIlMSNov 05)*
a) The patient should be prescribed antibiotics and asked to come after a week
b) Colour flow Doppler will be very useful in diagnosis
c) Scrotal exploration should be done without delay if doppler is not available
d) If left testis is not viable on exploration, patient should undergo left Orchidectomy and right orchidopexy.

2730. All of the following clinicopathologic features are seen more often in seminomas as compared to non-seminomatous germ cell tumors of the testis *except-*
a) Tumors remain localized to testis for a long time *{AIIMS May 2005)*
b) They are radiosensitive
c) They metastasize predominantly by lymphatics
d) They are often associated with raised levels of serum AFP and HCG

2731. Which of the following statements in true regarding testicular tumors ? *(AI06)*
a) Are embryonal cell carcinomas in 95% of cases
b) Bilateral in up to 10% cases
c) Teratomas are more common than seminomas
d) Usually present after 50 years of age

2732. All of the following abnormalities are predisposing causes for torsion of the testis except -*{COMED 06)*
a) Inversion of testis
b) Low investment of tunica vaginalis
c) Between 10 to 25 years of age
d) Seperation of the epididymis

2733. Which of the following is not seen in testicular carcinoma? *{APPG 06)*
a) Abdominal lump
b) Epidydimo orchitis
c) Inguinal lymphadenopathy
d) Hydrocele

2734. Orchidopexy for undescended testis is recommended at which age? *(Karnataka - PG MEE - 2006)*
a) 3 months b) 6 months
c) 2 years d) 5 years

2735. Ideal age for orchiopexy for cryptorchidism is -
a) At 6-10 yrs b) At 1 -2 yrs *(Aiims May 07)*
c) At puberty d) < 1yr of age

2736. All are features of Fournier's Gangrene except -
a) Testicles are involved *(MAHE 07)*
b) Obliterative arteritis seen
c) Hemolytic streptococci, isolated
d) Necrotizing fascitis

2737. High inguinal orchidectomy specimen showed tumor testis with involvement of epididymis without vascular invasion; Stage is - *(MAHE 07)*
a) T, b) T_2
c)T_3 d) T_4

2738. A 30 year old male patient presents with sudden onset swelling and pain over the right hemiscrotum. On examination the scrotum is redened and tender. Which of the following statement about the affecting condition is not true ? *(AI 08)*
a) Probable diagnosis is torsion
b) The right testis is likely to ride high in the scrotal compartment.
c) If torsion confirmed, trest with antibiotics and analgesics and perform corrective surgery immediately
d) If torsion confirmed, treat with antibiotics and analgesics and perform corrective surgery after 14 days

2739. Most common testicular tumor in prepubertal adults is - *(A iims May 08)*
a) Yolk sac tumor b) Embryonal cell Ca
c) Seminoma d) Teratoma

2740. All are features of Fournier's gangrene except -
a) Testicles are involved *(Manipal 08)*
b) Obliterative arteritis seen
c) Haemolytic streptococci, E.coli, staphylococci, Cl. Welchi can be isolated
d) Necrotising fascitis

2723) a 2724) a,b 2725)a,b,c,e 2726)a,b,c 2727) a 2728) d 2729) a 2730) d 273 l)b 2732) b 2733) c 2734) c
2735) d 2736) a 2737) a 2738) d 2739) a 2740) a

2741. High inguinal orchidectomy specimen showed teratoma testis with involvement of epididymis; stage is - *(Manipal 08)*
a) Tj **b) T_2**
c) T_3 d) T_{4b}

2742. Which is false about hydrocele ? *(APPG08)*
a) Almost always fluid is transudate
b) Get above the swelling
c) Testis is separate from swelling
d) Obscures inguinal hernia

2743. Operative managements of varicocele are indicated in which of the following condition (s) -*(PGIDec 08)*
a) Ipsilateral testis small size
b) Oligospermia on semen analysis
c) Grade - 3 varicocele (large size)
d) Signs or symptoms present
e) Subclinical presentaion

2744. Which of the following is false about testicular tumor- *(AIIMS May 09)*
a) Pure seminoma is more aggressive than ncnseminoma
b) Seminoma is radiosensitive
c) Seminoma can be treated by orchidectomy with radiotherapy
d) Seminoma spreads commonly through lymphatics

2745. Orchidopexy for cryptorchidism is done at the age of- *(AIIMS Nov 09)*
a) 1 to 2 years b) 5 to 6 years
c) Puberty d) Neonatal period

2746. A male with azoospermia found to have normal FSH & testosteron levels & normal size testes. Probable cause is - *(AIIMS Nov 09)*
a) Vas obstruction
b) Kallman syndrome
c) Undescended testis
d) Klinefeltor's syndrome

2747. All of the following are true about cryptorchidism, except - *(AIIMSNov 09)*
a) Cryptorchidism is a risk factor for testicular tumor
b) Seminoma is the most common tumor
c) Contalateral testis is also at risk
d) Orchidopexy reduces the risk of malignancy

2748. Orchidopexy for cryptorchidism is done at the age of- *(AIIMS May 10)*
a) 1 to 2 years b) 5 to 6 years
c) Puberty d) Neonatal period

2749. Lord's plication is done for - *(AI10)*
a) Inguinal hernia b) Testicular cancer
c) Hydrocele d) Testicular varices

2750. Best time for surgery of undescended testis is -
a) Just after birth *(AI 10)*
b) 6 months of age
c) 12 months of age
d) 24 months of age

2751. Which of the following is not true about testicular tumor? *(Maharashtra 10)*
a) About 95% are embryonal tumors
b) 10% are bilateral
c) Pulmonary metastases suggest that the tumor is teratoma
d) Lymphatic spread is to retroperitoneal and intrathoracic lymph nodes

2752. Surgery for undescended testis is recommended at what age - *(AI I I)*
a) 6 months b) 12 months
c) 24 months d) 36 months

2753. Surgery for undescended testes should be performed before what age ? *(AI 11)*
a) 6 months b) 12 months
c) 24 months d) 36 months

NEOPLASIA

2754. Which of the following tumours are sugrically curative - *(PGI88)*
a) Pheochromocytomab)Insulinoma
c) Glucogonoma d)Appendicular carcinoid
e) All

2755. Commonest intra-abdominal tumour below 2 years -
a) Neuroblastomab) Wilm's tomour *(PGI 85)*
c) Hepatoblastomad) Lymphoma

2756. Commonest intra-abdominal tumour between 2-5 years - *(PGI86)*
a) Neuroblastomab) Wilm's tomour
c) Hepatoblastomad) Lymphoma

2757. Lipoma becomes malignant commonly at which site - *(JIPMER88)*
a) Subcutaneous b) Retro-pertioneal
c) Sub-aponeuroticd) Intermuscular

2758. Calcifying epithelioma is also known *as-(AIIMS 86)*
a) Pilomatrixoma b) Myoblastoma
c) Calcinosis cutisd) Dermatofibromalenticulare

2759. Not a neuroglial tumor - *(Kerala 95)*
a) Shwanoma b)Astrocytoma
c) Medulloblastomad)Apendymoma

2760. Pseudolymphoma is seen in - *(PGI 97)*
a) Sjogren's syndrome
b) SLE
c) Mixed connective tissue disease
d) Behcet's syndrome

2761. Opsomyoclonus is seen in - *(PGI97)*
a) Neuroblastoma b) Meningioma
c) Medulloblastoma d) Wilms tumor

2762. Most favorable prognosis after radiotherapy is in -
a) Melanomab) Teratoma *(PGI 97)*
c) Seminomad) Desmoid

2763. Most haemorrhagic tumor is - *(PGI98)*
a) Leiomyosarcoma stomach
b) Ca stomach
c) AdenoCaGB
d) Ca pancreas

2741) a 2742) c 2743)a,b,c;d 2744) a 2745) a 2746) a 2747) d 2748) a 2749) c 2750) c 2751) a 2752) a 2753) b 2754) a,b,d 2755) a 2756) a 2757) b 2758) a 2759) a 2760) a 2761) a 2762) c 2763) a

2764. Pancoast tumour is seen with cancer of - *(PGI99)*
a) Apical lobe of lung b) Lingual lobe
c) Thyroid d) Pyriform fossa

2765. All are recognised tumour markers except-*(PGI99)*
a) BetaHCG b) Beta 2 microglobulin
c) Alpha fetoprotein d) Acid phosphatase

2766. Erythema chronicum migrans is seen in - *(PGI99)*
a) Lyme's disease b) Glucagonoma
c) Gastrinoma d) Phaeochromocytoma

2767. Cancers associated with excess fat intake are/is -
a) Breast b) Colon *(PGI 2000)*
c) Prostate d)Lung
e) Thyroid

2768. TVue about keratoacanthoma - *(PGI 2000)*
a) Benign tumor
b) Malignant skin tumor like squamous cell carcinoma
c) Treatment same as for squamous cell carcinoma
d) Easy to differentiate from squamous cell Ca. histologically
e) Treatment is masterly inactivity

2769. Features of carcinoid are - *(PGI 2000)*
a) Wheezing b) Cyanosis
c) Flushing d) Mitral valve involvement
e) Clubbing

2770. Gleason's staging is done in - *(PGI 2000)*
a) Ca prostate b) Ca Pancreas
c) Ca kidney d) Ca Cx

2771. 5 H. indole acetic acid in urine is seen in -
a) Carcinoid *(PGI 2000)*
b) Pheochromocytoma
c) Hirschsprung's disease
d) Wilm's tumor

2772. True about Carcinoid is all except - *(PGI 2000)*
a) Common in distal 3/4 appendix
b) Carcinoid sydrome is due to malignant transformation
c) Distal 2/3 T.O.C. Apendicectomy
d) Of all the carcinoid tumors in GIT 45% in appendix

2773. Uses of tumor marker are - *(PGI 01)*
a) Screening of a cancer
b) Follow up of a cancer patient, esp. for knowing about recurrence
c) Confirmation of a diagnosed cancer
d) For monitoring the treatment of a cancer

2774. Erythropoietin secreting tumor (s) - *(PGI01)*
a) Cerebellar hemangioblastoma
b) Hepatoma
c) Renal cell Ca
d) Adrenal adenoma
e) Fibromyoma of uterus

2775. True about soft tissue sarcoma - *(PGI02)*
a) Lymphatic spread
b) Enlarged size
c) Pseudoencapsulated
d) Spread though musculoaponeurotic plane

2776. CA-125 associated with - *(PGI 02)*
a) Colon Ca b) Breast Ca
c) Ovarian Ca d) Bronchogenic ca
e) Pancreatic ca

2777. CEA is associated with - *(PGI 02)*
a) Adenocarcinoma of colon b) Pancreatic ca
c) Neuroblastoma d) Ovarian ca
e) Prostatic ca

2778. Psammoma body found in - *(PGI 03)*
a) Papillary Ca thyroid b) Follicular Ca thyroid
c) Medullary Ca thyroid d) Anaplastic Ca thyroid
e) Lymphoma thyroid

2779. True statement about soft tissue sarcoma is/are -
a) Liposarcoma is rare *(PGI 04)*
b) Incisional biopsy is needed when size > 5cm
c) ENSC is diagnostic
d) TNM staging done
e) Radio sensitive

2780. True about Sential Lymph node biospy - *(PGI04)*
a) Special OT is requried
b) Blue dyes injected
c) Contraindicated if axillary LN is involved
d) It is done to avoid inadvertent axillary LN biopsy
e) Radioactive dye is used

2781. Lynch II syndrome is associated with which of the following carcinoma - *(PGI04)*
a) Ovary b) Colon
c) Breast d) Thyroid

2782. Buschke - Lowenstein tumor is - *(TN03)*
a) Molluscum contagiosum
b) Condyloma lata
c) Giant condyloma accuminata
d) Metastasise

2783. Which of the following is not an oncological emergency- *(MIMS03)*
a) Spinal cord compression
b) Superior venacaval syndrome
c) Tumorlysis syndrome
d) Carcinoma cervix stage - III "B" with pyometra

2784. Which one of the following is frequent cause of serum alpha feto protein level greater than 10 times the normal upper limit - **(***UPSC 04)*
a) Seminoma
b) Metastaic carcinoma of liver
c) Cirrhosis of liver
d) Oat cell tumour of lung

2785. Kaposi's Sarcoma - *(SGPGI04)*
a) Does not occur in non HIV positive persons
b) Has increasing incidence among AIDS patients
c) No GI bleeding
d) Uncommon among homosexual HIV Positive

2786. Which one of the following is rare site for metastasis- *(SGPGI04)*
a) Vertebrae b) Skull
c) Pelvis d) Forearm and leg bones

2764)a 2765)b 2766)a 2767)a,b,c 2768)a,e 2769)a,c 2770)a 2771)a 2772)b,d 2773)a,b,d 2774)a,b,c,e 2775)b,c,d 2776) c 2777) a,b,d 2778) a 2779)a,b,d 2780)b,d,e 2781) a,b 2782) c 2783) d 2784) b 2785) b 2786) d

2787. AD are seen in carcinoid syndrome - *(HPU05)*
a) Diarrhoea b) Constipation
c) Liver metastasis d) 5-HT secretion

2788. In which of the foUowing tumors alpha fetoprotein is elevated - **(***AIIMS Nov 05)*
a) Choriocarcinoma b) Neuroblastoma
c) Hepatocellular carcinoma d) Seminoma

2789. In which of the foUowing disease, the overaU survival is increased by screening procedure - *(AI05)*
a) Prostate cancer b) Lung cancer
c) Colon cancer d) Ovarian cancer

2790. Which one of the following soft tissue sarcomas frequently metastasizes to lymph nodes - *(AI 05)*
a) Fibrosarcoma
b) Osteosarcoma
c) Embryonal Rhabdomyosarcoma
d) Alveolar soft part sarcoma

2791. The prognosis of rhabdomyosarcoma is likely to be poor if the site of the tumour is - *(AI 06)*
a) Orbit b) Para testicular
c) Extremity d) Urinary bladder

2792. Fine needle aspiration cytology is not suitable for diagnosing - *(AI 06)*
a) Tubercular lymphadenitis
b) Papillary carcinoma thyroid
c) Plasmacytoma
d) Aneurymal bone cyst

2793. Spontaneously regressing tumours are- *(PGI June 06)*
a) Malignant melanoma b) Neuroblastoma
c) Ewing's sarcoma d) Wilm's tumour

2794. AD are correctly matched except - *(PGI June 06)*
a) BRC AI - Lung
b) BCL_2 - Apoptosis
c) Ch -16 - Philadelphia chromosome
d) APC - colon

2795. All the following skin conditions are considered as skin markers for internal malignancy except - *(Kam 06)*
a) Acanthosis nigricans b) Dermatomyositis
c) Bullous pemphigoid d) Pemphigus vulgaris

2796. Carcinoembryonic antigens (CEA) is increased in aU except - *(Aiims May 07)*
a) Lung cancer b) Breast cancer
c) Colon cancer d) Osteogenic sarcoma

2797. Tumor marker for primary hepatocellular carcinoma are aU except - *(Aiims May 07)*
a) Alpha feto proteinb) Alpha 2 macroglobulin
c) PIVKA-2 d) Neurotensin

2798. AU are precancerous except - *(MAHE 07)*
a) Lichen planusb) Verrucous carcinoma
c) Submucous fibrosis d) Leukoplakia

2799. Dukes classification is used for - *(UP 07)*
a) Pancreas carcinoma
b) Gastric carcinoma
c) Urinary bladder carcinoma
d) Colo-rectal carcinoma

2800. Screening increases life span in which ca -
a) Breast b) Colon *(PGI June 07)*
c) Prostate d) Lung ca

2801. The commonest site of lymphoma in the gastrointestinal system is - (*Corned 07)*
a) Small bowel b) Stomach
c) Large intestine d) Oesophagus

2802. Most common location of spinal tumors -
a) Intramedullary *(AIIMSNov 07)*
b) Intradural extramedullary
c) Extradural
d) Equally distributed

2803. Radiotherapy is the treatment of choice for which one of the foUowing tumors ? *(UPSC-II08)*
a) Verrucous carcinoma b) Malignant melanoma
c) Maijolin's ulcer d) Rodent ulcer

2804. What is the treatment of choice in desmoid tumors -
a) Irradiation *(UPSC-II 08)*
b) Wide excision
c) Local excision
d) Local excision following radiation

2805. Most common site for carcinoid tumor -
a) Appendix b) Liver *(Manipal08)*
c) Stomach d) Rectum

2806. Which is not having underlying malignancy ?
a) Paget disease of bone *(APPG 08)*
b) Paget disease of nipple
c) Paget disease of vulva
d) Paget disease of anal region

2807. Glomus tumor is seen in - *(AIIMSNov 08)*
' a) Liver b) Adrenals
c) Pitutary d) Finger

2808. Concomitant chemoradiotherapy is indicated in aU of the foUowing Except - *(AI 09)*
a) Stage III B Ca cervix
b) T2 No Mo anal cancer
c) T2 No Mo Glottic cancer
d) T1 N2 Mo Nasopharyngeal cancer

2809. Smoking may be associated with aU of the foUowing cancer's Except - *(AI 09)*
a) Ca Larynx b) Ca Nasopharynx
c) Ca Bladder d) Ca Esophagus

2810. Dye used in chromoendoscopy for detection of cancer - *(AIIMS May 09)*
a) Gentian violet b) Toluidine blue
c) Hemotoxiline and eosine d) Methylene blue

2811. Reparative granuloma of Jaw is treated by -
a) Antibiotics *(DELHI PG Feb. 09)*
b) Wedge resection
c) Resection and bone grafting
d) Curettage

2812. The foUowing bone tumour may cause dural deposits without causing bony changes- *(DELHIPG Feb. 09)*
a) Hodgkin's lymphoma b) Multiple myeloma
c) Secondaries d) Fibrous dysplasia

2787) b 2788) c 2789) c 2790) c 2791) c 2792) d 2793) a,b 2794) a,c 2795) d 2796) d 2797) b 2798) b 2799) d 2800)a,b,c 2801)b 2802)c 2803)d 2804)b 2805)a 2806)a 2807)d 2808)c 2809)None 2810)d 2811)d 2812)a

2813. Carcinoma in which surgery is rarely indicated -
a) Osteosarcoma *(PGINov 09)*
b) Wilm's tumor
c) Neuroblastoma
d) Rhabdomyosarcoma
e) Hodgkin's lymphoma

2814. Frozen section is/are used for - *(PGINov 09)*
a) Enzyme
b) Intraop Histopathological examination
c) Fat
d) Acid fast bacilli
e) To check surgical margin in tumor surgery

2815. Common tumor of Posterior mediastinum are -
a) Lymphoma *(PGINov 09)*
b) Neuroblastoma
c) Neurogenic tumors
d) Thymoma
e) Bronchogenic cyst

2816. MC germ cell tumor is - *(PGINov 09)*
a) Embryonal teratoma b) Dermoid
c) Rhabdomyosarcoma d) Seminoma
e) Sertoli cell CA

2817. A50 yr. old male presents with obstructive symptoms. Biopsy of stomach reveals Gastrointestinal stromal tumor (GIST). Most appropriate marker for GIST is- *(AIIMS Nov 09)*
a) CD 34 b) CD 117
c) CD 30 d)CD 10

2818. Lynch syndrome is associated with -*(AIIMSNov 09)*
a) Endometrial ca, Colon ca & Ovarian ca
b) Breast ca, Colon ca & Ovarian ca
c) Breast ca, Endometrial ca & Ovarian ca
d) Breast ca, Stomach ca & Colon ca

2819. Alpha feto protein is increased in - *(AIIMSNov 09)*
a) Hepatoblastoma b) Neuroblastoma
c) Seminoma d) Renal cell carcinoma

2820. Desmoid tumor, treatment is - *(AIIMSNov 09)*
a) Local excision
b) Wide excision
c) Wide excision with radiotherapy
d) Radiotherapy

2821. Presence of nephroblastomatosis in a biopsy specimen from Wilm's tumor of left kidney indicates high possibility of - *(AIIMS Nov 09)*
a) Denys-Drash syndrome
b) Mutation in insulin like growth factor
c) Increased risk of tumor in right kidney
d) Lymph node metastasis

2822. Tumors associated with infective etiology are all except - *(AIIMS Nov 09)*
a) Nasopharyngeal ca
b) Hepatocellular ca
c) Non-small cell carcinoma lung
d) Gastric ca

2823. A well differentiated follicular carcinoma of thyroid can be best differentiated from a follicular adenoma by- *(AIIMS May 10)*
a) Hurthle cell change
b) Lining of tall columnar and cuboidal cells
c) Vascular invasion
d) Nuclear features

2824. Psammoma bodies seen in A/E- *(AIIMS May 10)*
a) Follicular CA of thyroid
b) Papillary CA of thyroid
c) Serous cystadenocarcinoma of ovary
d) Meningioma

2825. Sister Mary Joseph nodule is most commonly seen with- *(AIIMS May10)*
a) Ovarian cancer b) Stomach cancer
c) Colon cancer d) Pancreatic cancer

2826. Which of the following is NOT true about FAP?
a) AR inheritance *(AIIMS May10)*
b) Screening done by sigmoidoscopy
c) Polyps develop in late adulthood
d) Epidermal cysts & osteomas may occur

2827. Smoking may be associated with all of the following cancers, except - *(AIIMS May 10)*
a) Ca Larynx b) Ca Nasopharynx
c) Ca Bladder d) Ca Esophagus

2828. Neoadjuvant chemotherapy is used in all except -
a) Esophageal Ca b) Breast Ca *(DPG10)*
c) Thyroid Ca d) Lung non-Small cell Ca

2829. All of the following hereditary conditions predispose to CNS tumors, except - *(DPG10)*
a) Neurofibromatosis 1 and 2
b) Tuberous sclerosis
c) Von-Hippel-Lindau syndrome
d) Xeroderma pigmentosum

2830. A 60-year old male was diagnosed as carcinoma right lung. On CECT chest there was tumour of 5 x 5 cm in upper lobe and another 2 x 2 cm size tumour nodule in middle lobe. The primary modality of treatment is - *(DPG 10)*
a) Radiotherapy b) Chemotherapy
c) Surgery d) Supportive treatment

2831. Most common site of minor salivary gland tumor? -
a) Pharyngeal cavities *(Maharashtra 10)*
b) Paranasal sinuses
c) Retromolar area
d) Nasal cavity

2832. Pseudoachalasia may be caused *by-(Maharashtra 10)*
a) Gastric adenocarcinoma b) Lung carcinoma
c) Pancreatic carcinoma d) All the above three

2833. Hypertension with hypokalemia and a *7-cm* **suprarenal mass suggests the diagnosis of -**
a) Cushing's syndrome *(Maharashtra 10)*
b) Adrenal carcinoma
c) Hypernephroma
d) Pheochromocytoma

2813)e 2814)a,b,c,e 2815)b,c,e 2816)d 2817)b 2818)a 2819)a 2820)b 2821)c 2822)c 2823)c 2824)a 2825)b 2826)a 2827)None>b 2828)c 2829)d 2830)c 2831)c 2832)d 2833)b

2834. Most common site of colorectal malignancy? *(MH10)*
a) Caecum b) Splenic flexure
c) Sigmoid colon d) Rectum

2835. Serum calcitonin may be elevated in - *(UP SC II10)*
a) Islet cell tumour of pancreas
b) Choriocarcinoma of ovary
c) Carcinoid tumour of appendix
d) Medullary carcinoma of thyroid

2836. 'Double duct' sign is diagnostic of - *(UP SC II10)*
a) Periampullary carcinoma
b) Gallbladder carcinoma
c) Klatskin's carcinoma
d) Hepatocellular carcinoma

2837. Fiscb'Classi£^fidtfi^p^l|4|G^^^^|®^a^i^ ;^||jl^Phaechromocytoma- b) Synovial cell sarcoma
c) Glomus tumor d) Astrocytoma

2838. Browii«ign is seen in - *(NEET/DNB'Pattern)*
§tf a) Xjlomus-tumor b) Cholesteatoma
c) Aoustic neuroma d) Hypothyroidism

MISCELLANEOUS

2839. All of the following are cause of blood in stools in children except - *(AIIMS 85)*
a) Meckels diverticulum b) Carcinoma
c) Intussusception d) Juvenile polyp

2840. Most common coagulopathy noted in surgical patients is - *(AIIMS 86, 88)*
a) Thrombocytopenia b) Afibrinogenemia
c) Fibrinolysis d) Factor VIII defeciency

2841. Leucine aminopeptidase is elevated obstructions of-
a) Ureter *(BHU 88, Assam 96)*
b) Urethra
c) Common bile duct
d) Spermatic cord

2842. Bee venon can be neutralised by applying- *(PGI88)*
a) Soda bicarbonate b) Vinegar
c) Lemon juice d) Dilute HCL

2843. The most dangerous injury is - *(PGI 88)*
a) Snake bite b) Scorpion bite
c) Wasp sting d) Human bites

2844. The best site for intramuscular injection is -
a) Deltoid *(PGI88)*
b) Anterolateral part of thigh
c) Upper outer segment of buttocks
d) Upper inner segment of buttocks

2845. Hereditary spehrocytosis is transmitted as- *(PGI85)*
a) Autosomal dominant b)Autosomal recessive
c) X-linked dominant d) X-linked recessive

2846. A patients compalints of occasional vomiting of food particles eaten a few days ago. His wife reports that his breath smells foul. The most likely diagnosis is - *(Kerala89)*
a) Pyloric construction b) Carcinoma stomach
c) Carcinoma esophagus d) Achalasia cardia

2847. Burning epigastric pain is due to - *(TN 90)*
a) Vomiting b) Reflux esophagitis
c) Duodenal ulcer d) Gastric ulcer

2848. Intractable peptic ulceration with renal stones occurs in - *(JIPMER 90)*
a) Zollinger Ellison syndrome
b) Parathyroid adenoma
c) Milk, alkali syndrome
d) MEN I syndrome

2849. Embolotherapy using heat contrast is done in -
a) Renal tumours *(TN91)*
b) A-V malformation
c) Varicosa veins of lowr limb
d) Varicocele of testes

2850. Peyronies disease affects the - *(TN91)*
a) Breast b) Vagina
c) Scrotus d) Penis

2851. Which is a non absorbable suture - *(JIPMER 91)*
a) Polypropylene b) Polyglycollic acid
c) Viciyl d) Collagen

2852. Removal of LI Ganglion in sympathetomy results in- *(JIPMER91)*
a) Impotence b) Retention of urine
c) Sterility d)Causalgia

2853. Gasless abdomen in X-ray is a sign *of-(AIIMS 91)*
a) Acute pancreatitis
b) Necortising enterocolitis
c) Ulcerative colitis
d) Intussusception

2854. 5-Fu is the chemotherapeutic agent of choice for all except - *(PGI 93)*
a) Ca Breast b) Ca stomach
c) Ca pancreas d) Ca colon

2855. Gastric tetany is due to - *(PGI 93)*
a) Increased intestinal acidity
b) Vagal Hyperactivity
c) Increased Calcium Sequestration
d) Decreased Calcium absorption

2856. Subcutaneous Calcifications are seen in -*(JIPMER 93)*
a) Gout b) Hyperparathyroidism
c) Oochronosis d) Malignancies

2857. Raji cell assays are used to quantitate - *(PGI 39, AIIMS 81)*
a) Complement levels
b) Immune complexes
c) T-cells
d) Interferon levels

2858. Courvoisier's law is related to -
a) Jaundice *(AIIMS 79, AMC 81, 84)*
b) Ureteric calculi
c) Portal hypertension
d) The length of skin flap in skin grafting

2859. In polycythaemia vera the most common postoperative complication following major surgery is - *(PGI 91, AMUR 8 7)*
a) Thrombosis b) Gastric ulcer
c) Diabetes insipidus d) Haemorrhage

2834)d 2835)d 2836)a 2837) c 2838)a 2839)b 2840)a 2841)c 2842)a 2843)d 2844)c 2845)a 2846)d 2847)b
2848) d 2849)b 2850) d 2851)a 2852)c 2853)c 2854)c 2855)d 2856)b,d 2857)b 2858)a 2859)d

2860. Witzelsucht syndrome (i.e. "Pathological Joking") is seen in - *(JIPMER 88, AI90)*
a) Frontal lobe tumours
b) Parietal lobe tumours
c) Temporal lobe tumours
d) IV ventriculars tumours

2861. Biot's respiration is seen in - *(JIPMER 88, AI90)*
a) Hypnosedative poisoning
b) Appendicitis
c) Cholecystitis
d) Bulbar poliomyelitis

2862. 'Sterile needle test' helps in differentiating -
a) Healing proces *(JIPMER 81, AIIMS 86)*
b) Depth of bums
c) Degenerative proces
d) Infection

2863. Van Buchem's syndrome is characterized by all except- *(PGI80, Rohtak 86)*
a) Overgrowth b) Distrotion of mandible
c) Facial Palsy d) Increased acid phosphatase

2864. The stage of myasthenia gravis that best responds to thymectomy is - *(AIIMS 80,81, PGI 86)*
a) Stage 1 : active
b) Stage 2: inactive
c) Stage 3 : burnt out
d) Those with thymoma present
e) None of the above

2865. Quant's sign (a T-shaped depression in the occipital bone) may be present in - *(JIPMER 81, AIIMS 84)*
a) Down's syndrome b) Head injury
c) Rickets d) Scurvy

2866. Nezelof's syndrome is recurrent episodes of- *(JIPMER 81, DNB 90)*
a) Appendicitis b) Cholecystitis
c) Intestinal obstruction d) Pneumonia

2867. Oxygen consumption during anesthesia and surgery with mid levels of hypothermia in infants less than 12 kg is (35-36$_0$C) - *(AIIMS 89, DNB 90)*
a) Unchanged b) Doubles
c) Tripled d) Quadrupled
e) None of the above

2868. Hickey-Hare test is used to diagnose - *(PGI 81, AIIMS 86)*
a) Congenital pyloric stenosis
b) Duodenal atresia
c) Achiasia cardia
d) Diabetes insipidus

2869. Usually employed techynique for splanchnic block is - *(JIPMER 79, AIIMS 80)*
a) Braun's method b) Kappi's method
c) Wending's method d) None of the above

2870. Spontaneous regression of malignant tumour is seen in - *(JIPMER 80, AIIMS 81)*
a) Burkits lymphoma b) Neuroblasoma
c) Wilm's tumour d) Renal cell carcinoma

2871. Secondary amyloidosis occurs in - *(JIPMER 80, AIIMS 82)*
a) Chronic osteomyelitis
b) Rheumatoid arthritis
c) Leprosy
d) Syphilis

2872. Presence of trifluroacetic acid (TFA) in urine indicates that volatile anaesthetic agent used was
a) Halothane *(JIPMER 81, AIIMS87)*
b) Methoxyflurance
c) Trichloroethylene
d) None of the above

2873. Arrow headed finger on X-ray is suggestive of -
a) Acromegaly *(PGI 83, 85)*
b) Hyperparathyroidism
c) Down's syndrome
d) Sarcoidosis

2874. Preoperative shaving is idealy done at -
a) Evening before *(JIPMER 81, Delhi 86)*
b) Morning of operation
c) Just before operation
d) At operation table

2875. The most important in assessing Fertility potential is- *(PGI 80, UPSC 89)*
a) Sperm count
b) Sperm motility
c) Sperm morphology
d) Quantity of ejaculated semen
e) None of the above

2876. A seldinger neeedle is used for - *(AIIMS 81,*
a) Liver biopsy b) Suturing skin *AMC 87)*
c) Arteriography d) Lymphography

2877. Newman and Seabrook's operation is used for -
a) Repair of parotid fistula *(PGI 79, AIIMS 84)*
b) For parotid calculi
c) For carcinoma of tongue
d) For treatment of recurrent chronic parotitis

2878. The commando operation is - *(JIPMER 80,81,*
a) Abdomino-perineal resection of the rectum for carcinoma *(UPSC 85)*
b) Disarticulation of the hip for gas gangrene of the leg
c) Extended radical mastectomy
d) Excision of carcinoma of the tongue, the floor of the mouth, part of the jaw and lymphnodes enbloc

2879. All of the following are perils of prolonged antibiotic therapy in intra abdominal sepsis except
a) Masking of general signs *(PGI 81, AIIMS 86)*
b) Subacute intestinal obstruction
c) Malignant change
d) Frozen pelviss

2880. Emergency thoractomy is only indicated in -
a) Empyema *(JIPMER 81, AMU 86)*
b) Pneumothorax
c) Uncontrolled bleeding
d) None of the above

2860)a 2861)None 2862)b 2863)d 2864)a 2865)c 2866)d 2867)b 2868)d 2869)a 2870)b,d 2871)a,b,c 2872)a 2873)a 2874)c 2875)b 2876)c 2877)a 2878)d 2879)c 2880)c

2881. Aaron's sign is seen in - *(AIIMS81, 86)*
a) Achlasia cardia
b) Hiatus hernia
c) Mediastinum emphysema
d) Acute appendicitis

2882. Duhamel operation is done in - *(JIPMER 81, UPSC 89)*
a) Congenital pyloric stenosis
b) Hiatus hernia
c) Achlasia cardia
d) Hirschsprung's disease

2883. Bolognini's symptom (a feeling of crepitation occuring from gradual increasing pressure on the abdomen) is seen in - *(PGI80,81, AIIMS 84)*
a) Congenital pyloric stenosis
b) Gastric polyp
c) Duodenal atresia
d) Measles

2884. First meconium is said to be formed during the — -month of foetal life - *(PGI 81, AIIMS 84)*
a) Second b) Fourth
c) Seventh d) Ninth

2885. Mauriac's syndrome is characterized by the following except - *(JIPMER 81, AIIMS 86)*
a) Diabetes b) Obesity
c) Dwarfism d) Cardiomegaly

2886. Kocher's manuever **means -** *(JIPMER 81)*
a) Mobilisation of gall bladder during cholecystectomy
b) Mobilisation of 2nd part of duodenum
c) Mobilisation of pancreas during pancreatectomy
d) Mobilisation of ascending colon

2887. Pyrexia due to wound infection commonly occurs after- *(PGI 81, AMU 87)*
a) Third post operation day
b) Fifth post operation day
c) Seventh post operation day
d) Second post operation day

2888. Catgut is prepared from submucosal layer of the intestine of- *(AIIMS 81, DNB 89)*
a) Cat b) Sheep
c) Human being d) Rabbit

2889. A cricoid hook is used particularly - *(JIPMER 81, DNB 89)*
a) In thyrodectomy
b) In block dissection of the neck
c) For retractting the superior laryngeal nerve
d) In tracheostomy

2890. Not a premalignant ulcer - *(Kerala 94)*
a) Bazin's ulcer b) Pagets disease of nipple
c) Maijolins ulcer d) Lupur vulgaris

2891. Cullen's sign in seen in - *(Kerala 94)*
a) Acute cholecystitis
b) Acute pancreatitis
c) acute haemorrhagic pancreatitis
d) Blunt injury abdomen

2892. Ramsteds operation is for - *(Kerala 94)*
a) Duodenal atresia
b) Volvulous of small intestine
c) Anorectal malformation
d) Congenital pyloric stenosis

2893. Corpora amylaciae is seen in - *(Kerala 94)*
a) Thymus b) Lymph node
c) Spleen d) Prostate

2894. Antibioma is best treated by - *(JIPMER 95)*
a) Partial resection
b) Complete resection
c) Aspiration
d) Administration of antibiotics

2895. Antibiotics should be given how long with surgery for prophytaxis- *(JIPMER 95)*
a) 1 hour before b) 1 hour after
c) 2 hours before d) 2 hours after

2896. During endotracheal intubation, unilateral breath sounds, no air heard entering the stomach and no gastric distension is suggestive of entry of the endotracheal tube into - *(UPSC 96)*
a) Right main bronchus b) Oesophagus
c) Mid-trachea d) Left main bronchus

2897. Sappey's line denotes a line - *(Karn. 95)*
a) Encircling the neck at C6 vertebra level
b) Encircling the trunk just above the umbilicus
c) Encircling the salphigian tubes
d) None of the above

2898. Hormonal treatment is given for which of the following malignancy - *(Kerala 96)*
a) ChorioCarcinoma b) Carcinoma prostate
c) Hepatoma d) Teratoma
e) Granulosa cell tumour

2899. Rovsing sign is seen in - *(PGI 95)*
a) Acute appendicitis b) Acute cholecystitis
c) Pancreatitis d) None

2900. A female patients complains of perumbilical pain & nausea particularly after taking food. The diagnosis is - *(CUPGEE 95)*
a) Meckel's diverticulum
b) Peptic ulcer syndrome
c) Lactose intolerance
d) None

2901. In a Kocher's subcostal incision which of the following should not be divided - *(Karanatak96, 94)*
a) Rectus abdominis muscle b) 8th dorsal nerve
c) Oblique muscles d) 9th dorsal nerve

2902. Hilton's method of treatment of an axillary abscess is advised because it - *(Karnatak 96, 94)*
a) Protects vital structures
b) Ensures adquate drainage
c) Hinders the spread of infection
d) Allows local instillation of antibiotics

2903. Bisgard treatment is for - *(AP 96, SCTIMS 98)*
a) Arterial ulcer b) Venous ulcer
c) TAO d) Raynauds phenomenon

2881)d 2882)d 2883)d 2884)a 2885)d 2886)b 2887)b 2888)b 2889)d 2890)a 2891)c 2892)d 2893)d 2894)b 2895)a 2896)a 2897)a 2898)b 2899)a 2900)a 2901)b,d 2902)a 2903)b

2904. Which tumour is treated by hormones - *(Kerala 96)*
a) Carcinoma prostrate b) Carcinoma bladder
c) Carcinoma cervix d) Carcinoma pancreas
e) Carcinoma stomach

2905. A patient is admitted with sever pain in the abdomen, nausea, vomiting and fever. The most likely diagnosis is - *(UPSC 97)*
a) Perforated peptic ulcer b) Intestinal obstruction
c) Acute pancreatitis d) Acute cholecystitis

2906. A12 month old male child suddenly draws up his legs and screams with pain. This is repeated periodically throughout the night interspeersed with periods of quiet sleep. When seen after 12 hours the child looks pale, has just vomited and passed thin blood-stained stool; there is a mass around umbilicus. What is the most likely diagnosis
a) Appendicitis *(UPSC 97)*
b) Intussusception
c) Gastro-enteritis
d) Roundworm obstruction

2907. Commonest tumour among children 1-5 years in South Africa is - *(TN 96)*
a) Neuroblastoma b) Wilm's tumour
c) Neurofibroma d) Burkitts lymphoma

2908. In a patient presenting with abdominal trauma, fracture Rib and bruise over left hypochondrium probable diagnosis is - *(PGI96)*
a) Rupture left lobe of liver
b) Rupture right lobe of liver
c) Splenic rupture
d) Rupture stomach

2909. Earliest method of diagnosing pituitary tumour
a) CT scan *(JIPMER 98)*
b) Visual field charting
c) Visual evoked potential
d) X-ray skull

2910. Most common sarcoma in a child is - *(JIPMER 98)*
a) Fibrosarcoma b) Rhabdomyosarcoma
c) Leiomyosarcoma d) Liposarcoma

2911. BCG is used in tumour therapy - *(JIPMER 98)*
a) Bladder b) Stomach
c) Oesophagus d) Colon

2912. Regarding CEA-false is - *(AIIMS 9 7)*
a) Prognostic indicator
b) Glycoprotein
c) Elevated in colorectal carcinoma
d) Elevated only when there is hepatic metastasis

2913. In head injury with lesion to the pituitary stalk, all are seen - *(AIIMS 97)*
a) SIADH b) Diabetes inspidus
c) Diabetes mellitus d) Prolactinoma

2914. Randall's plagues causes - *(TN 98)*
a) Bile stones b) Urinary stones
c) Premalignant lesions d) Bacterial infections

2915. A 40 year old male was brought to the hospital with acute pain in the upper abdomen. Pateints was in shock with feeble pulse andtachycardia. There was tenderness present in the epigastrium. There is no blood in the gastric aspirate and the patient felt better after aspiration. X-ray abdomen showed no free gas under the diaphragm. Investigations revealed TLC 13500 serum bilirubin 2.0 mg and serum amylase 8001.U.. The most likely diagnosis is - *(UPSC 88)*
a) Acute cholecystitis b) Acute pancreatitis
c) Acute appendicitis d) Acute hepatitis

2916. A 24 years old male, who has been having fever for 15 days starts having acute pain and distension of abdomen. Abdominal examination reveals generalised tenderness with guarding. The most likely diagnosis is - *(UPSC 88)*
a) Acute appendicitis
b) Acute pancreatitis
c) Enteric perforation
d) Duodenal ulcer perforation

2917. Inguinal lymphnode enlargement is seen in- *(MP 97)*
a) Seminoma testis b) Malignant melanoma foot
c) Ca cervix d)None

2918. Panceatico duodenectomy is the treatment of choice for - *(TN 99)*
a) Duodenal carcinoma b) Pancreatic carcinoma
c) Gall bladder carcinoma d) Gastric carcinoma

2919. A10 year old female who used to use the swimming pool regularly, comes with a three day history of vomitting, fever and adbominal pain. On examination, abdominal tenderness and guarding are present. The liver dullness is not obliterated. Likely diagnosis is - *(AIIMS 99)*
a) Gangrenous intussusception
b) Perforation
c) Spontaneous biliary peritonitis
d) Primary peritonitis

2920. Use of all the following significantly decreases airborne infection is operating room except -
a) Laminar air flow *(UPSC2K)*
b) Air-conditioning
c) Ultraviolet light
d) Microfilters

2921. Vicryl, the commonly used suture material is a -
a) Homopolymer of polydioxanone *(UPSC2K)*
b) Co-polymer of glycolide and lectide
c) Homopolymer of glycolide
d) Homopolymer of lactide

2922. All the following suture materials are non absorbable except - *(Kerala 2K)*
a) Poly amide b) Poly propylene
c) Poly diaxonone d) Polyethylene
e) Polyester

2904)a 2905)c 2906)b 2907) d 2908)c 2909)a 2910)b 2911)a 2912)d 2913)a,b2914)b 2915)b 2916)c 2917)b 2918)a,b 2919) d 2920)b 2921)b 2922)c

2923. 45 years executive suddenly develops hematemesis at home. He is brought to thehospital 4 hrs. later, there he again had about of hematemesis. Total blood loss would be around 2 litres. Most likely diagnosis is- *(A1IMS 2001)*
a) Gastritis b) Oesophagitis
c) Oesophageal varices d) Duodenal ulcer

2924. Psychiatric symptoms, true except - *(PGI2K)*
a) More common with supra than infra tentorial tumours
b) More common with slow growing
c) More with temporal than frontal lobe tumours
d) More with brain stem lesions

2925. PDS is absorbed within - *(MAHE 2001)*
a) 7 days b) 21 days
c) 100 days d) 225 days

2926. Bird's beak is seen in - *(J & K 2001)*
a) Volvulus b) Intussusception
c) Achalasia d) Ulcerative colitis

2927. Sentinel node biopsy is done in - *(A12002)*
a) Carcinoma Lung b) Carcinoma breast
c) Liposarcoma d) Carcinoma colon

2928. Local anaeshthetics cannot be used at the site of infections because it causes - *(MANIPAL 01)*
a) Spread of infection b) Lowered efficiency
c) Both d)None

2929. An AIIDS patient presents with fistula - in-ano.His CD4 count is below 50. What is the treatment of choice - *(MANIPAL 01)*
a) Seton b) Fistulectomy
c) None d) Both

2930. Commonest tumour at inner canthus of eye- *(HPU2001)*
a) Rodent ulcer b) Dermoid cyst
c) Malignant melanoma d) Buruli ulcer

2931. Steinstrasse is - *(UPSC2001)*
a) Staining of stones
b) Stones because of stress
c) Failure of ESWL
d) Ureteric obstruction due to fragments is ureter

2932. Stereotactic radiosurgery is done for - *(Jipmer 02)*
a) Glioblastoma multiforme
b) Medulloblastoma spinal cord
c) Ependymoma
d) AV malformation of brain

2933. Not true about bladder stones is - *(Jipmer 02)*
a) Rare in Indian children
b) Primary stones are rare
c) Small stones can be removed per urethra
d) Mixed stones are radioopaque

2934. Which malignancy would occur to prolonged multimodular goitre - *(AMU 2001)*
a) Papillary Ca b) Follicular Ca
c) Anaplastic Ca d) Medullary Ca

2935. Not true about urethral injuries is - *(TN 2001)*
a) Catheterize the pt. immediately
b) Can be associated with fracture pelvis
c) Bladder injury is associated with post urethral injuries
d) Blood at the external urethral meatus is an Imp feature

2936. Which of these is not a risk factor for thromboembolism - *(TN 2001)*
a) Myocardial infarction
b) Hypertension
c) Estrogen therapy
d) Superficial thrmbophlebitis

2937. Not true about 'Struvite Stones' is - *(SCTIMS 01)*
a) better k/a staghorn calculus
b) These are triple phosphate stones
c) Common in infected urine
d) Usually seen in acidic urine

2938. Treatment for parathyroid hyperplasia is -
a) Removal of all four glands *(UPSC 01)*
b) Calcitonin
c) Removal of 3 1/2 glands
d) Enlarged glands to be removed

2939. Treatment of choice for warthins tumour is -
a) Superficial parotidectomy *(UPSC 01)*
b) Enucleation
c) Radiotherapy
d) Injection of a sclerosant agent

2940. Treatment of choice for solitary thyroid nodule is- *(TN 01)*
a) Removal of the nodule
b) Hemithyroidectomy
c) Subtotal thyroidectomy
d) Total thyroidectomy

2941. Most common site of lentigo maligna melanoma is -
a) Face b)Legs *(PGI 01)*
c) Trunks d) Soles

2942. Most common origin of melanoma is from -
a) Junctional melanocytes *(AMU 01)*
b) Epidermal cells
c) Basal cells
d) Follicular cells

2943. Congenital hydrocele is best *tit* by - *(PGI 01)*
a) Eversion of sac b) Excision of sac
c) Lords procedure d) Herniotomy

2944. For carcinoma of the prostate the commonest site is- ***(Aims 01)***
a) Anterior zone b) Peripheral zone
c) Central zone d) Transitional zone

2945. Splenectomy is not done in - *(AIIMS 01)*
a) Mylofibrosis
b) Sickle cell anemia
c) Hereditary spherocytosis
d) Splenic abscess

2923) d 2924) d 2925) d 2926) a,c 2927)b 2928) c 2929) a 2930) a 293l)d 2932) d 2933) a 2934)b 2935) a 2936)d
2937)d 2938)c 2939)a 2940)b 2941)a 2942)b 2943)d 2944)b 2945)b

2946. All are true about long flexor tendons except
a) Flexor digitorum profundus inserted to distal phalanx base *(KERALA 95)*
b) Flexor digitorum superficialis attached to the sides of middle phalanx
c) Damag to the tendons involves formation of tenoma during repair
d) Good repair results if tendon sheath is damaged

2947. No man's land in palm corresponds to - *(MAHE98)*
a) Zone I b) Zone II
c) Zone III d) Zone IV

2948. Failure of migration of neural crest cells is seen in- *(KERALA 2001)*
a) Albinism b) Congenital megacolon
c) Odontomes d) Adrenal tumour

2949. Hypothermia is used in all except - *(PGI98)*
a) Cardiac surgery b) Neonatal ischemia
c) Heat stroke d) Cardiac arrhythmia

2950. Millards 'Rule of Ten' includes all except -
a) 10 kg b) 10 weeks *(Amu 95)*
c) 10 gm % Hemoglobin d) 10 months

2951. The commonest symptom post operatively seen is -
a) Depression *(Kerala 97)*
b) Psychosis
c) Euphoria
d) None of the above

2952. The most sensitive qualitative method for detection of air embolism is - *(PGI 79, AIIMS 86)*
a) Doppler ultra sound technique
b) Electro cardiogram
c) Arterial pressure
d) End expiratory carbon dioxide content
e) Rest of life

2953. Commonest artery for cannulation is - *(PGI97)*
a) Radial b) Ulnar
c) Brachial d) Cubital

2954. Duplication of GIT most commonly involves -
a) Esophagusb) Stomach *(PGI97)*
c) Duodenum d) Ileum

2955. Fiberoptic endoscopy is contraindicated in -*(PGI98)*
a) Children
b) Aneurysm of arch of aorta
c) Cervical spondylosis
d) Hemoptysis

2956. Fluoroscopy is used for diagnosis of - *(PGI 98)*
a) LV function b) Diaphragmatic palsy
c) Valvular clacification d) Pericardial effusion

2957. Which is not a feature of Dupuytern's contracture -
a) Recurrent trauma *(PGI 99)*
b) Genetic predilection
c) Bilateral lesions rare
d) Seen equally in males and females

2958. TVue about berry-aneurysm is following except -
a) Associated with familial syndrome *(PGI 2000)*
b) Most common site of rupture is apex which causes SAH
c) Wall contains smooth muscle fibroblasts
d) 90% occurs at ant. part of circulation at branching point

2959. Immediate surgery is required for - *(PGI 01)*
a) Paralytic ileus due to pelvic collection
b) Volvulus of intestine
c) Post-operative adhesions
d) Intestinal obstruction
e) Paralytic ileus with appendicitis

2960. AFP is raised in - *(PGI 03)*
a) Prostate Ca b) Hepatic Ca
c) LungCa d) Breast Ca
e) Colon Ca

2961. Absorbable sutures are - *(PGI 04)*
a) Catgut b) Silk
c) Polyprophylene d) Polyglycolic acid
e) Vicryl

2962. IFue about intra abdominal compartment syndrome-
a) Intra abdominal pressure > 15 cm H_20 *(PGI 04)*
b) Pneumoperitoneum can produce it.
c) T Renal blood flow
d) *i* venous return
e) T central blood volume

2963. Increased intra abdominal pressure is/are associated with - *(PGI 04)*
a) T pul capillary wedge pressure
b) T venous return
c) T pul inspiratory pressure
d) T renal blood flow
e) T cardiac output

2964. What will be your advice to a 60 yr moderately obese patient with h/O 4-6 cup of coffee per day, 4-6 glass of wine/day with 20 cigarettes per day. He is engaged as a salesman in a computer company. His brother died of Pancreatic carcinoma - *(PGI 04)*
a) Urgent wt. Reduction b) Strict vegetarian diet
c) Stop alcohol d) Stop coffee
e) Stop cigarette smoking

2965. Which is the baseline investigation in the case of an acute abdomen in this high -tech *era-(Kerala 03)*
a) Abdomen CT b) Abdomen X - Ray
c) USG d) Colonoscopy

2966. Which one of the following statements about xeroradiography is correct- **(***Karnataka 02)*
a) Is a wet technique
b) Uses X - ray film
c) Uses charged selenium plate
d) Requires more radiation exposure

2946)d 2947)b 2948)b 2949)b,d 2950)d 2951)d 2952)d 2953)a 2954)d 2955)b 2956)b,c 2957)d 2958)c
2959) b,d 2960) b,c 2961) a,d,e 2962)a,b,d 2963) a,c 2964)a,b,e 2965) b 2966) d

2967. A chest physician performs bronchoscopy in the procedure room of the out patient department. To make the instrument safe for use in the next patient waiting outside, the most appropriate method to disinfect the endoscope is by - *(A103)*
a) 70% alcohol for 5 min
b) 2% gluteraldehyde for 20 min
c) 2% formaldehyde for 10 min
d) 1% sodium hypochlorite for 15 min

2968. Bedsore is an example of - *(A103)*
a) Tropical ulcer b) Trophic ulcer
c) Venous ulcer d) Post thrombotic ulcer

2969. Depressed bridge of nose can be due to any of the following except - *{Karnataka 03)*
a) Leprosy b) Syphilis
c) Thalassemia d) Acromegaly

2970. A 60 year old lady underwent abdominal surgery and on the 4th post - operative day she was diagnosed to have Systemic Inflammatory Response Syndrome (SIRS). What are the features of SIRS *2{UPSC 04)*
a) Normal body temperature and normal respiratory rate
b) WBC > 12 x 10^9/L or < 4 x 10^9/L
c) Respiratory rate > 24 breaths/minute and heart rate > 90 beats/minute
d) Respiratory rate < 10 breaths/minute

2971. Which of the following preservatives is used while packing catgut suture? *(AI04)*
a) Isopropyl alcohol b) Colloidal iodine
c) Gluteraldehyde d) Hydrogen peroxide

2972. In sickle cell anemia sudden onset of Pancytopenia with hemolysis and no rise of reticulocyte count occurs in - *(Jipmer 04)*
a) Sequestration crisis b) Aplastic crisis
c) Hemolytic crisis d) Vasooculusive crisis

2973. Suicidal enzyme is - *{Jipmer 04)*
a) Cycloxygenase b) Lipooxygense
c) Dehydrogenase d) Pyruvate kinase

2974. A 48 year-old woman underwent subtotal thyroidectomy. She has a vague family history of malignant hyperthermia. She develops agitation, restlessness, fever, tremor, shivering, and tachypnea. Thyrotoxic crises can be best distinguished from malignant hyperthermia by estimating - *(Kerala 04)*
a) Temperature variation b) Increased CPK levels
c) LDH d) Mascular rigidity

2975. Who said these words: To study the phenomenon of disease without books is to sail an uncharted sea, while to study books without patients is not to go to sea at all - *{Karnataka 04)*
a) Hamilton Bailey b) Sir Robert Hutchison
c) Sir William Osier d)J.B. Murphy

2976. T1 and T2 images are a feature of which diagnostic test- *{Karnataka 04)*
a) Ultrasound b) C.T. scan
c) Duplex scan d) MRI scan

2977. Who said: "Skin is the best dressing"? *{Karn 04)*
a) Joseph Lister b) John Hunter
c) James Paget d) McNeill Love

2978. In the acronym "SWELLING" used for the history and examination of a lump or swelling, the letter $^{T}N^{f}$ stands for- *(Karnataka 04)*
a) Nodes b) Noise (Thrill/bruit)
c) Numbness d) Neurological effects

2979. Disparity of the bowel ends during and to end anastamosis is corrected by - *(Karnataka 04)*
a) Cheatle's manoeuvre b) Connell suture
c) Lambert suture d) Czerny technique

2980. Which of the following is a delayed absorbable synthetic suture material- *(TN 04)*
a) Chromic catgut b) Vicryl
c) Silk d) Nylon

2981. Lamina dura lining the alveolus is -*(Karnataka 02)*
a) Cancellous bone b) Ligament
c) Dense cortical bone d) Muscle

2982. Low and fixed specific gravity of urine is seen in -
a) Diabetes mellitus *(SGPGI05)*
b) Diabetes insipidus
c) Chronic renal failure
d) Acute glomerulonephritis

2983. Functional GI disorders can be differentiated from organic GI disorders by - *(SGPGI 05)*
a) Abdominal pain b) Diarrhoea
c) Tenesmus d) Bleeding PR

2984. In triage green colour indicates - *(COMEDK 05)*
a) Ambulatory patients
b) Dead or moribund patients
c) High priority treatment of transfer
d) Medium priority or transfer

2985. Lord's and Jaboulay's operation is done for- *(AMU*
a) Rectal prolapse b) Fistula in ano *05)*
c) Inguinal hernia d) Hydrocele

2986. Surgically used suture material polydioxanone (PDS)- *(COMEDK 05)*
a) Is non absorbable and remains encapsulated
b) Undergoes hydrolysis and complete absorption
c) Undergoes phagocytosis and enzymatic degradation
d) Is specifically used for heart valves or synthetic grafts

2987. Which one of the following is a muscle-splitting incision- *{ICS 05)*
a) Kocher's b) Rutherford-Morris
c) Pfannenstiel d)Lanz

2988. Aims of abbreviated laparotomy- *{PGI June OS)*
a) Decreased chance of infection
b) Early ambulation
c) Early wound healing
d) Haemostasis

2967)b 2968)b 2969)d 2970) b,c 2971) a 2972) a 2973)a 2974)b 2975)c 2976)d 2977)a 2978)b 2979)a 2980)b 2981)c 2982)c 2983)d 2984)a 2985) d 2986)b 2987) d 2988)d

2989. Orthobaric oxygen is used in - (*MAH A 05)*
a) Carbon monoxide poisoning
b) Ventilation failure
c) Anaerobic infection
d) Gangrene

2990. Which of the following catheter materials is most suited for long-term use is - *(AI05)*
a) Latex b) Silicone
c) Rubber d) Polyurethane

2991. Referred pain from all of the following conditions may be felt along the inner side of right thigh, except- *(AI 06)*
a) Inflamed pelvic appendix b) Inflamed ovaries
c) Stone in pelvic ureter d) Pelvic abscess

2992. On the 4th postoperative day of laparotomy a patient presents with bleeding & oozing from the wound Management is - *(PGI June 06)*
a) Dressing of wound & observe for dehiscence
b) IV fluids
c) Send for USG abdomen
d) Start treatments for peritonitis
e) Urgent surgery

2993. Pelvic exentration is known as - **(***APPG06)*
a) Miles Operation b) Lyods operation
c) Finch operation d) Brunshwing[5] operation

2994. Jack stone calculi is been in which anatomic part -
a) Prostate b) Kidney *(Manipal 06)*
c) Ureter d) Bladder

2995. In abdominal surgery lembert sutures refers to -
a) Single layer suturing *(Kam 2006)*
b) Sero muscular sutures
c) All coat intestinal suturing
d) Skin suturing

2996. Barrets esophagus is commonly associated with one of the following - *(AIIMS 06)*
a) Adenocarcinoma
b) Squamous cell carcinoma
c) Sarcoma
d) Gastrointestinal stromal tumor

2997. Which of the following brain tumours is highly vascular in nature? **(***AIIMS 06)*
a) Glioblastoma b) Meningiomas
c) CP angle epidermoid d) Pituitory adenomas

2998. A 40-year old female patient presented with dysphagia to both liquids and solids and regurgitation for 3 months. The dysphagia was non-progressive. What is the most likely diagnosis?
a) Carcinoma of the esophagus *(AIIMS 06)*
b) Lower esophageal mucosal ring
c) Achalasia cardia
d) Reflux esophagitis with esophageal stricture

2999. A 45-year-old male having a long history of cigarette smoking presented with gangrene of left foot. An amputation of the left foot was done. Representative sections from the specimen revealed presence of arterial thrombus with neutrophilic infiltrate in the arterial wall. The inflammation also extended into the neighbouring veins and nerves. The most probably diagnosis is - *(AIIMS 06)*
a) Takayasu arteritis
b) Giant cell arteritis
c) Hypersensitivity angiitis
d) Thromboangiitis obliterans

3000. RET proto oncogene mutation is a hallmark of which of the following tumors? *(AIIMS 06)*
a) Medullary carcinoma thyroid
b) Astrocytoma
c) Hurthle cell tumor thyroid

3001. A 65-year-old miner has lost 7 kgs weight within two months, has presented with cough, and bloody streaked sputum. He was treated for pulmonary tuberculosis 10 years ago. He also has drooping of his left eyelid for one month. On physical examination, there is ptosis of the left eye and papillary miosis. Chest X-ray revealed round opacification in the left upper apical lobe. What is the most probable diagnosis? *(AIIMS 06)*
a) Secondary tyberculosis b) Adencarcinoma
c) Squamous cell carcinoma d) Asbestosis

3002. In which of the following conditions acquired (secondfary) megacolon is seen? *(AIIMS 06)*
a) Fissure in-ano
b) Complete absence of parasympathetic ganglion cells
c) Absence of sympathetic ganglion cells
d) Rectal malignancy

3003. One of the following is not correct in papillary carcinoma of thyroid - *(AIIMS 06)*
a) Can be reliably diagnosed using fine needle aspiration cytology
b) Always unifocal
c) Typically spreads to the cervical lymph nodes
d) Requires a total thyroidectomy for large tumours

3004. Which one of the following statements is incorrect in regard to stones in the gallbladder ? *(AIIMS 06)*
a) Pigment stones are due to increased excretion of conjugated bilirubin
b) Are considered a risk factor for the development of gallbladder carcinoma
c) 10% of gallstones are radio-opaque
d) A mucocele of the gallbladder is caused by a stone impacted in Hartmann's pouch

3005. A 45-year-olf gentleman has undergone truncal vagotomy and pyloroplasty for bleeding duodenal ulcer seven years ago. Now he was intractable recurrent symptoms of peptic ulcer. All of the following suggest the diagnosis of Zolliner Ellison syndrome, except - *(AIIMS 06)*
a) Basal acid output of 15 meq/hour
b) Serum gastrin value of 500 pg/ml
c) Ulcers in proximal jejunum and lower end of esophagus
d) Serum gastrin value of 200 pg/ml with secretin stimulatiopn

2989) a 2990) b 2991) d 2992) b,e 2993) d 2994) d 2995) b 2996) a 2997) a 2998) c 2999) d 3000) a 3001) c 3002) d 3003)b 3004) d 3005)d

3006. The defective migration of neural crest cells results in- *(AIMS 06)*
a) Congenital megacolon
b) Albinism
c) Adrenogenital hypoplasia
d) Dentinogenesis imperfecta

3007. Which of the following statements is true of primary grade IV-V vesicoureteric reflux in young children?
a) Renal scarring usually begins in the midpolar regions *(AIIMS 06)*
b) Postnatal scarring may occur even in the absence of urinary tract infections
c) Long-term outcome is comparable in patients treated with either antibiotic prophylaxis or surgery
d) Oral amoxicillin is the choice antibiotic for prophylaxis

3008. Which of the following is the best way of preventing development deep vein thrombosis (DVT) in postoperative period? *(AIIMS 06)*
a) Early ambulation b) Physiotherapy
c) Prophylactic heparin d) Low dose aspirin

3009. A 48-year-old sports photographer has noticed a small nodule over the upper lip from four months. The nodule is pearly white with central necrosis, telangiectasia. The most likely diagnosis would be -
a) Basal cell carcinoma *(AIIMS 06)*
b) Squamous cell carcinoma
c) Atypical melanoma
d) Kaposis sarcoma

3010. Which one of the following statements is incorrect regarding Meckel's diverticulum? *(AIIMS 06)*
a) Is found on the anti-mesenteric border of the small intestine
b) Consists of mucosa without a muscle coat
c) Heterotopic gastric mucosa can ulcerate and cause a brisk gastrointestinal bleed
d) A fibrous band between the apex and umbilicus can cause intestinal obstruction

3011. A 35-year-old premenopausal patients as recently developed a 1.5 cm sized pigmented lesion on her back. Which of the following forms of tissue diagnosis will you recommend for her? *(AIIMS 06)*
a) Needle biopsy b) Trucut biopsy
c) Excision biopsy d) Incisional biopsy

3012. Extensive surgical debridement, decompression or amputation may be indicated in the following clinical setting except - *(UPSC 07)*
a) Progressive synergistic gangrene
b) Acute thrombophlabitis
c) Acute haemolytic streptococcal cellulitis
d) Acute rhabdomyolysis

3013. Match list I with list II and select the correct answer using the code given below the lists - *(UPSC 07)*

List I *(Carcinoma)*	List II *(Characteristic)*
A. Seminoma testis	1. Hormone dependent
B. Carcinoma prostate	2. Does not spread by lymphatics
C. Basal cell carcinoma	3. Prognosis depends on thickness
D. Malignant melanoma	4. Highly radiosensitive

Code:

	A	B	C	D
a)	4	1	2	3
b)	4	2	1	3
c)	3	1	2	4
d)	3	2	1	4

3014. A 55-year-old male patient underwent cholecystectomy for Gall stone calculus. During surgery the patient's pulse was irregulary irregular, 160/min, BP = 80/ 50 mm of Hg, temp. 40°c On examination a swelling in the neck was found. Most likely diagnosis is -
a) Thyroid storm b) Myocardial infarction
c) Arrthmias d) Stridor *(MAHE 07)*

3015. Cushing reflex is - *(UP 07)*
a) T Mean arterial pressure with increase intra cranial pressure
b) T Mean arterial pressure with decrease intracranial pressure
c) T Mean arterial pressure with increase intracranila pressure
d) 1 Mean arterial pressure with decrease intra cranial pressure

3016. Gases for Pneumoperitoneum - *(PGIJune07)*
a) $C0_2$ b) N_2
c) 0_2 d) Room air
e) N_zO

3017. Scrambled egg appearance is seen in - *(Corned 07)*
a) Carcinoma stomach b) Carcinoma galll bladder
c) Pancreatic carcinoma d) Renal carcinoma

3018. Shoulder pain post laparoscopy is due to -
a) Subphrenic abscess *(AIIMS Nov 07)*
b) CO_z retention
c) Positioning of the patient
d) Compression of the lung

3019. FNAC needle size - *(AIIMS Nov 07)*
a) 18-22 b) 22-26
c) 27-29 d) 16-18

3020. TViangle of Doom is bounded by all of the following except - *(AIIMS Nov 08)*
a) Cooper's ligament b) Vas deferens
c) Gonadal vessels d) Peritoneal reflection

3021. Nicoldoni sign is also known as - *(AIIMS Nov 08)*
a) Murray sign b) Frei sign
c) Darriersign d) Branham sign

3022. Allopurinol is used in organ preservation as -
a) Antioxidant *(AIIMS May 09)*
b) Preservative
c) Free radical scavenger
d) Precursor for energy metabolism

3006)a,b 3007)b 3008)c3009)a 3010)b 3011)c 3012)b 3013)a 3014)a 3015)a 3016)a,c,e 3017)c 3018)b 3019) b 3020) a 3021) d 3022) c

3023. True about aprocine gland - *(PGIJune09)*
a) Modified sweat gland
b) Modified sebaceous gland
c) present in axilla & groin
d) Hidradenitis suppurativa is infection of apocrine gland

3024. Aim of damage control laparatomy are -
a) Provide fascial closure *(PGIJune09)*
b) Arrest haemorrhage
c) Control contamination
d) Prevent infection
e) Prevent coagulation

3025. In surgical stress hormone is increased except -
a) ADH b) ACTH *(PGIJune 09)*
c) Cortisol d) Insulin
e) Renin

3026. True about Abdominal compartment syndrome -
a) i Cardiac output *(PGIJune 09)*
b) *i* Urine
c) *i* Pulmonary capillary wedge pressure
d) *i* Venous return
e) *i* Systemic vascular resistance

3027. Minimum amount of GI bleed to cause malena is -
a) 10mlb) 40 ml *(DELHIPGFeb. 09)*
c) 60ml d) 115 ml

3028. Which of the following is a delayed absorbable synthetic suture material ? *(DELHIPG Feb. 09)*
a) Chronic catgut b) Vicryl
c) Silk d) Nylon

3029. All of the following patients presenting with abdominal pain and shock need immediate laparatomy except- *(DELHIPG Mar. 09)*
a) Ruptured ectopic pregnancy
b) Haemorrhagic pancreatitis
c) Rupture abdominal aortic aneurysm
d) Ruptured liver hemangioma

3030. Which of the following statements is incorrect ?
a) Gas in biliary free may be seen following sphicterotomy
b) Column of feces in the left colon is normal
c) Intestinal obstruction can be one of the presentation in Gall Stone disease
d) Gas in periphery of liver suggests portal vein gas

3031. Risk factors for the development of critical limb ischemia include all except - *(DELHIPG Mar. 09)*
a) Diabetes
b) Hyeprlipidemia
c) Moderate alchol intake
d) Hyperhomocysteinemia

3032. The following statements are correct about burst abdomen (abdominal dehiscence) except-
a) Peak incidence in between 6th and 8th postoperative days *(UPSC-II09)*
b) Manage with nasogastric aspiration and intravenous fluids
c) Cover the wound with sterile towel and perform emergency surgery
d) Second dehiscence is very common

3033. A patient presents to the emergency department with pain and distension of abdomen and absolute constipation. What is the investigation of choice-
a) Plain X-ray abdomen (erect) *(UPSC-II09)*
b) Ultrasonography
c) Barium meal follow-through
d) Colonoscopy

3034. Mackler's triad includes- *(PGINov09)*
a) Vomiting
b) Subcutaneos emphysema
c) Lower thoracic pain
d) Peripheral cyanosis
e) Pleural effusion

3035. Pain in hypogatric region may arise from -
a) Uterus b) Left colon *(PGIMaylO)*
c) Urinary bladder d) Gallbladder

3036. Day care surgery can be done in - *(PGINov. 10)*
a) Lateral sphincterotomy
b) Rhinoplasty
c) Orchidectomy
d) Total thyroidectomy
e) Sub-cutaneous mastectomy

3037. Advantage of Minimal access surgery-(PG/*Nov. 10)*
a) t Heat loss b) Better Hemostasis control
c) Improved vision d) *i* in wound pain
e) Improved Mobility

3038. Fogarty's catheter is used for? *(AIIMSNov 10)*
a) Urethral catheterization
b) Removal of blood clots from the arteries
c) Bladder drainage
d) TPN

3039. Complication (s) of obesity is /are - *(PGIMay 10)*
a) Venous ulcer b) Pulmonary embolism
c) t Mortality d) Prostate cancer
e) Pulmonary hypertension

3040. The best cosmetic results for large capillary (port wine) hemangiomas are achieved by -
a) Excision and split-thickness skin
b) Laser ablation *(NEET/DNB Pattern)*
c) Cryosurgery
d) Tattooing

FORENSIC

SEC - I & II: LAW & MEDICINE. PERSONAL INPENTIF1CATION. MEDICOLEGAL AUTOPSY. EXHUMATION

1. Coroner's court is present at - *(PGI87, Kerala 87, UPSC85)*
a) Bombay b) Delhi
c) Madras d) Bangalore
e) Chandigarh

2. In case of death in lock up, the inquest is held by -
a) A Police officer b) Magistrate *(PGI 86)*
c) Panchayat officer d) District Attorney

3. Which carries more weight in a court of law -
a) Dying declaration *(PGI87)*
b) Dying deposition
c) Both carry the same weight
d) Both are not significant

4. The age of a 16 years old female is best determined by the radiograph of - *(PGI 87)*
a) Lower end of radius and Ulna
b) Upper end of humerus
c) Upper end of radius and Ulna
d) Xiphistemum

5. Legal age for marriage for boys in India -
a) 18 b) 19 *(PIIMS 87, PGI 86)*
c) 20 d)21
e) 25

6. Most common pattern of finger print is- *(AI88)*
a) Arch b) Loop
c) Whorl d) Composite

7. Postmortem staining can occur in some cases before death in - *(AIIMS 84)*
a) Children b) Old persons
c) Cholera d) Allof the above

8. Cephalic index is used for determintion of-
a) Race b) Age *(AI89)*
c) Sex d) Pelvic abnormality

9. Dying declaration can be received by - *(AI89)*
a) Medical officer b) Lawyer
c) Police officer d)All

10. Most reliable method of identificaton of a person is by- *(PGI86)*
a) Scars b) Anthropometry
c) Fingerprinting d) Photography

11. Dying deposition is recored by - *(NIMHANS86)*
a) Doctor b) Magistrate
c) Police officer d) Lawyer

12. The power of Amnesty for capital punishment is vested with - *(AMJ 88)*
a) The president b) Supreme court
c) High court d) The govemer

13. Pre-auricular sulcus is used for - *(AMJ88)*
a) Determination of Race
b) Determination of age
c) Determination of sex
d) None of the above

14. Who can be considered as an expert witness -
a) Medical men b) Firearm expert
c) Chemical examiner d)All *(TN89)*

15. To detemine the age of a 16 year old girl which of the following is to be rediographed - *(PGI 88)*
a) Wrist b)Knee
c) Ankle d) Elbow

16. Conduct money is paid to expert witness with summons from - *(AI90)*
a) Civil court b) Criminal court
c) High court d) Sub magistrate

17. Ossification centre appearing just before birth is- *(AI90)*
a) Lower end of femur b) Lower end of tibia
c) Upper end of humerus d) Scaphoid

18. Super imposition technique is used in- *(AI90)*
a) Skull b) Pelvis
c) Femur d)Ribs

19. Second molar erupts at - *(AI 91)*
a) 6 years b) 12 years
c) 18 to 22 years d) 25 to 28 years

20. Tatoo is useful in identifying body - *(AI 91)*
a) Living b)Dead
c) Decomposed d) Burnt

21. Perjury is - *(TN 91)*
a) Willful utterance of falsehood
b) An act comitted within court premises
c) Failure to sign summons
d) Failure to appear as a witness

22. Death sentence can be awarded by - *(Kerala 91)*
a) First class magistrate
b) Second class magistrate
c) Session court
d) Chief judicial magistrate

23. Medicolegal autopsy requires the premission of- *(JIPMER91)*
a) Police b) Magistrate
c) Reletives d) Medical superintendant

24. Best method for identification of a person is by- *(JIPMER91)*
a) Scars b) Blood group
c) DNA Analysis d) Finger prints

25. In India, inquest is carried out by all except -
a) Police b) Coroner *(AIIMS 91)*
c) Doctor d) Magistrate

26. Rigor mortis is simulated by - *(AIIMS92)*
a) Mummification b) Algor mortis
c) Cadaveric spasm d) All of the above

27. Medicolegal autopsy required the permission of-
a) Relatives *(AI93)*
b) Medical superintendent
c) Police
d) Magistrate

28. Which of the following is true about oath -
a) Not compulsory *(J1PMER 93)*
b) Compulsory and binds witness for evidence given
c) Holds witness responsible for consequences of evidence
d) Witness is liable for prosecution if he does not take oath

29. Mummification is seen in - (*JIPMER 80, Delhi 92)*
a) I.U.D. (Intrautemine death) fresh
b) I.U.D. late
c) Both
d) None

30. Rigor mortis is simulated by - (*A11MS92)*
a) Cadaveric spasm b) Mummification
c) Algor mortis d) All of theabove

31. To make a positive identification with the help of a partial finger point, the points of similarity should be at least - *{DNB 89)*
a) 10 b) 12
c) 16 d)20

32. Skull of a male differs from that of a female by all of the following except- (*JIPMER 81, Delhi 93)*
a) Capacity greater than 1500 c.c
b) Muscular markings over occiput are less marked
c) Orbits square
d) Frontal eminence small

33. Multiplying factor for estimating stature from humerus is (males) - *{AIIMS 84)*
a) 10-12 b)5-6
c) 7-9 d)9-10

34. Minimum quantity of blood required to be pre served for chemical analysis is- (*PGI81)*
a) 2 ml b) 10 ml
c) 50ml d) 100 ml

35. Medical certificate is - (*AIIMS 85)*
a) Documentary evidence b) Oral evidence
c) Hearsay evidence d) Parole

36. Eruption of temporary teeth will be completed by-
a) One to one and half year (*JIPMER 81,*
b) Two to two and half years *Kerala90)*
c) Three to four years
d) Four to five years

37. Colliquative liquefaction is seen within---------after death - *{AIIMS 80, AMU 86)*
a) Immediately b) 24 hours
c) 72 hours d) 1 week

38. Union of epiphysis at the age of 17 occurs in- *{BIHAR91)*
a) Head of femur b) Head of humerus
c) Lower end of femur d) All the above

39. The enquiry into the circumstances of death is called- (77V*91)*
a) Homicide enquiry b) Inquest report
c) Open verdict d) Adjourned verdict

40. A girl of 10 years will have----------permanent and —temporary teeth - *{PGI 79, DNB 90)*
a) 8,12 b) 8,16
c) 12,12 d) 16,8

41 Spinal cord is opened from the - *(AIIMS 86)*
a) Frontal approach b) Back side
c) Lateral side d) None of the above

42. C.S.F.is required to be preserved in -
a) Alcohol poisoning *{AIIMS 80, BIHAR 89)*
b) Arsenic poisoning
c) Copper poisoning
d) Organophosphorous poisoning

43. The temperature of the body rises up for first two hours after death. The probable condition include following except - *{AIIMS 81, DNB 89)*
a) Sun-stoke b)Frost-bite
c) Septicemia d) Tetanus
e) Strychnine poisoning

44. Multiplying factor of estimating from femur (males) is- *{AIIMS 84)*
a) 3.6-3.8 b) 4.1-4.8
c) 4.9-5.6 d) 5.8-6.2

45. The most reliable bones for the purpose of medul lary index are the folio wing except - *{AP91)*
a) Humerus b) Tibia
c) Radius d)Sternum

46. Lower end of the femur can help to determine the- *{PGI 85)*
a) Age b) Height
c) Weight d) Stature

47. In case of death in lock up, the inquest is held by- *{PG186)*
a) A police officer b) A magistrate
c) A panchayat officer d) Distric attorney

48. The age of a 15 year old female is best determined by the radiograph of - *{AIIMS 86, PGI 8 7)*
a) Lower end of Radius and Ulna
b) Upper end of humerus
c) Upper end of Radius and Ulna
d) Xiphistemum

49. Faint letter mark can be made visible by -
a) Infrared photography *{AIIMS 86)*
b) Spectrophotometer
c) Ordinary light
d) X-rays

50. Which of the following is best for establishing identity- *{Delhi 85)*
a) Anthropomery b) Dactylography
c) Hair examination d) Blood

51. Deep inspiration above the water level may cause
a) No effect on floatation of body - *{Delhi 84)*
b) Early floatation of the body
c) Late floatation of the body
d) Late floatation of the body only is sea water

52. A female pelvis differs from male pelvis by all except- *{Delhi 86, 87, 88, 89)*
a) Obtuse subpubic angle
b) Broad greater sciatic foramen
c) Broad lesser sciatic foramen
d) Prominent muscle markings

53. Pearson's formula is used for- *{PGI79, AIIMS 83)*
a) Cephalic index b) Stature
c) Race d)Age

54. Closure of coronal sutures starts at the age of- *(AIIMS 85)*
a) 20 years b)21 years
c) 30-35 years d) 50-60 years

55. Pure aryans have which type of skull -
a) Mesaticephalic *(JIPMER 80, AIIMS 85)*
b) Brachycephalic
c) Dolicocephalic
d) None of the above

56. "Cardiac polyp" is a term used for postmortem -
a) Fibrinous clots in heart *(AIIMS 81)*
b) Aneurysm
c) Infarcts in heart
d) Pale patches in heart

57. Lungs are preserved in - *(AIIMS 85)*
a) Alcohol poisoning
b) HCN poisoning
c) Carbon monoxide poisoning
d) All of the above

58. A child at the age of 7 years has how many teeth-
a) 16 b) 20 *(PGI83, UPSC81)*
c) 24 d)28

59. The minimum age for the appointment of governoris - *(AIIMS 79, AMC 81)*
a) 18 years b) 21 years
c) 35 years d) 45 years

60. Who can commute a death *sentence-(JIPMER 80)*
a) High court b) Supreme court
c) President d) Any of the above

61. Crural index is calcutated as-fPG/*80, AIIMS 82)*
a) Length of Radius b) Length of tibia
c) Length of Humerus d) Length of ulna

62. The sentence awarded by a court may be enhanced by the- *(AIIMS 83)*
a) Magistrate court b) High court
c) Higher court d) None of the above

63. While despatching blood and urine chemical analysis sodium flouride is added as preservative in the following concentration - *(PGI 80, AMU 86)*
a) 30 mg/10ml b)40mg./10ml
c) 50mg./ml d) 100mg./10ml

64. Exhumation is usually done in the - *(AIIMS 80)*
a) Early morning b) Evening
c) Night d) Any time

65. The most common death by suicide is by -
a) Phenobarbitone *(PGI 80, AIIMS 81)*
b) Insecticide
c) Hanging
d) Suicidal cut throat

66. The time limit for ordering of exhumation in India is- *(AIIMS 79, PGI 81)*
a) 1 month b) lyear
c) 10 years d) No limit

67. Best specimen of bone for sex determination is -
a) Femur b) Pelvis *(Kerala 94)*
c) Skull d) Mandible

68. Best method to determine age upto 14 years is - *(Kerala94)*
a) Ossification centres b) Dentition
c) Anthropometry d) Head circumference

69. The common type of inquest in India is -
a) Coroner's inquest *(Karn94)*
b) Police inquest
c) Judicial magistrate inquest
d) Medical examiner's inquest

70. After post mortem exam body has to be handed over to investigating - *(JIPMER95)*
a) Investing police officer b) Relatives of victim
c) Magistrate d) The civil authorities

71. For exhumation the order should be passed by -
a) Chief judicial magistrate *(Kerala95)*
b) Executive magistrate
c) Police officer
d) Session judge

72. Leading questions are permitted only in- *(AI95)*
a) Examination in chief b) Cross examination
c) Dying declaration d) Re-examination

73. If angle of mandible is obtuse it means that the bone belongs to - *(Delhi96)*
a) Adult male b) Adult female
c) Young female child d) Elderly person

74. Identical twins may not have - *(Karnat 96)*
a) Same DNA finger
b) Same finger print pattern
c) Same blood group
d) Same HLA system

75. Dying deposition is more important than dying declaration because it is - *(IN97)*
a) Made to a magistrate
b) Oath is taken
c) Made in presence of accused
d) Cross examination is permitted

76. Best method for identification of human is - *(AI97)*
a) Blood grouping b) Dactylography
c) Anthropometry d) Gustuffon's formula

77. 100 % sure differentiation of sex is possible by pelvic assessment of all except - *(PGI 96)*
a) Subpubic angle b) Obturator foramen
c) Preauricular sulcus d) Greater sciatic notch

52) d 53) b 54) c 55) c 56) a 57) b 58) c 59) c 60) d 61) b 62) c 63) d 64) a 65) c

78. Post-mortem autopsy is done for - (,*JIPMER98)*
a) Whole body
b) Parts which are injured
c) Parts which have been asked for in inquest
d) Parts which relatives have given permission for

79. After postmortem body is handed over to -
a) The authority who has conducted inquest in that particular case (.*JIPEMR 98)*
b) Police station near by
c) Coroner
d) Chief magsitrate

80. Most reliable method of indetification of a person is - *(Rajasthan97)*
a) Gustafson method b) Galton method
c) Anthropometry d) Scars

81. Sodium Fluride is used for preservation *of-(AI98)*
a) Urine b) Blood
c) Alcohol d) Carbolic acid

82. Perjury is- *(MAHE98)*
a) Wilful utterance of falsehood
b) Grevious injury
c) Contributory negligence
d) Criminal negligence

83. First finger loop bureau was established in -
a) London b) Paris *(MP2K)*
c) Calcutta d) Madras

84. Rectified spirit not used as preservative in case of -
a) Phenol b) Cyanide *(Bardwan2K)*
c) Insectides d) Aluminium phosphide

85. Exhumaion can be done in India - *(Bardwan 2K)*
a) After 7 years b) After 2 years
c) After 10 years d) At any time

86. The period of mixed dentition is between the ages of- *(Orissa 98)*
a) 2-5 years b) 6-11 years
c) 12-14 years d)15-17years

87. 20 permanent teeth and 8 temproray teeth are seen at the age of - *(Kerala 2001)*
a) lOyrs b) 11 yrs
c) 9 yrs d) 12 yrs

88. Cross examination of the prosecution witness is done by- *(Manipal 01)*
a) Public prosecutor b) Defence counsel
c) Judge d)None

89. First permanent tooth to arise - *(J1PMER 02)*
a) Incistor b) Canine
c) Premolar d) Molar

90. Temperature of a dead person is best measured by -
a) Mouth b) Rectum *(TN 02)*
c) Armpit d) Groin

91. Rigor mortis in a foetus develops after attaining -
a) 3 months of age b) 4 months of age *(TN 02)*
c) 7 months of age d) 10 months of age

92. Cheiloscopy is the study of - *(TN 2002)*
a) Foot prints b) Palatal prints
c) Fingerprints d) Lip prints

93. Corpus delicti means - *(TN 02)*
a) Essence of crime
b) Non decomposed body
c) Identification of dead person
d) Decomposed body

94. An order for exhumation can be given by -
a) District collector *(AI1MS 81, AP 02)*
b) Additional district magistrate
c) Sub collector
d) Any of the above

95. Subpoena is a kind of - *(A1IMS 81, AMU 02)*
a) Decomposed body tissue b) Designation
c) Document d) Court tribunal
e) Indelible ink

96. Puglistic attitude is seen in - *(All India 02)*
a) Drowning b) Protein coagulation
c) Electrocoagulation d) Hanging

97. Two carpal bones are radiologically seen in the wrist X-ray of most of the children by the end of -
a) 1 year b) 2 years (*UPSC 96)*
c) 3 years d) 4 years

98. Atavism is when a child resembles his -*(AIIMS 99)*
a) Parents b) Grandparents
c) Cousin d) Twin

99. The pubic arch in females is above - *(PGI88)*
a) 60-70 b) 70-75
c) 100 d) 130

100. Most specific and sensitive for identification is - *(PGI 98)*
a) Anthropometry b)Dactylography
c) Skull d) Pelvis

101. Most common type in dactylography is - *(PGI98)*
a) Wholrls b) Loops
c) Composite d) Arches

102. Sex determination form pelvis possible upto 95% accuracy from following except - *(PGI 98)*
a) Greater sciatic notch b) Pre auricular sulcus
c) Obturator foramen d) Sub public arch

103. The fetus can be considered viable if the following ossification center appears - *(PGI 99)*
a) Calcaneum b) Manubrium stemi
c) Lower end of femur d) None of the above

104. Testamentary capacity refers to - *(PGI 99)*
a) Ability to make a valid will
b) Criminal liability
c) Right to vote
d) Ability to give evidence

105. 99% sex difference can be done by all features of pelvic bones except - *(PGI 2000)*
a) Subpubic angle b) Greater sciatic notch
c) Preauricular sulcus d) Public rami

106. Best bone to assess age between 20-50 yrs -
a) Skull b)Ribs *(PGI 2000)*
c) Sternum d) Symphysis pubis

78)a 79)a 80)b 81)c 82)a 83)c 84)a 85)d 86)b 87)b 88)b 89)d 90)b 91)c 92)d

107. Cephalic index is useful for determination of -
a) Age b) Sex *(PGI03)*
c) Race d) Religion
e) Caste

108. A skull with squared orbit & rectangular palate with cephalic index 75 with broad nose, probably the race is - *(PGI 04)*
a) Negroes
b) Mongoloids
c) Europeans

109. Blackening and tattooing of skin and clothing can be best demonstrated by - *(AI03)*
a) Luminol spray
b) Infra red photography
c) Ultra violet light
d) Magnifying lens

110. Perjury means giving willful false evidence by a witness while under oath, the witness is liable to be prosecuted for perjury and the imprisonment may extend to seven years. This falls under which section of IPC - *(AI 03)*
a) 190 of Penal Code b) 191 of Penal Code
c) 192 of Penal Code d) 193 of Penal Code

111. At the age of 9 number of teeth are - *(Mahara 02)*
a) 12 b) 16
c) 20 d)24

112. Jurisdiction of land assessment comes under- *(Mahara 02)*
a) Supreme court b) Sessions count
c) District court d) None of the above

113. " Juvenile court" is presided over by -(.*Mahara 02)*
a) I class woman magistrate
b) II class woman magistrate
c) II class male magistrate
d) None of the above

114. The cephalic index of Indian population is between -
a) 70-75 b) 75 - 80 *(AI04)*
c) 80-85 d)85-90

115. Dichotomy means - *(Manipal 04)*
a) Fee splitting b) Summons
c) Civil wrong d)None

116. If a patient survives after having given dying declaration then it stands as - *(Jipmer 04)*
a) Corroborative evidence b) Non valued
c) Valid for 48 hours d)None

117. "Dry Submarine" in custodial torture injuries refers to - *(Karnataka 04)*
a) Falanga beating, on soles of feet
b) Tying of a plastic bag over the ears
c) Immersing head in contaminated water
d) Suspending the accused by the ankles

118. Cheiloscopy is the study of prints of - *(AIIMS 04)*
a) Foot b) Fingers
c) Palate d)Lips

119. A boy has 20 permanent and 8 temporary teeth his age would be - *(APPPGE 04)*
a) 9 years b) 10 years
c) 11 years d) 12 years

120. Corpus delciti means - *(TN 04)*
a) Warrant of arrest b) Body of crime
c) Dead body d) Body of a criminal

121. Exhumation is ordered by - *(J&K05)*
a) Civil Surgeon b) Superintendent of police
c) Circle Inspector d) District magistrate

122. Which is not a medical negligence *2LCt-(MAHA 05)*
a) 37 IPC b)304A
c) 351 IPC d) 312 IPC

123. The following may be the example of privileged communication except - *(MAHA 05)*
a) An impotent person marrying
b) A syphilitic taking bath in a public pool
c) Engine driver found to be color blind
d) Pilot having hypermetropia

124. In India, magistrate inquest is done in the following cases except - *(AI 05)*
a) Exhumation cases
b) Dowry deaths within 5 years of marriage
c) Murder cases
d) Death of a person in police custody

125. Medical qualifications awarded by institutions outside India and recognized by MCI are registered in- *(AI06)*
a) First schedule of Indian Medical Council Act 1956
b) Second schedule of Indian Medical Council Act 1956
c) Part I of third schedule of Indian Medical Council Act 1956
d) Part II of third schedule of Indian Medical Council Act 1956

126. Powers of a 1st class magistrate - *(PGI June 06)*
a) Fine upto Rs. 5000 & 3 years imprisonment
b) Fine upto Rs. 3000

127. Subpnoeais- *(Manipal 06)*
a) Summons b)Panchanama
c) Suratra d) Review

128. Power of chief judicial magistrate is imprisonment upto- *(MAHE07)*
a) 7 years b)5 years
c) 3 years d) Death sentence

129. Spalding sign is seen in - *(AI07)*
a) Drowning b) Maceration
c) Mummification d) Starvation

130. Spalding's sign is seen in - *(Aiims May 07)*
a) Drowning b) Mummification
c) Adipocere d) Maceration

131. Affiliation refers to - *(MAHE 07)*
a) Paternity dispute b) Divorce case
c) Rape d) Adultery

107)c 108) a 109)b 110)d lll)d 112)c 113)a 114)a 115)a 116)a 117)b 118)d 119)b 120)bl21)d
122)c 123) a 124)c 125)b 126)a 127)a 128)a 129)b 130)d 131)a

132. DNA finger printing doe with all except -
a) WBC b)RBC *(UP 07, 06)*
c) Saliva d) Spermatozoan

133. Exhumation order is given by - *(UP 07, 03)*
a) Coroner's court b) Police officer
c) Magistrate d) All of the above

134. If death of a patient occurs during surgery due to the negligency of the surgeon, then he can be charged under- *{Corned 07)*
a) 299DPC b)300IPC
c) 304AIPC d)304BIPC

135. There is no criminal responsibility below the age of- *{Corned 07)*
a) 5 years b) 7 years
c) 10 years d) 12 years

136. The center of ossification of which one of the following is used as medicolegal evidence for fetal viability - *{Corned 0 7)*
a) Head of the femur b) Distal end of femur
c) Greater trochanter d) Lesser trochanter

137. Not true about consent is - *(AIIMSNov07)*
a) Explaining to the patient the nature of his disease, the proposed treatment or procedure, the alternative procedure, the risks and benefits involved in both the proposed and alternative procedure, the relative chances of success or failure of both procedures
b) In cases of emergency consent is not necessary.
c) In criminal cases, the victim cannot be examined without his/her consent.
d) Blanket consent authorizers the attending physician or surgeon to do what ever he thinks best for him under the circumstances.

138. Sex can be established by examining hair root cells for the presence of - *{Corned 08)*
a) Davidson body b) Barr body
c) Golgi body d) Medullar index

139. Among the secondary changes in tooth the most useful one for age determination is - *{Corned 08)*
a) Attrition
b) Secondary dentine deposition
c) Root resorption
d) Root transparency

140. The most common type of fingerprint is - *(UP 08)*
a) Loop b) Arch
c) Composite d) Whorl

141. Cephalic index determines - *(UP 08)*
a) Age b)Sex
c) Race d) Socio-economic status

142. Medical man is witness box is - *(UP 08)*
a) Common witness
b) Expert witness
c) Common and Expert witness
d) Voluntary witness

143. Ossification centres appears - *(UP 08)*
a) Just before birth
b) After upper and of the femur
c) Upper end of the tibia
d) After lower end of femur

144. Corporobasal index is useful for determination of -
a) Race b) Age *(A 108)*
c) Stature d)Sex

145. Finger print bureau was first established in -
a) India b) England *(Aiims May 08)*
c) USA d) France

146. Power of chief judicial magistrate is imprisonment upto- *(Manipal 08)*
a) 7 years b) 5 years
c) 3 years d) Death sentence

147. Contributory negligence if proved is beneficial to -
a) The patient *(DPGEE 08)*
b) The treating doctor
c) Both of the above
d) None of the above

148. A leading question is not asked during -
a) Cross-examination *(DPGEE 08)*
b) Examination-in chief
c) Re-examination
d) All of the above

149. Contributory negligence is a defence in ?
a) Civil negligence *(APPG08)*
b) Criminal negligence
c) Ethical negligence
d) None

150. The test in which weight of lungs is compared with body weight is/are - *(PGI Dec 08)*
a) Fodere's Test b) Ploucquet's Test
c) Raygat's Test d) Wredin Test
e) Flourence Test

151. When two objects come in contact with each other, transfer of material takes place in accordance with-
a) Me naughten rule *(PGI Dec 08)*
b) Locard exchange principle
c) Rule of Haase
d) Locard's method

152. Privileged communication is made between -
a) Patient and Doctor *(AI09)*
b) Doctor and court of Law
c) Doctor and relative
d) Doctor and concerned authority

153. Disease which permanently alters the finger prints is- *(AI09)*
a) Leprosy b) Tuberculosis
c) Diabetes d) Dermatitis

154. Casper's dictum is used for - *(AI 09)*
a) Identification of body
b) Estimation of time since death
c) Establishing cause of death
d) Establishing weapon of Injury

132)c 133) a,c 134)c 135)b 136)b 137)d 138)b 139)d 140)a 141)c 142)c 143)a 144)d 145)a
146) a 147) b 148)c 149)b 150)b 151)b 152)d 153)a 154)b

155. All of the following are type of fingerprinting except-
a) Arch b) Loop *(PGI June 09)*
c) Composite d) Circle
e) Whorls

156. In India the age of consent for marriage of a female is - *(COMED 09)*
a) 15 years b) 16 years
c) 18 years d) 20 years

157. Diaphanous test is the test to detect - *(COMED 09)*
a) Pregnancy
b) Stoppage of respiration
c) Stoppage of circulation
d) Presence of blood

158. Rokitansky's method is - *(DELHIPG Feb. 09)*
a) An autopsy technique for infants
b) Used in heavy metal detection
c) Used for estimation of age using skull sutures
d) Used in brain mapping

159. All are true about cadaveric spasm, except -
a) Appears instantaneously by any method after death *(DELHI PG Feb. 09)*
b) Cannot be produced by any method after death
c) Molecular death does not occur
d) All the muscle of the body are involved

160. First sign of decomposition in a dead body is- *(DELHI PG Feb. 09)*
a) Greanish discoloration of skin over face
b) Greanish discoloration of skin over right iliac fossa
c) Greanish discoloration of skin over left iliac fossa
d) Reddish discoloration of skin over right iliac fossa

161. What is the age of a child having 20 permanent and 8 temporary teeth ? *(DELHIPG Mar. 09)*
a) 13 years b) 11 years
c) 9 years d) 15 years

162. Culpable homicide not amounting to murder is under section - *(DELHI PG Mar. 09)*
a) 304 b)304A
c) 302 d)376

163. To compare weight of lung of body which of the following test is used - *(PGI Nov 09)*
a) Cavette test b) Teichman test
c) Takayama test d) Fordere test
e) Ploucqet test

164. At what age, a person can be called as major (According to "Indian Majority Act") -
a) 16 b) 18 *(PGI Nov 09)*
c) 21 d)25
e) 12

165. Cadaveric spasm seen - *(PGI Nov 09)*
a) After 6 hrs b) After 24 hrs
c) After 12 hrs d) After 48 hrs
e) Immediately after death

166. Section IPC 377 deals with - *(AIIMS Nov 09)*
a) Unnatural sex offences b) Rape
c) Incest d) Adultery

167. A teacher slapped a 6th standard student after which she suffered from 25% hearing loss in left ear. This was corrected after a surgery. Which type of injury is this? *(AIIMS Nov 09)*
a) Simple b) Grievous
c) Dangerous d) Serious

168. Incisional wound on genital is seen commonly in -
a) Accidents b) Suicides *(AIIMSMay 10)*
c) Homicides d) Postmortem artifact

169. A woman died within 5 years of marriage under suspicious circumstances. Her parents complained that her in laws used to frequently demand for dowry. Under which of the following sections can a magistrate authorize of the case - *(AI10)*
a) Section 174 CrPc b) Section 176 CrPc
c) Section 304 IPC d) Section 302 IPC

170. Which of the following Indian Penal Codes offers immunity to doctor if he/she treats a patient without his/her consent in case of an emergency?
a) IPC91 b)IPC92 *(Maharashtra10)*
c) IPC93 d) IPC94

171. As per Indian Medical Council 2002 it is compulsory to maintain the medical records pertaining to all indoor patients for a minimum period of____ years-
a) 1 year b) 2 years *(Maharashtra10)*
c) 3 years d) 4 years

172. The age of a 15-year old female is best determined by the radiograph of - *(DPG 10)*
a) Lower end of Radius and Ulna
b) Upper end of humerus
c) Upper end of Radius and Ulna
d) Xiphistemum

173. When a group of muscles of a dead body were in state of strong connaction immediately prior to death and remain so even after death, the condition is termed as - *(DPG 10)*
a) Gas stiffening b) Rigor mortis
c) Cadaveric spasm d) Cold stiffening

174. Which of the following sections of IPC are concerned with dowry death? *(DPG 10)*
a) 300 b)302
c) 304A d)304B

175. A cognizable offence signifies - *(DPG 10)*
a) Imprisonment upto 2 years
b) Imprisonment upto 5 years
c) Arrest without warrant
d) Fine upto Rs. 10,000

176. A child has 20 temporary teeth and 8 permanent teeth. What is the age of the child- *(Punjab 10)*
a) 10 years b) 11 years
c) 13 years d) 14 years

177. Which carries more weight in a court of law -
a) Dying deposition *(Punjab 10)*
b) Dying declaration
c) Both carry the same weight
d) Both are not significant

155) d 156) c 157) c 158)a 159)d 160)b 161)b 162)b 163) e 164) b,c 165) e 166) a 167) b 168) c
169)b 170) b 171)c 172) a 173) c 174) d 175) c 176)None 177)b

178. Determination of sex is done best by which bone -
a) Femur b) Pelvis *(Punjab 10)*
c) Skull d) Mandible

179. A skull with squared orbit & rectangular palate with cephalic index 75 with broad nose, probably the race is - *(Punjab 10)*
a) Negroes b) Mongoloids
c) Europeans d) Oriental

180. Following surgery, a surgeon leaves behind a swab in the abdominal cavity. He is liable for punishment under - *(Jipmer 10)*
a) Criminal negligence
b) Civil negligence
c) Res judicata
d) Novus actus interveniens

181. The confirmatory test for blood is - *(Corned 10)*
a) Benzidine test
b) Luminol test
c) Leucomalachite green test
d) Teichmann test

182. "Declaration of oslo" deals with - *(Corned 10)*
a) Abortion b) Torture
c) Human experimentation d) Consumerism

183. True about battered baby syndrome- *(PGIMay 10)*
a) Posterior rib # may be seen in X- ray
b) Injury at the side of metaphysic is specific
c) Epiphyseal injury is common
d) Babygram is diagnostic
e) Me casue of death is extradural hemorrhage

184. All are true about postmortem staining except -
a) Occur immediate after death *(PGIMay 10)*
b) Common in dependent part
c) Disappear with rigor mortis
d) Margins are raised
e) Not found in internal organ

185. True about suspected animation - *(PGIMay 10)*
a) Common phenomenon in yogic person
b) Can be voluntary
c) Similar to molecular death
d) Similar to brain death
e) Person can be revived

186. True about Molecular death - *(PGINov. 10)*
a) Same as cellular death
b) Same as cellular death as indicated by rigor mortis
c) Indicated by stopping of heart function and flat BOG
d) Brain death
e) All cells of body die

187. Widmark's formula is used in calculating -
a) Quantity of alcohol in body *(AIIMSNov 10)*
b) Time since death
c) Infliction of injuries
d) Stature

188. During autopsy, if spinal cord is to be examined what is the most commonly used *approach-(AIIMS May 11)*
a) Anterior b) Posterior
c) Lateral d) Antero-lateral

189. In civil negligence, onus of proof lies on -
a) Judicial first degree magistrate *(AIIMS May 11)*
b) Police not below the level of sub inspector
c) Doctor
d) Patient

190. Condition promoting adipocere formation - *(AIIMS*
a) Dry and hot b) Hot and humid *May 11)*
c) Dry & optimum d) cold and moist

191. According to MCI act, medical education granted by Indian universities comes under - *(AIIMSMay 11)*
a) Schedule I of MCI act
b) Schedule II of MCI act
c) Part I of schedule III
d) Part II of schedule III

192. Dental numbering is done by all, except - *(AI11)*
a) FDI Two Digit System
b) Anatomic and diagrammatic charting
c) Palmer Notation
d) Aerogram

193. Which Indian law describes dying declaration?
a) Sec. 39 Cr.P.C *(Karn 11)*
b) Sec. 278 Cr.P.C
c) Sec.32IEA
d) Sec. 118IEA

194. With respect to dating of a bone, a bone more than 100 years old contain - *(Karn 11)*
a) 6 amino acids b) 7 amino acids
c) 8 amino acids d) 9 amino acids

195. In Polygraph test "GSR" stands for - *(Karn 11)*
a) Guilt Score Reaction
b) Galvanic Skin Reaction.
c) Guilt Sensor Reaction
d) Guilt Sensitivity Reaction.

196. Algor mortis is - *(PUNJAB 11)*
a) Cadaveric spasm
b) Post partum rigidity
c) Cooling of the body
d) Post mortem caloricity

197. Species identification is done by - *(PUNJAB 11)*
a) Neutron activation analysis (NAA)
b) Precipitin test
c) Benzidine test
d) Spectroscopy

198. Most common primary finger print pattern -
a) Loop b) Whorl *(Jipmer11)*
c) Mixed d)Arch

SEC - III s MEDICOLEGAL ASPECTS OF DEATH, INVESTIGATIONS. HANGING, STRANGULATION, STARVATION, COLD & HEAT

199. Rigor moritis develops ....after death - *(PGI86, 87)*
a) 1/2 -1 hr. b) 1 to 2 hrs
c)3to6hrs. d) 12 hrs

178)b 179) a 180) a 181) d 182) a 183)a,b,c,d 184)a,c,d,e 185)a,b,e 186)a,b,e 187) a 188)b 189)d
190) b 191)a 192)d 193)c 194) b 195) b 196)c 197)b 198) a 199)d

200. Cadaveric spasm- *(PGI86, 87)*
a) Instant in onset
b) Confined to a small group of muscle
c) Occurs only in voluntary muscles
d) Indicates that the person was alive at that time
e) All of the above

201. Foamy liver is seen in - *(AIIMS 87)*
a) Putrefaction b) Drowning
c) Mummification d)Adipocere

202. Post mortem staining gets fixed after - *(PGI 87)*
a) 2-3 hrs., b) 3-4 hrs.,
c) 5-6 hrs., d)6-7hrs.,
e) 7-8 hrs.,

203. Mummification occurs when - *(PGI 87)*
a) High atmospheric temperture is present
b) Dry air condition
c) Wind is present
d) All are correct

204. If a body is left undisturbed, for how long does post mortem staining persists - *(PGI 87)*
a) Few hours
b) Few days
c) Few months
d) Persists till it merges with discolouration of putrefaction

205. What poisoning retards putrefaction - *(PGI 87)*
a) Phosphorus b) Arsenic
c) Mercury d)Lead
e) Copper

206. Suspended animation may be seen in - *(AIIMS 85)*
a) Electrocution b) Morphine poisoning
c) Strangulation d) Rape

207. Hypostasis lasts for - *(PGI 88)*
a) Hours b) Days
c) Weeks d) Months

208. Cadaveric spasm - *(PGI 88)*
a) Immediately after death
b) After 2 hrs of death
c) Affect voluntary muscles
d) Affects involuntary muscle

209. The rate of cooling down of dead bodies in tropical climate is - *(PGI 88)*
a) 0.2°c/hr., b)0.5°c/hr.,
c) 1.0°c/hr., d)1.5°c/hr.,

210. Last organ to be affected in putrefaction -
a) Prostate b) Uterus *(PGI 85)*
c) Kidney d) Thyroid

211. Immediate stiffnes postmortem occurs in - *(A190)*
a) Cadaveric rigidity b) Cadaveric spasm
c) Rigor mortis d) Algor mortis

212. Mummification is - *(AI91)*
a) Dessication of the body
b) Pugilistic attitude of the body
c) Electric bums
d) Burking

213. Floatation of a body in water is due to - *(Kerala 91)*
a) Flesh being eaten by fishes
b) Presence of gases
c) Water logging of body
d) All of the abve

214. Honeycombing is seen in liver in cases of -
a) Cirrhosis b) Rupture *(Kerala 91)*
c) Putrefaction d) Hydatid disease

215. Presence of maggots at post mortem indicates -
a) Duration since death *(JIPMER 91)*
b) Cause of death
c) Mode of death
d) Posture of body at time of death

216. Cold stiffening may be associated with -
a) Trench foot *(AIIMS 80, AMC 85)*
b) Immersion foot
c) Body rigid, heavy and stiff
d) Any of the above

217. Colour changes of putrefacion are first observed in the- *(AIIMS 86)*
a) iliac fossa b) Popliteal fossa
c) Cubital fossa d) Arm pits
e) Neck

218. Rigor mortis in India in summer sets in - *(JIPMER 80, Delhi 92)*
a) 2-3 hrs b) 18-36 hrs
c) 2-5 days d) 1 week

219. Number of hours since death is calculated by multiplying the fall in rectal temperature -
a) 0.33 b) 0.67 *(JIPMER 81, Delhi 93)*
c) 1.0 d) 1.33
e) 1.5

220. Definition of suspended animation is -
a) It is a condition of apparent death when no signs of life are discovered as the functions are inter mpted for sometime or are reuced to minimum
b) Sign of death are irreversible
c) Only signs of brain death are present
d) None

221. In putrefaction greenish discolouration is first seen in - *(TN91)*
a) Lion b) Epigastrium
c) Right iliac fossa d) lower limb

222. Maggots in a dead body do not appear before -
a) 4 hours b) 12 hours *(PGI 80, Delhi 87)*
c) 24 hours d) 48 hours

223. The following are correct about cadaveric rigidity in contrast to cadaveric spasm except -
a) Condition is seen after death *(AIIMS 80,*
b) Affects all mucles of body *PGI 84)*
c) Helpful in determining time since death
d) None of the above

224. Rigor mortis first starts in - *(PGI 81, AIIMS 82)*
a) Upper eyelids b) Lower eyelids
c) Lower limbs d) Fingers

200)e 201)a 202)e 203)d 204)d 205)b 206)a,b 207)b 208)a,c 209)b 210)b 211)b 212)a 213)b

225. Marbling is noticed by - *(AIIMS84)*
a) 18 hours b) 36 hours
c) 48 hours d) 24 hours

226. In rigor mortis muscle - *(Kerala 94)*
a) Stiffens b) Shortens
c) Stiffens and shortens d) Stiffens and lengthens

227. Putrefaction is a - *(Karn 94)*
a) Perimortem sign of death
b) Immediate sign of death
c) Early sign of death
d) Late sign of death

228. Mummification is due to - *(AI95)*
a) Putrefaction b) Saponification
c) Dessication d) Extreme cold

229. Adipocere is likely to occur in - *(Karnat 96)*
a) Warm humid climate b) Dry hot climate
c) Burial in sandy soil d) All the above

230. Post-mortem caloricity is seen with - *(AI97)*
a) Strychnine poisoning
b) Lead poisoning
c) Mercury poisoning
d) Phosphorous poisoning

231. First indication of post mortem putrefaction is -
a) Discoloration of right iliac fossa *(AI 9 7)*
b) Puffiness of face
c) Bullous lesion
d) Scaling of skin

232. Immediate rigidity if a group of muscle without passing into stage of primary relaxation - *(AI 9 7)*
a) Cadaveric spasm b) Cadaveric rigidity
c) None

233. Maggots are seen on the dead body after- *(PGI96)*
a) One day b) 2 to 3 days
c) 3 - 4 days d) one week

234. Rate of cooling helps in determining-^/PMEK *98)*
a) Time of death b) Manner of death
c) Place of death d) Cause of death

235. Maggots appear in body in rainy season within -
a) 24hr b) 1-2 day *(PGI97)*
c) 2-3 day d) 3-4 days

236. What is suspended Animation- *(PGI 97)*
a) Animal is suspended in air
b) The subject is alive but shows no signs of life
c) Hibernation
d) Deep sleep

237. Suspended animation occurs after - *(DIA 99)*
a) Electrocution b) Cyanide poisoning
c) Bums d) Drowning

238. Putrefraction starts in - *(PGI 98)*
a) Liver b)Lung
c) Brain d) Heart

239. Rigor mortis first starts in - *(PGI 98)*
a) Heart b) Eye lids
c) Lung d) Limbs

240. Rigor mortis starts in - *(DNB 2001)*
a) Right iliac fossa b) Left iliac fossa
c) Brain d) Heart

241. Rigor mortis occurs first in which voluntary muscle- *(JIPMER 02)*
a) Muscles of eyelids b) Small muscles of hands
c) Neck muscles d) Face muscles

242. Entomology of cadaver helps in finding - *(IN 02)*
a) Time since death b) Mode of death
c) Manner of death d) Identify the disease

243. Putrefaction is facilitated by following except -
a) Very high temp b) Free air
c) Damp environment d) Shallow grave

244. Maggots in rainy day are seen within - *(PGI9 7)*
a) 6 hours b) 1-2 days
c) 2-4 days d) 5-6 days

245. Rigor mortis in winder season in Northern India lasts for - *(PGI 97)*
a) 24-48 HR b)>24HR
c) 2-3 days d) > 3 days

246. True about mummification is - *(PGI 9 7)*
a) External features are preserved
b) High atmospheric temperature is needed for it
c) Occurs in dry air
d) All of the above

247. Rigor mortis starts in - *(PGI 98)*
a) Eyelids b) Heart
c) Voluntary muscles d) Limbs

248. First internal sign of putrefaction is found-*(PGI98)*
a) Below the liver b) In mediastinum
c) Below the spleen d) In kidney

249. Suspended animation is defined as - *(PGI 98)*
a) Apparent death from which person can be aroused
b) True death from which person can not be aroused
c) May last for days or weeks
d) Can not be produced voluntarily

250. Postmortem caloricity is - *(PGI 98)*
a) t ed temp within 2 hours of death
b) Rapid fall in temp after death
c) ted temp after 6-8 hours of death
d) Decreases in temperature followed by rise

251. Adipocere formation is seen in - *(PGI 99)*
a) Dead body exposed to air
b) Dead body buried in damp, clay soil
c) Burial in dry hot air
d) Prolonged immersion in water

252. True about cadaveric spasm - *(PGI 2000)*
a) Develops immediately after death
b) May develop hours after death
c) Develops only in facial muscles
d) Involves individual/small group of muscles

253. True statement regarding mummification -
a) Time since death *(PGI 01)*
b) Facial features are preserved
c) Skin is shrunken, dry and brown
d) Implies the body was recovered from a hot and dry place
e) Modified putrefaction

225) b 226) c 227)d 228)c 229)a 230)a 231)a 232)a 233)b 234)a 235)b 236)b 237)a 238)a 239)a 240)d 241)a 242)a 243)a 244)c 245)a 246)d 247)b 248)a 249)a 250)a 251)b,d 252)a,d 253) a,c,d,e

254. Post mortem lividity persists till - *(PGI01)*
a) 24 hours b) 18 hours
c) 2-3 days d) 48 hours
e) Merges with putrefactive changes

255. True about adipocere - *(PGI 02)*
a) Common in dry and cold climate
b) Also called saponification
c) Sweetish smell
d) Occurs due to gradual hydrolysis and hydrogenation of fats

256. Rigor mortis is simulated by - *(PGI 02)*
a) Cold stiffness b) Heat stiffness
c) Tetanus d) Strychnine poisoning
e) Putrefaction

257. \\Tiich is true about Somatic death - *(PGI 03)*
a) Cooling of the body
b) Cessation of spontaneous respiration
c) Cessation of circulation
d) Flat isoelectric E.E.G
e) Deep unconsciousness with no response to external stimuli or internal need

258. Prolongation of Rigor mortis is seen in - *(PGI 03)*
a) Lead b) Arsenic
c) Mercury d) Copper

259. IVue about rigor mortis - *(PGI 03)*
a) First appear in chin
b) It last 18-36 hours in summer
c) Seen immediately after death
d) It disappears in the sequence as it appears
e) It last 24-48 hours in winter

260. Rigor mortis first seen in - *(PGI 04)*
a) Myocardium b) Upper eye lid
c) Lower eye lid d)Jaw
e) Leg

261. Post - mortem caloricity is increased in all except-
a) Bums b) Sunstroke *(Jipmer 03)*
c) Tetanus d) Septicaemia

262. Algor Mortis is - *(Jipmer 03)*
a) Cadaveric spasm b) Hypostasis
c) Cooling of body d) Ethyl alcohol

263. Rigor mortis starts at - *(IN03)*
a) Hands b)Eyes
c) Heart d) Intestines

264. Postmortem lividity is unlikely to develop in a case of- *(AI03)*
a) Drowning in well
b) Drowning in a fast flowing river
c) Postmortem submersion
d) Drowning in chlorinated swimming pool

265. Aseptic autolysis is seen in - *(Kerala 04)*
a) Adipocere b) Maceration
c) Putrefaction d) Mummification

266. Burking consits of- *(PGI85,87, UPSC87)*
a) Smothering and Traumatic asphyxia
b) Choking and drowning
c) Gagging only
d) Traumatic asphyxia only

267. The conclusive post mortem finding of death by drowning - *(PGI86,87)*
a) Cutis anserina
b) Presence of water in the middle ear
c) Edematous lungs
d) Demonstration of diatoms in the organs of the body

268. White lathery froth is seen in deaths duee to -
a) Drowning *(AI 88)*
b) Hanging
c) Organophosphours poisoning
d) Mineral acid poisoning

269. Fractures of the hyoid bone results from all except -
a) Throttling b) Hanging *(PGI 86)*
c) Choking d) Ligature strangulation

270. Death of judicial hanging is because of - *(AMJ88)*
a) Vasovagal shock
b) Occlusion of airway
c) Fracture disclosation of upper cervical vertebra
d) Coma

271. In starvation, the gall bladder may be - *(PGI 85,*
a) Atrophied b) Distended *(JIPMER 90)*
c) Show stones d) Normal

272. Hanging is established by - *(PGI85)*
a) Fracture of hyoid cartilage
b) Fracture of thyroid cartilage
c) Staining of saliva
d) Ligature mark

273. Hanging with the feet touching the ground is seen in- *(TN90)*
a) Partial hanging b) Complete hanging
c) Homicidal hanging d) Suicidal hanging

274. Hyoid fracture is seen in - *(JIPMER 90, TN 90)*
a) Hanging b) Strangulation
c) Burking d) Throttling

275. Petechial hemorhages in drowning is seen in -
a) Subpleural tissutes of lung *(JIPMER90)*
b) Submucosa of trachea
c) Bronchioles
d) Alveoli

276. Paultaf's hemorrhages occurs in which injury-
a) Strangulation b) Hanging *(AI90)*
c) Drowning d)Bums

277. Horizontal ligature mark in the neck is seen in -
a) Throttling b) Hanging *(AI91)*
c) Strangulation by ligature d) Chocking

278. Emphysema aqueosum is seen in - *(AIIMS 92)*
a) Wet drowning b) Secondary drowning
c) Dry drowning d) Immersion syndrome

279. In a acute starvation feeling of intense hunger lasts - *(AIIMS 79, AMU 86)*
a) 12-24 hours b) 24-36 hours
c) 36-48 hours d) 48-60 hours

254)e 255)b,c,d 256)a,b,e 257)b,c,d,e 258)b 259)b,d,e 260)a 261)a 262)c 263)c 264)b 265)b 266)a 267)c,d 268)a 269)c 270)c 271)J>,c 272)c,d 273)a 274)d 275)a 276)c 277)c 278)a 279)c

280. Which of the following sign will indicate that the death was antemortem - *(Delhi 86, TN 93)*
a) Cutis anserina
b) Washer woman's skin
c) Weed and grass in the hands
d) Cyanosis

281. Cafe coronary commonly occurs when a person is- *(PGI79, Bihar 89)*
a) Intoxicated b) Eating fatty food
c) Eating meat d) Eating fish

282. Accidental drowning is ruled out if - *(PGI 80, 84)*
a) The body is tied up inside a gunny bag
b) Hand and feet are tied by a ligature in way that is inconsistent with suicidal drowning
c) Heavy weights are attached in such a way that suicidal drowning is excluded
d) All of the above

283. Froth of drowning can be differentiated from that due to other causes by - *(ARMS 86)*
a) Microscopic detection of mucous
b) Detecting excess of salt in the froth
c) Both a and b
d) None of the above

284. A method of homicidal smothering and traumatic asphyxia is known is - *(PGI 80, Delhi 86)*
a) Choking b) Gagging
c) Burking d) Overlying

285. Hyperventilation before drowning - *(PGI85)*
a) Can cause death
b) Does not alter the process of drowning
c) Can cause delayed death
d) Can cause secondary drowning

286. Entire absence of fat throughout the body is suggestive of - *(PGI 90)*
a) Starvation b) Tuberculosis
c) Diabetes d) All of the above

287. Commonest type of drowning is - *(JIPMER 80, AIIMS 84)*
a) Suicidal b) Accidental
c) Homicidal d) All of the above

288. In frost bite, skin becomes hard and black in about
a) 3 days b) 7 days *(ARMS 87)*
c) 2 weeks d) 4-6 weeks

289. Le facies sympathique is seen in - *(JIPMER 79, AMU87)*
a) Traffic accident b) Hanging
c) Strangulation d) Myocardial infarction

290. If both water and food are completely with held to a person, death usually occurs in -*(JIPMER 80, Kerala 88)*
a) 1 to 2 days b) 2 to 4 days
c) 5 to 7 days d) 10 to 12 days

291. Suicidal drowning differs from homicidal drowning by the following except - *(PGI 80, ARMS 82)*
a) Absence of signs of struggle
b) Marks of violence on body absent
c) Untom clothes
d) None of the above

292. Hanging is defined as - *(Kerala 94)*
a) Suspension of body by a ligature, body weight acting as constricting force
b) Suspension of body by ligature after death
c) Obliteration of air passages by external compression
d) Mechanical interference to respiration.

293. Maximum congestion is seen in - *(Kerala 94)*
a) Choking b) Hanging
c) Strangulation d) Drowning

294. Oedema aquosum occurs in - *(Karn. 94)*
a) Wet drowning
b) Dry drowning
c) Secondary drowning
d) Immersion syndrome

295. Gettler's test is positive in - *(ARMS 94)*
a) Hanging b) Poisoning
c) Strangulation d) Drowning

296. Dry drowning is defined as - *(Delhi 96)*
a) Drowning in sea water
b) Drowning is cold water, death dut to cardiac arrest
c) Drowning of a dehydrated body
d) Drowning where death is due to laryngospasm

297. The most specific feature of death due to hanging is-
a) Tardieu sports *(Delhi 96)*
b) Ligature mark
c) Fracture of thyroid cartilage
d) Dribbling of saliva

298. Extensive bruising of neck muscles or ecchymosis of subcutaneous tissues in neck is characteristic of- *(Delhi96)*
a) Hanging b) Strangulation
c) Throttling d) Burking

299. One of the following is a definite sign of death due to drowning - *(Karn.95)*
a) Sand and mud in the mouth and nostrils
b) Fine lathery froth in the mouth and nostrils
c) Washerman's hands and feet
d) Diatoms in bone marrow

300. In a case of hanging neck ligature marks are example of- *(JIPMER98)*
a) Contussion b) Printed abrasion
c) Laceration d) Bruise

301. Gettlers test is positive in - *(Rajashthan 9 7)*
a) Hanging b) Poisoning
c) Strangulation d) Drowning

302. The postmortem finding seen in smothering-
a) Abrasion on the inner side of the mouth *(AP 98)*
b) Fracture body of Hyoid
c) Thyroid fracture
d) Curved marks on the neck

303. Gettler's test is done in - *(MP98)*
a) Hanging b) Strangulation
c) Drowning d)Throtling

280) c 281) a 282)d 283)d 284)c 285)c 286)a 287)b 288)c 289)b 290)d 291)d 292)a 293)c 294) a 295)d 296)d 297)d 298)b 299)d 300)b 301)d 302)a 303) c

304. Cafe coronary is due to - *(MP 98)*
a) MI b) Asphyxia
c) Strangulaion d) Drowning

305. Lynching is - *(AMC 2K)*
a) Practised in North America
b) Practised by white people on Negroes
c) Hanging publically on a tree
d) All

306. For diatoms test the best site for taking sample is
a) Lungs *(J &K 2001)*
b) Bone marrow in ulna
c) Bone marrow in femur
d) Muscle

307. Atypical arrest due to drowning is - *(PGI 79,*
a) Cardiac arrest due to drowning *AIIMS 83)*
b) Laryngo spasm due to drowning
c) Drowning in unconcious state
d) All of the above

308. In acute starvation, feeling of intense hunger lasts- *(PGI80, AMU89)*
a) 10 to 20 hours b) 20 to 30 hours
c) 36 to 48 hours d) Beyond 60 hours

309. Number of deciduous teeth is - **(**,*JIPMER 95)*
a) 20 b) 24
c) 28 d)32

310. Most common consistent feature after a child has been taken out from pond died from drowing is -
a) Water in lungs alveoli *(PGI 97)*
b) Petechial haemorrhages
c) Washer woman skin
d) Cyanosis

311. Hanging causes large amount of injury to -
a) Vertebral artery b) Carotid A *(PGI 98)*
c) Trachea d) Oesphagus

312. Diatom test is to determine death due to - *(PGI98)*
a) Drowing b) Strangulation
c) Hanging d)Bums

313. All are seen in drowing except - *(PGI 99)*
a) Miosis
b) Wet heavy lungs
c) Water and weeds in stomach and lung
d) Froth from mouth

314. Features supporting strangulation are - *(PGI 01)*
a) Blood outside vessels in microscopy from skin of ligature site
b) Dribbling of saliva from angle of mouth
c) Marked cyanosis of face
d) Frothy sputum in mouth and nostrils
e) Ligature mark

315. A dead body is found, on pressure over the chest fine leathery froth came out through nostrils and mouth, the mode of death was - *(PGI 03)*
a) Hanging
b) Organophosphorus poisoning
c) Drowing
d) Strangulation
e) Morphine poisoning

316. In fresh water drowning the death occurs within 4-5 minutes of submersion due to ventricular fibrillation. Which of the following reasons is responsible for this- **(***AIIMS 04)*
a) Total asphyxia is produced due to fresh water
b) Laryngospasm causing vagal inhibition
c) Haemoconcentration of blood caused by the osmotic pressure effect
d) Haemodilution, overloading of heart and haemolysis resulting in release of potassium

317. Which of the following is not seen in drowning -
a) Weeds in stomach and lung (*Kerala 04)*
b) Miosis
c) Wet heavy lungs
d) Frothing from mouth

318. All are types of strangulation except - (*Kerala 04)*
a) Bansdola b) Lynching
c) Garotting d) Mugging

319. When skull and photograph of face are available, identity can be established by - *(SGPGI05)*
a) Dactylography
b) Poroscopy
c) Superimposition technique
d) Gustafson's method

320. Foamy liver is seen in - *{SGPGI05)*
a) Arsenic poisoning b) Putrefaction
c) Mummification d) Aconite poisoning

321. Study of finger printing is - *(PGI June 05)*
a) DNA finger printing b) Dactylography
c) Gene analysis d) Poroscopy
e) Cheiloscopy

322. Medico-legal importance of rigor mortis is in estimation of - *{MAHE 05)*
a) Time of death b) Manner of death
c) Cause of death d) All the above

323. Female pelvis can be differentiated from male pelvis by- **(***APPGE05***)**
a) Larger obturator foramen
b) Obtuse angle of suprapubis
c) Suprapubic sulcus is prominent
d) All

324. The minimum age at which an individual is responsible for his criminal act is - *(AI05)*
a) 7 years b) 12 years
c) 16 years d) 21 years

325. The most reliable method of identification of an individual is - *(AI 05)*
a) Dactylography b) Scars
c) Anthropometry d) Handwriting

326. The most common pattern of fingerprint is -
a) Arch b)Loop *(AI 05)*
c) Whorl d) Composite

327. The most reliable criteria in Gustafson's method of identification is - *(AI 05)*
a) Cementum apposition b) Transparency of root
c) Attrition d) Root resorption

304)None 305)d 306)c 307)d 308)c 309)a 310)a 311)b 312)a 313)a 314)a,c,e 315)c 316)d 317)b
318)b 319)c 320) b 321)b 322)a 323)b 324)a 325)a 326)b 327)b

328. **Spalding's sign occurs after -** *(AI06)*
a) Birth of live fetus
b) Death of fetus in uterus
c) Rigor mortis of infant
d) Cadaveric spasm

329. **Fingerprint Bureau was first established in -**
a) England b) China *(AI06)*
c) India d) Singapore

330. **When a surgeon wants to send the autopsy specimen for virological examination, it should be preserved in-** *(AIIMS06)*
a) 50% glycerine
b) 10% formalin
c) Rectified spirit
d) Saturated solution of common salt

331. **The fingerprint pattern may be impaired permantly in cases of -** *(AIIMS 06)*
a) Eczema b) Scalds
c) Scabies d) Leprosy

332. **Most reliable criteria in Gustafson method of age estimation is -** *(AIIMS 06)*
a) Attrition
b) Secondary dentin deposition
c) Transparency of root
d) Cementum apposition

333. **Minimum age for punishment in Railways act ?**
a) 2 years b) 5 years *(APPG 06)*
c) 7 years d) 12 years

334. **The rate of temperature falls after death is -** *(UP 0 7)*
a) 0.2 - 0.3°C/hour b) 0.5 - 0.7°C/hour
c) 2 - 3°C/hour d) 5 - 7°C/hour

335. **The medicolegal importance of postmortem lividity is all except -** *(UP 07)*
a) Cause of death elsewhere
b) Time since death
c) Manner of death
d) Position of the body at the death

336. **Delayed rigor mortis occurs with -** *(UP 0 7)*
a) Vegetables poisons b) Strychnine
c) Opium d) Septicemia

337. **Last organ to be dissected during autopsy in asphyxial death is -** *(AIIMS Nov 0 7)*
a) Neck b) Head
c) Abdomen d) Thorax

338. **In autopsy, preservative used for vitreous is -**
a) Fluoride b) HC1 *(AIIMSNov 07)*
c) Phenol d) Xylol

339. **Postmortem rigidity first starts in -** **(***Corned 08)*
a) Eyelids b) Neck
c) Upper limbs d) Lower limbs

340. **In normal conditions of temperature and atmosphere, the rate of cooling of dead body is -**
a) 1.0°F/hour b)1.5°F/hour *(Corned 08)*
c) 2.0°F/hour d)2.5°F/hour

341. **Foamy liver is found in -** *(UP 08)*
a) Drowning b) Putrefaction
c) Adipocere d) Abortion

342. **In Riger mortis, first appearance occurs at-(T/P** *08)*
a) Neck b) Eyelid
c) Face d) Trunk

343. **Which of the following is not a cause of death due to suffocation -** *(AI 08)*
a) Choking b) Gagging
c) Smothering d) Throttling

344. **Fracture of the hyoid bone and thyroid cartilage with neck muscle bruising suggests a diagnosis of -**
a) Strangulation b) Hanging *(AI08)*
c) Choking d) Gagging

345. **Fracture of hyoid bone, thyroid cartilage and cricoid cartilage along with extensive bruising of neck muscles suggests a diagnosis of -** *(AI 08)*
a) Manual strangulation
b) Ligature strangulation
c) Hanging
d) Choking

346. **Sweating is Not present in -** *(AiimsMay08)*
a) Heat syncope b) Heat cramps
c) Heat stroke d) Heat fatigue

347. **Corpus delicti means -** *(Aiims May 08)*
a) Essence of crime
b) Inquest into death
c) Postmortem examination
d) Death by asphyxia

348. **Last organ to be dissected during autopsy in asphyxial death is -** *(Aiims May 08)*
a) Neck b) Head
c) Abdomen d) Thorax

349. **Dark brown P.M. lividity is seen in -** *(PGI June 08)*
a) Aniline b)CO
c) Phosphorous d) Hydrocyanide

350. **The rate of temperature fall after death** *is-(DPGEE 08)*
a) 2-3° C/hour b) 0.5-0.7^0 C/hour
c) 0.2-0.3^0 C/hour d) 5-7° C/hour

351. **What is aseptic autolysis called ?** *(APPG 08)*
a) Decomposition b) Adipocere
c) Mummification d)None

352. **Heat Rupture is characterized by -** *(AI 09)*
a) Regular margins
b) Irregular margins
c) Ruptured blood vessels
d) Ruptured red blood cells

353. **Incisional wound on genital is seen commonly in-** *(AIIMSMay 09)*
a) Accidents b) Suicides
c) Homicides d) Postmortem artifact

354. **Tentative cuts are seen in -** *(PGI June 09)*
a) Homicidal wound
b) Suidical wound
c) Rail Track accidental wound
d) Road traffic wound

355. **After death, tache noir is seen in -**
a) Lungs b) Brain *(DELHI PG Feb. 09)*
c) Heart d)Eyes

328) b 329) c 330) b 331)d 332) c 333) b 334) b 335) c 336) d 337) a 338) a 339) a 340) b 341) b

356. Paltauf s hemorrhage is seen in- *(DELHIPGFeb. 09)*
a) Wet drowning b) Dry drowning
c) Electrocution d) Suicidal hanging

357. Heat rupture is characterised by - *(AIIMSMay 10)*
a) Irregular margin b) Clotted blood
c) Regular margin d) Clotted blood vessels

358. During putrefaction, fixation of marbling occurs at- *(Maharashtra 10)*
a) 48-72 hours b) 72-96 hours
c) 36-48 hours d) 12-24 hours

359. Cephalic index is used to detect - *(Maharashtra 10)*
a) Age b)Sex
c) Race d) Any of the above

360. Le Facies sympathique is suggestive of -
a) Antemortem hanging *(Maharashtra 10)*
b) Suicidal hanging
c) Homicidal hanging
d) Postmortem hanging

361. Which of the following is best for testing development of rigor mortis? *(Maharashtra 10)*
a) Opening the lower jaw
b) Flexing elbow joint
c) Flexing knee joint
d) Falling the leg from height

362. Maximum congestion is seen in - *(DPG10)*
a) Choking b) Hanging
c) Strangulation d) Drowning

363. In freshwater drowning, the death occurs with 4-5 minutes of submersion due to ventricular fibrillation. Which of the following reasons is responsible for this? *(DPG 10)*
a) Total asphyxia produced due to fresh water
b) Laryngospasm causing vagal inhibition
c) Hemoconcentration of blood caused by the osmotic pressure effect
d) Haemodilution, overloading of heart and haemolysis resulting in release of potassium

364. All are components of black gum powder blister except- *(DPG 10)*
a) Sulphur b) Charcoal
c) Potassium nitrate d) Lead peroxide

365. In case of death due to starvation, at autopsy the condition of the gall bladder will be - *(Corned 10)*
a) Distended with inspissated bile
b) Empty
c) Filled with mucus
d) Filled with purulent fluid

366. Spanish windlass was practices in Spain as a method of execution. It is a type of - *(AIIMS Nov 10)*
a) Bansdola b) Mugging
c) Garrotting d) Hanging

367. 'La facies sympathique[9] is a condition seen in cases of- *(PUNJAB 11)*
a) Hanging b) Strangulation
c) Myocardial insufficiency d) Railway accidents

368. When a doctor shows gross absence of skill and care during treatment resulting in serious injury or death of the patient, it is called - *(Jipmer 11)*
a) Criminal negligence b) Malpractice
c) Maloccurence d) Misadventure

SEC - IV s MECHANICAL INJURIES, FIREARMS AND FIREARM INJURIES, REGIONAL INJURIES, THERMAL INJURIES

369. Grevious injury includes which of the following -
a) Incised wound of scalp *(PGI87)*
b) Lacerated wound of scalp
c) Fracture radius
d) Injury which kept patient away from week for 10 days
e) Abdominal trauma

370. Arborescent marking are seen in burns due to -
a) Electricity b) Phosphorus *(PGI 87)*
c) Lightening d)UVrays

371. Puglistic attitude in burns is seen in -
a) Antemortem bums *(AIIMS87, PGI86)*
b) Post mortem bums
c) Homicidal bums
d) Suicidal bums
e) Both antemortem bums and post mortem bums

372. Bevelling of the skull is seen in the - *(AI88)*
a) Broad end of the entry point in bullet injury
b) Narrow end of the entry point in bullet injury
c) Exit point of bullet
d) Depressed fracture of the skull

373. Pugilistic attitude is seen in - *(AI89)*
a) Bums b)Electrocution
c) Drowning d) Strangulation

374. Grease color is seen with.....Wounds - *(AI 89)*
a) Fire arm entry b) Fire arm exit
c) Road traffic accident d) Hanging

375. Joule burn is seen with - *(AI 89, TN 90)*
a) Electrocution b) Scalds
c) Lighting d) Vitriolage

376. Which of the following constitute grevious injury-
a) Incised wound of scalp *(AI 89, TN 90)*
b) Incised wound of thigh
c) Fracture Tibia
d) Laceration of the scalp

377. Grease collar is seen with - *(AIIMS 84)*
a) Electrocution b) Lighting
c) Thermal injury d) Bullet entry

378. In a lacerted wound the hair bulb is - *(AIIMS 84)*
a) Cut b) Crushed
c) Both of the above d) Lacerated

379. Pugilistic attitude is seen in - *(PGI88)*
a) Antemortem bums b) Post mortem bums
c) Drowning d)All

356) a 357) d 358) c 359) c 360) a 361) a 362) c 363) d 364) d 365) a 366) c 367) a 368) a 369) c

380. Privation of any member of joint is a.....hurt -
a) Simple b)Grevious *(PGI85)*
c) Serious d) Dangerous

381. More than 5% carboxyhemoglobin is indicative of -
a) Ante mortem bums b) Drowning *{PGI 89)*
c) HCN poisioning d) Suffocation

382. Greenish colour in a contussion is due to -
a) Hemosiderin b)Haematoidin *(JIPMER90)*
c) Bilirubin d) Biliverdin

383. In a completely charred body at autopsy, medical officer can say that the burns are antemortem if he can find-
a) Soot in respiratory passage *(JIPMER 90)*
b) Cyanosis of finger nails
c) Congestion of kidney
d) Pale internal organs

384. Tentative cuts occur in which injury - (*.AI90)*
a) Accidentalb) Suicidal
c) Homicidal d) Fabricated

385. Choking is constricting device within the barrel at the muzzle end of - *(TN 89)*
a) Revolverb) 303 rifle
c) Shot gun d) Semiautomatic pistol

386. Which is true about stab wound - *{AI 91)*
a) Breath is maximum
b) Length is maximum
c) Depth is maximum
d) It has wound of entry and exit

387. The commonest cause for sudden death is - *{AI91)*
a) Acute myocarditis b) Pulmonary edema
c) Myocardial infarction d) CCF

388. Dermal Nitrate test detects - *{AIIMS 91)*
a) Nitrite Salt Poisoning b) Blood stains
c) Nerve gas poisoning d) Gun powder residue

389. Which is a Cognisable offence except - *{AI 93)*
a) Robbery b) Murder
c) Rape d) Attempted suicide

390. Postmortem wound best differs from the antemortem wound by - *{Delhi 87,93)*
a) Gaps on incising
b) No clots
c) Absence of erythema and cellular changes
d) Stain can be removed by washing

391. Which of the following indicates that the wound in a hospitalized woman typist hit by lathis admitted for 20 days was grevious - *(AIIMS 81, Delhi 93)*
a) She is not able to be recognized
b) Wound does not heal completely
c) Incised wound over scalp
d) She is not able to do her daily routines

392. Following are the causes of death in a patient with burns except - *(ARMS 78, ORISSA 91)*
a) Shock b) Suffocation
c) Sepsis d) Air embolism

393. Tearing of the skin and subcutaneous tissue is called- *{AP90)*
a) Abrasion b) Laceration
c) Contussion d) Avulsion

394. On tenth day of a tooth being knocked out, the local clinical finding will be - *(ARMS 81, Kerala 89)*
a) Tooth socket being filled up by tissue
b) Blood clots in the socket
c) Alvoelar process smooth
d) Fluid blood in the socket

395. The effective range of shot gun is - *(ARMS 79,*
a) 10 to 15 yards b) 20 to 30 yards *AMU87)*
c) 30 to 40 yards d) 60 to 80 yards

396. False vesication differs from true vesication except-
a) Produced after death *(DNB 89)*
b) Vesicles contain gas and no fluid
c) No inflammatory or respiratory zone present
d) None of the above

397. Bullet is picked up with- *(ARMS 81, ROHTAK86)*
a) Toothed forceps b) Hands
c) Scissors d) Needle

398. Compressed air is used to fire lead slugs in- *(PGI 81, AMU 87)*
a) Automatic pistol b) Revolver
c) Air rifle d) Shot gun

399. Detonator cap is situated at - *(ARMS 80, PGI85)*
a) Top of the bullet b) Side of the bullet case
c) Base of the rim d) None of them

400. Section 302 of Indian penal Code is for-
a) Rape *(ARMS 80, AMC 83)*
b) Murder
c) Grievous hurt
d) Attempt to commit suicide

401. Pellet holes in a firearm wound is seen if distance is - *(JIPMER 81, ARMS 84)*
a) 60 cm b) 100 cm
c) 150 cm d) 200 cm

402. Incised-like lacerated wound appears at - *(PGI83,*
a) Forehead b) Hand *DELHI 87)*
c) Thorax d) Abdomen

403. Filigree burns are due to - *{ARMS 79, PGI 81)*
a) Chemicals b) Lightening
c) Electric shock d) Radiations bums

404. The proliferation of vascular endothelium is seen within - *{ARMS 81, AMU 86)*
a) 6 hours b) 12 hours
c) 24 hours d) 7 days

405. Smokeless gun powder is composed of - *(ARMS 80,*
a) KMn04 b) HCN*81)*
c) Nitrocellulose d) Sulphur

406. Provisional callus forms in fracture of bone by- *(JIPMER 81, AMU 86)*
a) 3 days b) 7 days
c) 14 days d) 30 days

407. 'Pond Fracture' is seen commonly in - *(TN87)*
a) Persons who are over 50 year of age
b) Young adults
c) Children
d) Women

380) b 381)None 382)b 383) a 384) b 385) c 386) c 387) c 388) d 389) d 390) c,d 391)d 392) d 393) b
394)a 395)c 396)d 397)b 398)c 399)c 400)b 401)d 402)a,b 403)b 404)d 405)c 406)b 407)c

408. Full dispersion is seen in - *(PGI79, AIIMS81)*
a) Full choked b) Half choked
c) Unchoked d) All of the above

409. Callus becomes thick and hard like bone within- *(JIPMER80, AMU86)*
a) 2 weeks b) 4 weeks
c) 6 weeks d) 3 months

410. "Fracture a-la signature" is - *(IN89)*
a) A depressed fracture
b) A fissured fracture
c) Separation of the suture lines
d) A ring fracture

411. The killing range of a military rifle is about -
a) 100 yards b) 500 yards *(AP89)*
c) 1000 yards d) 300 yards

412. Open wound is a - *(Kerala 94)*
a) Contussionb) Abrasion
c) Laceration d) Concussion

413. "Triage" is associated with - *(Jipmer 95)*
a) Warfare injuries b) Road injuries
c) Gun shot injuries d) Poisoning resuscitation

414. Brush injury is due to - *(All India 95)*
a) Friction b) Electric shock
c) Scalds d) Bullet injury

415. One of the following is an example of a grevious injury- *(Delhi 96)*
a) Scalp laceration
b) Forearm laceration requiring stitches
c) Fracture of radius
d) Groin injury with loss of 1 litre of blood

416. The most common type of hemorrhage in injury to boxers is - *(AIIMS 95)*
a) Extradural b) Subdural
c) Intracerebral d)Intraventricular

417. Crocodile skin appearance is seen in - *(Kerala 96)*
a) High voltage bums b) Electric Shock
c) Drowning d) Mummifications

418. Which is not true regarding colour of bruise -
a) 4th day - bluish black to brown *(CUPGEE96)*
b) 7-12 days - green
c) lstday-Red
d) 2 Weeks - normal

419. Filigree burns are due to - *(AP96)*
a) Splashes b) Flame bums
c) AC Current d) Lightening

420. All are components of black gun powder except- *(AIIMS97)*
a) Sulphur b) Charcoal
c) Potassium nitrate d) Lead peroxide

421. Ante mortem blister differs from postmortem blister by- *(PGI96)*
a) Presence of Albumin & Chloride in blister fluid
b) Gas in blister
c) Dry hard surface of the floor of blister (punctured)
d) Absence of hyperemia around the blister

422. Joule burn is seen in - *(UP 97)*
a) Electrocution b) Thermal Injury
c) Radiation Injury d) Lightning

423. In deep incised wounds, Langer's lines determine -
a) Direction b) Gaping *(MAHE98)*
c) Shelving d) Healing

424. Damage produced by a bullet fired from a_____ person in direct proportion - *(Orissa 99)*
a) Size b) Shape
c) Velocity d) Weight

425. Which is associated with shotgun along-
a) Gun powder b) Primer *(Orissa98)*
c) Projectile d) Wads

426. For dowry death punishment is - *(Orissa R)*
a) 3 year imprisonment+Rs. 10,000/-
b) 5 year imprisonment + Rs. 15,000/-
c) 7 year imprisonment + Rs. 20,000/-
d) 2 year imprisonment + Rs. 15,000/-

427. Grevious hurt is punishable under section_____ IPC- *(Orissa R)*
a) 320 b)354
c) 321 d)402

428. Which of the following sections of IPC are concerned with dowry death - *(Kerala 2K)*
a) 300 b)302
c) 304 d) 304-A
e) 304-B

429. Grevious injury includes all the following except-
a) Emasculation *(Kerala 2K)*
b) Permanent privation of hearing
c) Privation of any member/joint
d) Disability to follow one's ordinary pursuits for a period of a week
e) Permanent disflgeration of face

430. Dermal Nitrate test is done for the detection of- *(J&K2001)*
a) Gunpowder residue b) Seminal stains
c) Blood stains d) Saliva

431. Gutter fracture is due to - *(KERALA 2001)*
a) A sharp weapon b) Fire arm injury
c) Blunt weapon d) Serrated edge

432. Detection of metals (heavy) is done by using all tests except - *(AI2002)*
a) Harrison - Gilory test
b) Spectroscopic examination
c) Neutron activation test
d) Paraffin test

433. Black gun powder; ingredient not present is -
a) Lead peroxide b) Arsenic *(PGI 02)*
c) Charcoal d) Silver nitrate
e) Sulphur

434. Where does a lacerated wound appear like a incised wound- *(AP 02)*
a) Abdomen b) Thorax
c) Hand d) Forehead

408) c 409) d 410) a 411)b 412)c 413)a 414) a 415)c 416) b 417)a 418)b 419)d 420)d 421) a
422) a 423) b 424) c,d 425) d 426) c 427) a 428) e 429) d 430) a 431)b 432) d 433)a,b,d 434) c,d

435. Gutter fracture result from - *(AP 02)*
a) Injury with a large round object
b) Bullet injuries
c) Automobile accident
d) Falling from a height

436. Grevious injury includes - *(PGI02)*
a) Emasculation
b) Loss of 15 days work
c) Permanent disfigurement
d) Fracture of bones

437. Mercury fulminate is used in fire arm ammunition as - *(JIPMER 89, AMC 02)*
a) Detonator b) Smokeless powder
c) Black powder d) Mixed powder

438. Pugilistic attitude is due to - *{PGI02)*
a) Bums
b) Vitriolage
c) Flexor group contracture
d) Extensor group contracture

439. Markings in a projectile occurs in - *(A.L 02)*
a) Double barrel gun b) Pistol
c) Rifle d) Shot gun

440. In blast injury most common organ affected -
a) Eardrum b) Stomach *(CUPGE97)*
c) Lungs d) All of the above

441. The extent of muscle damage by a bullet depends primary on the - *(UPSC 9 7)*
a) Size b) Velocity
c) Shape d) Weight

442. Lacerated wound looks like an incised wound in the-
a) Scrotum b) Scalp *(PGI 88)*
c) Abdomen d) Thigh

443. Burn (heat) haematoma is seen between -*(PGI97)*
a) Skull and dura b) Brain and arachnoid
c) Arachnoid and Pia d) Pia and dura

444. Pugilistic attitude is most common in woman dying with- *(PGI 97)*
a) Antemortem bums
b) Post mortem bums
c) Asphyxia
d) Carbon monoxide poisoning

445. Injury that comes under sec 320IPC - *(PGI97)*
a) Abrasion over face
b) Nasal bone fracture
c) Epistaxis
d) Lacerated wound over scalp

446. Antemortem bruise is differentiated from postmortem bruise by - *(PGI 99)*
a) Well defined margin
b) Capillary rupture with extravasation blood and ligature mark
c) Yellow colour
d) Gaping

447. Pugilistic attitude is due to - *(PGI 99)*
a) Coagulation of proteins b) Cadaveric spasm
c) Rigor mortis d) Coagulation of fats

448. Grevious injuries are - *(PGI 2000)*
a) Severe bodily pain for 10 days
b) Not able to work for 17 days
c) Dislocation of tooth
d) Joint dislocation
e) Bone fracture

449. Difference between antemortem burns & postmortem burns & vesicles, favouring AM burn vesicles is/are- *(PGI 2000)*
a) Tissue beneath vesicle is dry, hard & yellow
b) Protein & chloriedes in vesicle are more
c) Erythema is present
d) Fluid in the vesicle is scanty

450. Difference between incised wound & heat rupture, favouring heat rupture are - *(PGI2000)*
a) Margins well defined
b) Small & multiple wounds
c) Nerves & vessels around are visible in floor
d) Seen only over scalp

451. Use of wadding in a smooth bore gun rifle produces all except - *(PGI2000)*
a) Causes fatal injuries b) Helps in lubrication
c) Optimum pressure d) Sealing the air

452. Sites notorious for incised looking wound are all except- *(PGI2000)*
a) Chest b) Zygoma
c) Iliac crest d)Shin

453. Depressed # of skull results from - *(PGI 2000)*
a) Heavy object with small striking surface
b) Heavy object with large striking surface
c) Fall over the ground
d) Light object

454. Lacerated wound appears as incised wound in which of the following sites - *(PGI 01)*
a) Scalp b)Tibialshin
c) Anterior abdominal wall d) Anterior thigh
e) Around the hip

455. Difference between antemortem wounds and postmortem wounds, in favour of AM wounds is/are-
a) Are larger *(PGI01)*
b) Increased gaping of wounds
c) Increased enzyme activity
d) Oozing of blood

456. Black gunpowder contains- *(PGI02)*
a) Charcoal b)$KN0_3$
c) Sulfur d) Lead peroxide
e) Arsenic

457. Which of the following are grevious injury -
a) Emasculation *(PGI03)*
b) Privation of any member of joint
c) Permanent disfiguration of head or face
d) Injury that heals spontaneously without any damage
e) Injury causing an absence from work for 15 days

435) b 436) a,c,d 437) a 438) a 439) b,c 440) d 441) b,d 442) b 443) a 444) a,b 445) b 446) b,d 447) a 448)c,d,e 449) b,c 450) b,e 451) a 452) a 453) a 454) a,b 455) b,c 456)a,b,e 457)a,b,c

458. In antemortem tooth loss or extraction of the alveolus is - (*Karnataka 02)*
a) Smooth
b) Sharp and feathered
c) Does not show any injury
d) sMay have a regular or an irregular appearance

459. I.P.C section for grevious injury - (*Jipmer 03)*
a) Section 420 b) Section 320
c) Section 299 d) Section 351

460. Stellate wound is produced with firearm in -
a) Contact shot b) Close shot *(TN 03)*
c) Range within 60 cms d) Distant shot

461. In which of the following weapons empty cartridge case is ej ected after firing - *(AIIMS 04)*
a) Short gun b)Revolver
c) Pistol d) Rifle

462. A 25 year old person sustained inj ury in right eye. He developed right corneal opacity following the injury. Left eye was already having poor vision. Corneoplasty of right eye was done and vision was restored. Medicolegally such injury is labeled as - *(AI04)*
a) Grievous b) Simple
c) Dangerous d) Serious

463. True regarding electrocution injuries is all except - *(SGPGI04)*
a) Direct current produces greater damage as compared to alternating current
b) The injuries are greater when associated with moist contact
c) The injuries are of higher intensity if the body is partially not earthed
d) High voltages throw the victms clear

464. In Northern India postmortem staining seen in - *(PGI June 05)*
a) 6 hr after death b) 12 hr after death
c) 24 hr after death d) 18 hr after death
c) 26 hr after death

465. Goose skin or cutis anserina is seen in -*(PGIjune 05)*
a) Drowning b) Lightening
c) Strangulation d) Fire arm injury

466. Ideal tissue for diatom study - *(PGI June 05)*
a) Bone marrow of femurb) Lung
c) Liver d) Brain
e) Kidney

467. Atypical drowning is due to - *(MAHE 05)*
a) Laryngospasm b) Vagal inhibition
c) Water inhalation d) Electrolyte disturbance

468. A person is presumed dead as per law if not seen or heard for by his/her near and dear ones for -
a) 5 years b) 7 years *(Orissa 05)*
c) 10 years d) 15 years

469. 'La facies sympathique' is a condition seen in cases of - *(AIIMS NOV 05)*
a) Hanging b) Strangulation
c) Myocardial insufficiency d) Railway accidents

470. Which of the following statements is not correct regarding diatom - *(AI 05)*
a) Diatoms are aquatic unicellular plant
b) Diatoms has an extracellular coat composed of magnesium
c) Acid diagestion technique is used to extract diatoms
d) Presence of diatoms in the femoral bone marrow is an indication of antemarten inhalation of water.

471. Postmortem caloricity may be seen in all the following causes of death *except* **-** *(AIIMS May 05)*
a) Septicemia
b) Barbiturates poisoning
c) Strychnine poisoning
d) Tetanus

472. The ideal place to record temperature in dead body is from - *(AIIMS May 05)*
a) Axilla b) Groin
c) Rectum d) Mouth

473. When a group of muscles of a dead body were in state of strong contraction immediately prior to death and remain so even after death, the condition is termed as - *(AIIMS May 05)*
a) Gas stiffening b) Rigor mortis
c) Cadaveric spasm d) Cold stiffening

474. The ideal place to record body temperature in dead body is- *(AIIMS 06)*
a) Rectum b) Axilla
c) Mouth d) Groin

475. A dead boy having cadaveric lividity of bluish green colour.The most likely cause of death is by poisioning due to - *(AIIMS 06)*
a) Hydrocyanic acid b) Hydrogen sulphide
c) Oleander d) Sodium nitrite

476. Paradoxical undressing is seen in - *(Manipal 06)*
a) Exhibitionism b) Fetichism
c) Hypothermia d) Carbon monoxide poisoning

477. KEYHOLE bullet entry is a feature of- *(MAHE 07)*
a) Tandem Bullet b) Ricochet Bullet
c) Single Bullet d) Double Bullet

478. Most common cause of death in Electrocution is -
a) Respiratory muscle paralysis *(UP 07)*
b) Ventricular fibrillation
c) Asphyxia
d) Regurgitation of fluids

479. 'Molotov cocktail' is - *(UP 07)*
a) Time bound bomb
b) Mixture of alcohol
c) Mixture of drug composition
d) Incendiary bomb

488. Fg, FFg FFFg used to describe - *(PGI June 07)*
a) Primer b) Cartridge
c) Black gunpowder d) Wad

458) b 459) b 460)a 461)c 462)a 463)a 464)a 465)a 466)a 467)b 468)b 469)a 470)b 471)b
472) c 473)c 474)a 475)b 476)c 477)b 478)b 479)d 480) c

481. With Reference to an incised wound all the following are true except - *(Corned 07)*
a) It has clean cut margins
b) Bleeding is generally less than in laceration
c) Tailing is often present
d) Length of injury does not correspond with the length of the blade

482. Fracture dislocation of 2nd and 3rd cervical vertebrae is common in - *(Corned 07)*
a) Partial hanging b) Lynching
c) Judicial hanging d) Throttling

483. Which of these is not a grevious injury?
a) Loss of teeth *(ARMS Nov 07)*
b) Loss of hearing of one ear
c) Permanent disfiguration of face.
d) Abrasion on face.

484. Telefono is... *(AIIMSNov 07)*
a) Beating the soles of feet with rod
b) Beating of the ears
c) Forced immersion of head until stage of suffocation
d) Tying of a plastic bag over head.

485. Most common site of primary impact injury to pedestrians in a motor vehicle accident is...
a) Abdoemn b)Legs *(ARMS Nov 07)*
c) Head d) Chest

486. In tandem bullet, number of bullet/bullets coming out of the gun is/are - *(ARMS Nov 07)*
a) 1 b)2
c) 3 d)4

487. In a 6 year old child with burns involving the whole of head and trunk, the estimated body surface area of burns is- *(Corned 08)*
a) 44% b) 52%
c) 55% d)58%

488. Vipers snake bites resembles - *(UP 08)*
a) Sulfuric acid b) Organophosphorus
c) Thallium d) Abrus precatorius

489. Gun powder consists of all except - *(UP 08)*
a) Sulphur b) Charcoal
c) Potassium nitrate d) Lead nitrate

490. Difference between post burn rupture & incised wound - *(PGI June 08)*
a) Seen in front of the thigh
b) Intact blood vessels & nerve at floor of the wound
c) Bleeding from the wound
d) Small and multiple

491. Hingee fracture of skull is seen in accidents involving- *(Manipal 08)*
a) Car driver b) Car passenger
c) Pedestrian d) Motorcycler driger

492. A bullet which is packed with jacket and opens at base is called - *(DPGEE 08)*
a) Tandem bullet b) Duplex bullet
c) Dum Dum bullet d) Souneir bullet

493. Hydrocutioifis - *(ARMS Nov 08)*
a) Electrocution ^ water
b) Dry drowning ˅
c) Drowning in cold water
d) Postmortem immersion

494. What is Falanga? *(ARMS Nov 08)*
a) Beating on soles with blunt object
b) Beating on ear with both palms
c) Beating on the abdomen
d) Suspension by wrists

495. FQ FFQ FFFG..used to discribe - *(PGI Dec 08)*
a) Primer b) Cartridge
c) Black gunpowder d) Wadding
e) Base of firearms

496. Antemortem Abrasions can be confused with -
a) Eczema b) Ant bite marks *(A109)*
c) Chemical bum d) Joule bum

497. Extensive abrasions are found all over the body of a pedestrian lying by the road side. What is the likely cause ? *(AI09)*
a) Primary impact injury
b) Secondary impact injury
c) Secondary injury
d) Postmortem artifact

498. Stellate wound may be seen in which of the following bullet entry wounds - *(AI 09)*
a) Contact wound b) Close shot
c) Distance shot d) Two feet distance

499. Commonest organ to be injured in primary blast injuries is - *(AI09)*
a) Lung b) Liver
c) Spleen d)Skin

500. Which of the following skull fractures is called a 'Motorcyclist's fracture - *(AI 09)*
a) Ring fracture of base of skull
b) Hinge fracture of base of skull
c) Comminuted fracture of skull
d) Depressed fracture of skull

501. All of the following may cause Traumatic Asphyxia, Except- *(A109)*
a) Railway accident
b) Road traffic accident
c) Accidental strangulation
d) Stampede in crowd

502. In which part of body a lesser impact causes maximum bruise? *(ARMS May 09)*
a) Face b)Sole
c) Back zd) Palm

503. Antemortem and postmortem wounds could be differentiated by all, except - *(ARMS May 09)*
a) Everted margins
b) Blood clots in surrounding tissue
c) Swollen edges
d) Sharp edges

481)b 482)c 483)d 484)b 485)b 486)b 487)b 488)d 489)d 490)a,b,d 491)d 492)c 493)c 494)a
495) c 496)b 497)c 498) a 499)a 500)b 501)c 502)a 503) d

504. Destructive power of bullet is determined by- *(AIIMS May 09)*
a) Weight of bullet b) Shape of bullet
c) Size of bullet d) Velocity of bullet

505. The most affected organ or system in a blast under water is - *(DELHIPG Feb. 09)*
a) Lungs b) Intestine
c) Skin d) Heart

506. In countrecoup injuries - *(DELHIPG Mar. 09)*
a) Injury is on same side
b) Injury is on opposite side
c) Injury is all over the brain
d) None of the above

507. Blackening found at entry wound in firearm injuries is due to - *(DELHI PG Mar 09)*
a) Burnt gun powder b) Smoke
c) Flame d) Friction and dirt

508. All belong to category of grievous hurt, except- *(DELHI PG Mar 09)*
a) Superficial firearm wound over thigh
b) Stab injury of abdominal cavity
c) Hairline fracture of first metatarsal
d) Acid bum over face

509. All are suggestive of traumatic bleed, except -
a) Extradural haemorrhage *(DELHI PG Mar 09)*
b) Subdural haemorrhage
c) Subarachnoid haemorrhage
d) Contusion

510. Antemortem burn differ from postmortem burns by all except - *(AIIMS Nov 09)*
a) Pus in vesicle
b) Vesicle with hyperemic base
c) Vesicle containing air
d) Infammatory red line

511. Motorcyclist fracture among the following is -
a) Ring fracture *(AIIMS May 10)*
b) Sutural seperation
c) Comminuted fracture of vault of skull.
d) Fracture base of skull into anterior & posterior halves

512. Destructive power of bullet is determined by -
a) Weight of bullet *(AIIMS May 10)*
b) Shape of bullet
c) Size of bullet
d) Velocity of bullet

513. Primary impact injuries are commonly seen on -
a) Chest b) Abdomen *(AI10)*
c) Legs d)Head

514. Which of the following bullets leaves a visible mark, so that a person can see it - *(AI 10)*
a) Tandem bullet b) Tracer bullet
c) DumDum bullet d) Incendiary bullet

515. Lightening flash can cause injury by all of the following, Except - *(AI 10)*
a) Direct effect of electric current
b) Super heated air
c) Expanded and repelled air
d) Compressed air pushed in front of the current

516. Arborescent marks or filigree burns are seen in- *(Maharashtra 10)*
a) Radiation b) Electrical bums
c) Chemical bums d) Lightening

517. Bevelling of the skull is seen in the - *(DPG10)*
a) Broad end of the entry point in bullet injury
b) Narrow end of the entry point in bullet injury
c) Exit point of bullet
d) Depressed fracture of the skull

518. A bullet fired from a gun is not released. It is ejected out with the subsequent shot. It is known as- *(DPG 10)*
a) Dumdum bullet b) Rocketing bullet
c) Richochet bullet d) Tandem bullet

519. Rule of Hasse is used for calculating - *(Punjab 10)*
a) Time since death b) Age of Foetus
c) Fluid requirement d) Bum area

520. All are components of black gun powder except -
a) Sulphur *(Punjab 10)*
b) Charcoal
c) Potassium nitrate
d) Nitrocellulose

521. Incised looking lacerated wounds are seen in -
a) Hand b) Thorax *(Jipmer 10)*
c) Abdomen d) Forehead

522. Differentiating features of contusion (Vs postmortem staining) are - *(PGI May 10)*
a) Blusih is color
b) Disappear on pressure area
c) Margin irregular
d) Limited to intravascular compartment
e) Extravasation of blood occurs

523. True about pugilistic attitude - *(PGIMay 10)*
a) Indicate only antemortem bum
b) Indicate only postmorten bum
c) Can not differentiate b/w ante & post mortem bum
d) Occur d/t intense heat
e) Indicate defence by victim

524. False about bruise - *(PGINov. 10)*
a) Much darker at point of contact / pressure
b) Blood is present in vessel and can be easily washed away
c) Seen at / around the area of injury
d) Extravasation of blood occurs
e) Produced by blunt object

525. A rickshaw tyre passed on a 8 year old child. T^re marks were found on the body. This is an exmaple of- *(AIIMS Nov 10)*
a) Percolated bruise b) Imprint abrasion
c) Contusion d) Patterned bmise

526. 'Sparrow's foot' mark is seen in - *(AI 11)*
a) Gunshot Injuries
b) Stab injury of face
c) Windshield Glass injury
d) Vitriolage

504) d 505) b 506)b 507)b 508)a 509)c 510)c 511)d 512) d 513)c 514)b 515)d 516) d 517) c

641. Professional death sentence is - *(AMC2K)*
a) Imprisonment for whole life
b) Rigorous imprisonment
c) Erasing the name from the panel of RMPs
d) None

642. For diagnosis of lunacy a person can be kept under observation at a stretch for - *(Orissa 98)*
a) 2 days b) 7 days
c) 10 days d) 30 days

643. Me Naughten's rule: *(Orissa R)*
a) Section 84 b) Section 85
c) Section 86 d) Section 87

644. All of the following conditions of defence available to a doctor against allegation of negligence except
a) Medical maloccurrence *(Kerala 2K)*
b) No fee for treatment charged
c) Therapeutic misadventure
d) Res Judicata
e) Error judgement

645. Lucid interval is seen in - *(NIMHANS2K)*
a) Insanity b) Malignant disease
c) Electrical shock d) Syphilis

646. Barr body is seen in - *(TN 2001)*
a) Buccal mucosa smear b)RBC
c) WBC d) Saliva

647. Euthanasia is - *(Kerala 97)*
a) Recently recognised in India
b) Recognoised in all countries
c) Recognized is few countries
d) illegal world wide

648. McNaughten rule is applicable to - *(PGI02)*
a) Calculate length of fetus b) Estimate height
c) Insanity d) Dactyglography
e) Detect CO poisoning

649. During an operation if a pair of scissors is left in abdomen, it is known as - *(Kerala 04)*
a) Petty's method b) Res ipsa forcepalis
c) Res ipsa loquitor d) Pharaoh's serpents

650. A case of head injury requiring urgent decompression, when there are no relative present. The doctor must -
a) Operate
b) Consent from police is a must
c) Wait for relatives
d) None

651. Disputed maternity can be solved by using the following tests except - *(All India 04)*
a) Blood grouping b) HLA typing
c) Precipitin test d) DNA finger printing

652. A 16 years boy is accused as rape to a 12 years old girl. By which of the following the boy can prove that he is innocent - *(PGI June 05)*
a) No abrasion in body & genitalia
b) Absence of blood & semen in cloth & genitalia
c) Absence of saliva in cheek
d) Age of the boy 16 years
e) Presence of smegma in penis & copora granulosus

653. Presence of semen in the vaginal canal is a proof of- *(J&K05)*
a) Rape b) Sexual intercourse
c) Indecent assault d) Attempted rape

654. MTP Act was passed in the year - *(MAHE 05)*
a) 1971 b) 1974
c) 1981 d) 1984

655. Sexual asphyxia is associated with - *(MAHA 05)*
a) Sadism b) Masochism
c) Fetichism d) Vouyerism

656. Feature of sodomy, conclusive in nature -
a) Dilated tender levator ani *(Orissa 05)*
b) Lax sphincter ani
c) Sperms in anus
d) Bleeding from anal verge

657. 'Vagitus uterinus' is - *(AIMSNOV05)*
a) An infection of vagina
b) An infection of uterus
c) A cry of unborn baby from uterus
d) Infection of both vagina and uterus

658. Which of following tests in used to detect semen ?
a) Phenolphthalein test b) Reine's test *(AI06)*
c) Barberio's test d) Paraffin test

659. Age limit for marriage in Men - *(PGI June 06)*
a) 15 b) 16
c) 18 d)21
e) 25

660. Sexual asphyxia is associated with - *(HP 06)*
a) Sadism b) Masochism
c) Fetishism d) Voyeurism

661. Supposititious child is - *(Manipal 06)*
a) Child bom after death of father
b) Birth after artificial insemination
c) Child bom through Surrogate mother
d) Fictitious child

662. Irresistible sexual desire in male is known as -
a) Sadism b) Tribadism *(AiimsMay08)*
c) Satyriasis d) Nymphomania

663. Legal Responsibility of insane is/are all except -
a) Rule of Haase *(PGI June 09)*
b) Me Naughten's rule
c) Curren'srule
d) Durham mle
e) Rule of nine

664. All are related with legal responsibility to insane person, except - *(DELHI PG Mar. 09)*
a) Rule of Hasse b) McNaughten's mle
c) Durham's mle d) Curren's mle

665. For claiming criminal negligence against a doctor, case should be filed within - *(Jipmer 10)*
a) 1 year b) 3 years
c) 6 months d) 2 years

666. Not a grievous hurt - *(PGI May 10)*
a) Emasculation b) Contusion over scalp
c) # of bone d) Hurt which endanger life
e) Severe bodily pain for 15 days

641)c 642)c,d 643)a 644)b 645)a 646)a 647)c 648)c 649)c 650)a 651)c 652)a,b 653)b 654)a

SEC - VII s FORENSIC EXAMINATION OF BIOLOGICAL FLUID, STAINS & OTHER MATERIALS, COLLECTION AND PRESERVATION OF BIOLOGICAL MATERIALS

667. If the father has blood group genotype AO and the mother's blood group genotype BO. The offspring may have blood group genotype -
a) A b)B *(AlIMS84)*
c) AB d) All of the above

668. Best test for seminal stains is - *(PGI86)*
a) Acid phosphatase test
b) Precipitin test
c) Florence test
d) Alkaline phosphatase test

669. Florence test detects - *(AlIMS 85)*
a) Bilirubin # b) Urine
c) Semen d) Blood

670. Blood clots after.....hrs. of death - (*PGI 85)*
a) 1/2 hrs. b) 45 minutes
c) 1/4 hrs. d) *l/z* hrs.

671. Berberio's test is done for - *(PGI89)*
a) Blood b) Urine
c) Saliva d) Semen

672. In old blood stained fibre, blood grouping is done by- *(AI90)*
a) Benzidine test b) Acid elution test
c) Preciptin test d) Hemin cystal test

673. Acid phosphatase test is used for analysing-
a) Semen b) Blood*(AI91)*
c) Urine d) Bile

674. All are tests for Seminal stains *except-(AIIMS 91)*
a) Takayama test b) Barberio's test
c) Florence test d) Acid phosphatase test

675. Takayama reagent is used in - *(AI91)*
a) Gulacumtest b) Castle mayer test
c) Haemin cystal test d) Haemochromogen test

676. Which is wrong match - *(AlIMS 83)*

Test for blood	Positive colour
a) Benzidine test	Blue
b) Gulacum test	Deep blue
c) Castle mayer test	Pink purple
d) Leucomalachite test	Pink

677. True about human hair is - *(Delhi 92)*
a) Medulla is 1/3 ^ of cortex
b) Cortex is 1/3[1(1] of medulla
c) Has scales
d) None of the above

678. In Leucomalachite test, the positive test is indicated by_____ colour - *(AlIMS 83, 86)*
a) Peacock blue b) Deep purple
c) Red d) Khaki

679. Human hair differs from animal hair by that -
a) Cuticle has scales *(PGI 86,*
b) Medulla is thick *Delhi 85, 86,89)*
c) Medulla is broader than cortex
d) Pigment is central

680. Fragmentation of medulla of scalp hair is a feature of- *(All India 96)*
a) Negro race b) Monogolians
c) Caucasians d) Aryans

681. Absent fragmented medula in hair is seen in all except- *(AI 98)*
a) Negroes b) Aryans
c) Mongloids d) Caucasians

682. In Takayama test, which of the following is seen under microscope - *(AP 9 7)*
a) Yellowish to brownish rhomboid crystals
b) Yellow needle shaped crystals
c) Pink feathery structures
d) Spherical granules

683. Benzidine test is positive with the enzym*e-(Kerala 94)*
a) Cytochrome oxidase b) Dehydrogenase
c) Hydrolase d) Peroxidase

684. Species identification is done by - (*AlIMS 03)*
a) Neutron activation analysis (N.A.A)
b) Precipitin test
c) Benzidine test
d) Spectroscopy

685. Hydrogen peroxide is used in all the following chemical tests for blood except - *(A ll India 04)*
a) Benzedine test b) Phenoththalein test
c) Orthotoluidine test d) Teichmann's test

686. Maximum period of observation for proving insanity is - **(***Orissa 05)*
a) 10 days b) 14 days
c) 30 days d) 90 days

687. Me. Naughten's law used in - *(PGI June 06)*
a) Insanity b) Alcohol level estimation
c) Drug level

688. Criminal responsibility of a person of unsound mind comes under which penal code - (*APPG 06)*
a) Section 84 b) Section 85
c) Section 88 d) Section 302

689. Best method to prove paternity is - *(Kerala 94)*
a) Blood grouping b) Finger prints
c) Phenotypic resembelance d) DNA finger printing

690. Consider the following statements - *(ICS 98)*
DNA fingerprint is valuable in
a) Determination of blood group
b) Investigation of crime
c) Investigation of autoimmune
d) Determination of paternity

691. Puppe's rule is related to - *(CMC 2001)*
a) Sequence of bullets
b) Enzyme assay in blisters
c) Related to age estimation
d) Sex determination

692. What is 'DNA' fingerprinting - *(PGI 01)*
a) Identification of a person fingerprinting by using genetic enginering method
b) A record of a persons genetic make up
c) Identification of persons by genetic analysis
d) None of the above

667) d 668) a 669) c 670) a 671)d 672) b 673) a 674) a 675) d 676) d 677) a,c 678) a 679) None
680) a 681) a 682) c 683) d 684) b 685) d 686) c 687) a 688) a 689) d 690) b,d 691) a 692) c

693. Which is the best method to determine paternity - *(Kerala 01)*
a) Fingerprinting b) DN A finger printing
c) Blood group d)HLA

694. The species orgin of blood can be detected by -
a) Benzidine test b) Takayama test *(Corned 08)*
c) Spectroscopy d) Precipitin test

695. DNA fingerprinting is done with all except -
a) RBC b) WBC *(DPGEE08)*
c) Salvia d) Spermatozoa

696. Dried semen stain in clothes is identified by- *(AIIMS Nov 09)*
a) UV light b) Spectroscopy
c) Magnifying lens d) Infra red

697. Sodium fluoride is used for preservation of -
a) Urine d) Blood *(DPG10)*
c) Alcohol d) Carbolic acid

POISONS

698. Neostigmine is beneficial in symptomatic bites by-
a) Cobra b) Viper (*UPSC05)*
c) Scorpion d) Black widow spider

699. Brown disclouration of the mucosa of the stomach is seen in poisoining due to *- (AIIMS 87, PGl 86)*
a) Nitric acid b) Sulphuric acid
c) Hydrochloric acid d) Mercury
e) Arsenic

700. Amyl Nitrie is used as an antidote in ..... poisoining - *(AIIMS 87)*
a)$C0_2$ b) CO
c) Cyanide d) Nitric acid
e) Arsenic

701. Complication of Kerosene poisoning - *(AI88)*
a) Pneumonia b) Vomiting
c) Hemoptysis d) Diarrhoea
e) Acute renal failure

702. Diwali poisoning is due to - *(AI88)*
a) Phosphorus b) Arsenic
c) Mercury d) Lead
e) Copper

703. Antidote for sodium nitrate poisoning is - *(A188)*
a) Methylene blue IV b) Egg albumin
c) EDTA d) Animal charcoal

704. Nux Vomica is - *(AP 85,88)*
a) Vegetable poison containing atropine
b) Seed containing strychnine
c) Used as a cattle poison
d) Used to induce vomiting in poisoning

705. Brown coloured urine is seen in the - *(A189)*
a) Nitric acid poisoning
b) Carbolic acid poisoning
c) Sulphuric acid poisoning
d) Hydrochloric acid poisoning

706. Pin point pupils is seen in..... poisoning-
a) Barbiturate b) Morphine *(PG186)*
c) Organophosphours d) Methyl aicohol

707. Nalorphin is used as an antidote of - *(AP 88)*
a) Strychnine b) Opium
c) Dhatura d) Cocaine

708. Greenish urine is seen in poisoning with-*(AMJ 88)*
a) Carbolic acid b) Nitric acid
c) Copper sulphate d) Hydrochloric acid

709. Optic atrophy can be caused by..... poisoning -
a) Phosphrous b) Ethyl alcohol *(AIIMS 85)*
c) Methyl alcohol d) Lead

710. Preservative used for alcohol poisoning is -
a) Formalin *(AIIMS 85)*
b) Saturated solution of sodium chloride
c) Methyl alcohol
d) None of the above

711. Blue line on the gums is seen in chronic ..... poisoning - *(PGl 85, JIPMER 90)*
a) Hg b) Pb
c) Ag d)As

712. Anaemia, punctate basophilia, constipation blue line and abdominal colic are characreristic of - *(A186)*
a) Opium addiction b) Arsenic poisoning
c) Mercuric poisoning d) Lead poisoning

713. In Chronic alcoholism which of the following is seen in - *(JIPMER 90)*
a) Delirium tremens b) Wemike's syndrome
c) **Korsokoff** psychosis d) All of the above

714. Dilated pupil, dry mouth is a features of poisoning due to- *(A1.89)*
a) Morphine b) Organophorous
c) Dhatura d) Phenothiazines

715. The pupil is constricted in - *(A.189)*
a) Dhatura b) Opium
c) Benzodiazepines d)Phenothiazines

716. Best method of treatment of Methyl alcohol poisoning is - *(JIPMER 91)*
a) Calcium gluconate b) Ethyl alcohol
c) Amphetamines d) 1% Ammonia

717. The non poisonous salt of cyanide is-*(JIPMER 91)*
a) Potassium Cyanide b) Sodium cyanide
c) Hydrocyanic acid d) Potassium ferrocyanide

718. Tactile hallucinations is seen in chronic poisoning with- *(JIPMER 91)*
a) Cocaine b) Opium
c) LSD d) Cannabis

719. Anterior horn cells are affected in - *(JIPMER 91)*
a) Dhatura poisoning
b) Srtychnine poisoning
c) Botulism
d) None of the above

720. An overdosage of morphine is treated with -
a) Nalorphine IV b) Steroids *(PGI93)*
c) IV methadone d)Naloxone IV

721. Which of the following toxins can be detected in burnt bone- *(AI93)*
a) Cyanide b) Arsenic
c) Mercury d) Phosporus

693) b 694) d 695) a 696) a 697) b 698) a 699) b 700) c 701) a 702) c 703) a 704) b,c 705) a 706) b,c 707)b 708)a 709)c 710)d 711)a,b,c 712)d 713)d 714)c 715)b 716)b 717)d 718)a 719)b 720)d 721)b

722. The non poisonous Salt of cyanide is-*(JIPMER 93)*
a) Potasium cyanide
b) Hydrocyanic acid
c) Sodium cyanide
d) Potassium ferrocyanide

723. Which of the following is non poisonous snake -
a) Viper b)Krait *(AIIMS 81, JIPMER 92)*
c) Sea snake d) Rat snake

724. True about strychnine poisoning is-*(DELHI 86, 92)*
a) All muscles affected of the same time
b) Shoulder girdle affected 1st
c) Pelvic girdle affected first
d) None of the above

725. Critical level of alcohol on blood should be -
a) 0.1 % b) 0.15% *(ARMS 78, DELHI93)*
c) 0.2% d) 0.3%

726. People suffering from achlorhydria may not sufferfrom toxic effect of oral ingestion of - *(AMU*
a) Phosphorus b) Copper sulphate *86)*
c) Arsenic trioxide d) Potassium cyanide

727. Shaking palsy is associated with poisoning with -
a) Lead b) Mercury *(AIIMS 87, AI93)*
c) Arsenic d) Strontium

728. Poisoning by irritants may be mistaken for -*(AIIMS*
a) Peritonitis b) Cholera *81, UPSC 88)*
c) Gastroenterits d) Intestinal obstruction

729. Antidote for acute iron poisoning - *(PGI81,*
a) Desferioxamine b)NaEDTA *DELHI 92)*
c) BAL d) Penicillamine

730. The following are true about chloral hydrate except
a) Peculiar pungent odour *(AIIMS 86)*
b) Crystalline
c) Used as hypnotic
d) Sweetish taste

731. At the following blood carbon carbon monoxide concentration the clinic picture will simulate alcoholic intoxication - *(JIPMER 81, DELHI93)*
a) 10% b) 70%
c) 30% d) 50%

732. A pinch of which of the following poisons can kill as many as five persons - *(BIHAR 92)*
a) Arsenic trioxide b) Copper sulphate
c) Lead sulphate d) Arsenic disulphide

733. Which of the following is used in forgeries as an ink remover solution - *(PGI 80, DNB 90)*
a) Sulphuric acid b) Nitric acid
c) Carbolic acid d) Oxalic acid

734. It is true about formalin - *(AIIMS 80,DNB 90)*
a) That it can be used as preservative in alcohol poisoning
b) Never used as a preservative for chemical analysis
c) Used as a preservative in poisoning with digitalis
d) None of the above

735. Which of the following is known as "Thorn apple"- *(AIIMS 82)*
a) Dhatura alba b) Dhatura niger
c) Dhatura stramonium d) Dhatura metet

736. In nux vomica poisoning the following is also required to be preserved - *(PGI 81, AMU 89)*
a) Long bones b) Brain
c) Muscles d)Skin

737. The following is also known as "Knock out drops" or "micky finn - *(AIIMS 81, AMU 89)*
a) Chloroform b) Methyl alcohol
c) Chloral hydrate d) Ethylene glycol

738. Ganja is obtained from - *(JIPMER 79, UPSC 89)*
a) Dried leaves b) Fresh leaves
c) Flowering tops d) Roots

739. Fatal period in sulphuric acid poisoning is - *(AIIMS 81,BIHAR 90)*
a) 2-4 hours b) 6-10 hours
c) 12-16 hours d)18-14hours

740. Blood cholinesterase level should be estimated for three weeks, in non-fatal cases of poisoning with- *(JIPMER 90)*
a) Parathion b) Eedrine
c) Thallium sulphate d) Arsenic oxide

741. Large bones of about 6 inches are required to be preserved in - *(AIIMS 81, BIHAR 89)*
a) Arsenic & antimony poisoning
b) Aconite poisoning
c) Dhatura poisoning
d) Smack poisoning

742. An addict develops delusions, misleading hallucination of sight and hearing and the felling of creeping things of "grains of sand " in the skin he is addicted to - *(AIIMS 8 7)*
a) Heroin b) Methadone
c) Cocaine d) Amphetamines

743. About 20 grams of hairs are required to be preserved in - *(AIIMS 79, AMU 89)*
a) Minerals poisoning b) Aconite poisoning
c) Iodine poisoning d) Codeine poisoning

744. Which of the following is not used in methyl alcohol poisoning - *(UPSC 85,87, DELHI 87)*
a) Gastric lavage b) Dialysis
c) Ethyl alcohol d) High does of vitamin B_{12}

745. In salicylate poisoning the treatment recommendedis - *(AIIMS 87, DNB 88)*
a) Forced diuresis b) Chelating agents
c) Atropine d) Conservative

746. Average fatal dose of croton oil seeds is- *(PGI 80, AIIMS 85)*
a) 500 drops b) Handful of seeds
c) About 4 to 5 drops d) 20 drops

747. Amyl nitrite is an antidote for poisoning with - *(UPSC 85, 86, DELHI 87)*
a) H SO b) Ammonia
c) HfcN4 d) Carbon monoxide

748. One of the following substance produce injuries which stimulate contussion-fJZPMEft *80, AIIMS 83)*
a) Semicarpus anacardium b) Ricinus communis
c) Abrus percatorius d) Capsicum annum

722) d 723) d 724) a 725) b 726) d 727) b 728) c 729) a 730) d 731)c 732) a 733) d 734) b 735)a,b
736) b 737) c 738) c 739) d 740) a 741) a 742) c 743)None 744) d 745) a 746) d 747) c 748) a

749. In burnt bones, the following can be detected -
a) Arsenic *(AIIMS 79,81)*
b) Lead
c) Oraganoposphorus compound
d) None of the above

750. Which of the following is considered as an antidote for cocaine p oisoning- *(PGI78,AIIMS 80)*
a) Phenobarbitone b) Morphine
c) Amyl nitrate d) Ether

751. Which of the following commonly known as "thorn apple" - *(AIIMS 81,AMC 83)*
a) Dhatura alba b) Dhatura niger
c) Dhatura atrox d) Dhatura stramonium

752. Nux vomica seeds contain 2 alkaoids, strychnine and- *(AIIMS 84)*
a) Hyoscine b)Hyoscyamine
c) Brucine d) Atropine

753. In low concentration of carbon monoxide (4%) the commonest symptom is - *(AIIMS 80, UPSC 82)*
a) Nausea b) Headache
c) Muscular weakness d) Ringing in ears

754. The following alkaloids are presents in opium except- *(AP 86)*
a) Hyoscyamine b) Morphine
c) Papaverine d) Narcotine

755. Chromodacryorroea (shedding of pink tears due to accumulation of porphyrin) may be seen in poisoning with - *(PGI 82)*
a) Arsenic b) Barbiturate
c) CuS04 d) Oraganophosphorous

756. Which of the following is the lateral curve of the body in strychnine *poisoning-(JIPMER 80, UPSC 83)*
a) Opisthotonus b) Emprosthotonus
c) Pleurosthotonus d) None of the above

757. Which of the following is also known as "Kasoomba" or Madak Chandu - *(AIIMS 83)*
a) Dhatura b) Cannabis
c) Opium d) Calotropis

758. Magnan's symptom is - *(PGI 79)*
a) Illusion b) Delusion
c) Formication d) Depersonalization

759. Which of the following is considered as an antidote for cocaine poisoning - *(AIIMS 80, 81)*
a) Oxygen b) Diazepam
c) Ethyl alcohol d) Nitric oxide

760. The fatal dose of absolute alcohol in an adult is -
a) 30ml b) 60 ml *(AP 88)*
c) 90ml d) 150 ml

761. The alcohol content in[6] Absolute alcolol' - *(PGI 79,*
a) 90% b) 95% *AIIMS 81)*
c) 99.95% d) 100%

762. The active principles of Dhatura are all of the following except - *(AIIMS 84)*
a) Phyricatachol b)Hyoscyamine
c) Atropine d) Hyascine

763. The average fatal period of copper poisoning is -
a) 30-60 minutes b) 1-3 days *(AIIMS87)*
c) 3-7 days d) 7-14 days

764. Ptysalism is seen in - *(AIIMS 80, UPSC 84)*
a) Arsenic poisoning b) Copper poisoning
c) Dhatura poisoning d) Atropine sulphate

765. Which of the following tests are used for arsenic poisoning - *(JIPMER 80,PGI 83)*
a) Marsh's test b) Reinsh's test
c) Macewen's test d) Marquri' test

766. Widmark's formula is used to calculate the quantity of the following in the body after equilibrium between the blood and tissues is reached - *(ROHATAK86)*
a) Methyl alcohol b) Nitrous oxide
c) Ethyl alcohol d) Lithium carbonate

767. The fatal period of Aconite is usually -(*JIPMER 80,*
a) 5-10 minutes b) 15-30 minutes *AMU89)*
c) 1-5 hours d) 12-48 hours

768. All of the following are aryl phosphate except -
a) Folidol b)Parathion *(AIIMS 82)*
c) Diazinon (Tick 20) d) Malathion

769. Arsenophagists are - *(AIIMS 80)*
a) Criminals using arsenic for homicidal purpose
b) Person using arsenic as abortion stick
c) Persons who can tolerate high doses of arsenic after taking arsenic in low doses at frequent intervals
d) Persons using it as cattle poison

770. The upper limit of safety for carbonmonoxide in air is- *(PGI81)*
a) 0.2% b)0.01%
c) 0.4% d) 0.005%

771. Narcotic Drugs and psychotropic substance act was passed in the year - *(AIIMS 79,DNB 90)*
a) 1981 b)1983
c) 1985 d) 1986

772. Velvety appearance of stomach is seen in poisoning with- *(KERALA 95)*
a) Abruspercatorius b) Barbiturate
c) Arsenic d)Lead

773. All of the following causes constriction of pupil except- *(AJ 95)*
a) Dhatura
b) Morphine
c) Organophosphorus poisoning
d) Pontine haemorrahge

774. Following druge causes delirium - *(AI95)*
a) Dhatura b) Cannabis
c) Morphine d) Barbiturates

775. Macewans's sign is associated with - *(AI95)*
a) Alcohol poisoning b) Pontine haemorrhage
c) Cerebellar tumours d) Cocaine intoxication

776. Tactile hallucinations occurs in - *(AI 95)*
a) Acute barbiturate toxicity
b) Chronic cocaine poisoning
c) Parkinsonism
d) Chronic depression

749)a 750)a 751)a,b 752)c 753)None 754)a 755)d 756)c 757)c 758)c 759)b 760)None 761)c
762)a 763)b 764)b 765)a,b 766)c 767)c 768)d 769)c 770)b 771)c 772)c 773)a 774)a,b 775)a 776)b

777. Cyanide poisoning acts by - *(DELHI 96)*
a) Inhibiting DNA synthesis
b) Inhibiting enzymes of proteins synthesis
c) Inhibiting cellular respiration
d) Inhibiting protein breakdown

778. Antidote for oxalic acid poisoning - *(KAR. 95)*
a) BAL b) Animal charcoal
c) Calcium gluconate d) Magnesium sulphate

779. Which metal poisoning can be detected analysing bone- *(KERALA 96)*
a) Arsenic b) Nickel
c) Chromium d) Lead
e) Mercury

780. Fatal does of methanol - *(KERALA 96)*
a) 15 ml b) 30-60 ml
c) 60-250ml d) 500 ml

781. What is not seen with bite of pit viper - *(PGI95)*
a) CVS collapse b) Absence of local sign
c) Convulsion d) DIC

782. Hyperpigmentation of palms & soles is seen in which poisoning - *(CUPG.EE 96)*
a) Arsenic b) Mercury
c) Lead d) Copper

783. Carbolic acid poisoning; Postmortem finding are-
a) Greenish stomach *(A.P96)*
b) Yellow charred stomach
c) Leathery stomach
d) Black charred stomach

784. Marsh test used in diagnosis of poisoning due to-
a) Arsenic b) Lead *(AIMS 97)*
c) Iron d) Copper sulphate

785. Hemoglobinuria is seen in all except - *(AIMS 97)*
a) Copper sulphate poisoning
b) Snake venom
c) Clostridium welchii sepsis
d) Thalassemia

786. Opium poisoning produces.....types of respiration - *(AIMS97)*
a) Rapid and shallow b) Rapid & deep
c) Shallow d) Diaphagmatic

787. Arsenic poisoning mimics - *(AI9 7)*
a) Cholera b) Food poisoning
c) Alcohol withdrawl d) Tetanus

788. 'Liquid gold' with reference to urine is seen in presence of - *(AI 9 7)*
a) Heavy metals (222-M) b) Barbiturates
c) Organophosphorous d) Lead poisoning

789. Post mortem cherry red discoloration is due to -
a) Asphyxia *(AI97)*
b) Carbon monoxide poisoning
c) Drowning
d) Organophosphorus poisoning

790. Run Amok Homicide delusion is characteristic of- *(AIMS96)*
a) Cannabis b) Cocaine
c) Dhatura d) Alcohol poisoning

791. Almond like bitter smell is positive in- *(AIMS 96)*
a) Chloral hydrate poisoning
b) Hydrocyanic acid
c) Hydrocyanic poisoning
d) Oleander poisoning

792. Dryness of mouth dialted pupil & delirium are symotoms of - *(UP 9 7)*
a) Chronic lead poisoning
b) Opium addiction
c) Chronic arsenic poisoning
d) Dhatura poisoning

793. Heavy metal poisoning causes proximal tubular necrosis - *(PGI97)*
a) Hg b) Cadium
c) Lead d)Gold

794. Proximal convoluted tubule necrosis is seen in ..... poisoning- *(AIMS97)*
a) Phenol b) Arsenic
c) Aconite d)Lead

795. Almond bitter smell is seen with - *(KERALA 97)*
a) Cyanide poisoning b) Arsenic poisoning
c) Lead poisoning d) None of the above

796. Haemodialysis is done in all except.....poisoning-
a) Barbiturates b) Salicylates *(AI 98)*
c) Kerosene d) Alcohol

797. In acute organophosphorous poisoning which of the following is seen - *(AP 96)*
a) Dry lungs b) Edematous lungs
c) Pneumonia d) Pleural rub

798. Widmarks formula is used for which poisoning -
a) Alcohol b) Mercury *(MP 98)*
c) Cyniad d)Lead

799. Asthma like symptoms is seenin.....poisoning-
a) Arsenic b) Organophosphorous
c) Lead d)Gold *(ME98)*

800. Gastric lavage is contraindicated in poisoning-
a) Kerosene b) Carbolic acid *(ME 98)*
c) Alcohol d) Salicylate

801. Average fatal period of copper poisoning -
a) 4hrs b) 18-36hrs *(Kerala98)*
c) 24-48 hrs d) >5 days

802. In barbitutate poisoning which is not present - *(ROHATAK 97)*
a) Hypotrension b) Hypothermia
c) Pupils not reactive d) Pulmonary edema
e) None

803. Morbid jealousy is diagnostic of - *(ROHATAK 97)*
a) Cocaine b) Cannabis
c) Alcoholism d) Tabacco Intoxication
e) Barbiturate

804. Erethism is seen in toxicity of - *(AIMS 98)*
a) Arsenic b) Mercury
c) Lead d)Iron

805. Stability of venom is dependent on - *(AMC 99)*
a) H bond b) Disuphlide bond
c) Van der waal's d) Ionic interaction

---

777) c 778) c 779) a 780) c 781) b 782) a 783) c 784) a 785) d 786) c 787) a 788) b 789) b 790) a 791)b 792)d 793)a,b 794)a,b 795)a 796)c 797)b 798)a 799)b 800)a 801)b 802)c 803)c 804)b 805) b

806. Venom of sea snake is mostly - *(UPSC 2K)*
a) Neurotoxic b) Haemolytic
c) Myotoxic d) Hepatotoxic

807. Widmark formula is used for - *(MP 2K)*
a) Alcohol b) Barbiturate
c) Cannabis d) Opium

808. Perforation of stomach is more common due to ingestion of- *(ORISSA98)*
a) Nitric acid b) Sulphuric acid
c) Hydrochloric acid d) Carbolic acid

809. Metal fume fever is common in chronic poisoning with- *(Orissa98)*
a) Mercury b)Lead
c) Zinc d) Thallium

810. Elevated levels of cyanide is seen in which of the following - *(AIIMS2K)*
a) Cold b) Scald
c) Starvation d) Thermal bums

811. Least toxic compound of lead is - *(MAHE 2001)*
a) Lead arsenate b) Lead oxide
c) Lead carbonate d) Lead sulphide

812. Linseeds used for (cattle/animal) poisoning contain which of the following principle poisoning substance- *(AI2002)*
a) Aconite b) Hydrocyanic acid
c) Pilocarpine d) Atropine

813. Narcotic abuse case with jet black, tongue, the cause is - *(AIIMS2001)*
a) Cocaine poisoning b) Morphine poisoning
c) Cannabis toxicity d) LSD poisoning

814. Patient is brought to casualty with poisoning . Stomach wash lavage fluid on heating produced black precipitate. The poison is - *(AIIMS2001)*
a) TIC 20 b)$AgN0_5$
c) Malathione d) Celphos

815. Alternate contraction & dilatation of pupils is seen in.....poisoning - *(TN2002)*
a) Aconite b) Cyanide
c) Hemlock d) Organo phosphate

816. Non irritant gas with systemic toxicity -*(PGI2002)*
a) N_2 b)CO
c)NH3 d)Cl
e) HCL

817. Putrefaction is retarded by - *(AIIMS 02)*
a) Carbolic acid
b) Oxalic acid
c) Organophosphorous poison
d) Hydrochloric acid

818. Acute lead poisoning in child presents as - *(AI99)*
a) Status epilepticus b) Ataxia
c) Focal deficit d) Papilloedema

819. Amyl nitrate is usually administered by- *(ORISSA 91)*
a) Inhalation b) Sublingual route
c) Subcutaneous route d) Ingestion

820. Amyl Nitrate is used as an antidote for- *(AIIMS87)*
a) Co poisoning b) Cyanide poisoning
c) $C0_2$ poisoning d) Dapsone poisoning
e) Barbiturate poisoning

821. A patient with headache, nausea, vomiting, fatigue, jaundice,hepatomegaly and oliguria may have an occupational disease caused by - *(AIIMS 79, PGI80)*
a) HjS b) Carbon tetrachloride
c) Benzol d) Mercury
e) Lead

822. Amenorrhoea and sterility may occur in women as a result of occupational exposure to-*(Jimper 80,*
a) Zinc b) Mercury
c) Chromium d) CO
e) Lead

823. A comatose child has a garlic like odour to the breath. The most probable diagnosis is -*(UPSC 82)*
a) Flavism b) Atropine poisoning
c) Lead poisoning d) Arsenic poisoning

824. Haemodialysis is indicated in - *(UPSC 2K)*
a) Organophosphorous poisoning
b) Salicylate poisoning
c) Mushroom poisoning
d) Phenobarbitone poisoning

825. Sodium Fluoride is used as a preservative of blood in the estimation of - *(PGI 93)*
a) Cyanide b) Mercury
c) Arsenin d) Alcohol

826. Macewen's sign is seen in poisoning with -
a) Salicylates b) Alcohol *(AI93)*
c) Barbiturates d)Diazepan

827. Hemodialysis is useful in poisoning with all except-
a) Barbiturates b) Methanol
c) Diazepam d) Salicylates

828. A patient is brought with a history of excessive thirst and agitated behaviour. On examination, the pupils were dilated and temperature was raised with dry skin. The patient was picking on clothes. The most likely diagnosis is - (*UPSC 95)*
a) Organophosphorous poisoning
b) Heat storke
c) Dhatura poisoning
d) Thyroid crisis

829. A 3 year old male child has features of gripping abdominal pain, severe vomiting, bloody diarrhoea and fever. The most likely diagnosis is - *(UPSC95)*
a) Iron poisoning
b) Lead poisoning
c) Phosphorous poisoning
d) Magnesium poisoning

830. Features of chronic lead poisoning are all except-
a) Encepalopathy b) Burtonion line *(AI95)*
c) Cutaneous blisters d) Constipation

831. Symptoms in first two days of poisoning with methyl iso cyanate are all except - *(AMU95)*
a) Hemoptysis b) Lacrimation
c) Chest pain d) None

806) c 807) a 808)b 809)c 810)d 811)d 812)b 813)a 814)d 815)a 816)b 817)a 818)a 819)a
820)b 821)b 822)e 823)None 824)b,d 825)d 826)b 827)c 828)c 829)a 830)c 831)a

832. Type of respiration in Morphine poisoning is -
a) Deep Rapid b) Rapid shallow *(AIIMS 97)*
c) Slow d) Diaphragmatic

833. Haemodialysis is useful in all except - *{AIIMS 96)*
a) Barbiturate poisoning b) Methanol poisoning
c) Salicylate toxicity d)Digoxin toxicity

834. Not seen in Barbiturate poisoning is - *{AIIMS 97)*
a) Hypothermia b) Hypotension
c) Flaccid coma d) Non reacting pupil

835. Antidote of choice in methyl alocohol poisoning is- *{AIIMS 98)*
a) Atropine b)PAM
c) Neostigmine d) Adrenaline
e) None

836. An overdose of narcotics causes all of the following except- *{KARNAT 98)*
a) Dilated pupils b) Hypotension
c) Depressed reflexes d)Coma

837. Which of the following gas causes toxicity (systemic) without causing respiratory irritation-
a) Sulphur b) Carbon monoxide *{AI02)*
c) Ammonia d) Hydrochloric acid

838. Heavy metal poisoning causing PCT necrosis is -
a) Cadmium b) Lead *(PGI97)*
c) Mercury d)Gold

839. Which is excreted typically in lead poisoning -
a) Urobilinogen b) Coproporphyrin *(PGI97)*
c) Bilirubin d) Bile salts

840. In organophosphorous poisoning, following are seen except - *(PGI 97)*
a) Pupillary dilatation b) Salivation
c) Bronchospasm d) Sweating

841. Atropine is used for following except - *(PGI97)*
a) Organophosphorus posioning
b) Mushroom poisoning
c) Physostigmine overdose
d) Glaucoma

842. Postmortem finding in carbon monoxide poisoning is- *(PGI 97)*
a) Cherry red blood b) Intense cyanosis
c) Excessive salivation d) Pin point pupil

843. In aluminium phosphide poisoning, not true is -
a) Accumulation of acetylcholine at NM junction *(PGI 98)*
b) Cytochrome oxidase
c) Phosphine formation
d) Metabolic acidosis

844. Dhatura poisoning is characterized by - *(PGI 99)*
a) pinpoint pupil
b) Dilated salivary gland
c) Dilated pupil with facial flush
d) Decrease temp

845. Marsh test is for detection of - *(PGI 99)*
a) Lead b) Strychnine
c) Arsenic d) Opium

846. Specimens for toxicological studies is preserved in- *(PGI 99)*
a) 10% of formaldehyde
b) Alcohol
c) Supersaturated solution of common salt
d) Normal saline

847. The principle of using nitrate in cyanide poisoning is to reduce - *(PGI 99)*
a) Methemoglobin production
b) Sufi Hb production
c) To correct metabolic abnormalities
d) Carboxy Hb production

848. Preservative used for toxicological specimen -
a) 20% formalin *(PGI 2000)*
b) Saturated sodium chloride
c) 20% alcohol
d) 10% alcohol

849. Proximal tubule proteinuria and painful bone lesions are seen in overdose of - *(PGI 2000)*
a) Cadmium b)Lead
c) Mercury d) Phenol

850. Pinpoint pupil is seen in which of the following conditions- *(PGI 01)*
a) Organophosphorus poisoning
b) Opium poisoning
c) Celephos poisoning
d) Dhatura (Dhatura fastuosa)
e) Hyoscine

851. Cherry red discoloration of skin is seen in which poisoing in post mortem lividity - *(PGI 01)*
a) Lead b) Arsenic
c) HCN d)CO

852. Opium poisoning is featured by - *(PGI 01)*
a) Constricted pupil
b) Respiratory depression
c) Tachycardia
d) Tachypnea
e) Hallucination

853. Blue hypostasis is seen poisoning due to - *(PGI 02)*
a) E^S b) Phosphorus
c) GO d) Organophosphorus compounds
e) Arsenic

854. Amylnitrate is used in which of the following poisioning - *(PGI 02)*
a) Hydrocyanide poisoning b) Red phosphorus
c) Yellow phosporus d) Arsenic poisoning
e) Lead poisoning

855. Which of the following is neurotoxic - *(PGI 02)*
a) Sea snake b) Russel viper
c) Krait d) Cobra
e) Pit viper

856. Wid mark's formula is used in which poisor -
a) Alcohol b) Barbiturate *(PGI02)*
c) Carbolic acid d) Clephos poisoning
e) Lead

832) c 833) d 834)d 835)e 836)a 837)b 838)c 839)b 840)a 841) d 842)a 843)a 844)c 845) c
846) c 847) a 848) b 849) a 850) a,b 851)d 852)a,b,e 853) a 854) a 855) c,d 856) a

857. Chronic arsenic poisoning causes - *(PGI02)*
a) Pure sensory neuropathy
b) Pure motor neuropathy
c) Mixed sensory and motor neuropathy
d) Painful neuropathy
e) Hyperkeratosis of skin

858. In a patient with acute arsenic poisoning, which of these would show accumulation of as - *(PGI 02)*
a) Liver b) Bone marrow
c) Skin d) Kidney
e) Brain

859. A person feels that grains of sand are lying under the skin or some small insects are creeping on the skin giving rise to itching sensation; the condition is seen in - *(PGI 03)*
a) Cocaine poisoning
b) Organophosphorus poisoning
c) Morphine poisoning
d) Alcohol withdrawal
e) Carbon monoxide poisoning

860. Viper snake venom is - *(PGI 03)*
a) Haematotoxic b) Vasculotoxic
c) Myotoxic d) Hepatotoxic
e) Neurotoxic

861. Delirium is seen in which of the following poisonings - *(PGI 03)*
a) Dhatura b) Lead
c) Naxvomika d) Opioid
e) Cannabis

862. Activated charcoal is used in - *(PGI 03)*
a) Alcohol b) Barbiturate
c) Heavy metal poisoning d) Lead poisoning

863. Lead poisoning is characterised by - *(PGI 03)*
a) Diarrhoea b) Encephalopathy
c) Neuropathy d) Anaemia
e) Constipation

864. Opium poisoning is treated with - *(PGI 03)*
a) Nalorphine b) Atropine
c) Neostigmine d) Physostigmine

865. Gatric lavage turns black in presence of silver nitrate, most probable poisoning was - *(PGI04)*
a) Celfos b) Malathion
c) Organophosphorus d)Parathion

866. Jet black tongue found in - *(PGI 04)*
a) Cocaine b) Arsenic
c) Opium d) Bismuth

867. Krit poisoning is - *(PGI 04)*
a) Vasculotoxic b) Neurotoxic
c) Cardiotoxic d) Haemotoxic
e) Vaslulotoxic

868. In a suspected case of death due to poisoning where cadaveric rigidity is lasting longer than usual, it may be a case of poisoning due to -
a) Lead b) Arsenic *(AI03)*
c) Mercury d) Copper

869. True about Blindness due to methanol poisoning -
a) Due to direct off of formic acid
b) Formipezole, a specific alcohol dehydrogenase inhibitor is helpful
c) Ethanol is useful reduced blindness
d) Gastric lavage not helpful
e) Activated charcoal is highly effective

870. Deep blue colour of hypostasis is seen in death due to poisoning by - *(Al 04)*
a) Potassium cyanide b) Phosphorous
c) Aniline dyes d) Carbon monoxide

871. Which of the following is the most reliable method of estimating blood alcohol level - *(AI04)*
a) Cavett's test
b) Breath alcohol analyzer
c) Gas liquid chromatography
d) Thin layer chromatography

872. Which of the following are poisonous -*(Jharkand 03)*
a) Krait b) Hydropis
c) Cobra d)All

873. Rain drop pigmientation is seen in - *(Jharkand 03)*
a) Arsenic poisoning
b) Phosphorous poisoning
c) Mercury Poisioning
d) All

874. Magnan's Symptom is - *(Kerala 04)*
a) Illusion b) Delusion
c) Auditory hallucination d) Formication

875. Cyanide poisoning kit does not contain *(Kerala 04)*
a) Sodium thiosulfate b) Sodium nitrate
c) Sodium bicarbonate d) Amyl nitrate

876. Cage test is used in - **(***TN04)*
a) Alcohol poisoning b) Opiate poisoning
c) Datura poisoning d) Cannabis poisoning

877. The poison causing delirium is - (*77V04)*
a) Strychinine b) Dhatura
c) Cannabis d) Caster

878. The Following are features of cyanide poisoning except* *(SGPGI05)*
a) Fixed dilated nonreacting pupil
b) Loss of consciounsness
c) Areflexia
d) Normal myocardial activity

879. Following is not correct about mercury poisoning-
a) Highest concentration of consumed mercury is found in kidneys *(SGPGI05)*
b) Mercuria lentis is due to deposition of mercury
c) Tremors are more common in workers of this industry
d) penicillamine is not effective in its treatment

880. A new drug that reduces craving for alcohol is -
a) Naltrexone b) Buspirone (*COMEDK 05)*
c) Trazadone d) Phenindamine

881. All are adulterants of heroin -
a) Chalk powder b) Quinine
c) Charcoal d) Fructose

857)c,e 858)a,c,d 859)a 860)a,b 861)a,b,d,e 862)b 863)All 864)a,d 865)a 866)a 867)b 868)b 869)a,b,c 870) c 871)c 872) d 873)a 874)d 875)c 876)a 877)b 878)d 879)d 880)a 881)c

882. Treatment of aluminium phosphide consists of -
a) Magnesium sulphate IV infusion *(J & K 05)*
b) Acidosis correction with IV sodium carbonate
c) Adequate hydration with IV infusion
d) All of the above

883. A person in coma has pin point pupils. The cause may be all except - *(APPGE 05)*
a) Barbiturate poisoning
b) Morphine poisoning
c) Organophosphate poisoning
d) Pontine hemorrhage

884. Xanthoproteic reaction is seen in - *(Orissa 05)*
a) $HN0_3$ b) HCL acid poisoning
c) H_2S0_4 poisoning d) Carbolic acid poisoning

885. All of the following poison's are dialyzable except- *(A11MS NO V 05)*
a) Ethylene glycol b) Methanol
c) Barbiturates d) Copper sulphate

886. In methyl alcohol poisoning there is CNS depression, cardiac depression and optic nerve atrophy. These effects are produced due to -
a) Formaldehyde and formic acid *(AI 05)*
b) Acetaldehyde
c) Pyridine
d) Acetic acid

887. In chronic arsenic poisoning the following samples can be sent for laboratory examination, except -
a) Nail clippings b) Hair samples *(A105)*
c) Bone biopsy d) Blood sample

888. At autopsy, the cyanide poisoning case will show the following features, except - *(AI05)*
a) Characteristic bitter lemon smell
b) Congested organs
c) The skin may be pinkish or cherry red in colour
d) Erosion and haemorrhages in oesophagus and stomach

889. Diffusion of oxygen at the tissue level is affected in all the following poisonings except -*(AIIMS May 05)*
a) Carbon monoxide b) Curare
c) Phosgene d) Cyanides

890. Priapism occurs in - *(ARMS 06)*
a) Snakebite b) Ratti poisoning
c) Cantharide poisoning d) Arsenic poisoning

891. In OPC poisoning, OPC actions are -
a) Phosphorylated enzyme *(PGIJune 06)*
b) Irreversibly inhibit cholinesterase
c) Oximes effective when given beyond 24 hours
d) Atropine can't reverse in early stage

892. "Plant Penicillin" is the term used for -
a) Organophosphorous compounds
b) Endrin
c) Arsenious oxide
d) Cyanide

893. Milky juice obtained by incising the leaves and stalk of the plant and fed for female infanticide is -
a) Madar j uice b) Avandi j uice *(COMED 06)*
c) Nacpala juice d) Rati juice

894. Most Poisonous Snake is - **(***PUNJAB 06)*
a) Cobra b) King Cobra
c) Viper d)Krait

895. Universal antidote is made up of all except ?
a) Tannic acid (*Manipal 06)*
b) Potassium permanganate
c) Magnesium oxide
d) Activated charcoal

896. Burtonian line is seen with poisoning of - *(AI 0 7)*
a) Mercury b)Lead
c) Arsenic d)Zinc

897. Acrodynia is associated with - *(AI 07)*
a) Mercury b) Phenolic acid
c) Oxalic acid d) Carbolic acid poisoning

898. Mercury will affect which part of the renal tubule -
a) PCT b) DCT *(AI07)*
c) CT d) Loop of Henle

899. The drug of choice for mushroom poisoning is -
a) Atropine b) Physostigmine *(AI 07)*
c) Adrenaline d)Carbachol

900. Which of the following is not as aryl phosphate ?
a) TIK20 b) Malathion *(AI 07)*
c) Parathion d)Follidol

901. Which is not an aryl phosphate - *(Aiims May 07)*
a) Parathion b) Tik-20
c) Malathion d)Paraoxon

902. Dialysis is useful in poisoning with all of the following except - *(Aiims May 07)*
a) Methyl alcohol b) Barbiturates
c) Ethylene glycol d) Copper sulphate

903. Hemoperfusion with charcoal is useful in poisoning with- *(Aiims May07)*
a) Barbiturate poisoning b) Methyl alcohol
c) Lithium d) Ethylene glycol

904. Which of the following poison is detects after death is - *(UP 07, 06)*
a) Lead b) Arsenic
c) Thallium d)Zinc

905. Green colored urine seen in - *(PGI June 07)*
a) Kerosene b)OPCs
c) Carbolic acid d) Paracetamol

906. Diagnosis of CO poisoning poste mortem -
a) Blood thin and red coloured *(PGI June 0 7)*
b) Congestion of all organs
c) Cyanosis

907. Formication is associated with_____ abuse -
a) Alcohol b) Cocaine *(Corned 07)*
c) Benzodiazipine d) Analgesics

908. Which of the following poisons has only local action?
a) Sulphuric acid b) Carbolic acid *(Corned 07)*
c) Oxalic acid d) Phosphorus

909. Copper sulphate poisoning manifests with -
a) Acute hemolysis *(Corned 08)*
b) High anion gap acidosis
c) Peripheral neuropathy
d) Rhabdomyolysis

882) d 883) a 884) a 885) d 886) a 887) d 888) a 889) b 890) c 891) a,b 892) b 893) a 894) b 895) b
896)b 897)a 898)a 899)a 900)b 901)c 902)d 903)a 904)b 905)c 906)a,b 907)b 908)a 909)a

910. The poison that can be detected after death in hair is - *(Corned 08)*
a) Lead b) Copper
c) Mercury d) Arsenic

911. The following are complications of cocaine poisoning except- *(UPSC-108)*
a) Angina and myocardial infarction
b) Epileptic seizures
c) Hypothermia
d) Hypertension

912. Which one among the following is generally used as a fungicide, while others are 'generally used as insecticides' ? *(UPSC-108)*
a) Aldrin b)Dieldrin
c) Heptachlor d) Hexachlorobenzene

913. Cherry red colour postmortem appearance is seen in- *(UP08)*
a) Cyanide poisoning b) Phosphorus
c) Arsenic d) Mercury

914. Over doses of acetaminophen causes hepatic finding in postmortem - *(UP08)*
a) Centrilobular necrosis
b) Scattered patchy necrosis
c) Liquefactive necrosis
d) Coagulative necrosis

915. Which of the following is an example of a polychlorinated hydrocarbons- *(AI08)*
a) Parathion b) Malathion
c) Diazinion d)Endrin

916. Yellow fatty liver is characteristic of poisoning with-
a) Arsenic b) Mercury *(AI08)*
c) Phosphorus d) Oxalic acid

917. Which of the following heavy metal poisoning may cause colitis that resembles diptheritic colitis ?
a) Lead b) Arsenic *(AI 08)*
c) Mercury d) Copper

918. A middle aged man from West Bengal presents with paraesthesia of hands and feet, hyperkeratosis of palms, lines on his nails and rain drop pigmentation. The most likely causative toxin for the above mentioned presentation is - *(AI 08)*
a) Lead b) Arsenic
c) Thallium d) Mercury

919. Alkalinisation of urine may be done in cases of poisoning with - *(AI 08)*
a) Barbiturates b) Amphetamines
c) Alcohol d) Morphine

920. Gastric lavage contraindicated in poisoning by -
a) Kerosene b) Morphin *(PGI June 08)*
c) Barbiturates d) Dhatura
e) Cynide

921. All are organophosphorus compounds except -
a) DDT b)HETP *(Manipal 08)*
c) TEPP d) OMPA

922. Gastric Lavage is contraindicated in poisoning with-
a) Kerosene *(PGI Dec 08)*
b) Organophosphorus
c) Arsenic
d) Morphine
e) Dhatura

923. A man working as a pest killer comes to OPD with pain abdomen, garlic odour in breath and transverse lines on nails. Most likely the person is having -
a) Arsenic poisoning *(AIIMS Nov 08)*
b) Lead poisoning
c) Mercury poisoning
d) Cadmium poisoning

924. A man working as a pest killer comes to OPD with pain abdomen, garlic odour in breath and transverse lines on nails. Most likely the person is having:
a) Arsenic poisoning *(AIIMS May 09)*
b) Lead poisoning
c) Mercury poisoning
d) Cadmium poisoning

925. Formication and delusion of persecution occurs together in - *(AIIMS May 09)*
a) LSD b) Amphetamine
c) Canabis d) Cocaine

926. Mee's lines are seen in poisoning with -
a) Cadmium b)Lead *(PGI June09)*
c) Mercury d) Arsenic
e) Thallium

927. plumbism is caused by- *(PGIJune 09)*
a) Lead poisoning b) Mercury poisoning
c) Thallium poisoning d) Copper poisoning
e) Arsenic poisoning

928. Dark brown postmortem lividity is seen in -
a) Aniline poisoning *(COMED 09)*
b) Carbon-monoxide poisoning
c) Phosphorus poisoning
d) Cyanide poisoning

929. The chief compound in cannabis is - *(COMED 09)*
a) 9-A-tetrahydrocannabinol
b) 6-A-tetrahydrocannabinol
c) 5-A-tetrahydrocannabinol
d) 4-A-tetrahydrocannabinol

930. Tactile hallucination is seen in poisoning with -
a) Carbolic acid b) Cannabis *(COMED 09)*
c) Cocaine d) Chloral hydrate

931. All the following methods are used in the detection of heavy metals, except - *(DELHIPG Feb. 09)*
a) Neutron activation analysis
b) Atomic absorption spectroscopy
c) Scanning electron microscope-energy dispersive X-ray analysis
d) Paraffin test

932. Putrefaction is delayed in - *(DELHIPG Feb. 09)*
a) Peritonitis b) Septicemia
c) Anasarca d) Zinc chloride poisoning

910) d 911)c 912) d 913)a 914)a 915)d 916)c 917)c 918)b 919)a 920)a 921)a 922)a 923)a
924) a 925) d 926) d 927) a 928) c 929) a 930) c 931) d 932) d

933. Kennedy phenomenon deals with-*(DELHIPGFeb. 09)*
a) Evaluation of exit and entry wounds
b) Evaluation of bum wounds
c) Effects of poisoning on stomach mucosa
d) Estimation of fetal age

934. The most preferred side for collection of blood in alcohol poisoning is - *(DELHIPG Feb. 09)*
a) Femoral vein b) Radial artery
c) Subclavian vein d) Cardiac

935. Cholera like action is seen in poisoning by -
a) Ricinus communis *(DELHI PG Feb. 09)*
b) Calotropis gigantea
c) Ergot
d) Abrus precatorius

936. Magnesium sulphate lavage is done in poisoning with - *(DELHIPGFeb. 09)*
a) Aniline b) Copper sulphate
c) Ethyl alcohol d) Phenol

937. Parotid swelling occurs in poisoning with :
a) Iodine b) Mercury *(DELHIPGFeb. 09)*
c) Thallium d) Barium

938. Cobra snake venom is - *(DELHIPG Mar. 09)*
a) Vasculotoxic b) Urotoxic
c) Musculotoxic d) Nephrotoxic

939. Green-coloured urine is characteristic of which poisoning? *(DELHI PG Mar. 09)*
a) Phenol b) Copper sulphate
c) Barbiturates d)Lead

940. False snese of perception without any external stimuli is a characteristic of -*(DELHI PG Mar 09)*
a) Illusion b) Delusion
c) Hallucination d) Impulse

941. Tactile sensations over the body are a characteristic of which poisoning ? *(DELHI PG Mar 09)*
a) Cocaine b) Opium
c) Cannabis d) Barbiturate

942. Hatter's shakes are present in poisoning by- *(DELHI PG Mar 09)*
a) Lead b) Arsenic
c) Copper sulphate d) Mercury

943. Which one of the following is most characteristic of Elapidae snake envenomation ? *(UPSC-109)*
a) Bleeding manifestation
b) Neuro-paralytic symptoms
c) Rhabdomyolysis
d) Cardiotoxicity

944. A 28-year-old male patient is brought to casualty in comatose state, with pin-point pupils, reduced respiratory rate and bradycardia. What is the most likely diagnosis ? *(UPSC-109)*
a) Tricyclic antidepressant poisoning
b) Opioid poisoning
c) Benzodiazepine poisoning
d) Organophosphorus poisoning

945. True about role of nitrites in cyanide poisoning -
a) Deoxygenation *(PGI Nov 09)*
b) Chelation of cyanides
c) Methemoglobin formation
d) Sulfhemoglobin formation

946. Caustic poison corrodes mucosa because of -
a) It's hygroscopic nature *(AIIMS Nov 09)*
b) It has glue like action
c) It has affinity for mucosa
d) It is programmed to stick

947. Hatter's shakes are seen in which poisoning -
a) Arsenic b) Mercury *(AIIMS Nov 09)*
c) Copper d) Lead

948. A child brought with suspected ingestion, presented with dry mouth, dilated pupil, difficulty in swallowing, delirium, dry & warm skin, the substance is -
a) Anti-cholinergic *(ARMS May 10)*
b) Sympathetic
c) Cholinergic
d) Alpha-blocker

949. A factory worker presents with excessive salivation, blue lines on gums, tremors, disturbed personality, insomnia and loss of appetite. The most likely poisoning is - *(AI10)*
a) Mercury b)Lead
c) Arsenic d) Phosphorus

950. Aconite poisoning causes all except - *(AI 10)*
a) Hypersalivation b) Tingling and numbness
c) Increased BP d) Chest pain

951. Which of the following drugs is used for narcoanalysis - *(AI 10)*
a) Atropine b) Phenobarbitone
c) Scopolamine d) Pethidine

952. Vesiculation can be caused by application of -
a) Cantheridin b) Brucine*(Maharashtra 10)*
c) Dhatura d) Capsicum

953. Brown-coloured urine is seen in the - *(DPG10)*
a) Nitric acid poisoning
b) Carbolic acid poisoning
c) Hydrochloric acid poisoning
d) Sulphuric acid poisoning

954. Which of the following is a non- poisonous snake?
a) Viper b)Krait *(DPG10)*
c) Sea snake d) Rat snake

955. In methyl alcohol poisoning there is CNS depression, cardiac depression and optic nerve atrophy. These effects are produced due *to-(DPG10)*
a) Formaldehyde and formic acid
b) Acetaldehyde
c) Pyridine
d) Acetic acid

956. Priapism occurs in - *(DPG 10)*
a) Snakebite b)RattiPojsoning
c) Cantharide poisoning d) Arsenic poisoning

957. Green coloured urine is seen in poisoning with -
a) Phenol b) Ethyl alcohol *(Punjab 10)*
c) Ethylene glycol d) Kerosene

933)a 934)a 935)a 936)c 937)a 938)None 939)a 940)c 941)a 942)a 943)b 944)b 945)c 946)a

958. A person feels that grains of sand are lying under the skin or some small insects are creeping on the skin giving rise to itching sensation; the condition is seen in - *(Punjab 10)*
a) Organophosphorus poising
b) Alcohol withdrawl
c) Cocaine poisoning
d) Morphine poisoning

959. Gastric lavage turns black in the presence of silver nitrate, most probable poisoning is - *(Punjab 10)*
a) Celphos b)Malathion
c) Organophosphorus d)Parathion

960. "Hatter's shakes" are see in poisoning due to -
a) Mercury b) Arsenic *(Jipmer 10)*
c) Lead d) Copper

961. Acrodyniaisafeatureof- *(Jipmer 10)*
a) Iron deficiency anemia b) Mercury poisoning
c) Copper poisoning d) Zinc poisoning

962. Colour of urine in phenol poisoning- *(Jipmer 10)*
a) Green b)Red
c) Blue d) Yellow

963. All are features of cocainism except -
a) Hemorrhagic stroke *(Jipmer 10)*
b) Seizures
c) Co-existing alcohol addiction
d) Priapism

964. Blindness along with metabolic acidosis occur in -
a) Methanol poisoning *(Jipmer10)*
b) Ethanol poisoning
c) Barbiturate poisoning
d) Salicylate poisoning

965. Spinal cord is preserved in the poisoning of -
a) Alcohol b) Oleander *(Jipmer 10)*
c) Opioid d) Strychnine

966. The state of muscles in between convulsions in strychnine poisoning is *(Jipmer10)*
a) Fasciculations b) Relaxation
c) Rigidity d) Tonic contraction

967. Sarcoidosis is mimicked by chronic_____ poisoning- *(Corned.10)*
a) Mercury b) Beryllium
c) Aluminium d)Lead

968. All the following statements are TRUE regarding methyl alcohol poisoning EXCEPT - *(Corned 10)*
a) It is characterized by high anion gap acidosis
b) It causes ocular toxicity
c) It causes high osmolal gap
d) Concurrent ethanol ingestion worsens the clinical features

969. Dimercaprol is/are used in poisoning with -
a) Pb b) Hg *(PGIMaylO)*
c) As d) Acetaminophen
e) Iron

970. Red brown post mortem staining is seen in -
a) Dhatura b) Aniline *(PGINov 10)*
c) CO d) Nitrites
e) Cyanide

971. Feature (s) of CO poisoning is/are - *(PGINov. 10)*
a) Cherry red colour and thinning of blood
b) Congestion of all organs
c) Severe cyanosis
d) Parkinsonism
e) Blister on skin

972. Gastric Lavage is contraindicated in poisoining with- *(PGINov. 10)*
a) Kerosene b) Organophosphorus
c) Arsenic d) Morphine
e) Dhatura

973. Patient is having bronchodilation, increased temperature, constipation and tachycardia. The diagnosis is - *(AIIMS Nov 10)*
a) Organophosphate poisoning
b) Paracetamol poisoning
c) Mushroom poisoning
d) Atropine poisoning

974. Aluminium phosphide poisoning - all true except -
a) Subendocardial infarction *(AIIMS Nov 10)*
b) Produces phosphine gas
c) Oesophageal stricture
d) Inhibits cytochrome a oxidase

975. A middle aged man comes to OPD with paraesthesia of hands and feet, hyperkeratosis of palms, rain drop pigmentation and transverse lines on nails. Most likely the person is having - *(AIIMS May 11)*
a) Arsenic poisoning b) Lead poisoning
c) Mercury poisoning d) Cadmium poisoning

976. Which of the following is an iOuminous, translucent and waxy poison - *(AI11)*
a) Iodine b) Ammonium bromide
c) Cobra venom d) Yellow phosphorus

977. A patient presents to the emergency department with bluish discolouration of conjunctiva, mucus membranes and nails one hour after ingestion of a poison. Examination reveals tachycardia and hypotension. Which of the following is the most likely ingested poison - *(AI 11)*
a) Mercury b) Arsenic
c) Lead d) Silver

978. Which of the following is commonly used as a Rave drug- *(AI11)*
a) Cannabis b) Cocaine
c) Heroin d) Ecstasy

979. All are true about aluminium phosphide poisoning except- *(PUNJAB11)*
a) Accumulation of acetylcholine at neuromuscular junction
b) Inhibit cytochrome oxidase
c) Production of phosphine
d) Metabolic acidosis

980. Maximum damage to esophagus is by -
a) $H_?S0_4$ *(PUNJAB11)*
b) Nitric acid
c) Sodium hydroxide (NaoH)
d) Acetic acid

958) c 959) a 960) a 961)b 962) a 963) d 964) a 965) d 966)b 967) b 968) d 969)a,b,c 970) a,d

981. Colour of urine in phenol poisoning - *(Jipmer 11)*
a) Red b)Blue
c) Green d) Yellow

982. Dhatura poison contains all except - *(Jipmer 11)*
a) Atropine b) Hyoscine
c) Hyoscyamine d) Muscarine

983. Spinal cord is preserved in - *(Jipmer 11)*
a) Strychnine poisoning b) Arsenic poisoning
c) Oleander poisoning d) War gas poisoning

984. Basophilic stippling of the RBCs is a sensitive index of- *(UPSCII11)*
a) Lead poisoning b) Arsenic poisoning
c) Asbestosis d) Silicosis

MISCELLANEOUS

985. A civil wrong is known as - *(AIMS 80)*
a) Mutatis mutandis b) Pari passu
c) Tort d) Ultra wires

986. Hatter's Shake is seen in - *(AI93)*
a) Arsenic b) Mercury
c) Phosphorus d) Lead

987. Colour changes of putrefaction are first observed in the- *(AIMS 86)*
a) iliac fossae b) Popliteal fossae
c) Cubital fossae d) Arm pits
e) Neck

988. A congnizable offence signifies - *(AI93)*
a) Imprisonment upto 2 yrs
b) Imprisonment upto 3 yrs+Rs. 1000 fine
c) Arrest without warrant
d) Only fine upto Rs 1000

989. Criminal responsbility in Indian constitution is included in IPC section - *(PGI81, Kerala 90)*
a) 84 b)300
c) 302 d)304

990. Erethism is seen in which poisoning - *(AIMS 97)*
a) Mercury b) Arsenic
c) Aconite d) Phenol

991. Sexual consent cannot be given by a girl below- *(TN 99)*
a) 15 yrs b) 17 yrs
c) 18 yrs d) 21 yrs

992. Which of the following sections of IPC are concerned with dowry death - *(Kerala 2K)*
a) 300 b) 302
c) 304 d) 304-A
e) 304-B

993. Fibrosis is seen in a thrombus after....weeks -
a) One b) Two *(AI 89)*
c) Four d)Five

994. A farmer who worked in he field whole day suddenly took ill and was brought to the hospital with vomiting, diarrhoea, salivation perspiration, constricted pupils and pulmonary oedema. The most likely diagnosis is-
a) Acute left ventricualr failure *(UPSC 97)*
b) Organophosporus poisoning
c) Snakebite
d) Aluminium phosphide poisoning

995. Sewer gas is - *(PGI 03)*
a) Phosgene b) H_2S
c) CO_2 d) Aluminium phosphide

996. Not a test of circulation - *(Orissa 04)*
a) Magnus test b) Icard test
c) Winslow test d) Diaphanous test

997. Weight of a virgin uterus is - *(Orissa 04)*
a) 50 gm b) 100 gm
c) 200 gm d) 150 gm

998. Nasal swabs preserved in - *(Manipal 04)*
a) Drowning b) Anaphylaxis
c) Cocaine poisoning d) None

999. False negative hydrostatic test in a live born foetus may be seen in - *(AI 08)*
a) Atelectasis b) Artificial respiration
c) Emphysema d) Putrefaction

1000. Study of death in all its aspects is known as -
a) Trichology b) Ornithology *(AIMS Nov 08)*
c) Odontology d) Thanatology

1001. Constituents of a typical embalming solution are all except- *(AIMS Nov 08)*
a) Phenol b) Glycerine
c) Formalin d) Ethanol

1002. The best method of injection in embalming is- *(DELHIPGFeb. 09)*
a) Continuous injection and drainage
b) Continous injection with disrupted drainage
c) Alternate injection and drainage
d) Discontinuous injection and drainage

1003. Ewing's postulates deals with relationship between-
a) Trauma and tumor *(DELHI PG Feb. 09)*
b) Trauma and MI
c) Trauma and SAH
d) Trauma and poisoning

1004. Which of the following organs/tissues are presently not being used for organ/tissue transplantation. -
a) Blood vessels b)Lung *(AI11)*
c) Liver d) Urinary Bladder

Recent Years NEET/DNB Questions

1005. Cobras belong to- *(NEET/DNB Pattern)*
a) Viperidae b)Elapidae
c) Colubridae d)Crotalide

1006. Voyeurism is also known as - *(NEET/DNB Pattern)*
a) Scotophilia b) Priapism
c) Frotteurism d) Onanism

1007. Coirneal tattooing is done by - *(NEET/DNB Pattern)*
a) Gold chloride
b) Calcium chloride
c) Copper sulphate
d) Potassium permanganate

981)c 982) d 983) a 984) a 985) c 986) b 987) a 988) c 989) a 990) a 991) a 992) e 993) b 994) b

1008. Angel dust is - *(NEET/DNB Pattern)*
a) Phencyclidine b)LSD
c) Morphine d) Cannibis

1009. Two identical twins will not have same - *(NEET/DNB Pattern)*
a) Fingerprints b) Iris color
c) DNA copies d) Blood group

1010. La facies symapthique is seen in -
a) Hanging *(NEET/DNBPattern)*
b) Strangulation
c) Myocardial insufficiency
d) Railway accident

1011. According to 2000 act, juvenile is boy and girl respectively less than - *(NEET/DNB Pattern)*
a) 16 and 18 b)18and21
c) 14 and 16 d) 18 and 18

1012. CrPC 26 - *(NEET/DNBPattern)*
a) Division of offence
b) Division of negligence
c) Division of malpractice
d) None

1013. Contributory negligence is negligence due to -
a) Doctor *(NEET/DNBPattern)*
b) Patient
c) Doctor and patient
d) Hospital administrator

1014. Best site for blood collection for toxicology sampling-
a) Abdominal aorta *(NEET/DNBPattern)*
b) Femoral vein
c) Carotid artery
d) Heart

1015. Borax is- *(NEET/DNB Pattern)*
a) Gastrointestinal irritants
b) Genitourinary irritants
c) Ecbolics
d) Emmenagogues

1016. Not a part of firearm - *(NEET/DNB Pattern)*
a) Bolt b) Piston
c) Extractor d) Muzzle

1017. Pupil condition in opium poisoning - *(NEET/DNB Pattern)*
a) Miosis b) Mydriasis
c) Irregular d) No change

1018. Methadone is used in treatment of overdose of-
a) Cocaine b) Heroin *(NEET/DNB Pattern)*
c) Amphetamine d) Barbiturate

1019. What is first external sign of decomposition of dead body- *(NEET/DNB Pattern)*
a) Decomposition of liver and intestine
b) Greenish discolouration over right iliac fossa
c) Greenish discolouration over dependent parts
d) Blood stained froth from mouth

1020. In strychnosnux vomica poisoning- *(NEET/DNB Pattern)*
a) Pt becomes unconscious immediately
b) Pt remains conscious throughout
c) Pt becomes unconscious at end stage
d) Pt becomes unconscious in 1 hr or so

1021. Medical etiquette is related to -
a) Legal responsibility of physicians
b) Rules to be followed by physician
c) Laws of courtesy observed between physicians
d) Moral principles

1022. Colour of urine in carbolic acid poisoning -
a) Dark yellow b) Reddish *(NEET/DNB Pattern)*
c) Black d) Dark green

1023. Which snake bite causes hematologic abnormalities-
a) Cobra b)Crait *(NEET/DNB Pattern)*
c) Viper d) Sea snake

1024. Injury by Lathi- *(NEET/DNB Pattern)*
a) Contusion b) Laceration
c) Stab wound d) Abrasion

1025. Number of milk teeth - *(NEET/DNB Pattern)*
a) 16 b) 12
c) 20 d)8

1026. In nux vomica poisoning, posture assumed by the spine is - *(NEET/DNB Pattern)*
a) Opisthotonus b) Emprosthotonus
c) Pleurosthotonus d) b and c

1027. Rule ofHasseis used to determine- *(NEET/DNB Pattern)*
a) Age of fetus b) Height of adult
c) Race of person d) Identification

1028. Widmark's formula helps in the measurement of blood level of - *(NEE T/DNB Pattern)*
a) Cocaine b) Alcohol
c) Barbiturates d) Benzodiazepines

1029. Gastric lavage is contraindicated in poisoning by -
a) Kerosene *(NEET/DNB Pattern)*
b) Morphine
c) Barbiturates
d) Cyanide

1030. Marshalls triad is seen in - *(NEET/DNB Pattern)*
a) Explosive injury b) Gunshot injury
c) Drowning injury d)None

1031. What acts as both poison & antidote- *(NEET/DNB Pattern)*
a) $CuS0_4$ b)$HgCl_2$
c) Ar_20_3 d)Thallium arsenate

1032. Yellow discoloration of skin and mucosa is seen in which poisoning? *(NEET/DNB Pattern)*
a) Nitrous oxide b) Nitric acid
c) Sulphuric acid d) Phosphoric acid

1033. Organs first to be injured in blast- *(NEET/DNB Pattern)*
a) Ear, lung b) Kidney, spleen
c) Pancreas, duodenum d) Liver, muscle

1034. In which of the following case police inquest is not done-
a) Dowry death b) Suicide
c) Death by accident d) Death by animals

1035. Liking to wear opposite sex clothes - *(NEET/DNB Pattern)*
a) Fetichism b) Masochism
c) Transvestism d) Sadism

1036. Cause of death for drowing in cold water -
a) Vagal *(NEET/DNB Pattern)*
b) Asphyxia
c) Loss of consciousness
d) None

1037. Cephalic index is used for - *(NEET/DNB Pattern)*
a) Race b) Age
c) Sex d) Caste

1038. Telefono is - *(NEET/DNB Pattern)*
a) Beating on soles b) Pulling of hair
c) Beating on ears d) Beating on fingers

1039. Plantiff is a person who - *(NEET/DNB Pattern)*
a) Files case in civil court b) Acts as defender
c) Gives judgement d) None

1040. Incised looking laceration is seen at ? *(NEET/DNB Pattern)*
a) Forehead b) Hand
c) Thorax d) Abdomen

1041. Dirt collar or grease collar is seen in - *(Jipmer 2005)*
a) Punctured wound by sharp weapon
b) Lacerated wound
c) Firearm entry wound
d) Stab wound

1042. A person knows the truth & wilfully concealed the truth &gives false evidence in the court of law. He will be punished under which IPC - *(NEET/DNB Pattern)*
a) 190 b) 192
c) 191 d) 193

1043. Sexual assault of child, hymen is not ruptured due to-
a) Deep seated *(NEET/DNB Pattern)*
b) Underdeveloped
c) Too tough to rupture
d) Distensible

1044. Boy died in emergency room with white froth in mouth. The poisoning is due to -
a) Orgnophosphorus b) Opium
c) HCN d) None

1045. Burking includes- *(NEET/DNB Pattern)*
a) Choking b) Ligature
c) Overlaying d) Traumatic asphysia

1046. Phossy jaw is caused by - *(NEET/DNB Pattern)*
a) White phosphorous b) Yellow phosphorous
c) Arsenic d) Antimony

1047. Victim was choked with mouth & nose covered with elbow around neck. It is called as- *(NEET/DNB Pattern)*
a) Mugging b) Garrotting
c) Bansadola d) None of the above

1048. Crural index is - *(NEET/DNB Pattern)*
a) Length of tibia / femur x 100
b) Length of radius /humerus x 100
c) Length of fibula/ tibia x 100
d) Length of radius/ ulna x 100

1049. Falangais- *(NEET/DNB Pattern)*
a) Beating on soles with blunt object
b) Beating on soles with palms
c) Beating on the abdomen
d) Suspension by wrists

1050. Questionnaire is to check toxicity after-
a) Alcohol b) Nicotine *(NEET/DNBPattern)*
c) Opium d) Heroine

1051. Law of Criminal responsibility is in which section -
a) 81 b) 80 *(NEET/DNB*
c) 83 d)84 *Pattern)*

1052. Blackening of eye most common because of -
a) Friction abrasion *(NEET/DNBPattern)*
b) Patterned abrasion
c) Imprint abrasion
d) Contusion

1053. Incised looking laceration is seen in all except -
a) Iliac crest *(NEET/DNBPattern)*
b) Zygomatic bone
c) Shin
d) Chest

1054. In vitrous what is measured for time since death -
a) Sodium *(NEET/DNBPattern)*
b) Potssium
c) Proteins
d) Chloride

1055. In criminal cases, conduct money is paid by -
a) Court *(NEET/DNBPattern)*
b) Magistrate
c) Judge
d) No conduct money is given

1056. DNA finger printing cannot be taken from -
a) Saliva *(NEET/DNBPattern)*
b) Tooth
c) Buccal mucosa
d) Blood

1057. Sexual asyphyxia is associated with -
a) Sadism *(NEET/DNBPattern)*
b) Masochism
c) Fetichism
d) Vouyerism

1058. Ectopic bruise is most commonly seen in -
a) Leg *(NEET/DNB Pattern)*
b) Eye
c) Pinna
d) Scalp

1059. Kennedy phenomenon is seen in -
a) Road traffic accident *(NEET/DNB Pattern)*
b) Gunshot injury
c) Bums
d) Contusion

1060. Muttering delirium is seen with - *(NEET/DNB Pattern)*
a) Ricinus b) Datura
c) Cocaine d) Aconite

1061. TVeatment of paracetamol poisoning -
a) N acetyl cysteine *(NEET/DNB Pattern)*
b) Activated charcoal
c) Dialysis
d) Alkaline diuresis

1062. Police Inquest is all except - *(NEET/DNB Pattern)*
a) Senior head constable can investigate
b) Most common inquest
c) Panchnama has to be signed by 10
d) 10 may not summon

1063. Emysema aquosum is found *m-(NEET/DNBPattern)*
a) Dry drowning b) Wet drowning
c) Immersion syndrome d) Secondary drowning

1064. Post mortem caloricity is seen in -
a) Tetanus *(NEET/DNB Pattern)*
b) Cholera
c) Strychnine poisoning
d) All of the above

1065. Ethylene glycol when ingested affects kidney by forming- *(NEET/DNB Pattern)*
a) Formaldehyde b) Oxalates
c) Isoproylalcohol d) Phosphates

1066. All are cardiotoxic except - *(NEET/DNB Pattern)*
a) Aconite b) Opium
c) Oleander d) Nicotine

1067. Which of the following retards putrefaction ?
a) Mercury b)Lead *(MH2003)*
c) Arsenic d) Copper

1068. Gunshot residue on hands can be detected by which test - *(NEET/DNB Pattern)*
a) Benzidine test
b) Phenolphthalein test
c) Dermal nitrate test
d) Hydrogen activation analysis

1069. Best means to identify a *person-(NEET/DNB Pattern)*
a) Photography b) Dactylography
c) Anthropometry d) Handwriting

1070. Color of postmortem lividity in hypothermic death- *(NEET/DNB Pattern)*
a) Purple b) Deep red
c) Cherry red d) Bright pink

1071. Chronic arsenic poisoning does not cause -
a) Mixed sensory & motor neuropathy
b) Mesothelioma *(NEET/DNBPattern)*
c) Hyperkeratosis of skin
d) Anemia

1072. In civil cases, conduct money is decided by -
a) Opposite party *(NEET/DNBPattern)*
b) Judge
c) Doctor
d) Witness

1073. For DNA sampling which preservative is used -
a) EDTA b) Citrate *(NEET/DNB Pattern)*
c) Heparin d) Fluoride

1074. Frigidity is- *(NEET/DNBPattern)*
a) Inability to initiate sexual arousal in female
b) Inability to initiate sexual arousal in male
c) Ejaculation occurring immediately after penetration
d) None

1075. IPC 94 states that - *(NEET/DNB Pattern)*
a) Criminal responsibility
b) Act to which a person is compelled by threats is not offence
c) Act to which a person is compelled by threats is an offence
d) Civil responsibility

1076. Pink disease or acrodynia is seen with -
a) Arsenic b) Mercury *(NEET/DNB Pattern)*
c) Copper d)Lead

1077. Who is called as the Father of toxicology -
a) Paracelsus b) Galen *(NEET/DNB Pattern)*
c) Galton d) Guftafson

1078. Cognisable offence comes under which section of Cr. P.C. - *(NEET/DNB Pattern)*
a) 2C b)2B
c) 1A d) None

1079. Which of the following is not seen in finger prints -
a) Loop b) Circles *(NEET/DNB Pattern)*
c) Whorl d)Arch

1080. speed ball is cocaine plus - *(NEET/DNB Pattern)*
a) Heroin b) Cannabis
c) Amphetamine d)LSD

1081. Brutonian lines on gums is seen in poisoning with ?
a) Lead b) Mercury *(NEET/DNB Pattern)*
c) Arsenic d)Zinc

1082. In how many hours does a dead body float in India in summer -
a) 6 hours b) 12 hours
c) 24 hours d) 48 hours

1083. Method of identification using lips? *(NEET/DNB Pattern)*
a) Dactylography b)Podogram
c) Cheiloscopy d) None

1084. Not used for iron poisonin ? *(NEET/DNB Pattern)*
a) Penicillamine b) Desferrioxamine
c) Gastric lavage d) Magnesium hydroxide

1085. IPC for criminal responsibility defining non-offence is ? *(NEET/DNBPattern)*
a) 82 b) 182
c) 88 d) 188

1086. Chemical name for ectasy is - *(NEET/DNB Pattern)*
a) MDMA b) MDHA
c) EDHA d) MDAM

1087. Most common drug abuse in India- *(NEET/DNB Pattern)*
a) Cannabis b) Amphetamine
c) Cocaine d) Heroine

1088. Dathura poisoning is characterised by -
a) Pinpoint pupil *(NEET/DNBPattern)*
b) Dilated salivary gland
c) Dilated pupil with facial flush
d) Decreased temperature

1089. Stellate wound may be seen in which of the following bullet entry wounds - *(NEET/DNBPattern)*
a) Contact shotb) Close shot
c) Distance shot d) Two feet distance

1062)d 1063) b 1064)d 1065)b 1066)b 1067)c 1068)c 1069)b 1070)c 1071)b 1072)b 1073)a 1074)a 1075)b 1076)b 1077) a 1078)a 1079)b 1080)a 1081)a>b 1082)c 1083)c 1084)a 1085)a 1086)a 1087)d 1088)c 1089)a

1090. In a 3 month fetus - *(NEET/DNB Pattern)*
a) Nail comes
b) Limbs well formed
c) Anus is seen as dark spot
d) Meconium is found in duodenum

1091. Paltauf s hemorrhages are seen in -
a) Hanging *(NEET/DNB Pattern)*
b) Strangulation
c) Drowning
d) Thermal injury

1092. First aid should be given in acid contact - *(NEET/*
a) Wash with normal water soap *DNB Pattern)*
b) Wash with mild alkali agent
c) Wash with strong alkali
d) Refer to higher centre

1093. Hyoid bone fracture is common with- *(NEET/DNB*
a) Hanging b) Strangulation *Pattern)*
c) Choking d) Throttling

1094. Dhatura seeds resemble - *(NEET/DNB Pattern)*
a) Risinus communis b) Capsicum
c) Opium d)None

1095. Black papper adultrant is -
a) Khesari dal b) Dried papaya seed
c) Fine sand d) None

1096. Amotivational syndrome is seen with- *(NEET/DNB*
a) Cannabis b) Cocaine *Pattern)*
c) LSD d)None

1097. Hydrogen Peroxide is used in all of the following chemical tests for blood except -*(NEET/DNB Pattern)*
a) Benzidine test b) Kastle Mayer test
c) Ortho toludine test d) Teichman test

1098. IPC 82 states that: child cannot be punished under what age - *(NEET/DNBPattern)*
a) 5yrs b) 8yrs
c) 7yrs d) lOyrs

1099. Oral evidence is more important than written testimony as- *(NEET/DNBPattern)*
a) Oral evidence cannot be cross examined
b) Oral evidence can be cross examined
c) Documentary evidence requires no proof
d) None

1100. Knockout drops are- *(NEET/DNBPattern)*
a) Paraldehyde b) Chloral hydrate
c) Kerosene d) Turpentine

1101. Oochronosis is seen in which poisoning -
a) Hydrochloric acid *(NEET/DNBPattern)*
b) Carbolic acid
c) Oxalic acid
d) Formic acid

1102. Dilated pupil with coma is seen in which poisoning -
a) Opium *(NEET/DNBPattern)*
b) Datura
c) Mushroom
d) Pilocarpus

1103. Last organ to putrify in males *)sr(NEET/DNBPattern)*
a) Bones b) Prostate
c) Brain d) Spleen

1104. Instantaneous rigor is seen in -*(NEET/DNB Pattern)*
a) Cadaveric rigidity b) Rigor mortis
c) Cold stiffening d) Gas stiffening

1105. % of COHb that can cause death - *(NEET/DNB*
a) 70% b)82% *Pattern)*
c) 75% d) 80%

1106. In a case of Hanging neck ligature marks are example of - *(NEET/DNB Pattern)*
a) Contusion b) Pressure abrasion
c) Laceration d) Bruise

1107. Grievous injury is punishable under which section of IPC- *(NEET/DNB Pattern)*
a) 354 b)320
c) 321 d)402

1108. Bright red color on post martum staining found in-
a) CO b) HCN*(NEET/DNB Pattern)*
c) H2S d)P

1109. Opium is derived from - *(NEET/DNB Pattern)*
a) Leaf b)Root
c) Poppy seed d) Unripe capsule

1110. Neurotoxin is which snake - *(NEET/DNB Pattern)*
a) Viper b)Krait
c) Sea snake d)None

1111. Mechanism of cyanide poisoning is by inhibiting -
a) DNA synthesis *(NEET/DNB Pattern)*
b) Cytochrome oxidase
c) Protein breakdown
d) Protein synthesis

1112. Most common hymen rupture in a virgin is -
a) Anterior *(NEET/DNB Pattern)*
b) Anterolateral
c) Posterolateral
d) Posterior

1113. A patient with rain drop pigmentation, which poisoning caused it - *(NEET/DNB Pattern)*
a) Copper b) Arsenic
c) Lead d) Mercury

1114. Which section belongs to marital rape - *(NEET/DNB*
a) 375A b)376A *Pattern)*
c) 376B d) 375 B

1115. Frotteruism is - *(NEET/DNB Pattern)*
a) Sexual pleasure is obtained by witnessing the act of urination
b) Sexual gratification by rubbing private parts
c) Sexual practise involving three people
d) None

1116. Foamy liver is seen as - *(NEET/DNB Pattern)*
a) Adipocere b) Putrefaction
c) Mummification d)Drowing

1117. What test is used to check if blood is of human origin- *(NEET/DNB Pattern)*
a) Takayamatest b) Benzidine test
c) Precipitin test d) Teichmann's test

1090) a 1091)c 1092)b 1093)b 1094)b 1095)b 1096)a 1097)d 1098)c 1099)b 1100)b 1101)b 1102)b 1103) a
1104)a 1105)b 1106)b 1107)b 1108)c 1109)d 1110)b 1111) b 1112)c 1113)b 1114)b 1115)b 1116)b 1117)c

1118. Vasculotoxic is - *(NEET/DNB Pattern)*
a) Sea snakeb) Viper
c) Krait d) Cobra

1119. Shotgun does not contain - *(NEET/DNB Pattern)*
a) Barrel b) Choke bore
c) Bullets d) Muzzle

1120. Vitriolage is used for - *(NEET/DNB Pattern)*
a) Using vitriol for suicide
b) Using vitriol for homiside
c) Vitriol throwing
d) Perforation of stomach caused by sulphuric acid.

1121. Doctrine of res ipsa loquitur means -
a) Common knowledge *(NEET/DNB Pattern)*
b) Medical maloccurance
c) Fact speaks for itself
d) Oral evidence

1122. In medicolegal autopsy, cavity to be opened first is - *(NEET/DNBPattern)*
a) Thoracic b) Abdomen
c) Cervical d) Any of the above

1123. Antidote for Strychnine poisoning is- *(NEET/DNB Pattern)*
a) Barbiturates b) Physotigmine
c) Fomepizole d) Naloxone

1124. Cyanide odour is of - *(NEET/DNB Pattern)*
a) Rotten egg b) Fish
c) Fruity d) Bitter almond

1125. First treatment for snake bite is -
a) Antisnake venom *(NEET/DNBPattern)*
b) Application of tourniquet
c) Clean the wound with soap & water
d) Local incision & suction

1126. Algor mortis is - *(NEET/DNBPattern)*
a) Rise of body temperature after death
b) Cooling of body
c) Persistent body spasm
d) None

1127. Lendrum stain is done for - *(NEET/DNB Pattern)*
a) Air embolism b) Fat embolism
c) Amniotic fluid embolism d)None

1128. Barium carbonate poisoning causes -
a) Respiratory distress *(NEET/DNB Pattern)*
b) Gastrointestinal irritation
c) Muscular weakness
d) Cyanosis

1129. True about Stab Wounds - *(NEET/DNB Pattern)*
a) Depth is Greater than Breadth
b) Breadth is greater than depth
c) Length is greater than breadth
d) It has wound of entry and exit

1130. Concealment of an Infant is under which section of IPC - *(NEET/DNB Pattern)*
a) 320 b)304
c) 375 d) 318

1131. Gabon's system is used for - *(NEET/DNB Pattern)*
a) Dactylography b) Poroscopy
c) Ridgeology d) None

1132. Oximes are contraindicated in which poisoning ?
a) Malathion b) diazinon *(NEET/DNB Pattern)*
c) Phorate d) Carbamate

1133. Ethylene Glycol antidote is - *(NEET/DNB Pattern)*
a) Barbiturates b) Acetycysteine
c) Ferric chloride d)Fomipizole

1134. Post mortem caloricity is seen with -
a) Arsenic b) Lead *(NEET/DNB Pattern)*
c) Datura d) Strychnine

1135. Tetany is caused by which poisoning- *(NEET/DNB Pattern)*
a) Oxalic acid b) Carbolic acid
c) Sulphuric acid d) Nitric acid

***

ANAE STHESIA

– liS I9sl

, i A -j

Wmmmm

ANAESTHESIA

ANAESTHETIC EQUIPMENTS

1. True about Boyle's apparatus - *(PGIDec 06)*
a) Continuous flow machine
b) Liquid anesthetic vapours not used
c) Resistance very high
d) Resistance low

2. True about anaesthesia machine - *(PGI June 08)*
a) Cylinder is a part of high pressure system
b) 0_2 flush delivers < 35 lit
c) O_z flush delivers > 35 lit
d) Pipeline is a part of low pressure system

3. For high pressure storage of compressed gases cylinders are made up of -
a) Molybdenum steel b) Iron + Mo
c) Steel + Cu d) Cast iron

4. Gas is filled as liquid in cylinder in - *(PGIDec 07)*
a)O_z b)$C0_2$
c)N_zO d) Cyclopropane
e) Halothane

5. Ratio of O_2 : N_2O in Entonox is - *(NEET/DNB Pattern)*
a) 50 : 50 b) 60 : 40
c) 40 : 60 d) 25 : 75

6. An anaesthetist orders a new attendant to bring the oxygen cylinder. He will ask the attendant to identify the correct cylinder by following color code -*(AI 03)*
a) Black cylinders with white shoulders
b) Black cylinders with grey shoulders
c) White cylinders with black shoulders
d) Grey cylinder with white shoulders

7. As per ISO, color of N_zO cylinder is - *(MH11)*
a) Blue b) Black
c) White d)Red

8. Colour of oxygen cylinder is - *(AI97)*
a) Grey b)Blue
c) Black with white shoulder d) Orange

9. Pin index system is a safety feature adopted in anaesthesia machines to prevent - *(AIIMS 03)*
a) Incorrect attachment of anaesthesia machines
b) Incorrect attachment of anaesthesia face masks
c) Incorrect inhalation agent delivery
d) Incorrect gas cylinder attachment

10. DISS is used for - *(NEET/DNB Pattern)*
a) Correct application ofcylinder tdanaesthesia machine
b) To provide analgesia
c) To monitor BP
d To monitor CVP

11. IVue statement regarding pin index - *(PGIMay 10)*
a) Pin is present on cylinder
b) Pin is present on machine
c) Not effective if wrong gas is filled in cylinder
d) Pin index of air is 2,5

12. Pin code index of N_2O is - *(PGI 00, PGI June 04 NEET/DNB Pattern)*
a) 1,6 b) 2,5
c) 2,6 d)3,5

13. Pin index safety system what is true - *(Punjab 11)*
a) Holes in the anaesthesia machine
b) Pin index of N_20 is 2,5
c) Pins on the cylinder - yokes
d) Pin index of O_z - 2,5

14. True about N_zO cylinder ■ *(PGI 00, PGI June 04)*
a) Pressure is 2200 PSI b) Blue in colour
c) Gas in liquid form d) Pin index 3.5
e) It is flammable

15. All statements are true about gas cylinders except -
a) Pressure of N_zO is 745 psig at 20°C
b) Higher pressure indicates impurity in N_zO
c) N_20 is in liquid form *(Jipmer 02,MAHE 04)*
d) Emergency oxygen 'E' cylinder has more gas than 'H' cylinder

16. Color of N_20 cylinder is - *(Maharashtra 01)*
a) Black with white shoulders
b) White with black shoulders
c) Grey
d) Blue

17. True about N_20- *(PGI June 08)*
a) Pin index 3,5 b) Blue in colour
c) Stored as liquid d) MAC 105

18. True about Rotameter - *(MP 06)*
a) Rotameter reading may not get affected by dirt inside the tube
b) Rotameter reading may not get affected by static electricity
c) The height to which bobbin rises indicates the flow rate
d) A rotameter is a variable pressure flowmeter

19. If an anaesthetist at high altitude uses plenum vaporizers. It will deliver the vapor concentration -
a) Higher than the original concentration at high partial pressure *(MP 06)*
b) Lower than the concentration at lower partial pressure
c) Higher than the concentration at same partial pressure
d) Lower than concentration at same partial pressure

20. All of the following are used to maintain proper oxygen flow to the patient except - *(AIIMSMay 08)*
a) Placement of Oxygen flowmeter downstream of the Nitrogen flowmeter
b) A proportionater between N_2 and O_2 control valve
c) Different pin index for nitrogen and oxygen
d) Calibrated oxygen concentration analyses

21. All of the following are safety measures to prevent the delivery of hypoxic gas mixture to the patient except - *(AIIMS May 08)*
a) Location of oxygen valve after the N O valve
b) Presence of a PIN index system to prevent wrong attachment of the N O and oxygen cylinders
c) Location of a fail-safe valve downstream from the nitrous oxide supply source

---

l)a,d 2)a,c 3) a 4)b,c,d 5) a 6) a 7) a 8)c 9)d 10) a ll)b,c 12) d 13)c,d 14)b,c,d
15) d 16) d 17) a,b,c,d 18)c 19)c 20)c 21)b

22. True regarding anesthesia apparatus - *(MP 05)*
a) Rotameter reading may not get affected by dirt inside the tube
b) Rotameter reading may not get affected by static electricity
c) The Boyle machine is an intermittent flow device
d) An oxygen failure safety device operate even in the absences of nitrous oxide

23. O is given during anaesthesia to prevent-*(Jipmer 95)*
a)[2] Pain b) Hypoxia
c) Hypercapniad) Hypotension

24. All of the following are suitable anaesthetic circuits for both controlled and assisted ventilation except -
a) Mapleson A b) Mapleson B & C *(AIIMS 03)*
c) Mapleson D d) Mapleson E

25. A **25 year old male is undergoing incision and drainage of abscess under general anaesthesia with spontaneous respiration. The most efficient anaesthetic circuit is** - *(SGPGI05)*
a) Maplelson Ab) Mapleson B
c) Mapleson C d) Mapleson D

26. The most appropriate circuit for ventilating a spontaneously breathing infant- *(MH 05; AI05; NERT/DNB Pattern)*
mh ; ^r^clSbn#ee^i£t)d^ehtion ofAyre's T peiece
p; v^^b) Mapleson A or Magill's circuit
gSfftp- c) Mapleson C on watery to *'8c* fro canister *'(4* g v
d) Bain's circuit

27. In an infant anaesthesia is given by using - *(MP 98)*
a) Open mask ventilation
b) Non - breathing circuit
c) Magill's system
d) Ayre's T. Piece

28. Anaesthesia breathing circuit recommended for spontaneous breathing is - *(Kam 11)*
a) Mapleson A b) Mapleson B
c) Mapleson C d) Mapleson D

29. In magil circuit airflow is - *(AI 00, 98, MP 99)*
a) *Zt* . of minute volume b) equal to M. V.
c) 2xm.v. d)3 xm.v.

30. Bains' circuit is Mapelson type - circuit - *(MH06,*
a) TyepA b)TypeB *MP 99)*
c) Type D d) Type E

31. Ayre's T-piece is which type of *mcmt-(NEET/DNB*
a) Type A b) Type B *Pattern)*
c) Type E d) Type D

32. True about Bain circuit - *(PGI June, 09, Nov 10)*
a) Mapleson type B
b) Mapleson type D
c) Can be used for spontaneous respiration
d) Can be used for controlled vantilation
e) Coaxial

33. Anaesthetic circuit that prevents rebreathing of CO2" *(Maharashtra 08)*
a) Magil's circuit b) Mapleson D circuit
c) Ayre's piece d) Circle system

34. Rebreathing systems are A/E - *(PGI 95, SGPGI 00,*
a) To & fro system b) Circle system *AI 91)*
c) Water's system d) Mapleson F

35. The most important constituent in soda lime for reabsorption of $C0_2$ in a closed circuit is -
a) Sodium hydroxide *(AIIMS May 12)*
b) Barium hydroxide
c) Calcium hydroxide
d) Potassium hydroxide

36. All are constituents of soda lime except - *(PGI 96,*
a) $Ca(OH)_2$ b) $Ba(OH)_2$ *Jipmer 2K)*
c) Silica d) Moisture

37. The constitution of soda lime is - *(Delhi 96)*
a) 5% $Ca(OH)_2$,95% NaOH
b) 5% NaOH, 95% $Ca(OH)_2$
c) 5% KoH 95% NaOH
d) 100%$Ca(OH)_2$

38. 100 gms of soda lime absorbs..... % of $C0_2$ -
a) 15 b) 25 *(Kerala 98)*
c) 150 d) 1000

39. Clayton is used in a close breathing system for the purpose of- *(PGI 96, AMU98)*
a) As a hardner b) As an absorbent
c) As a softner d) As an indicator

40. Water is used for hardening in - *(PGI 96, AI 92)*
a) Sodalime b) Baralime
c) Both d)None

41. All >LC02 absorption in circuit except-(PG/*Dec 07)*
a) Resistance in circuit b) High flow
c) Small granule size d) Medium granule size
e) Chanelling

42. Sodalime is used to absorb $C0_2$ in - *(MH09)*
a) Bain's circuit b) Magill's circuit
c) Closed circuit d) Jackson system

43. Bag and mask ventilation is absolutely contraindicated in - *(Rajasthan 97)*
a) Tracheo-esophageal fistula with esophageal atreasia and esophagus connected to trachea
b) Diaphragmatic hernia
c) Meconium aspiration

44. True about laryngeal mask airway (LMA) -
a) Available in 8 sizes *(PGI June 08)*
b) Intubation can be done
c) Size 1 for neonate
d) Size 3 for adults
e) Full protection from aspiration

45. Laryngeal mask airway size 2 is recommended for-
a) <6.5kg b) 6.5-20kg *(Kam 11)*
c) 20-30 kg d) 30-50 kg

46. Laryngeal mask airway is indicated in - *(PGI01)*
a) To prevent aspiration of stomach contents
b) Short surgical procedure
c) Where endotracheal intubation is contra-indicated
d) Difficult airway
e) Facilitate endotracheal intubation

22) d 23) b 24) a 25) a 26) a 27) d 28) a 29)b 30) c 31)c 32)b,c,d,e 33) d 34) d 35) c
36) b 37) b 38) b 39)d 40)b 41)a,d 42)c 43)a,b,c 44)a,b,c,d 45)b 46)b,d,e

47. The laryngeal mask airway used for securing the airway of a patient in all of the following conditions except -
a) In a difficult intubation *(AI 05)*
b) In cardiopulmonary resuscitation
c) In a child undergoing an elective / routine eye surgery
d) In a patient with a large tumour in the oral cavity

48. Laryngeal mask Airway (LMA) is used for -
a) Maintenance of the airway *(AIIMS 03)*
b) Facilitating laryngeal surgery
c) Prevention of aspiration
d) Removing oral secretions

49. IVue about Larynegeal mask airway-fPG/ *June, 09,*
a) More reliable than face mask *Nov 10)*
b) Prevent aspiration
c) Alternative to Endotracheal tube (E.T.T)
d) Does not require laryngoscope & visualisation
e) Can be used in lull stomach

50. True about laryngeal mask airway is - *(Punjab 11)*
a) Can be used in full stomach patients
b) Used as alternative to ET intubation
c) Provides full protection from aspiration
d) Difficult airway is an indication for use

51. Which of the following are used to protect airways -
a) LMA b) Endotracheal tube
c) Ryles tube d) Combitube *(PGINov 09)*
e) Sengsten blackmore tube

52. Endotracheal tube level is - *(CMC Vellore 97)*
a) 5 cms above xiphistemum
b) 4 cms above camia
c) 1 cm above camia
d) At camia

53. Both oral and Nasal intubation are *Cfl - (AIIMS 95)*
a) Laryngeal edema
b) CSF-Rhinorrhoea
c) Comatose patient
d) Acute Tracheo-Laryngo-bronchitis

54. True about endotracheal intubation is - *(AI99)*
a) It reduces normal anatomical dead space
b) It produces decrease in resistance to respiration
c) Subglottic edema is most common complication
d) All of the above

55. Which of the following is not an indication for endotracheal intubation ? *(AI 06)*
a) Maintenance of a patent airway
b) To provide positive pressure ventilation
c) Pulmonary toilet
d) Pneumothorax

56. Position for orotracheal intubation -
a) Extension of neck and atlanto-occipital joint
b) Extension of only neck *(Maharashtra 09)*
c) Flexion of neck only
d) Flexion of neck and extension of atlanto-occipital joint

57. During laryngoscopy and endo-tracheal intubation which of the maneuver is not performed- *(AIIMS*
a) Flexion of the neck
b) Extension of Head at the atlanto-occipital joint
c) The laryngoscope is lifted upwards levering over the upper incisors
d) In a straight blade laryngoscope, the epiglottis is lifted by the tip

58. Pressure necrosis which causes venous flow to stop during endotracheal intubation occurs at- *(Jipmer 01)*
a) 20-30 mmHg b) 15-20 mm Hg
c) 30-40mmHg d)16-15mmHg

59. Nasal intubation is contra indicated in - *(AIIMS95)*
a) CSF Rhinorrhea b) Fracture cervical spine
c) Fracture mandible d) Short neck

60. Contraindication for nasotracheal intubation -
a) Basal skull fractures *(Karn 04)*
b) Neonate
c) Difficult intubation
d) Prolonged intubation

61. Merits of nasotracheal intubation is -
a) Good oral hygiene *(AIIMS May 07)*
b) Less infection
c) Less muscosal damage and bleeding
d) More movement or displacement of endotracheal tube

62. Blind nasal intubation is indicated in - *(SGPGI04)*
a) Temporomandibular joint ankylosis
b) Cervical spondylitis
c) Fracture mandible
d) Traumatic quadriplegia

63. IVue about laryngoscopy & intubation-fPG/ *June 04)*
a) Hypertension
b) Tachycardia
c) Tic t
d) T Intra ocular pressure
e) *i* Lower oesophageal sphincter tone

64. True about endotracheal intubation (during the process) is all except - *(PGI 01)*
a) Hypertension & tachycardia
b) Raised IOT
c) Raised ICT
d) Arrhythmias
e) Increased oesophageal peristalsis

65. True about endotracheal cuff - *(PGI June 04)*
a) Low-volume, high pressure
b) Low-volume, low pressure
c) High-volume, low pressure
d) High-volume, high pressure
e) Equal-volume, pressure

66. The following is true about endotracheal cuff. It has -
a) Low volume, high pressure *(DELHIPG Feb. 09)*
b) Low volume, low pressure
c) High volume, high pressure
d) Equal volume and pressure

47) d 48) a 49)a,c,d 50)b,d 51)b 52) b 53)a,d 54) a 55) d 56) d 57) c 58) c 59) a 60) a
61) a 62) a 63)a,b,c,d 64) e 65)a,c 66) a

67. In infant (full term) diameter (mm) length (cm) of ETT used are - *(SGPGI01)*
a) 3.5,16 b) 7,12
c) 3.5,12 d)7,10

68. What should be the internal diameter of the endotracheal tube in a child weighing 1500 gm ?
a) 2mm b) 2.5 mm *(MH07)*
c) 3mm d) 3.5 mm

69. Armoured enforcement of ET tube is used in-
a) Neurosurgery b) Cardiac surgery *(Calcutta*
c) Liver surgery d) Intestinal Surgery *2K)*

70. With regard to laryngeal trauma associated with the placement of an endotracheal tube (ETT) -
a) It is most likely to occur at the thyroid cartilage
b) Trauma to the vocal cords usually involves the right *(DELHI PG Mar 09)*
c) Vocal cord paralysis is caused by injury to the anterior branch of the recurrent laryngeal nerve
d) Postoperative hoarseness greater than one week is likely to represent transient nerve injury

71. A 27 year old female was brought to emergency department for acute abdominal pain following which she was shifted to the operation theatre for laparotomy. A speedy intubation was performed but after the intubation, breath sounds were observed to be decreased on the left side and a high end tidal $C0_2$ was recorded. The likely diagnosis is - *(AI10)*
a) Endotracheal tube blockage
b) Bronchospasm
c) Esophageal intubation
d) Endobronchial intubation

72. Most reliable indicator to prevent oesophageal intubation - *(NEET/DNB Pattern)*
a) Oxygen saturation on pulse oximeter
b) Measurement of CO_2 in exhaled air(Etco2)
c) Direct visualization of passing tube beneath vocal cords
d) Auscultation over chest

73. What is the volume of reservoir bag used in neonatal resuscitation - *(Jipmer 98)*
a) 240ml b) 500ml
c) 750ml d) 1000 ml

74. All of the following are example of definite airways, except- *(AI 11)*
a) Nasotrachealtube b) Orotracheal tube
c) Laryngeal Mask airway d) Cricothyroidotomy

75. Seen after tracheostomy - *(AIIMS May 09)*
a) Inversion of V/P ratio
b) Increased V/P ratio
c) Decreased in dead space
d) Increased resistance of air flow

76. Indications of tracheostomy are - *(PGI03)*
a) Flail chest b) Head injury
c) Tetanus d) Cardiac tamponade
e) Foreign body

77. Fixed performance device is - *(Jipmer 11)*
a) Ventury mask b) Nasal cannula
c) Simple mask d) Non rebreathing mask

78. Which one of the following device provides fixed performance oxygen therapy-(^4/ZMS'*May 05, UP 00)*
a) Nasal Cannula b) Venturi mask
c) 02byT-piece d) Edinburg mask

79. In venturi mask maximum 0_2 concentration attained is - *(Bihar 05)*
a) 90% b) 100%
c) 60% d) 80%

80. Which of the following is used for oxygen therapy-
a) Pulse oximeter b) Nick name's catheter
c) Hudson's mask d) Guedel's airway *(MH01)*

81. At a flow rate of 3L/min, inspiratory ($FU0_2$) concentration of 30-60% can be achieved by using a - *(Jipmer98)*
a) Nasopharyngeal catheter b) Simple face mask
c) Venturi mask d) Head box

82. Side effects of oxygen therapy are all except -
a) Absorption atelectasis *(AIIMS May 07)*
b) Increased pulmonary compliance
c) Decreased vital capacity
d) Endothelial damage

83. In hyperbaric oxygenation the maximum allowed pressure of O_z is - *(Delhi96)*
a) 3 atm b) 1 atm
c) 5 atm d)9atm

84. Mac Intosh curved blade laryngoscope is a type of- *(Jipmer11)*
a) Indirect laryngoscope b) Direct laryngoscope
c) Bronchoscope d) Video laryngoscope

85. Laryngeal spasm induced during intubation can be prevented by the following drugs except -*(UPSC 04)*
a) Fentanyl b) Local anesthetic spray
c) Rofecoxib d) Diltiazem

86. Which of the following produces the least damage to blood elements - *(AIIMS Nov 04)*
a) Disc oxygenator b) Membrane oxygenator
c) Bubble oxygenator d) Screen oxygenator

87. True about oxygen concentrator - *(PGI June 05)*
a) Zeolite activation b) Delivers 0_2
c) Requires power supply d) Gives 0_2 at 100%

88. Which.'.camreplace&£)as *O^C9rnet,r(NEET/DNB*
a) Argon b) Xenon *Pattern)*
c) Helium t d^None ■

PREOPERATIVE ASSESSMENT & MONITORING IN ANAESTHESIA

89. ASA classification is done for - *(Rajasthan 01)*
a) Status of patient b) Risk
c) Pain d) Lung disease

67) c 68) c 69) a 70) a,c 71) d 72) b 73) a 74) c 75) c 76)a,b,c,e 77) a 78) b 79) c 80) c
81) a 82) b 83) a 84) b 85) c 86) b 87)a,b,c 88) c 89)a,b

90. All are features of difficult airway except -
a) Miller's sign *(NEET/DNB Pattern)*
b) Micrognathia with macroglossia
c) TMJ ankylosis
d) Increased thyromental distance

91. Malampatti grading is for - *(AI 2000)*
a) Mobility of cervical spine
b) Mobility of atlanto axial joint
c) Assessment of free rotation of neck before intubation
d) Inspection of oral cavity before intubation

92. Plan C of anesthetic airway management is -
a) Standard laryngoscopy & intubation *(Make 05)*
b) Intubation catheter guided intubation
c) Insertion of laryngeal mask airway & fiberoptic bronchoscopy
d) Cancel the surgery or perform tracheostomy

93. A patient who was on aspirin for long period was selected for an elective surgery. What should be done- *(A1IMS01)*
a) Stop aspirin for 7 days
b) Infusion of fresh frozen plasma
c) Infusion of platelet concentration
d) Go ahead with surgery maintaining adequate hemostasis

94. Calcium channel blockers in anesthesia, True is -
a) Needs to be decreased as they augment hypotension & muscle relaxation *(PGI2000)*
b) Withheld because they lower LES pressure
c) Should be given in normal doses as they prevent MI & angina
d) All of the above

95. A Patient is on regular medications for co-existing medical problems. Which of the following drugs may be stopped safely with minimal risk of adverse effects before an abdominal surgery - *(AI 12)*
a) Statins
b) Bta Blockers
c) ACE inhibitors/ACE Receptor Blockers
d) Steroids

96. Preanesthetic medication is used for A/E - *(PGI 02)*
a) Decrease of anesthetic dose
b) Decrease BP
c) Prevent aspiration
d) Produce amnesia for peri-operative events
e) Relieve anxiety

97. Premedication in anaesthesia is given for -
a) Decreasing the dose of anaesthetic drugs
b) Decreasing post-operative complications
c) Relieving the anxiety *(MH 02)*
d) All of the above

98. Premedication is prescribed to - *(SGPGI04)*
a) Allay anxiety
b) Make the patient asleep before coming for operation
c) Reduce the dose of induction agents
d) Produce amnesia

99. Drugs commonly used in pre-anaesthetic medication-
a) Diazepam b) Scopolamine *(PGIDec 04)*
c) Morphine d) Succinylcholine
e) Atracurium

100. Glycopyrolate is better than atrophine because -
a) It crosses blood brain barrier *(Jharkhand 04)*
b) Not crosses blood brain barrier
c) More sedation
d) Antisialague

101. Atropine as preanesthesia has all effects except -
a) Decrease secretion *(AI96)*
b) Bronchoconstriction
c) Prevent bradycardia
d) Prevent hypotension

102. Most potent antiemetic agent used in preoperative period- *(AIMS96)*
a) Glycopyrolateb) Hyoscine
c) Atropine d) Metochlorpromide

103. Which of the following is used as preanaesthetic medication causes longest amnesia - *(MP 98,*
a) Diazepam b) Lorezapam *DPG09)*
c) Midazolam d) Flunitrazepam

104. Which of the following is not a cardiovascular monitoring technique - *(AIIMS Nov 05)*
a) Transesophageal echocardio-graphy
b) Central venous pressure monitoring
c) Pulmonary artery catheterization
d) Capnography

105. A non ventilated preterm baby in incubator is under observation. Which is the best way to monitor the baby's breathing and detect apnea - *(AI 07)*
a) Capnography
b) Impedence pulmonometry
c) Chest movement monitoring
d) Infrared end Tidal $C0_2$ measurement

106. Pulse oxymetry detects inaccurately in presence of-
a) Hyperbilirubinemia *(PGI June 05)*
b) Nail polish
c) Methemoglobinemia
d) Skin pigmentation

107. Pulse oximetry - *(MP 05)*
a) Locates the isobestic point of hemoglobin and measure oxygen saturation
b) Is inaccurate in the presence of fetal hemoglobin
c) Is inaccurate in the presence of caboxyhemoglobin
d) Measures oxygen content

108. Pulse oximeter is used for monitoring -
a) Oxygen content of blood *(Maharashtra 03)*
b) Oxygen saturation
c) Partial pressure of oxygen
d) All of the above

109. Capnography basically monitors-
a) Central venous pressure *(NEET/DNB Pattern)*
b) Blood pressure during anesthesia
c) Concentration of exhaled $C0_2$
d) Concentration of inhaled 0_2

90) d 91) d 92) a,b 93)a 94)c 95)c 96)b 97)d 98)a,c,d 99)a,b,c 100)b 101)b 102)b 103)a 104) d 105)b 106) b,c,d 107) a,c 108)b 109) c

110. Capnography is useful for - *(MH11)*
a) Determining Vaporizer malfunction or contamination
b) Determining circuit hypoxia
c) Determining the appropriate placement of endotracheal tube
d) Detecting concentration of oxygen in the anesthetic circuit.

111. Flat capnogram found in A/E - *(A1IMSMay 09)*
a) Disconnection of anesthetic tubing
b) Accidental extubation
c) Mechanical ventilation failure
d) Bronchospasm

112. Most common cause for end tidal $C0_2$ falls due to- *(Jharkhand 05)*
a) Cardiac arrest b) Extubation
c) Hypothermia d) Hyperhermia

113. Rise in end tidal CO_z during thyroid surgery can be due to all except - *(AI11)*
a) Anaphylaxis
b) Malignant hyperthermia
c) Thyroid storm
d) Neuroleptic malignant syndrome

114. Which of the following may result in sudden increase in ETC 0_2- *(MH11)*
a) Malignant hyperthermia b) Hyperthyrodism
c) Shivering d) All of the above

115. The most sensitive and practical technique for detection of myocardial ischemia in the perioperative period is - *(AIIMS Nov 05)*
a) Magnetic Resonance Spectroscopy
b) Radio labeled lactate determination
c) Direct measurement of end diastolic pressure
d) Regional wall motion abnormality detected with the help of 2D transoesophageal echocardiography

116. All are the Complication of CVP line except -
a) Airway injury b) Haemothroax *(PGI June 09)*
c) Air embolism d) Septicemia
e) Pseudoaneurysm

117. Importance of CVP measurements is - *(PGI 01)*
a) Need for blood transfusion
b) Assess amount of fluid to be given
c) Need for inotropic support
d) Rate of intravenous fluid replacement
e) Assess need for plasma transfusion

118. While introducing the Swan-ganz catheter, its placement in the pulmonary artery can be identified by the following pressure tracing - *(AIIMSNov 05)*
a) Diastolic pressure is lower in PA than in RV
b) Diastolic pressure is higher in PA than in RV
c) PA pressure tracing has dicrotic notch from closure of pulmonary valve
d) RV pressure tracing for plateau and sharp drop in early diastole

119. Swan Ganz catheter measure - *(PGIDec 06)*
a) PCWP
b) C.O.
c) Mixed venous 0_2 saturation
d) Right atrial pressure

120. Use of Intraarterial cannula in major surgery -
a) Measurement of direct intra arterial BP *(PGI 05)*
b) Sample for ABG
c) Drug injection
d) BT (Blood transfusion)

FUNDAMENTAL CONCEPTS

121. The main controlling agent for respiratory drive is which of the following - *(Make 07)*
a) $C0_2$ b) Oxygen
c) NO d)$HB0_3$

122. Anatomic dead space is increase by all except -
a) Atropine *(AI 99)*
b) Halothane
c) Massive pleural effusion
d) Inspiration

123. Dead space is increased by all except-
a) Anticholinergic drugs *(AIIMS May 09)*
b) Standing
c) Hyperextension of Neck
d) Endotracheal intubation

124. The physiological dead space is decreased by -
a) Upright position *(AIIMS May 05)*
b) Positive pressure ventilation
c) Neck flexion
d) Emphysema

125. Regarding critical temperature which of the following is true - *(PGIDec 08)*
a) Tc of0_2 is -119°C b) Tc ofN_2 is 119°C
c) Tc ofN_2 is 36.5°C d) Tc ofN_20 is 36.5°C
e) Tcofairis-140.6°C

126. Which is the critical temperature of N_20 - *(AP 08)*
a) 118°C b)88°C
c) 26°C d)36.5°C

MUSCLE RELAXANTS

127. Features of depolarising neuromuscular blocking agents are all / except - *(PGI2000, Jipmer 99)*
a) Cause muscle fasciculation
b) No fade
c) No post tetanic facilitation
d) Isoflurane potentiates
e) Reversed by neostigmine

128. For non depolarization block which of the following statement is correct - *(PGI99)*
a) Post tetanic potentiation is seen
b) Tetanic fade is absent
c) Train of four is absent
d) Anticholinergic drugs potentiation of block

110) c 111) d 112) b 113) a 114)d 115)d 116)a 117)a,b,d,e 118)c>b 119)a,b,c,d 120)a,b,c,d 121)a
122) c 123) d 124) c 125)a,d,e 126) d . 127) e 128) a

129. All of the following statements about neuromuscular blockage produced by succinylcholine are true, Except- *(AI10)*
a) No fade on train of four stimulation
b) Fade on tetanic stimulation
c) No post tetanic facilitation
d) Train of four ratio >0.4

130. Train of four is characteristically used in concern with - *(AI 08)*
a) Malignant hyperthermia
b) Non-depolarizing neuromuscular blockers
c) Mechanical ventilation
d) To check hemodynamic parameters

131. M.C. nerve used for monitoring during anaesthesia-
a) Ulnar nerve b) Facial nerve
c) Radial nerve d) Median nerve

132. What is the time gap given in train of four - *(AP 08)*
a) 10 sec b) 20 sec
c) 40 sec d) 60 sec

133. Which of the following is not an amino steroid derivative - *(AP 08)*
a) Alcuroniumb) Vecuronium
c) Pancuronium d) Pipecuronium

134. Which of the following is/are non-depolarizing muscle relaxant(s) - *(PGI Nov 09)*
a) Mivacuriumb) Halothane
c) Desflurane d) Isoflurane
e) Ether

135. D-tubocurarineactsby- *(DPG09)*
a) Inhibiting nicotinic receptors at myoneural junction
b) Inhibiting nicotinic receptors at autonomic ganglion
c) Producing depolarizing block
d) By inhibiting reuptake of acetylcholine

136. Site of action of vecuronium is - *(AIIMS 95, 96)*
a) Cerebrum b) Reticular formation
c) Motor neuron d) Myoneural junction

137. Shortest acting non depolarizing muscle relaxant -
a) Mevacurium *(AI 98, 03, SGPGI01,*
b) Vercuronium *MH 06, 07, 08)*
c) Atracurium
d) Succinyl choline

138. Shortest acting skeletal muscle relaxant is- *(PGI98)*
a) Suxamethonium b) Mivacurium
c) Pancuronium d) Vecuronium

139. Which of the following is the neuromuscular blocking agent with the shortest onset of action *1 (AIIMSMay 06)*
a) Mivacurium b) Vecuronium
c) Rapacuronium d) Succinylcholine

140. Which of the following muscle relaxant has the maximum duration of action - *(AI 06, MH 09)*
a) Atracurium b) Vecuronium
c) Rocuronium d)Doxacurium

141. Muscle relaxant excreted exclusively by kidney -
a) Gallamine b) Atracurium *(AIIMS 98)*
c) Vercuronium d) Sch

142. Muscle relaxant contraindicated in Renal failure is - *(AIIMS 95, Jharkhand 04, AI 99)*
a) Gallamine b)d-TC
c) Vecuronium d) Atracurium

143. Which of the following skeletal muscle relaxants undergo Hoffman's elimination ? *(PGIJune 07; PGI 99,*
a) Atracurium *NEET/DNB Pattern)*
b) Succinylcholine
c) Mivacurium
d) Vecuronium

144. Muscle relaxant used in renal failure - *(NEET/DNB*
a) Ketamine b) Atracurium *Pattern)*
c) Pancuronium d) Fentanyl

145. Which of the following can be given in hepatic as well as in renal failure - *(Maharashtra 10)*
a) Atracurium b) Vecuronium
c) Pancuronium d) Mivacurium

146. The ideal muscle relaxant used for a neonate undergoing porto-enterostomy for biliary atresia is-
a) Atracurium b) Vecuronium *(AIIMS 03)*
c) Pancuronium d) Rocuronium

147. Which anaesthetic agent is neither metabolised by liver nor by kidney - *(NEET/DNB Pattern)*
a) Atracurium b) Vecuronium
c) Pancuronium d) Rocuronium

148. Muscle relaxant of choice in hepatic and renal failure-
a) Cisatracurium b) Rocuronium *(AIIMSMay 07)*
c) Vecuronium d) Rapacuronium

149. A child with bladder exstrophy and chronic renal failure. The Anesthesia of choice for the child while operating exstrophy is - *(AIIMS Nov 09)*
a) Atracurium b) Mivacurium
c) Pancuronium d) Rocuronium

150. A patient with bilirubin value of 8 mg/dl and serum creatinine of 1.9 mg/dl is planned for surgery. What is the muscle relaxant of choice in this patient-
a) Vecuronium b) Pancuronium *(AI10)*
c) Atracurium d) Rocuronium

151. A 21 year old lady with a history of hypersensitivity to neostigmine is posted for an elective caesarean section under general anesthesia. The best muscle relaxant of choice in this patient should be - *(AIIMS*
a) Pancuronium b) Atracurium *May04)*
c) Rocuronium d) Vecuronium

152. At the end of a balanced anaesthesia technique with non-depolarizing muscle relaxant, a patient recovered spontaneously from the effect of muscle relaxant without any reversal. Which is the most probable relaxant the patient had received - *(AI03)*
a) Pancuronium b) Gallamine
c) Atracurium d) Vecuronium

129) b 130) b 131)a 132)None 133)a 134) a 135) a 136) d 137) a 138) a 139)d 140) d 141)a 142) a
143) a 144) b 145) a 146) a 147) a 148) a 149) a 150)c 151)b 152)c

153. An ICU patient on atracurium infusion develops seizures after 2 days. The most probable cause is -
a) Accumulation of landonosine *(AI06)*
b) Allergy to drug
c) Due to prolong infusion

154. All of the following drugs are eliminated by kidney except - *(AIIMS Nov 04)*
a) Pancuronium bromide b) Atracurium besylate
c) Vecuronium bromide d) Pipecuronium

155. Cis atracurium is preferred over atracurium due to advantage of - *(AIIMS May 11)*
a) Rapid onset b) Short duration of action
c) No histamine release d) Less cardiodepressant

156. Laudanosine is metabolite of - *(AIIMSMay 11)*
a) Cisatracurium b) Atracurium
c) Pancuronium d)Gallamine

157. Which non depolarizing agent is a ganglion blocker-
a) Atracuriumb) Pancuronium *(AIIMS May 95)*
c) D-TC d) Gallamine

158. Cardiovascular side effects are minimal with -
a) Pancuronium b) Rocuronium *(PGIDec 06, 02)*
c) Doxacurium d) Vecuronium
e) Mivacurium

159. Agents safe in renal failure - *(SGPGI2000)*
a) Gallamine b)Pancuronium
c) Vecuronium d) Mivacurium

160. All of the following drugs are eliminated by kidney except - *(AIIMS Nov 04)*
a) Pancuronium bromideb) Atracurium besylate
c) Vecuronium bromide d) Pipecuronium

161. Succinyl choline is a muscle relaxant which act by -
a) Persistent depolarisation *(UP 02)*
b) Competitive blockade
c) Mechanism of action uncertain
d) a and b

162. Which muscle relaxant increases intracranial pressure ? *(AIIMS02)*
a) Mivacurium b) Atracurium
c) Suxamethonium d) Vecuronium

163. Muscle pain after anaesthesia is caused by -
a) Vecuronium *(UP 96, PGI 99)*
b) D-tubocurare
c) Suxamethonium
d) All

164. Bradycardia is common after injection of - *(AIIMS*
a) Midazolam b) Succinyl choline *Nov 05)*
c) Dopamine d) Isoprenaline

165. Depolarizing muscle relaxant - *(MH02)*
a) Scoline b) Ketamine
c) Halothane d) Atracurium

166. Effective adjuvant in attenuatating hypertension and tachycardia associated with laryngoscopy and intubation - *(MH09)*
a) Fentanyl b) Suxamethonium
c) Atracurium d) Ketamine

167. Fasciculation are caused by - *(MH 05, 02, AI97)*
a) Suxamethonium b) Pancuronium
c) d-TC d) Vecuronium

168. Phase II block is seen in - *(AIIMS 98)*
a) Sexamethonium (Sch) b)d-TC
c) Ether d)N_20

169. A 70 kg old athlete was posted for surgery, Patient was administered succinylcholine due to unavailability of vecuronium. It was administered in intermittent dosing (total 640 mg). During recovery patient was not able to respire spontaneously & move limbs. What is the explanation- *(AIIMSNov 10)*
a) Pseudocholinesterase deficiency increasing action of syccinylcholine
b) Phase 2 blockade produced by succinylcholine
c) Undiagnosed muscular dystrophy and muscular weakness
d) Muscular weakness due to fasciculation produced by succinylcholine

170. Dual block is by - *(Jharkhand 06)*
a) Vecuronium + pancuronium b) Atracurium
c) Vecuronium + rocuronium d) Succinylcholine

171. The use of succinylcholine is not contraindicated in- *(AIIMS 02)*
a) Tetanus b) Closed head injury
c) Cerebral stroke d) Hepatic failure

172. Hyperkalemia due to scoline is seen in all except -
a) Crush injury b)Bum *(AIIMS 2K)*
c) Abdominal sepsis d) Muscular dystrophy

173. Risk of adverse effect of scoline is greater in-*(MH 07)*
a) Spinal cord injury b) Thoracic injury
c) Bone injury d) Head injury

174. Administration of scoline (Sch) produces dangerous hyperkalemia in - *(AIIMS 99)*
a) Acute renal failure (ARF) b) Raised ICT
c) Fracture femur d) Paraplegia

175. Succinylcholine is used with caution in all except- *(NEET/DNB Pattern)*
a) Mysthenia gravis. b) Bums
c) Crush injury d) Tachycardia

176. The administration of succinylcholine to a paraplegic patient led to the appearance of dysarrhythmias, conduction abnormalities and finally cardiac arrest. The most likely cause is -
a) Hypercalcemia b) Hyperkalemia*(AIIMS 03)*
c) Anaphylaxis d) Hypermagnesemia

177. In a young patient who had extensive soft tissue and muscle injury, which of these muscle relaxants used for endotracheal intubation might lead to cardiac arrest- *(AIIMS 03)*
a) Atracurium b) Suxamethonium
c) Vecuronium d) Pancuronium

153) a 154) b 155)c 156)b>a 157) c 158)c,d 159)c,d 160)b 161)a 162)c 163) c 164)b 165) a 166) b
167) a 168) a 169)b 170)d 171)d 172)None 173) a 174)d 175) d 176) b 177) b

178. All of the following statements are incorrect about the treatment of prolonged suxamethonium apnoea due to plasma cholinesterase deficiency (after a single dose of suxamethonium) except-
a) Reversal with incremental doses of neostigmine
b) Continue anaesthesia and mechanical ventilation till recovery *(AIIMS Nov 04)*
c) Transfusion of fresh frozen plasma
d) Plasmapheresis

179. Abnormal plasma choline esterase produces apnea due to which of the following - *(Maharashtra 03)*
a) Halothane b)Lignocaine
c) Suxamethonium d)Isoflurane

180. After suxamethonium 50 mg, apnea persists for one hour- *(MP 05)*
a) Treatment with cholnesterase is indicated
b) Probably an atypical cholinesterase is present
c) Treatment with stored blood is indicated
d) Apnea may be due to low serum potassium concentration

181. Which of the following is not seen in scoline apnea?
a) It is due to succinylcholine *(AIIMS May 12)*
b) It can be inherited
c) Patients usually do not die of scoline apnea if they are properly managed
d) It occurs due to deficiency of cholinesterase

182. Succinylcholine when given by endotracheal intubation causes A/E - *(MP 99)*
a) Hypokalemia in paraplegic patient
b) Prolonged apnea
c) Raised intra ocular pressure
d) Bradycardia

183. Which one of the following increase the potassium level in the body - *(UPSC 2K)*
a) E-tubocurarine b)Gallamine
c) Suxamethonium d) Pancuronium

184. Succinyl choline is short acting due to -*(Jipmer 95)*
a) Rapid excretion b) Poor absorption
c) Rapid hydrolysis d) None

185. True about scoline are following except - *(PGI97)*
a) Fasciculations
b) ICT increases
c) Non depolarising neuro muscular blocker
d) Short acting muscle relaxant

186. Action of scoline is potentiated by- *(MH-11)*
a) Nitrous oxide b) Sevoflurane
c) Isoflurane d) Halothane

187. True about non-depolarizing muscle relaxants -
a) Competitive inhibitor of acetylcholine
b) Metabolised by pseudocholinesterase
c) Mg^{2+} predisposes the block *(PGI June 05)*
d) Ca^{2+} antagonizes the block
e) Hypothermia prolongs the block

188. Which of the following statement is not correct for Vecuronium - *(AIIMS 02)*
a) It has high incidence of cardiovascular side effects
b) It has short duration of neuromuscular block
c) In usual doses the dose adjustment is not required in kidney disease
d) It has high lipophilic property

189. Which of the following muscle relaxants is free of cardiovascular effects over the entire clinical dose range - *(MP 04)*
a) Pancuronium b) Vecuronium
c) Atracurium d) Pipecuronium

190. Mivacurium when given in high doses, all are true except - *(AIIMS Nov 07)*
a) Bronchospasm
b) Hypertension
c) Flushing
d) Increase in dose increases the rapidity of onset

191. True about d-TC is all except - *(PGI 98)*
a) Excreted unchanged by kidney
b) Causes hypotension by ganglion blocking action
c) Vagolytic action
d) Effects lasts for 2-3 hours

192. Muscle most resistant to non depolarizing block is-
a) Intercostal b) Abdominal *(Jipmer 03)*
c) Diaphragm d) Adductors

193. Which of the following occurs first with the use of DTC- *(TN 97)*
a) Diaphragmatic relaxation
b) Abdominal wall relaxation
c) Diplopia
d) Ptosis

194. dTcisa- *(MP 97, 01)*
a) Centrally acting agent
b) Ganglionic blocker
c) Depolarizing agent
d) Competitive neuromuscular blocker

195. All of the following can be used for reversal of muscle relaxant EXCEPT - *(SGPGI05)*
a) Neostigmine b) Atropine
c) Physostigmine d) Edrophonium

196. Only anticholinergic commonly used to reverse the action of neuromuscular blocker -*(Maharashtra 10)*
a) Edrophonium b)Physostigmine
c) Pyridostigmine d) Neostigmine

197. Which of the following is consistent with return of muscle tone adequate to protect the airway from aspiration after reversal from anaesthesia ?
a) TOF ratio of 0.7 *(DELHI PG Mar. 09)*
b) No fade detectable on Double Burst Tetanic Stimulation
c) Return of normal resting minute ventilation
d) Five seconds sustained head lift

178) b 179) c 180) b 181)d 182) a 183)c 184)c 185)c 186) a 187)a,c,d,e 188)a,b 189)b 190)b
191)c,d 192) c 193) c,d 194)d 195) b 196)d 197)a,d

198. Neostigmine is used for reversing the adverse effect of- *(PGI97)*
a) dTC + pancuronium b) d TC only
c) Alcuronium only d) Ketamine complication

199. The reversal of neutromuscular blockade with d-T-C is done with- *(Delhi 96)*
a) Scoline b) Neostimine
c) Atropine d) Dantrolene

200. Drugs metabolized by cholinesterase-(7*& K 01, PGI*
a) Succinylcholine b) Mivacurium *Dec 04)*
c) Esmolol d)Remifentanyl
e) Ketamine

201. Myasthenics are resistant to following muscle relaxant- *(PGI 2000)*
a) Suxamethoniumb) Pancurium
c) Atracuronium d) Vecuronium

202. A 25 year old overweight female was given fentanyl-pancuronium anesthesia for surgery. After surgery and extubation she was observed to have limited movement of the upper body and chest wall in the recovery room. She was consscious and alert but voluntary respiratory effort has limited. Her blood pressure and heart rate were normal. The likely diagnosis is- *(AI10)*
a) Incomplete reversal of pancuronium
b) Pulmonary embolism
c) Fentanyl induced chest wall rigidity
d) Respiratory depression

203. In myasthenia gravis, which drugs should not be used-
a) Gallamine * b) Neostigmine *(PGI 02)*
c) Aminoglycosides d) Metronidazole
e) Ampicilin

204. Which of the following muscle relaxants causes maximal pain on injection - *(AI12)*
a) Succinyl choline b) Vecuronium
c) Rocuronium d) Cistracurium

GENERAL ANAESTHESIA

205. In normal anesthesia fresh minimum gas flows 0_2 delivery- *(Bihar05)*
a) 21% b)33%
c) 51% d)75%

206. The concentration of 02 in adequate anesthesia is -
a) 15% b) 18% *(Jipmer 95, Delhi 96)*
c) 33% d)50%

207. Oxygen content in anaesthetic mixture is -
a) 25% b) 30% *(DELHI PG Feb. 09)*
c) 33% d)38%

208. 100% 0_2 given to wash out 94-98% N_2 in -
a) 2 min b)5min *(Orris a 98)*
c) 15 min d) 20 min

209. Commonly used route of administrationfor general anaesthesia is - *(Maharashtra02)*
a) Inhalational b) Intravenous
c) Intra-arterial d) Subcutaneous

210. Not intravenous Anaesthetic agent - *(MP97,AI95)*
a) Ketamine b) Thiopentone
c) Etomidate d) Cyclopropane

211. A 20 yr old patient presented with early pregnancy for Medical termination of Pregnancy (MTP) in day care facility. What will be the anesthetic induction agent of choice ? *(AIIMS May 06)*
a) Thiopentone b) Ketamine
c) Propofol d) Diazepam

212. Which of the following induction agent is used to produce a 'street-fit' person following surgery -
a) Midazolam b) Propofol *(Jipmer 2 K)*
c) Alfentanyl d) Thiopentone

213. All are true about propofol except - *(PGI 99, SGPGI02)*
a) Pleasant sedation & recovery
b) Safe in porphyria
c) Antiemetic effect
d) Suppression of airway reflexes
e) Cardiac stimulant

214. Which of the following is NOT TRUE regarding PROPOFOL? *(AI 08)*
a) It is used in day care anesthesia
b) It is contraindicated in porphyria
c) Commercial preparation contains egg extract
d) It does not cause airway irritation

215. True about propofol - *(PGI May 10)*
a) Indicated in egg allergy
b) Can be used in porphyria
c) It is of barbiturate group
d) Used in day care surgery

216. Regarding features of propofol, which of the following statement is correct - *(PGI Dec 05)*
a) It suppresses adrenocortical hormone secretion
b) I.M. inj. is painful
c) Undergoes hepatic metabolism
d) Chemically it is derivative of D-isopropyl phenol
e) Cerebral protective action

217. True regarding propofol - *(SGPGI 01)*
a) Emetogenic
b) Intramuscular injection is painful
c) Undergoes hepatic metabolism
d) Cerebral protection

218. A severely ill patient was maintained on an infusional anaesthetic agent On the 2nd day he started detiorating. The probable culprit may be - *(PGI 99, Jipmer 04)*
a) Etomidate b) Propofol
c) Opioid d) Barbiturate

219. Thiopentone is used for induction anesthesia, because it is - *(Jipmer 98)*
a) Smooth induction b) Rapidly redistributed
c) easy to adminster d) easy to monitor

220. Sodium Thiopentone is ultra short acting d/t -
a) Rapid absorption *(DPG 09, Maharashtra 05,*
b) Rapid metabolism *Jipmer 00)*
c) Rapid redistribution
d) Rapid excretion

198)a 199) b 200)a,b,d 201)a 202)a 203)a,c 204) c 205)b 206)c 207)c 208)None>a 209)b 210)d
211) c 212) b 213) e 214) b 215)b,d 216)c,d,e 217)c,d 218)b 219)a 220)c

221. Which of the following anaesthetic agent lacks analgesic effect - *(PGI Dec 05)*
a) N_20 b) Thiopentone
c) Methohexitone d) Ketamine
e) Fentanyl

222. % of thiopentone-used in induction - *(AIIMS 95)*
a) 0.5% b) 1.5%
c) 2.5% d)4.5%

223. Dose of thiopentone used for induction is-
a) 1 mg / kg *(Jipmer 96)*
b) 2 mg / kg c) 5 mg / kg
d) 10 mg / kg e) 15 mg / kg

224. A patient selected for surgery was induced with thiopentone iv through one of anticubital vein complains of severe pain of whole hand. The next line of management - *(AIIMS 01)*
a) Give IV propofol through same needle
b) IV ketamine through same needle
c) IV lignocaine through same needle
d) Leave it alone

225. If thiopentone is injected accidently into an artery the first symptom is - *(AI9 7)*
a) Analgesia b) Paralysis
c) Skin ulceration d)Pain

226. Intra arterial injection of thiopentone causes - *(AIIMS 95)*
a) Vasospasm b) Vasodialation
c) Necrosis of vessel wall d) Hypotension

227. Pentothiol sodium should preferablay be injected into- *(MAHE98)*
a) Femoral vein b) Antecubital vein
c) Neck vein d) Veins on outer aspect of fore arm

228. Intravenous thiopentone pentox, produces - *(PGI 03)*
a) Rash b)Pain
c) Spasm d) Hypotension
e) Muscular excitation (locally)

229. One of the following is true about the physical state of thiopentone - *(Delhi 96)*
a) Colorless b) Pale yellow color
c) Green color d) Acidic solution

230. All are true about thiopentone except -
a) $NaHC0_3$ is a preservative *(AIIMS Nov 07)*
b) Contraindicated in porphyria
c) Agent of choice in shock
d) Has cerebroprotective action

231. Thiopentone is C/I in - *(IN 00, AIIMS 97)*
a) Acute intermittent porphyria
b) Bronchial asthma
c) Both
d) None

232. Thiopentone has cerbroprotective effect because of-
a) Decrease cerebral metabolism *(AI 12)*
b) Reduction of vasospasm
c) Calcium channel blockage
d) Free redical removal

233. Use of Thiopentone- *(PGI Dec 04)*
a) Seizure b) Truth spell
c) Reduction of ICP d) Cerebral protection
e) Maintenance of an anesthesia

234. Induction agent that may cause adrenal cortex suppression is - *(PGI June 06, AI 03, AP 98)*
a) Ketamine b)Etomidate
c) Propofol d) Thiopentone
e) Fentanyl

235. Which of the following anaesthetic agent causes adrenal suppression - *(AIIMS Nov 10)*
a) Etomidate b) Thiopentone
c) Ketamine d) Propofol

236. Following is an adverse effect of Etomidate -
a) Adrenocortical suppression *(Korn 11)*
b) Hypertension
c) Hyperkalemia
d) Emergence phenomena

237. An intravenous anesthetic agent that is associated with hemodynamic stability, maintenence of CVP with post operative nausea, vomiting and myoclonus-
a) Ketamine b) Etomidate
c) Propofol d) Opioids

238. Which of the following anesthetic is safe in heart failure - *(NEET/DNB Pattern)*
a) Etomidate b) Propofol
c) Thiopentone d) Ketamine

239. Which anesthetic induction agent produces cardiac stability. In other words cardiostable anesthetic is -
a) Ketamine *(MH10, AIIMS May 09)*
b) Propofol
c) Thiopental
d) Etomidate

240. Ketamine belongs to which of the following group of drugs ? *(MH 08)*
a) Phencyclidine b) Phenols
c) Barbiturate d) Benzodiazepine

241. Which of the following drugs produces dissociative anesthesia - *(MH 10, 05, 03, 02, AIIMS Nov 06, AI96*
a) Ketamine *NEET/DNBPattern)*
b) Propofol
c) Thiopentone
d) Enflurane

242. TiCT caused by - ..... *(AI 2000, PGI 97)*
a) Ketamine b) Thiopentane
c) Halothane d) Propofol

243. Cerebral metabolism and 0_2 consumption are increased by - *(AIIMS Nov 07)*
a) Propofol b) Ketamine
c) Atracurium d) Fentanyl

244. Which of the following drugs is contraindicated in a patient with raised intracranial pressure ?
a) Thiopentone *(AIIMS 99, AIIMS May 06, AI 98)*
b) Propofol *NEET/DNBPattern)*
c) Midazolam
d) Ketamine

221)b,c 222) c 223) c 224) c 225) d 226) a 227) d 228)a,b,d,e 229) b 230) c 231) a 232) a 233)a,b,c,d
234) b 235)a 236)a 237)b 238)a 239)d 240)a 241)a 242)a 243)b 244) d

245. Maximum analgesic action found in - *(AI97)*
a) Catecholamine b) Propofol
c) Ketamine d) Thiopentone

246. Benefit of ketamine- . *(NEET/DNB Pattern)*
a) Causes decrease in BP b) Good analgesic action
c) Decrease ICT d) Decrease IOT

247. Which of the following anaesthetic agents have good analgesic property ? *(PGI June 06)*
a) Ketamine b) Nitrous oxide
c) Thiopentone d) Propofol
e) Midazolam

24$. Which drug of anesthetics causes hallucination -
a) Ketamine *(MH 06, DPG 09,AP 08, AI 98)*
b) Trilene
c) Halothane
d) Trichloroethylene

249. Emergence delirium is associated with - *(AP 96)*
a) Pentothal sodium b) Ketamine
c) Droperidol d) Halothane

250. The incidence of unpleasant dreams associated with emergence from ketamine anaesthesia can be reduced by administration of- *(COMED 09)*
a) Atropine b)Scopolamine
c) Physostigmine d) Diazepam

251. Hypertension with tachycardia is due to - *(MP 98)*
a) Morphine b)Thiopentone
c) Ketamine d) Halothane

252. Increased cardiac oxygen demand is caused by- *(Rohtak 99)*
a) Ketamine b) Nitrous oxide
c) Thiopentone d) Halothane

253. Which of the following anesthetic agent does not cause hypotension on injection? *(Jipmer 11)*
a) Ketamine b) Propofol
c) Halothane d)Thiopentone

254. Ketamine can be used in all of the situations except-
a) Status asthmaticus *(SGPGI2000)*
b) For analgesia & sedation
c) Obstetric hemorrhage
d) Ischemic heart disease
e) Aortic aneurysm

255. Ketamine is contraindicated in -
a) Raised ICT b) Hypertension
c) IHD d)All

256. Contraindicated in head injury -*(NEET/DNB Pattern)*
a) Halothane b) Ketamine
c) N_20 d) Propofol

257. Which of the following anesthetic agentsis contraindicated in patients with hypertension?
a) Ketamine b) Propofol *(AI 11)*
c) Etomidate d) Diazepam

258. All statements regarding ketamine are true except-
a) May be arrythmogenic *(PGI 02, SGPGI 04)*
b) Raised ICT do not respond to C02 level
c) Vasodilator and negative ionotropic effect
d) Psychomimetic emergence
e) Indirectly sympathetic action

259. Which of the following is a sympathomimetic -
a) Propofol b) Etomidate *(NEET/DNB*
c) Ketamine d)N O *Pattern)*

260. Ketamine is safe in - [2] *(SGPGI 02)*
a) Raised ICT b) Open eye injury
c) Ischemic heart disease d) Severe shock

261. Inducing agent of choice in *DIC-(NEET/DNB Pattern)*
a) Thiopentone b) Ketamine
c) Methohexitone d) Propofol

262. With regard to ketamine, all of the following are true except - *(AIIMS Nov 05)*
a) It is a direct myocardial depressant
b) Emergence phenomenon are more likely if anticholinergic premedication is used
c) It may induce cardiac dysarythmias in patients receiving tricyclic antidepressants
d) Has no effect on intracranial pressure

263. True about ketamine - *(NEET/DNB Pattern)*
a) Bronchodilator
b) Depressed airway reflexes
c) Causes hypotension
d) Decreases ICT

264. Increased requirement of curare - *(Jipmer 2000)*
a) Ketamine b) Althesin
c) Nitrous oxide d) Histotoxic hypoxia

265. Site of action of ketamine is- *(Bihar 04)*
a) Spinal cord
b) Local nerve fibers
c) Primary action on thalamoneocortical projection
d) Posterior column

266. The anesthetic that affects the laryngeal & pharyngeal reflexes minimally - *(AP 9 7)*
a) Propanidid b) Methohexitane
c) Thiopentone d) Ketamine

267. Inducing ageht of choice in asthma - (*NEET/DNB*
a) Thiopentone b) Methhexitone *Pattern)*
c) Ketamine d) Propofol

268. Dose of ketamine by IM route is (in mg/kg) -
a) 4 b) 6 *(MH01)*
c) 8 d) 10

269. A patient presented with blunt trauma to the abdomen to the emergency department. His heart rate is 150/min and his BP is 80/50 mm Hg. He is scheduled to undergo an emergency laparotomy. Which of the following is the anaesthetic agent of choice? *(AIIMS May 12)*
a) Thiopentone b) Midazolam
c) Ketamine d) Propofol

270. A 32-year old male with no past medical history is brought to the emergency department after being injured in a bomb blast. On examination he is suspected to have a splenic injury and is supposed to undergo an emergency laparotomy. Which of the following is the ideal anaesthetic agent of choice? *(AIIMS May 12)*
a) Remifentanil b) Morphine
c) Etomidate d) Halothane

245) c 246) b 247) a,b 248) a 249) b 250) d 251)c 252) a 253) a 254) d,e 255)All 256) b 257) a 258) b
259) c 260)d 261)b 262) d 263)a 264)a 265)c 266)d 267)c 268)a 269)c 270) c

271. All of the following cause myocardial depression except- *(PGIJune09)*
a) Halothane b)Etomidate
c) Thiopentone d) Ketamine
e) Propofol

272. The following anaesthetic drug causes pain on intravenous administration - *(A1IMSMay 06)*
a) Midazolam b) Propofol
c) Ketamine d) Thiopentone sodium

273. Pain during injection occurs with all except-*(MH07)*
a) Propofol b) Thiopentone
c) Ketamine d)Etomidate

274. Sufentanyl is a potent - *(A1IMS 97)*
a) Myocardial depressant b) Analgesic
c) Anticonvulsnt d) Hepatotoxin

275. Which one of the following is the shortest acting intravenous analgesic - *(AIIMS03)*
a) Remifantanil b) Fentanyl
c) Alfentanil d) Sufentanil

276. More potent opiod - *(Jipmer 04)*
a) Fentanyl b) Morphine
c) Sufentanyl d) Methadone

277. Characteristics of Remifentanyl - *(PGIDec 07)*
a) Metabolised by plasma esterase
b) Short half life
c) More potent than Alfentanyl
d) Dose reduced in hepatic and renal disease
e) Duration of action more than Alfentanyl

278. Significant muscle rigidity is caused by-*(Kerala 04)*
a) Domperidone b) Ketamine
c) Halothane d) Fentanyl

279. Which one of the common side effects is seen with fentanyl ? *(A1IMS May 06)*
a) Chest wall rigidly b) Tachycardia
c) Pain in abdomen d) Hypertension

280. Neurolept analgesia all are true except- *(PGI98)*
a) Can be used along with 0_2 & N_20
b) Causes focal dystonia
c) Fentanyl-droperidol
d) Causes hypotension
e) None

281. Partition coefficient of gas- *(PGI 98)*
a) Measure of potency
b) Directly proportional to potency
c) Measures solubility
d) All of the above

282. Index of potency of general anaesthesia - *(AP 9 7)*
a) Minimum alveolar concentration
b) Diffusion coefficient
c) Dead space concentration
d) Alveolar blood concentration

283. The potency of an inhalational anesthetic depends on- *(PGI 99)*
a) Blood gas partition co-efficient
b) Oil-gas partition co-efficient
c) Gas pressure
d) Blood pressure

284. Highly lipid soluble agent would be associated with -
a) Potent anaesthetic action *(MAHE 98)*
b) Potent analgesic action
c) Excellent muscle relaxant action
d) Least respiratory depression

285. Lowest concentration of anesthetic agent in alveoli needed to produce immobility in response to painful stimulus in 50% of individual is termed as -
a) Minimum alveolar concentration *(AIIMS98)*
b) Minimal analgesic concentration
c) Minimal anaesthetic concentration
d) Maximum alveolar concentration

286. MAC stands for - *(NEET/DNB Pattern)*
a) Mmmum alveoiar concentration, ^ g|
b) Minimal analgesic concentration
c) Minimal anaesthetic concentration
d) Maximum alveolar concentration

287. Minimum alveolar concentration (MAC) of an anaesthetic agent means it produces lack of reflex response to skin incision in of subjects -
a) 25% b)50% *(MH06)*
c) 75% d) 100%

288. Which of the following has minimum MAC ?
a) Methoxyflurane b) N_2O *(Bihar 05)*
c) Halothane d) Desflurane

289. MAC of desflurane is - *(DPG 09)*
a) 1.15 b)2
c) 4 d)6

290. MAC of halothane is - *(DPG 08)*
a) 0.75% b) 1-2%
c) 6% d)2%

291. Minimum Alveolar Concentration (MAC) of sevoflurane in % is - *(Karn 11)*
a) 0.75 b) 0.42
c) 1.15 d) 2

292. All of the following factors decrease the minimum alveolar concentration (MAC) of an inhalation anaesthetic agent except - *(AI1MS 03)*
a) Hypothermia b) Hyponatremia
c) Hypocalcemia d) Anemia

293. Exception of Meyer overton rule are A/E-
a) Nonanaesthetics *(Jipmer 03, J&K 04)*
b) Nonimmobilizer
c) Cut off effect
d) Hydrophobic site

294. Which of the following inhalational agents has the minimum blood gas solubility coefficient ?
(WB 06, Jharkhand 05, ARMS May 06, ARMS 02)
a) Isoflurane b) Sevoflurane
c) Desflurane d) Nitrous oxide

295. Least diffusion coefficient is for-*(Jipmer 04, AMU05)*
a) Isoflurane b)Enflurane
c) Halothane d) N_20

296. Least soluble anesthetic agent is - *(Jharkhand 05,*
a) Desflurane b) Sevoflurane *TN05)*
c) Halothane d) Methoxyflurane

271)b 272)b>d 273)c 274)b 275)a 276)c 277)a,b,c 278)d 279)a 280)e 281)a,c 282)a 283)b 284)a

a) Induction of anaesthesia
b) Recovering anaesthesia
c) Preoperatively
d) Postoperatively

302. **At the end of anaesthesia after discontinuation of nitrous oxide and removal of endotracheal tube, 100% oxygen is administered to the patient to prevent -** *(AIIMS 03)*
a) Diffusion Hypoxia b) Second gas effect
c) Hyperoxia d) Bronchospasm

303. **Diffusion hypoxia is seen with -** *(Jipmer 03)*
a) Ether b) Cyclopropane
c) Halothane d) Nitrous oxide

304* lievels of ether anesthesia were demonstrated by whom - *(NEET/DNB Pattern)*
a) Morton b) Guedel
c) Thompson d) None

305. **Stages of anesthesia were established by -**
a) Ether b) N_20 *(AIIMS97)*
c) Halothane d) Chloroform

306. **All are stages of anaesthesia** *except-(NEET/DNB*
a) Analgesia b) Allodynia *Pattern)*
c) Delirium d) Surgical anesthesia

307. **Surgical anesthesia is -** *(Kerala 98)*
a) Stage I b) Stage II
c) Stage III d) Stage IV

308. **In the second stage of anaesthesia the pupil is -**
a) Constricted b) Partially dilated *(KA 96)*
c) Normal in size d) Totally dilated

309. **Lacrimation during anaesthesia indicates -**
a) Stage I b) Stage II *(CUPGEE95)*
c) Stage III d) Stage IV

310. **In which plane of anaesthesia, movement of eyeball is lost -** *(AP 96)*
a) Stage 3, Plane 1 b) Stage 1, Plane 3
c) Stage 2, Plane 3 d) Stage 4

311. **Definitive sign of phase I of anaesthesia is -** *(JIPMER 95, DPG 09)*
a) Fixation of eyeball b) Pupillary dilatation
c) Blurring of vision d) Intercostal paralysis

312. **All are fluorinated anaesthetics except-** *(Jipmer 98)*
a) Halothane b) Isoflurane
c) Enflurane d) Methoxyflurane

313. **True about halothane -** *(PGI 03)*
a) 1% thymol is used as preservative
b) It senitizes heart to catecholamines at 1 MAC
c) 20% metabolized
d) It is not usually given in same patient within 3 months
e) It forms compound - A with sodalime

314. **True about Halothane -** *(PGI Dec 06)*
a) Non irritant
b) Antiarrhythmic
c) It antagonizes bronchospasm
d) Vasodilator

315. **True about halothane -** *(PGI 02)*
a) Causes bronchodilation
b) Anti-arrhthmic
c) Can be used in hepatitis
d) Uterine contraction occurs
e) Causes hepatitis

316. **Which of the are the following contraindication for halothane used -** *(PGI 01)*
a) Male sex
b) Middle age
c) Recent halothane use
d) Associated liver pathology
e) Obesity

317. **In a 2 months old infant undergoing surgery for biliary atresia, you would avoid one of the following anaesthetic -** *(AIIMS 03)*
a) Thiopentone b) Halothane
c) Propofol d) Sevoflurane

318. **Which of the following inhalational anaesthetic agents is contraindicated in liver disease-** *(MH 06)*
a) Methoxyflurane b) Halothane
c) Ether d) Isoflurane

319. **The anaesthetic drug that is contraindicated in the presence of jaundice is-** *(CMC 98)*
a) Halothane b) Ether
c) Gallamine d) Nitrous oxide

320. **Hepatotoxic agent is -** *(AIIMS 97)*
a) Ketamine b) Ether
c) N_20 d) Halothane

321. **All are true except -** *(AI 01)*
a) Halothane is good analgesic agent
b) Halothane sensitize heart to catacholamines
c) Halothane relaxes bronchi
d) Halothane causes hepatitis and liver cell necrosis

322. **All are true about halothane** *except-(NEET/DNB*
a) Tachycardia b) Hepatitis *Pattern)*
c) Bronchodilatation d) Uterine relaxation

297)b 298)d 299)d 300)d 301)b 302)a 303)d 304)b 305) a 306)b 307)c 308)b 309)c 310)a
311)a 312)None 313)b,c,d 314)a,c,d 315)a,e 316)c 317)b 318)None>b 319)None>a 320)d 321)a 322)a

323. Which of the following fluorinated anaesthetics corrodes metal in vaporizers and breathing systems?
a) Sevoflurane b)Enflurane *(AIIMSMay06)*
c) Isoflurane d) Halothane

324. Regarding the use of halothane in obsteric surgery, which is true - *(CUP GEE 96)*
a) There is increased risk of PPH
b) It has no effect on uterine musculature
c) Best used in caesarean section
d) None is true

325. Best uterine relaxation is seen with -*(DELHI PG*
a) Chloroform b) Nitrous oxide *Feb. 09)*
c) Ether d) Halothane

326. Post operative jaundice is because of use of -
a) Isoflurane b)N_20 *(PGI99)*
c) Methoxyflurane d) Halothane

327. Repeated use of halothane causes - *(AI99, PGI97)*
a) Hepatitis b) Pancreatitis
c) Encephalitis d) Meningitis

328. Shivering is most commonly seen with use of -
a) Halothane b) Cyclopropane *(KA 97)*
c) Ether d) Thiopentone

329. True statement regarding halothane is - *(Make 98)*
a) Reduces arterial pressure
b) Increases heart rate
c) Decreases cardiac output
d) Increases sympathoadrenal activity

330. Anaesthetic agent that predisposes to maximum arrhythmias - *(MH 07, PGI96)*
a) Isoflurance b)Enflurane
c) Halothane d) Ether

331. A six year old child is posted for elective urology surgery under general anesthesia. He refuses to allow the anaesthesiologist an I.V. access. The best inhalational agent of choice for induction of anesthesia is - *(AIIMS May 04)*
a) Sevoflurane b) Methoxyflurane
c) Desflurane d) Isoflurane

332. In a child, the anesthetic of choice is - *(SGPGI01)*
a) Enflurane b) Isoflurane
c) Sevoflurane d) Halothane

333. Which is C/I in closed system anesthesiology -
a) Methoxyflurane b) Isoflurane *(Bihar 05)*
c) Sevoflurane d) Desflurane

334. True about Sevoflurane - *(PGIDec 04)*
a) Isopropyl ether
b) MAC is 2%
c) Good to use in old age
d) Blood gas partition coefficient is more than halothane
e) Formation of compound A with baralyme

335. Which of the following statements about inhalation anesthetic agents is wrong ? *(AI 08)*
a) Sevoflurane is more potent than isoflurane
b) Sevoflurane is less cardiodepressant than isoflurane
c) Desflurane has lower blood-gas partition coefficient than sevoflurane
d) Sevoflurane has a higher MAC than isoflurane

336. Leastcardiotoxic agent- *(AI 98, 96)*
a) Isoflurane b) Enflurane
c) Sevoflurane d) Halothane

337. Least cardiovascular side effects found in - *(AI2000)*
a) Isoflurane b) Enflurane
c) Trilene d) Ketamine

338. Anesthetic of choice for cardiac anesthesia -
a) Isoflurane b) Ketamine *(SGPGI 03)*
c) Methoxyflurane d) Halothane

339. Which of the following statements regarding desflurane is correct ? *(AIIMS Nov 04)*
a) It causes severe myocardial depression
b) It is a structural analogue of isoflurane
c) It has very high blood and tissue gas partition coefficient
d) It is metabolically unstable

340. All are true regarding Desflurane EXCEPT-
a) Low blood/gas partition coefficient *(Karn 11)*
b) Minimum alveolar concentration range from 5—7%
c) Sweet smelling agent
d) Suitable for day care surgery

341. A seventy year old patient is posted for a surgery which is likely to last 4-6 hours. The best inhalational agent of choice for maintenance of anesthesia in such a case is - *(AIIMS May 04)*
a) Methoxyflurane b) Ether
c) Trichlorethylene d) Desflurane

342. Which of the following is contraindicated in CRF -
a) Halothane b) Enflurane *(MH08)*
c) Desflurane d) Isoflurane

343. Which of the following should be considered as the cause of generalized convulsions 20 minutes postoperatively ? *(DPG 09)*
a) Halothane b) Enflurane
c) Isoflurane d) Sevoflurane

344. Which of the following inhalational agent is contraindicated in a patient with history of epilepsy-
a) Isoflurance b) Enflurane *(AIIMS 03)*
c) Halothane d) Sevoflurane

345. Which of the following is an epileptogenic anesthetic agent - *(Ain)*
a) Isoflurane b) Sevoflurane
c) Methoxyflurane d) Halothane

346. Nephrotoxic agent is - *(AI 98, AIIMS 97)*
a) Methoxy flurone b) Isoflurone
c) Halothane d)N_20

347. Fluoride content is least - *(PGI 97)*
a) Methoxyflurane b) Enflurane
c) Isoflurane d) Sevoflurane

348. Fluoride content is least in -*(NEET/DNB Pattern)*
a) Enflurane b) Isoflurane
c) Sevoflurane d) Desflurane

323) d 324) a 325) d 326) d 327) a 328) a 329) a,c 330) c 331) a 332) c 333) c 334)a,b,e 335) a,b
336) a 337) a 338)a 339)b 340)c 341) d 342)b 343)b 344)b 345)b 346)a 347)c 348)d

349. Anaesthetic agent of choice in renal failure -
a) Methoxyflurane b) Isoflurane *(Jharkhand 06)*
c) Enflurane d)None

350. A patient with alcoholic liver failure requires general anesthesia for surgery. The agent to be used-
a) Ether b) Halothane *(MH09, SGPGI03)*
c) Methoxyflurane d) Isoflurane

351. Bone marrow depression is seen with - *(ARMS 96)*
a) Halothene b)N_20
c) Ether d) Isoflurane

352. Which anesthetic gas has high propensity to accumulate in cavities? *(Jipmer 11)*
a) Halothane b) Nitrous oxide
c) Ether d) Sevoflurane

353. True about N O - *(NEET/DNB Pattern)*
a) Good muscle relaxant
b) Low potency and goc danalgesia
c) High potency and poor analgesia
d) None

354. Use of nitrous oxide is contraindicated in all of the following surgeries except - *(ARMS Nov 08)*
a) Cochlear implant b) Microlaryngeal surgery
c) Vitrioretinal surgery d) Exentration operation

355. If pneumocephalus created either by surgery or by performance of a pneumoencephalogram, it is suggested that nitrous oxide be avoided for how many days - *(Jipmer95)*
a) 4 days b) 5 days
c) 6 days d) 7 days

356. Anaesthesia contraindicated in volvulus of gut is -
a) Halothane *(J & K 01, CUPGEE 96)*
b) Nitrous oxide
c) Ketamine
d) Pancuronium

357. **Anesthetic agent contraindicated in Emphysema is-**
a) N_20 b) Halothane *(SGPGI01)*
c) Ether d) Isoflurane

358. Which anaesthetic gas is contraindicated in the presence of pneumothorax ? *(COMED09)*
a) Halothane b) Isoflurane
c) Nitrous oxide d) Chloroform

359. Pulmonary vasodilatation associated with -
a) Halothane b) Lignocaine *(Jharkhand 05)*
c) Isoflurane d) Ketamine

360. Which of the following anaesthetic agents causes a rise in the Intracranial pressure - *(AI05)*
a) Sevoflurane b) Thiopentone sodium
c) Lignocaine d) Propofol

361. Heart is not sensitized by - *(MP 01)*
a) Halothane b) Chloroform
c) Diethyl-ether d)None

362. All of the following are the disadvantages of anesthetic ether, except - *(AI05)*
a) Induction is slow
b) Irritant nature of ether increases salivary and bronchial secretions
c) Cautery cannot be used
d) Affects blood pressure and is liable to produce arrhythmias

363. Ether is not used in modern surgical practice, because it is- *(Kerala 97)*
a) Highly explosive
b) Poor anaesthetic
c) Expensive
d) Complicated apparatus needed

364. Anaesthetic agent which is explosive in the presence of cautery - *(Delhi PG Feb. 09)*
a) Nitrous oxide b) Ether
c) Trilene d) Halothane

365. Maximum emesis causing anaesthetic - *(Jipmer 95)*
a) N20 b) Diethyl ether
c) Chloroform d) Thiopental

366. Not compatible with soda lime - *(ARMS 97)*
a) Ether b) Halothane
c) Trilene d) N_20

367. Agent which dissolves rubber - *(Punjab 10)*
a) Halothane b) Enflurane
c) Desflurane d) Isoflurane

368. Which of the following is not true about Xenon anaesthesia- *(ARMSNov 06, 11)*
a) Non explosive
b) Minimal cardiovascular side effects
c) Slow induction and slow recovery
d) Low blood gas solubility

369. True about xenon anaesthesia - *(PGINov. 10)*
a) Rapid induction and recovery
b) Low potency
c) High blood solubility
d) Non - explosive
e) Heavier than air

370. Anaesthetic that has a smooth induction is -
a) Diethyl ether b) Thiopental *(DPG 09)*
c) N_20 d) Halothane

371. Pungent volatile anaesthetic agents are-
a) Halothane b) Isoflurane *(PGI Nov 09)*
c) Sevoflurane d) Desflurane
e)N_20

372. In emergency caesarian section rapid induction of anaesthesia is done to - *(Jipmer 2 K)*
a) Prevent gastric aspiration
b) Prevent fetal depression
c) To decrease awareness

373. During rapid induction of anesthesia - *(AI03, NEETf*
a) Sellick's maneuver is not required *DNBPattem)*
b) Pre-oxygenation is m&nditqfy
c) Suxamethonium is contraindicated
d) Patient is mechanically ventilated before endotracheal, intubation

374. Stress free anaesthesia occurs in - *(Bihar 04)*
a) Alfentanil b) Sufentanil
c) Fentanyl d) Morphine

349)b 350)d 351)b 352)b 353)b 354)d 355)d 356)b 357)a 358)c 359)a>c 360)a 361)c 362)d 363) a 364) b 365) b 366) c 367) a 368) c 369)a,b,d,e 370) b 371)b,d 372) a 373) a 374) All

375. Which of the following intravenous induction agent is the most suitable for day care surgery- *^03, 06,*
a) Morphine b) Ketamine *AIIMS 98, MH 09)*
c) Propofol d) Diazepam

376. Which of the following is the best indication for propofol as an intravenous induction agent ?
a) Neurosurgery *(Manipal 09, A104)*
b) Day care surgery
c) Patients with coronary artery disease
d) In neonates

377. The following combination of agents are the most preferred for short day care surgeries - *(AIIMS 03)*
a) Propofol, fentanyl, isoflurane
b) Thiopentone sodium, morphine, halothane
c) Ketamine, pethidine, halothane
d) Propofol, morphine, halothane

378. Anesthetic agent(s) safe to use in 1tCP-(PG7*Nov 09)*
a) Halothane b) Thiopentone
c) Ketamine d) Ether

379. Bradycardia during anaesthesia seen in -
a) Pancuronium b) Vecuronium *(PGIJune04)*
c) Atracurium d) Propofol
e) Succinylcholine

PSP **Dept of anaesthesia can be best assessed by -**
a) Pulse oximeter *(NEET/DNB Pattern)*
b) End-tidal pC02 MP&1P
c) Acid blood gas analysis
d) Bispectral index ?l§Sl

381. A 40 year old female underwent surgery. Postoperatively she told the anesthetist that she was aware of preoperative events. Individual intraoperative awareness is evaluated by - *(AI11)*
a) Pulse oximetry b) Colour doppler
c) Bispectral imaging d) End tidal $C0_2$

382. Individual intraoperative awareness is evaluated by- *(AI12)*
a) Pulse oximetry b) Colour doppler
c) Bispectral imaging d) End tidal $C0_2$

383. A 40-year female has to undergo insicional hernia surgery under general anesthesia. She complains of awareness during her past cesarean section. Which of the following monitoring techniques can be used to prevent such awareness?
a) Color doppler *(AIIMS May 12)*
b) Bispectral index monitoring
c) Transesophageal echocardiography
d) Pulse plethysmography

384. Which of the following have analgesic property ?
a) N_20 b) Ketamine *(PGI June 08, 01)*
c) Thiopentone d) Etomidate

385. Which of following is/are false - *(PGI Nov. 10)*
a) Enflurane interacts with sodalime
b) Sevoflurane casues seizures
c) Rapid recovery from propofol
d) Ketamine acts through GAB A-A receptors
e) MAC indicates potency of inhalational agents

386. Which of the following statements about Total Intravenous Anesthesia (TIVA) is true - *(AI 12)*
a) Causes More Renal Toxicity
b) Reduces Cerebral Metabolic Rate
c) Risk of Malignant Hyperthermia is high
d) Inhibits Hypoxic Pulmonary Vasconstriction

3877" **True about midazolam as inducing agent -** SIP
a) Increase in BP *(NEET/DNB Pattern)*
• 7 b) Does not product pain an IV injection
'% | c),,b£crease ce^ebrai ox^gen consm^ptipn 11
d) Increase peripheral vascular resistance

388. Which of the following responses is least affected by Anesthesia - *(AI 12)*
a) Brainstem Auditory Evoked Response (BAER)
b) Visual Evoked Response (VER)
c) Somatosensory Evoked potential (SSEP)
d) Electroencephalogram (EEG)

389. Which of the following statements about Anesthetic Machine is true - *(AI 12)*
a) Temperature of Desflurane Vaporizer Chamber is 39°C
b) Flow-meters (Rotameters) are Interchangeable
c) Oxygen sensors are placed on the expiratory limb of the anesthesia circuit
d) All of the above

REGIONAL ANAESTHESIA

390. Local anaesthesia acts by - *(NEET/DNB Pattern)*
a) Na^+ channel inhibition
b) Ca^{4*4} channel inhibition
c) Mg^{4-4} channel inhibition
d) K^+ channel inhibition

391. *True* about local anaesthetic - *(PGI 01)*
a) Cocaine acts by decreasing norepinephrine
b) Act by decreasing sodium entry into cell
c) Lignocaine is an amide
d) Dibucaine is drug of choice for epidural anaesthesia

392. True statements about local anaesthesia - *(PGI 03)*
a) It inhibits the generation of action potential
b) Unmyelinated thin fibers are most susceptible than myelinated large fibers
c) Toxicity is reduced by addition of vasoconstrictor
d) Blocks all modalities of sensation at the same time

393. In local anesthesia, which of the following is the first sequence to go - *(Maharashtra 05)*
a) Temprature b) Parasympathetic
c) Motor d) Preganglionic sympathetic

394. The afferent nerve fibres which are most sensitive to local anaesthetic belong to Group -
a) A b) B *(AIIMS May 04, AI 95)*
c) C d)D

375)c 376)b 377)a 378)b 379)d,e 380)d 381)c 382)c 383)b 384)a,b 385)a,d 386)b 387)b 388)a 389)a 390)a 391)b,c 392)a,c 393)d 394)b

395. True about local anaesthetic agents - *(PGI04)*
a) Duration depends on protein binding
b) Potency depends upon lipid solubility
c) LA with low PKa is more active
d) Higher dose produces more block
e) Signal transduction blockade

396. Sodium bicarbonate when given with local anaesthetics has which of the following effect -
a) Increases speed and quality of anaesthesia^/ *09)*
b) Decreases diffusion of the anaesthetic drug
c) Causes rapid elimination of the local anaesthetic
d) Decreases speed and quality of anaesthesia

397. Addition of epinephrine to lignocaine-*(NEET/DNB*
a) Increaseses distribution of LA *Pattern)*
b) Decreases absorption of LA
c) Decreases duration of LA
d) Increases metabolism of LA

398. Drug used to prolong action of LA in Hypertensive pts- *(NEET/DNB Pattern)*
a) Clonidine b) Felypressin
c) Dedtqmidate d) Noratenalin

399. From which of the following routes absorption of local anaesthetic is maximum ? *(AIIMSNov 08)*
a) Intercostal b) Epidural
c) Bronchial d) Caudal

400. Which one of the following is not an amide- *(AJ 07,*
a) Lignocaine b) Procaine *98, AIIMS 03)*
c) Bupivacaine d)Dibucaine

401. Which of the following is not an ester - *(MH08, 07)*
a) Amethocaine b) Benzocaine
c) Procaine d) Bupivacaine

402. Which of the following is an ester linked local anaesthesia - *(Kerala 98)*
a) Cocaine b)Lidocaine
c) Bupivacaine d) Dubicaine

403. Which of the following are not local anesthetics -
a) Bupivacaine b) Mepivacaine *(PGINov 09)*
c) Mivacurium d) Butorphenol
e) Buprenorphine

404. Which of the following local anaesthetics is most likely to produce an allergic reaction - *(Jipmer 05)*
a) Prilocaine b) Ropivacaine
c) Etidocaine d) Benzocaine

405. Allergic reactions to amide linked anesthetic are -
a) Less common than that of ester linked local anesthetics
b) More common than that of ester linked anesthetics
c) Not known *(Maharashtra 03)*
d) None of the above

406. Cholinesterase metabolizes following except -
a) Tetracaine b) Procaine *(PGI97)*
c) Acetylcholine d) Bupivacaine

407. Which of the following is long acting local anesthetic > 2hrs - *(PGIDec 05)*
a) Bupivacaine b) Prilocaine
c) Etidocained)Dibucaine
e) Tetracaine

408. Local anaesthetic acting for more than 2 hrs-*(PGI 00*
a) Bupivaciane b) Etodocaine *SGPGI 00)*
c) Lignocaine d) Cholorprocaine

409. Short acting L.A - *(PGI 2000)*
a) Procaine b) Lignocaine
c) Bupivacaine d) Tetracaine

410. Long acting local anesthetic is - *(Jipmer 11)*
a) Procaine b) Lignocaine
c) Bupivacaine d) Etidocaine

411. Longest acting L.A. - *(MH02)*
a) Bupivacaine b) Tetracaine
c) Xylocaine d) Procaine

412. Shortest acting local anesthetic agent is - *(AI97)*
a) Procaine b) Lidocaine
c) Tetracaine d) Bupivacaine

413. Which local anaesthetic has highest protein binding capacity - *(MH-ll)*
a) Lignocaine b) Tetracaine
c) Prilocaine d) Procaine

4143 Local anaesthetic with maximum ionized form tit physiological pH - *(NEET/DNB Pattern)*
a) Lignocaine b) Etidocaine
c) Bupivacaine d) Chloroprocaine

415. Which local anesthetic causes vasoconstriction -
a) Cocaine b) Lidocaine *(SGPGI04)*
c) Bupivacaine d) Procaine

416. Vasoconstrictor L. A. is - *(NEET/DNB Pattern)*
a) Cocaine b) Procaine
c) Lidocaine d) Chlorprocaine

417. All are vasodilators except - *(AI98)*
a) Procaine b) Lidocaine
c) Cocaine d) Chlorprocaine

418. Local Anesthetic first used clinically -*(AIIMSNov 09)*
a) Procaine b) Lignocaine
c) Bupivacaine d) Cocaine

419. Cocaine was first used as local anaesthetic by-
a)Carlkollar b) Holmer wells *(NEET/DNB*
c) Morton d) None *Pattern)*

420. Naturally occuring LA - *(Kerala 97)*
a) Cocaine b) Lidocaine
c) Bupivacaine d) Tetracaine

421. Pupil fails to dilate by giving cocaine in -
a) Central sympathetic paralysis *(AIIMS June 2000)*
b) Central parasympathetic paralysis
c) Peripheral parasympathetic paralysis
d) Peripheral sympathetic paralysis.

422. Maximum dose of plain lignocaine (in mg) -
a) 300 b)500 *(Maharashtra 03)*
c) 700 d) 1000

423. Maximum dose of lignocaine with adrenaline (in mg/kg) - *(AIIMS May 12)*
a) 4 b) 5
c) 7 d) 10

424. Concentration of lignocaine used - *(PGI Dec 07)*
a) 2% b)4%
c) 5% d) 10%
e) 1%

395)All 396) a 397) b 398) b 399) a 400) b 401) d 402) a 403)c,d,e 404) d 405) a 406) d 407)a,c,d,e 408)a,b 409)a 410)c,d 411)a,b 412)a 413)b 414)d 415)a,c 416)a 417)c 418)d 419)a 420)a 421)d 422) a 423) c 424)a,b,c,e

425. All are true about lignocaine except - *(JH 05)*
a) Most commonly used anesthetic agent
b) Effective for 45-60 minute
c) Safe for person prone to malignant hyperthermia
d) None

426. About lidocaine, all are true except - *(PGI98)*
a) LA effect b) Cardiac arrhythmia
c) Ester d) Acts on mucous membranes

427. Cardiac or central nervous system toxicity may result when standard lidocaine doses are administered to patients with circulatory failure. This may be due to the following reason - *(AI03)*
a) Lidocaine concentration are initially higher in relatively well perfused tissues such as brain and heart
b) Histamine receptors in brain and heart gets suddenly activated in circulatroy failure
c) There is a sudden out-burst of release of adreneline, noradreneline and dopamine in brain and heart
d) Lidocaine is converted into a toxic metabolite due to its longer stay in liver

428. Which one of the following local anesthetic is highly cardiotoxic - *(AIIMS May 05)*
a) Lignocaine b) Procaine
c) Mepivacaine d) Bupivacaine

429. A 30 year old lady is to undergo surgery under intravenous regional anesthesia for her left 'trigger finger'. Which one of the following should not be used for patient ? *(AIISMMay 04)*
a) Lignocaineb) Bupivacaine
c) Prilocaine d) Lignocaine + ketorolac

430. Correct statement regarding bupivacaine includes-
a) Less carditoxic than prilocaine *(PGIDec 05)*
b) It is an amide
c) The maximum tolerable dose is 8 mg/kg body wt
d) Duration more than 2 hrs

431. Levo-bupivacaine is administered by which of the following route - *(PGI June 04)*
a) Nasogastricb) Epidural
c) Intravenous d) Intra-theccal
e) Oral

432. The following statements about Bupivacaine are true except- *(WB 96)*
a) Must never be injected into a vein
b) More cardiotoxic than lignocaine
c) 0.25 percent is effective for sensory block
d) Long acting drug
e) It produces methaemaglobinaemia

433. Local anaesthesia causing methemoglobinemia -
(AIIMS May 10> May 09, NEET/DNB Pattern)
a) Procaine b) Prilocaine
c) Etodicaine d) Ropivacaine

434. Earliest sign of systemic absorption of local anaesthetic is - *(COMED 09)*
a) Convulsions b) Circulatory collapse
c) Circumoral numbness d) Respiratory arrest

435. Lignocaine in high dose produces - *(PGI June 04)*
a) Convulsion b) Respiratory depression
c) Hypotension d) Cardiac arrest
e) Hypothermia

436. Bupivacaine toxicity treated with - *(PGIDec 97)*
a) Esmolol b) Epinephrine
c) Lignociaine d) 5 percent dextrose
e) Benzodiazepines

437. In acute convulsions due to toxicity to local anaesthetic most important step in immediate management is -
a) Secure airway *(Kerala 95)*
b) Adrenaline
c) IV short acting barbiturate
d) Diazepam IV

438. Least useful treatment of local anesthetic induced convulsions- *(Maharashtra 08)*
a) Phenytoin b) Thiopentone
c) Midazolam d) Propofol

439. Treatment of bupivacaine toxicity includes -
a) Isoprenaline b) Epinephrine *(PGINov. 10)*
c) Bretylium d) Metoprolol
e) Lignocaine

440. A 25 year old male with roadside accident underwent debridement and reduction of fractured both bones right forearm under axillary block. On the second postoperative day the patient complained of persistent numbness and paresthesia in the right forearm and the hand. The commonest cause of this neurological dysfunction could be all of the following except- *(AI04)*
a) Crush injury to the hand and lacerated nerves
b) A tight cast or dressing
c) Systemic toxicity of local anaesthetics
d) Tourniquet pressure

441. The topical use of following local anesthetic is not recommended ? *(AIIMS02)*
a) Ligocaine b) Bupivacaine
c) Cocaine d)Dibucaine

442. LbcaTAnaesthetic in wound/ulcerfftahagement-
a) Prilocaine * ' b) ^ilb^rbGai***n^0EBT/DNB***
c) Benzocaine d) Bupivacaine *Pattern)*

443. Which among the following is NOT used for surface anaesthesia - *(COMED09)*
a) Lignocaine b) Procaine
c) Tetracaine d) Benzocaine

444. All of the following are effective topically except -
a) Procaine b) Cocaine *(NEET/DNB Pattern)*
c) Lidocaine d)Amethocaine

445. TVue about EML A - *(PGI Dec 06)*
a) Can be used for intubation
b) Mixture of local anesthesia
c) Faster acting
d) Used in children

425) c 426) c 427) a 428) d 429) b 430) b,d 431)b 432) e 433) b 434) c 435)a,b,c,d 436) b,e 437) a
438) a 439) b,c 440) c 441) b 442) c 443) b 444) a 445) b,d

446. EMLA constituent is - *(NEET/DNB. Pattern)*
a) Lidocaine + Cocaine
b) Lidocaine + Prilocaine
c) Lidocaine + Bupivacaine
d) Bupivacaine + Prilocaine -

447. Interscalene approach to brachial plexus block does not provide optimal surgical anaesthesia in the area of distribution of which of the following nerve -
a) Musculocutaneous b) Ulnar *(AI03,01)*
c) Radial d) Median

448. For reduction of shoulder one of the following technique is appropriate - *(MP05)*
a) Spinal anesthesia b) Interscalene block
c) Axillary brachial block d) Bier block

449. Which of the following is not a sign of successful stellate ganglion block - *(AI09)*
a) Nasal stuffness b) Guttman sign
c) Homer's syndrome d) Bradycardia

450. A successful stellate ganglion block can produce -
a) Hypotension *(Kerala97)*
b) Homer's syndrome
c) Brachial plexus involvement
d) Hemifacial anaesthesia

451. Most common complication of celiac plexus block -
a) Pneumothorax *(AIIMS May 09)*
b) Postural hypotension
c) Retroperitoneal hemorrhage
d) Intra-arterial injection

452. The anesthetic drug injected for paravertabral block is least likely to diffuse to - *(AI 09)*
a) Epidural space
b) Subarachnoid space
c) Intercostal space
d) Superior and inferior paravertebral spaces

453. A patient in ICU was on invasive monitoring with intra arterial canulation through right radial artery for last 3 days. Later he developed swelling and discolouration of right hand. The next line of management is - *(UP 03, AIIMS 01)*
a) Stellate ganglion block b) Paravertebral block
c) Radial Nerve block d) Celiac plexus block

454. For Bier's block drug of choice is - *(MP 00)*
a) Prilocaine b) Bupivacaine
c) Lignocaine d)None

455. In spinal anesthesia, the needle is piereced upto -
a) Subdural space *(Maharashtra 01)*
b) Extradural space
c) Epidural space
d) Subarachnoid space

456. In spinal anesthesia, the drug is deposited between-
a) Dura and arachnoid *(DELHIPG Feb. 09)*
b) Pia and arachnoid
c) Dura and vertebra
d) Into the cord substance

457. Structure (s) pierce in Lumber spinal puncture is/are - *(PGI June 09)*
a) Ligamentum flavum
b) Duramater
c) Supraspinous ligament
d) Anterior longitudinal ligament
e) Posterior longitudinal ligament

458. Which of the following nerves are affected after spinal anesthetic block - *(Maharashtra 10)*
a) Motor and sensory only
b) Sensory and autonomic nerve only
c) Sensory nerves only
d) Sensory, autonomic and motor nerves

459. Spinal anesthesia should be injected into the space between- *(AI97)*
a) T_{12}-L_1 b) L_1-L_2
c) Lg - L_4 d) L_5 - S i

460. Spinal anesthesia is given at which of the following levels -
a) Ll-2 b) L2-4 *(AI 11)*
c) Midline of thorax d) Below L5 (caudal)

461. In high spinal anaesthesia what is seen -
a) Hypotension & Bradycardia *(Kerala00,*
b) Hypotension & Tachycardia *AIIMS01)*
c) Hypertension & Bradycardia
d) Hypertension & Tachycardia

462. Following spinal subarachnoid block a patient develops hypotension. This can be managed by the following means except-
a) Lowering the head end *(AIIMS03)*
b) Administration of 1000 ml of Ringers lacate before the block
c) Vasopressor drug like methoxamine
d) Use of ionotrope like dopamine

463. Best way to prevent hypotension during spinal anesthesia - *(AI 95)*
a) Preloading with crystalloids
b) Mephentermine
c) Dopamine
d) Trendelenburg's position

464. Vasopressor of choice in hypotension produced during sub-arachnoid - *(PGIDec 04, SGPGI00)*
a) Ephedrine b) Mephenteramine
c) Adrenaline d) Dopamine
e) Steroids

465. Post dural puncture headache, true about -
a) Common in elderly *(PGI June 04, PGI 01)*
b) Small bore needle prevents it
c) Early ambulation increases incidence
d) Occurs immediately after spinal anaesthesia
e) Blood patch is the first line of treatment

466. Best treatment for post dural puncture headache-
a) Caffeine b)NSAIDs
c) Extradural blood patch d) IV fluid

467. Post spinal headache is due to - *(AI 95)*
a) Meningitis b) Encephalitis
c) CSFleak d) Increased ICT

446) b 447) b 448) b 449) d 450) b 451)b 452) b 453) a 454) Oa 455) d 456) b 457)a,b,c 458) d
459) c 460) b 461) a 462)b 463)None>a 464) a 465) b,d 466) c 467) c

468. For prevention of headache during spinal anaesthesia-
a) Diluted solution of local anaesthetic should be used *(NEET/DNB Pattern)*
b) Preloading with crystalloids
c) Finer I.P. needle should he used
d) Head end should be elevated

469. Cranial nerve not involved in spinal anaesthesia -
a) 1st and 10th b) 3rd and 6th *(Rohtak 99)*
c) 2nd and 4th d) 7th and 8th

470. A patient was admitted epidural anaesthesia with 15 ml of 1.5%. Lignocaine with adrenaline for hernia surgery. He devoled hypotension and respiratory depression within 3 minutes after administration of block. The most common cause would be -
a) Allergy to drug administered *(AIIMSMay 05, 03)*
b) Systemic toxicity to drug administered
c) Patient got vasovagal shock
d) Drug has entered the subarachnoid space

471. An anesthesia resident was giving spinal anesthesia when the patient had sudden aphonia and loss of consciousness. What could have happended? *(AI11)*
a) Total spinal b) Partial spinal
c) Vaso vagal attack d) Intravascular injection

472. Tuohy needle is used for - *(MH 02)*
a) Spinal anesthesia b) Epidural anesthesia
c) CSF tapping d) Biopsy

473. Epidural anesthesia decrease risk of - *(UP 2K)*
a) Headache b) Hypotension
c) Meningitis d) Arachnoiditis

474. All of the following are advantage of epidural anaesthesia over spinal anaesthesia except -
a) Dural puncture is avoided *(Orissa 98)*
b) Chances of meningitis are very low
c) Post spinal headache is avoided
d) Its duration of action is very short

475. True about Epidural anesthesia - *(PGIMay 10)*
a) Effects start immediately
b) C/I in coagulopathies
c) Given in subarachnoid space
d) Venous return decreases

476. In epidural anaesthesia all are used except-
a) Pentazocine b) Buprenorphine*(Bihar 04)*
c) Bupivacaine d) Morphine, fentanyl

477. Which cant be given by Epidural anaesthesia -
a) Morphine b) Remifentanil *(NEET/DNB*
c) Alfentanil d) Fentanyl *Pattern)*

478. Site of action of epidural analgesia - *(AIIMS 98)*
a) Sensory nerve ending
b) Ventral horn
c) Substantia gelatinosa
d) Cortex

479. Maximum concentration for epidural block -
a) Bupivacaine b) Lidocaine*(NEET/DNB*
c) Ropivacaine d) Chlorprocaine *Pattern)*

480. Epidural narcotic is preferred over epidural LA because it causes - *(AIIMS 96)*
a) Less respiratory depression
b) Less dose is required
c) No motor paralysis
d) No retention of urine

481. True about epidural anaesthesia in pregnancy -
a) Given through subarachnoid space *(PGI 03)*
b) Increases cardiac output
c) Decreases venous return
d) Venous pooling
e) Decreased placental circulation

482. Saddle block is used for - *(MP 03)*
a) Surgery of lower limbs
b) Upper abdominal surgery
c) Inguinal hernia repair
d) Perianal surgery

483. In all of the following conditions neuraxial blockade is absolutely contraindicated, except - *(AI 03)*
a) Patient refusal
b) Coagulopathy
c) Severe hypovolemia
d) Pre-existing neurological deficits

484. Subarachnoid block as anesthesia is contraindicated in- *(KA98)*
a) Diabetic gangrene b) Burgers disease
c) Atherosclerotic gangrene d) Hemophilia

485. Contraindications to epidural analgesia include the following EXCEPT - *(UPSC-II09)*
a) Raised intracranial pressure
b) Coagulopathy
c) Infection over the back
d) Hypertension

486. Contraindication of spinal anesthesia is - *(DPG 08)*
a) Hypertension b) Renal disease
c) Clotting disorders d) Diabetes %

487. Centrineuraxial (spinal and epidural) anaesthesia is not contraindicated in - *(AI 0 7)*
a) Platelets < 80,000
b) Patient on aspirin
c) Patient on oral anticoagulants
d) Patient on I. V.UFH

488. A young boy has sickle cell trait. Which of the following anaesthesia is contraindicated ?
a) IV regional anaesthesia *(AIIMSMay 10)*
b) Brachial plexus block by supraclavicular approach
c) Brachial plexus block by infraclavicular approach
d) Brachial plexus block by axillary approach

489. Which anaesthetic modality is to be avoided in sickle cell disease - *(AI 11)*
a) General anaesthesia
b) Brachial plexus block
c) I. V. Regional Anaesthesia
d) Spinal

468)c 469)a 470)d 471)c 472)b 473)a,c,d 474)d 475)b,d 476) None 477)b 478)c 479)d 480)c 481) c,d 482) d 483) d 484) d 485) d 486) c 487) b 488) a 489) c

490. Anesthetic agent with vasoconstriction is contraindicated in ? *(AI11)*
a) Finger block b) Spinal block
c) Epidural block d) Regional anesthesia

COMPLICATIONS OF ANAESTHESIA

491. Mendelson syndrome is due to - *(PGI98)*
a) Aspiration pneumonitis
b) Chemical pneumonitis
c) Oesophagitis
d) Oesophageal spasm

492. The following are true of Mendelson's syndrome - *(Delhi PG Mar: 09)*
a) Critical volume of aspirate is 50 mis
b) Critical pH of gastric aspirate is 1.5
c) Onset of symptoms generally occurs within 30 minutes
d) Steroids have been shown to improve outcome

493. True about aspiration pneumonia - *(PGI June 04)*
a) Affected by volume of aspiration
b) Affected by pH of aspiration fluid
c) Occurs during induction
d) Inflammation
e) Infection

494. Sallick's manouvere is used *for*-*(PGI 09, (A1IMS97)***
a) To prevent gastric aspiration
b) To facilitate Respiration
c) To reduce dead space
d) To prevent alveolar collapse

495. During anaesthetic procedure, compression of cricoid cartilage - *(MP 98)*
a) Prevents spinal headache
b) Helps in preventing regurgitation
c) Aid in intubation
d) Help to relieve reflex bronchospasm

496. Which of the following drugs are believed to be effective in the treatment of post-operative shivering?
a) Ondansetron *(Delhi PG Mar. 09, AI 06)*
b) Diclofenac Sodium
c) Pethidine
d) Paracetamol

497. Hypothermia is used in all except - *(UP 04, PGI 98)*
a) Neonatal asphyxia b) Cardiac surgery
c) Hyperthermia d) Arrythmia

498. Hypothermia is used in - *(PGI 2000)*
a) Hyperpyrexia
b) Prolonged surgeries
c) Massive blood transfusion
d) Hypertension

499. Which of the following anesthetic agents does not trigger malignant hyperthermia ? *(AI 06)*
a) Halothane b) Isoflurane
c) Suxamethonium d) Thiopentone

500. Which does not cause malignant hyperthermia -
a) Isoflufahe *ih ^0* *V)* **Desffiirade** *(NEET/DNB*
c) N_2O ^ **d) Enflurane** *^'jPatt&rn)*

501. Agent causing malignant *hyperthertn\a-(NEET/DNB*
a) Succinyl choline b) Dantrolene *Pattern)*
c) Gallamine l|||§g|) Ketamine

502. All the following cause malignant hyperpyrexia except- *(Karnataka 05)*
a) N20 b) Halothane
c) Methyoxyflurane d) Isoflurane

503. End-tidal $C0_2$ is increased to maximum level in -
a) Pul. embolism *(PGI 2000)*
b) Malignant hyperthermia
c) Extubation
d) Blockage of secretion

504. All are seen in malignant hyperthermia except -
a) Bradycardia *(AIIMS May 07)*
b) Hyperkalemia
c) Metabolic acidosis
d) Hypertension

505. Treatment of malignant Hyperthermia includes -
a) Dantrolene *(PGI Dec 08)*
b) Cooling
c) Deepening plane of inhalational anaesthesia
d) Discontinue inhalational anaesthesia
e) GiveO therapy with 100%O .

506. About malignant hyperthermia^true - *(PGI June 08)*
a) Succinylcholine & Halothane predisposes
b) Dantrolene usefull in all cases
c) Ketanserine can be used as an alternative to Dantrolene
d) Propofol is safe
e) Muscle biopsy of diagnostic

507. A 10-year old child is undergoing squint surgery. He suddenly developed increased heart rate, arrhythmia, high fever, metabolic and respiratory acidosis on arterial blood gases and elevation of end tidal $C0_2$. Which of the following would be the first agent of choice in the management of this condition? *(AIIMS May 12)*
a) Dantrolene b) Paracetamol
c) Procainamide d) Sodium bicarbonate

508. Drugs used to control post-operative vomiting
a) Diazepam b) Phenobarbitone
c) Aprepitant d) Droperidol *(PGI June 08)*
e) Ondansetron

509. The following are used for treatment of postoperative nausea and vomiting following squint surgery in children except - *(AI 05)*
a) Ketamine b) Ondansetron
c) Propofol d) Dexamethasone

510. The most common rhythm disturbance during early post-operative period is - *(AIIMS May 05)*
a) Bradycardia b) Ventricular fibrillation
c) Tachycardia d) Complete heart block

490)a 491)a,b 492)c 493)All 494)a 495)b 496)c 497)d 498)a,b 499)d 500)c 501)a 502)a 503)b
504) a 505)a,b,d>e 506)a,b,d,e 507) a 508)a,c,d,e 509) a 510)c

511. Which of the following is not used in controlling heart rate intraoperatively - *(AI07)*
a) Propanolol / Metoprolol b) Verapamil
c) Esmolol d) Procainamide

512. Ultra short acting beta blocker most commonly used in anaesthesia is - *(IN 02)*
a) Esmolol b)Nadalol
c) Propanalol d) Atenolol

513. With respect to cardiac arrests occurring during anaesthesia - *(Delhi PG Mar. 09)*
a) The most common preceding arrhythmia is bradycardia
b) The most common cause is failure of ventilation
c) Most occur during emergence from anaesthesia
d) Most are considered unpreventable and untreatable

514. Cause of post operative hypertension -*(PGI June 04)*
a) Pre-operative hypertension
b) Inadequate analgesia
c) Phaeochromocytoma
d) Hypoxemia
e) Hypercarbia

515. Which of the following signs of congestive cardiac failure constitute a major risk to the surgical patient undergoing anaesthesia ? *(DELHI PG Mar. 09)*
a) Jugular venous distention and third heart sound
b) Cardiomegaly
c) Pedal oedema
d) Basal crepitations on auscultation

516. Trendelenberg position produces decrease in all of the following except - *(AI 91)*
a) Vital capacity b) Functional residual capacity
c) Compliance d) Respiratory rate

517. Upper respiratory tract infection is a common problem in children. All the following anaesthetic complications can occur in children with respiratory infections, except - *(AI 02)*
a) Bacteremia
b) Halothane granuloma
c) Increased mucosal bleeding
d) Larygospasm

518. During intraoperative anaesthesia mismatch BT develops - *(PGI Dec 0 7)*
a) Increased bleeding b) Hypotension
c) Bronchospasm d)Rash
e) Movements of limbs

519. Mismatched blood transfusion manifests intraoperatively as - *(PGI 99)*
a) RiseinB.P. b) Excessive bleeding
c) Dyspnoea d) Hematuria

520. During surgery transfusion reaction is manifested as- *(PGI 02)*
a) Hypothermia
b) Hypotension
c) Bleeding
d) Increased muscle movement
e) Decreased respiratory rate

521. Which of the following surgical incisions is associated with the highest risk of postoperative pulmonary complications ? *(Delhi PG Mar. 09)*
a) Vertical laparotomy b) Horizontal laparotomy
c) Lateral thoracotomy d) Median sternotomy

522. 5 yr old child going to sitting craniotomy while positioning in O.T. developed end tidal C02 0mm Hg P02 80 mm Hg implies - *(AIIMS 00)*
a) Endotracheal tube in oesophagus
b) E.T. blocked with secretion
c) Venous air Embolism
d) Left lung collapse

523. 55 year old female a known case of thryotoxicosis in control posted for abdomino perineal resection during surgery there was sudden drop in B.P., and end tidal C02 decreased from 40 to 10 mmHg. On auscultation there was a mill wheel murmur, what is the diagnosis - *(AIIMSNov 09)*
a) Thyroid storm b) Bleeding
c) Hypoxia d) Air embolism

524. Which of the following is true to the immediate postoperative period in a young patient with previously normal lungs having upper abdominal surgery ? *(Delhi PG Mar. 09)*
a) Arterial oxygen tension will typically be reduced by an average of 10 mm Hg when breathing room air
b) Arterial oxygen tension will normalize after 15 minutes
c) Diffusion hypoxia is the major determinant of arterial hypoxaemia
d) The CXR will typically reveal no abnormalities

ANAESTHESIA FOR SPECIAL SITUATIONS

525. A 5 year old child is suffering from cyanotic heart disease. He is planned for corrective surgery. The induction agent of the choice would *by-(AIIMS Nov 05)*
a) Thiopentone b) Ketamine
c) Halothane d) Midazolam

526. A 6 month old child is suffering from patent ductus arteriosus (PDA) with congestive cardiac failure. Ligation of ductus arteriosus was decided for surgical management. The most appropriate inhalational anaesthetic agent of choice with minimal haemodynamic alteration for induction of anaesthesia is - *(AIIMSNov 05)*
a) Sevoflurane b)Isoflurane
c) Enflurane d) Halothane

527. A 52 year old male diagnosed as triple vessel coronary artery disease with poor left ventricular function. Coronary artery bypass grafting surgery was decided. During maintenance of anaesthesia which one of the following agents should be preferred ? *(AIIMS Nov 04)*
a) IV opioids b) Isoflurane
c) Halothane d) Nitrous oxide

511)None>a 512)a 513)a,b 514)A11 515)a 516) d 517)b 518)a,b,c,d 519)b 520)b,c 521)a 522)c
523) d 524) a 525) b 526) a 527) a >b

528. During surgery for aortic arch aneurysm under deep hypothermic circulatory arrest, which of the following anesthetic agent administered prior to circulatory arrest that also provides cerebral protection ? *(AIIMS 02)*
a) Etomidate b) Thiopental sodium
c) Propofol d) Ketamine

529. A 30 year old woman with coarctation of aorta is admitted to the labour room for elective caesarean section. Which of the following is the anaesthesia technique of choice - *(AIIMS Nov 05)*
a) Spinal anaesthesia
b) Epidural anaesthesia
c) General anaesthesia
d) Local anaesthesia with nerve block

530. Patient with mitral stenosis is having surgery tomorrow. There is some liver compromise. Which of the following inhalational agent is preferred -
a) Halothane b)Enflurane *(AIIMSNov 10)*
c) Xenon d) Sevoflurane

531. The most common cause of morbidity and mortality in patients undergoing major vascular surgery is -
a) Renal complications *(AIIMSMay 05)*
b) Thromboembolic phenomenon
c) Coagulopathies
d) Cardiac complications

532. A patient of alcohlic liver faliure requires general anesthesia AOC is - *(AI01)*
a) Ether b) Halothane
c) Isoflurane d) Methoxyflurane

533. The volatility of an anesthetic agent is directly proportional to lowering the flow in the portal vein. Portal flow is maximally reduced by-
a) Ether b) Halothane*(AIIMS May 10)*
c) Isoflurane d)Enflurane

534. Anesthesia of choice in renal failure - *(AI 01)*
a) Methoxy flurane b) Isoflurane
c) Enflurane d)None

535. Anaesthesia of choice in renal disease-*(PGI June 08)*
a) Atracurium b) Cisatracurium
c) Vecuronium d)Rocuronium
e) Mivacuronium

536. Best anaesthesia for status asthmaticus -*(AIIMS 97)*
a) Thiopentone b) Ketamine
c) Ether d)N_20

537. Which is safest to be used in asthmatic patients -
a) Nitrazepam b) Phenobarbitone *(PGI01)*
c) Chloral hydrate d) All hypnotics are safe
e) Morphine

538. After Hyperventilating for some time holding the breath is dangerous because - *(AIIMSNov 00)*
a) Decrease $C0_2$ shift the 0_2 dissociation curve to the left
b) Alkalosis can lead to tetany
c) It can lead to $C0_2$ Narcosis
d) Due to lack of stimulation by $C0_2$, anoxia can go into dangerous levels

539. Current mode of analgesia best for intrapartum pain relief- *(MH06)*
a) Epidural analgesia b) Spinal anaesthesia
c) Inhalational d) Local analgesia

540. A lower Segment Caesarean Section (LSCS) can be carried out under all the following techniques of anesthesia, except- *(Delhi PG Feb. 09, AI 05)*
a) General anesthesia
b) Spinal anesthesia
c) Caudal anesthesia
d) Combined spinal epidural anesthesia

541. In general, the last muscle to be rendered akinetic with a retrobulbar anesthetic block *\s-(ARMS May 06)*
a) Superior rectus b) Superior oblique
c) Inferior oblique d) Levator palpebral superioris

542. Complication of peribulbar block- *(PGI Dec 04)*
a) Retrobulbar hemorrhage
b) Globe rupture
c) Optic neuritis
d) Local anaesthetic solution can migrate to brain
e) Vasovagal syncope

543. A five year old child is scheduled for strabismus (squint) correction. Induction of anesthesia is uneventful. After conjunctival incision as the surgeon grasps the medial rectus, the anaesthesiologist looks at the cardiac monitor. Why do you think he did that? *(A I I MS 02)*
a) He wanted to check the depth of anaesthesia
b) He wanted to be sure that the blood pressure did not fall
c) He wanted to see if there was an oculocardiac reflex
d) He wanted to make sure there were no ventricular dysarhythmias which normally accompany incision

544. During ocular surgery, when eye surgeon touches the medial rectus, he asked to assistant to measure heart rate because of - *(Bihar 06)*
a) Occulocardiac reflex b) Occulocephalic reflex
c) Occulovagal reflex d)None

545. Following will be the choice of anaesthesia in an infected tooth posted for extraction - *(MP 06)*
a) Local block with lignocaine
b) Local block with lignocaine and adrenaline
c) Isoflurane
d) Enflurane

546. Which of the following anaesthesia will produce decreased EEG activities - *(AIIMS Nov 06, 11)*
a) Hypothermia b) Early hypoxia
c) Ketamine d) N_20

547. Fire breaks out during laser vocal cord surgery. What is not to be done? *(AI 11)*
a) Pouring sterile water
b) Removing endotracheal tube
c) 100% oxygen after discontinuing anesthetic gases
d) Treatment with steroid and antibiotics

528) b 529) c 530) c 531)d 532) c 533) b 534) b 535)a,b,e 536) b 537) a 538) d 539) a 540) c 541) b 542)All 543) c 544) a 545) d 546) a 547) c

548. Anaesthesia used in microlaryngoscopy is -
a) Pollarad tube of 10 mm diameter with heavy sedation
b) Pollarad tube of 15 mm diameterwith topical xylocaine
c) Pollarad tube with infiltration block *(AIIMS 96)*
d) Heavy sedation on and endotracheal intubation

549. Which of the following anesthetic drugs is contraindicated in chronic renal failure -*(AI 12)*
a) Morphine b) Fentanyl
c) Pethidine d)Atracurium

550. In a pregnant female, there is decreased requirement of the spinal anaesthetic agent because of all of the following except - *(AIIMS May 12)*
a) Exaggerated lumbar lordosis
b) Decreased volume of subarachnoid space
c) Engorgement of epidural veins
d) Increased sensitivity of the nerves to anaesthetic agent

551. A six year old child is posted for elective urology surgery under general anesthesia. He refuses to allow the anaesthesiologist an I.V. access. The best inhalational agent of choice for induction of anesthesia is - *(AIIMSMay 04)*
a) Sevoflurane b) Methoxyflurane
c) Desflurane d) Isoflurane

552. Which of the following inhalational agents is the induction agent of choice in children -*(AI06, 04,PGI 08,05, MH 08)*
a) Methoxyflurane b) Sevoflurane
c) Desflurane d) Isoflurane

553. All agents can be given for induction of anesthesia in children except ? *(Jharkhand 06)*
a) Halothane b) Sevoflurane
c) Morphine d)N_20

554. In a child with intestinal obstruction with deranged liver function test, the anesthetic of choice is -
a) Enflurane b) Isoflurane*(PGIJune06)*
c) Halothane d) Sevoflurane
e) Ether

555. A 5 year old boy suffering from Duchenne Muscular dystrophy and polymyositis has been fasting for 8 hrs and has to undergo tendon lengthening. Which anaesthesia should be used - *(AIIMS 2000)*
a) Induction by IV thiopentone & maintenance by N_20 & halothene
b) Induction by IV propofol and maintenance by N_20 &o_2
c) Induction by IV scoline and maintenance by N_20 & Halothane
d) Inhalation N_zO, 0_2 & halothene

556. A 5 year old boy suffering from Duchenne muscular dystrophy has to undergo tendon lengthening procedure. The most appropriate anaesthetic would be- *(AI03)*
a) Induction with intravenous thiopentone and N_20; and halothane for maintenance
b) Induction with intravenous suxamethonium and N_20; and oxygen for maintenance
c) Induction with intravenous suxamethonium and N_20; and halothane for maintenance
d) Induction with inhalation halothane and N_20; oxygen for maintenance

557. The most appropriate circuit for ventilating a spontaneously breathings infant during anaesthesia is- *(AI05)*
a) Jackson Rees modification of Ayres T piece
b) MaplesonAor Magill's circuit
c) Mapleson C or Waters to and frocanister
d) Bains circuit

558. The narrowest part of larynx in infants is at the cricoid level. In administering anesthesia this may lead to all except - *(AIIMS 03)*
a) Choosing a smaller size endotracheal tube
b) Trauma to the subglottic region
c) Post operative stridor
d) Laryngeal oedema

559. A 5 year old patient is scheduled for tonsillectomy. On the day of surgery he had running nose, temperature 37.5°C and dry cough. Which of the following should be the most appropriate decision for surgery -
a) Surgery should be cancelled
b) Can proceed for surgery if chest is clear and there is no history of asthma
c) Should get X-ray chest before proceeding for surgery
d) Cancel surgery for 3 weeks and patient to be on antibiotic

560. A six year old boy is scheduled for examination of the eye under anaesthesia. The father informed that for the past six months the child is developing progressive weakness of both legs. His elder sibling had died at the age of 14 years. Which drug would you definitely avoid during the anaesthetic management ? *(AIIMS 02)*
a) Succinylcholine b) Thiopentone
c) Nitrous oxide d) Vecuronium

561. A two month old infant has undergone a major surgical procedure. Regarding postoperative pain relief which one of the following is recommended -
a) No medication is needed as infant does not feel pain after surgery due to immaturity of nervous system *(AI 06)*
b) Only paracetamol suppository is adequate
c) Spinal narcotics via intrathecal route
d) Intravenous narcotic infusion in lower dosage

562. Regarding neonatal circumcision, which one of the following is true - *(AIIMS 03)*
a) It should be done without anaesthesia, as it is hazardous to give anaesthesia
b) It should be done without anesthesia, as neonates do not perceive pain as adults
c) It should be done under local anaesthesia only
d) General anaesthesia should be given to neonate for circumcision as they also feel pain as adults

548) c 549) c 550)a 551)a 552)b 553)c 554)c 555)d 556)a 557)a 558)a 559)d 560)a 561)d 562) c

CARDIOPULMONARY RESUSCITATION AND MECHANICAL VENTILATION

563. First step in CPR (cardio pulmonary resuciatation) should be- *(PGI2000)*
a) IV adrenaline b) Intracardic atropine
c) Airway maintainance d) Hystrectomy

564. In a patient with multiple injuries, first thing to be done is - *(DPG 09, PGI99)*
a) Patency of airway
b) Maintenance of B.P.
c) Immobilize cervical spine
d) Lateral position with mouth gas

565. A 40 year old man who met with a motor vehicle catastrophe came to the casualty hospital in an hour with severe maxillofacial trauma. His Pulse rate was 120/min, BP was 100/70 mm Hg, Sp02 - 80% with oxygen. What would be the immediate management-
a) Nasotracheal intubation *(AIIMS Nov 10)*
b) Orotracheal intubation
c) Intravenous fluid
d) Tracheostomy

566. In a patient with cardiorespiratory arrest, basic life support is given to support which of the following system- *(PGI01)*
a) Respiratory system b) Cardiovascular system
c) Renal system d) Gastrointestinal system
e) CNS

567. According to 2005 AHA guidelines true about number of chest compression in CPR -
a) 80/min including neonate *(PGI Dec 07)*
b) 90/min including neontate
c) 100/min excluding neonate
d) 120/min including neonate
e) 120/min excluding neonate

568. IN CPR drug of choice is - *(AP 96)*
a) $NaHC0_3$ b) Isoprenaline
c) Propranolol d) Adrenaline

569. IVue about adrenaline in CPR - *(PGI 01)*
a) Can be given intratracheally
b) I. V. route better than intracardiac
c) Intracardiac route better than IV
d) Converts coarse fibrillation into fine ones
e) The dose used is 2ml containing 1 in 1000 concentration

570. Concentration of adrenaline in CPR is - *(MP 03)*
a) 1 : 10 lakhs b) 1 : 1 lakhs
c) 1:10,000 d) 1 :1000

571. Which of the following drugs in NOT recommended for intracheal administration during cardiopulmonary resuscitation - *(Karn 96)*
a) Atropine b) Sodium bicarbonate
c) Adrenaline d)Lignocaine

572. The outcome following resuscitation of cardiac arrest is worsened if during resuscitation patient is given - *(AIIMS Nov 05)*
a) Ringer's lactate b) Colloids
c) 5% Dextrose d) Whole blood transfusion

573. During cardiac resuscitation, the following can occur except- *(PGI 01)*
a) Rupture of lungs b) Rupture of liver
c) Rupture of stomach d) Rupture of spleen
e) Disseminated intravascular coagulation occurs

574. During cardiopulmonary resuscitation, cardiac massage is given - *(MH 06)*
a) Upper third of sternum b) Mid third of sternum
c) Lower third of sternum d) Precordium

575. In controlled ventilation - *(PGI Nov 09)*
a) Patient is active b) Patient is passive
c) Ventilator is active d)IPPV
e)Ventilater is passive

576. In volume-cycled ventilation the inspiratory flow rate is set at - *(AIIMS 02)*
a) 140-160 L/min b) 110-130 L/min
c) 60-100 L/min d) 30-50 L/min

577. The following modes of ventilation may be used for weaning off patients from mechanical ventilation except- *(AI05)*
a) Controlled mechanical ventilation (CMV)
b) Synchronized intermittent mandatory ventilation (SIMV)
c) Pressure support ventilation (PSV)
d) Assist-control ventilation (ACV)

578. All are true about PEEP except - *(PGI 99)*
a) Useful in situations where $P0_2$ is low
b) I CO
c) Impaired renal function
d) slid

579. About CPAP all are true except - *(AIIMS May 09)*
a) Given prophylactically in all preterm with respiratory distress
b) Started with $Fi0_2$ 50-60%
c) Given in infants less than 28 weeks and less than 1 kg weight
d) Improves oxygenation and improves lung compliance

580. Complication of positive pressure ventilation- *(Kerala 98)*
a) Pneumothorax b) Bradycardia
c) Decreased ventilation d) Arrhythmias

581. Placement of a double lumen tube for lung surgery is best confirmed by - *(PGIDec 08, AIIMS Nov 05)*
a) $EtC0_2$
b) Airway pressure measurement
c) Clinically by auscultation
d) Bronchoscopy

563)c 564)a 565)b 566)a,b,e 567)c 568)d 569)a,b 570)d 571)b 572)c 573)e 574)c 575)b,c,d
576) c 577) a 578) d 579) c 580) a 581) d

582. The most sensitive and practical technique for detection of myocardial ischemia in the perioperative period is - *(AIIMS Nov 05)*
a) Magnetic Resonance Spectroscopy
b) Radio labeled lactate determination
c) Direct measurement of end diastolic pressure
d) Regional wall motion abnormality detected with the help of 2D transoesophageal echocardiography

MISCELLANEOUS

583. Which one of the following is the description used for the term allodynia during pain management ?
a) Absence of pain perception *(AIIMS May 06)*
b) Complete lack of pain sensation
c) Unpleasant sensation with or without a stimulus
d) Perception of an ordinarily non-noxious stimulus as severe pain

584. Perception of ordinarily non noxious stimuli as pain, is better known as - *(PGI2000, SGPGI03)*
a) Allodynia b) Hyperalgesia
c) Hyperesthesia d) Radiculopathy

585. Allodynia is - *(AIIMS 98)*
a) Feeling pain without stimulus
b) Feeling pain to a normal non painful stimulus
c) Both
d) None

586. Visual analogue scale (VAS) most widely used to measure - *(AIIMS 05, 03)*
a) Sleep b) Sedation
c) Pain intensity d) Depth of anaesthesia

587. Pain rating index is provided *by-(PGI02,Jipmer 00)*
a) Faces scale b) Visual analogue scale
c) Me Gill questionniare d) CHEOP scale

588. Best scale to measure pain in children of 5 years age would be - *(SGPGI 02)*
a) \AS b) Me Gill scale
c) Faces scale d) CHEOPS

589. A children hospital Eastern Ontaria Pain Scale (CHEOPS) for rating potoperative pain in children includes all - *(AIIMS Nov 08)*
a) Cry b) Touch
c) Torso d) Oxygen saturation

590. TVue regarding morphine - *(PGI June 06)*
a) Tolerance develops for all except miosis and constipation
b) Tolerance to all effects develops with chronic usage
c) Tolerance develops for all except euphoria and sedation
d) Tolerance can develop to all effects in high doses

591. All are opioid agonist - antagonist compounds except- *(PGI 02, Jipmer 01)*
a) Buprenorphine b) Nalbuphine
c) Pentazocine d) Nalmefene
e) Papaverine

592. Best antagonist of morphine is - *(AIIMS 97)*
a) Nalorphine b) Naloxone
c) Buprenorphine d) Pentazocine

593. Which one of the following is the shortest acting intravenous analgesic - *(AIIMS 03)*
a) Remifantanil b) Fentanyl
c) Alfentanil d) Sufentanil

594. Established routes of administration of morphine include - *(PGI June 02)*
a) Inhalation b) Rectal
c)SC d)IV
e) IM

595. Which of the following drug can be given intravenously, epidurally or by transdermal route -
a) Fentanyl b)Thiopental *(DPG 08)*
c) Succinylcholine d) Vecuronium

596. Opioid antagonist that can be given orally -*(MH10)*
a) Naltrexone b) Naloxone
c) Nalbuphene d) Pentazocine

597. True about nitric oxide - *(PGI June 07)*
a) Formed from L-Arginine by NO synthase
b) Causes vasodilation in all vessels
c) Used in portal hypertension
d) Interacts with Hb
e) Used in erectile dysfunction

598. Which of the following inhaled gas is used to decrease pulmonary artery pressure in adults and infants ? *(AIIMS 02)*
a) Nitrous oxide b) Nitrogen dioxide
c) Nitric oxide d) Nitrogen

599. True about inhaled nitric oxide - *(PGI June 07)*
a) Causes generalized vasodilation
b) Dilates pulmonary arteries
c) Causes hypotension
d) Least systemic effects
e) Better ventilation perfusion match

600. TVue about action of inhaled NO - *(PGINov. 10)*
a) Causes pulmonary vasodilation
b) Increase pulmonary artery pressure
c) Inproves ventilation- perfusion matching
d) Systemic vasodilation
e) Least systemic effect

601. Which of the following statements is true regarding Nitric oxide - *(PGI 01)*
a) Used in pulmonary hypertension
b) Decreases the dose of anaesthetics
c) Sympathomimetic action
d) Causes systemic hypotension
e) Used as a vasoconstrictor

602. Which of the following agents is not used to provide induced hypotension during surgery ? *(AI06)*
a) Sodium nitroprusside b) Hydralazine
c) Mephenteramine d)Esmolol

582)d 583)d 584)a 585)b 586)c 587)c 588)d 589)d 590)a 591)d,e 592)b 593)a 594)b,c,d,e 595) a 596) a 597) All 598) c 599)b,d,e 600)a,c,e 601) a,d 602) c

603. Hypotensive anesthesia in nasopharyngeal angiofibroma is/are given by - *(PGI June 09)*
a) Propofol b) Ketamine
c) Phentolamine d) Halothane
e) Na Nitroprusside

604. Sodium nitroprusside infusion may result in - *(AIIMS May 05)*
a) Hypertension b) Pulmonary oedema
c) Cyanide toxicity d) Heart block

605. The drug which is not suitable for patients with acute porphyria for intravenous induction *is-(AHMSMay 05)*
a) Thiopentone sodium b) Propofol
c) Midazolam d)Etomidate

606. Drugs contraindicated in AIP - *(PGIDec 07, 04)*
a) Thiopentone b)Etomidate
c) Ketamine d) Propofol
e) Midazolam

607. In porphyria all drugs are safe except - *(MH 09)*
a) Propofol b) Midazolam
c) Afentanyl d)Pentazocin

608. Anesthetic agent contraindicated in porphyria -
a) Thiopentone b) Propofol *(PGINov 09)*
c) Ketamine d)Etomidale
e) Methadone

609. A patient after undergoing thoracotomy complains of severe pain. He can be managed by-
a) Intercostal cryoanalgesia *(AIIMS Nov 10)*
b) I.V fentanyl
c) Oral morphine
d) Oralbrufen

610. Management of chronic pain includes-fPG*/Nov 10)*
a) Intra-thecal hyperbaric phenol
b) Anterolateral cordotomy
c) Epidural fentanyl
d) Patient controlled analgesia (PCA)
e) Anticonvulsant drugs

611. True about Heliox - *(PGI Nov. 10)*
a) Helium is an inert gas
b) Less viscous than air
c) Higher density than air
d) Reduces work of breathing
e) Mixture of He & 0_2

612. Criteria for brain death A/E- *(PGI Dec 07)*
a) BOG b)EEG
c) Brain stem reflex d) 1 body temperature
e) Pupillary dilatation

613. Clinical criteria of brain death is all except -
a) Coma *(Jipmer 05)*
b) Absent brain stem reflex
c) Absent spinal cord reflex
d) Absent motor activity

614. Which of the following does not represent a significant anaesthetic problem in the morbidly obese patient ? *(ARMS Nov 04)*
a) Difficulties in endotracheal intubation
b) Suboptimal arterial oxygen tension
c) Increased metabolism of volatile agents
d) Decreased cardiac output relative to total body mass

615. Characteristic of an ideal gas is - *(PGI 98)*
a) Volume is directly proportional to change in pressure
b) Volume is inversely proportional to change in temperature
c) At absolute temp, volume of gas is 1
d) Obeys Charles, Byles and Avagadro laws

616. The gas used to create pneumoperitoneum is -
a)$C0_2$ b)N_2 *(PGI 01)*
c)0_2 d) Room air
e) N_2O

617. Incubator heat is delivered by except - *(PGI 98)*
a) Conduction b) Convection
c) Radiation d) Evaporation

618. True about scavenging action in OT - *(MP 06)*
a) Outlet connection is 22 mm male fitting
b) Interface limit pressure is 0 to +2 cm H20
c) The charcoal as an adsorbent should not be used
d) Scavenging is defined as the collection of excess gases from equipment used in administrating anesthesia or exhaled by the patient and removal of these gases to an appropriate places discharge outside the working environment

619. The gas which produces systemic toxicity without causing local irritation is - *(AI02)*
a) Ammonia b) Carbon monoxide
c) Hydrocyanic acid d) Sulfur dioxide

620. In a patient with fixed respiratory obstruction Helium is used along with Oxygen instead of plain oxygen because - *(AI 02)*
a) It decreases oxygenation
b) It decreases turbulence
c) It decreases the dead space
d) It provides analgesia

621. Drugs which interfere with anesthesia are -
a) Calcium channel blocker nifedipine *(PGI 01)*
b) Beta blockers
c) Aminoglycosides
d) Steroid administration
e) D-tubocurane

622. In an injured patient with hypovolemia intravenous fluid administerved is guided by - *(PGI 03)*
a) Central venous pressure b) Blood pressure
c) Urine output d) Pulse rate

** *

RADIOLOGY

FUNDAMENTALS IN RADIOLOGY

1. **X-rays were discovered by -** *(MP 04)*
   a) Godfrey Hounsfield b) Roentgen
   c) Coulomb d) Sievert
2. **The active ingredient of X-ray film is -** *(DPG 08)*
   a) Silver chloride b) Silver bromide
   c) Silver nitrate d) Gold chloride
3. **X-rays are modified -** *(DPG Feb 09)*
   a) Protons b) Electrons
   c) Neutrons d) Positrons
4. T **energy linear acceleration used in-***(PGI June 04)*
   a) X-ray b) Cathode rays
   c) Photon rays d) a - rays
   e) y-rays
5. **X-rays are produced when -** *(AIIMS 02)*
   a) Electron beam strike the nucleus of the atom
   b) Electron beam strikes the anode
   c) Electron beam reacts with the electromagnetic field
   d) Electron beam strikes the cathode
6. **Which is provided by linear accelerator-flTZ/MS'** *95)*
   a) Electron b) Neutron
   c) Proton d) Infrared rays
7. **Ion which scatters X-ray most is -** *(AI9 7)*
   a)Ca^{++} b) Hg
   c) Pb d)H^{+}
8. **Maximum scattering in X-ray plate occurs in -**
   a) Carbon b) Mercury *(AI 96)*
   c)lt d)Ca^{++}
9. **What is needed for proper radiographic image in a heavy bony built person?** *(AI 02)*
   a) tedma b)Tkvp
   c) Ted exposure time d) Ted developing time
10. **Contrast in X-rays is dependent -** *(Assam 95)*
    a) KV
    b) Ma
    c) Duration of exposure
    d) Distance between source and object
11. **Photoelectric effect can be best described as an -**
    a) Interaction between high energy incident photon and the inner shell electron *(AI 08)*
    b) Interaction between low energy incident photon and the outer shell electron
    c) Interaction of the high energy incident photon and the outer shell electron
    d) Interaction between a low energy incident photon and the inner shell electron
12. **Photon transferring some of its energy to electron is-** *(Jipmer 06)*
    a) Photoelectric effect
    b) Bremsstrahlung effect
    c) Compton effect
    d) Ionization
13. **Grid is a device used for -** *(Punjab 11)*
    a) Reducing scattered radiation
    b) Reducing patient's exposure time
    c) Reducing the contrast of the X-ray
    d) All of the above
14. **CAT was invented by -** *(Jharkhand 03)*
    a) Hounsfield b) Roentgen
    c) Cormack d) Tesla
15. **Hounsfield units depends on -** *(AIIMSMay 09)*
    a) Electron density
    b) Mass density
    c) Effective atomic number
    d) Attenuation coefficient
16. **In computed tomography (CT), the attenuation value are measured in hounsefield units (HU). An attenuation value of'O' (zero) HV corresponds to -**
    a) Water b) Very dense bone structure
    c) AIR d) Fat *(AIIMS Nov 04)*
17. **HU is measure of-** ***(iyEET/DNB Pattern)***
    a) CT ... ; *b)\m*
    c) PET ■ *d)USG*
18. **Slice of tissue X-rays is -** *(PGI99)*
    a) Tomography b) Mammography
    c) Contrast studies d) All of the above
19. **High - resolution CT of the lung is a specialized CT technique for greater detail of lung parenchyma and it utilizes -** *(AIIMS 02)*
    a) Special lung filters
    b) Thick collimation
    c) Bone algorithm for image reconstruction
    d) Large field of view
20. **High resolution computed tomography of the chest is the ideal modality for evaluating -** *(AI 03)*
    a) Pleural effusion b) Interstitial lung disease
    c) Lung mass d) Mediastinal adenopathy
21. **Which one of the following imaging techniques gives maximum radiation exposure to the patient?**
    a) Chest X-ray b)MRI *(AI06, AIIMS, May 11)*
    c) CT scan d) Bone scan
22. **Radiation hazard is absent in -** *(PGI June 06)*
    a) MRI
    b) Doppler USG
    c) Digital substraction angiography
    d) Tc 99 scan
23. **Calcification is best detected by -** *(PGI 03)*
    a) X-ray b)USG
    c) CTScan d)MRI
    e) PET Seen
24. **Regarding CT scan all are true except -**
    a) 50% reduction in kVp reduces 50% radiation dose
    b) Decrease in mA (milli amperes) decreases radiation dose exposure significantly in pediatric chest
    c) Quality of the radiation generated depends upon voltage *(AIIMS Nov 08)*
    d) Radiation dose exposure is directly related to the time of exposure

l)b 2)b 3)b 4) a 5)b 6)a 7)c 8)a 9)a,b 10)a 11) d 12)c 13)a 14)a

25. Walls of the CT scanner room are coated with -
a) Lead b) Glass *(A110)*
c) Tungsten d)Iron

26; Which of the fdilbwing techniqu^ use pi^zpelectric *cry%i^T(AnMSNov04;J^Q&^plEE>r/DNB Pattern)*
a) Ultrasonography b) X-ray diffraction
c) NMR imaging d) Xeroradiography

27. Ultrasound frequency used for diagnostic purposes in obstetrics - *(PGI01)*
a) 1-20 MHz b) 20-40 MHz
c) 40-60 MHz d) 60-80 MHz
e) 80-100 MHz

28. Frequency of sound waves used in USG - *(Bihar 04)*
a) <1000Hz b)>5000Hz
c) > 10000 Hz d) > 20000 Hz

29. USG wave travel in human body at the rate of -
a) 1500 m/s b) 2500 m/s *(Jhark03)*
c) 3500 m/s d)None

30. Ultrasonography transducer contain - *(Bihar 05)*
a) Sodium fluoride b) Lead Zirconate
c) Caesium fluoride d) None

31. The ultrasonic sound waves employed in ultrasound machine for medical sonography have the frequency of- *(MH 06)*
a) 2-20 MHz b) Less than 1 MHz
c) 20 -20,000 Hz d) Greater than 100 MHz

32. Which is not echogenic while doing ultrasonography-
a) Bile b)Gas *(Jipmer 03)*
c) Bone d) Gall stones

33. Acoustic shadow is produced by the following except-
a) Bone b) Calculus *(MH03)*
c) Fat d)Gas

34. The intensity of colour in Doppler is determined by -
a) Direction flow *(PGI98)*
b) Velocity of flow
c) Strength of returning echo
d) None of the above

35. Contrasts used in USG - *(PGIDec 07)*
a) Urograffin b) Ultragraffin
c) Sonavist d) Conray
e) Barium

36. Time sector scanning of neonates is preferred because of the following reason. Most practical reason - *(PGI 95)*
a) Open fontanelles
b) Inexpensive
c) Children more co-operative
d) Better resolution

37. In which of the following form of imaging, Harmonic Imaging is related - *(DPG Mar. 09)*
a) Sonography b) Digital radiography
c) MRCP d) Nuclear imaging

38. NMR based in the principle of - *(AIIMS2000, AI99)*
a) Electron beam b) Proton beam
c) Magnetic field d) Neutron beam

39. In MRI the field used is - *(AI 97)*
a) 0.05 tesla b) 100 tesla
c) 1.1 tesla d) 11 tesla

40. Tj and T_2 images are a feature of which diagnostic test- *(MH06, Kar 04)*
a) USG b) CT Scan
c) Duplex scan d) MRI

41. On a MRI scan on T weighted images all appear hypointensve except - [1] *(DPG Mar. 09)*
a) Chronic hemorrhage b)Air
c) Cortical bone d) Ligaments

42: Which loqkssamepn T^ T_2 on MRI- *(NEET/DNB Pattern)*
a) Gallbladder b)Fat
c) Kidney d)GSF

43. Advantage of MRI - *(PGI Dec 08)*
a) Calcification best seen
b) CSF hypointense on T_1 hyperintense on T_2
c) Best to visualise vascular structures
d) Best to differentiate benign/malignant pulmonary nodule
e) Can be used in multiple plain

44. Which of the following is not true about MRI ?
a) MRI is useful in locating small lesions *(AI 12)*
b) CT is better than MRI in bone lesions
c) MRI is better for calcified lesions
d) None

45. An absolute contraindication of MRI is -
a) Pacemaker *(AiimsMay08)*
b) Prosthetic cardiac valves
c) Insulin pump
d) Choclear implants

46. Absolute C/I of MRI is - *(PGI June 05)*
a) Pacemaker
b) Pregnancy at 1st trimester
c) Aneurysmal clip
d) Phobia

47. Patient with a metallic foreign body in eye, which investigation is not done - *(PGI Dec 06)*
a) MRI b)USG
c) X-ray d)CT .

48; Vk Tnie about MM are all except - *(NEET/DNB Pattern)*
a) Not helful in breast implant
b) Nofgoodfbf Cjal^^|^Sipn^.
c) No radiation exposure
d) Contraindicated in cardiac pacemaker

49. All of them use non-ionizing radiation except -
a) Ultrasonography *(AI06,MH03)*
b) Thermography
c) MRI
d) Radiography

50. Which one is non-ionising radiation - *(PGI97)*
a) MRI b) CT Scan
c) X-ray d) Position emission scintigraphy

25) a 26) a 27) a 28) d 29) a 30) b 31) a 32) a 33) c 34) b 35) c 36) a 37) a 38)b>c
39) c 40) d 41) a 42) b 43)c,e 44) c 45) a 46)a,c 47) a 48) a 49) d 50) a

51. "Time of Flight" technique is employed in-*(DPG Mar.*
a) Spiral CT b) MR imaging *09)*
c) CT angiography d) Digital radiography

52. Most radio dense substance is - *(DPG Feb. 09)*
a) Fluid b) Soft tissue
c) Brain d) Bone

53. MR1 rooms are shielded completely by a continuous sheet or wire mesh of copper or aluminum to shield the imager from external electromagnetic radiations, etc. It is called - *(AJIMS 03)*
a) Maxwell cage b) Faraday cage
c) Edison's cage d) Ohms cage

54. The EEG cabins should be completely shielded by a continuous sheet of wire mesh of copper to avoid the picking of noise from external electromagnetic distrubances. Such a shielding is called as - *(AHMSNov*
a) Maxwell cage b) Edison's cage *04)*
c) Faraday cage **d)** Ohm's cage

55. PACS in medical imaging stands for"*(Aiims May 08)*
a) Planned archiving common system
b) Planned archiving computerized system
c) Picture archiving and communication system
d) Picture archiving or computerized system

56. Which of the following statements about contrast in radiography is true - *(AI11)*
a) Ionic monomers have three iodine atoms per two particles in solution
b) Osmolar contrast agents may be ionic or non ionic
c) Gadolinum may cross the blood brain barrier
d) Iohexol is a high osmolar contrast media

57. Contrast used in CT - *(PGI 2000)*
a) Gadolinium b) Technitium
c) Iodine d) Chromium

58. Contrast used for MRI - *(PGI 2000)*
a) Iodine b) Gadolinium
c) Metvazamide d) Pmnipaque

59. Radiocontrast is contraindicated in all except -
a) Renal failure b) Patient on metformin
c) Dehydration d) Obesity *(AI07)*

60. Which of the following contrast agents is preferred in a patient with decreased renal function to avoid contrast nephropathy - *(AI 11)*
a) Acetylcystine b)Fenoldapam
c) Mannitol d) Low osmolar contrast

61. Contrast media of choice for myelogram \&-*(AIIMS95)*
a) Urografin 75% b) Conray 470
c) Iohexol d) Biligrafin

62. Contrast material used in the diagnosis of esophageal atresia is - *(PGI 97)*
a) Gastrograffin b) Conray 420
c) Dianosil d) Myodii

63. Nonionic dye is - *(NEET/DNB Pattern)*
a) Ioxoglate b) Iohexol
c) Iothalamate d) None

64. Non-Iodine containing contrast is - *(AIIMSMay 12)*
a) GdDTPA b)Visipaque
c) Iohexanol d) Diatrozoate

65. Allergic reactions to radiological contrast agents are-
a) Anaphylactic reactions *(AI 08)*
b) IgE mediated reactions
c) Urticaria
d) Edema

66. All of the following are true about iodinated intravascular contrast media except -
a) They are used in digital subtraction angiography
b) They are radio opaque *(Kerala 00)*
c) They can cause anaphylactic reactions
d) They are used in magnetic resonance imaging
e) They are excreted mainly by the kidneys

67. I/V contrast is not used in - *(Punjab 11)*
a) HRCT b)MRI
c) IVP d) Myelography

RESPIRATORY SYSTEM

68. For chest X-ray best view is - *(Bihar 06)*
a) P.A. view b) A.P. view
c) Lateral view d)None

69. Decubitus view is useful in diagnosing - *(PGI 01)*
a) Pleural effusion
b) Pleural effusion with dependent hemithorax
c) Pericardial effusion
d) Middle lobe consolidation

70. Minimal pleural effusion is best detected by X-ray...view - *(UP 98)*
a) A.P. b)P.A
c) Lateral d) Oblique

71. What minimal amount of pleural fluid is seen on chest radiograph - *(MH 03)*
a) 50ml b) 150 ml
c) 500 ml d) 800 ml

72. Right anterior oblique view of chest X-ray true is/ are - *(PGI June 08)*
a) Cassette near right shoulder
b) Cassette near left shoulder
c) Arch of Aorta best seen
d) Left atrial enlargement can be diagnosed
e) Mitral & tricuspid valves better seen

73. Which view is taken for aortic window -
a) AP b) LAO *WEET/DNB Pattern)*
c) RAO d) LPO

74. Apex of lung is best assessed by- *(Kerala 03)*
a) APview b) PA view
c) Lordotic view d) Oblique view

7 5. The lordotic view is valuble in confirming the presence of lesion in the lung apex and also in the -*(Jipmer 96)*
a) Posterior mediastinum b) Lingular segment
c) Posterior basal segment d)Hilum

51)b 52) d 53)b 54)c 55)c 56)a 57)c 58)b 59)d 60)d 61)c 62)c 63)b 64)a
65) a 66) d 67) d 68) a 69)a,b 70) c 71) None >a 72) a,d 73) b 74) c 75) b

76. Right lung is seen to best advantage on the following view- *(UP 99)*
a) Right posterior oblique b) Right anterior oblique
c) Left anterior oblique d) Lateral

77. Best view to diagnose pneumothorax - *(PGI98)*
a) Lateral oblique
b) PA view in full expiration
c) PA view in full inspiration
d) AP view in full expiration

78. X-ray film should be taken in closed pneumothorax during - *(MP 2000)*
a) Deep expiration b) Deep inspiration
c) In supine position d) In lateral position

79. Normal hilar shadow in X-ray chest is produced by all except - *(MP 00, AIIMS 97)*
a) Pulmonary artery b) Bronchus
c) Lower lobe viens d) Upper lobe veins

80. True about chest X-ray is all except - *(PGI 97)*
a) Left hilum is higher
b) Left dome is higher
c) All fissures are clearly seen on lateral film
d) None

81. Structure forming right border of heart-
a) SVC b)IVC *(PGI June 06)*
c) Rt. atrium d) Lt. atrium appendage
e) Pulmonary vessels

$%i >R|ghit heart border is formed by all exceftig
a) SVC , gj ,, *bwc, ,m£TmWaaer4*
c) Right atrium d) Left atrium

83. Right border of the heart in CXR is formed by -
a) Pulmonary artery *(PGI June 07)*
b) Superior vena cava
c) Rt atrium
d) Rt ventricle

84. Lt border of the heart in CXR is formed by -*(PGI 04)*
a) Pul. artery b) Pul. vein
c) Abdominal aorta d) Arch of aorta
e) Rt ventricles

85. Left border of heart on chest X-ray is formed by- *(PGINov. 10)*
a) Aortic arch b) Left Pulmonary artery
c) Right atrium d) Left ventricle
e) Right ventricle

86. Base of heart is formed by - *(PGIDec 06)*
a) Rt. ventricle b)LV
c) LV+RV d)RA+RV
e) RA + LA

87. In X-ray right border of mediastinum is formed by all except - *(AI98)*
a) SVC b) Right atrium
c) Right ventricle d) Right brachiocephalic veins

88. Right side of mediastinum shadow is not formed by -
a) Superior venacava *(AI 95)*
b) Right innominates
c) Right atrium
d) Right ventricle

89. True about chest X-ray - *(PGINov 09)*
a) 40% lung tissue seen obscured by bony structure & mediastinum.
b) 60% lung tissue seen obscured by bony structure & mediastinum
c) Right dome higher than left dome
d) Right dome pushed up by liver
e) Should be taken in expiration

90. All are true about thymus swelling except -
a) Widening of mediastinum on X-ray *(AIIMS 99)*
b) Sharp border with sail like appearance
c) Steroid administration reduces size of swelling
d) Shift of trachea on X-ray

91. Tracheal bifurcation on X-ray corsponds to -
a) T_5T_6 b) T_4T_5 *(PGI01)*
c) Sternal angle d) Thoracic inlet

92. Perihilar fluffy opacities oh chest X-ray is seen in - *(NEET/lINB Pattern)*
a) Sarcoidosis b) Pulmonary edema
c) Silicosis d) Lung carcinoma

93. All are true about Kerley B line except - *(AIIMS 97)*
a) Horizontal
b) Runs from hilar area to peripheral area
c) Due to thickening of septa
d) Due to pulmonary venous hypertension

94. Kerley's ⁶B' lines are found in - *(PGI 03)*
a) Interstitial edema
b) Pulmonary venous congestion
c) Pericardial effusion
d) Mitral stenosis

95. Kerley B lines are seen in - *(PGINov 09)*
a) Pleural effusion b) Mitral stenosis
c) Pericardial effusion d) Interstitial edema
e) Lymphangitis carcinomatosis

96. Air bronchogram may be seen in the following except- *(MH03)*
a) Consolidation of lung b) Lung collapse
c) Bronchoalveolar Ca d) Normal variant

97. Silhouetting of left border of heart (silhoutte sign positive) on chest radiograph indicates what pathology- *(Maharashtra 05)*
a) Upper lobe b) Hilar
c) Lingular d) Lower lobe

98. Consolidation of which portion of the lung is likely to obliterate the Aortic knuckle on X- ray chest -
a) Left Lingula *(AM)*
b) Right upper lobe
c) Apex of lower lobe
d) Left upper lobe (posterior part)

99. A triangular opacity with clear borders, base towards midline and obliterating right heart border on a chest radiograph suggest that the pathology is likely to be in-
a) Apical segment of right lower lobe *(MH11)*
b) Medial segment of right lower lobe
c) Right middle lobe
d) Any of the above

76) a,c 77) b 78) a 79) c 80) b 81)a,b,c 82) d 83)b,c 84) a,d 85)a,d 86) e 87) c 88) d 89)a,c,d
90) d 91)b,c 92) b 93) b 94)a,b,d 95)b,d,e 96) b 97) c 98) d 99) c

100. Bulging fissures in lungs in seen in - *(PGI99)*
a) Klebsiella pneumonia b) Staph pneumonia
c) Pulmonary oedema d) Pneumoconiosis

101. Floating water-lily sign is feature of -*(AIIMSNov 0 7)*
a) Lung hydatid b) Bronchial adenoma
c) Lung abscess d) Aspergilloma

102. Honeycombimg of lung in C.X.R. is seen in -
a) R.A. b)T.B. *(PGI03)*
c) Scleroderma d) Carcinoma
e) Interstitial lung disease

103. Ground glass appearance is not seen in-*(MH06, AI01)*
a) Hyaline membrane disease
b) Left to right shunts
c) Pneumonia
d) Obstructive TAP VC

104. Bilateral pleural plaques and pulmonary fibrosis involving bases is hallmark of - *(MH10)*
a) Asbestosis b) Silicosis
c) Scleroderma d) Byssinosis

105. A 48 years old man, resident of Baroda outskirts near a textile mill presents to his family physician with respiratory symptoms. Doctor advices X-ray chest which showed - fine reticular & nodular pattern in lower zone with loss of clarity of diaphragm & cardiac shadows. He also doubts about the presence of small pleural effusion. The probable diagnosis is? *(Al 99)*
a) Stannosis b) Asbestosis
c) Silicosis d) Coal worker's pneumoconiosis

106. Extensive pleural thickening and calcification especially involving the diaphragmatic pleura are classical features of - *(AI 03)*
a) Coal worker's pneumoconiosis
b) Asbestosis
c) Silicosis
d) Siderosis

107. Solitary nodule lung cannot be - *(DPG Feb. 09)*
a) Tuberculoma b) Neurofibroma
c) Bronchogenic carcinoma d) Lymphoma

108. Which of the following signs suggest benign nature in the evaluation of solitary pulmonary nodule on CT scan? *(DPG Mar. 09)*
a) Air bronchogram in nodule
b) Presence of amorphous calcification
c) Fat density within the lesion
d) Spiculated outline

109. A patient presents with a solitary pulmonary nodule (SPN) on X-ray. The best investigation to come to a diagnosis would be - *(AI1MS 02)*
a) MRI b)CTScan
c) USG d) Image guided biopsy

110. Hypertranslucency of lung unilaterally is seen on all except- *(PGI 2000)*
a) Pneumothorax
b) Resection of mammary gland
c) Pulm art. obstruction
d) Pneumonectomy

111. Hyperinflation of lung in CXR is seen in -
a) CCF *(PGI Dec 04)*
b) Congenital lobar emphysema
c) Diaphragmatic hernia
d) Foreign body
e) Mucoviscidosis

112. Hypertranslucent chest X-ray is seen in all except -
a) J&cleodsyndrome *(NEET/DNB Pattern)*
b) Emphysema
p) Pneumonectomy |§
i2§3l dlJPqIkffl%yfi8pmb^SilI 1I 1§3|

113. Which of the following is a cause of unilateral hyperlucent lung on chest radiography? *(COMED 09)*
a) Poland syndrome b) Asthma
c) Acute bronchiolitis d) Pleural effusion

114. The cause of homogenous opacity on X-ray is all except- *(Karnataka 2000)*
a) Pleural effusion
b) Diaphragmatic Hernia
c) Massive consolidation
d) Emphysema

115. In lung X-ray, heterogenous shadow is due to -
a) Haemangioma *(PGI 97)*
b) Pulmonary infarction
c) Metastatic lesion
d) TB

116. Causes of a cavitating lesion in the chest radiograph are all except - *(WB 2000)*
a) Hamartoma
b) Pulmonary infarction
c) Squamous carcinoma of the bronchus
d) Caplan's syndrome
e) Haematoma

117. Miliary mottling seen in - *(PGI Dec 06)*
a) TB b) Sarcoidosis
c) Silicosis d) P. carinii pneumonia

118. "Miliary shadow" on chest X-ray is seen in - *(PGI 03)*
a) Tuberculosis b) Rheumatoid arthritis
c) Pneumoconiosis d) COPD
e) Metastasis

119. Miliary mottling found in - *(PGI June 06)*
a) Rheumatoid arthritis
b) TB
c) Pneumocystis carinii pneumonia
d) Congestive heart failure
e) Pulmonary edema

120. Miliary shadow in chest X-ray is seen in A/E -
a) TB *(NEET/DNB Pattern)*
b) Sarcoidosis
^ c) Klebsiella 4 §§i| M/ |§§0
d) Metastasis

121. Miliary mottling on X-ray chest is seen in - *(PGI 00)*
a) Histoplasmosis
b) Sarcoidosis
c) Secondaries from Ca. colon
d) Gonococal pneumonia

100) a 101)a 102) a,b,c,e 103)b 104)a 105)b 106)b 107)d 108)c 109)d 110)d lll)b 112)c 113)a 114) d 115)c,d 116) a 117)a,b,c 118)a,b,c,e 119)a,b,e 120)c 121)a,b,c

122. Miliary mottling on chest radiograph can be seen in-
a) Pneumoconiosis b) TB *(MH 05)*
c) Mitral stenosis d)All

123. Egg shell calcification found in - *(PGIJune 06, PGI03)*
a) Silicosis b) Sarcoidosis
c) Metastatic node d) Lymphoma
e) Tuberculosis

124. Egg shell calcification is seen in - *(Punjab 11)*
a) Lymphoma
b) Sarcoidosis
c) Carcinoma metastatic to lymph node
d) T.B.

125. Mediastinal lymph node calcification is seen in which one of the following? *(COMED 09)*
a) Metastatic neoplasm b) Lymphoma
c) Sarcoidosis d)Bronchiectasis

126. Egg shell calcification is seen in all except -
a) Sarcoidosis *(AIIMS 98)*
b) Silicosis
c) Post irradiation lymphoma
d) Bronchogenic CA

127. Egg shell calcification is seen in - *(PGI June 09)*
a) Sarcoidosis b)Sillicosis
c) Lung Ca d) pneumoconiosis
e) Lymphoma following radiation treatment

128. "Egg shell" calcification is seen in - *(PGI 01)*
a) Bronchiolitis b) Silicosis
c) Ca. bronchus d) Sarcoidosis
e) Histoplasmosis

129. Egg shell calcification in hilar lymph nodes is seen in- *(PGI 01)*
a) Sarcoidosis b) Histoplasmosis
c) Tuberculosis d) Carcinoma lung
e) Silicosis

130. Egg shell calcification is seen in - *(PGI June 09)*
a) Sarcoidosis b)Sillicosis
c) Lung Ca d) pneumoconiosis
e) Lymphoma following radiation treatment

131. Popcorn calcification is characteristically seen in -
a) TB *(AI97)*
b) Metastasis
c) Pulmonary hamartoma
d) Fungal invagination

132. Well defined lesion in the lung with popcorn calcification on X-ray suggestive of - *(Delhi 2000)*
a) Calung b) Adenoma
c) Hamartoma d) Hydatid cyst

133. Chest X-ray showing opacity in the lung with irregular calcification is suggestive of - *(MH 10)*
a) Lung carcinoma b) Hamartoma
c) Hydatid cyst d) Adenoma

134. Characteristics of BENIGN tumour of lung in X-ray is - *(Assam 99)*
a) Size > 5 cms diameter
b) Cavitation
c) Peripheral location
d) Concentric dense calcification

135. Features of pneumothorax are all except - *(MP 05)*
a) Devoid of lung markings
b) Hypertranslucency
c) Shift of mediastinum to same side
d) Collapse of ipsilateral lung

136. All of the following are indirect radiologic signs of collapse of lung EXCEPT - *(Karn 11)*
a) Mediastinal displacement
b) Hilar displacement
c) Compensatory hyperinflation
d) Loss of aeration

137. A 55 year old man who has been on bed rest for the past 10 days, complain of breathlessness and chest pain. The chest X-ray is normal. The next step in investigation should be - *(AI 04, 03)*
a) Lung ventilation - perfusion scan
b) Pulmonary arteriography
c) Pulmonary venous wedge angiography
d) Echocardiography

138. Best method to diagnose pulmonary embolism -
a) Pulmonary angiography *(PGI97, AP 95)*
b) Scintillation perfusion scan
c) CTScan
d) X-ray chest

139. In patient with high clinical suspicion of pulmonary thromboembolism, best investigation would be?
a) D-dimer *(AIIMS Nov 07)*
b) CT angiography
c) Catheter angiography
d) Color Doppler

140. Good standard for diagnosing pulmonary embolism -
a) X-ray chest *(PGI 97)*
b) Ventilation perfusion scan
c) Blood gas analysis
d) Doppler

141. Investigation of choice for pulmonary embolism -
a) CT scan *(AI 98)*
b) Contrast CT
c) Ventilation - Perfusion scan
d) MRI

142. Pulmonary embolism is best diagnosed by -
a) USG *(MH 02, AI 96)*
b) X-ray chest
c) Ventilation - Perfusion scan
d) CT scan

143. In pulmonary embolism, findings in perfusion scan is - *(PGI2000)*
a) Perfusion segmental defect
b) Perfusion defect with normal lung scan & radiography
c) Tenting of diaphragm
d) Normal chest scan

144. Hampton hump is feature of ? *(AIIMSNov 07)*
a) Pulmonary tuberculosis
b) Pulmonary embolism
c) Pulmonary hemorrhage
d) Bronchogenic carcinoma

122)d 123)a,b,d,e 124)a,b,d 125) b,c 126) d 127)a,b,d,e 128)b,d,e 129)a,b,c,e 130)a,b,d,e 131)c 132)c 133) b 134)d 135)c 136) d 137) a 138) c 139) b 140)None>b 141)b 142) d 143)a,b,d 144)b

145. Uremic lung most often results due to - *(PGI98)*
a) Pulmonary edema b) Fibrosis
c) Alveolar injury d) CVC liver

146. A young man with pulmonary tuberculosis presents with massive recurrent hemoptysis. For angiographic treatment, which vascular structure should be evaluated first - *(AI04, AIIMS 03, 02)*
a) Pulmonary artery b) Bronchial artery
c) Pulmonary vein d) Superior vena cava

147. A 40 years old man presents with a recurrent hemoptysis and purulent cough. X-ray was found to be normal The next investigation done to aid in diagnosis is - *(AIMS 02, 01)*
a) MRI b) Bronchoscopy
c) HRCT d) CT guided biopsy

148. The following is not the differential diagnosis of an anterior mediastinal mass - *(AIMS 02, MP 99)*
a) Teratoma b) Neurogenic tumor
c) Thymoma d) Lymphoma

149. Which among the following is a cause of posterior mediastinal opacity on Posterior-Anterior (PA) and lateral view of chest radiograph? *(Karn 11)*
a) Tortuous innominate artery
b) Bochdalek's Hernia
c) Enlarged pulmonary artery
d) Thymoma

150. Commonest mass in the middle mediastinum is -
a) Lipoma *(AIMS Sep 96)*
b) Aneurysm
c) Lymph node mass
d) Congenital cysts

151. The most likely diagnosis in a newborn who had a radiopaque shadow with an air fluid level in the chest along with hemivertebrae of the 6th thoracic vertebra on plain X-ray is - *(AIMS 02)*
a) Congenital diaphragmatic hernia
b) Oesophageal duplication cyst
c) Bronchogenic cyst
d) Staphylococcal pneumonia

152. A child has respiratory distress, chest X-ray shows multiple air filled space, the differential diagnosis is all except - *(AIMS 98)*
a) Congenital lung cyst
b) Congenital diaphragmatic hernia
c) Congenital lobar aplasia of lung
d) Congenital adenomatous malformation

153. A neonate presents with respiratory distress, contralateral mediastinal shift and multiple cystic air filled lesions in the chest. Most likely diagnosis is - *(AI 01)*
a) Pneumonia
b) Congenital lung cyst
c) Congenital diaphragmatic hernia
d) Congenital lobar emphysema

154. Apgar scores were 3, and 6 at 1 and 5 minutes. At 10 minutes child shows features of breathlessness,on CXR-mediastinal shift was there, possible causes -
a) Bilateral choanal atresia *(PGI 2000)*
b) Pneumothorax
c) Congenital diaphragmatic hernia
d) Hyaline membrane disease

155. A child with acute respiratory distress showing hyperinflation of unilateral lung in X-ray is due to -
a) Staphylococcal bronchopneumonia *(AI02)*
b) Aspiration pneumonia
c) Congenital lobar emphysema
d) Foreign body aspiration

156. Pappu 2 yrs old boy presents in the causality with H/O sudden onset of respiratory difficulty & stridor on auscultation, >led breath sound & wheeze on the RT side. The X-ray shows RT opaque hemithorax. What will be diagnosis - *(AI 02)*
a) Pneumothorax
b) Acute epiglottitis
c) Massive pleural effusion
d) Foreign body aspiration

157. In X-ray, loops of bowel on left side of hemithorax and shift of heart shadow - *(PGI 98)*
a) Eventration of diaphragm
b) Foramen of bochdalek hernia
c) Morgagni's hernia
d) Any of the above

158. A 25 year old man presented with fever, cough, expectoration and breathlessness of 2 months duration. Contrast enhanced computed tomography of the chest showed bilateral upper lobe fibrotic lesions and mediastinum had enlarged necrotic nodes with peripheral rim enhancement Which one of the following is the most probable diagnosis?
a) Sarcoidosis *(AIMS 04, AI 03)*
b) Tuberculosis
c) Lymphoma
d) Silicosis

159. A patient suffering from AIDS presents with history of dyspnea and non-productive cough x-ray shows bilateral perihilar opacities without pleural effusion and lymphadenopathy. Most probable etiological agent is- *(AIMS 02)*
a) Tuberculosis b)CMV
c) Kaposis sarcoma d) Pneumocystis carinii

160. Centrally located cavitating lung lesion is most likely to be- *(MP99)*
a) Sarcoma b) Small cell carcinoma
c) Adenocarcinoma d) Squamous cell carcinoma

161. Which of the following organs should always be imaged in a suspected case of broncogenic carcinoma - *(AIMS Nov 04)*
a) Adrenals b) Spleen
c) Kidney d) Pancreas

145) a 146) b 147) b 148) b 149) b 150) c 151)b 152) c 153)c>d 154)b,c 155) d 156) d 157) d 158) b 159) d 160) d 161) a

162. Soft tissue mass in chest with rib erosion in X-ray is seen in all except - *(A1IMS 96)*
a) Leukemia b) Ewing's sarcoma
c) Multiple myeloma d) Osteosarcoma

163. Unilateral elevation of diaphragm is commonly due to- *(CMC96)*
a) Obesity b) Large liver
c) Scoliosis d) Congenital causes

164. Sequestrated lung is most commonly supplied by - *(MH08, 06; Jipmer 00)*
a) Bronchial artery b) Subclavian artery
c) Pulmonary artery d) Ascending aorta

165. In rt. sided hemithorax on chest X-ray PA view what can be excluded - *(PGI97)*
a) CCF b)TB
c) Pulmonary infarct d) None of the above

166. The nodular pattern often seen in the lungs following renal transplantation is thought to be due to -
a) Fungus b)Inafarcts *(CMC 96)*
c) Cytomegalovirus d) Autoimmune reaction

167. Chest X-ray shows opacity after blunt trauma, most likely diagnosis is - *(MP 99)*
a) Haemothorax b) Pneumothorax
c) Pneumonia d) Pulmonary embolism

168; Best imaging modality in bronchogenic carcinoma-
a) CT b) MRI *(NEET/DNB Pattern)*
\'.i-'; -'/p):Bronchqsq9py;-- d)None

169. Investigation of choice for detection & characterization of interstitial lung disease is -
a) MRI *(DPG 08, M08,Maharashtra 07*
b) Chest X-ray *MIMS 05)*
c) High resolution CT scan
d) Ventilation perfusion scan

170. High resolution computed tomography of the chest is the ideal modality for evaluating - *(M 03)*
a) Pleural effusion b) Interstitial lung disease
c) Lung mass d) Mediastinal adenopathy

171. Best method to diagnose Bronchiectasis is -
a) X-ray b) Bronchography *(Karn 01)*
c) M.R.I. d)HRCT

172. A3 year old female child developed fever, cough and respiratory distress. On chest X-ray consolidation is seen in right lower lobe. She improved with antibiotics but on follow up at 8 weeks was again found to have increasing consolidation in right lower lobe. Your next investigation would be -
a) Bronchoscopy *(AIIMS Nov 07)*
b) Bacterial culture of the nasopharynx
c) CT scan of the chest
d) Allergen sensitivity test

173. Chest X-ray of an industrial worker exposed to asbestos over 20 years shows an ill-defined rounded opacity in the lower lobe with a 'comet tail' appearance on PA view. Which of the following is the most likely diagnosis- *(AI12)*
a) Mesothelioma b) Bronchogenic carcinoma
c) Round Atelectasis d) Pulmonary infarct

CARDIOVASCULAR SYSTEM

174. In all of the following increased cardiac silhouette sign is seen except - *(MP 2000)*
a) Tetralogy of Fallot's b) Pericardial effusion
c) Aortic regurgitation d) Ebstein anomaly

175. If the right cardiac silhouette is obliterated, it means the pathology involves - *(AIIMS May 08)*
a) Right lower lobe b) Right atrium
c) Right middle lobe d) Right ventricle

176. Left cardiac border bulge can be seen in all, except -
a) Enlarged azygous vein *(AI 2000)*
b) Left appendicular overgrowth
c) Coronary artery aneurysm
d) Pericardial defect

177. Left sided cardiac bulge seen on chest X-ray is/are d/tto- *(PGI May 10)*
a) Enlargement of left atrial appendage
b) Azygous vein enlargement
c) Coronary artery aneurysm
d) Pulmonary edema
e) Right atria 1 hypertrophy

178. Which among the following is not a chest radiographic feature of left atrial enlargement? *(Karn 11)*
a) Double left heart border
b) Elevated left main bronchus
c) Splaying of carina
d) Enlargement of left atrial appendage

179. Earliest sign of left atrial enlargement is - *(AI 08)*
a) Posterior displacement of esophagus
b) Widening of carinal angle
c) Elevation of left bronchus
d) Double shadow of right border

180. A patient is having mitral stenosis. His X-ray will show all of the following finding except - *(MIMS 02)*
a) Lifting up of left bronchus
b) Double atrial shadow
c) Obliteration of retrosternal shadow on lateral X-rays
d) Posterior displacement of esophagus on barium swallow

181. All are radiological features of Mitral stenosis except-
a) Straight left border of heart *(AIIMS 2000)*
b) Oligemia of upper lung fields
c) Pulmonary hemosiderosis
d) Lifting of left bronchus

182. Radiological feature of mitral stenosis is/are -
a) Double contour of right heart border
b) Straightening of left heart border
c) Splaying of carinal angle *(PGI June 09)*
d) Prominent aortic knuckle
e) Kerely lines

183. Earliest radiological sign of pulmonary venous hypertension in chest X-ray is - *(M 08)*
a) Cephalization of pulmonary vascularity
b) Pleural effusion
c) Kerley B lines
d) Alveolar pulmonary edema

162) a 163)b,c 164)d 165)a 166)c 167)a 168)a 169)c 170)b 171)d 172)c 173)c 174)a 175)c 176) a 177) a 178)a 179)a 180)c 181)b 182)a,b,c,e 183)a

184. Earliest feature of pulmonary venous hypertension is - *(DPGEE 08)*
a) Upper lobar vessel dilatation b) Kerley B lines
c) Left atrial enlargement d) Pleural effusion

185. Features of pulmonary venous hypertension are A/E-
a) Perihilar haze *(PGI06, Jipmer 05)*
b) Peribroncheal cuffing
c) Upper lobar diversion
d) Uniformly branching lines parallel to pleura
e) Pulmonary ossicles & fine nodular pattern

186. Chest X-ray picture in CCF - *(PGIDec 04)*
a) Cardiomegaly
b) Thick interlobar septum
c) Superior mediastinal widening
d) Multinodular parenchymal lesion

187. All are seen in congestive cardiac failure except -
a) Kerley B lines *(AI 2000)*
b) Prominent lower lobe vessel
c) Pleural effusions
d) Cardiomegaly

188. Left heart failure findings are all except -
a) Kerley B lines *(AIIMS May 09)*
b) Redistribution of blood vessels to apex
c) Oligemic lung field
d) Cardiomegaly

189. Prunning of pulmonary arteries is seen in - *(AI 09)*
a) Pulmonary hypertension
b) Chronic bronchitis
c) Pulmonary infections
d) Pulmonary transplant

What is not seen on chest X-ray in pulmonary artery hypertension - *(NEET/DNB Pattern)*
a) Enlargement of central arteries
b) Peripheral prunning *T?T: 4&M*
b)'Narirowing of central 'arteries
d) None

191. X-ray picture of VSD - *(PGI June 04)*
a) Small Lt. ventricle b) Small Rt. ventricle
c) Dilated Lt. atrium d) Dilated pulmonary veins
e) Dilated pulmonary arteries

192 . X-ray features of ASD are all except - *(MH 07)*
a) Right atrial enlargement
b) Left atrial enlargement
c) Pulmonary plethora
d) Small aortic knockle

193. Which is the objective sign of identifying pulmonary plethora in a chest radiograph? *(AI 11)*
a) Diameter of the main pulmonary artery > 16 mm
b) Diameter of the left pulmonary artery > 16 mm
c) Diameter of the descending right pulmonary artery >16mm
d) Diameter of the descending left pulmonary artery >16mm

194. Plethoric lung fields are seen in all of the following conditions, except - *(AIIMS May 06)*
a) Atrial septal defect (ASD)
b) TAPVC(Total anomalouspulmonary venous connection)
c) Ebstein's anomaly
d) Ventricular septal defect

195. Flask shaped heart is seen in - *(NEET/DNB Pattern)*
a) Ebstein anomaly b) Pericardial effusion
c) TOF d) TAP VC

196. Spring water cyst is another name for - *(PGI 97)*
a) Hydatid cyst of lung b) Lung amoebic cyst
c) Pleuro pericardial cyst d) Enterogenous cyst

197. Egg-on-side' appearance on X-ray chest is seen in -
a) Tetralogy of Fallot *(AIIMS May 08, Nov 07*
b) Uncorrected TGA *AI 10, PGI Nov 09)*
c) Tricuspid atresia
d) Ebstein's anomaly

198. Egg in cup appearance is seen in - *(Kerala 04)*
a) TOF
b) MR
c) Constrictive pericarditis
d) Transposition of great vessels

199. Snowman appearance on x-ray is seen in which cardiac pathology - *(AIIMS May 08, PGI Nov 09) NEET/DNB Pattern)*
a) Fallots tetrology b) TAP VC
c) TGA d) Ebstein's anomaly

200. Figure of 8 in chest X-ray is seen in -
a) Ebstein anomaly *(AI 2K, PGI May, 10)*
b) Total anomalous pulmonary venous connection (TAPVQ
c) Tetrology of fallot
d) Transposition of great vessels

201. In which of the following a 'Coeur en Sabot' shape of the heart is seen - *(AI 2000, 04)*
a) Tricuspid atresia
b) Ventricular septal defect
c) Transposition of great arteries
d) Tetralogy of fallot

202. X-ray chest showing globular cardiomegaly with oligemic lung fields in a child is suggestive of -
a) TOF b) TAP VC *(MH 10)*
c) Ebstein's anomaly d)PDA

203. Which of the following is the most common feature of Aortitis on chest X-ray - *(AI 08)*
a) Calcification of ascending aorta
b) Calcification of descending aorta
c) Calcification of pulmonary artery
d) Focal oligemia

204. Ground glass ventricular septum is seen in -
a) TOF b) HOCM *(NEET/DNB*
'N c) TGA - __ d)CHF *^ Pattern)*

205. Drug used to perform stress ECHO-
a) Thallium b) Dobutamine *(AIIMS May 08)*
c) Adrenaline d) Adenosine

184) a 185) d 186)a,b 187)b 188)c 189)a 190)c 191)c,e 192)b 193)c 194)c 195)b 196)c 197)c 198)c 199) b 200)b 201)d 202)c 203)a 204) b 205)b

206. Investigation of choice for Aortic dissection is -
a) Aortography *(AIIMS 97, AI96)*
b) CT scan
c) MRI
d) X-ray chest

207. Most important investigation for pericardial effusion- *(MP 98, AI 97)*
a) Cardiac catheterization b)USG
c) Echocardiography d) X-ray chest

208. Cardiotoxicity caused by radiotherapy & chemotherapy is best detected by - *(AI 99)*
a) ECHO
b) BOG
c) Radionucletide scan
d) Endomyocardial biopsy

209. Test of choice for Reversible Myocardial Ischemia -
a) Thallium scan b) MUGA scan *(AI 09)*
c) Resting ECHO d) Coronary angiography

210. Which of the following is not true regarding myocardial ischemia - *(AIIMS Nov. II)*
a) Late enhancement on Gd MRI suggestive of scar
b) Akinetic area does not benfit by revascularization
c) Low dose dobutamine may be used in hibernating myocardium
d) Rest reinfection thallium is used in hibernating mycardium

211. In a Down's syndrome patient posted for surgery, the necessary preoperative investigation to be done is - *(AI 09)*
a) CT Brain b) Echocardiography
c) Ultrasound Abdomen d) X-ray cervical spine

212. The most accurate investigation for assessing ventricular function is - *(AI 06)*
a) Multislice CT b) Echocardiography
c) Nuclear scan d) MRI

213. Most sensitive investigation for air embolism is -
a) Decreased tidal volume of $C0_2$ *(AI 99)*
b) Decreased tidal volume of $N0_2$
c) Doppler ultrasound
d) Central venous presure

214. About diagnosing air embolism with transesophageal echocardiography, which of the following is false -
a) It can quantify the volume of air embolised
b) It is a very sensitive investigation *(AIIMS 02)*
c) Continuous monitoring is needed to detect venous embolism
d) Interferes with doppler when used together

215. The most recent advance in noninvasive cardiac output monitoring is use of - *(AIIMS 02)*
a) PA catheter
b) Thermodilution technique
c) Echocardiography
d) Electrical impedance cardiography technology

216. Isotope used in myocardial perfusion scan is -
a) Technetium *(ROHTAK 95)*
b) Thallium
c) Stannous pyrophosphate
d) Gallium

217. Acute myocardial infarct scintigraphy is done with-
a) Thallium *(AP98)*
b) Gallium
c) Neodynium
d) Tc stannous pyrophosphate

218. In diagnosis of acute myocardial infarction hot spot is seen with - *(AP97)*
a) Thallium 201 scan b) Tc 99 scan
c) Strontium 90 scan d) L 127 scan

219. Which test is performed to detect reversible myocardial ischemia? *(AIIMS 03)*
a) Coronary angiography *(NEET/DNB Pattern)*
b) MUGA scan
c) Thallium scan
d) Resting echocardiography

220. Myocardial uptake gated acquisition scan (MUGA) is done for - *(MP02)*
a) Testing drug toxicity
b) Ventricular function & Anthracyclin induced toxicity
c) Myocardial perfusion
d) None

221. Which one of the following investigations is considered to be ''Gold standard" technique for diagnosis of arterial occlusive disease - *(UPSC-II09)*
a) Doppler ultrasound blood flow detection
b) Duplex imaging
c) Treadmill
d) Digital substraction angiography (DSA)

222. Rib notching is found in - *(PGI0I)*
a) Neurofibromatosis
b) Lymphangiomyomatosis
c) Aortic aneurysm
d) Taussig-Bing operation
e) Aortic obstruction

223. Inferior rib notching is seen in - *(AI 08)*
a) Coarctation of aorta b) Rickets
c) ASD d) Multiple myeloma

224. Which of the following causes rib-notching on the chest radiograph? *(AI 06)*
a) Bidirectional Glem shunt
b) Modified Blalock-Taussing shunt
c) IVC occlusion
d) Coarctation of aorta

225. True regarding radiological picture of coarctation of aorta A/E - *(PGI04, WB 05)*
a) Involvement of upper two ribs
b) Bilateral
c) Inferior rib notching
d) Usually before 5 years of age
e) '3'sign

206)c 207)c 208) d 209)a 210)b 211)b 212)b 213)c 214)d 215)d 216) a,b 217)d218)b 219)c 220) b 221) d 222)a,d,e 223) a 224) d>b 225) a,d

226. Bilateral rib notching is seen in - *(MH 05)*
a) Coarctation of aorta b) PDA
c) TAPVC d) All of the above

227. Rib notching is seen in all except - *(AIIMSNov 09)*
a) Waterston Cooley shunt
b) Aortic obstruction
c) Blalock Taussig shunt
d) Pulmonary atresia with large VSD

228. Superior rib notching is/are caused by-*(PGI June 09)*
a) Hyperparathyroidism b) Poliomyelitis
c) Blalock tausing shunt d) Marfan syndrome
e) Coarctation of aorta

229. Radiological features of pericardial effusion A/E -
a) Flask shaped heart *(MH 05)*
b) Pulmonary oligemia
c) Cardiomegaly
d) Pulmonary plethora

230. A child presents with respiratory distress. A vascular ring is suspected. Investigation of choice is- *(AIIMS Nov 09)*
a) PET b) CT
c) MRI d) Angiography

231. An asymptomatic old patient presents with bruit in the carotid artery. Which of the following is the investigation of choice? *(Jipmer 11)*
a) Doppler ultrasonography
b) Internal carotid angiography
c) Aortic arch angiography
d) Spiral CT angiography

232. On barium swallow which of the following will cause posterior impression - *(AIIMS Nov 09)*
a) Left atrium
b) Aortic knuckle
c) Pulmonary sling
d) Aberrant right subclavian artery

233. Which artery is dissected most commonly following arteriography by femoral route - *(AIIMS May 11)*
a) Celiac trunk
b) Superior mesenteric artery
c) Inferior mesenteric artery
d) Gastroduodenal artery

234. During cardiac imaging the phase of minimum motion of heart is- *(AI 2010)*
a) Late systole b) Mid systole
c) Late diastole d) Mid diastole

GIT AND HEPATOBILIRAY SYSTEM

235. Investigation of choice in diffuse esophageal spasm is -
a) Manometry *(AI 08)*
b) Esophagoscopy
c) Barium examination showing tertiary contractions
d) CT thorax

236. Investigation of choice for Zenker's diverticulum is -
a) Barium swallow *(AIIMS Nov. 11)*
b) Endoscopy
c) Esophageal manometry
d) CT

237. Diffuse esophageal dilatation on barium swallow is seen in - *(PGI June 05)*
a) Achlasia b) Trypanosomiasis
c) Etidronate therapy d) Scleroderma

238. "Rat - tail" appearance on barium swallow examination g|l issf^^^^^^lar^06/NM^TDNB/Pattem)
a) Achalasia cardia
b) Carcinotha^vesbph^is ^
c) Hiatus hernia
KSr'Sd) **Diffuse esophageal spasm**

239. Cork-screw opperance of esophagus is seen-
a) Achalasia cardia *(MH-11)*
b) Carcinoma esophagus
c) Diffuse esophageal spasm
d) Caustic injury

240. Corkscrew appearance ofesophagus is seen in -
a) Carcinoma- n -.-V/Vi *(NEET/DNB. Pattern)*
b) Achalasia
c) Diffuse, esophageal spasm
d) Stricture

241. Double bubble sign in seen in -*(AIIMS.May 09,PGI*
a) Duodenal atresia *Dee 07, NEEIDNB/Paltern)*
b) Jejunal atresia *% 31*
c) Pyloric stenosis
sggggSd)v **Hirschprung disease**

242. Double bubble sign in children is seen in A/E -
a) Ladd's band *(PGI Dec 04)*
b) Annular pancreas
c) Pancreatic pseudocyst
d) Duodenal atresia
e) Diaphragmatic hernia

243. Double bubble sign is seen in A/E- *(Punjab 11)*
a) Duodenal atresia b) Diaphragmatic hernia
c) Ladd band d) Annular pancreas

244. Double bubble sign on X-ray is seen *in-(AIIMS 99)*
a) Duodenal atresia b) Oesophageal atresia
c) Colonic atresia d) Pyloric stenosis

245. "Double bubble" sign with air shadows absent in distal bowel coils on X-ray abdomen in characteristic of- *(MH 10, 06)*
a) Duodenal webs b) Duodenal atresia
c) CHPH d) All of the above

246. Double track sign is seen in -*(NEET/DNB Pattern)*
|g|i | **-a) Duodenal atresia b) GfJPS |j**
c) Gastric ulcer d) Achalasia

247. Carman's meniscus sign is diagnostic of -
a) Peptic ulcer *(MH 08, 07)*
b) Cholecystitis
c) Carcinoma of stomach
d) Meconium ileus

226) a 227) a 228)a,b,d 229) d 230) c 231) a 232) d 233) c 234) d 235) a 236) a 237) a,b 238) b 239) c 240) c 241) a 242) c,e 243) b 244) a 245) b>a 246) b 247) c

248. Following are common features of malignant gastric ulcer on Barium meal, Except - *(AIIMS May 04)*
a) Location on the greater curvature
b) Carman's meniscus sign
c) Radiating folds which do not reach the edge of the ulcer
d) Lesser curvature ulcer with a nodular rim

249. Trifoliate appearance is in - *(Jharkhand 06)*
a) Peptic ulcer
b) Pyloric stenosis
c) Carcinoma head of pancreas
d) None

250. X-ray feature of pyloric stenosis is- *(AIIMS 97)*
a) Single bubble appearance
b) Double bubble appearance
c) Triple bubble appearance
d) Multiple air fluid levels

251. Congenital hypertropic pyloi ric stenosis is diagnosed *(NEET/DNB Pattern)*
a) CT b) USG
c) MRF d) X-ray

252,. All correlates with USG finidngs of pyloric stenosis except- *(AIIMS Nov. 11)*
a) Accuracy 95%
b) High gastric residue
c) Segment length > 16 mm
d) Thickness of pylorus > 4 mm

253 . A newborn presenting with intestinal obstruction showed on abdominal X-ray, multiple air fluid levels. The diagnosis is not likely to be - *(AI 02)*
a) Pyloric obstruction b) Duodenal atresia
c) Illeal atresia d) Ladd s bands

254 . Which of the following is earliest sign of ulcerative colitis on double contrast barium enema study -
a) Mucosal granularity *(MH 05)*
b) Loss of haustrations
c) 'Collar - button' ulcer
d) Lead pipe colon

255.. Radiological signs of crohn's disease-(PG7 *June 08)*
a) String sign of Kantor
b) Pipestem appearance
c) Pseudopolyp
d) Backwash ileitis

256. Lead pipe appearance is seen in - *(PGI94, UP 02)*
a) Chron's disease b) Ulcerative colitis
c) Schistosomiasis d) Carcinoma colon

257,. Scalloping of the edge of sigmoid colon on barium enema seen in - *(CMC 2K)*
a) Diverticulosis b) Ulcerative colitis
c) Carcinoma colon d) Pneumatosis intestinalis

258. String sign is a radiological feature of - *(MH 06)*
a) Crohn's disease b) Ulcerative colitis
c) Ileocecal tuberculosis d) Ischemic colitis

259. String sign is seen in - *(Kerala 98)*
a) Crohns disease
b) TB of the ileocaecal region
c) Idiopathic hyperophic pyloric stenosis
d) All of the above

260. String of Kantor is seen in - *(AIIMS 96, UP 03,*
a) Chron's disease b) Ulcerative colitis *Kerala 2K)*
c) TB d) Carcinoma

261. "String of beads" appearance on abdominal X-ray is seen in - *(MH 07, MP 06)*
a) Small bowel obstruction
b) Large bowel obstruction
c) Carcinoma of stomach
d) Gastric outlet obstruction

262. TViad of vomiting, abdominal distension and "String of beads" sign on abdominal X-ray is typically suggestive of - *(MH09)*
a) Duodenal atresia
b) Small bowel obstruction
c) Large bowel obstruction
d) Gastric volvulus

263. The following are radiological features of sigmoid volvolus except - *(Kern 04)*
a) Inverted U shaped bowel loop
b) Liver overlap sign
c) Bird of prey
d) Cupola sign

264. "Coffee bean" sign is seen in - *(MP 04)*
a) Intussusception
b) Bowel ischaemia
c) Sigmoid volvulus
d) Congenital hypertrophic pyloric stenosis

265. X-ray appearance of CBD stone on cholangiography is - *(AIIMS 98)*
a) Meniscus appearance b) Sudden cut off
c) Smooth tapering d) Eccentric occlusion

266. All of the following are diagnostic barium follow through features of ileocecal tuberculosis Except- *(AI 08)*
a) Apple - core appearance
b) Pulled up contracted cecum
c) Widening of ileocecal angle
d) Strictures involving terminal ileum

267. Ileocecal tuberculosis presents with all except -
a) Rapid emptying of narrowed terminal ileum
b) Inverted umbrella sign *(PGI 06, Jipmer 07)*
c) Stellate ulcer with elevated margins
d) Longitudinal ulcers are more common
e) Napkin ring stenosis

268. Radiological finding in ileal atresia - *(PGI 00)*
a) Microcolon on Ba enema
b) Double bubble sign
c) Coil spring appearance in Ba-Enema
d) Obstruction in Ba meal

248) d 249) a 250)a 251)b 252)b 253)a 254)a 255)a 256)b 257)b 258)c 259)d 260)a 261)a 262) b 263) d 264) c 265) a 266) a 267) d 268) a,d

269. Following are features of ischaemic colitis except-
a) Thumb printing *(MP 2000)*
b) Serrated mucosa
c) Increased mucosal fold thickness
d) Dilution of barium

270. Radiological feature of ischemic colitis is -
a) Saw toothing *(Karn 01, UP 99, PGI 96)*
b) Craggy popcorn appearance
c) Thumb printing
d) Cobble stone appearance

271. Soap bubble appearance in X-ray is seen in -
a) Multiple cystic kidney *(AIIMS 99)*
b) Neuroblastoma
c) Cystic lymphangiectasis
d) Meconium ileus

272. Feathery appearance in jejunum is due to-*(PGI 99)*
a) Valvulae conniventes b) Haustrations
c) Luminal gas d) Vascular network

273. Which among the following is false regarding small bowel appearance on abdominal radiograph?
a) Valvulae conniventes are present *(Karn 11)*
b) Peripheral distribution
c) Radius of curvature is small
d) Solid faeces are absent

274. Small intestine in intestinal obstruction is distinguished radiologically from large intestine by-
a) Haustration *(MP 2005)*
b) Valvulae conniventes
c) Can not be distinguished
d) None

275. Colon is identified on X-ray - *(NEET/DNB Pattern)*
a) Haustra b) Valvulae conniventes
c) String of beads sign d) More number of loops

276. Investigation for small intestine includes all except-
a) Enteroclysis *(PGI Dec 05)*
b) Radionucleide enteroclysis
c) MRI enteroclysis
d) CT enteroclysis
e) USG enteroclysis

277. Which among the following is false regarding need of chest radiograph in a patient of acute abdomen-*(Karn 11)*
a) Supine chest radiograph is the best radiograph for showing presence of a small pneumoperitoneum
b) A number of chest conditions can present as acute abdominal condition
c) Acute abdominal condition may be complicated by the chest pathology
d) Even when the chest radiograph is normal it acts as a most valuable baseline

278. Free gas in abdomen (under the diaphragm) can be best diagnosed by which X-ray - *(MH 02)*
a) Standing
b) Right lateral recumbent view
c) Left lateral recumbent view
d) Sitting position

279. In case of suspected perforation which view is best-
a) Erect b) Supine *(Jharkhand 03)*
c) Lateral decubitus d) None

280. The best view to visualize minimum pneumoperitoneum is- *(Delhi 95, AI12)*
a) AP view of abdomen
b) Erect film of abdomen
c) Rt lateral decubitus with horizontal beam
d) Lt lateral decubitus with horizontal beam

281. Cupola sign - *(Jharkhand 06)*
a) Radiological finding in supine posture for pneumoperitoneum
b) Radiological finding in supine posture for pneumothorax
c) Air in Morrison pouch
d) Both wall of bowel is seen

282. Typical "Saw-tooth" colon on barium enema is seen with- *(MH09)*
a) Colonic diverticulosis b) Colonic volvulus
c) Colonic carcinoma d) Ulcerative colitis

283. "Hat sign" on double contrast barium enema is seen in- *(MH09)*
a) Ulcer b) Polyp
c) Carcinoma d) Diverticulum

284. Couinaud's segments are used to divide which organ-
a) Liver b) Lung *(MH02)*
c) Spleen d) Kidney

285. According couinaud's classification of functional segments of liver, which of the following is segment IV of liver? *(AIIMS Nov 07)*
a) Left lobe b) Right lobe
c) Caudate lobe d) Quadrate lobe

286. A 22 year old man presents with a solitary 2 cm space occupying lesion of mixed echogenicity in the right lobe of liver on ultrasound examination. The rest of the liver is normal. Which of the following tests should be done *next-(AUMS Nov 02)*
a) Ultrasound guided biopsy of the lesion
b) Hepatic scintigraphy
c) Hepatic angiography
d) Contrast enhanced CT scan of the liver

287. Solitary hypoechoice lesion of the liver without septate or debris is most likely to *be-(AIIMS Nov 05)*
a) Hydatid cyst b) Caroli's disease
c) Liver abscess d) Simple cyst

288. Which one of the following hepatic lesions can be diagnosed with high accuracy by using nuclear imaging? *(AIIMS Nov 04)*
a) Hepatocellular carcinoma
b) Hepatic adenoma
c) Focal nodular hyperplacia
d) Cholangiocarcinoma

289. CT finding of acute pancreatitis are all except -
a) Dilation of pancreatic duct *(UP 2K)*
b) Fuzzy outline of pancreas
c) Peripancreatic fluid collection
d) Edematous pancreas

269)d 270)c 271)d 272)a 273)b 274)b 275)a 276)b,c,d,e 277)a 278)a 279)a 280)None&d 281)a
282) a 283) b 284) a 285) d 286) b 287) d 288) c 289) a

290. CT findings of acute pancreatitis are - *(MP 00)*
a) Fuzzy outline of pancreas
b) Dilatation of pancreatic duct system
c) Peripancreatic fluid collection
d) All

291. Radiological signs of acute pancreatitis include the following except - *(Maharashtra 08)*
a) Colon cut-off sign b) Cullen's sign
c) Renal halo sign d) Sentinel loop sign

292. Colon cut off sign seen in - *(MP 06)*
a) Acute pancreatitis b) Diverculities
c) Appendicitis d) Carcinoma colon

293. Chain of lakes appearance in ERCP is seen \s-*(AI 96)*
a) Acute pancreatitis b) Chronic pancreatitis
c) Carcinoma pancreas d) Ductal adenoma

294. Widening of the C loop in X-ray is diagnostic of-
a) Chronic pancreatitis *(DPGFeb. 09)*
b) Carcinoma head of pancreas
c) Periampullary carcinoma
d) Calculi in the ampullar of Vater

295. "Spongy appearance" with central sunburst calcification is seen in - *(AIIMS May 07)*
a) Pancreatic adenocarcinoma
b) Mucinous cyst adenocarcinomas
c) Somatostatinoma
d) Serous cystadenoma

296. ERCP in pancratitis is done to know about-fPG/ *01)*
a) Gall stone b) Associated cholangitis
c) Ascites d)Pancreatic divisum
e) Annular pancreas

297. Most sensitive investigation of pancreatic carcinoma is - *(WB95)*
a) Angiography b)ERCP
c) Ultrasound d) CT scan

298. A patient complains of epigastric pain, radiating to back off and on. The investigation of choice is -
a) MRI b) CT scan *(AIIMS 99)*
c) USG d) Radio nucleotide scan

299. Investigation of choice for small intestine tumor -
a) Ba follow through *(Jipmer 98)*
b) Echo
c) X-ray abdomen
d) CT scan with contrast

3IC Capsule endoscopy is u: sed for - *(NEET/DNB Pattern)*
a) GERD b) Motility disorder
c) Bleeding d)Nonc

301. Contrast used in barium enema is - *(Jipmer 03)*
a) Barium oxide b) Barium sulphide
c) Barium sulphate d) Lead sulphate

302. True about features of cholecystitis on USG -
a) Thick fibrosed gallbladder wall *(PGI01)*
b) Stone impacted at neck of gall bladder
c) Perigallbladderhalo
d) Increased vascularity

303. True about OCG is- *(PGI 2000)*
a) First done by Graham Cole in 1942
b) Dye ingested at rate of 1 ml/kg
c) USG has replaced it
d) Dye used is telepaque

304. Which is not required for visualisation of gall bladder in oral cholecystography - *(AIIMS 95)*
a) Functioning liver
b) Motor mechanisms of gall bladder
c) Patency of cystic duct
d) Ability to absorb water

305. The investigation of choice for acute cholecystitis is-
a) USG b) HID A-Scan *(PGI 02)*
c) CT-Scan d) X-ray

306. Investigation of choice in obstructive jaundice is -
a) ERCP b)USG *(AI97)*
c) Cholecystography d) Laproscopy

307. Investigation of choice for gall stone - *(PGI 01)*
a) X-ray b)USG
c) Cholecystography d) CAT Scan

308. Most common investigation done for obstructive j aundice - *(AIIMS 99)*
a) CT scan b)USG
c) X-ray d)ERCP

309. Minimal ascites can be best detected by - *(AIIMS98)*
a) USG b) Plain X-ray abdomen
c) MRI d) CT scan

310. Focal and diffuse thickening of gallbladder wall with high amplitude reflections and 'comet tail' artifacts on USG suggest the diagnosis of-
a) Xanthogranulomatous cholecysitis
b) Carcinoma of gall bladder
c) Adenomyomatosis *(AI 09,AIIMS Nov 08)*
d) Cholesterolosis

311. Which of the following is not a diagnostic feature of gall stone ileus on plain abdominal radiograph?
a) Ectopic calcified gallstone *(MH03)*
b) Stone <2.5 cm size in the intestine
c) Signs of small intestinal obstruction
d) Gas in the biliary tree

312. Air in biliary tract is seen in all except - *(AIIMS 95)*
a) Gall stone ileus
b) Sclerosing cholangitis
c) Carcinoma gall bladder
d) Endoscopic papillotomy

313. Thickened gall bladder wall in USG seen in -
a) Acute cholecystitis *(PGIDec 04)*
b) Mucosal thickening
c) Cholesterosis
d) Ascites
e) AIDS cholangitis

314. Computed Tomography (CT scan) is least accurate for diagnosts of - *(AI 11)*
a) Aneurysm in the Hepatic Artery
b) Lymph node in the para- aortic region
c) Mass in the tail of pancreas
d) Gall stones

290)a,c 291)b 292)a 293)b 294)b>a 295)d 296)a,b,d,e 297)c 298)b 299)a 300)c 301)c 302)a,b,c
303)c,d 304)b 305)a 306)b 307)b 308)b 309)a 310)c 311)b 312)b 313)a,b,d,e 314)d

315. Central dot sign is seen in - *(AIIMSNov 08, May 11)*
a) Caroli's disease
b) Primary sclerosing cholangitis
c) Polycystic liver disease
d) Liver hamartoma

316. TVue about are MRCP- *(PGI Dec 07)*
a) MRI is used to obtain the image
b) CT is used for the images
c) It shows the biliary tree
d) Dye has to be injected endoscopically
e) It is an invasive procedure

317. Technitium-99 scan is used for diagnosis of -
a) Meckel's diverticulum *(Manipal 08)*
b) Appendix
c) Volvulus
d) Obstruction

318. Investigation of choice for recurrent GIST -
a) MEBG b) PET *(AIIMS Nov 08)*
c) MRI d)CECT

319. Gasless abdomen is a feature of- *(MP 01)*
a) High obstruction
b) Acute pancreatitis
c) Congenital diaphragmatic hernia
d) All

320. Frostberg's reverse 3 sign is seen in - *(MH 01)*
a) Periampullary carcinoma
b) Annular pancreatic carcinoma
c) Carcinoma head of pancreas
d) All

321. DD for right upper quadrant calcification -
a) Gallstone *(PGI June 06)*
b) Renal stone
c) Calcification in vessels
d) Hepatic hemangioma

322. Calcific hepatic metastases are seen in- *(Corned 09)*
a) Adenocarcinoma of the colon
b) Carcinoid tumours
c) Renal cell carcinoma
d) Lymphoma

323. USG is sensitive in - *(PGI June 04)*
a) Ureteric colic b) Gall stone
c) Blunt abdominal trauma d) Appendicitis
e) Pancreatic pathology

324. In a CT scan at the level of celiac trunk, following structures will be seen - *(PGI02)*
a) Pancreas b) Gall bladder
c) Inferior vena cava d) Duodenum
e) Portal vein

325. Investigation of choice for diagnosis of spleenic rupture- *(AIIMS95)*
a) Peritoneal lavage b)Ultrasound
c) CT scan d) MRI

326. For the evaluation of blunt abdominal trauma, which of the following imaging modalities is ideal?
a) Ultrasonography *(AIIMS04)*
b) Computed tomography
c) Nuclear scintigraphy
d) Magnetic resonance imaging

327. Spleenic injury is diagnosed on X-ray by - *(PGI 97)*
a) Half stomach shadow
b) Obliteration of spleenic shadow
c) Rib fracture
d) Gas under diaphragm

3 28. Best imaging modality for neuroendocrinal tumors-
a) PECT *(AIIMS 01)*
b) CECT
c) Radio nucleotide scan
d) MRI with gadolinium scan

329. Protein losing enteropathy diagnosis, all used except?
a) Tc albumin *(AIIMS May 11)*
b) Tc dextran
c) In transferrin
d) Tc seclosumab

330. Neonate triangular cord sign on USG is seen in - *(NEET/DNB Pattern)*
a) Galactosemia b) Biliary atresiaJ w
c) Hepatitis d)Nbne

UROGENITAL SYSTEM

331. Functional analysis of kidney is best done by -
a) Radionuclide scanning *(DPGFeb. 09, PGI 97)*
b) IVP
c) Ultrasound
d) MRI

332. Which of the following agents is used to measure glomerular filtration rate (GFR) - *(AI08, AI95)*
a) Iodohippurate b)Tc99m-DTPA
c) Tc99m - MAG3 d) Tc99m - DMSA

333. A patient presents with acute renal failure and anuria. The USG is normal. Which of the following investigation will give best information regarding renal function - *(AI 10)*
a) Intravenous pyelogram
b) Retrograde pyelography
c) Antegrade pyelography
d) DTPA scan

334. The investigation of choice for Renal Scarring defect in Kidney is - *(AI12)*
a) DMSA scan b) DTPA scan
c) DEXA scan d) MCU

335. A patient presented with ARF with complete anuria but a normal ultrasound. Next investigation is -
a) IVP *(AI99)*
b) Antegrade pyelography
c) Retrograde pyelography
d) Radiorenogram

336. A dense renogram is obtained by - *(AI 10)*
a) Dehydrating the patient
b) Increasing the dose of contrast media
c) Rapid (Bolus) injection of dye
d) Using non- ionic media

315) a 316)a,c 317) a 318)b>d 319)d 320) b 321)a,b,c,d 322) a 323)b,c,d 324)a,c,e 325) c 326) b
327) b,c 328) c 329) d 330) b 331) a 332) b 333) d 334) a 335) d 336) c

337. A dense persistent nephrogram may be seen in all of the following except - *(AIIMS 02)*
a) Acute ureteral obstruction
b) Systemic hypertension
c) Severe hydronephrosis
d) Dehydration

338. Non-visualisation of kidney in excretory urogram is seen in - *(PGI Dec 05, 04)*
a) Duplication
b) Renal vein thrombosis
c) Hydronephrosis
d) Hypoplasia
e) Amyloidosis

339. 'Stipple sign' in transitional cell carcinoma of the renal collecting system is best demonstrated by -
a) Intravenous urography *(COMED 09)*
b) Retrograde pyeloureterography
c) Radionuclide scan
d) Ultrasound scan

340. Cobra head deformity is characterstic of -
a) Posterior urethral valve *(Corned 09, AIIMS 97)*
b) Ureterocele
c) Bladder tumor
d) Cytitis

341. "Adder - head" appearance on voiding cystourethrogram in bladder is feature of - *(MH 07)*
a) Horse shoe kidney b) VUR
c) Ureterocele d) Carcinoma ofbladder

342. IVP is contraindicated in - *(WB 96, 2K)*
a) Multiple myeloma b) Kidney stones
c) Renal cyst d) Transplanted kidney

343. B^^igniialYP is scfrn ip - *((NEEJDNB/Eattern)*
a) Polycystic kidney
b) Hydronephrosis
c) Chronic pyelonephritis
d) Hypernephroma

344. 'Rim' and 'ball' nephrograms in intravenous urography are seen in - *(COMED 09)*
a) Normal kidneys
b) Acute obstructive nephropathy
c) Chronic obstructive nephropathy
d) Chronic renal failure

345. Spider leg appearance is found in - *(PGI 99)*
a) Polycystic kidney b) Pyelonephritis
c) Hydronephrosis d) Renal artery stenosis

346. IVP of polycystic kidney disease shows -
a) Cobra head *(PGINov 09)*
b) Dropping lily
c) Flower base appearance
d) Spider leg deformity
e) Fish hook appearance

347. Tear - drop bladder is seen in - *(MH02)*
a) Pelvic abscess b) Pelvic lipomatosis
c) Bladder rupture d)All

348. Teardrop bladder are seen in - *(PGI May 10)*
a) Pelvic hematoma
b) Pelvic lipomatosis
c) T.B.
d) Neurogenic bladder
e) Intraperitoneal bladder rupture

349. Which of following is not a feature of renovascular hypertension on intravenous urography - *(MH 05)*
a) Delayed 'wash - out' of contrast
b) Filling defect in calyces
c) Ureteral kinking
d) Normal or small sized kidney

350. Most sensitive and specific investigation for screening of Renovascular hypertension -
a) MRI *(AIIMS 01)*
b) Captopril enhanced radionuclide scan
c) Spiral CT Scan
d) Duplex - Doppler flow study

351. Investigation of choice for hydronephrosis -
a) Excretory Urography *(NEET/DNB Pattern)*
b) USG
c) MRI
d) Cystourethrography

352. Not a radiological finding of papillary necrosis on excretory urogram is - *(AIIMS May 09)*
a) Tracks and horns from calyces
b) Ring shadow
c) Increased dense nephrogram
d) Egg in cup appearance

353. For renal stone, diagnosis is not done by -
a) IVP b) MRI *(PGI May 10)*
c) PET-Scan d)USG
e) CT scan

354. The most sensitive imaging modality for diagnosis of ureteric stones in a patient with acute colic is -
a) X-ray KUBregion *(DPG 09, AI05, NEET/DNB Pattern)*
b) Ultrasonogram
c) Non contrast CT scan of the abdomen
d) Contrast enhanced CT scan of the abdomen

355. In Renal cell carcinoma investigation of choice to evaluate inferior venacava & renal vein for thrombus - *(AIIMS 99)*
a) IVP b) Coloured doppler
c) USG d) CT scan

356. All of the following form radiolucent stones except - *(AIIMS 03, NEET/DNB Pattern)*
a) Xanthine b) Cysteine
c) Allojurinol d) Ofoticfa

357. Most important investigation for posterior urethral valve is - *(MH 06, AIIMS 97)*
a) Urethroscopy
b) IVP
c) Retrograde cystogram
d) Micturating cystogram (MCU)

337)b 338)None 339)a 340)b 341)c 342)a 343)b 344)c 345)a 346)d 347)d 348)a,b,c,e 349)b 350) c 351)b 352) None 353)b,c 354)c 355)b 356)b 357)d

358. Causes of bladder calcification are - *(PGIDec 06)*
a) Schistosmosis b) Urethral cell
c) TB d) Carcinoma

359. The investigation of choice for imaging of urinary tract tuberculosis is - *(A1IMS04)*
a) Plain X-ray b) Intravenous urography
c) Ultrasound d) Computed tomography

360. Which of the following imaging modality is most sensitive to detect early renal tuberculosis -
a) Intravenous urography *(AIIMS 03, 02, AI05)*
b) Ultrasound
c) Computed tomography
d) Magnetic resonance imaging

361. Renal tuberculosis can be diagnosed earliest by -
a) CT scan b) IVP *(ARMS98)*
c) Angiography d)USG

362. The most important sign of significance of renal artery stenosis on an angiogram is - *(AI 06)*
a) A percentage diameter stenosis > 70%
b) Presence of collaterals
c) A systolic pressure gradient > 20 mm Hg across the lesion
d) Post-stenotic dilatation of the renal artery

363. The posterior urethra is best visualized by -
a) Static cystogram *(ARMS Nov 05)*
b) Retrograde urethrogram
c) Voiding cystogram
d) CT cystogram

364. Which of the following is not an appropriate investigation for anterior urethral stricture ?
a) Magnetic resonance imaging *(ARMS 03)*
b) Retrograde urethrogram
c) Micturating cystourethrogram
d) High frequency ultrasound

365. Abdominal ultra-sonography in a 3 year old boy show a solid circumscribed hypoechnoic renal mass. Most likely diagnosis is - *(AI 02)*
a) Wilm's tumor b) Renal cell carcinoma
c) Mesoblastic nephroma d) Oncocytoma

366. Transrectal ultrasonography in carcinoma prostate is most useful for - *(AI 08)*
a) Guided prostatic biopsies
b) Seminal vesicle involvement
c) Measurement of prostatic volume
d) To detect hypoechoic area

367. Hypoechoic lesion within prostate in USG seen in -
a) Adenocarcinoma *(PGI Dec 04)*
b) Normal prostate tissue
c) Infertility
d) Urethral obstruction
e) BPH

368. Radiation exposure is the least in the following procedure- *(ARMS Nov. 10)*
a) Micturating cystourethrogram
b) IVP
c) Bilateral nephrostomogram
d) Spiral CT for stones

SKELETAL SYSTEM

369. Which one of the following is a recognized X-ray feature of rheumatoid arthritis? *(AI 03)*
a) Juxta-articular osteosclerosis
b) Sacroilitis
c) Bone erosions
d) Peri-articular calcification

370. Epiphyseal enlargement is seen in - *(ARMS 97)*
a) Rickets
b) Scurvy
c) Spondylo-epiphyseal dysgenesis
d) Juvenile rheumatoid arthritis

371. Fraying and cupping of metaphyses of long bones in a child does not occur in - *(AI 03)*
a) Rickets b) Lead poisoning
c) Metaphysealdysplasia d) Hypophosphatasia

372. Splaying and cupping of the metaphysis is seen in-
a) Rickets b) Scurvy *(PGI 99)*
c) Paget's disease d) Lead poisoning

373. Dense metaphyseal band is seen in- *(PGI June 08)*
a) Hypervitaminosis A b) Hypervitaminosis B
c) Scurvy d) Hypervitaminosis D

374. Vertebra plana is seen in - *(ARMS 98)*
a) Malignancy b) Fracture
c) Tuberculosis d) Eosinophilic granuloma

375. An eight year old boy presents with back pain and mild fever. His plain X-ray of the dorsolumbar spine reveals a solitary collapsed dorsal vertebra with preserved disc spaces. There was no associated soft tissue shadow. The most likely diagnosis is -
a) Ewing's sarcoma b) Tuberculosis *(AI 03)*
c) Histiocytosis d) Metastasis

376. Vertebra plana is seen in - *(PGI June 05)*
a) Eosinophilic granuloma b) Trauma
c) Paget's disease d) Malignancy

377. X-ray of which bone (s) would be diagnostic in hyperparathyroidism - *(PGI2000)*
a) Skull b) Phalanges
c) Long bones d) Scapula
e) Spine

378. Pathognomic feature of hyperparathyroidism -
a) Osteopenia *(ARMS98)*
b) Loss of lamina dura
c) Brown's tumor
d) Sub periosteal resorption of phalanges

379. X-ray features of hypoparathyroidism are the following except - *(MH10, 03)*
a) Osteosclerosis
b) Calvarial thickening
c) Subperiosteol resorption
d) Subcutaneous calcification

380. Trident hand is seen in - *(NEET/DNB Pattern)*
a) Achondroplasia
b) Mucopolysaccharidosis
c) Diphyseal achlasia
d) Cleidocranial dystosis

358) a,c,d 359)b 360) a 361) b 362)b 363) c 364) a 365) a 366) a 367) a,e 368) a 369) c 370)a,c,d 371) b 372) a 373)d 374)d>a,c 375)c 376)a,b,d 377)a,b 378)d 379)c 380)a

381. Champagne glass pelvis is seen in - *(Jipmer 02)*
a) CDH b)Down's syndrome
c) Cretinism d)Achondroplasia

382. Multiple lytic lesions of skull with beveled edges are seen in - *(MH 06)*
a) Eosinophilic granuloma b)Metastases
c) Multiple myeloma d)Neuroblastoma

383. Geographic lytic lesions in vault of skull with beveled edges are seen with - *(AIIMS 97)*
a) Multiple myeloma
b) Eosinophilic granuloma
c) Hyperparathyroidism
d) Reticular cell Ca

384. 76 year old man presents with lytic lesion in the vertebrae. X-ray skull showed multiple punched out lesions. The diagnosis is - *(AIIMS 2000)*
a) Metastasis b) Multiple myeloma
c) Osteomalacia d) Hyperparathyroidism

385. Multiple punched out lesions on skull X-ray is found in- *(AIIMS94)*
a) Down's b) Hyperparathyroidism
c) Multiple myeloma d)All

386. In scurvy all the following radiological signs are seen except - *(AI04)*
a) Pelican spur
b) Soap bubble appearance
c) Zone of demarcation near epiphysis
d) Frenkel's line

387. All are radiological sign of Vit C deficiency except-
a) White line of frenkel *(AIIMS 95)*
b) Wimberger line
c) Osteoporosis of bone
d) Widening of epiphysis

388. Radiological findings of scurvy are A/E -*(PGI99)*
a) Epiphyseal widening b)Metaphyseal porosis
c) White line d) Pelkan spur

389. Pelkan spur is seen in - *(MH 01)*
a) Rickets b) Scurvy
c) Hemophilia d)All

390. Radiological features of rickets include -
a) Narrowing of epiphysis *(PGI Dec 05)*
b) Cupping of metaphysis
c) Ricketic rosary
d) Pelkan's spur

391. Not a radiological feature of rickets - *(MH 09)*
a) Splaying of metaphysis
b) Cupping of metaphysis
c) Subluxation of epiphysis
d) Widening of metaphysis

392. Earliest evidence of healing in rickets is provided by-
a) S. Ca^ *(AI 95)*
b) S. $P04^{3-}$
c) Radiological examination of growing bone ends
d) S. Alkaline phosphate level

393. Wind swept deformity is seen in - *(AIIMS 98)*
a) Ankylosing spondylitis b) Scurvy
c) Rheumatoid arthritis d) Rickets

394. Biine within bode appearance is seel m - *ffr' ~*
a) CML *(NEET/DNB Pattern)*
b) Osteoporosis
c) Osteopetrosis
d) Bone infarct

395. Beheaded Scottish terrier sign is -
a) Spondylosis *(AIIMS 92, Jipmer 99, 90)*
b) Spondylolisthesis
c) Lumbar canal stenosis
d) Slipped disc

396. In spondolysthesis following radiological features seen- *(PGI Dec 06)*
a) Scotty dog
b) Scotty dog wearing a collar
c) Beheaded scotty dog terrier sign
d) Nepolean sign

397. Calcification around the joint is seen in - *(PGI 99)*
a) Pseudo gout b) Hyperparathyroidism
c) Rh. arthritis d) Gout

398. Calcification ofintervertebrgddisc isseepinr^fl *2K*
a) Gout b) Rheumatoid *NEET/DNB*
c) Alkaptonuria d) Psoriasis *Pattern)*

399. A 40 year old male female patient on long term steroid therapy presents with recent onset of severe pain in the right hip. Imaging modality of choice for this problem is - *(AIIMS May 05)*
a) CT scan b) Bone scan
c) MRI d) Plain X-ray

400. Looser's zones is seen in - *(PGI 02)*
a) Osteoporosis b) Hyperparathyrodism
c) Osteomalacia d) Renal osteodystrophy
e) Paget's disease

401. Looser's zone is seen in - *(MH 10, 03)*
a) Osteogenesis imperfecta
b) Osteopetrosis
c) Osteomalacia
d) Hypoparathyroidism

402. Pseudofracture or looser's zone is seen in - *(MEET/*
a) Osteoporosis b) Osteopetrosis *DNB Pattern)*
• c)\0steorimlaGia,^-d)^Scui^^

403. Which endocrine disorder is associated with epiphyseal dysgenesis? *(AI 03)*
a) Hypothyroidism b) Cushings syndrome
c) Addison's disease d) Hypoparathyroidism

404. Flaring of anterior ends of the ribs is characteristically seen in - *(AI 08)*
a) Neurofibromatosis b) Scurvy
c) Rickets d) Hypothyroidism

405. Bamboo spine is seen in - *(Maharashtra 05, 01)*
a) Ankylosing spondylitis b) RA
c) Paget's disease d)All

381) d 382) a 383)b 384)b 385) c 386)b 387) d 388) a 389)b 390)b 391) c 392) c 393) c>d 394) c
395) b 396) c,d 397) a,d 398) a,c 399) c 400)b,c,d,e 401) c 402) c 403) a 404) c 405) a

406. X-ray finding of osteomyelitis within 8 day is -
a) Cystic swelling *(DPG 09, PGI 99)*
b) Soft tissue swelling
c) New bone formation
d) Sequestrum formation

407. "Hair-on end" appearance is seen in -
a) Thalassemia *(AIIMS May 08)*
b) Sickle cell anemia
c) Hemochromatosis
d) Megaloblastic anemia

408. Hair on end appearance is characteristically seen in - *(Maharashtra 01)*
a) Thalassemia major
b) Sickle cell anemia
c) G6PD deficiency
d) Hereditary spherocytosis

409. Wormian bones are seen in all except -
a) Hypothyroidism *(Maharashtra 01)*
b) Down syndrome
c) Turner syndrome
d) Osteogenesis imperfecta

410. Which one of the following is the earliest radiographic manifestation of childhood leukemia?
a) Radiolucent transverse metaphyseal band
b) Diffuse demineralization of bones
c) Osteoblastic lesions in skull *(AIIMS Nov 04)*
d) Parenchymal pulmonary lesions on chest films

411. A 2 yr old boy suffering from leukaemia, following are the X-ray finding -
a) Osteolytic lesion in flat bones *(PGI 03)*
b) Metaphysial osteoporosis
c) Periosteal new bone formation
d) Osteosclerosis of long bone
e) Transverse line of dark band below the growth plate

412. All are radiological features of sickle cell anemia except - *(PGI June 08)*
a) Vertebra plana b) Floating teeth
c) Bone infarct d) Marrow hyperplasia
e) Secondary osteomyelitis

413. On MRI the differential diagnosis of spinal cord edema is - *(AIIMS May 06)*
a) Myelodysplasia b) Myelomalacia
c) Myeloschisis d) Cord tumors

414. Which of the following is not true regarding ossified posterior longitudinal ligament (OPLL)? *(AI09)*
a) Most commonly involves thoracic spine
b) Gradient echo MR sequence may overestimate the canal stenosis
c) MRI is best for diagnosis
d) Low signal intensity on all MR sequences

415. Sonographic finding of spina bifida - *(PGI June 04)*
a) Ventriculomegaly
b) Obliteration of cisterna magna
c) Small BPD
d) Abnormal curvature of cerebellum
e) Club foot

416. Best radiographic view for fracture of Cl, C2 vertebrae is - *(AIIMS May 09, AI 08)*
a) AP view b) Odontoid view
c) Lateral view d) Oblique view

417. The gold standard for the diagnosis of osteoporosis is- *(AI 05, AIIMS 04)*
a) Dual energy X-ray absorptiometry
b) Single energy X-ray absorptiometry
c) Ultrasound
d) Quantitative computed tomography

418. Bone Density is best studied by- *(AI 12)*
a) CT scan b) DEXA scan
c) MRI scan d) Bone scan

419. Which of the following is not a cause of generalized increase in bone density in adults? (DPG *Mar 09)*
a) Myelosclerosis b) Renal osteodystrophy
c) Fluorosis d) Caffey's disease

420. Increased bone density is seen in all except -
a) Primary hyperparathyroidism *(Maharashtra 03)*
b) Osteopetrosis
c) Fluorosis
d) Hypoparathyroidism

421. Malten - wax appearance is seen in - *(MH 07)*
a) Osteoporosis b) Osteopoikilosis
c) Melorheostosis d) Osteogenesis imperfecta

422. "Flowing wax" appearance on anterior and posterior borders of vertebrae with normal intervertebral disc space occuring due to ligament calcification is seen in- *(MH09)*
a) Ankylosing spondylitis
b) Diffuse idiopathic skeletal hypertrophy
c) Psoriatic spondyloarthropathy
d) RA

423. Codman's triangle is a feature of- *(MH-11)*
a) Osteosarcoma b) Osteochondroma
c) Osteoid osteoma d) Chondrosarcoma

424. Codman's triangle is seen in - *(NEET/DNB Pattern)*
a) Chdn&oblasfoma ^ByOsteb^afdbinaL -f- -
c) Chandrosarcoma d)GCT !

425. Sun ray appearance is seen in - *(PGlDec 05)*
a) Osteosarcoma b) Ewing sarcoma
c) Osteoclastoma d) Multiple myeloma

plpl "Swnrayappearance" on Xipaiy is suggestive of- 1
a) A chondrosarcoma *(AIIMS 04, NEET/DNB*
b) A metastatic tumour in the bone *Pattern)*
c) An osteogenic sarcoma
d) An Ewing's sarcoma

427. Radiological inv. shows sun ray appearance; dx is -
a) Osteosarcoma b)GCT *(AIIMS 95)*
c) Osteomyelitis d) Ewing's sarcoma

428. Radiological feature of osteosarcoma is - *(AIIMS 99)*
a) New bone formation b) Sunray appearance
c) Cotton wool app. d) Osteoid formation

429. Radiographic appearance of Pindborg's tumor is -
a) Onion - peel appearance *(AI 02)*
b) Sun burst appearance
c) Cherry - blosom appearance
d) Driven - snow appearance

406) b 407) a 408)a 409)c 410)a 411)a,c,d,e 412)a,b 413)b 414)a 415)a,b,d 416)b 417)a 418)b
419) d 420) a 421)c 422) b 423) a 424) b 425) a,b 426) c>b,d 427) a >d 428) b 429) d

430. Expansile lytic lesion with fluid - fluid levels within the metaphysis of fibula seen on CT and MRI in an early adolescent female is typical of - *(MH10)*
a) Giant cell tumor b) Aneurysmal bone cyst
c) Hemangioma d) Fibrous dysplasia

431. A lady dimple has a lytic lesion in X-ray of upper end of humerus. The diagnosis is - *(A1IMS 99)*
a) Osteosarcoma b) Osteochondroma
c) Unicameral bone cyst d) Osteoclastoma

432. A classical expansive lytic lesion in the transverse process of a vertebra is seen in - *(AI03)*
a) Osteosarcoma b) Aneurysmal bone cyst
c) Osteoblastoma d) Metastasis

433. X-ray shows soap bubble appearance at lower end of redius, treatment of choice is - *(A1IMS 98)*
a) Local excision b) Excision & Bone grafting
c) Amputation d) RT

434. Lytic lesion in skull are seen in following except -
a) Multiple myeloma b) Metastasis bronchus
c) Thalassemia d) Ca prostate *(PGI97)*

435. **Osteoblastic metastasis is seen -** *(NEET/DNB Pattern)*
a) Prostate carcinoma b) Multiple myeloma
c) Thyroid carcinoma d) Renal carcinoma

436. Dense calcification is seen in - *(AIIMS 96)*
a) Chondroblatoma b) Chondrosarcoma
c) Osteosarcoma d) Fibrosarcoma

437. Onion - peel appearance is seen in - *(Comed09, MH09, NEET/BNB-Pattern)*
a) Ewing's sarcoma
b) Ostebma
c) Osteosarcoma
d) Osteoclastoma

438. Best investigation for bone metastasis is - *(AI 12)*
a) MRI b) CT
c) Bone scan d) X-ray

439. Best investigation for bone metastasis is - *(AI 11)*
a) MRI b) CT
c) Bone scan d) X- ray

440. In normal X-ray of shoulder which is superior most structure - *(NEET/BNB Pattern)*
a) Greater tubercle
b) Surgical neck of humerus
c) Coracoid process
d) Head of humerus

441. Investigation of choice for a lesion of temporal bone-
a) CT b) MRI *(AIIMS May 10)*
c) USG d) Plain X-ray

442. Bare orbit is/are seen in - *(PGI Nov. 10)*
a) Metastasis b)Neuroblastoma
c) Optic nerve glioma d) Osteomyelitis
e) Pseudotumor cerebri

443. Investigation of choice for intramedullary SOL is -
a) MRI b) USG *(NEET/DNB*
c) CT d) X-ray *Pattern)*

NERVOUS SYSTEM

444. Most common cause of suprasellar enlargement with calcification in chfldren is - *(AIIMS Dec 94, AI97)*
a) Craniopharyngioma
b) Astrocytoma
c) Meningioma
d) Suprasellar tuberculoma

445. A 6 year old boy has been complaining of headache, ignoring to see the objects on the sides for four months. On examination he is not mentally retarded, his grades at school are good, and visual acuity is diminished in both the eyes. Visual charting showed significant field defect CT scan of the head showed suprasellar mass with calcification. Which of the following is the most probable diagnosis ?
a) Astrocytoma *(AIIMS Nov 04)*
b) Craniopharyngioma
c) Pituitary adenoma
d) Meningioma

446. Intracranial calcification with cystic lesion in plain X-ray skull is seen in - *(AIIMS 96)*
a) Meningioma b) Glioma
c) Craniopharyngioma d) Medulloblastoma

447. Suprasellar calcification with growth retardation is seen in - *(AIIMS 95)*
a) Pineal body tumor b) Pituitary tumor
c) Thalamic tumor d)Craniopha

448. Which of the following is the most common cause of a mixed cystic and solid suprasellar mass seen on cranial MR scan of a 10 years old child -
a) Pituitary adenoma *(AIIMS May 05)*
b) Craniopharyngioma
c) Optic chiasma glioma
d) Germinoma

449. Physiological calcification of Skull in X-ray is seen in- *(PGI01)*
a) Pineal gland b) Choroid plexus
c) Red nucleus d) Basal ganglion

450. Basal ganglia calcification is seen in - *(PGI 03)*
a) Hyperparathyrodism b) Hyperthyroidism
c) Hypoparathyroidism d) Hypothyroidism
e) Acromegaly

451. Basal ganglia calcification is seen inall except -
a) Hypoparathyroidism *(AI07)*
b) Wilson's disease
c) Perinatal hypoxia
d) Fahr's syndrome

452. Calcification of basal ganglia is seen in A/E -
a) Berry's aneurysm *(AIIMS97)*
b) Cysticercosis
c) Idiopathic hyperparathyroidism
d) Wilson's disease

430)b 431)c 432)b 433)b 434)d 435)a 436)b>c 437)a 438)c 439)c 440)c 441)a 442)a 443)a
444) a 445) b 446) c 447) d 448) b 449)a,b,d 450)a,c,d 451)b 452) d

453. Which of these is not a sign of increased ICT -
a) Erosion of dorsum sella *(AIIMS May 08)*
b) Sutural diastasis
c) Ballooning of sella
d) Copper-beaten appearance

454. In children raised ICT is manifested by - *(MP 98)*
a) Lytic lesions in skull wall
b) Rarefaction of dorsum of sella
c) Sutural diastasis
d) None

455. The MR imaging in multiple sclerosis will show lesions in - *(AI06)*
a) White matter b) Grey matter
c) Thalamus d) Basal ganglia

456. Extensive involvement of deep white matter with bilateral hyperdense thalami on non-contrast CT scan of the brain is virtually diagnostic of -
a) Alexander's disease *(AIIMS Nov 07)*
b) Krabbe's disease
c) Canavan's disease
d) Metachromatic leukodystrophy

457. Which of the following is not a MRI feature of Mesial temporal sclerosis ? *(AI 09)*
a) Atrophy of mammillary body
b) Atrophy of fornix
c) Blurring of Grey white matter junction of ipsilateral temporal lobe
d) Atrophy of hippocampus

458. A15 year old boy had 10-12 partial complex seizures per day inspite of adequate 4 drug antiepileptic regime. He had history of repeated high grade fever in childhood. MRI for epilepsy protocol revealed normal brain scan. What should be the best non-invasive strategy to make a definite diagnosis so that he can be prepared to undergo epilepsy surgery-
a) Interictal scalp EEG *(AIIMS 02)*
b) Video EEG
c) Interictal ^{18}F-FDg PET.
d) Video EEG with Ictal"mTc-HMPAO Brain SPECT

459. Finding in meningioma are all except - *(PGI97)*
a) Vascular markings around falx
b) Calcification
c) Erosion
d) Osteosclerosis

460. Meningioma on plain radiography reveals -
a) Calcification b) Erosion *(PGI June 09)*
c) Sutural diastasis d) Osteosclerosis
e) Vascular marknig

461. A 40 years old female patient presented with recurrent headaches. MRI showed an extra-axial, dural based and enhancing lesion. The most likely diagnosis is - *(DPG 09, AIIMS May 06, AI 12)*
a) Meningioma b) Glioma
c) Schwannoma d) Pituitary adenoma

462. Characteristic featurs of meningioma are all except-
a) Dural tail sign *(Maharashtra 02)*
b) Hyperostosis
c) Prominent vascularity
d) Intra-axial tumor

463. A 45 year old female presented with lower limb weakness, spasticity, urinary hesitancy and mid dorsal intradural enhancing mass in MRI. What is the diagnosis - *(AI 07, AIIMS May 10, Nov 06)*
a) Lipoma b) Meningioma
c) Dermoid cyst d) Neuroepithelial cyst

464. A 20 year female patient with 6th cranial nerve palsy on T2 weighted MRI shows a hyperintense lesion in cavernous sinus which shows homogenous contrast enhancement. Most probable diagnosis is?
a) Schwannoma *(AIIMS Nov. 10)*
b) Meningioma
c) Cavernous sinus hemangioma
d) Astrocytoma

465. A male was brought unconscious to the hospital with external injuries. CT brain showed no midline shift, but basal cisterns were compressed with multiple small hemorrhages. What is the diagnosis -
a) Cortical contusion *(AI 07, AIIMS May 10,*
b) Cerebral laceration *Nov 06)*
c) Multiple infarcts
d) Diffuse axonal injuries

466. Which one of the following tumors shows calcification on CT scan - *(AI 05)*
a) Ependymoma b) Medulloblastoma
c) Meningioma d) CNS lymphoma

467. All of the following calcify except - *(Jipmer 02)*
a) Medulloblastoma
b) Sturge weber syndrome
c) Meningioma
d) Ependymoma

468. Ring enhancing lesion in brain is/are seen in -
a) Brain abscess *(PGI Dec 08)*
b) Resolving haematoma
c) Primary CNS lymphoma
d) Encephalopathy
e) Infarction

469. Local cerebral lesion with ring on CT scan is caused by- *(PGI02)*
a) Toxoplasmosis b) Intracranial haemorrhage
c) Cysts d) Hamartoma

470. Periventricular calcification is often due to- *(PGI97)*
a) Toxoplasmosis b) CMV infection
c) Congenital syphilis d) All of the above

471. ''Bracket Calcification" on Skull X-Ray is seen in -
a) TuberousSclerosis *(AIIMSMay 12)*
b) SturgeWebeSyndrome
c) Lipoma of corpus callosum
d) Meningioma

453) c 454) c 455) a 456) b 457) c 458) d 459) c 460)a,d,e 461) a 462) d 463) b 464) b 465) d
466) c>a 467) a 468)a,b,c,e 469) a 470) b 471) c

472. Tram track appearance on CT scan of head is seen in- *(AIIMS01)*
a) Stage weber syndrome
b) Von Hippie lindau syndrome
c) Tuberous sclerosis
d) Neurofibroma

473. Subdural haematoma most commonly results from-
a) Rupture of intracranial aneurysm *(AIIMS 04)*
b) Rupture of cerebral AVM
c) Injury to cortical bridging veins
d) Hemophilia

474. Which of the following is classic CT appearance of an acute subdural hematoma - *(MH04, A104)*
a) Lentiform-shaped hyperdense lesion
b) Cresent-shaped hypodense lesion
c) Cresent-shaped hyperdense lesion
d) Lentiform-shaped hypodense lesion

475. Characteristic of subdural hematoma is -
a) Convex hyperdensity *(AIIMS98)*
b) Concavo convex hyperdense
c) Biconvex hyperdense
d) Concavo convex hypodense

476. CT scan of a patient with history of head injury shows a biconvex hyperdense lesion displacing the grey-white matter interface. The most likely diagnosis is -
a) Subdural hematoma *(AI03)*
b) Diffuse axonal injury
c) Extradural hematoma
d) Hemorrhagic contusion

477. Which tumor is suggested by "Thouser leg Appearance" on an ascending myelogram? *(DPG Mar. 09)*
a) Extradural b) Extramedullary
c) Intramedullary d) Vertebral

478. The first investigation of choice in a patient with suspected subarachnoid haemorrhage should be -
a) Non-contrast computed tomography *(AI 04)*
b) CSF examination
c) Magnetic resonance imaging (MRI)
d) Contrast-enhanced computed tomography

479. Investigation of choice for acute subarachnoid haemorrhage - *(DPG Feb. 09, Calcutta 2K,*
a) Enhanced MRI b) MRI *Assam 2K, AI 98)*
c) CT-scan d) Angiography

480. Best test to determine etiology of SAH - *(AIIMS 95)*
a) Enhanced CT
b) Unenhanced CT
c) Intra arterial digital substraction angiography
d) MRI

481. Investigation of choice for multiple sclerosis -
a) CT b)MRI *(MEET/DNB Pattern)*
c) USG d)PET

482. Investigation of choice for juvenile nasoangiofibroma
a) X-ray b) Angiography *(AIIMS 97)*
c) USG d) CT Scan - contrast enhanced

483. The procedure of choice for the evaluation of an aneurysm is - *(AI 06)*
a) Ultrasonography
b) Computed tomography
c) Magnetic resonance imaging
d) Arteriography

484. A patient is suspected to have vestibular schwanomma. The investigation of choice for its diagnosis is - *(AI 04, NEET/DNB Pattern)*
a) Contrast enhanced CT scan
b) Gadolinum enhanced MRI
c) SPECT
d) PET scan

485. The best investigation to diagnose a case of acoustic neuroma is - *(AIIMS May 08)*
a) Gadolinium enhanced MRI b) CT scan
c) Audiometric analysis d) PET scan

486. Which of the following is the best choice to evaluate radiologically a posterior fossa tumor? *(MH 05,*
a) CT scan b) MRI *SGPGI04, AI03)*
c) Angiography d) Myelography

487. Investigation of choice for meningeal carcinomatosis is - *(AIIMS Nov. II)*
a) Contrast enhanced MRI b)PET-CT
c) SPET d)NCCT

488. Parameningeal Rhabdomyosarcoma is best diagnosed by - *(AIIMS 01)*
a) MRI b)CTScan
c) SPECT d)PET

489. Cerebral blood flow in an asphyxiated child is best measured by - *(AIIMS May 09)*
a) NIRS b)PET
c) Radionuclide imaging d) MRI angiography

490. Carotid artery stenosis screening invivo choice is -
a) USG b) CT *(NEET/DNB Pattern)*
c) MRI d) Doppler

491. Dye for myelography is inj ected in which space -
a) Subdural b) Epidural *(MH02)*
c) Subarachnoid d) Extradural

492. Investigation of choice for diagnostic evaluation of hydrocephalus in one month old child - *(MH 05)*
a) X-ray skull b)USG
c) CT d)MRI

493. MRI finding in covernous angioma -*(AIIMSNov. 11)*
a) Reticular popcorn like pattern
b) Arterial feeders
c) Well defined nidus
d) Phebectasia

494. Tiger eye sign on MRI **is seen** *in-(NEET/DNB Pattern)*
jj | a) Halloverden spatz disease b) CHPS §p|g|j
c) Achalasia Cardia d) None

OBSTETRICS AND GYNAECOLOGY

495. USG can detect gestation sac earliest at - *(PGI97)*
a) 5-6 weeks of gestation b) 7-8 weeks of gestation
c) 10 weeks of gestation d) 12 weeks of gestation

472) a 473)c 474)c 475)b 476)c 477)c 478)a 479)c 480)c 481)b 482)d 483)d 484)b 485) a
486) b 487) a 488)a 489)a 490)d 491)c 492)b 493)a 494)a 495)a

496. Earliest sign of fetal life is best detected by - *(AI04)*
a) X-ray b) Fetoscopy
c) Real time USG d) Doppler

497. Molar pregnancy can be best diagnosed by -*(MH01)*
a) Clinical history & examination
b) Ultrasound study
c) Laproscopy
d) CT Scan

498. The investigation of choice for an ectopic pregnancy is - *(A1IMSMay 08., PG197)*
a) CT scan b) TransvaginalUSG
c) Serum HCG levels d)MRI

499. Most accurate assessment of gestational age by USG is done by - *(Jipmer 04)*
a) Femur length b) Gestational sac size
c) Menstrual history d) Crown rump length

500. Parameters used to estimate gestational age in last trimester - *(PG197)*
a) CR length b) Abdominal circumference
c) BPD d) Femur length

501. In second trimester of pregnancy, the diognosis of IUGR can be best made by assessing which of the following parameter- *(MH-11)*
a) HC b)AC
c) GRL d)BPD

502. Which one of the following congenital malformation of the fetus can be diagnosed in first trimester by ultrasound? *(AI1MS Nov 08, AI06)*
a) Anencephaly b) Inencephaly
c) Microcephaly d) Holoprosencephaly

503. Anencephaly can be diagnosed by USG at -
a) 10-12 weeks of gestation *(AIIMS 96)*
b) 14-18 weeks of gestation
c) 20-24 weeks of gestation
d) 24-28 weeks of gestation

504. Earliest detectable congenital malformation by USG is? *(AIIMSNov 08)*
a) Spina bifida b) Cystic hygroma
c) Anencephaly d) Encephalocele

505. Ultrasonography of umbilical artery is done to know about- *(PG197)*
a) Heart beat b) Gastational age
c) Fetal weight d) Fetal maturity

506. True about antenatal doppler analysis is all except -
a) Reduction in end diastolic flow is associated with poor out come *(Jipmer 06, PGI06)*
b) Reduction in EDF is associated with IUGR
c) In normal gestation placental resistance is high
d) S/D ratio is high in IUGR
e) Investigation of choice in pregnancy

507. USG done at 18-20 weeks mainly to- *(Kerala 01)*
a) Detect fetal abnormality b) Determine sex
c) Estimate liquor d) Determine maturity

508. All are signs / features of ectopic pregnancy on USG except- *(PGI 03)*
a) Pseudo sac
b) Hyperechoic rim
c) Adenexalmass
d) Echogenic mass with multicystic spaces within endometrial cavity
e) Doughnut sign

509. Ectopic pregnancy, characteristic finding in USG is- *(AIIMS 98)*
a) Absence of gestational sac in uterus
b) Complex adnexal mass
c) Resistance in coloured doppler
d) Free fluid in peritoneal cavity

510. USG can diagnose all except -
a) Anencephaly b) Neural tube defect
c) Placenta previa d) Down's syndrome

511. On USG finding of cystic hygroma in fetus is suggestive of - *(AIIMS 9 7)*
a) Down's syndrome b) Marphan's syndrome
c) Turner's syndrome d) Klinfelter's syndrome

512. Popcorn calcification is seen in - *(NEET/DNB*
a) Fibroadenoma b) Fibroadenosis *Pattern)*
c) Carcinoma breast d)None

513. Mammographic abnormality seen in CA breast is -
a) Change in density *(PGI June 05)*
b) Clusters of Microcalcification
c) Change in architecture
d) All

514. Hallmark of breast malignancy on mammography -
a) Low density lesion *(Maharashtra 10)*
b) Smooth margin
c) Clusters of microcalcification
d) Popcorn calcification

515. Which of the following features on mammogram would suggest malignancy - *(AIIMSMay 06)*
a) Well defined lesion
b) A mass of decreased density
c) Areas of speculated microcalcifications
d) Smooth borders

516. On mammogram all of the following are the features of a malignant tumor except - *(AIIMS03)*
a) Spiculation b)Microcalcifica
c) Macrocalcification d) Irregular mass

517. The sensitivity of mammography is low in young females because - *(AI09)*
a) Less glandular tissue and more fat
b) Young females are less cooperative
c) Young breast have dense tissue
d) Because of less fat content

518. Which of the following does not contain fat on mammography? *(AI09)*
a) Post-traumatic cyst b) Hamartoma
c) Seborrhic keratosis d) Galactocele

496) d 497) b 498) b 499) d 500)b,c,d 501) d 502) a 503) a 504) c 505) a 506) c,e 507) a 508) d 509) b
510) None>d 51 l)c 512) a 513) d 514) c 515)c 516)c 517)c 518)c

519. The most sensitive investigation for DCIS (Ductal carcinoma in situ) of breast? *(AI09, AIIMS, Nov: 10)*
a) Mammography b) Ultrasound
c) MRI d) PET scan

520. Investigation to diagnose stage-I carcinoma breast -
a) B/L mammogram b) X-ray chest *(PGI2K)*
c) Bone scan d) Liver scan

521. Mammography can be used in- *(MH01)*
a) Early breast carcinoma b) Mastitis
c) Fibroadenoma d) Phyllodes tumor

522. Triple assessment for carcinoma breast includes -
a) History, clinical examination, biopsy/cytology
b) Clinical examination, mammography, biopsy/ cytology *(AI09)*
c) History, clinical examination, ultrasonography
d) Observation, ultrasonography, biopsy/cytology

NUCLEAR MEDICINE

523. Gamma camera in Nuclear Medicine is used for -
a) Organ imaging *(AI 05)*
b) Measuring the radioactivity
c) Monitoring the surface contamination
d) RIA

524. On 3 phase 99m Tc - MDP bone scan, which of the following bone lesions will show least osteoblastic activity - *(AIIMS 03)*
a) Paget' disease b) Osteoid osteoma
c) Fibrous dysplasia d) Fibrous cortical defect

525. Bone scan in multiple myeloma shows -
a) Hot spot *(AIIMS Nov 06)*
b) Cold spot
c) Diffusely increased uptake
d) Diffusely decreased uptake

526. Hot spots in bone scan are seen in the following conditions conditions except - *(Maharashtra 07)*
a) Osteomyelitis b) Multiple myeloma
c) Hyperparathyroidism d) Metastases

527. Hot spot in MI is seen in - *(AI98, AIIMS 96)*
a) Th-20 b) Gallium
c) Pyrophosphate Tc99 d) Albumin

528. Which test is performed to detect reversible myocardial ischemia? *(AIIMS 03)*
a) Coronary angiography
b) MUGA scan
c) Thallium scan
d) Resting echocardiography

529. Renal GFR is best measured by - *(PGIDec 05)*
a) Tc99 DMSA
b) Tc99 Pyrophosphate scan
c) Tc99 DTPA
d) Creatinine clearance
e) Tc99 albumin scan

530. GFR is measured with which of the following?
a) Iodohippurate b)Tc99m-DTPA *(AI08)*
c) Tc99m - MAG3 d) Tc99m - DMSA

531. Impared renal function is assessed by - *(AI 99)*
a) MAG 3 b) Iodohippurate
c) DMSA scan d) DTPA

532. Distribution of functional renal tissue is seen by -
a) DMSA *(Jipmer 05, PGI 05)*
b) DTPA
c) MAG3 - Tc99
d) 1123 iodocholesterol

533. Vesicoureteric reflux is demonstrated by using -
a) DMSA *(Jipmer 06, TN 04)*
b) DTPA
c) MAG3 - Tc99
d) 1123 iodocholesterol

534. In Radionuclide imaging the most useful radio pharmaceutical for skeletal imaging is - *(AI 05, 95, 94, AIIMS 95,PGI 03, 02, 00)*
a) Gallium 67 (^{67}Ga)
b) Technetium-sulphur-colloid (^{99m}Tc-Sc)
c) Technetium-99m (^{99ra}Tc)
d) Technetium-99m linked to Methylene disphosphonate (^{99m}Tc-MDP)

535. Sestamibi scan is used in - *(PGI 03)*
a) Ectopic thyroid
b) Ectopic parathyroid
c) Parathyroid adenoma
d) Extra adrenal pheochromocytoma
e) Adrenal pheochromocytoma

536. Isotope for thyroid scaning - *(PGI 2000)*
a) I^{129} b) I^{131}
c) Technetium99 d) Selenium

537. All isotopes are used for thyroid except - *(PGI02)*
a) 1-131 b) 1-123
c) 1-122 d) 1-125
e) 1-129

538. Isotope used in RAIU - *(AI 07)*
a) I^{131} b) I^{123}
c) I^{125} d) I^{127}

539. Tc labelled RBC's are used for - *(AI95)*
a) Biliary tree b) Renal disease
c) Pulmonary embolism d) Spleenic disease

540. Which of the following techniques is the best for differentiating recurrence of brain tumour from radiation therapy induced *necrosis?(AIIMSMay 05)*
a) MRI b) Contrast enhanced MRI
c) PET scan d) CT scan

541. Radio isotopes are used in the following technique except- *(AI 04)*
a) Mass spectroscopy
b) RIA
c) ELISA
d) Sequencing of nucleic acid

519)c 520)a 521)a 522)b 523)b 524)d 525)b 526) b 527)c 528)c 529)c 530)b 531)a>b,d
532) a 533) a 534) d 535) b,c 536) b,c 537)c,d,e 538) b 539) d 540) c 541) c

542. PET scan uses - *(NEET/DNB Pattern)*
a) 2-Fluorodeoxyglucose b) Technetium
c) Chromium d) Cobalt

RADIOTHERAPY

543. What is atomic number - *(PGI01)*
a) Proton b) Electrons + protons
c) Protons + neutrons d) Protons + protons

544. Substance with same atomic number but different mass number- *(MH10, 09, 06, 03)*
a) Isotope b) Isobar
c) Atom d) Mineral

545. Principle used in radiotherapy is - *(A197)*
a) Cytoplasmic coagulation b) Ionizationof molecule
c) DNA damage d) Necrosisof tissue

546. Ionization radiation acts on tissue leading to -
a) Linear acceleration injury *(AI98)*
b) Excitation of electron from orbit
c) Formation of pyramidine dimer
d) Thermal injury

547. Functional basic of ionising radiation depends on-
a) Pyramidine base pairing *(AIIMS 96)*
b) Removal of orbital electron
c) Linear energy transfer
d) Adding orbital electron

548. Most sensitive structure in cell for radiotherapy is- *(PGI02)*
a) Cell membrane b) Mitochondrial membrane
c) DNA d) Enzymes
e) ER

549. Which of the following statements best describes 'Background Radiation[9] - *(AI 10)*
a) Radiation in the background of nuclear reactors
b) Radiation in the backgroung during radiological investigations
c) Radiation present constantly from natural sources
d) Radiation from nuclear fall out

550. Radioactive substance emits the following except -
a) Gamma b)Beta *(MH08,02)*
c) Alpha d) X-rays

551. Principles of Linear accelerators is used in -
a) X-rays b) Gamma- rays *(PGI June 06)*
c) Alpha rays d) Infrared rays
e) Alpha particles

552. Brachytherapy is - *(MH05)*
a) Radiotherapy with the source of radiation outside the body, well at a distance
b) External beam radiation therapy
c) Radiation source used in body cavities or implated directly into tissues
d) Per oral radiation therapy

553. Most common used rays for radiotheraphy -
a) X rays b) y rays *(PGI June 06, PGI 02)*
c) a rays d) P rays

554. Most commonly radiothearpy uses - *(AIIMS 99)*
a) X-rays b) Gamma rays
c) Alpha rays d) Electron

555. Radioactive emissions used in radiotherapy are -
a) a-Particles b) p-Particles *(PGI 03, 01)*
c) y-rays d) X-ray
e) Infraredrays

556. Beams can be used for cancer treatment are -
a) y- rays b) a -rays *(PGI02)*
c) Neutrons d) Protons
e) X-rays

557. In radiation theray rays used are - *(PGI 99)*
a) a, p b) a, y
c) P, Y d) Y, a, p

558. About X-rays which is/are not true - *(PGI Dec 08)*
a) Low frequency b) Long wavelength
c) Dual character d) Penetrating
e) Electrically neutral

559. The major difference between X-Rays and Light is -
a) Energy b) Mass *(AI10)*
c) Speed d) Type of wave

560. Which one of the following has the maximum ionization potential? *(AI 06)*
a) Electron b) Proton
c) Helium ion d) Gamma - Photon

561. Which of the following has highest ionizing potential- *(Maharashtra 10)*
a) X-ray b) Gamma ray
c) a - rays d) P - rays

562. Which of the following is the most penetration beam-
a) Electron beam b) 5 MV photons *(AI 04)*
c) 18MV photons d) Proton beam

563. Which of the following has mot penetrating power ?
a) a - particle b) p - particle *(MH 07, AI 02)*
c) y-radiation d) Electron beam

564. Most harmful to individual cell - *(PGI98)*
a) X-rays b) a - particles
c) p-particles d) X-rays (gamma rays)

565. Which of the following is the most ionizing radiation- *(AI 10)*
a) Alpha b)Beta
c) X-rays d) Gamma

566. For the treatment of deep seated tumors, the following rays are used - *(AIIMS 03)*
a) X rays and Gamma-rays
b) Alpha rays and Beta- rays
c) Electrons and positrons
d) High power laser beams

567. SI unit of dose of radiation absorption -
a) Rad b) REM *(MH 10, 06)*
c) Gray d) Curie

568. Curie is unit of - *(PGI 97)*
a) Radiation exposure b) Radiation absorption
c) Radioactivity d) All of the above

542) a 543) a 544) a 545) b,c 546) b 547) b 548) c 549) c 550) d 551) a 552) c 553) a,b 554) a >b
555)a,b,c 556)All 557) d 558) a,b 559) a 560) c 561) c 562) c 563) c 564) b 565) a 566) a 567) c 568) c

569. Gray equals - *(PGI June 07, NEET/DNB Pattern)*
a) 100 rad b) 1000 rad
c) 10000 rad

570. **1 Curie equals to -** *(APPG 08)*
a) 3.7 Mbecqueral b) 37Mbecqueral
c) 3.7 Gb d) 37Gb

571. I becquerel is equal (Disinegration/sec) to -
a) $3.7xlO^{10}$ b)$2.7x\ 10^{10}$ *(PGIMaylO)*
c) $1.7\ xlO^{10}$ d) $3.7\ x\ 10'^{2}$
e) 1

572. Unit of radiation exposure - *(MH 06, 05)*
a) Rad b) Rem
c) Gray d) Roentgen

573. Which of the following best estimated the amount of radiation delivered to an organ in the radiation field-
a) Absorbed dose b) Equivalent dose *(AI10)*
c) Effective dose d) Exposure dose

574. Conventional daily dose regimen in external beam radiotherapy is - *(MH03)*
a) 100-150 cGy b)150-170cGy
c) 180-200cGy d)225-250cGy

575. Isotope (s) used in high dose rate brachytherapy -
a) Irl92 b) Co-60 *(PGIJune09)*
c) Cs-133 d)Ra226
e) Pdl03

576. Which of the following is used for permanent interstitial implant brachytherapy- *(MH 03)*
a) Boron b) Cesium - 131
c) Phosphorus d) Iridium

577. Which one of the following radioisotope is not used as permanent implant: *(A 105, DPG 09)*
a) Iodine-125 b) Palladium-103
c) Gold-198 d) Caesium-137

578. All may be used in interstitial brachytherapy except-
a) Cs^{137} b) Au^{198} *(AI99)*
c) Ir^{192} d) Co^{60}

579. Which of the following radioactive isotopes is not used for brachytherapy - *(AIIMS05)*
a) Iodine-125 b) Iodine-131
c) Cobalt-60 d) Iridium-192

580. Which of the following radioisotopes is commonly used as a source for external beam radiotherapy in the treatment of cancer patients - *(AI03)*
a) Strontium-89 b) Radium-226
c) Cobalt-59 d) Cobalt-60

581. For teletheraphy, isotopes commonly used are -
a) 1-123 b) Cs-137 *(PGI02, Nov. 10)*
c) Co-60 d)Tc-99
e) Ir-191

582. For teletheraphy setup all are used except -*(AIIMS 98)*
a) Iridium 127 b) Cobalt 60
c) Simulator d) Computer

583. Which is used in teletheraphy & Brachytherapy both- *(AIIMS98)*
a) Iridium 127 b) Cobalt 60
c) Pallidium d) Iodine 131

584. All of the following radioisotopes are used as systemic radionucleide,except- *(AI 06)*
a) Phosphorus-32 b) Strontium-89
c) Iridium-192 d) Samarium-153

585. Radioactive isotopes that are used in treatment of cancer are - *(PGI 03)*
a) Cesium b) Cobalt
c) Carbon d) Technetium
e) Nitrogen

586. Isotopes used for radiotherapy - *(PGI 2000)*
a) Radon b) Cobalt 60
c) Iridium d) Cesium

587. Used in radiotherapy - *(PGI June 08)*
a) Iodine-131 b) Co-60
c) Ir-192 d)Lu-177
e) Iodine-125

588. Phosphorus^{32} emits - *(AI 06)*
a) Beta particles b) Alpha particles
c) Neutrons d) X-rays

589. All of the following are pure beta emitters Except -
a) Yttrium-90 *(AIIMS May 11)*
b) Phosphorus-32
c) Strontium
d) Samarium-153

590. Radium emits which of the following radiations -
a) Alpha rays b) Beta rays *(PGI 00, 01*
c) Gamma rays d) X-rays *PGI, May 10)*
e) Neutrons

591. Radioactive isotope/substance emits the following radiations except - *(MH 08)*
a) Alpha b)Beta
c) Gamma d) X-ray

592. Longest half life is seen in - *(AIIMS 97)*
a) Radon b) Radium
c) Uranium d) Cobalt

593. The half life of Cobalt -60 is - *(AIIMS 97)*
a) 3.4 years b) 5.2 years
c) 1.2 years d) 2.3 years

594. Which is/are false about $T_{1/2}$ of radioisotopes -
a) Ra -226:1626 years *(PGI May 10)*
b) 1-131:60 years
c) Co-60:5.26 years
d) Ir-192 : 74 years
e) Cs- 137:30 years

595. Half-life of Iodine 131 is - *(DPG 08)*
a) 8 hours b) 8 days
c) 8 weeks d) 8 months

596. Most suitable radioisotope of Iodine for treating hyperthyroidism is - *(AI 03)*
a) I^{123} b) I^{125}
c) I^{131} d) I^{132}

597. Which of the following is used in the treatment of differentiated thyroid cancer? *(AI 06)*
a) $^{13.}I$ b) 99mTc
c) 32p d)311-mIBG

569)a 570)c 571)e 572)d 573)a 574)c 575)a,b 576)b 577)d 578)None 579)b 580)d 581)b,c 582)a 583)b 584) c 585) a,b 586)a,b,c,d 587)All 588) a 589) d 590)a,b,c,e 591) d 592)b 593)b 594) b,d 595)b 596) c 597) a

598. Radioactive phosphorus is used in the treatment of-
a) Polycythemia *(DPG Feb 09)*
b) Thyroid metastasis
c) Multiple myeloma
d) Embrynal cell carcinoma

599. Thre about Cobalt - 60 is - *(PGIDec 04)*
a) Natural radioactive agent
b) At.wt. 59
c) Emits p and y-rays
d) Half life is 5.3 years
e) Used in both brachy & teletherapy

600. Cobait-60is- *(MH03 07,03)*
a) Natural radioactive source
b) Natural radioactive material
c) Artificial radioactive source
d) Artificial stable substance

601. Artiflcal radioisotops - *(PGI 02)*
a) Radium b) Uranium
c) Plutoniumd) Iridium
e) Cobalt

602. Which of the following elements is obsolete in radiotherapy - *(A1IMS Nov 09)*
a) Radium 226 b) Cobalt 60
c) Iridium 192 d) Cesium 137

603. Intercavitatory radiotherapy is treatment modality for- *(AI1MS 99)*
a) Ca Cervix b) Ca Oesophagus
c) Ca Stomachd) Renal cell CA

604. Advantage of brachytherapy - *(PGIDec 04)*
a) Non-invasive
b) Less radiation hazard to normal tissue
c) Max.radiation to diseased tissue
d) Can be given in all malignancies
e) Doesn't require trained personnel

605. Features of interstitial radiotherapy are all except -
a) Only used in head & neck *(PGI June 06)*
b) *i* Damage to normal tissue
c) Temporary or permanent
d) Only iridium used
e) Used for easily accessible organ

606. Radiation emitts by Ir-192 - *(PGIDec 07)*
a) 0.5 Mev b)0.6Mev
c) 0.66 Mev d)0.6 66Mev
e) 0.47 Mev

607. Radiosensitive tumors are - *(PGI June 06)*
a) Seminomab) Lymphoma
c) Sarcoma d) Ewing's sarcoma
e) Leukemia

608. Tumor(s) most responding to radiotherapy -*(PGI03)*
a) Sarcoma b) Seminoma
c) Lymphoma d) Leukaemia

609. Which of the following is the most radiosensitive tumour? *(AIIMS May 05)*
a) Ewing tumour
b) Hodgkin's disease
c) Carcinoma Cervix
d) Malignant fibrous histocytoma

610. Which of the following malignant tumors is radio resistant? *(DPG 09, AI06)*
a) Ewing Tumour b) Retinoblastoma
c) Osteosarcoma d) Neuroblastoma

611. Which of these tumors is least radiosensitive -
a) Ewing's sarcoma *(AIIMSMay 07)*
b) Osteosarcoma
c) Wilm's tumor
d) Neuroblastoma

612. Most radiosensitive brain tumor is - *(AIIMS 97)*
a) Astrocytoma b) Ependymoma
c) Medulloblastoma d) Craniopharyngeoma

613. The most radiosensitive tumour among the following is- *(AI06)*
a) Bronchogenic carcinoma b) Carcinoma parotid
c) Dysgerminoma d) Osteogenic sarcoma

614. Most Radiosensitive ovarian tumor is- *(AIIMS 97)*
a) Serus cystadenoma b) Dysgerminoma
c) Demoidcyst d) Teratoma

615. Most Radiosensitive tumor - *(AIIMS 95)*
a) Brenner's tumor b) Dysgerminoma
c) Mucinous cystadenoma d) Teratoma

616. Tumor responding best to radiation include following- *(PGI 97)*
a) Melanoma b) Dysgerminoma
c) Teratoma d) Choriocarcinoma

617. Most Radiosensitive tumor of the following is -
a) Ca Kidney b)Ca Colon *(AI01)*
c) Ca Pancreas d)Ca Cervix

618. Which one of the following therapeutic mode is commonly employed in intra-operative radiotherapy?
a) Electron *(DPG 09, AIIMS 03)*
b) Photon
c) X-ray
d) Gamma rays

619. Intraoperative RT is given in - *(AIIMS 98)*
a) Ca Cervix b)Ca Breast
c) Ca Pancreas d) Ca Thyroid

620. Prophylactic intracranial irradiations are given in -
a) Small cell Ca of lung *(PGI 98)*
b) Testicular Ca
c) Ca breast
d) Ca stomach

621. Prophylactic cranial irradiation not indicated in treatment of - *(AI 02)*
a) Small cell Ca of lung b) ALL
c) Hodgkin's lymphoma d)NHL

622. Craniospinal irradiation is used in the Treatment of
a) Oligodendroglioma *(AI 02)*
b) Pilocytic astrocytoma
c) Mixed oligoastrocytoma
d) Medulloblastoma

623. Stereotactic radiosurgery uses all except -
a) Proton *(AIIMS May 09)*
b) Electron
c) Linear accelerator
d) Gamma knife

598)a 599)All 600)c 601)d,e 602)a 603)a 604)b,c 605)a,d,e 606)e 607)a,b,d 608)b,c 609)a 610)c
611) b 612) c 613)c 614)b 615)b 616)b 617)d 618)a 619)c 620)a 621)c 622)d 623)b

624. Stereotactic Radio-surgery is a form of - *(A1IMS 03)*
a) Radiotherapy b) Radioiodine therapy
c) Robotic Surgery d) Cryo Surgery

62 5. Stereotactic Radiotherapy is used in -
a) Miliary Lung Metastasis *(AIIMS May 12)*
b) Inoperable Stage 1 Lung Tumor
c) Lymphangitis Carcinomatosa
d) Tumor at die base of tongue with new Lymph Node enlargement

626. Gamma knife - *(PGI June 06)*
a) Steel knife
b) Used for cutting tumours in difficult location
c) Cobalt is used
d) Recovery delayed

627. Isotopes used in relief of metastatic bone pain includes - *(PGI May 10)*
a) Strontium 89 b) 1-131
c) Gold-198 d)P-32
e) Rhenium-186

628. The technique employed in radiotherapy to counteract the effect of tumour motion due to breathing is known as - *(AI05)*
a) Arc technique b) Modulation
c) Gating d) Shunting

629. For which malignancy, intensity Modulated Radiotherapy (IMRT) is the most suitable -
a) Lung b) Prostate *(AUMS Nov 05)*
c) Leukemias d) Stomach

630. Hyperfractionation radiotherapy is used in the management of - *(DPG Feb. 09)*
a) Lung cancer b) Breast cancer
c) Seminoma d) Ovarian cancer

631. Radiosensitizer drug(s) is/are - *(PGI Dec 08)*
a) Misonidazole b)ActinomycinD
c) Oxygen d) Hyperthermia
e) Amifostine

632. Radiation therapy to hypoxic tissues may be potentiated by the treatment with - *(AIIMS 03)*
a) Mycostatin b) Metronidazole
c) Methotrexate d) Melphalan

633. All are radiosensitizer except - *(AIIMS 97)*
a) 5-Fu b)BUDR
c) Cyclophosphamide d)Hydroxyrea

634. A patient with cancer received extreme degree of radiation toxicity. Further history revealed that the dose adjustment of a particular drug was missed during the course of radiotherapy. Which of the following drugs required a dose adjustment in that patient during radiotherapy in order to prevent radiation toxicity - *(AIIMS May 04)*
a) Vincristine b) Dactinomycin
c) Cyclophosphamide d) 6 - Mercaptopurine

635. Which of the following drugs requires a dose adjustment in patient during radiotherapy in order to prevent radiation toxicity ? *(DPG Mar. 09)*
a) Vincristine b) Dactinomycin
c) Cyclophosphamide d) 6-Mercaptopurine

636. Radioprotective drug is - *(PGIDec. 08, AI 01,12)*
a) Paclitaxem b) Vincristine
c) Amifostine d) Btoposide

637. Amifostine, protects all of the following except -
a) CNS b) Salivary glands *(AI 09)*
c) Kidneys d) GIT

638. Which of the following statements about 'Stochastic effects ' of radiation is true - *(AI 10)*
a) Severity of effect is a function of dose
b) Probability of effect is a function of dose
c) It has a threshold
d) Erythema and cataract are common examples

639. Most sensitive tissue to Radiation is - *(AIIMS 95)*
a) Liver b) Gonads
c) Spleen d)Skin

640. Organs sensitive to radiation are - *(PGI 03)*
a) Gonad b) Bone marrow
c) Liver d) Fat
e) Nervous tissue

641. What is radioresistant - *(AIIMS 97)*
a) Cartilage b) Seminoma
c) Ewings sarcoma d) GI epithelium

642. Most radiosensitive tissue of body among the following is - *(MH 02)*
a) Bone marrow b) Spleen
c) Kidney d) Brain

643. Most common skin manifestation seen after 2 days of radiation therapy is - *(DPG 09, MH 05, AI 98)*
a) Erythema b) Atopy
c) Hyperpigmentation d) Dermatitis

644. Most common hormone dificiency seen after intracranial radiation therapy - *(AIIMSMay 0 7)*
a) Prolactin b) Gonadotropins
c) ACTH d) Growth hormone

645. Most common presentation of radiation carditis is-
a) Pyogenic Pericarditis *(AI 97)*
b) Pericardial Effusion
c) Myocardial Fibrosis
d) Atheromatous Plaque

646. Late effects of radiation thearpy - *(PGI 02)*
a) Mucositis b) Enteritis
c) Nausea and vomiting d) Pneumonitis
e) Somatic mutations

647. Low dose Radiation cause - *(PGI Nov. 10)*
a) Lung cancer b)AML
c) Cervical cancer d) Glioma
e) Meningioma

648. MC cancer due to Radiation - *(PGIDec 07)*
a) Leukaemia b) Bronchogenic Ca
c) Thyroid Ca d) Breast cancer
e) Bone tumour

649. Radiation exposure during infancy has been linked to which one of the following carcinoma - *(AI 03)*
a) Breast b) Melanoma
c) Thyroid d)Lung

624) a 625) b 626) b,c 627)a,d,e 628) c 629) b 630) a 631)a,b,c,d 632) b 633) c 634) b 635) b 636) c 637) a 638)b 639)b 640)a,b 641)a 642)a 643)a 644)d 645)b 646)a,b,d,e 647)a,b,d,e 648)a 649)c

650. Post-radiation transverse myelitis usually presents at what time after radiation therapy- *(MH 05)*
a) l - 2 weeks b) l - 2 months
c) 4 - 6 months d) l year

651. Most Radio sensitive stage - *(DPG 09, AI08, 07,98,96, PGI Dec 05, 97, AIIMS 02)*
a) S phase
b) Gjphase
c) G_2 phase
d) G_2M phase

652. Most radio resistant phase in cell cycle - *(Jipmer 11)*
a) Gj b) Early S
c) Late S d) G_2

653. Ionoising radiation most sensitive in - *(PGI June 05)*
a) Hypoxia b) S phage
c) G_2M phage d) Activating cell

654. The phase of cell cycle, most sensitive to radiation is / are - *(PGI Nov 09)*
a) M Phase b) G_2 Phase
c) S Phase d) Early G_1 Phase
e) G_0Phase

655. The maximum permissible radiation exposure per year recommended by NCRP for radiation worker is- *(MH 06, DPG 08)*
a) 3 rad b) 8 rad
c) 10 rad d)50mSv

656. Maximum permissible radiation dose in pregnancy is - *(MH 03, 02, AIIMS 03)*
a) 0.5 rad b) 1.0 rad
c) 1.5 rad d) rad

657. Cell most sensitive to radiation - *(DPG Feb. 09)*
a) Lymphocytes b) Neutrophils
c) Basophils d) Platelets

658. The radiation tolerance of whole liver as - *(AI 04)*
a) 15 Gy b)30Gy
c) 40Gy d)45Gy

659. Point A and point B Manchester location are important for treatment of which cancer -
a) Cervix b) Vagina *(MH 10, 03)*
c) Ovary d) Uterus

660. Point B in treatment of Ca Cervix by radiotherapy corresponds to - *(DPG Feb. 09)*
a) Obturator nodes b) Machenrodt's ligament
c) Ischial tuberosity d) Round ligament

661. Quantum of Radiation advocated at point B in carcinoma cervix - *(MH 11)*
a) 1000 cGy b) 2000 cGy
c) 5000 cGy d)8000cGy

662. Maximum recommended external beam radiation therapy dose for a case of carcinoma cervix is -
a) 80 Gy b)70Gy *(MH-11)*
c) 50 Gy d) 35 Gy

663. Photodynamic therapy with hematoporphyrins and light is increasingly used in treatment of ?
a) Ovary Ca b)SkinCa *(MH 10)*
c) Colon Ca d) All of the above

664. Emergency radiotherapy is given in - *(PGI June 05)*
a) Superior vena cava syndrome
b) Pericardial temponade
c) Increased ICP
d) Spinal cord compression

665. What dose of radiation therapy is recommended for pain relief in bone metastases - *(ARMS May 04)*
a) 8 Gy in one fraction b) 20 Gy in 5 fractions
c) 30 Gy in 10 fractions d) Above 70 Gy

666. The ideal timing of radiotherapy for Wilms tumour after surgery is - *(AI 06)*
a) Within 10 days b) Within 2 weeks
c) Within 3 weeks d) Any time after surgery

667. In which malignancy postoperative radiotherapy is minimally used - *(AI 04)*
a) Head and neck b) Stomach
c) Colon d) Soft tissue sarcomas

668. Radiation induced necrosis can be diagnosed by -
a) PET b) CT *(ARMS Nov 09)*
c) MRI d) Biopsy

669. Most stable radio-isotope among the following -
a) 0-18 b)C-14 *(MH-11)*
c) P-32 d) I-125

MISCELLANEOUS

670. Invertogram to be done in a new born - *(PGI98)*
a) Immediately b) After 2 hours
c) After 4 hours d) After 6 hours

671. First sign of hydrocephalus in children is - *(PGI 98)*
a) Post clinoid erosion b) Large head
c) Sutural diastasis d) Thinned out vault

672. William's syndrome is associated with - *(ARMS 98)*
a) Congenital supravalvular aortic stenosis
b) Congenital subvalvular aortic stenosis
c) VSD
d) ASD

673. Which one of the following is the most preferred route to perform cerebral angiography? *(AI 05)*
a) Transfemoral route b) Transaxillary route
c) Direct carotid puncture d) Transbrachial route

674. Beaded lumen with flmbrial fluid is seen in- *(NEET/DNB Pattern)*
a) TB of fallopian tube b) TB of endometrium
c) TB of Ovary d)None

675. Investigation of choice in parathyroid pathology is -
a) CT Scan *(MH 02, AI 95)*
b) Gallium scan
c) Thallium scan
d) Tc - Thallium substruction scan

676. Which of the following is not a CT feature of Adrenal adenoma- *(AI 09)*
a) Low attenuation
b) Homogenous density and well defined borders
c) Enhances rapidly, contrast stays in it for a relatively longer time and washes out late
d) Calcification is rare

650) d 651) d 652) c 653) c,d 654) a,b 655) d 656) a 657) a 658) c 659) a 660) a 661) c 662) c 663) d

677. All of the following statements about CT scan features of adrenal adenoma are true, Except- *(AI10)*
a) Calcification is Rare
b) Low Attenuation
c) Early enhancement with slow wash out of contrast
d) Regular margins

678. Which one of the following imaging modalities is most sensitive for evaluation of extra-adrenal Pheochrmocytoma- *(A1IMS 03)*
a) Ultrasound b)CT
c) MRI d) MIBG scan

679. The diagnostic procedure not done in case of pheochromocytoma - *(AIIMSMay07)*
a) CT scan b) MRI
c) FNAC d) MIBG scan

680. Which of the following feature of thyroid nodule on ultrasonogram is not suggestive of malignancy?
a) Hyperechogenisity *(AI09, AIIMS May 10)*
b) Hypoechogenisity
c) Nonhomogenous
d) Microcalcification

681. All of the following modalities can be used for in-situ ablation of liver secondaries, except - *(AI 06)*
a) Ultrasonic waves b) Cryotherapy
c) Alcohol d) Radio frequency

682. All are X-ray findings of retinoblastoma except -
a) Widening of optic canal *(AIIMS 99)*
b) Intra cerebral calcification
c) Intraocular calcification
d) Secondaries in cranial bones

683. 'Thumb print' sign seen in - *(PGI June 08)*
a) Candida b) Aspergillus
c) Thrrmomyces d) Epiglotitis

684. On DSA, typical 'string of beads' appearance of arteris is seen in- *(MH10, AIIMS May 04)*
a) Takayasu's disease
b) Atherosclerotic stenesis
c) Fibromuscular dysplasia
d) Middle aortic syndrome

685. X-ray view for supra orbital fissure - *(AIIMS 9 7)*
a) Towne's b)AP
c) Caldwell d)Basal

686. Caldwell lac view (occipito - frontal) can visualise -
a) Spenoid sinus b) Nasal bone *(PGI 02)*
c) Maxillary bone d) Ethmoid
e) Frontal sinus

687. Basal skull view (submentovertical view) X-ray is best to visualize - *(PGI2K)*
a) Ethmoid sinus b) Frontal sinus
c) Sphenoid sinus d) Maxillary sinus
e) Nasopharynx

688. Neural tube defect is best detected by - *(AI95)*
a) USG b) Chromosomal analysis
c) Amniocentesis d) Placentography

689. True about virtual colonoscopy - *(PGI Nov. 10)*
a) Provide endoluminal view
b) Biopsy can be taken
c) CT and MRI used
d) Used even when conventional colonoscopy fails
e) Used of screening of ca colon

690. Which of the following is used to differentiate between arachnoid cyst and epidermoid *cyst-(AIIMSNov. 11)*
a) FLAIR b)Tl weighted MRI
c) Smooth margin d) Contrast enhancement

691. In cerebral angiography the dye is injected through-
a) Femoral artery b) Brachial artery *(AI 99)*
c) Axillary artery d) Radial artery

692. Which of the following liver metastasis appear hypoechoic on Ultrasonography - *(AI 12)*
a) Breast cancer b) Colon cancer
c) Renal cancer d) Mucinous adenocarcinoma

693. A child was taken for CECT Chest and contrast was injected; child had swelling which gradually increased. There is numbness. There is pain on passive extension of fingers. He is not allowing you to touch the arm. Pulse was present. What will you do?
a) High Dose Prednisolone *(AIIMS May 12)*
b) Arterial Thrombectomy
c) Immediate Fasciotomy
d) Antihistaminics / Anticoagulants

SKIN

ANATOMY OF SKIN

1. Desmosomes are helpful in connecting -
a) Keratinocytes *(NEET/DNB Pattern)*
b) Melanocytes
c) Dermis and epidermis
d) Langerhans cells

2. True about stratum lucidum - *(PGI June 09)*
a) Sandwitched between S. spinosum and S.granulosum
b) Sandwitched between S. corneum and S.granulosum
c) Contain hair follicle
d) Also known as prickle cell layer
e) Contain degenerated cells

3. Which layer of epidermis is underdeveloped in the VLBW infants in the initial 7 days - *(AIIMS Nov 02)*
a) Stratum germinativum b) Stratum granulosum
c) Stratum lucidum d) Stratum corneum

4. Melanocytes are present in - *(PGI99)*
a) Stratum corneum b) Stratum basale
c) Stratum granulosum d) Dermis

5. All statements are true regarding skin except -
a) Skin is stratified squamous epithelium *(PGI 96)*
b) Melanocyte & merkel cells are immigrant cells
c) Keratin filaments are a hallmark of epidermal cells
d) Keratinization process cause hydration of cells
e) Spines of spinous cells are formed from house keeping organelle

6. Basal cell degeneration seen in - *(PGI 02)*
a) Lichen planus b) Psoriasis
c) Pemphigus

7. Acantholysis involves - *(PGI Dec 08)*
a) Epidermis
b) Dermis
c) Dermo-epidermal junction
d) Subcutaneous tissue

8. Acanthosis involves - *(NEET/DNB Pattern)*
a) Str spinosufn b) Str granuolosum
c) Str Basale „ d) Str corneum

9. Dyskeratosis is characteristic feature of -*(PGI2K)*
a) Darrier'sds b) Pemphigus vulgaris
c) Psoriasis d) Bowen's disease
e) Hailey-Hailey ds

10. In which of the following conditions Parakeratosis most frequently occurs - *(AI06)*
a) Actinic keratoses
b) Seborrheic keratoses
c) Molluscum contagiosum
d) Basal cell carcinoma

11. Fox Fordyce's disease is a disease of - *(DPG 08)*
a) Eccrine glands b) Apocrine glands
c) Sebaceous glands d) Pilosebaceous glands

12. Fordyce's spot involves - *(SGPGI05)*
a) Sebaceous glands b) Pilosebaceous glands
c) Hair d) Nails

13. Hidradenitis suppurativa is a disease of?
a) Apocrine glands *(NEET/DNB Pattern)*
b) Eccrineiglands ,. -5 ?
c) Holocrine glands
d) None of the above

im **Miliaria is a disorder of -** *(NEET/DNB Pattern)*
a) Sebaceous glands 5 b) Apocrine glands
c)Eccrineglands d) Holocrine glands

15. Regarding Fordyce spots - *(PGI 02)*
a) Represent internal malignancy
b) Ectopic sebaceous glands
c) Present in axillae
d) Found in healthy people
e) Are erythematous

16. Fordyce's disease mainly involves-f^Z/MS[1]*2K, PGI97)*
a) Lips b) Buccal mucosa
c) Neck d) Trunk

17. In Fox Fordyce disease, true is/are - *(PGI 2002)*
a) Common in adult woman
b) Bullous lesions are common
c) Common in areola & axilla
d) Associated with other malignancies

18. Acne vulgaris invloves - *(AIIMS2001)*
a) Pilosebaceous gland b) Sebaceous gland
c) Eccrine gland d) Apocrine gland

19. Acne vulgaris involves - *(PGI 96)*
a) Sweat glands b) Sebaceous gland
c) Hair follicles d) Ceruminous glands

20. Acne vulgaris is due to involvement *oi-(PGI June 06)*
a) Sebaceous glands b) Eccrine glands
c) Pilosebaceous glands d) Apocrine glands
e) Sweat glands

21. Comedones are seen in - *(AIIMS 98, Kerala 94)*
a) Acne vulgaris b) Lichen planus
c) Adenoma sebaceum d) Pityriasis

22. Features of acne vulgaris - *(PGI June 06)*
a) T secretion
b) Not seen after 20 years
c) T Androgen production causes
d) Rx is penicillin for 1 week

23. Causative factor for acne are following except -
a) Androgen *(PGI 2000, SGPGI 00)*
b) Only food
c) Bacterial contamination
d) Hypercomification of duct

245 Jh sebaceous glands accumulation of sebum leads : to - *(NEET/DNB Pattern)*
a) Millia b) Acne ■ ,
c) Epidermoid cyst d)Milliria

25. Treatment of choice for Acne vulgaris *-(PGIDec 05)*
a) Minocycline for inflammatory acne
b) Retinoids for comedonal acne
c) Etretinate
d) Rifampicin
e) Dapsone

---

26. Drug treatment of acne vulgaris - (.*PGI June 05)*
a) Minocycline b) Penicillin
c) Co-triamoxazole d) Gentamycin
e) Tetracycline

27. Treatment of acne- *(PGI June 05)*
a) 13-cis retinol b) Minocycline
c) Erythromycin d) Dapsone
e) Rifampicin

28. A patient presented with multiple nodulocystic lesions on the face. The drug of choice is -
a) Retinoids b) Antibiotics *(AIIMSMay02)*
c) Steroids d)UV light

29. A 24 year old unmarried woman has multiple nodular, cystic, pustular and comadonic lesions on face, upper back and shoulders for 2 years. The drug of choice for her treatment would be - *(AI06)*
a) Acitretin b) Isotretinoin
c) Doxycycline d) Azithromycin

30. Treatment of nodulocystic acne \s-*(AHMS 95, AI 94)*
a) Erythromycin b) Tertacycline
c) Isoretinonine d) Steroids

31. A teenager girl with moderate acne is also complaining of irregular menses. Drug of choice will be- *(AIMS Nov 10)*
a) Oral isotretinon b) Oral acitretin
c) Oral minocycline d) Cyproterone acetate

32. A female patient presents with diffuse alopecia to you. She had suffered from typhoid fever 4 months back. Most probable diagnosis is - *(AIMSNov 07)*
a) Androgenetic alopecia b) Telogen effluvium
c) Anagen effluvium d) Alopecia areata

33. A 30 year old female developed diffuse hair loss 3 months after delivery of her first child. The probable diagnosis is - *(PGI 01, SGPGI03)*
a) Androgenic alopecia b) Endocrinal alopecia
c) Telogen effluvium d)SLE

34. Diagnosis of a man with diffuse hair loss involving crown & frontal scalp with maintenance of frontal hair line - *(Jipmer 98)*
a) Alopecia areata
b) Anagen effluvium
c) Male pattern baldness
d) Female pattern baldness

35. A male patient presents with patchy loss of hair on scalp, eyebrows and beard. He also gives history of rapid graying of hair in a few areas. The likely diagnosis is - *(AI 08)*
a) Alopecia areata b) Anagen effluvium
c) Telogen effluvium d) Androgenic alopecia

36. A 8 year old child has localized non cicatrial alopecia over scalp with itching and scales. The diagnosis is - *(AIMS 93)*
a) Tinea Barbae b) Alopecia areata
c) Tinea Capitis d) Lichen planus

37. A male presents with focal alopecia and boggy swelling on scalp and easily pluckable hair. Diagnosis is - *(AIMS 95)*
a) Alopecia areata b) Patterned baldness
c) Telogen effluvium d) Tinea capitis

38. Anagen phase of the hair indicates-*(AIMS May 06)*
a) The phase of activity and growth
b) The phase of transition
c) The phase of resting
d) The phase of degeneration

39. Growth phase of hair is - *(PGI 99, AI 98)*
a) Anagen b) Metagen
c) Telogen d)None

40. This phase in hair cycle determines the length to which hair in different body areas can grow -
a) Anagen b) Catagen *(Karri 11)*
c) Telogen d) Kenogen

41. Cicatricial alopecia is seen in - *(PGIDec 07)*
a) DLE b) Psoriasis
c) Alopecia areata d) Lichen planus
e) SLE

42. This is a cause for scarring alopecia - *(Karn 11)*
a) Alopecia areata b) Aplasia cutis
c) Trichotillomania d) Sarcoidosis

43. All of the following are causes of cicatrizing alopecia except - *(AIMSNov 07)*
a) Lichen planus b) Discoid lupus erythematosus
c) Alopecia areata d) Lupus vulgaris

44. Cicatricial alopecia is seen in - *(PGIDec 04)*
a) DLE b) SLE
c) Secondary syphilis d) Psoriasis
e) Lichen planus

45. Scarring alopecia is seen in - *(AI 09)*
a) T. Capitis b) Androgenic alopecia
c) Alopecia areata d) Lichen planus

46. Which of the following conditions causes alopecia without scarring - *(J & K 05)*
a) DIE b) Herpes Zoster
c) Alopecia areata d) Lichen planus pilaris

47. Cicatricial alopecia is seen in - *(AI 99)*
a) Tenia capitis b) Psoriasis
c) DIE d) Alopecia aereta

48. Alopecia aerata is - *(NEET/DNB Pattern)*
a) Cicatricial scar b) Non cicatricial scar
c) Fungal infection d)None

49. Exclamation mark alopecia is a feature of -
a) Telogen effluvium *(AIMS Nov 05, Bihar 06,*
b) Androgenic alopecia *Kerala 01, Karn 05)*
c) Alopecia aerata
d) Alopecia mucinosa

50. In alopecia areata, seen is - *(PGI97)*
a) Exclamation mark hair b) Scarring
c) Fungal infection d) Traumatic

51. Anagen effluvium is induced by all except -
a) Radiation b)PEM *(Karn 08)*
c) Anticancer drug d) Prolonged labor

26) a,c,e 27)a,b,c,d 28) a 29) b 30) c 31) d 32) b 33) c 34) d 35) a 36) c 37) d 38) a 39) a
40) a 41)a,d,e 42)b,d 43)c 44)a,b,e 45)d 46)c 47)c 48)b 49)c 50)a 51)d

52. Contraindicated in Androgenic Alopecia - *(AI2000)*
a) Testosterone b) Minoxidil
c) Cyproterone d) Finasteride

53. Nail is involved in - *(PGI Dec 07)*
a) Psoriasis b) Lichen planus
c) Fungal infection d) Alopecia
e) Viral infection

54. Nails are involved in all except - *(SGPG1 05)*
a) Psoriasis b) Lichen planus
c) Taenia d)DLE

55. Nail involvement is not a feature of - *(A11MS 94)*
a) Psoriasis b) Lichen planus
c) Dermatophytosis d)DLE

56. Pitting nail dystrophy seen in-*(PGI June 08, DPG 09)*
a) Dermatophytic infection
b) Psoriasis
c) Lichen planus
d) Seborrheic dermatitis

57. Pitting of nails is seen in - *(DELHI PG Feb. 09)*
a) Lichen planus b) Psoriasis
c) Pemphigus d) Arsenic poisoning

58. Moth eaten alopecia is seen in - **(***Corned 08)*
a) Black dot tinea b) Telogen effluvium
c) Alopecia areata d) Secondary syphilis

59. Pterygium of nail is characteristically seen in -
a) Lichen planus *(AI06, NEET/DNB Pattern)*
<b) Psoriasis
c) Tinea ungjuni
dJAlopeciaffie; ata

60. Koenen's periungal fibroma is seen in -
a) Tuberous sclerosis *(PGI 96, Jipmer 02)*
b) Neurofibromatosis
c) Psoriasis
d) Alopecia aerata

61. Wrong statement is - *(AI2000)*
a) Mees line in arsenic poisoning
b) Pterygium of nails in Lichen planus
c) Onycholysis in Psoriasis
d) Koilonychia in Megaloblastic Anemia (B_{12} def)

SKIN LESIONS AND DISORDERS OF PIGMENTATION

62. A boy comes from Bihar with non-anesthetic hypopigmented atrophic patch over face, diagnosis is- *(AIIMS99)*
a) P. alba b) P. versicolour
c) Indeterminate leprosy d) Borderline leprosy

63. A child presents with solitary white well defined patch on his right thigh. Diagnosis is - *(AIIMS2000)*
a) Piebaldism b) Albinism
c) Nevus achromicus d) Acral vitiligo

64. A 24 year old man had multiple, small hypopigmented macules on the upper chest and back for the last three months. The macules were circular, arranged around follicles and many had coalesced to form large sheets. The surface of the macules showed fine scaling. He had similar lesions one year age which subsided with treatment The most appropriate investigation to confirm the diagnosis is -
a) Potassium hydroxide preparation of scales
b) Slit skin smear from discrete macules
c) Tzanck test *(AIIMSNov03)*
d) Skin biopsy of coalesced macules

65. An adult presents with oval scaly hypopigmented macules over chest and back. The diagnosis is- *(AIMS 01)*
a) Leprosy b) Lupus Vulgaris
c) Pityriasis versicolour d) Lichen Planus

66. Babloo a 5 year boy presents with small hypopigmented scaly macule on check. Some of his classmates also have similar lesions. The most probable diagnosis is - *(AIMS 2000)*
a) Pityriasis rosea b) Pityriasis versicolour
c) Indeterminate leprosy d) Pityriasis alba

67. 7 year old boy chandu presents with reccurent, scaly, hypopigmented patch on face, diagnosis is -
a) Vitiligo *(AIMS 95, 96, 98, 99, 01)*
b) Indeterminate leprosy
c) pityriasis alba
d) Pityriasis rosea

68. A 5 year boy has multiple asymptomatic oval and circular faintly hypopigmented macules with fine scaling on his face. The most probable cilinical diagnosis is - *(AI 03)*
a) Ptyriasis versicolor b) Indeterminate leprosy
c) Ptyriasis alba d) Acrofacial vitiligo

69. An 8 year old boy from Bihar presents with a 6 month H/o an ill defined hypopigmented slightly atrophic macule on the face. The most likely diagnosis is -
a) Ptyriasis alba *(AI 05,DPG 09)*
b) Indeterminate leprosy
c) Morphacea
d) Calcium deficiency

70. A 6 year old child from Tamil Nadu presents with a solitary nonanaesthetic patch on face, the possible diagnosis is - *(AIMS 98)*
a) Pityriasis alba b) Indeterminate leprosy
c) Pityriasis versicolor d) Tinea infection

71. Piebaldism refers to- *(KARNATAKA PGMEE 06)*
a) Androgenetic alopecia
b) Erythema nodosum leprosum
c) Associated with white forelock
d) None of the above

52) a 53) All 54) d 55) d 56)b,c 57) a,b 58) d 59) a 60) a 61) d 62) c 63) c 64) a 65) c
66) d 67) c 68) c 69) b 70) b 71) c

72. Which of the following is uwtrue, regarding piebaldism- *(NEET/DNB Pattern)*
a) Autosomal dominant condition
b) Amelanotic skin associated with a white forelock
c) Islands of normal or hypermelanotic skin
d) Usually improves with age

73. Which of the following is/are not the cause of hypopigmentation - *(PGI May 10)*
a) Leprosy b)Pinta
c) Syphilis d) Pytriasis alba
e) Pytriasis versicolor

74. Hypopigmented lesions are seen in -
a) Melasma *(DELHIPG Mar. 09)*
b) Pityriasis alba
c) Lichen planus pigmentosus
d) Urticaria pigmentosa

75. Hypopigmented patches can be seen *in-(PGIDec 05)*
a) Becker naevus b) Freckles
c) Nevus Ito d) Nevus Ota
e) Nevus anemicus

76. Hypo-depigmented lesion seen in - *(PGI04)*
a) Naevas Ito b) Naevus depigmentosa
c) Naevas Ota d) Naevas anaemicus
e) Freckles

77. Hypopigmented patches present in - *(SGPGI 02)*
a) Nevus Ota b) Nevus Ito
c) Nevus anemicus d) Becker nevus

78. True about pitryiasis alba - *(PGI 01)*
a) No active treatment required
b) Common in elderly
c) Variant of vitiligo
d) Common over the face
e) Presents as scaly, whitish macules

79. All of the following is given for the treatment for Pityriasis versicoler Except - *(AI02)*
a) Ketoconazole b) Griseofulvin
c) Clotrimazole d) Selenium sulphate

80S Spaghetti and meat ball appearance is seen in - *(NEET/DNB Pattern)*
a) Dermatophytes
b) Aspergillus
c) Pityriasis versicolor
d) Candida

81. Commonest type of vitiligo - *(MP 08)*
a) Vulgaris b) Segmental
c) Acrofacial d) Facial

82. An increased incidence of vitiligo is found *\s-(AHMS 94)*
a) Psoriasis b) Nutritional deficiency
c) Old age d) Diabetes mellitus

83. Most common endocrine disturbance associated with vitiligo is - *(Jipmer 11)*
a) Addison's disease b) Thyroid disease
c) Diabetes insipidus d) Diabetes mellitus

84. Vitiligo vulvaris, best treatment is - *(Bihar 03)*
a) PUVA b) Steroids
c) Coaltar d)All

85. Vitiligo vulvaris, treatment is - *(Jharkhand 06)*
a) PUVA b) Steroids
c) Coaltar d)All

86. True about vitiligo are all *except-(Jipmer 04, WB 05)*
a) Genetic predisposition is known
b) Leucotrichia is associated with good prognosis
c) PUVA is used for treatment
d) Topical steroids give good results

87. With regard to vitiligo, which one of the following is NOT correct - *(UPSC-109)*
a) Generalized vitiligo is often symmetrical
b) Trauma and sunburn may precipitate vitiligo
c) It is a congenital condition
d) Focal areas of melanocyte loss are observed

88. A female has hypopigmented lesion on centre of forehead. Drug responsible is ? *(AIIMS Nov 08)*
a) Hydroquinone
b) Ether metabolite of hydroquinone
c) Para tertiary butyl catechol
d) Para tertiary butylphenol

89. A 23 year old lady develops brown macular lesions over bridge of Nose and cheeks following exposure to light The probable diagnosis *\s-(AUMS 99, AI 01)*
a) Chloasma *(AIIMS May 12)*
b) Acne rosacea
c) Systemic lupus erythematosis
d) Photodermatitis

90. True about acanthosis nigricans - *(PGI 03)*
a) Most commonly seen in obesity
b) Seen in axilla
c) It signifies internal malignancy
d) It is associated with insulin resistance
e) Seen in old age

91. Acanthosis Nigricans in old pt. Usually indicate -
a) Skin disorder *(Jharkhand 04)*
b) Malignancy
c) Senile brain
d) Usually found in negro

92. Acanthosis nigricans histological show - *(MH10)*
a) Papillomatosis b) Marked acanthosis
c) Hypermelanosis d) All of the above

93. Diffuse form of hyperpigmentation is seen *\n-(MH 06)*
a) Vitamin B_{12} deficiency
b) Ectopic ACTH secretion
c) Whipple's disease
d) All of the above

94. A 20 year old young female had history of recurrent acne on the face treated with many antibiotics like clindamycin, tetracycline, erythromycin and others. Now she complained of multiple hyperpigmented spots at the site of old acne lesions. Which of the following drug might have been responsible for this- *(AI 10)*
a) Erythromycin b) Tetracycline
c) Minocycline d) Demeclocycline

72)d 73)c 74)b 75)e 76)b,d 77)c 78)a,d,e 79)b 80)c 81)a 82)d 83)b 84)a 85)d 86) b 87) c 88) d 89) a 90)a,b,c,d 91)b 92) a 93) d 94) c

95. A17 years old girl with acne has been taking a drug for the last two years. She now presents with blue black pigmentation of nails. The likely medication causing the above pigmention is - *(AI10)*
a) Tetracycline b) Minocycline
c) Doxycycline d) Azithromycin

96. Rain drop pigmentation is seen in - *(AP 96)*
a) Chronic lead poisoning
b) Chronic Arsenic poisoning
c) Chronic Mercury poisoning
d) All of the above

97. Topical azelaic acid is used in - *(COMED 09)*
a) Hyperpigmentary disorders
b) Dermatophyte infections
c) Vitiligo
d) Mixed infections

98. Which among is notapromaiy^sliMi esion -
| iOTtaq-qg V | h);£laule *(NEET/DNB Pattern)*
c) Abscess d) None

99/ A flat discolouration on skin as 1 cm is called -
| a) MacijlV . 1 b) Plaque *(NEET/DNB Pattern)*
£ c Boil 1 * d) Papule 0
e) Wheal

100. Neither raised nor depressed is - *(PGI 97)*
a) Macule b) Plaque
c) Nodule d) Papule

DERMATITIS

101. An infant presented with erythematous lesions on cheek, extensor aspect of limbs, mother has history of bronchial asthma, the probable diagnosis is -
a) Air borne contact dermatitis *(AI 07)*
b) Atopic dermatitis
c) Seborraehic dermatitis
d) Infectious eczematoid dermatitis

102. A 3 months old infant is having thick scales on scalp with dandruff. Erythmatous scaly lesions on nasolabial folds are also present. Diagnosis is -
a) Atopic dermatitis *(SGPGI 03)*
b) Seborrheic dermatitis
c) Xerotic eczema
d) Napkin dermatitis

103. A 24 years male has eczematous dermatitis involving scalp and face with greasy yellow scales. He is also suffering from severe dandruff. He is having -
a) Atopic dermatitis *(DPG 03)*
b) Contact dermatitis
c) Seborrheic dermatitis
d) Discoid dermatitis

104. -A 3 year old child has eczematous der matitis on extensor surfaces. His mother has a history of Bronchial asthma. Diagnosis should be -
a) Atopic dermatitis *(AIIMS Nov 11; 06, May 07,*
b) Contact dermatitis *NEET/DNi 3 Pattern)*
c) Seborrhic dermatitis
d) Infantile eczematous dermatitis

105. A 25 year old man presents with recurrent episodes of flexural exzema contact urticaria, recurrent skin infections and severe abdominal cramps and diarrhoea upon taking sea foods. He is suffering from - *(AI 04, Manipal 09)*
a) Seborrheic dermatitis
b) Atopic dermatitis
c) Airborne contact dermatitis
d) Nummular dermatitis

106. Rakesh, a 7-year old boy had itchy, excoriated papules on the forehead and the exposed parts of the arms and legs for 3 years. The disease was most severe in the rainy season and improved completely in winter. Most likely diagnosis is -*(AIIMS May 12)*
a) Insect bite hypersensitivity
b) Scabies
c) Urticaria
d) Atopic dermatitis

107. Seborrhoeic dermatitis is frequently seen in -
a) Lipid storage disorders *(COMED 09)*
b) Psoriasis vulgaris
c) Hypertension
d) Parkinson's disease

108. Spongiosis is seen in - *(PGI 97)*
a) Acute eczema b) Lichen planus
c) Psoriasis d) Pemphigus

109. Characteristic feature of atopic dermatitis is -
a) Pruritus *(MP 05)*
b) Dennie's Lines
c) Scaling skin (Lichenification)
d) Rash

110. 'Itch is disease' is true for - *(UPSC 2K)*
a) Atopic dermatitis b) Insect bites
c) Seborrheic dermatitis d) Tinea cruris

111. Dennie-Morgan fold is seen in -*(Maharashtra 07)*
a) Dermotomyositis b) SLE
c) Psoriasis vulgaris d) Atopic dermatitis

112. M.C.site of Atopic dermatitis - *(AIIMS 95, Jipmer*
a) Scalp b) Elbow *93, DPG 09)*
c) Antecubital fossa d) Trunk

113. Atopic dermatitis is diagnosed by - *(AI 99)*
a) Patch test b) Wood lamp
c) Clinical examination d) IgE

114. Minor clinical feature in diagnosis of atopic dermatitis A/E - *(PGI Dec 04)*
a) Dry skin b) Pruritus
c) Morgagnian fold d) Pitriasis alba
e) Dermographism

115. Ofrue about atopic dermatitis are all except -
a) Pruritus *(NEET/DNB Pattern)*
b) Scratching
c) Mica like scales
d) Xerosis

95) b 96) b 97) a 98) d 99) a 100) a 101) a 102)b 103) c 104) a 105) b 106) a 107) d 108) a
109) a 110) a 111) d 112)c 113)c 114)b 115)c

116. In India, the plant which causes dermatitis most commonly is - *(AIIMS May 08)*
a) Parthenium grass b) Cotton fibers
c) Poison Ivy d) Ragweed

117. M.C. cause of Airborn Dermatitis in India is -
a) Parthenium b) Calotropis *(AI99)*
c) Crysophillus d) Dust

118. Most common cause of allergic contact dermatitis in Indian female is - *(AIIMS 2000)*
a) Vegetables b) Nail polish
c) Detergents d) Dyes

119. M.C. precipitant of contact dermatitis is -*(AI93)*
a) Gold b) Nickle
c) Silver d) Iron

120. Patch test is read after - *(AI 99)*
a) 2 hours b) 2 days
c) 2 weeks d) 2 months

121. Patch testing is done for - *(PGIDec 08)*
a) Atopic dermatitis
b) Irritant contact dermatitis
c) Allergic contact dermatitis
d) Discoid dermatitis
e) Seborrheic dermatitis

122. Air-borne contact dermatitis can be diagnosed by-
a) Skin biopsy *(AIIMS May 06, AI 92, DPG 09)*
b) Patch test
c) Prick test
d) Estimation of serum IgE levels

123. Patch test is done to document - *(AIIMSMay 09)*
a) Type I hypersensitivity
b) Delayed type hypersensitivity
c) Autoimmune disease
d) Immunocomplex deposition

124. A 55 year old male, with uncontrolled diabetes mellitus and hypertension, developed severe air-borne contact dermatitis. The most appropriate drug for his treatment would be - *(AIIMS 04)*
a) Systemic corticosteroids b) Thalidomide
c) Azathioprine d) Cyclosporine

125. Coin shaped eczema is - *(Iharkhand 05)*
a) Nummular eczema b) Atopic acema
c) Infantile eczema d) Endogenous eczema

126. Exfolative dermatitis can be due to all of the following disease except - *(AI 02)*
a) Drug hypersensitivity b) Pityriasis rubra pilaris
c) Pityriasis rosea d) Psoriasis

127. Causes of erythroderma - *(PGI lune 05)*
a) Pityriasis alba b) Pityriasis versicolor
c) Psoriasis d) Lichen planus
e) Eczema

128. Gold poisoning leading to exfoliative dermatitis is treated by - *(AIIMS 95)*
a) Chloroquin b) Steroid
c) Antibiotics d) Antihistaminics

129. All may lead to hives and wheals except - *(PGI 97)*
a) Cold b) Hepatitis C
c) Serum sickness d) Typhoid fever

130. A patient gets reccurent urticaria while doing exercise and on exposure to sunligh. Which of the following is most like cause - *(AIIMS 2000)*
a) Chronic Idiopathic Utricaria
b) Universal dermographism
c) Cholinergic utricaria
d) photodermatitis

131. A 22 year old woman developed small itchy wheals after physical exertion, walking in the sun, eating hot spicy food and when she was angry. The most likely diagnosis is - *(AIIMS Nov 03)*
a) Chronic idiopathic utricaria
b) Heat urticaria
c) Solar urticaria
d) Cholinergic urticaria

132. Following is a type of physical urticaria -
a) Dermographism *(DELHI PG Mar. 09)*
b) Urticaria pigmenthosa
c) Urticaria vasculitis
d) Auto-immune urticaria

133. Urticarial lesions are best described as-f*COMED 09)*
a) Nonpruritic b) Bullous
c) Evanescent d) Macular

134. A 5 year old male child has multiple hyperprigmented macules over the trunk. On rubbing the lesion with the rounded end of a pen, he developed urticarial wheal, confined to the border of the lesion. The most likely diagnosis is -*(AI 04, Manipal 09)*
a) Fixed drug eruption b) Lichen planus
c) Urticaria pigmentosa d) Urticarial vasculitis

135. A 9 year old has multiple itchy erythematous wheals all over the body for 2 days. There is no respiratory difficulty. Which is the best treatment?*(AIIMS 04)*
a) Antihelminthics
b) Systemic corticosteroids
c) Antihistamines
d) Adrenaline

136. All are true regarding hereditary angioedema, except? *(PGI 98)*
a) Dysfunction of enzyme is most common cause
b) Enzyme involved is Cl INH
c) Cl inhibitor targests Hageman factor
d) Complement C4 & C2 decrease
e) Bradykinin level decrease during attack

137 A man takes peanut and develops, tongue swelling, neck swelling, stridor, hoarseness of voice. What is the probable diagnosis - *(AIIMSNov 06)*
a) Angioneurotic edema b) FB bronchus
c) Parapharyngeal abscess d) FB in larynx

138. A patient presents with history of episodic painful edema of face and larynx. Which of the following is likely to be deficient- *(AI 09)*
a) Complement C3 b) Complement C5
c) C1 Esterase Inhibitor d) Properidin

116) a 117) a 118)None 119)b 120)b 121)c 122)b 123)b 124)c 125)a 126)c 127)c,d,e 128)b 129)d
130)c 131) d 132) a 133)c 134)c 135)c 136)a,e 137)a 138)c

139. A person present with recurrent swelling on face and lips due to emotional stress, cause is -
a) Cl esterase inhibitor deficiency *(AIIMSMay 09)*
b) Allergy
c) Anaphylaxis
d) None of the above

140. Immediately after eating, a man develops swelling of face and lips, respiratory distress, intense pruiritis, hypotension and feeling of impending doom. The most likely diagnosis is - *(AI09)*
a) Angioneurotic edema b) Anaphylaxis
c) Myocardial infarction d) Food stuck in throat

141. Not true about angioneurotic edema ? *(AI 09)*
a) Pitting edema of face, lips and mucous membrane
b) C1 Esterase inhibitor deficiency can cause it
c) Extreme temperature exposure can provoke it
d) Known with ACE inhibitors

PAPULOSQUAMOUS DISORDERS

142. All are causes of papulo squamous lesions except -
a) Psoriasis *(PGI2000, SGPGI02)*
b) Parapsoriasis
c) Squamous cell carcinoma
d) Mycosis fungoides
e) Congenital syphilis

143. AH of the following may lead to plaque formation except - *(PGI 99, SGPGI 03)*
a) Psoriasis b) Lichen planus
c) Pityriasis rosea d) Pemphigus

144. The important feature of psoriasis is -*(AMC 99)*
a) Crusting b) Scaling
c) Oozing d) Erythema

145. A 30 years old male presented with silvery scales on elbow and knee, that bleed on removal. The probable diagnosis is - *(AI 98)*
a) Pityriasis b) Seborrhoeic dermatitis
c) Psoriasis d) Secondary syphilis

146. A male is presenting with a violaceous papule which is pruritic. There is pterygium of nail with cicatracial alopecia. Diagnosis is - *(PGI 98)*
a) Psoriasis b) Pityriasis rosea
c) Lichen planus d) Seborrheic dermatitis

147. 10 year old child has violaceous papule and pterygium of nails. The diagnosis is - *(AIIMS 99)*
a) Psoriasis b) Pemphigus
c) Pemphigoid d) Lichen planus

148. An adult is presenting with severe dandruff and greasy yellow scales on scalp. Diagnosis is -
a) Seborrheic dermatitis *(PGI 94)*
b) Pityriasis rubra pilaris
c) Pityriasis rosea
d) Lichen planus

149. A child is presenting with erythmatous follicular papules on trunk. There are areas of normal skin within the lesions. There is thickening of Palms & soles. This child is suffering from - *(MP 07)*
a) Pityriasis rosea b) Pityriasis rubra pilaris
c) Psoriasis d) Seborrheic dermatitis

150. A patient presented with scarring alopecia, thinned nails, hypopigmented macular lesions over the trunk and oral mucosa. The diagnosis is - *(AIIMS 01)*
a) Psoriasis b) Leprosy
c) Lichen planus d) Pemphigus

151. A young female presented with lucy linear lesions on tongue since a month with elongation of nail fold beyond the nail bed. What is the diagnosis -*(AI 10)*
a) Psoriasis b) Geographic tongue
c) Lichen planus d) Candidiasis

152. Multiple erythematous annular lesions with peripheral collorette of scales arranged predominantly on trunk are seen in -*(AI 12, AI 02)*
a) Pityriasis vesicular
b) Pytiriasis rubra pilaris
c) Pityriasis rosea
d) Pityriasis lichennoides chronica

153. A 16 year old boy presented with asymptomatic, multiple erythamatous annular lesions with a collarette of scales at periphery of the lesions present on the trunk. The most likely diagnosis is- *(AI05)*
a) Pityriasis versicolor b) Pityriasis alba
c) Pityriasis rosacea d) Pityriasis mbra pilaris

154. Which of the following seen in Psoriasis -
a) Pautrier's micro abscess *(PGI Dec 07, Dec 06)*
b) Micro-munro abscess
c) Grenz zone
d) Hyperkeratosis
e) Suprapapillary thinning

155. All are true about psoriasis except - *(PGI 2000)*
a) Very pruritic
b) Pitting of nails
c) Joint involvement in 5-10%
d) Parakeratosis & acanthosis
e) Munro abscess

156. Typical silveryscales of psoriasis are absent in -
a) Scalp b) Kee *(Kerala06)*
c) Groin d) Elbow

157. Least common site involvement in psoriasisis -
a) Scalp *(AI 98, SGPGI 01)*
b) Nail involvement
c) CNS involvement
d) Arthritis

158. All are true regarding Psoriasis except -*(AI2000)*
a) Arthritis in 5%
b) Abscess is seen
c) Head, neck and face are not involved
d) No scaly, red lesions are seen in inffamammary and natal area

139) a 140) b 141)a 142)e 143)d 144)b 145)c 146)c 147)d 148)a 149)b 150)None 151)c 152) c 153) c 154)b,d,e 155)a 156)c 157)c 158)c

159. A patient presents with erythematous scaly lesions on extensor aspect of elbows and knee. The clinical diagnosis is got by - *(AIIMS May 02)*
a) Auspitz sign b) KOH smear
c) Tzanck smear d) Skin biopsy

160. Most common type of psoriasis - *(DNB 07)*
a) Plaque psoriasis b) Psoriasis vulgaris
c) Flexural psoriasis d) Penile psoriasis

161. This type of psoriasis is commonly seen in children and may follow a streptococcal sore *t\m&t-(Kam 11)*
a) Guttate b) Stable plaque
c) Pustular d) Arthropathic

162. Psoriasis associated with (3 - hemolytic streptococcal infection - *(Maharashtra 09)*
a) Psoriasis vulgaris
b) Erythrodermic psoriasis
c) Pustular psoriasis
d) Guttate psoriasis

163. Normal healthy child developing psoriatic lesions after an episode of streptococcal infection. Which type of lesion is this? *(Maharashtra 08)*
a) Plaque psoriasis b) Inverse psoriasis
c) Pustular psoriasis d) Guttate psoriasis

164. "Auspitz" sign is characteristically seen in -
a) Plaque Psoriasis *(AIIMS May 08)*
b) Pustular Psoriasis
c) Lichen planus
d) Inverse Psoriasis

165. A patient with psoriasis was started on systemic steroids. After stopping the treatment, patient developed universally red scaly skin with plaques losing their margins all over his body. The most likely cause is - *(AIIMS 01)*
a) Drug induced reaction
b) Pustular psoriasis
c) Bacterial infection
d) Erythrodermic Psoriasis

166. A patient with psoriasis was started on systemic steroids. After stopping treatment, the patient developed generalized pustules all over the body. The cause is most likely to be - *(AI02)*
a) Drug induced reaction b) Pustular psoriasis
c) Bacterial infections d) Septicemia

167. Munro micro abscess is seen in - *(PGI99)*
a) Dermal tissue b) Stratum basale
c) Stratum comeum d) Stratum malpighi

168. About micro-munro abscess which of the following statements are true - *(PGI June 09)*
a) Seen in stratum comeum
b) Seen in psoriasis
c) Contain neutrophils and lymphocyte
d) Contain neutrophil only
e) Associated pustules are normally seen

169. Bleeding spots seen on removal of scales in psoriasis is called as - *(PGI June 08)*
a) Auspitz sign b) Punctate hemorrhage
c) Nikolysk's sign d) Darrier sign

170. Auspitz Ipll isrelated to-*(Bihar 05, MH 11, NEET/ DNB Pattern)*
a) Pemphigus b) Psoriasis
c) Lupus vulgaris d) Lichen planus

171. All of the following are seen in psoriasis except -
a) Auspitz sign present *(SGPGI03)*
b) 10% associated with arthritis
c) It is premalignant disease
d) Worsening of disease during winter

172. Psoriasis is characterized by all, except- *(DELHIPG Feb. 09)*
a) Definite pink plaque with clear margin
b) In children disappear in 2 weeks to reappear again
c) Always associated with nail infection
d) Involves knee and elbow

173. Treatment of psoriasis - *(PGI June 05)*
a) PUVA b) Methotrexate
c) Systemic steroids d) Femicycline
e) Terbinafine

174. Vitamin D analogue calcitriol is useful in the treatment of -
a) Lichen planus b) Psoriasis
c) Phemphigus d) Leprosy

175. Treatment of pustular psoriasis is-*(AIIMS May 02)*
a) Thalidomide b) Retinoids
c) Hydroxyurea d) Metholtrexate

176. Treatment of choice in Pustular psoriasis- *(AI 94)*
a) Psorialin + UV therapy b) Systemic steroid
c) Methotrexate d) Estrogen

177. DOC for a pregnant woman in 2nd trimester with pustular psoriasis is - *(AI08)*
a) Prednisolone b) Dapsone
c) Acitretin d) Methotrexate

178. The treatment of choice for erythrodermic psoriasis is - *(SGPGI04)*
a) Corticosteroids b) Methotrexate
c) Coaltar topically d) Topical corticosteroids

179. A pdmigravida female presented with erythematous skin changes and lesions with multiple pus lakes. Which of the following should be the most appropriate- *(AI10)*
a) Corticosteroids b) Atretinin
c) Psorolen + PUVA d) PUVA

180. Drug of choice for impetigo herpetiformis is -
a) Prednisolone b) Dapsone *(DPG 08)*
c) Acitretin d) Methotrexate

181. The only indication of giving corticosteroids in pustular psoriasis is - *(AI05)*
a) Psoriatic erythroderma with pregnancy
b) Psoriasis in a pt. with alchoholic cirrhosis
c) Moderate arthritis
d) Extensive lesions

159) a 160) a,b 161)a 162)d 163)d 164)a 165)d 166)b 167)c 168)a,b,d 169)a 170)b 171)c 172)c
173)a,b 174)b 175)b 176)b 177)a 178)b 179)a 180)a 181)a

182. The only definitive indication of systemic steroids in psoriasis- *(AIIMS Nov 11)*
a) Pustular psoriasis
b) Impetigo herpetiformis
c) Psoriatic arthropathy
d) Erythroderma

183. Psoriasis is exacerbated by - *(AI 98)*
a) Lithium b) p - blockers
c) Antimalarials d) All of the above

184. All of the following drugs can worsen psoriatic lesion, except - *(J & K 05)*
a) Chloroquine b) Beta-blockers
c) Acitretin d) Lithium

185. Treatment of psoriasis include all except- *(MH 03)*
a) Retinoids b) Methotrexate
c) Cyclosporine d) Oral corticosteroides

186. Itchy polygonal violaceous palpules seen in - *(AI 98, DPG 09, NEET/DNB Amern)*
a) Psoriasis b) Pemphigus
c) Lichen planus d) Pitriasios rosea

187. Ichy purple papule followed by hyperpigmentation on resolution, is seen in- *(NEET/DNB Pattern)*
a) Addison's disease b) DM
c) Hypothyroidism d) Licfen planus

188. Not a histological feature of b'chen planus is - *(NEET/DNB Pattern)*
a) Acanthosis
b) Hyperkeratosis
c) Neutrophils in stratum
d) Pigment incontinence

189. The most characteristic finding in lichen planus is-
a) Civatte bodies *(PGI99)*
b) Basal cell degeneration
c) Thinning of nail plate
d) Violaceous lesions

190. Basal cell degeneration seen *in-(PGI 02,Jipmer 98, 02)*
a) Lichen planus b) Psoriasis
c) Pemphigus d)DLE

191. Max. Joseph's space is a histopatho-logical feature of - *(AIIMS May 06, MH 11)*
a) Psoriasis vulgaris b) Lichen planus
c) Pityriasis rosea d) Parapsoriasis

192. Wickehm's stria seen *in-(AI 02, SGPGI02, Bihar 03)*
a) Lichen niditus b) Lichenoid eruption
c) Lichen striates d) Lichen planus

193. Most characteristic feature of lichen planus is -
a) Thinning of nail plate is most common
b) Non scarring alopecia *(PGI 98)*
c) Violaceous lesions on skin and mucous membrane
d) Wickham striae

194. Characterstic nail finding in lichen planus - *(AIIMS 01, NEET/DNB Pattern)*
a) Pterygium
b) ST*
c) Beau's Lines
d) Hyperpigmentation of nails

195. Lacy white lesion in mouth with pterygium is seen in - *(SGPGI 01)*
a) Psoriasis b) Ptirysis alba
c) Lichen planus d) Leprosy

196. A young lady present with white lacy lesions in oral cavity and her proximal nail fold has extended onto the nail bed. What is the likely diagnosis -
a) Psoriasis *(AI 12, 10)*
b) Geographic tongue
c) Lichen planus
d) Candidiasis

197. Regarding Lichen planus all are true except -
a) Hypopigmentation in residual disease *(AI 2000)*
b) Lymphatic infiltration in supradermal layer
c) Itchy, polygonal, purple, papule
d) Skin, Hair & oral mucosa commonly involved

198. True about Lichen planus - *(PGIDec 04)*
a) Basal cell degeneration
b) Colloid bodies seen
c) Epidermal hyperplasia in chronic cases
d) Wickham's striae seen
e) Autoimmune disease

199. Cicatrising alopecia with perifollicular blue- gray patches is most commonly associated with *-(AI 11)*
a) Pitting of nails
b) Whitish lesions in the buccal mucosa
c) Arthritis
d) Discoid plaques in the face

200. Civatte bodies are found in - *(Kerala 98)*
a) Lichen planus b) Psoriasis
c) Dermatophytosis d) Vitiligo

201. All of the following regarding Lichen planus are true except - *(MP 05)*
a) Does not involve mucous membrane
b) Associated with Hepatitis 'C'
c) Topical steroid are the mainstay of therapy
d) Spontaneous remissions 6mo to 2 years

202. Pityriasis rosea true - *(AIIMS Nov 06, AI 07)*
a) Self limiting
b) Chronic relapsing
c) Life threatening infection
d) Caused by dermatophytes

203. Annular herald patch is seen in - *(AIIMS 97,*
a) Psoriasis b) P. alba *Jharkhand 05)*
c) P. rosea d) Nocardiasis

204. A patient of hypertension of ACE inhibitors developed rosea skin erruptions. True statement regarding this situation is - *(SGPGI 03)*
a) Drug may be the cause and discontinuation may improve the skin condition
b) High dose steroids are needed initially
c) ACE inhibitors are safe and cannot lead to skin eruptions
d) Drug may be the cause but discontinuation is not required

182)b 183) d 184)c 185)d 186)c 187)d 188)c 189)b 190) a 191)b 192)d 193)d 194)b 195) c
196) c 197) a 198) All 199)b 200) a 201) a 202) a 203) c 204) a

205. Which viral association is found in pityriasis rosea - *(Jharkhand 04)*
a) HHV 7 b)CMV
c) Vericella Zoster d)EBV

206. Which of the following statements is true regarding Pityriasis rubra pilaris - *(PGI01)*
a) Isolated patches of normal skin are found
b) Cephalocaudal distribution
c) I.V. cyclosporine is effective
d) More common in females
e) Oral cyclosporine is effective

207. Keratoderma is a feature of - *(DELHI PG Mar. 09)*
a) Pityriasis rubra pilaris b) Pemphigus
c) Pityriasis rosea d) Psoriasis

208. Koebner's phenomenon is characteristic of -
a) Psoriasis *(PGI 99)*
b) Pemphigus vulgaris
c) Pityriasis rosea
d) Lupus vulgaris

209. Koebner's phenomenon is seen in followin except- *(MH11)*
a) Erythema b) Scleromyxedema
c) Molluscum contagiosum d) Darnel's disease

im **In which of the following, Koebher phendmenon is NOT seen -** *(NEET/DNB Pattern)*
a) Lichen planus
b) Lichen sclerosis
c) Erythema mulritorme
d) Lichen sipiplex chromeusT

211. Koebner's phenomenon is seen in - *(PGIDec 04)*
a) Lichen planus b) Warts
c) Bechet syndrome d) Psoriasis
e) Vitiligo

212. Kobner phenomenon is present in all except -
a) Psoriasis b) Lichen planus *(Bihar 06)*
c) Warts d) None

2 **m** **Koebner phenomenon present in which of the following -** *(NEET/DNB Pattern)*
a) Plane warts b) Pemphigus vulgaris
c) Lupus vulgaris d) Lichen simplex bhronicus

214. "Isomorphic response" can be a feature of the following except - *(MH 03, 02)*
a) Warts b) Tinea
c) Psoriasis d) Molluscum contagiosum

215. Pseudoisomorphic phenomenon is seen in -
a) Psoriasis b) Lichen planus *(AI11)*
c) Vitiligo d) Plane warts

216. Pseudo koebener's phenomeneon is/are seen in -
a) Warts *(PGI Nov 10)*
b) Molluscum contagiosum
c) Lichen planus
d) Psoriasis

VESICULOBULLOUS (BLISTERING! DISORDERS

217. A patient is presenting with Non pruritic, Painless erythema surrounded by vesicles with erythematous halo on face & hand. There is history of drug intake for fever 2 weeks back. The patient is suffering from - *(PGI 98)*
a) Bullous pemphigoid
b) Erythema multiforme
c) Herpes zoster
d) Dermatitis herpatiformis

218. A 28 year old patient has multiple grouped papulovesicular lesions on both elbows, knees buttocks and upper back associated with severe itching. The most likely diagnosis is- *(AIIMS Nov 02)*
a) Pemphigus vulgaris b) Bullous pemphigoid
c) Dermatitis herpetiformis d) Herpes Zoster

219. A 30 year old male had severely ithcy papula-vesicular lesions on extremities, knees, elbows and butocks for one year. Direct immunofluorescence staining of the lesions showed IgA deposition at dermoepidermal junction. The most probable diagnosis is - *(AI 12, 04)*
a) Pemphigus vulgaris b) Bullous pemphigoid
c) Dermatitis herpetiforms d) Nummular eczema

220. Extremely pruritic excoriation & papules on buttocks with autoantibodies against epidermal transglutaminase and IgA deposition in dermis on immunohistological examination of normal perilesional skin. Diagnosis is - *(SGPGI 01)*
a) Pemphigus vulgaris
b) Pemphigoid
c) Linear IgA disease
d) Dermatitis herpetiformis

221. A 30-year-old male had severely itchy papulovesicular lesions on extremities, knees, elbows and buttocks for one year. Direct immunofluorescence staining of the lesions showed IgA deposition at dermo epidermal junction. The most probable diagnosis is - *(Manipal 09)*
a) Pemphigus vulgaris
b) Bullous pemphigoid
c) Dermatitis herpetiformis
d) Nummular eczema

222. A 40 year male presenting with painful flaccid vesicles on face and oral mucosa with assymetric distribution. Immunofluorescence shows intercellular IgG deposition in epidermis. Diagnosis is- *(AI04)*
a) Erythema multiformis b) Bullous pemphigoid
c) Pemphigus vulgaris d) Herpes zoster

205)a 206)a,b 207)a 208) a 209)b 210)d 211)a,b,d,e 212)d 213)a 214)b 215)d 216)a,b 217)b
218) c 219) c 220) d 221) c 222) c

223. A 23 years old lady presents with vesicular lesion in the buccal mucosa & crusted lesion on the skin, possible diagnosis is - *(AI97)*
a) Pemphigus Vulgaris
b) Pemphigus foliaceous
c) Pemphigoid
d) Dermatitis Herpitiformis

224. A middle aged female has flaccid bullae in the skin and oral erosion. Histopathology shows intraepidermal acanthololytic blisters. The most likely diagnosis is - *(PGI Dec 05)*
a) Pemphigus vulgaris
b) Paraneoplastic pemphigus
c) Bullous pemphigoid
d) Dermatitis hepatiformis
e) Epidermolysis bullosa acquista

225. A female presents with persistent painful oral lesions, with acantholytic cells. Most likely diagnosis is - *(AI 08)*
a) Pemphigus vulgaris
b) Dermatitis herpetiformis
c) Epidermolysis bullosa
d) Bullous pemphigoid

226. A 50 year old male known case of myasthenia with erythema ted shallow erosions with few blisters and scales. Oral mucosa is not involved immunopathology demonstrates IgG deposition on keratinocytes and auto antibodies against Dsg -1. The diagnosis is - *(PGI 98)*
a) Pemphigus vulgaris
b) Bullous pemphigoid
c) Pemphigus foliaceus
d) Dermatitis herpetiformis

227. A 24 years old female has flaccid bullae in the skin and oral erosions. Histopathology shows intraepidermal acantholytic blister. The most likely diagnosis is - *(AIIMS May 03)*
a) Pemphigoid
b) Erythema multiforme
c) Pemphigus vulgaris
d) Dermatitis herpetiformis

228. 25 years old female has palatal ulcer and skin blister most likely diagnosis is - *(AI 97)*
a) Pemphigus vulgaris
b) Pemphigus foliaceous
c) Dermatitis herpetiformis
d) Pemphigoid

229. A 85 yr old woman with Nikolsky sign-ve, blisters on thigh & trunk, lesions come on & off. What is the cause - *(PGI 2000)*
a) Pemphigus vulgaris
b) Pemphigoid
c) Lichen planus
d) Dermatitis herpetiformis

230. A 56 year old male lallu presents with painful bullous lesion in lower extrimity, the most likely diagnosis is - *(AIIMS 97)*
a) Pemphigus vulgaris b) Bullous pemphigoid
c) Necrotic pemphigus d) Contact eczema

231. A 40 year old male had multiple blisters over the trunk & Extremities. Direct immuno fluoresce studies showed linear IgG deposits along the basement membrane, which of the following is the most likely diagnosis - *(AIIMS Nov 04)*
a) Pemphigus vulgaris
b) Bullous pemphigoid
c) Pemphigus foliaceous
d) Dermatitis herpetiformis

232. A patient with Bullous eruption on lower limb and trunk, biopsy show epidermal bullae. The correct diagnosis is - *(AI 2000)*
a) Pemphigoid b) Pemphigus vulgaris
c) Impetigo d) Internal malignancy

233. A 45 year old male has multiple grouped vesicular lesions present on the T10 segment dermatome associated with pain. The most likely diagnosis is- *(AIIMS Nov 02)*
a) Herpes zoster
b) Dermatitis herpetiformis
c) Herpes simplex
d) Scabies

234. Most common pemphigus is - *(Jharkhand 06)*
a) Pemphigus vulgaris
b) Pemphigus vegetans
c) Pemphigus foliaceus
d) Pemphigus erythematosus

235. In pemphigus vulgaris, antibodies are present against - *(PGI 2000, SGPGI2000)*
a) Basement membrane b) Intercellular substance
c) Cell nucleus d) Keratin

236. Acantholysis is characteristic of - *(AI 03)*
a) Pemphigus vulgaris
b) Pemphigoid
c) Erythema multoforme
d) Dermatitis herpetiformis

237. A 50 years old man has a 2 year history of facial bullae & oral ulcers. Microscopic smear from skin lesions is most likely to disclose - *(AI 96)*
a) Tzanck cells b) Acantholytic cells
c) Necrosis d) Koilocytosis

238. Loss of Intercellular cohesion between keratinocytes is called as ~ *(NEET/E>NB Pattern)*
a) Acanthosis b): Acantholysis
c) Keratinolysis d) Spongiosis[1]

239. Acantholytic cells are - *(SGPGI 01)*
a) Epidermal cells b) Plasma cells
c) Keratinocytes d) Giant cells

223) a 224) a 225) a 226) c 227) c 228) a 229) b 230) b 231)b 232) c 233) a 234) a 235) b 236) a 237) a,b 238) b 239) a,c

240. Tzank cell is - *(NEET/DNB Pattern)*
a) Keratinocyte b) Fibrobalst
c) Neutrophil d) Lymphocyte

241. Acantholytic cells in pemphigus is - *(PGI96)*
a) Cell with hyperchromatic nuclei and perinuclear halo
b) Cell with hypochromatic nuclei and perinuclear halo
c) Multinucleated cells
d) None of the above

242. Flaccid bullae lesions with oral mucosal lesions. The finding in immunoflourescence is -
a) Fish net IgG in epidermis *(AIIMS Nov 09)*
b) Linear IgG in DEJ
c) Granular IgA in dermal papillae
d) Linear IgA in reticular dermis

243. All are associated with pemphigus except -
a) Thymoma *(SGPGI02, PGI 98)*
b) CLL
c) Myasthenia gravis
d) Non-Hodgkins lymphoma
e) Atrophic gastritis

244. True about pemphigus vulgaris - *(PGI June 09)*
a) Subepidermal
b) Autoimmune disease
c) Tzanck smear shows acantholytic cells
d) Antibody are formed against desmogleins
e) Blister on skin & mucosa

245. Spontaneous remission is most frequent with -
a) Herpes labialis *(SGPGI 04)*
b) Herpes genitalis
c) Herpetic chancroid
d) Herpes gestationis

246. Drug induced pemphigus is most commonly caused by- *(COMED06)*
a) Penicillamine b) Phenytoin sodium
c) Carbamazepine d) Penicillin

247. Subepidermal bullae on trunk and flexural surface with linear C_3/IgG basement membrane deposite are feature of - *(MH 08)*
a) Bullous pemphigoid
b) Pemphigus vulgaris
c) Linear Ig A disease
d) Dermatitis herpatiformis

248. Mucosa is never involved in which of the following disorders - *(J & K 05)*
a) Dermatitis herpetiformis
b) Pemphigus vulgaris
c) Epidermolysis bullosa acquisita
d) Toxic epidermal necrolysis

249. One of the following is the t/t of choice for dermatitis herpetiformis - *(AIIMS May 05)*
a) Corticosteroids b) Dapsone
c) Mtx d) Retinoids

250. Gluten free diet is beneficial in -
a) Psoriasis *(Kerala 96, MH 07, 06, 05)*
b) Exfoliative dermatitis
c) Dermatitis herpetiformis
d) Pemphigoid

251. All are true about linear IgA disease except -
a) Subepidermal involvement *(PGI 01)*
b) Severe itching
c) Granular deposition of IgA
d) Are candidates for gluten free diet
e) A variant of dermatitis herpetiformis

252. All causes erythema multiforme except - *(AI99)*
a) HSV b) Drugs
c) Idiopathic d)HPV

253. Erythema multiforme is most often related to -
a) Herpes zoster infection *(COMED 06)*
b) Herpes simplex infection
c) Molluscum contagiosum infection
d) Human papilloma virus infection

254. Most common cause of erythema multiforme -
a) Herpes simplex b) DM *(MH 10)*
c) Pityriasis rosae d) Erysipelas

255. Target or Iris lesion seen in -*(AI 98, AIIMS 97)*
a) Urticaria b) Erythema multiforme
c) Scabies d) Lichen planus

256. Regarding erythema multiforme all are true except - *(AI 2000)*
a) No vesicles
b) Target lesions are seen
c) Involves face and neck regions
d) Sign of internal malignancy

257. A 60-year old patient presented with several bullous lesions for the last 3 days; each bulla was surrounded by an erythematous halo. There were multiple target lesions. Patient also had oral erosions. The most likely diagnosis is - *(SGPGI 04)*
a) Chicken pox b) Herpes simplex
c) Herpes zoster d) Steven - Johnzon syndrome

258. All are true about erythema multiformis except -
a) Due to herpes simplex *(Jharkhand 05)*
b) Due to sulphonamide
c) Lesion are symmetrical
d) Mucous membrane is usually involved

259. Features of epidermolysis bullosa - *(PGI June 06)*
a) 1 Adhesion fibrils
b) Present as miliary & scaring
c) IgG deposits in epidermo-dermal junction

260. In an 8 day old child with no history of consanguinity in the parents, the mother reports blisters and bleeding off of the skin at the site of handling and pressure. There was a similar history in the previous child which proved to be fatal. The diagnosis is -
a) Bullous pemphigoid *(AIIMS May 01, AI 12)*
b) Congenital syphilis
c) Congenital epidermolysis bullosa
d) Letterer - Swiwe disease

240)a 241)a 242)a 243)e 244)b,c,d,e 245)d 246)a 247)a 248)a 249)b 250)c 251)c,d,e 252)d 253)b
254) a 255) b 256) a 257) d 258) d 259) a 260) c

261. Genetic predisposition is seen in which disease -
a) Lichen planus *(PGI97)*
b) Bullous pemphigoid
c) Pemphigus vulgaris
d) Epidermolysis Bullosa

262. Etiology of Epidermolysis bullosa is -*(Rohtak 97)*
a) Genetic b) Infections
c) Senile d) Malignant
e) Metabolic

263. In congenital dystrophic variety of epidermolysis bullosa, mutation is seen in the gene conding for - *(AIIMS Nov 08, May 11)*
a) Laminin 4 b) Collagen type 7
c) Alpha 6integerin d) Keratin 14

264. Which of the following shows granular deposition of IgA in dermal papilla - *(AIIMS May 09, Nov. 11)*
a) Dermatitis herpetiformis
b) IgA papillomatosis of childhood
c) Bullous pemphigoid
d) Gestational herpes

265. Skin disease not showing DIF (Direct immunofluorescence - *(PGI Nov. 10)*
a) Darrier's disease
b) Hailey-Hailey disease
c) Cicatricial pemphigoid
d) Dermatitis herpatiformis
e) Pemphigus

266. Direct immunofluorescence is positive *in-(PGI 02)*
a) Atopic dermatitis b) SLE
c) Pemphigus d) Secondary syphilis

267. Intraepidermal intercellular IgG deposition is seen in - *(AIIMS Nov. 11, May 09)*
a) Pemphigus b) Bullous pemphigoid
c) Herpes genitalis d) Not recalled

268. A patient presented with multiple vesicles over the body with fish net like IgG deposition in the epidermis. Most likely diagnosis is -*(PUNJAB 11)*
a) Pemphigus vulgaris
b) Pemphigus folliaceous
c) Dermatitis herpetiformis
d) Bullous pemphigoid

269. Fishy net pattern is seen in - *(Jipmer 11)*
a) Pemphigus vulgaris
b) Darier's disease
c) Bullous pemphigoid
d) Dermatitis herpetiformis

270. All are vesiculo bullous lesions except-*(Kerala 96)*
a) Dermatitis herpetiformis b) Scabies
c) Pemphigus d) Pemphigoid

271. All of the following are bullous lesions except -
a) Pemphigus vulgaris *(SGPGI03)*
b) Dermatitis herpetiformis
c) Atopic dermatitis
d) Pemphigoid

272. The following diseases are characterized by bullous eruptions EXCEPT - *(UPSC-109)*
a) Porphyria cutanea tarda
b) Variegate porphyria
c) Dermatitis herpetiformis
d) Lichen planus

273. Bullous skin lesions are seen in all except -
a) Impetigo b) DM *(MH05)*
c) Porphyria d) Lupus vulgaris

274. Sub-epidermal splitting is not found in - *(PGI 99)*
a) Bullous pemphigoid
b) Pemphigus foliaceous
c) Dermatitis herpetiformis
d) Bums

275. Subepidermal lesion are all except - *(PGI June 09)*
a) Bullous pemphigoid b) Pemphigus vulgaris
c) Hailey - Hailey disease d) Darrier's disease
e) Acanthosis nigricans

276. Intraepidermal acantholytic blister is seen in -
a) Pemphigus vulgaris *(PGI June 06)*
b) Bullous pemphigoid
c) Paraneoplastic pemphigus
d) Dermatitis herpetiformis
e) Epidermolysis bullosa

111. **Intra-epidermal lesions seen in -** *(PGI June 08)*
a) Pemphigus vulgaris
b) Epidermolysis bullosa acquisita
c) Dermatitis herpetiformis
d) Bullous pemphigoid
e) Paraneoplastic pemphigus

278. Intra epithelial bulla is seen in - *(AI91, AIIMS 95)*
a) Pemphigus b) Pemphigoid
c) Dermatitis herpetiformis d) Light eruption

279. Bullous skin lesions with 'intraepidermal split' is feature of - *(MH 11)*
a) Pemphigus vulgaris b) Pemphigoid
c) Epidermolysis bullosa d) All

280. What is not true about Erythema multiforme -
a) Associated with H simplex
b) Involves distal parts of extremities
c) No vesicle *(NEET/DNB Pattern)*
d) Target lesions

281. Intra-epidermal vesicles are seen in -
a) Pemphigus vulgaris *(PGI June 04)*
b) Carcinomatous pemphigus
c) Dermatitis herpetiformis
d) Congenital epidermolysis bullosa
e) Trauma

282. Intraepidermal blisters are seen in - *(PGI Nov 09)*
a) Bullous pemphigoid
b) Pemphigus folliaceous
c) Dermatitis herpatiformis
d) Bullous SLE
e) Bullous impetigo

261)d 262)a 263)b 264)a 265)a,b 266)c 267)a 268)a 269)a 270)b 271)None>c 272)d 273)d 274) b 275)b,c,d,e 276)a,c,e 277) a,e 278) a 279) a 280) c 281) a,b 282) b,e

283. Intraepidermal blisters are seen in all of the following conditions except - *(NEET/DNB Pattern)*
a) Pemphigus foliaceous
b) Pemphigus vulgaris
c) Paraneoplastic pemphigus
d) Pemphigoid

284. Intraepidermal bulla is seen in - *(COMED 09)*
a) Pemphigoid b) Pemphigus
c) Dermatitis herpetiformis d) Light reaction

285. Which layer of skin causes vesicular change in case of burn - *(AI1MS 97)*
a) Basal layer b) Papillary layer
c) Epidermis d) Dennis

286. Blister formation in burn case is in - *(Bihar 06)*
a) Intraepidermal b)Subepidermal
c) Subdermal d) Subfascial

287. In Pemphigus vulgaris, tzank smear shows - *(NEET/DNB Pattern)*
a) Acantholytic cells
b) Macrophages
c) Fibroblasts
d) Neutrophils

288. Tzank smear is for - *(NEET/DNB Pattern)*
a) I3ZV b) Psittacosis
c) Cryptococcus d) Ricketssia

289. The Tzank smear multinucleated cells are seen in - *(PGI97)*
a) Chicken pox b) Psoriasis
c) Molluscum contagiosum d) Pemphigus vulgaris

290. A patient has Bullous Lesion; on Tzank smear -
a) Langerhans cells are seen *(AT 96)*
b) Acontholysis
c) Leucocytosis
d) Absence of melanin pigment

291. Tzank smear is positive *in r (NEET/DNB ^Pattern)*
a) Herpes simplex b) Psoriasis
c)LP d) Warts

292. Acantholysis is seen in - *(PGI June 09)*
a) Bullous pemphigoid
b) Dermatitis herpetiformis
c) Hailey - Hailey disease
d) Darrier's disease
e) Pemphigus vulgaris

293. Acantholysis is seen in - *(PGI May 10)*
a) SSSS b) Impetigo
c) Hailey- Haiky disease d) Darrier's disease
e) Pemphigus vulgaris

294. Acantholysis is seen in - *(All India 95)*
a) Epidermis b) Dermis
c) Dermo-epiderm junction d) Subcutaneous tissue

295. Acantholysis is due to destruction of - *(AIIMS 97)*
a) Epidermis
b) Subepidermis
c) Basement membrane
d) Intercellular substance

296. Acantholysis is seen in all of the following except-
a) Pemphigus *(MP 06)*
b) Bullous pemphigoid
c) Steven-Johnson syndrome
d) Toxic epidermal necrolysis

297. Nikolsky sign is positive in all except -
a) Pemphigus *(AIIMS 00, MP 06)*
b) Bullous pemphigoid
c) Toxic epidermal Necrolysis
d) Staphylococcal skin scaled syndrome

298. Nikolsky sign not present in - *(Bihar 06)*
a) Pemphigus b) Pemphigoid
c) Vitiligo d) Staphylococcal scalded syndrome

299. Nikolsky's sign is positive in - *(PGI 98)*
a) Pemphigus b) Dermatitis herpatiformis
c) Pemphigoid d) Rubella

300. Hailey - hailey disease is - *(Jharkhand 03)*
a) Benign familial chronic pemphigus
b) Pemphigus acutus
c) Pemphigus
d) Lyell's syndrome

PHOTOSENSITIVE DISORDERS

301. 23 year old lady Sony develops brown macular lesions over bridge of nose and cheek following exposure to light. The probable diagnosis is -
a) SUE b) Acne Rosacea *(AIIMS 99)*
c) Chloasma d) Photodermatitis

302. A girl of 19 years with arthritis and photosensitive rash on cheeks, likely diagnosis is -
a) SLE *(AI01, Bihar 03)*
b) Chlosma
c) Steven's Johnson syndrome
d) Lyme's disease

303. A 40 year old woman presents with a 2 year old H/o erythematous papulo pustular lesions on convexities of the face. There in a background of erytherma & telengiectasia. The most likely diagnosis is - *(AI 05)*
a) Acne vulgaris b) Acne rosacea
c) SLE d) Polymorphic light eruption

304. 19 year old girl presents with ligh brown pigmentation over Malar eminence, likely diagnosis is- *(AI 01)*
a) Chloasma b) SLE
c) Melasma d) Melanoma

305. A 45 year old farmer has itchy erythematous papular lesions on face, neck,[6] V' area of chest, dorsum of hands and forearms for 3 years. The lesions are more severe in summers and improve by 75% in winters. The most appropriate test to diagnose the condition would be - *(AI 06)*
a) Skin biopsy
b) Estimation of IgE levels in blood
c) Patch test
d) Intradermal prick test

283)d 284)b 285)d 286)b 287)a 288)a 289)a 290)b 291)a 292)c,d,e 293)a,c,d,e 294)a 295)d
296)b,d 297)b 298)b,c 299)a 300)a 301)c 302)a 303)b 304)a 305)c

306. Exposure to sunlight can precipitate - *(UPSC 2K)*
a) Chloasma
b) Discoid lupus erytyhematosus
c) Dermatitis herpatiformis
d) Lupus vulgaris

307. Which of the following not photosensitive -
• a) Porphyria ■ b) DEE • *(NEET/DNB Pattern)*
y j M p) **SLE** *i p* **^d)rExchei]^planus>'^^j5^ ;**

308.Which of the following are photosensitive diseases-
a) SUE b) Liver spots *(PGI01)*
c) Calcinosiscutisd) Morphea
e) Prophyria cutanea tarda

309. Photosensitivity is a feature of -
a) Porphyria cutanea tarda *(DELHI PG Mar. 09)*
b) Psoriasis
c) Pemphigoid
d) Pompholyx

31:0.. Rhinophyma complicates - *(NEET/DNB Pattern)*
a) Acne vulgaisb) Acne rosacea
c) Psoriasis d) Phemphigus

311. Rhinopyma is (Potate nose) - *(AP 96)*
a) Septal deviation of nose
b) Sweat gland hypertrophy
c) Mucous gland hypertrophy
d) Sebaceous gland hypertrophy

312. A 40 year old farmer with a history of recurrent attacks of porphyria complains of itching when exposes to the sun and maculopapular rash on sun exposed areas, his symptoms are exaggerated in the summer. The diagnosis is - *(AIIMS May 01)*
a) Seborrheic dermatitis
b) Contact dermatitis
c) Psoriasis
d) Porphyria cutanea tarda

313. Chandu 32 years male presents with abdominal pain and vomitting. He also complain of some psychiatric symptoms & visual hallucination. Most likely diagnosis is - *(AI 01)*
a) Hypothyroidism b) Hyperthyroidism
c) Hysteria d) Intermittent porphyria

314. A girl on sulphonamides developed abdominal pain and presented to emergency with seizure. What is the probable cause ? *(AIIMSNov 08)*
a) Acute intermittent porphyria
b) Congenital erythropoietic porphyria
c) Infectious mononucleosis
d) Kawasaki's disease

315. Porphyrins are synthesized mainly in -*(AIIMS 95)*
a) Spleen
b) Liver and spleen
c) Bone marrow and spleen
d) Liver and bone marrow

BACTERIAL INFECTIONS

316. Leprosy does not involve - *(PGI 98)*
a) CNS b) Testis
c) Skin d) Cornea

317. Skin smear is negative in which leprosy - *(AI 97)*
a) Indeterminate b) Neuritic
c) Lepromatous d) Borderline

318. Most common type of leprosy in India - *(PGI97)*
a) BT b) TT
c) IL d)BL

319. Virchow's cells are seen in - *(UP 95)*
a) Henoch scholein purpura
b) Toxic Epidermal necrolysis
c) Congenital syphilis
d) Leprosy

320. Lepra cell is a - *(Maharashtra 01)*
a) Plasma cell b) Neutrophil
c) Lymphocyte d) Histiocyte

321. Satellite lesion are seen in - *(AI 99)*
a) Tuberculoid leprosy
b) Lepromatous leprosy
c) Borderline tuberculoid leprosy
d) Histoid leprosy

322. Inverted saucer shaped lesion is found in -
a) Lepromatous leprosy *(AIIMS May 12, 95)*
b) Tuberculoid leprosy
c) Borderline leprosy
d) Indeterminate leprosy

323. In leprosy nerves commonly involved - *(PGI97)*
a) High ulnar, low median
b) High median, low ulnar
c) Triple nerve palsy
d) High radial, low median

324. Skin biopsy in leprosy is characterized by - *(AI97)*
a) Periappendgeal bacilli
b) Periappendgeal lymphocytosis
c) Perivascular lymphocytosis
d) All of the above

325. All are true lepromatous leprosy except - *(IN96)*
a) Presence of globi
b) Subepidermal free zone
c) Decreased cell mediated immunity
d) Presence of granulomas subdermally

326. A 45 year old male had multiple hypoaesthetic mildly erythematous large plaques with elevated margins on trunk and extremities. His ulnar and lateral popliteal nerves on both sides were enlarged. The *most* **probable diagnosis is** - *(AIIMS Nov 03)*
a) Lepromatous leprosy
b) Borderline leprosy
c) Borderline tuberculoid leprosy
d) Borderline lepromatous leprosy

306)a,b 307)d 308)a,b,e 309)a 310)b 311)d 312)d 313)d 314)a 315)d 316)a 317)b 318)b 319)d
320) d 321) c 322) c 323) a 324) d 325) d 326) d

327. Multiple hypoaesthetic, hypopigmented macules on right lateral forearm with numerous acid fast bacilli is indicative of - *(AIIMS May 12)*
a) Tuberculoid leprosy
b) Lepromatous leprosy
c) Indeterminate leprosy
d) Borderline leprosy

328. In leprosy which of the following is not seen -
a) Abnormal EMG *(PGI2000)*
b) Voluntary muscle wasting
c) Decreased proprioception
d) Decreased response to tactile sensation
e) Increased response to tactile sensation

329. Earlist sensation to be lost in Hansens disease is -
a) Pain b) Touch *(UP 98)*
c) Vibration d) Temperature

330. A single hypopigmented anesthetic patch with satelite lesion on forearm, likely diagnosis is- *(AIIMS 94)*
a) Indeterminate leprosy b) Tuberculoid leprosy
c) Neuritic leprosy d) Lupus vulgaris

331. All lesions are seen in leprosy except - *(A197)*
a) Erythematous Macule
b) Hypopigmented patch
c) Vesicles
d) Flat & raised patches

332. All are features of lepromatous leprosy except -
a) Gynaecomastia *(TN 96, AIIMS 94)*
b) Madarosis
c) Saddle nose
d) Perforating Ulcer

333. Symmetrical multiple lesions are seen in which type of leprosy - *(Maharashtra 01)*
a) Borderline b) Neuritic
c) Lepromatous c) Tubercular

334. Which of the following is an indication of active leprosy- *(CUPGEE96)*
a) New skin lesions b) Nerve tenderness
c) Erythema d)All

335. In leprosy neural involvement occurs in what percentage of patients- *(Orissa 99)*
a) 30% b) 60 %
c) 90% d) 100%

336. Iris pearl is seen in - *(Calcutta 00)*
a) Leprosy b) Sarcoidosis
c) Tuberculosis d) Chloasma

337. About tuberculoid leprosy, false is - *(Jharkhand 06)*
a) CMI is depressed
b) CMI is increased
c) A single anesthetic patch
d) None

338. Lepromin test is positive in which leprosy -
a) Lepromatous *(AIIMS 2000, MH10)*
b) Indeterminate
c) Histoid
d) Tuberculoid

339. The following test is not used for diagnosis of leprosy - *(AIIMS 06)*
a) Lepromin test
b) Slit skin smear
c) Fine needle aspiration cytology
d) Skin biopsy

340. A16 year old student reported for the evaluation of multiple hypopigmented macules on the trunk and limbs. All of the following tests are useful in making a diagnosis of leprosy, except - *(AIIMSNov 03)*
a) Sensation testing b) Lepromin test
c) Slit smears d) Skin biopsy

341. ENL is seen in which form of leprosy - *(PGI Dec 05)*
a) Indeterminate b) BT
c) LL d)BL
e) TT

342. The main cytokine, involved in erythema nodosum leprosum (ENL) reaction is - *(AIIMSMay 06)*
a) Interleukin - 2
b) Interferon - gamma
c) Tumor necrosis factor - alpha
d) Macrophage colony stimulating factor

343. Manifestation of ENL include all of the following except - *(PGI Dec 05)*
a) Pancreatitis b) Fever
c) Hepatitis d) Arthritis
e) Cutaneous nodules

344. Type-I lepra reaction is commonly seen in:
a) Histoid leprosy *(DELHI PG Mar 09)*
b) Lepromatous leprosy
c) Borderline tuberculoid leprosy
d) Polyneuritic leprosy

345. The following drug is used for the treatment of type H lepra reaction, except - *(AIIMS 06)*
a) Chloroquine b) Thaliodomide
c) Cyclosporin d) Corticosteroid

346. DOC for lepra II reaction is - *(AI08)*
a) Steroids b) Thalidomide
c) Clofazimine d) Dapsone

347. Drug of choice for lepra II reaction is- *(DPGEE 08)*
a) Steroids b) Thalidomide
c) Clofazimine d) Dapsone

348. Thalidomide is drug of choice for - *(AI 99)*
a) Lepra I reaction b) Lepra II reaction
c) Both d) Nerve abscess

349. DOC in type I lepra reaction with severe neuritis -
a) Thalidomide b) Clafazamide *(AI 95)*
c) Dapsone d) Systemic corticosteroid

350. Antileprotic drug also used in lepra reaction is -
a) Rifampicin b) Dapsone *(AIIMS 97)*
c) Ciprofloxacin d) Clofazimine

351. Lucio reaction is seen in - *(NEET/DNB Pattern)*
a) TB b) Leprosy
c) Syphillis d)LGV

327) d 328) c,e 329) d 330) None >b 331)c 332) None 333) c 334)All 335) d 336) a 337) b 338) d 339) a 340) b 341)c,d 342) c 343) a 344) c 345) c 346) a 347) a 348) b 349) d 350) d

352. Duration of treatment in multibacillary leprosy according to WHO is - *(PGI June 02)*
a) 6 months b) 1 year
c) 2 years d) 5 years
e) Lifelong

353. Under leprosy eradication programme the managment of single lesion is - *(A1IMS 02; PGI June 00)*
a) Single dose of Rifampicin and Dapsone
b) Rifampicin and Dapsone for 6 months
c) Rifampicin, ofloxacin and minocycline single dose
d) Rifampicin and minocycline for 6 months

354. In multibacillary leprosy the follow up examination after adequate treatment should be done yearly for -
a) 3 years b) 3 years *(Delhi 96)*
c) 5 years d) 10 years

355. A patient with leprosy had slightly erythematous, anesthetic plaques on the trunk and upper limbs. He was treated with paucibacillary multidrug therapy (PB-3MDT) for 6 months. At the end of 6 months, he had persistent erythema and induration in the plaque. The next step of action recommended by the World Health Organization (WHO) in such a patient is - *(AIIMS Nov 04)*
a) Stop antileprosy treatment
b) Continue PB-MDT till erythema subsides
c) Biopsy the lesion to document activity
d) Continue dapsone

356. Treatment of severe ulnar neuritis in borderline tuberculoid leprosy is - *(A107)*
a) MDT only b) MDT + steroid
c) Wait and watch d) MDT + thalidomide

357. Best method of treatment of ulner never abscess in case of leprosy is - *(AIIMS 96, MAHE 05)*
a) High does of steroid
b) Incision and drainage
c) Thalidomide
d) High does of clofazamine

358. Treatment of acute neuritis in lepra I reaction is A/E- *(AI95)*
a) Dapsone b) Steroid
c) Thalidomide d) Incision anddrainage

359. Reversal lepra reaction shown no response to -
a) Cloafazimine b) Dapsone *(Jipmer 95)*
c) Glucocorticoids d) Thalidomide

360. The most effective drug against M. leprae is -
a) Dapsone b) Rifampicin *(AI03)*
c) Clofazamine d) Prothionamide

361. WHO regime for paucibacillary leprosy - *(AI 96)*
a) 100 mg Dapsone daily + Rifampcin monthly (600 mg)
b) Dapsone daily + Rifampcin daily
c) Dapsone + Rifampcin + Clofazimine daily
d) Rifampcin + Clofazimine daily

362. According to WHO latest treatment of leprosy is -
a) 2 yrs. Or negative slit smear negative which ever is longer for multibacillary *(PGI 96)*
b) Life long treatment
c) Six months treatment for paucibacillary
d) Not specified

363. All of the following are true of tuberculoid leprosy except- *(Karnat96)*
a) It is infective b) Positive lepromin test
c) Treatment for 5 years d) Body immunity is high

364. One of the following is a side effect of clofazimine used in leprosy therapy - *(AI96)*
a) Hyperpigmentation
b) Erythema
c) Discoloration of body secretions
d) Macular rash

365. If a claw hand develops in a patient with Leprosy, the deformity is - *(AI12)*
a) Grade 0 b) Grade I
c) Grade II d) Grade III

366. M.C. type of cutaneous T.B. is - *(PGIDec 06)*
a) Lupus vulgaris b) Scrofuloderma
c) T.B. verruca cutis d) Erythema induratum

367. Most common form of cutaneous tuberculosis in India- *(Maharashtra 09)*
a) Scrofuloderma
b) Lupus vulgaris
c) Primary cutaneous tuberculosis
d) Tuberculosis verucous cutis

368. Tuberculosis of skin is called as - *(AIIMS 98)*
a) Lupus vulgaris b) Lupus pernio
c) Lupus profundus d) Scrofuloderma

369. Skin manifestation of T.B. - *(PGI04)*
a) Lupus vulgaris b) Lupus pernio
c) Scrofuloderma d) Butcher warts

370. Forms of skin tuberculosis include all except -
a) Lupus vulgaris *(Maharashtra06)*
b) Scrofuloderma
c) Erythema nodosum
d) Erythema annulare

371. True about lupus vulgaris - *(PGIDec 04)*
a) Apple jelly nodule at root of nose
b) TB of skin & mucosa
c) Also known as scrofuloderma
d) ATT is helpful

372. Lupus vulgaris is - *(SGPGI04)*
a) Tuberculosis of skin b) Basal cell CA
c) Squamous cell CA d) Fox bite

373. Apple-jelly nodules is/are seen in - *(PGINov 10)*
a) Lupus vulgaris b)DLE
c) Lichen planus d) Psoriasis

374. Skin TB which involves skin after involving lymph nodes - *(AIIMS 96)*
a) Scrofuloderma b) Lupus vulgaris
c) Lupus erythematous d) Lupus pernio

35l)b 352)b 353)c 354)c 355) a 356)b 357)b 358)c 359)d 360)b 361)a 362)c 363)c 364)a,c 365) c 366) a 367) b 368) a,d 369) a,c 370) d 371)a,b,d 372) a 373) a 374) a

375. Cutaneous tuberculosis secondary to underlying tissue is called as - *(AI 99)*
a) Lupus vulgaris b) Scrofuloderma
c) Spina ventosa d) Tuberculous verrucosa cutis

376. Scrofuloderma is - *(Maharashtra 05)*
a) Chronic infection by staphylococcus epidermidis
b) Tubercular sinus with a discharge
c) Rupture of a lymph node with involvenent of skin
d) Lesion in lupus vulgaris

377. Tuberculides are seen in - *(AIlMSMay 07, Nov 06)*
a) Lupus vulgaris b) Scrofuloderma
c) Lichen scrofulosorum d) Erythema nodosum

378. Which of the following is/are tuberculides -
a) Lichen scrofulosorum *(PGI2000, June 07)*
b) Lichen nichidus
c) Lichen aureus
d) Erythema nodosum

379. Which of the following tuberculids is characterized by involvement of sweat glands, and hair follicles with noncaseating epitheloid granuloma - *(AI09)*
a) Lichen scrofulosorum b) Miliary tuberculosis
c) Papulonecrotic type d) Lupus vulgaris

380. A12 year old boy had a gradually progressive plaque on a buttock for the last 3 years. The plaque was 15 cm in diameter, annular in shape, with crusting and induration at the periphery and scarring at the center. The most likely diagnosis -*(AIIMSNov 03)*
a) Tinea corporis b) Granuloma annulare
c) Lupus vulgaris d) Borderline leprosy

381. A 36 years old factory worker developed itchy annular scaly plaques in both groins. Application of a carticosteroid ointment led to temporary relief but the plaques continued to extend at the periphery. The most likely diagnosis is - *(AI 05)*
a) Erythema annulare centrifugam
b) Granuloma annulare
c) Annular lichen planus
d) Tenia cruris

382. 20 year old male from Jaipur with erythermatous lesion on cheek with central crusting likely diagnosis is - *(AI 01)*
a) SLE b) Lupus vulgaris
c) Chillblain d) Cutaneous leishmaniasis

383. Ayoung boy presented with lesion over his right buttock which had peripheral scaling and central scarring. The investigation of choice would *be-(AIIMS Nov 01)*
a) Tzank Smear b) KOH preparation
c) Biopsy d) Saboraud's agar

384. An 8 year old boy present with well defined annular lesion over the buttock with central scarring that is gradually progressive over the last 8 months. The diagnosis is - *(AIIMS 01)*
a) Annular psoriasis
b) Lupus vulgaris
c) Tinea corporis
d) Chronic granulomatous disease

385. Mycobacterium causeing skin ulcer - *(PGI02)*
a) M. smegmatis b) M. scrofulaceum
c) M. ulcerans d) M. fortuitum
e) M. marinum

386. Epitheliod granuloma is char acterstic of -*(ARMS 95)*
a) Sarcoidosis b) Eosinophilia
c) T.B. d) Mycosis fungoides

387. Tuberculosis verrucosa cutis is a form of -
a) Tuberculid *(SGPGI05)*
b) Primary tuberculosis
c) Postprimary tuberculosis with good resistance
d) Post primary tuberculosis with poor resistance

388. A Farmer has a single warty lesion on leg. Which of the following could be most likely lesion -
a) Verruca vulgaris *(ARMS Nov 10)*
b) Tuberculosis verrucosa cutis
c) Mycetoma
d) Lichen planus hypertrophicus

389. Which of the following are bacterial infections of skin - *(PGI June 05)*
a) Pyoderma gangrenosum b)Piedra
c) Impetigo contagiosa d) Impetigo herpetiformis
e) Ecthyma

390. False statement about impetigo - *(PGI 01)*
a) Mostly caused by staphylococcus or streptococcus or both
b) It predisposes to glomerulonephritis
c) Produces scar on healing
d) Erythromycin is drug of choice
e) It is infectious lesion

391. True about Impetigo is - *(PGI June 08)*
a) Contagious b) Bacterial infection
c) Non contagious d) Honey coloured crust
e) Viral infection

392. Staphylococcus causes A/E- *(PGI 99)*
a) Scarlet fever b) TSS
c) Carbuncle d) Sycosis barbae

393. Staphylococcus can cause - *(PGI June 01)*
a) Ecthyma b) Erythrasma
c) Furuncle d) Impetigo contagiosa
e) Sycosis barbae

394. Staphylococcal infection causes all disease except -
a) Impetigo b) Erysipelas *(AI97)*
c) Ecthyma d) Scaldy skin syndrome

395. Impetigo contageosa most commonly due *to-(JH04)*
a) Group B streptococcous
b) Staphalococous
c) Moniliasis
d) Streptococcus viridans

396. A3 months old male infant developed otitis media for which he was given a course of Co-trimoxazole. A few days later, he developed extensive peeling of the skin; there were no mucosal lesions and the baby was not toxic. The most likely diagnosis is -
a) Toxic epidermal necrolysis *(AIIMS 04)*
b) Staphylococcal scalded skin syndrome
c) Steven Johnsom syndrome
d) Infantile pemphigus

375)b 376)c 377)c 378)a,d 379)a 380)c 381)d 382)d 383)c 384)b 385)c,d,e 386)a,c 387)c 388)b 389)c,e 390)c 391)a,b,d 392)a 393)a,c,d,e 394)b 395)b 396)b

397. Following is a bacterial infection - *(DPG March 09)*
a) Pyoderma gangrenosum
b) Impetigo herpitiformis
c) Pitted keratolysis
d) Mycosis fungoides

398. Skin hazards of swimming are - *(PGI01)*
a) Verrucae
b) Pyoderma gangrenosum
c) M. marinum gangrenosum
d) M. ulcerans infection

399. Which of these statements is false for erythema marginatum - *(MP 04)*
a) Lesions are serpiginous
b) Characteristically it is an evanescent
c) Rash worsens on application of heart
d) Rash is itchy

400. Erysipeloid is transmitted by - *(PGI99)*
a) Droplet b)Feco-oral
c) Mosquito bite d) Contact with animal

401. Herpes zoster is commonly seen in -*(DELHI PG Feb. 09)*
a) Cervical region b) Thoracic region
c) Lumber region d) Geniculate ganglion

402. Shingles is the other name for - *(COMED 06)*
a) Herpex simplex b) Varicella
c) Herpes Zoster d) Herpes labialis

403. Jarish herxheimer reaction is seen in early cases of- *(PGI98)*
a) Syphilis b) Gonorrhoea
c) IGV d) Granuloma inguinale

404. Jarisch Herxheimer reaction is commonly seen in -
a) Early syphilis *(SGPGI05)*
b) Late congenital syphilis
c) Latent syphilis
d) Syphilis of cardiovascular system

405. Eczema herpeticum is caused by - *(PGI June 07, PGI2K)*
a) Herpes simplex virus b) Varicella
c) CMV d)HPV
e) HSV-6

406. Kaposi varicelliform lesion seen in -*(PGI04, PGI Dec 05)*
a) Atopic dermatitis b) Darriers disease
c) Lichen planus d) Varicella zoster

407. DOC for herpes zoster is - *(AIIMS 98)*
a) Vidarabine b) Acyclovir
c) Idoxuridine d) Aclidine

408. After 3 days of fever patient developed maculo erythematous rash lasting for 48 hrs diagnosis is -
a) Fifth disease b) Rubella *(AI02)*
c) Measles d) Roseola infantum

409. Recurrent balanoposthitis seen in - *(PGI02)*
a) DM b) Herpes simplex
c) Smoking d) Alcohol
e) Bad hygiene

410. Discharging sinus is seen in - *(AI96)*
a) Syphilis b) Herpes
c) Actinomycosis d) Molluscum contagiosum

411. Erythrasma is caused by - *(MH 01)*
a) Corynebacterium b) Staph
c) Streptococci d) Viruses

412. Corynebacterium minutissimum causes - *(MH02)*
a) Erysipelas b) Erythrasma
c) Ecthyma d) Impetigo

FUNGAL INFECTION, SCABIES, PEDICULOSIS

413. Which of the following are fungal infection of skin - *(PGI June 05)*
a) Sporotrichosis b) Molluscum contagiousm
c) Madura foot d) Tinea
e) Erysipelas

414. Stain used for staining fungal elements- *(AIIMSNov 09)*
a) Acid fast stain b) Mucicarmic
c) Methenamine d) Gram stain

415. Which dye is most suitable for fungus demonstration in biopsy - *(AIIMS Nov 06)*
a) Alizarin red b) Veirhoff dye
c) Mason's trichome d) PAS

416. Which of the following stains is used to study fungal morphology in tissue sections - *(AI 10)*
a) PAS b)Von-kossa
c) Alzarin-red d) Masson's Trichrome

417. Dermatophyte infection is - *(Bihar 06)*
a) Superficial b) Subdermal
c) Subfascial d) Muscular

418. Ring worn infection affects - *(UP 9 7)*
a) Dermis b) Papillary layer
c) Stratum comeum d) Prickle cell layer

419. T. capitis (endothrix) is caused by - **(***PGI Dec 2000)*
a) Epidermophyton b) T.tonsurans
c) T.violaceum d) Microsporum
e) Trubrum

420. Which does not cause Tinea capitis -
a) Epidermophyton *(Jipmer 97, AIIMS 94, 92)*
b) Microsporum
c) Trichophyton rubrum
d) Trichophyton violaceum

421. Kerion is seen in - *(AIIMS 98)*
a) Candida infection b) Trichomoniasis
c) Pityriasis d) Dermatophytosis

422. Most common organism causing T. capitis is-*(AI01)*
a) Trichophyton tonsurans b) Microsporum
c) Epidermophyton d) Candida albicans

423. An 8 yr old boy presents with boggy swelling and easily pluckable hair, Diagnosis is - *(AIIMS 98)*
a) Tinea capitis b) Alopecia areata
c) Tuberculorid leprosy d) Pityriasis alba

424. A 7 year old boy with boggy swelling of the scalp with multiple discharging sinuses with cervical lymphadenopathy with easily pluckable hair. What would be done for diagnosis - *(AIIMS Nov 09,96, 94; AI 01)*
a) Pus for culture b) KOH mount
c) Biopsy d) Patch test

397)c 398)a,c 399)d 400)d 401)b 402)c 403)a 404)a 405)a 406)a,b 407)b 408)d 409)d 410)c
411)a 412)b 413)a,c,d 414)c 415)d 416)a 417)a 418)c 419)b,c 420)a 421)d 422)b 423)a 424)b

425. The test likely to help in diagnosis of a patient who presents with an itchy annular plaque on the face is - *(AI03)*
a) Gram's stain b) Potassium hydroxide mount
c) Tissue smear d) Wood's lamp examination

426. Best diagnostic test for fungal skin infection -
a) KOH test b) Diascopy *(NEET/DNB*
c) Wood's lamp d) Patch test *Pattern)*

427. A 60-year old male presented with discolouration, thickening and tunneling of 2 fingernails and one toe nail. Which of the following will clinch the diagnosis at the earliest? *(AIIMSMay 12)*
a) Wood's lamp examination b) KOH mount
c) Slit smear (split skin smear) d) Gram stain

428. Tinea unguium effects - *(AI 95)*
a) Nail fold b) Nail plate
c) Joints d) Inter digital space

429. Tinea incognito is seen with - *(Jipmer 02, PGI99)*
a) Steroid treatment b)l%BHi3
c) 5%permethrin d) Antibiotics

430. A 22 years old male patient presents with a complaints of severe itching and white scaly lesions in the groin for past month. Which of the following is most likely to be the causative agent -*(AIIMSNov 03)*
a) Trichophyton rubrum b) Candida albicans
c) Candida glabrata d) Malassezia furfur

431. A 36- year - old factory worker developed itchy, annular scaly plaques in both groins. Application of a corticosteroid ointment led to temporary relief but the plaques continued to extend at the periphery. The most likely diagnosis is - *(AI 05)*
a) Erythema annulare centrifugum
b) Granuloma annulare
c) Annular lichen planus
d) Tinea cruris

432. A 30 yr old female presents with history of itching under right breast. On examination annular ring lesion was present under the breast. The diagnosis is - *(AIIMS May 02)*
a) Trichophyton rubrum b) Candida albicans
c) Epidermophyton d) Microsporum

433. Treatment of tinea unguium - *(PGI June 05)*
a) Fluticasone b) Itraconazole
c) Oleamineoil d)Turbinafin
e) Neomycin

434. Ciclipirox oleamine is used in - *(AP 96)*
a) Dermatophytosis b) Acne
c) Psoriasis d) Lichen planus

435. An eleven year old boy is having tinea capitis on his scalp. The most appropriate line of treatment is -
a) Oral griseofulvin therapy *(AI03)*
b) Topical griseofulvin therapy
c) Shaving of the scalp
d) Selenium sulphide shampoo

436. DOC for Tinea Unguim - *(UP 95)*
a) Ampthotericin B b) Miconazole
c) Grisoefulvin d) Nystatin

437. Griseofulvin is used in - *(Bihar 04)*
a) Tinea captis b) P. versicolor
c) Candidiasis d)ALL

438. Grisefulvin given for the treatment of fungal infection in the finger nail dermatophytosis for how much duration - *(AI 02)*
a) 4 weeks b) 6 weeks
c) 2 months d) 3 months

439. Dermatophytes are-(PG/ *03, SGPGI04, PGI June 06)*
a) Sporothrix b) Tinea versicularis
c) Microsporidium d) Trichophyton rubrum
e) All of the above

440. A 24 year old man had multiple, small hypopigmented macules on the upper chest and back for the last three months. The macules were circular, arranged around follicles and many had coalesced to form large sheets. The surface of the macules showed fine scaling. He had similar lesions one year ago which subsided with treatment The most appropriate investigation to confirm the diagnosis is -
a) Potassium hydroxide preparation of scales
b) Slit skin smear from discrete macules
c) Tzanck test *(AIIMS May 12, Nov 03)*
d) Skin biopsy of coalesced macules

441. The following drug is effective in treatment of ptyriasis versicolor - *(AIIMS May 03)*
a) Ketoconazole b) Metronidazole
c) Griseofulvin d) Chloroquine

442. AD the foUowing drugs are effective in t/t of ptyriasis versicolor except - *(Bihar 05, AI 05)*
a) Selenium sulphide b) Ketoconazole
c) Grieseofulvin d) Clotrimazole

443. Commonest fungal infection of the female genitaba in diabets - *(Karnat 98)*
a) Cryptococcal b) Madura mycosis
c) Candidial d) Aspergellosis

444. A washer man presents with thickness erosion & discoloration of web spaces of toes diagnosis is-*(PGI 96)*
a) Psoriasis b) Tinea Unguium
c) Both d) Candidiasis

445. An otherwise healthy male presents with a creamy curd Dke white patch on the tongue. The probable diagnosis is - *(AI 10)*
a) Candidiasis b) Histoplasmosis
c) Lichen planus d) Aspergillosis

446. Linear lesion is seen in - *(PGI97)*
a) Sporotrichosis b) Lichen planus
c) Psoriasis d) Pemphigus

447. Potassium iodide is useful in the treatment of:
a) Sporotrichosis *(DELHIPG Mar 09)*
b) Impetigo
c) Viral warts
d) Dermatitis herpetiformis

425) b 426) a 427) b 428) b 429) a 430) a 431)d 432) a 433) b,d 434) a 435) a 436) c 437) a
438) None >d 439) d 440) a 441) a 442) c 443) c 444) d 445) a 446) a 447) a

448. All the following antimicrobial agents are used topically except- *(AI95)*
a) Clotrimazole b) Griseofulvin
c) Nystatin d) Miconazole

449. The Burrows in scabies is in the - *(Karn. 98)*
a) Stratum basale b) Stratum granulosum
c) Stratum comeum d) Dermis

450. Characteristic lesion of scabies is - *(NEET/DNB Pattern)*
a) Burrow b) Fissure
c) Vesicle d) Papule

451. Incubation period of scabies is - *(Calcutta 2K)*
a) 7 days b) 2 weeks
c) 4 weeks d) 2-3 days

452. Adult scabies is characterized by - *(PGIDec 04)*
a) Involve palm & soles b) Involve face
c) Involve anterior abdomen d) Involve web space
e) Involve genitalia

453. Scabies in children differs from that in adults in that it affects - *(Jipmer 2K)*
a) Webspace b)Face
c) Genitalia d) Axilla

454. Scabies in adults differs from that in children by -
a) Not involving face *(MAHE 07, Manipal 08)*
b) Non involving genitals
c) Not involves areola
d) Involves whole body

455. Circle of hebra is associated with - *(PGI June 08)*
a) Syphilis b) Scabies
c) Leprosy d) Lichen planus

456. Not a feature of scabies - *(NEET/DNB, Pattern)*
a) Burrows are seen; in- Stratum Comeum
b) Itching is more severe at night
c) Family history is found
d) Fever is a common finding

457. Nodular scabies is found in - *(AIIMS 97)*
a) Web space of finger b) Axilla
c) Abdomen d) Scrotum

458. An 8 month old child presented with itchy, exudative lesions on the face, palms and soles. The siblings also have similar complaints. The treatment of choice is such a patient is - *(A103)*
a) Systemic ampicillin
b) Topical betamethasone
c) Systemic prednisolone
d) Topical permethrin

459. An infant presented with itchy eczematous crusted lesions with exudation on palm, sole, glans penis and face. All are true except - *(PGI 02)*
a) Family should be examined
b) Only patient needs chug treatment
c) All clothing & linen should be discarded or burnt
d) Distribution of lesion help in diagnosis making
e) Dmg should be applied to affected areas for whole day

460. An infant presenting with itchy lesions over groin and prepuce, all is indicated except - *(AI01)*
a) Bath & apply scabicidal solution
b) Treatment of all family members
c) Dispose all clothes by burning
d) IV antibiotics

461. Ivermectin in indicated in the treatment of -
a) Syphilis b) Scabies *(AIIMS May 06)*
c) Tuberculosis d) Dermatophytosis

462. Oral medication used in the treatment of scabies -
a) Albendazole b) Metronidazole *(Karn11)*
c) Ketoconazole d) Ivermectin

463. A 6 month old infant had itchy erythematous papules and exudative lesions on the scalp, face, groins and axillae for one month. She also had vesicular lesions on the palms. The most likely diagnosis is - *(AI06)*
a) Congenital syphilis b)Sebonhoeic dermatitis
c) Scabies d) Psoriasis

464. A 6 month old infant presented with multiple papules & exudative lesions on the face, scalp, trunk and few vesicles on palms and soles for 2 weeks. His mother has H/O itchy lesions. The most likely diagnosis is - *(AIIMS May 12, 05)*
a) Scabies
b) Infantile exzema
c) Infantile sebomheic dermatitis
d) Impetigo contagiosa

465. Papulovesicular lesion on face, trunk, palm and sole in a 9 month old child is seen *\n-(AIIMSMay 12, 95)*
a) Scabies
b) Drug reaction
c) Atopic dermatitis
d) Seborrheic dermatitis

466. A child has itchy vesicles on face, palm and sole the diagnosis is - *(AIIMS 96)*
a) Scabies b) Seborrhic dermatitis
c) Chicken pox d) Atopic dermatitis

467. A child has multiple itchy papular lesions on the genitalia and fingers. Similar lesions are also seen in the younger brother. Which of the following is most possible diagnosis ? *(AIIMSNov 02)*
a) Papular urticaria b) Scabies
c) Atopic dermatitis d) Allergic contact dermatitis

468. Scabies, an infection of the skin caused by Sarcoptes scabies, is an example of - *(AIIMS Nov 02)*
a) Water borne disease b) Water washed disease
c) Water based disease d) Water related disease

469. Vagabond's disease is - *(Calcutta 2K, Bihar 04)*
a) Pediculosis corporis b) Scabies
c) Eczema d) Ringworm

470. Macula cerulea is seen in - *(Orissa 99, Bihar 06)*
a) Pediculosis humanis corporis
b) Pediculosis capitis
c) Pthiris pubis
d) Lupus erythematosis

448) b 449) c 450) a 451)c 452)c,d,e 453) b 454) a 455) b 456) d 457) d 458) d 459)b,c,e 460) c 461) b
462) d 463) c 464) a 465) a 466) a 467) b 468) b 469) a 470) a,c

471. TOC for pediculosis corporis is - *(AIIMS 98)*
a) 3 application of BHC
b) 4 application of BHC
c) Disinfection of all clothes and beddings
d) DDT application

472. Permethrin is used in treatment of - *(A199)*
a) Scabies b) Leprosy
c) Body Louse d) Leishmaniaris

SEXUALLY TRANSMITTED DISEASES

473. A 23 year old male had unprotected sexual intercourse with a commercial sex worker. Two weeks later, he developed a painless, indurated ulcer on the glans which exuded clear serum on pressure. Inguinal lymph nodes in both groins were enlarged and not tender. The most appropriate diagnostic test is - *(AIIMS 04)*
a) Gram's stain of ulcer discharge
b) Darkfield microscopy of ulcer discharge
c) Giemsa stain of lymph node aspirate
d) ELISA for HTV infection

474. 20 year old male lalu develops multiple ulcers over prepuce and glans which are painful along with suppurative lymphadenopathy, 5 days after having sexual intercourse with a sex worker, most probable diseases is - *(AIIMS 96)*
a) Herpes simplexb) Molluscum contagiousm
c) Syphilis d) Chancroid

475. A man having multiple, painful, indurated, undermined, sloughed edged glans which occurred 5 days after exposures; most likely diagnosis is -
a) Chancroid b) Primary chancre *(A108)*
c) Herpes genitalis d)LGV

476. 19 years male develops painless penile ulcers 9 days after sexual intercourse with a professional sex worker likely diagnosis is - *(AI01)*
a) Chancroid b) Herpes
c) Chancre d) Traumatic ulcer

477. A 20 years old male developed multiple tender non-indurated bleeding ulcers over prepuce 4 days after sexual exposure. The most probable diagnosis in this patient is - *(DELHI PG Feb. 09)*
a) Primary syphilis b) Lymphogranuloma venerum
c) Chancroid d) Donovanosis

478. Multiple painful ulcers over glans without induration is suggestive of - *(AIIMS 93)*
a) IGV b) Granuloma inguinale
c) Chancroid d) 2° syphilis

479. A 30 year old male patient has a large, spreading and exuberant ulcer with bright red granulation tissue over the glans penis. There was no lymphadenopathy. The most likely causative organism is -
a) Treponema pallidum *(AIIMS Nov 03)*
b) Herpes simplex virus type 1
c) Herpes simplex virus type 2
d) Calymmatobacterium granulomatis

480. A 24 year old male presents to a STD clinic with a single painless ulcer on external genitalia. The choice of laboratory test to look for the etiological agent would be - *(AIIMS May 03)*
a) Scrappings from ulcer for culture on chocolate agar with antibiotic supplement
b) Serology from detection of specific IgM antibodies
c) Scrappings from ulcer for dark field microscopy
d) Scrappings from ulcer for tissue culture

481. Painful ulcers over genitalia are caused *by-(MH 03)*
a) Primary syphilis b) Granuloma inguinale
c) Chancroid d)LGV

482. Tenderness is uncommon in - *(Maharashtra 10)*
a) Herpes genitalis b) Chancroid
c) Donovanosis d) All of the above

483. Ulcer on penis which bleeds on touch, is feature that best in which of the following - *(MH 11)*
a) Donovanosis b) Syphilis
c) Herpes genitalis d)LGV

484. Beefy red, foul smelling genital granuloma with a bleeding ulcer on touch is seen in - *(Jipmer 11)*
a) IGV b) Chancroid
c) Primary syphilis d) Donovanosis

485. Genital ulcer is seen in A/E - *(PGI97)*
a) Granuloma inguinale b) Syphillis
c) IGV d) Donovanosis

486. Genital ulcer is/are caused by - *(PGINov 09)*
a) HPV b)HSV
c) HIV d) Treponema pallidum

487. The most frequent cause of recurrent genital ulceration in a sexually active male is - *(AI 03)*
a) Herpes genitalis b) Aphthous ulcer
c) Syphilis d) Chancroid

488. All of the following are sexually transmited, Except-
a) Candida albicans *(AI 02)*
b) Echinococcus
c) Molluscum contagiosum
d) Group B streptococcus

489. Not A sexually transmitted disease- *(JH04)*
a) Pinta b) Candidiasis
c) HBV d) Trichomonisis

490. Which is a noveneral form of trephonemal infection-
a) Yaws b) Pinta *(IN 95)*
c) Syphillis d)GV

491. Which of the following is an example of a non venereal disease - *(CUPGEE 96)*
a) Endemic syphilis b) Gonorrhea
c) Chancroid d) LGV
e) Primary herpes

492. Commonest trophozoite infection by sexual intercourse - *(Orissa 99)*
a) Entamoeba histolytica b) Trichomonas vaginalis
c) Trepanama palidium d) Giardia intestinales

471)c 472) a,c 473) b 474) d 475) a 476) c 477) c 478) c 479) d 480) c 481)c 482) c 483) a 484) d 485) c 486) b,d 487) a 488) b 489) a 490) a,b 491) a 492) b

493. Secondary syphilis is manifested by - *(PGI03)*
a) Painless lymphadenopathy
b) Pruritic rash
c) Mucosal erosion
d) Asymptomatic rash
e) Mostly asymptomatic

494. In secondary syphilis all are seen except -
a) Condyloma lata *(MP 05, PGI 98)*
b) Interstitial keratitis
c) Arthritis
d) Proteinuria

495. The skin lesions of secondary syphilis include all of the following except - *(AIIMS 97, 98)*
a) Macules b) Vesicles & Bullae
c) Nodule d) Papulosquamous

496. In secondary syphilis, true about rash is -*(PGI 98)*
a) Pruritic b) Vesicular
c) Asymptomatic d) Tender

497. Condylomata latae are seen in - *(AIIMS 99, 98)*
a) Congenital syphilis b) Primary syphilis
c) Secondary syphilis d) Tertiary syphilis

498. Treponema pallidum causes - *(Maharashtra 02)*
a) Condyloma acuminata b) Condyloma lata
c) Both d) None

499. Candyloma lata is caused by - *(Maharashtra 05)*
a) H. ducreyi
b) Calymmatobactor granulomatis
c) Treponema pallidum
d) HSV

500. The lesion characteristic of secondary syphilis -
a) Ulcer *(Bihar 05)*
b) Condyloma acumicata
c) Condyloma lata
d) Gumma

501. Which stage of syphilis is most contagious ?
a) Primary *(DELHI PG Mar. 09)*
b) Secondary
c) Early latent
d) Later latent

502. A young man presents to the emergency department with a maculopapular rash 2 weeks after healing of a painless genital ulcer. The most likely etiological agent is - *(AI11)*
a) Treponema Pallidum
b) Treponema Pertunae
c) Chalmydia Trachomatis

503. Soft sore is caused by? *(NEET/DNB Pattern)*
a) H ducreyi
b) Calymmatobacterium granulomatis
c) Chlamydia trachomitis
d) T. Pallidum

504. Hard chancre is seen in - *(Maharashtra 05)*
a) Chancroid b) Syphilis
c) Tularemia d) All

505. 'Chancre redux' is a clinical feature of -
a) Early relapsing syphilis *(AIIMS May 06)*
b) Late syphilis
c) Chancroid
d) Recurrent herpes simplex infection

506. Ollendorff sign is seen in - *(Maharashtra 10)*
a) Primary syphilis b) Secondary syphilis
c) Latent syphilis d) Neurosyphilis

507. Characteristic feature of early congenital syphilis is - *(TN 95)*
a) Microcephaly
b) Saddle nose
c) Interstitial keratitis with saber shin
d) Vesicular rash with bulla over palms and soles

508. After giving treatment for Syphilis, the response to treatment can be best assessed by -*(AIIMS Nov 99, AI 02)*
a) FTA- ABS b) VDRL
c) TPHA d) Immobilization test

509. To indicate effective therapy in syphilis VDRL test should a fall in titre of - *(Orissa 99)*
a) One fold b) Two fold
c) Three fold d) Four fold

510. True about syphilis is A/E - *(AI 98)*
a) VDRL is sensitive but not specific
b) Infection leads to life long immunity
c) IgM & IgA
d) T. pallidium when inoculated in rabbit produce progressive disease

511. DOC in primary syphillis is - *(AI 92)*
a) Corticosteroid b) Oral penicilline
c) Benzathine penicilline d) Crystalline penicilline

512. Gonococcus does not involve - *(AI 96)*
a) Testis b) Fallopian tube
c) Epididymis d) Cervix

513. TOC for penicillin resistant gonorrhoea-(^4//MS *98)*
a) Ciprofloxacin b) Ceftriaxone
c) Streptomycin d)Erythromycin

514. Donovanosis is caused by -
a) Calymmatobacter granulomatis
b) T. pertenue
c) Chlamydia trachomatis
d) H. ducreyi

515. Granuloma venereum is caused by - *(Bihar 06)*
a) Donovania granulomatis b) Chlamydia
c) Hemophillus ducrey d) None

516. Chancroid is caused by - *(JH 06, MH 06)*
a) H. ducrey b) Y. pestis
c) DGV d) Tinea pedis

517. Chancroid may be caused by - *(AI 99)*
a) T. pallidium b) G. donovani
c) Chlamydia trachomatis d) Herpes hominis virus

518. LGV is caused by - *(Bihar 05, AIIMS 99)*
a) Chalamydia trachomatis
b) Haemophylus ducrei
c) HTLV type II
d) Donovanosis granulomatis

493) a,c,d,e 494) b 495) b 496) c 497) a,c 498) b 499) c 500) c 501) b 502) a 503) a 504) b 505) a 506) b
507)d 508)b 509)d 510)b,c 511)c 512)a 513)b 514)a 515)a 516)a 517)d 518)a

519. Frie test is done in - *(AI 96)*
a) Donovanosis b)LGV
c) Syphillis d) Leprosy

520. Groove sign is seen in - *(MH 09, 06)*
a) Donovanosis b)LGV
c) Chancroid d) Genital herpes

521. Genital elephantiasis is caused by - *(AI 02)*
a) Donovanosis b) Congenital syphilis
c) Herpes genitalis d) Lymphogranuloma venerum

522. Painful lymph adenopathy is seen in - *(PGI02)*
a) Donovanosis b) Syphilis
c) Chancroid d) Herpes simplex
e) Gonorrhea

5 W& Pseudo bubo is seen in - *(NEET^DNJB. Pattern)*
a) Donovanosis b) LGV
c) Chancroid d) Syphilis

524. Lymphadenopathy is seen in A/E - *(AI 95)*
a) Syphilis 1st stage b) Donovanosis
c) IGV d) Chancroid

525. DOC in chancroid is - *(AIMS 98)*
a) Tetracycline b) Doxycycline
c) Erythromycin d) Streptomycin

526. Treatment of both partners is recommended in A/E - *(UP 03, PGI 99)*
a) Candida infection b) Gardenella
c) Herpes d) Trichomonasvaginalis

527. Genital warts are most commonly caused by which of the following serotypes of HPV? *(AIIMS May 08)*
a)HPV6 b) HPV 16
c) HPV 18 d) HPV 33

528. Myrmecia warts are - *(Jipmer 98)*
a) Planer wart b) Plantar wart
c) Verrucous wart d) Palmer wart

529. All are true regarding viral warts except-(PG/ *97)*
a) Basophilic stippling
b) Koilocytes are characteristic
c) Spontaneous regression common in children
d) Perinucear vacuolization
e) Verruca vulgaris is associated with HPV 7

530. Condyloma acuminata is caused by -
(Calcutta 03, Jharkhand 04, Maharashtra 11)
a) HPV b) HSV
c) HIV d) All

531. Verrucosa vulgaris is caused by - *(Bihar 04)*
a) HPV b)EBV
c) CMV d) HIV

532. Type of human papilloma virus associated with cacinoma cervix - *(JIPMER 98)*
a) Types 6,12,18 b) Types 16,18,31
c) Types 6,8,11 d) Types 3,10,19

533. Podophyllum resin is indicated in the treatment of- *(AIIMS May 03)*
a) Psoriasis b) Pemphigus
c) Condyloma acuminata d) Condylomata lata

534. Regarding podophyllin resin which of following statement is true - *(PGI Dec 08)*
a) Dervied from plant source
b) Safe in pregnancy
c) Teratogenic
d) High recurrence rate of wart after podophyllin resin treatment
e) Individual variation in response rate

535. Topical immunomodulator used for the treatment of genital warts is - *(AI 08)*
a) Imiquimod b) Podophylline
c) Interferon d) Acyclovir

536. Imiquimod used in treatment of anogenital warts acts manly as - *(Maharashtra10)*
a) Antifungal b) Antiviral
c) Immunostimulator d) Keratolytic

537. 3 year old female child develops umblicated nodule over face, following a trivial infection. Probable diagnosis - *(AIIMS99)*
a) Molluscum contagiosum b) Scabies
c) Chicken pox d) L. planus

538. An eight year old boy presents with multiple umbilicated papules on trunk. Diagnosis is -
a) Molluscum contagiosum *(AIIMS 98)*
b) Chicken pox
c) Herpes zoster
d) Dermatophytosis

539. Umblicated pearly white asymptomatic skin lesion diagnosis is - *(AIIMS96)*
a) HSV b) Molluscum contagiosum
c) EBV d) None

540. The syndromic management of urethral discharge includes treatment of - *(AI 03)*
a) Neisseria gonorrhoeae and herpes genitalis
b) Chlamydia trachomatis and herpes genitalis
c) Neisseria gonorrhoeae and chlamydia trachomatis
d) Syphilis and chancroid

541. Most common site of affection of herpes simplex -
a) Thorax b) Abdomen *(CUPGEE 96)*
c) Face d) Extremities

542. Herpes resistant to acyclovir is treated by -
a) Foscamet b) Lamivudine *(Jipmer 02)*
c) Ganciclovir d) Valacyclovir

543. The syndromic management of genital ulcer syndrome in India includes which of the following disease - *(AIIMS Nov 11)*
a) Chanchroid and primarychancre
b) Chanchroid and herpes simplex
c) Chanchroid, primarychancre and herpes simplex
d) Herpes simplex and primary chancre

AUTOIMMUNE SKIN DISORDERS

544. An autoimmune disease is - *(AI 2000)*
a) Pemphigus vulgaris b) Psoriasis
c) Lichen planus d) Acne vulgaris

519)b 520)b 521)d 522)b,c,d,e 523)a 524)b 525)c 526) a,b 527)a 528)b 529)e 530)a 531)e 532)b
533)c 534)a,c,d,e 535)a 536)c 537)a 538)a 539)b 540)c 541)c 542)a 543)c 544)a,b,c

545. All are manifestations of SLE except - *(PGI98)*
a) Lesions resemblig Chr. DLE
b) Butterfly rash
c) Photosensitivity
d) Constitutional symptom
e) Sex ratio in nearly equal

546. All of the following are causes of "lupus" except -
a) Hydralazine b) Clofibrate *(NIMHANS 06)*
c) Penicillamne d) Chlorpromazine

547. True about drug induced SLE is - *(PGI2000)*
a) CNS manifestation are common
b) Renal involvement is common
c) Antihistone antibodies are found in many
d) All with antibodies progress to lupus
e) Sex ratio is nearly equal

548. A 40 year old woman presented with a 8 month history of erythema and swelling of the periorbital region & papules & plaques an the dorsolateral aspect of forearms & knuckles with ragged cuticles. There was no muscle weakness. The most likely diagnosis is - *(AIIMS Nov 04)*
a) SLE
b) Dermatomyositis
c) Systemic sclerosis
d) Mixed connective tissue disorder

549. Gottron's papules are - *(COMED09)*
a) Erythematous papules on cheeks
b) Erythema seen over elbows and knees
c) Periorbital lesions
d) Violaceous papules over knuckles

550. 'Gottron papules' seen in dermatomyositis are -
a) Vesicular b) Psoriatic *(MH 09, 07)*
c) Lichenoid d) Pustular

551. All are dermatological manifestations of dermatomyositis except - *(AIIMS Nov 09)*
a) Gottron's patches b) Mechanic's hands
c) Periungual telangiectasia d) Salmon Rash

552. All are seen in dermatomyositis except - *(Jipmer 11)*
a) Calcinosis cutis b) Heliotropic rash
c) Shawl sign d) Gottron's rash

553. All are cutaneous manifestations of systemic sclerosis, except - *(A110)*
a) Sclerodactyly b) Gottron's papule
c) Telengiectasia d) Esophageal dysmotility

554. Female presents with history of color change from pallor to cyanosis on exposure to cold in fingers. This condition is mostly associated with ?
a) Scleroderma *(AIIMS Nov 08)*
b) Leukemia
c) Lung infections
d) Hepatosplenomegaly

555. Palpable purpura is seen in all except - *(PGI99)*
a) Wegeners GN b) ITP
c) HSP d) Serum sickness

556. Palpable pupura is seen in all conditions except -
a) Cryoglobulinuria b)H.S. pupura *(AI2K)*
c) Gaint cell arteritis d) Drug induced vasculitis

557. Palpable purpura is seen in - *(MP 06)*
a) PAN b) ITP
c) TTP d)DIC

558. "Pinch" purpura is diagnostic of - *(AIIMSMay 05)*
a) Systemic primary amyloidosis
b) Secondary systemic amyloidosis
c) Idiopathic thrombocytopenic purpura
d) Drug induced purpura

559. Which of the following is/are not the features of henoch-Schonlein purpura (HSP) - *(PGI Dec 08)*
a) Abdominal pain b) Splinter hemorrhage
c) Thrombocytopenia d)Epistaxis
e) Arthritis

560. A child develops non-blanching macules and papules on lower extremities, mild abdominal pain and skin biopsy showed IgA deposition. Most appropriate diagnosis is - *(AIIMS May 09)*
a) Drug induced vasculitis b) HSP
c) Wegener's granulomatosis d) Kawasaki disease

561. A 42 year old female has palpable purpura with rash over buttocks, pain in abdomen, and arthropathy diagnosis is - *(AI08)*
a) Sweet syndrome b)HSP
c) Purpura fulminans d) Meningococcemia

562. IgA deposits on skin biopsy - *(AIIMSMay 09)*
a) Henoch schouleiln puspura
b) Giant cell arteritis
c) Microscopic polyangitis
d) Wegener's granulomatosis

563. All regarding HSP is true except - *(PGI 08)*
a) Hematuria resolve without treatment
b) Steroids best treat skin lesions
c) Self limiting arthralgia
d) Excellent prognosis
e) Purpura fulminans

564. A 27 year old sexually active male develops a vesiculobullous lesion on the glans soon after taking tablet paracetamol for fever. The lesion healed with hyperpigmentation. The most likely diagnosis is -
a) Behcet's syndrome *(AI 05)*
b) Herpes genitalis
c) Fixed drug eruption
d) Pemphigus vulgaris

565. Sexually active male comes with complaints of recurrent ulcers over the glans which heals with hyperpigmentation, probable diagnosis is -
a) Aphathous ulcer *(AIIMS Nov 09)*
b) Fixed drug eruption
c) Herpes genitalis
d) Chlamydial infection

566. Fixed drug eruptions can be seen more frequently with - *(DELHI PG Mar 09)*
a) Penicillin b) Sulfonamide
c) Cetrizine d) Roxithromycin

545) e 546) b 547) c,e 548) b 549) d 550) c 551) d 552) a 553) b>d 554) a 555) b 556) c 557) a 558) a
559)c 560)b 561)b 562)a 563)b,e 564)c 565)b 566)b

567. Which of these statements is false for lesions of Erythema nodosum - *(MP 04)*
a) They are considered as hypersensitivity reaction
b) The skin overlying the lesions is red, smooth and shiny
c) They are usually non tender
d) They can be associated with tuberculosis

568. Erythema nodosum is due to - *(Jharkhand 04)*
a) Contraceptive pills b) Barbiturates
c) Penicillin d) Sulphonamides

569. Erythema nodosum is seen in all of the following except- *(AJ11)*
a) Pregnancy b) Tuberculosis
c) SLE d) Chronic pancreatitis
d) Calymmatobacter granulomatis

570. 25 years old male having fever & malaise since 2 weeks, arthritis of ankle joint and tender erythematous nodules over the shin. Diagnosis is -
a) Erythema nodosum *(AIIMSMay 10)*
b) Hensen's disease
c) Weber-christian disease
d) Urticarial vasculitis

571. Genoder mal disease that can cause skin malignancy are- *(PGI03)*
a) Xeroderma pogmentosa
b) Neurofibromatosis
c) Actinic keratosis
d) Porphyria cutanea tarda

572. Lisch nodule is seen in - *(PGI99)*
a) Von reclinghausens disease
b) Lupus vulgaris
c) Leprosy
d) LGV

573. Cafe au lait spots seen in? *(NEET/DNB Pattern)*
a) NF b) Gardner syndrome
c) Cockayne syndrome d) Down, syndrome

574. A patient had seven irregular hyperpigmented macules on the trunk and multiple small hyperpigmented macules in the axillae and groins since early childhood. There were no other skin lesions. Which is the most likely investigation to support the diagnosis ? *(AI06)*
a) Slit lamp examination of eye
b) Measurement of intraocular tension
c) Examination of fundus
d) Retinal artery angiography

575. A patient has multiple meningiomas, acoustic neuroma and Hyperpigmented skin lesions; most likely diagnosis is - *(MAHE 07)*
a) Neurofibromatosis
b) Tuberous sclerosis
c) Von Hippel lindau disease
d) Sturge weber syndrome

576. All are seen in Ihberous sclerosis except - *(AI2000)*
a) Iris nodule
b) Renal cortical cyst
c) Rhabdomyoma of heart and lung
d) Adenoma sebaceum

577. Adenoma sebaceum is a feature of - *(AlIMSNov 05)*
a) Neurofibromatosis
b) Tuberous sclerosis
c) Xanthomatosis
d) Incontinenetia pigmenti

578. Babloo a 4 year male presents with history of seizures. On examination there is hypopigmedted patches on face & mental retardation. Most probable diagnosis is - *(AIIMS2000)*
a) Neurofibromatosis b) Tuberous sclerosis
c) Sturge weber syndrome d) Incontinenta pigmenti

579. Ash leaf maculae is found in - *(JH 05, DPG 08)*
a) Tuberous sclerosis b) Neurofibromatosis
c) Lymphangioma d)None

580. Koenen's periungual fibromas are seen in > 50% of cases with- *(Jipmer 02)*
a) Tuberous sclerosis
b) Sturge weber syndrome
c) Alaxia telangiectasia
d) Neurofibroatosis

581. Granular layer is absent in - *(Orissa 98)*
a) Ichthysis vugaris
b) X linked ischyosis
c) Epidermolytic hyperkeratosis
d) Lamellar ichthyosis

582. Ichthysis is caused by - *(Nimhans 01)*
a) Hemosiderosis b) Refsum disease
c) Niacin deficiency d) Steven johnson syndrome

583. Steroid suphatase deficiency is seen in -
a) Ichthyosis vulgaris *(COMED06)*
b) Lamellar Ichthyosis
c) ^{4}X'linked recessive icthyosis
d) None of the above

584. Skin pigmentation & icthyosis like side effects are seen in - *(AI 96)*
a) Rifampcin b) Clofazimine
c) Dapsone d) Steroid

585. Icthyosis is associated with - *(NEET/DNB Pattern)*
a) Hodgkins disease b)AJ0DS
c) Hypothyroidism d)AIl

586. The mode of inheritance of incontinentia pigment is - *(Kerala 04)*
a) Autosomal dominant b) Autosomal recessive
c) X-linked dominant d) X-linked recessive

587. True about incontinenta pigmenti include the following except - *(AIIMS May 11, AI 09)*
a) X-linked dominant
b) Primary skin abnormality
c) Avascularity of peripheral retina
d) Ocular involvement is seen in almost 100% cases and is typically unilateral

567) c 568) a,d 569) d 570) a 571) a 572) a 573) a 574) a 575) a 576) a 577)b 578) b 579) a 580) a
581) a 582) b 583) c 584) b 585) d 586) c 587) d

588. Cells cultured from patients with this disorder exhibit low activity for the nucleotide excision repair process. This autosomal recessive genetic disease includes marked sensitivity to sunlight (Ultra voilet light) with subsequent formation of multiple skin cancers and premature death, the disorder is -
a) Acute intermittent porphyria *(Karnatak 98)*
b) Alkaptonuria
c) Xeroderma pigmentosa
d) Ataxia - Telangiectasa

SKIN TUMORS

589. Which of the following is not a NEVUS of melanocyte- *(NEET/DNj B Pattern)*
a) Mongolian spot b) Nevus of Ito
c) Nevus of ota d) Beckernevus I§gf§

590 , Maximum malignant potential is in - *(AI98)*
a) Superficial naevus b) Epidermal naevus
c) Junctional naevus d) Intradermis naevus

591. Which naevi commonly predispose to malignant melanoma ? *(DELHI PG Feb. 09)*
a) Dermal b) Junctional
c) Congenital d) Lentigo

592. Predisposing factors for skin cancer are-
a) Smoking b)U-V-light *(PGIDec2K)*
c) Chronic ulcer d) Infrared light

593. Predisposing factors for skin ca are - *(PGI02)*
a) Lichen planus b) Bowen's disease
c) Psoriasis d) Bechet's disease
e) UVrays

594. Changes of squamous cell carcinoma are seen in -
a) Seborrhoeic keratosis *(PGI97)*
b) Bowen's disease
c) Lichen planus
d) DIE

595. Actinic keratosis is seen in - *(AIIMS May 02)*
a) Basal cell carcinoma
b) Squamous cell carcinoma
c) Malignant melanoma
d) Epithelial cell carcinoma

596. Which of the following is associated with sun exposure? *(AIIMS May 12)*
a) Actinic keratosis
b) Seborrheic keratosis
c) Sebaceous cell carcinoma
d) Syringoma

597. Mycosis fungoides affects - *(CMC 98)*
a) T Cells b)B Cells
c)NK Cells d)K Cells
e) None of the above

598. Pautrier's micro-abcess is a histological feature of- *(AIIMSNov 05, TN 99)*
a) Sarcoidosis
b) TB
c) Mycosis fungoides
d) Ptyriasis lichenoides chronica

599. Mycosis fungoides which is not true -
a)It is the most common form of cutaneous lymphoma *(AI 07, AIIMS Nov 06)*
b) Pautriers microabscess
c) Indolent course and good prognosis, easily amenable to treatment
d) Erythroderma seen and spreads to peripheral circulation

600. Stage 1 cutaneous T cell lymphoma treatment is -
a) PUVA *(NEET/DNB Pattern)*
b) Biological response modifiers
c) Systemic chemotherapy
d) Extracorporial photopheresis

601. Total Skin Electron Irradiation is used for the treatment of - *(AI 12)*
a) Mycosis Fungoides b) Psoriasis
c) Sezary Syndrome d) Brain Metastasis

602. Following are signs of internal malignancy except -
a) Tuberous sclerosis *(PGI97)*
b) Acanthosis nigricans
c) Clubbing
d) Dermatomyositis

603. Underlying internal malignancy is not shown by -
a) Acanthosis nigricans & annular erytheman
b) Bullous pyoderma & migratory necrotizing erythema *(AI 96)*
c) Granuloma annulare
d) Erythema gyratum repens

Not true about Skin tag - *(NEET/DNB Pattern)*
a) Associated with sfebbrrho'eic keratosis
b) Pedunculated
c) Most common site is neck and axilla
d) Premalignant

MISCELLANEOUS

605. The most potent topical corticosteroids is-*(DPG 09,*
a) Hydrocortisone butyrate cream 0.1% *Orrisa 98)*
b) Betamethasone valerate cream 0.1%
c) Clobetasol propionate cream 0.5%
d) Clobetasone butyrate cream 0.5%

606. Uses of PUVA- *(PGI Dec 04)*
a) Pigmented purpuric lesion
b) Herpes zoster
c) Mycosis fungoides
d) Lupus panniculitis
e) Lichenoid dermatitis of Gougerot & Blum

607. Photochemotherapy is useful in - *(SGPGI03)*
a) Psoriasis b) Lichen planus
c) Tinea d) Icthyosis

608. PUVA therapy is used in - *(PGI 02)*
a) Psoriasis b) Lichen planus
c) Freckles d) Melasma
e) Vitiligo

609. Psoralen-A is used in the treatment of -
a) Pemphigus b) Vitiligo *(DELHIPG Feb. 09)*
c) Pityriasis alba d) Icthyosis

610. Best range of UV light used for treatment of skin diseases - *(Maharashtra 01)*
a) 100-200nm b)200-400nm
c) 400-700 nm d) >700nm

611. Woods lamp used in diagnosis of - *(PGIDec 06)*
a) P. versicolor b) Vitiligo
c) Porphyria d) Psoriasis
e) Lichen planus

612. Wood's lamp light is used in the diagnosis of -
a) Tinea capitis *(SGPGI02, AIIMS May 02)*
b) Candida albicans
c) Histoplasma
d) Cryptococcus

613. Wood lamp is used to diagnose - *(MH05)*
a) Psoriasis b) Tinea versicolor
c) Pityriasis rosae d) Erysipelas

614. Woods lamp has a frequency of - *(TN 04)*
a) 250 nm b)300nm
c) 320 nm d)360nm

615. Coral red colour on wood lamp seen is-*(MH 10, 08,*
a) Erythrasma b) Pseudomonas *Bihar 04)*
c) Tinea d)ALL

616. Yellow fluorescence on wood's lamp is seen in -
a) Tuberous sclerosis *(MH 07)*
b) Pseudomonas infection
c) Tinea capitis
d) Erythrasm

617. Diascopy is very helpful in diagnosis of- *(MH 09)*
a) Cutaneous vasculitis b) Nevus anaemicus
c) Lupus vulgaris d) All of the above

618. Morbilliform eruptions is seen in - *(PGI 01)*
a) Scarlet fever b) Rubella
c) Toxic shock syndrome d) Measles
e) Mumps

619. Exanthems are caused by all except - *(MH01)*
a) Malaria b)Typhoid
c) Measles d) Rubella

620. Which of the following are pruritic lesions -
a) Lichen planus b) Sun bums *(PGI2K)*
c) Pemphigoid d) Psoriasis
e) SLE

621. Pruritis is seen in all except - *(Kerala 95, DPG 09)*
a) Pemphigus b) Lichen simplex chronicus
c) Psoriasis d) Contact dermitits

622. Mucosa is involved in - *(PGIDec 07)*
a) Psoriasis b) Lichen planus
c) Alopecia d) Scabies
e) Porphyria

623. Oral examination is done in case of - *(PGI 97)*
a) Peutzjegher syndrome
b) Psoriasis
c) Beri-beri
d) Plummer vinson syndrome

624. Mucous lesions are seen in - *(PGI 02)*
a) Sec. Syphilis b) Dermatitis herpetiformis
c) Psoriasis d) Pemphigus
e) Porphyria

625. A 27-year-old male had burning micturition and urethral discharge. After 4 weeks he developed joint pains involving both the knees and ankles, redness of the eye and skin lesion. The most probable clinical diagnosis is - *(ARMS May 05)*
a) Psoriasis vulgaris b) Reiter's syndrome
c) Behcet's syndrome d) Sarcoidosis

626. Which of the following is not included in the triad of Reiter's syndrome - *(CUPGEE 96)*
a) Conjuctivitis b) Urethritis
c) Arthritis d) Keratoderma blenorrhagica

627. All are seen in reiter's syndrome except ?
a) Subcutaneous nodules *(ARMS Nov 08)*
b) Oral ulcers
c) Keratoderma blenorrhagicum
d) Circinate balanitis

628. A person suffers from B27 associated reactive arthritis, urethritis and conjunctivitis. Which is most likely organism involved in this case ?
a) Borrelia burgdorferi *(ARMSNov 08)*
b) Ureaplasma urealyticum
c) Beta hemolytic streptococci
d) Streptococcus bovis

629. Noninfective cause of genital ulcer is - *(J & K 04)*
a) Behcets disease b) Hansen's disease
c) Ramsons's disease d) Syphilis

630. Gculoorogenital ulcers are a feature of- *(NEET/DNB Pattern)*
a) Behcet disease b) Lichen planus
c) JSLB %% 11| UH | H gg | d) Psoxi^^^J^ | g|||

631. A patient gives a history of recurrent oral ulcers. The ulcers are small with a yellow floor surrounded by an erythematous halo on the lips. He also has multiple, tender nodules on the skin. He most likely has- *(ARMS Nov 11)*
a) Behcet's syndrome b) Herpes labialis
c) Fixed drug eruption d) Pemphigus vulgaris

632. Reccurent oral ulcers with pain and erythematous halo around them, diagnosis is - *(ARMS 96)*
a) Apthus ulcer b) Herpes
c) Chicken pox d) Measels

633. A child with fever presents with multiple tender erythematous skin lesions. On microscopic examination the skin lesions are seen to have neutrophilic infiltration in the dermis. What is the diagnosis - *(AI11, 09)*
a) Sweet syndrome b) Behcet's syndrome
c) Pyoderma gangrenosum d) Juvenile dermatosis

634. A young female presents with a history of fever and nodular lesion over the skin. Histopathology reveals foamy histiocytes with neutrophilic infiltration. There is no evidence of vasculitis. Most probable diagnosis is - *(AI11)*
a) Sweet's syndrome
b) Erythema nodosum
c) Erythema nodusum leprosum
d) Behcet's syndrome

635. Pyoderma gangrenosum is seen in - *(IN 97)*
a) Crohns disease b) Divertuculosis
c) Ulcerative colitis d) Ca. colon

mm. Drug not causing exanthematous skin eruption- *(NEET/DNB Pattern)*
a) Phenytoin b) Hydrocortisone
e) ; An^icillih; ; d) Phenylbutazone

637. Acrodermatitis entropathica is seen with deficiency of - i; *(NEET/DNB Pattern)*
a) Zinc b)tiroh C ■ ^
c) Copper d) Vlt A

638. Flaky paint appearenceof skin is seen in- *(AI95)*
a) Dermatitis b) Pellagra
c) Marasmus d) Kwashiorkar

639. Casal's paint necklace is caused by - *(PGI97)*
a) Lichen planus b) Pellagra
c) Pernicious anemia d)SLE

640. Which is false about acrodermatitis enteropathica -
a) Triad of diarrhoea, dementia and dermatitis
b) Low serum zinc levels *(AIIMS may 11)*
c) Symptoms improve with zinc supplementation
d) Autosomal recessive

641. All of the following are primary cutaneous disorder except- *(AI 09, AIIMS 10, NEET/DNB Pattern)*
a) Psoriasis b) Reiter's disease
c) Lichen planus d) Icthiosis

642. "Calcinosis universalis" occurs in - *(J & K 05)*
a) Ehlers Danlos syndrome
b) Christian Weber syndrome
c) Dermatomyositis
d) Scleroderma

643. Spider telengectacia false is -*(NEET/DNB Pattern)*
a) More common in males
b) Can be caused by trauma
c) Light therapy for treatment
d) May be associated with liver disease

644. Hirsutism can be caused by the following except -
a) Flutamide b) Norethisterone *(AI 10)*
c) Danazole d) Phenytoin

645. Child presents with linear verrucous plaques on the trunk with vacuolization of keratinocytes in S.Spinosum and S.Granulosum. Diagnosis is ?
a) Incontinenta pigmenti *(AIIMS May 11, Nov. 08)*
b) Delayed hypersensitivity reaction
c) Verrucous epidermal nevus
d) Linear darriers disease

646. Pomphylox affects - *(NEET/DNB Pattern)*
a) Palms & soles b) Groin
c) Scalp d) Trunk ■

647. Fine reticular pigmentation with palmar pits are seen in - *(AIIMS may 11)*
a) Dowling - Degos disease
b) Rothmund thompson syndrome
c) Cockyane syndrome
d) Bloom's syndrome

648. Child with erythematous non blanching bosselated lesion on right side of face, Rx is - *(AIIMS may 11)*
a) Erbium laser
b) Nd-YAG laser
c) Flash light pumped dye laser
d) Q ruby laser

649. Neonatal fat necrosis resembles which of the following - *(AIIMS may 11)*
a) Post steroidal panniculitis
b) Erythema induratum
c) Lipodermatosclerosis
d) Lupus panniculitis

650. Chemical peeling is done by all except -*(AIIMSNov 10)*
a) Trichloroacetic acid b) Phosphoric acid
c) Carbolic acid d)Kojicacid

651. Lines of Blaschko represent - *(AI 11)*
a) Lines along lymphatics
b) Lines along blood vessels
c) Lines along nerves
d) Lines of development

652; Maximum cumulative dose of isotretinoin shouldn't exceed for acne treatment -*(NEET/DNB Pattern)*
a) 30-60 mg/kg b) 60-90 mg/kg
c) 90-120 mg/kg d) 120-150 mg/kg

PSYCHIATRY

SYMPTOMS & SIGNS IN PSYCHIATRY AND CLASSIFICATION

1. Mutism and aldnesis in a person who appears awake and even alert, is best described as - *(AI06)*
a) Twilight state b) Oneroid state
c) Steupor d) Delirium

2. Emotion is controlled by - *(PGI97)*
a) Limbic system b) Frontal lobe
c) Temporal lobe d) Occipital lobe

3. A 25 year old woman complains of intense depressed mood for 6 months with inability to enjoy previously pleasurable activities. This symptom is known as -
a) Anhedonia b)Avolition *(AIIMSMay 05)*
c) Apathy d) Amotivation

4. Alexithymia is - *(Kerala 2K)*
a) A feeling of intense rapture
b) Pathological sadness
c) Affective flattening
d) Inability to recognise and describe feelings
e) Inappropriate mood

5. A person who laughs one minute and cries the next without any clear stimulus is said to have -
a) Incongruent effect *(AIIMSNov 05)*
b) Euphoria
c) Labile affect
d) "Split personality"

6. Ambivalence is most commonly seen in -
a) Schizophrenia b) Hysteria
c) Mania d) OCN *(ARMS 96)*

7. Ambivalence is most commonly associated with -
a) Depression *(MP 02)*
b) Generalized anxiety disorder
c) Schizophrenia
d) OCD

8. Hallucination is disorder of - *(NEET/DNB Pattern)*
a) Thought b) Perception
c) Memory d) Intelligence

9. Hallucination and illusion are disturbances of -
a) Thought b) Perception*(MH09)*
c) Sensation d) Mood

10. Which is not a perceptional disorder/iV/fET/DAS
a) Hallucinations b) Illusion *Pattern)*
c) Delusion d) None

11. Altered perception of real obj ects is -*(ARMS Nov 0 7)*
a) Illusion b) Delusion
c) Hallucination d) Delirium

12. False sense of perception without any external object or stimulus is known as -
a) Illusion *(ARMS May 03, Jharkhand 05,*
b) Impulse *ARMS 96, AI 98, Maharashtra 07)*
c) Hallucination
d) Phobia

13. Hallucinations are - *(Maharashtra 02, A199)*
a) Feeling of familiarity with unfamiliar thing
b) Alteration of perception of ones reality
c) Misinterpretation of stimuli
d) Perception occurring without external stimulation

14. A patient sees a rope and fears like a snake. It is called- *(PGI 02)*
a) Illusion b) Hallucination
c) Delusion d) Depersonalization
e) Derealization

15. A 8 year old child after tonsillectomy sees a bear in her room. She screams in fright. A nurse who rushes in switches on the light, finds a rug wrapped on a armchair. She pacifies the child what the child experienced was a - *(Kerala 97)*
a) Delusion b) Illusion
c) Hallucination d) None of the above

16. Which is not true about hallucination -
a) It is as vivid as normal stimulus *(ARMS May 09)*
b) It occurs in inner subjective space
c) It is independent of will of observer
d) It occurs in absence of perceptual stimuli

17. All of the following feature of hallucination except-
a) Depends on will of observer and is under voluntary control *(SGPGI03, AI 02)*
b) Occur in inner subjective space
c) It is vivid as sensory perception
d) It occurs in absence of perceptual stimulus

18. All of the following are features of hallucinations, except - *(AI 03)*
a) It is independent of the will of the observer
b) Sensory organs are not involved
c) It is as vivid as that in a true sense perception
d) It occurs in the absence of a perceptual stimulus

19. Visual hallucinations are seen in - *(PGI June 09)*
a) Hebephrenic schizophrenia
b) Residual schizophrenia
c) Simple schizophrenia
d) Delirium
e) Temporal lobe epilepsy

20. Formed visual hallucinations are seen in lesion of -
a) Frontal *(PGI June 06, 2K)*
b) Occipital
c) Temporal
d) Arcuate fasciculus
e) Dentate nucleus

21. What is hypnopompic phenomenon? *(Bihar 06)*
a) If experienced while falling asleep
b) If experienced while awakening
c) After head trauma
d) After convulsion

22. Hallucinations which occur at the 'start' of sleep is -
a) Hypnagogic hallucinations *(Jipmer 02)*
b) Hypnopompic hallucinations
c) Jactatio noctuma capitis
d) Non - specific hallucination

23. Reflex hallucination is a morbid variety of -
a) Kinesthesia *(A1IMS May 11, 09)*
b) Parasthesia
c) Hyperasthesia
d) Synaesthesia

24. A patient gets tingling when his bed light is flashed suddenly. Which type of hallucination is this -
a) Hypnagogic hallucinations *(Maharashtra 10)*
b) Hypnopompic hallucinations
c) Reflex hallucinations
d) Functional hallucinations

25. Hallucinations are seen in all except - *(MP 99)*
a) Schizophrenia
b) Seizure due to intracerebral space occupying lesions
c) LSD
d) Anxiety

26. Cognition is- *(Jharkhand 03, AI 97)*
a) Perception b) Thought
c) Action d) Feeling

27. Cognitive disorders - *(PGI June 06, 07, Dec 03)*
a) Delirium b)Depersonalization
c) Dementia d) Secondary gain

28. All are format thought disorders except - *(Bihar 07)*
a) Schizophrenia
b) Delusion
c) Loosening of association
d) Obsessive compulsive neurosis

29. Loosening of association is an example of - *(AI 06)*
a) Formal thought disorder
b) Schneider's first symptoms
c) Perseveration
d) Concrete thinking

30. Which of the following is not a disorder of form of thought? *(AIIMS May 12)*
a) Derailment
b) Tangentiality
c) Thought block
d) Loosening of association

31. Delusion is a disorder of - *(AIIMSNov 06, AIIMS 97, AI 07, 99, Jharkhand 04, Maharashtra 03, UP 08)*
a) Thought
b) Perception
c) Insight
d) Cognition

32. Persistent belief in something which is not a fact is- *(UPSC 95, WB 01)*
a) Illusion b) Hallucination
c) Delusion d) Delirium

33. Nihilistic ideas are seen in - *(PGI Dec 08)*
a) Simple schizophrenia
b) Paranoid schizophrenia
c) Cotard's syndrome
d) Depression
e) Body dysmorphic disorder

34. A man hits his neighbour. Next day he feels that police is behind him and his brain is being controlled by radio waves by his neighbour. The probable diagnosis is - *(AIIMS 99)*
a) Thought insertion
b) Passivity feeling
c) Delusion of persecution
d) Obscessive compulsive disorder

35. A 25 year old university student had a fight with the neighbouring boy. On the next day while out, he started feeling that two men in police uniform were observing this movements. When he reached home in the evening he was frightened. He expressed that police was after him and would arrest him. His symptoms represent - *(AIIMS Nov 03)*
a) Delusion of persecution b) Ideas of reference
c) Passivity d) Thought insertion

36. Delusion is not present in - *(AI 02)*
a) Delirium b) Mania
c) Depression d) Compulsivedisorder

37. Delusions are seen in all the following except -
a) Obsessive compulsive disorder *(SGPGI02)*
b) Depression
c) Mania
d) Schizophrenia

38. Delusion is not seen in - *(Jipmer 95)*
a) Depression b) Anxiety
c) Schizophrenia d) Mania

39. Following are correctly matched except - *(PGI 98)*
a) Schizophrenia-Auditory hallucination
b) OCD-infidelity
c) Alcoholism - auditory hallucination
d) Depression - guilt feeling

40. Delusion of persecution occur in - *(PGI June 09)*
a) Schizophrenia
b) Paranoid psychosis
c) Manic episode

41. Delusion of grandiosity seen in - *(PGI Nov. 10)*
a) Hypomania
b) Schizoaffective mania
c) Paranoid schizophrenia
d) Kleptomania
e) Pyromania

42. Erotomania is seen in - *(NEET/DNB Pattern)*
a) Bipolar mania b) Unipolar mania
c) Neurosis d) OCD

43. Perseveration is - *(Bihar 06, AI 05)*
a) Persistent and inappropriate repetition of the same thoughts
b) When a patient feels very distressed about it
c) Characteristic of schizophrenia
d) Characteristic of obsessive compulsive disorder (OCD)

44. Thoughts in mind with rhyming rather than with meaning of thoughts - *(Maharashtra 10)*
a) Flight of ideas
b) Perseveration
c) Circumstantiality
d) Clang association

45. Loss of capability of doing goal directed things, to express ideas, making irrelevant comments, but ultimately succeeding in going back to original point is known as - *(Maharashtra 07, 06)*
a) Commentalism b) Tangentiality
c) Dysprosodia d) Circumstantiality

46. Repetition of movements, act, words and phrases; beyond point of relavance- *(Maharashtra 08)*
a) Fusion b) Mannerism
c) Perseveration d) Stereotypy

47. Confabulation is defect of - *(MP 00, AIIMS 98)*
a) Memory b) Intelligence
c) Attention d)Concentration

48. True about confabulation - *(Jharkhand 04)*
a) A memory disorder
b) Synonymous with false memory syndrome
c) It is congenital
d) It is age related disease

49. Confabulation is typically seen in - *(Kerala 98)*
a) Mania b) Depression
c) Alcoholism d) Delirium

50. Confabulation is- *(SGPGI03)*
a) A state of confusion where patient is not able to describe the details
b) Purposefully fabricating stories to project a certain image
c) Filling up to gaps by fabrication to cover lapses in memory
d) Seen in delirium

51. Unfamiliarity of familiar things is seen in -
a) Deja vu *(Kerala 99, Jipmer 02, Karn 94)*
b) Jamais vu
c) Deja entendu
d) Deja pence

52. Catatonic features are seen in schizophrenia they are also seen in - *(PGI June 08)*
a) Severe depression b) Conversion disorder
c) Personality disorder d) Somatisation disorder

53. The DSM.IV classification of psychiatric disorder as proposed by American Psychiatry Association classifies and helps in diagnosing patient on multiple axes. Of these, axis V represents the degree of -
a) Present state of symptoms *(Maharashtra 09)*
b) Comorbid medical condition
c) Global assessment of function
d) Comorbid psychological problem

54. Consultation - liation (C-L) psychiatry involves diagnosing - *(MAHE 06, SGPGI04)*
a) Psychiatric illness in medically ill
b) Medical illness in psychiatric patients
c) Sucidal tendency in psychiatric patients
d) Sucidal tendency in medically ill

55. Rorschach inkblot test is - *(Bihar 03)*
a) Projective b) Subjective
c) Both d)None

56. Rorschach test measures - *(PGI 99)*
a) Intelligence b) Creativity
c) Personality d) Neuraticism

57. Signs of organic brain damage are evident on -
a) Bender Gestalt test *(A1 04)*
b) Rorschach test
c) Sentence completion test
d) Thematic appreception test

58. The halstead reitan battery involves all except-
a) Finger oscillation *(PGI99)*
b) Constructional praxis
c) Rhythm
d) Tactual performance

59. Which of the following is not a cognitive error/ dysfunction- *(AI10)*
a) Catasrophic thinking b) Arbitrary inference
c) Overgeneralization d) Thought block

60. Healthy thinking includes all except- *(AIIMSMay 11)*
a) Continuity b) Constancy
c) Organization d) Clarity

ORGANIC MENTAL DISORDERS

61. All are seen in organic psychosis except -
a) Disorientation in place, time & person
b) Clouding of consciousness *(Kerala 96)*
c) Hallucination
d) Normal common knowledge
e) Intellectual impairment

62. Disturbed orientation is seen in - *(MP 99)*
a) Schizophrenia
b) Neurosis
c) Paranoid personality
d) Organic mental disorder

63. Which of the following behavioral problems would suggest an organic brain lesion - *(SGPGI 05)*
a) Formal thought disorder
b) Auditory hallucinations
c) Visual hallucinations
d) Depression

64. The following is suggestive of an organic cause of the behavioral symptoms - *(AI 02)*
a) Formal thought disorder
b) Auditory hallucinations
c) Delusion of fruit
d) Prominent visual hallucination

65. **Features of delirium -** *(PGI Nov. 10, June 08)*
a) Deficit of attention
b) Autonomic instability
c) Altered sleep wake pattern
d) Hallucination
e) Delirium can not diagnosed clinically

66. **True about delirium; are all except -**
a) Preserved attention *(NEET/DNB Pattern)*
b) Disturbed sleep
lvi^<#-DisbrieuMic&VJ *z4m*
2.> *a)* **Hajllucin&tipn**

67. **All are features of delirium except -** *(AIIMS 96)*
a) Confusion b) Disorientation
c) Hyperactivity d) Loss of memory

68. **A patient semiconscious with altered sensorium with visual hallucination and fragmented delusions is suffering from, which of the following disorder -**
a) Delirium b) Delusion *(SGPGI02)*
c) Schizophrenia d) Mania

69. **A patient with pneumonia for 5 days is admitted to the hospital in altered sensorium. He suddenly ceases to recognize the doctor and staff. He thinks that he is in jail and complains of scorpion attacking him. His probable diagnosis is -** *(AJ 01)*
a) Acute dementia b) Acute delirium
c) Acute schizophrenia d) Acute paranoia

70. **Global cerebral dysfunction characterized by alteration in cognitive function and consciousness is known as -** *(Maharashtra 09)*
a) Acute anxiety b) Depression
c) Delirium d) Dementia

71. **An alcoholic is brought to the Emergency OPD with the complaint of irrelevant talking. He had stopped using alcohol three days back. On examination, he is found to be disoriented to time, place and person. He also has visual illusions and hallucinations. There is no history of head injury. Most likely diagnosis is -** *(A103)*
a) Demetiapraecoxb) Delirium tremens
c) Schizophrenia d) Korsakoff's psychosis

72. **Delirium tremens is characterized by confusion associated with -** *(SGPGI 04, AI03)*
a) Autonomic hyperactivity and tremors
b) Features of intoxication due to alcohol
c) Sixth nerve palsy
d) Korsakoff psychosis

73. **All are true about Delirium tremens except -**
a) Severe depression**b)** Hallucination *(AIIMS 98)*
c) Extreme anxiety d) Delusion

74. **Slow waves in EEG activity seen in -** *(PGI 98)*
a) Depression b) Delirium
c) Schizophrenia d) Mania

75. **Which of the following is not used in delirium -**
a) Haloperidol b) Lithium*(PGIDec 05)*
c) Diazepam d) Olanzapine
e) Resperidone

76. **Not a feature of dementia is -** *(AIIMS 99)*
a) Loss of sensorium b) Wearing of dirty clothes
c) Forget fullness d) Loss of neurons in brain

77. **Catastrophic reaction is feature of-** *(MH-1I)*
a) Dementia b) Schizophrenia
c) Delirium d) Anxiety

78. **Characteristic feature of subcortical dementia is -**
a) Memory loss b) Aphasia *(AIIMS 99)*
c) Dyslexia d) Tactile agnosia

79. **Subcortical dementia is seen in all except -**
a) Parkinsonism *(NEET/DNB Pattern)*
b) Alzheimer's disease
c) Wilson's disease
d) Huntingtons chorea

80. **All are causes of subcortical dementia except -**
a) Alzheimer's disease *(AIIMS May 09)*
b) Parkinson's disease
c) Supranuclear palsy
d) HIV associated dementia

81. **Which one of the following is a subcortical dementia?** *(UPSC-108)*
a) Alzheimer's disease
b) Huntington's chorea
c) Normal pressure Hydrocephalus
d) VitB_{12} deficiency

82. **All are examples of cortical dementia except -**
a) Alzheimer's disease *(Jipmer 03, SGPGI 01)*
b) Multiple sclerosis
c) Creutzfeldt Jacob disease
d) Pick's disease

83. **One of the following is a reversible cause of dementia-** *(MP 03)*
a) Toxic dementia b) Alzheimer's ds.
c) Multi-infarct dementia d)Pickds.

84. **Reversible cause of dementia -** *(AP 96, AI 95)*
a) Post encephalitis b) Multi infarct
c) Hydrocephalus d) Senile dementia

85. **Reversible cause of dementia is -** *(AI 95)*
a) Multi infarct b) Senile dementia
c) Post encephalitis d) Huntington's chorea

86. **Reversible cause of dementia -** *(PGI June 04)*
a) Hypothyroidism b) Alzheimer's disease
c) Vitamin B_{12} deficiency d) Vitamin A deficiency

87. **Treatable causes of dementia are -** *(PGI 01)*
a) Alzheimer's ds. b) Hypothyroidism
c) Multi-infarct dementia d) SDH (subdural h'ge)
e) Hydrocephalus

88. **Dementia is seen in all except -** *(MP 97)*
a) Schizophrenia b) Head injury
c) Huntington's chorea d) Frontal lobe tumour

89. **Dementia is seen in all except -** *(MP 98, WB 2K)*
a) Schizophrenia b) Alzheimer's disease
c) Huntington's chorea d) Pick's ds.

90. **Most common cause dementia in** *adult-(Jharkhand06)*
a) Alzheimer's b) Multiinfarct
c) Pick disease d) Metabolic cause

91. **Pseudodementia is seen in-***(PGI91\ Delhi 03, Kam. 11)*
a) Alcoholism b) Depression
c) Schizophrenia d) Mania

92. **A 65 year old male is brought to the outpatient clinic with one year illness characterized by marked forgetfulness, visual hallucination, suspiciousness, personality decline, poor self care and progresssive deterioration in his condition. His Mini Mental Status Examinations (MMSE) Score is 10. His most likely diagnosis is -** *(AIIMS Nov 02)*
a) Dementia b) Schizophrenia
c) Mania d) Depression

93. **Vascular dementia is characterized by -** *(PGI 03)*
a) Disorientation b) Memory deficit
c) Emotional liability d) Visual hallucination
e) Personality deterioration

94. **A 70 yr old man presents with h/o prosopagnosia, loss of memory, 3rd person hallucination since 1 month. On examination deep Tendon reflexes are increased, minimental examination score is 20/30. What is most likely diagnosis -** *(AIIMS 01)*
a) Dissociated dementia b) Schizophrenia
c) Alzheimers disease d) Psychotic disorder

95. **Protein involved in Alzheimer's** *disease~(Nimhans 01)*
a) Apo E gene b) Presenilin II
c) Amyloid portion d)All

96. **Biochemical etiology of Alzheimer's disease relates to-** *(ARMS96)*
a) Serotonin b) Dopamine
c) Acetylcholine d)GABA

97. **Following are predispositions to Alzheimer's disease except -** *(AI99, WB 99)*
a) Down's syndrome b) Head trauma
c) Smoking d) Low education group

98. **All the following are featuring Alzheimer's disease except-** *(WB 02)*
a) Cerebellar atrophy
b) Common in 5th and 6th decade
c) Atrophied gyri and widened sulci
d) Progressive dementia

99. **Neurofibrillary tangles with senile plaques are seen in -** *(PGI 2000)*
a) Parkinson's disease b) Alzheimer's disease
c) Schizophrenia d) Tuberous sclerosis

100. **Dementia of Alzheimer's type is not associated with one of the following -** *(ARMSNov 05)*
a) Depressive symptoms b) Delusions
c) Apraxia and aphasia d) Cerebral infarcts

101. **Regarding Alzheimer's disease which is/are not true -** *(PGI June 09, PGI Dec 08)*
a) Initial loss of long term memory
b) Delayed loss of short term memory
c) Step ladder pattern
d) Cognitive impairment
e) Judgment impairment

102. **A/E are true regarding Alzheimer's disease -**
a) Gradually progressive *(PGI Feb 08)*
b) Abrupt onset acute exacerbation
c) Episodic memory
d) Fronto temporal disorder
e) Ubiquitin lewy bodies

103. **Progressive cognitive impairment in Alzheimer's disease is characterized by -** *(Maharashtra 06)*
a) Nominal aphasia
b) Recent memory loss
c) No behavioral abnormalities
d) All

104. **Fronto temporal dementias include A/E -** *(UP 07)*
a) Pick's disease b) Nonfluent aphasia
c) Semantic dementia d) Alzheimer's disease

105. **Rivastigmine and Donepezil are drugs used predominantly in the management of -** *(AI 06)*
a) Depression b) Dissociation
c) Delusion d) Dementia

106. **Donepezil is used in treatment of -** *(MP 05)*
a) Alzheimer's dementia b) Schizophrenia
c) Anxiety disorder d) Depression

107. **Korsakoff's psychosis is seen in -** *(PGI Dec 05)*
a) CRF b) Alcohol withdrawal
c) Marasmus d) Cirrhosis

108. **The site of lesion in Korsakoff's psychosis is -**
a) Frontal lobe *(ARMS 96)*
b) Corpus striatum
c) Mammilary body
d) Cingulate gyrus

109. **Wernicke's encephalopaty involves which part of CNS -** *(PGI 2000)*
a) Mammillary body b) Thalamus
c) Frontal lobe d) Arcuate fasciculus

110. **All are associated with Wernicke's encephalopathy except-** *(NEET/DNB Pattern)*
a)- Cog wheel rigioity
b) Alteration inthental function
c) VIth nerve palsy
d) Ataxia

ill. **A 45 year male with a history of alcohol dependence presents with confusion, nystagmus and ataxia. Examination reveals 6th cranial nerve weakness. He is most likely to be suffering from -** *(AI 05)*
a) Korsakoff's psychosis
b) Wernicke encephalopathy
c) DeClerambault syndrome
d) Delirium tremens

H2. **A alcoholic person comes to your office, he can't tell his name, there is gross incoordination in walking, and his eye is deviated to one side, what is your diagnosis -** *(Bihar 06)*
a) Wernicke's encephalopathy
b) Korsakoff's psychosis
c) Alcoholic hallucination
d) Delirium tremens

113. Wernikes:ehcepiiaiopathy features are ail except- *(NEET/DNB Pattern)*
a) Confusion b) Ataxia ^
c) Aphasia d) Nystagmus ^ ;

114. All are the features of Korsakoff's syndrome except- *(Jipmer 98, UP 02)*
a) Confabulation b) Retrograde amnesia
c) Antegrade amnesia d) Defective motor skill

115. In korsakoff psychosis all are seen except -
a) Loss of remote memory *(Jipmer 98)*
b) Loss of intellectual function but preservation of memory
c) Lack of insight, unable to understand the disability
d) Reversible state

116. True statement about Korsakoff's psychosis is - *(Rohtak 2000, Jipmer 99, UP 99, PGI97)*
a) Severe antegrade + Mild retrograde memory defect
b) Mild antegrade + severe retrograde memory defect
c) Only antegrade memory defect
d) Only retrograde memory defect

117. Korsakoff's psychosis is diagnosed by - *(AI2000)*
a) Peripheral neuropathy
b) Visual hallucination
c) Impairment of long term memory
d) Seizures

118. All are relatively normal in Korsakoff's psychosis except - *(MAHA 03, KA 03, J&K00)*
a) Implicit memory b) Intelligence
c) Language d) Learning

119. Korsakoff's syndrome true is - *(PGI 00, UP 03, Jipmer 01)*
a) Cerebral cortex is mostly affected
b) Learning is relatively normal
c) Retrograde memory is not affected
d) Cannot be caused by malnutrition
e) Confabulation may be present

120. An alcoholic presents with complaints of loss of memory of recent events, impaired insight, confabulation, and dementia of few months duration. The patient is suffering from - *(MAHE 01)*
a) Wernicke's encephalopathy
b) Korsakoff's psychosis
c) Delirium tremens
d) Binswanger's disease

121. In chronic alcoholic, loss of memory & confabulation is due to - *(Bihar 05)*
a) Wemick's encephalopathy
b) Korsakoff's psychosis
c) Alcoholic hallucination
d) Delirium tremens

122. Korsakoff's psychosis is diagnosed by -
a) Peripheral neuropathy *(Jharkhand 06)*
b) Visual hallucination
c) Impairment of long-term memory
d) Seizure

123. Not seen in Korsakoff's syndrome - *(Jipmer 2000)*
a) Clear consciousness
b) Inability to learn new things
c) Halluciations
d) Confabulation

124. Wernicke's encephalopathy can be prevented by -
a) IV saline *(PGI 01, AIIMS 98)*
b) Large amounts of glucose
c) Thiamine supplement
d) Imipramine

125. 35 year old male comes with h/o 10 year of alcoholism and past history of ataxia with B/L lateral rectus palsy. He was admitted & treated. What changes expected to see - *(PGI June 08)*
a) Progression to Korsakoff's psychosis
b) Residual ataxia in 50% of patients
c) Extraocular palsy disappear in hour
d) Immediate relief from symptoms

126. Anterograde amnesia is seen in -
a) Head injury *(AIIMS Nov 10)*
b) Stroke
c) Spinal cord injury (Traumatic paraplegia)
d) Alzheimer's disease

127. Amnesia is found in - *(AI 2000)*
a) Head injury b) Mania
c) Schizophrenia d) Psychiatric state

128. Biological amnesia is - *(AIIMS 98)*
a) Lack of interest b) Presenile dementia
c) Opioid addiction d) Hypothyroidism

129. When information memorized afterwards is interfered by the information learnt earlier, it is called- *(AIIMSMay 04)*
a) Retroactive inhibition b) Proactive inhibition
c) Simple inhibition d) Inhibition

130. All are true except - *(PGI Feb 08)*
a) Procedural learning is from past experiences
b) Implicit learning is procedural skill acquirement
c) Amnestic syndromes lose semantic memory
d) Implicit memory is declarative
e) Anterograde amnesia affects long term memory more

131. Mini mental status is - *(Jipmer02)*
a) Method to investigate common psychiatric problem
b) 30 point programme to evaluate cognitive function
c) To evaluate schizophrenia
d) Instrument to measure delirium

132. Total score iii Mini Mental Status Examination (MMSE)is- *(Maharashtra 10) NEET/DNB Pattern)*
a) 25 b) 30
c) 32 d)35

133. The following are the psychiatric sequelae after stroke in elderly - *(PGI03)*
a) Depression b) Post traumatic stress disorder
c) Dementia

113) c 114) d 115) a,b,d 116)a 117)c 118)d 119) e 120)b 121)b 122)c 123)c 124)c 125)a,b,c 126)a,b,d 127) a 128) b 129) b 130)a,c,d,e 131)b 132) b 133) a,c

134. In case of above 60 years of age psychiatric disorder in India is mostly due to - *(Calcutta 2 K)*
a) Depression b) Dementia
c) Hysteria d) Schizophrenia

135. A60year man had undergone cardiac bypass surgery 2 days back. Now he started forgetting things and was not able to recall names and phone numbers of his relatives. What is the probable diagnosis -
a) Depression *(AI10)*
b) Post traumatic psychosis
c) Cognitive dysfunction
d) Alzheimer's disease

SUBSTANCE ABUSE

136. Substance dependence is due to all except?
a) Personality *(AIIMS Nov 09)*
b) Peer Pressure
c) Family history of substance abuse
d) Intelligence

137. Which of the following is not a feature of drug dependence - *(AI 12)*
a) Tolerance
b) Persistant desire to quit drug
c) Consumption of Large amount of drug over prolonged period
d) Use of illegal substances

138. Treatment is not required in withdrawal of - *(AI 96)*
a) Cannabis b) Alcohol
c) Amphetamine d) LSD

139. The withdrawal from all of the following may produce suicidal tendencies except -*(Jipmer 96, Nimhans 97)*
a) Cocaine b) Amphetamine
c) Alcohol d) Cannabis

140. Symptomatic treatment is not required in withdrawal of- *(AI 98)*
a) Cannabis b) Morphine
c) Alcohol d) Cocaine

141. Physical dependence is not seen with - *(AIIMS 95)*
a) Alcohol b) Raw opium
c) Cannabis d) Benzodiazepines

142. Physical dependence is not seen with - *(MP 97)*
a) Cannabis b) LSD
c) Alcohol d) Benzodiazepines

143. Most commonly abused opioid- *(NEET/DNBPattern)*
a) Morphine ** ' r<V •; b) Diacetylmorphine
e) Oxycodine v d) Buprembrphine

144. All are seen in morphine poisoning except - *(AI97)*
a) Cyanosis
b) Pinpoint pupil
c) Hypertension
d) Respiratory depression

145. Acute opioid withdrawl is characterized by -
a) Rhinorrhoea b) Piloerection
c) Miosis d) Insomnia
e) Constipation *(PGIDec 04)*

146. A boy is having diarrhoea, rhinorrhoea, sweating & lacrimation, What is the most probable diagnosis-
a) Cocaine withdrawal *(AIIMS Nov 10)*
b) Heroin withdrawal
c) Alcohol withdrawal
d) LSD withdrawal

147. The following symptoms may be seen in opium withdrawal- *(DELHIPGFeb. 09, Calcutta 01)*
a) Tremors b) Lacrimation
c) Dry nose and mouth d) Constipation

148. Yawning is a common feature of - *(AIIMSMay 03)*
a) Alcohol withdrawal b) Cocaine withdrawal
c) Cannabis withdrawal d) Opioid withdrawal

149. Not a feature of heroin (smack) withdrawal - *(KA 96)*
a) Yawning b) Muscle cramps
c) Hypersomnia d) Hypertension

150. Which of the following drugs is not used in opioid dependence ? *(AIIMS May 09)*
a) Disulfiram b)Clonidine
c) Lorazepam d) Naltrexone

151. Naltrexone is used in opioid addiction because -
a) To treat withdrawal symptoms *(AI 07, AIIMS*
b) To treat overdose of opioids *Nov 06, May 07)*
c) Prevent relapse
d) Has addiction potential

152. False regarding opiate withdrawal syndrome -
a) Characterized by body pain *(UP 99, SGPGI99)*
b) Characterized by dilatation of pupils
c) Treated with naltrexone
d) Treated with methadone

153. The drug which is used for long term maintenance in opioid addiction - *(AIIMS Nov 06)*
a) Naloxone b) Nalorphine
c) Butarphanol d) Methadione

154. Which of the following is an alternative to methadone for maintenance treatment of opiate dependence ?
a) Diazepam *(AIIMS May 05)*
b) Chlordiazepoxide
c) Buprenorphine
d) Dextropropoxyphene

155. Opiate withdrawal is treated with- *(AIIMS 95)*
a) CPZ b) Nalorphine
c) Pethidine d) Methadone

156. Naltrexone is used in opioid dependene to -
a) Prevent respiratory depression *(AIIMS May 10)*
b) Treat withdrawal symptoms
c) Prevent relapse
d) Treatment of opioid overdose

157. Drugs used in Heroin withdrawal *zveAIE-(AIIMS98)*
a) Buprenorphine b)Clonidine
c) Dextropropoxyphene d) Haloperidol

158. Methadone is indicated in - *(UP 99)*
a) Opioid overdose b) Opioid dependence
c) Opioid withdrawal d) Alcohol withdrawal

134)b 135) c 136) d 137) d 138)a,d 139) d 140) a 141)c 142)b>a 143) b 144)c 145)a,b,d 146) b

159. "Smack" is the "common" name for *-(CUPGEE 96)*
a) Heroin b) Cocaine
c) Opium d)None

160. Ail are adulterants of Heroin, except *-(AUMSMay 05)*
a) Chalk powder b) Quinine
c) Charcoal d) Fructose

161. In an alcoholic man, Blackouts are seen *in-(MH-ll)*
a) Alcohol abstinence
b) Hepatic encephalopathy
c) Alcohol intoxication
d) Alcohol withdrawal

162. Most common symptom of alcohol withdrawal is -
a) Bodyache b) Tremor *(AI07)*
c) Diarrhoea d)Rhinorrheo

163. Features of alcohol withdrawal are all except-*(AI98)*
a) Epileptic seizure b) Restlessness
c) Hypersomnolence d) Hallucination

164. Deti^ih tt-ehieiis is seen in *-(NEET/DNB Pattern)*
a) Aldohol withdrawal b) Alcohol overdoses
c) Morphine poisoning d) Atropine poisoning

165. TVue about delirium tremens - *(PGI June 05)*
a) Clouding of consciousness b) Coarse tremors
c) Chronic delirious behaviour d) Hallucination
e) Autonomic dysfunction

166. A 30 year old male with history of alcohol abuse for 15 years is brought to the hospital emergency with complaints of fearfulness, mis-recognition, talking to self, aggressive behavior, tremulousness and seeing snakes and reptiles that are not visible to others around him. There is history of drinking alcohol two days prior to the onset of the present complaints. He is most likely suffering from - *(AIIMS Nov 03)*
a) Delirium tremensb) Alcoholic hallucinosis
c) Schizophrenia d) Seizure disorder

167. An alcoholic addicted presents in emergency with irrelevant talking & disoriented to time, place and person. There is H/O not taking alcohol from last 3 days & no head injury. He also has visual hallucination. The diagnosis - *(AI 02)*
a) Dementia praecoxb) Delirium tremens
c) Schizophrenia d) Korsakoff psychosis

168. A 40 year old male, with history of daily alcohol consumption for the last 7 years, is brought to the hospital emergency room with acute onsent of seeing snakes all around him in the room, not recognizing family members, violent behavior and tremulousness for few hours. There is history of his having missed the alcohol drink since 2 days. Examination reveals increased blood pressure, tremors, increased psychomotor activity, fearful affect, hallucinatory behaviour, disorientation, impaired judgement and insight. He is most likely to be suffering from-*(AI05)*
a) Alcoholic hallucinosis
b) Delirium tremens
c) Wernicke encephalopathy
d) Korsakoff's psychosis

169. 46 year old chronic alcoholic, one day after abstinence from alcohol comes to casualty presenting with restlessness, seizures, coarse tremors. He is not able to recognize the doctor, he think himself in a jail. He also complains uncontrolable fear of being murdered, insomnia and insects crawling over body, probable diagnosis is - *(MP 03)*
a) Alcoholic seizures (rum fits)
b) Korsakoff's psychosis
c) Delirium tremens
d) Alcoholic hallucinosis

170. In alcohol withdrawal which is not seen - *(Bihar 05)*
a) Seizure b) Blackout
c) Coarse tremor d) Hallucination

171. Withdrawal, delrium, hallucinations and amnestic disorder is seen with - *(Calcutta 2K)*
a) Cannabis b) Opiates
c) Alcohol d) Amphetamines

172. Alcohol withdrawal is characterised by - *(Make 99)*
a) Phobia b) Delusion
c) Illusion d) Hallucinations

173. Morbid jealousy is most often seen in patients taking-
a) Alcohol b) Amphetamine
c) LSD d) Cannabis *(UP 97)*

174. Alcoholic Paranoia is associated with - *(AI 10)*
a) Fixed delusions b) Hallucinations
c) Drowsiness d) Impulse agitation

175. Effects of chronic alcoholism are - *(Jipmer 98)*
a) Confabulation b) Amnesia
c) Kosarkoff psychosis d) Malnutrition
e) All of the above

176. Wernicke-korsakoff syndrome is due to the deficiency of which of the following - *(Jipmer 00)*
a) Pyridoxine b) Thiamine
c) VitamineB^ d) Riboflavin

177. IVue about alcoholic dependence syndrome -
a) Tolerance *(PGI June 09)*
b) Withdrawal
c) CAGE questionnaire
d) Physical dependence

178. By which alcohol dependence is best indicated -
a) Blackouts *(Assam 96, AIIMS95)*
b) Early morning drinking
c) Withdrawal symptoms
d) Physical dependence

179. All are anticraving agent for alcohol except -
a) Lorazepam b) Naltrexone *(AIIMS May 09)*
c) Topiramate d) Acamprosate

180. Which of the following is used to maintain abstinence in alcohol dependence ? *(DPG 09)*
a) Naltrexone b) Clonidine
c) Disulfiram d) Naloxone

181. All of the following agents are used in the treatment of alcohol dependence, except - *(AI 11)*
a) Flumazenil b) Acomprosate
c) Naltrexone d) Disulfiram

159) a 160)c 161) c 162)b 163)c 164)a 165)a,b,d,e 166)a 167)b 168)b 169)c 170)b 171)c 172)d

182. A 40 year old man presents to casualty with history of regular and heavy use of alcohol for ten years and morning drinking for one year. The last alcohol intake was three days back. There is no history of head injury or seizures. On examination, there is no icterus, sign of hepatic encephalopathy or focal neurological sign. The patient had coarse tremors, visual hallucinations and had disorientation to time. Which of the following is the best medicine to be prescribed for such a patient ? *(AI04)*
a) Diazepam b) Haloperidol
c) Imipramine d) Naltrexone

183. Drug of choice in delirium tremens is - *(SGPGI04,*
a) Diazepalm b) Phenytoin *AI 95)*
c) Chlordiazepoxide d)Morphine

184. In an uncomplicated case of alcohol withdrawal, the drug which can be given safely is - *(AIIMSMay 08)*
a) Benzodiazepines b)Clonidine
c) Morphine d)Disulfiram

185. T/t of alcohol withdrawal - *(PGI June 0 7)*
a) B-blocker b)BZD
c) Amitryptiline d) SSRIs

186. In alcohol withdrawal, drug of choice *is-(DELHIPGFeb.*
a) TEP b) Chlormethazole *09)*
c) Chlordiazepoxide d) Buspirone

187. Alcohol intoxication is a form of - *(Maharashtra 03)*
a) Psychosis b) Anxiety neurosis
c) Dependence d)Withdrawal syndrome

188. Psychiatric complications of alcohol dependence -
a) Anxiety b) Suicide *(PGI 01)*
c) Depression d) Schizophrenia
e) Mania

189. Hangover following alcohol consumption can be treated with - *(NEET/DNB Pattern)*
a) Pyridoxine b) Thiamine
c) Riboflavin d) Niacin

190. Formication and delusion of persecution, both are together seen in - *(AIIMS May 11, 09)*
a) LSD psychosis b) Amphetamine psychosis
c) Cocaine psychosis d) Cannabis psychosis

191. Paranoid Psychosis with cocaine is seen due to-*(AI 12)*
a) Tolerance b) Withdrawl
c) Reverse Tolerance d) Intoxication

192. Jet black pigmentation of tongue with tactile and visual hallucination is feature of which poisoning -
a) Cocaine b) Arsenic *(RJ 98)*
c) Cannabis d) Heroin

193. 'Flash-back' phenomenon is seen with the use of -
a) Cannbis b) Psilocybin *(KA 99)*
c) LSD d) All of the above

194. Which is associated with flashback phenomenon -
a) Cannabis b) *Cocame(Burwan 2K)*
c) Amphetamine d) Heroin

195. Amotivational syndrome is seen in - *(MH10, TN 99)*
a) Cannabis b) Cocaine
c) Amphetamine d) LSD

196. After use of some drug, a person develops episodes of rage in which he runs about and indiscriminately injures a person who is encountered in way. He is probably addict of- *(AIIMS 97)*
a) Alcohol b)Cannzbis
c) Opium d) Cocaine

197. Psychosis resulting due to chronic amphetamine intake most commonly resembles - *(Orrisa 98)*
a) Delirium b) Mania
c) Paranoid schizophrenia d) Dissocitive disorder

198. Hallucinations are produced by-*(NEET/DNB Pattern)*
a) Amphetamine b) Morphine
c) Paraxetine d) Chlorpromazine

199. Which of the following is not hallucinogenic -
a) LSD b) Cocaine *(UP 96)*
c) Mescaline d) Amphetamine

200. A 16-year old boy suffering from drug abuse presents with cross-over of sensory perceptions, such that, sounds can be seen and colors can be heard.Which of the following is the most likely agents responsible for drug abuse- *(AI 12)*
a) Cocaine b) LSD
c) Marijuana d) PCP

201. All of the following about LSD intoxication are true except- *(SGPGI99)*
a) Panic b) Confusion
c) Hypereflexia d) Treatment is phenothiazines

202. "Mainlining" is - *(CUPGEE 02)*
a) Cocaine addiction
b) Homicidal cut wounds
c) Drug addicts using main veins for injecting drugs
d) Suicidal cut wounds

203. Used for averting smoking habit is - *(DPG 08)*
a) Buspirone b) Bupropion
c) Methadone d) Venlafaxine

204. Most common substance of abuse in India -
a) Cannabis *(AI 07, AIIMS May 10, May 07)*
b) Tobacco
c) Alcohol
d) Opium

205. In patients of substance-abuse, drugs used are -
a) Naltrexone b) Naloxone *(PGI 02)*
c) Clonidine d) Lithium
e) Disulfiram

206. Drugs used in maintenance of substance dependance-
a) Naloxone b) Acamprosate *(PGIDec 06)*
c) Disulfiram d) Clonidine

207. Effect comprising conjuctival congestion, T appetite, dry mouth, tachycardia and synesthesia is seen with- *(Maharashtra 09)*
a) Cannabis b) Caffeine
c) Cocaine d) Codeine

208. Etheromanias refer to - *(NEET/DNB Pattern)*
a) Acute psychosis post ether anaesthesia
b) Ether addiction .
c) Excessive ether use drug anaesthesia
d) None

SCHIZOPHRENIA AND OTHER PSYCHOTIC DISORDERS

209. Lack of insight is not a feature *oi-(AI 05,SGPGI 03)*
a) Panic disorder b) Schizophrenia
c) Mania d) Reactive psychosis

210. Which of the following features is not included in psychosis - *(PGI June 04)*
a) Panic attack b) Delusion
c) Hallucination d) Hypochondriasis

211. Impaired insight is found in - *(PGI 97)*
a) Traumatic psychosis
b) Schizophrenia
c) Anxiety neurosis
d) Obsessive compulsive neurosis

212. Impaired insight is evident in - *(AIIMS 92)*
a) Psychosomatic disorder
b) Anxiety neurosis
c) Post traumatic stress disorder
d) Schizophrenia

213. Differentiating features b/w neurosis and psychosis, In psychosis- *(MP 01)*
a) Insight is preserved
b) Lack of insight
c) Personality and behavior preserved
d) None

214. Difference between neurosis and psychosis is -
a) Severity b) Insight *(AI95)*
c) Clinical features d) Duration

215. Lack of insight is not a feature of - *(AIIMS NOV 02)*
a) Panic disorder b) Schizophrenia
c) Mania d) Reactive Psychosis

216. Patient presents with altered behaviour, delusions & hallucination suggest - *(AI 97)*
a) Psyshotic disorderb) Confirms schizophrenia
c) Korsakoff's psychosis d) Depression

217. A patient presents with one month history of abnormal hallucination and delusion. The patient lacks insight to his changed behaviour. Likely diagnosis is - *(AI 97)*
a) Paronia b) Depression
c) Psychosis d) Schizophrenia

218. Delusions are seen in all of the following, Except- *(AI 12)*
a) Shizophrenia b) Depression
c) Dementia d) Conversion Disorder

219. Which of the following feature is included in psychosis - *(PGI June 06)*
a) Panic attack b) Delusion
c) Hallucination d) Hypochondriasis
e) Emotional withdrawal

220. A psychotic disorder most commonly pertains to which of the following symptoms ?
a) Weeping or laughing *(DELHIPG Mar. 09)*
b) Agitation or retardation
c) Obsessions or compulsions
d) Delusions or hallucinations

221. Most specific of psychosis - *(AIIMS 95)*
a) Neologism b) Incoherence
c) Pressure of speech d) Persveration

222? The term '®^mentirprecox" was coined by-*(AI08,*
a) Freud b)B*ieyftzr NEET/DNBPattern)*
c) Kraepelih d) Schneider

223. The term catatonia is coined by - *(CIP 01)*
a) Kahlbaum b) Freud
c) Maxwell j ones d) Adler

224. Term schiophrenia was coined by - *(NEET/DNB*
a) Erichmuir b) Sigmund frued *Pattern)*
c) Bleular d) None

225. One of the following drug abuse produces a psychosis closely resembling paranoid schizophrenia-fMP *98,*
a) Barbiturates b) Amphetamines *Jipmer 11)*
c) Opioids d) Benzodiazepines

226. Paranoid schizophrenia is caused by - *(AIIMS 97)*
a) L-Dopa b) Fluoxetine
c) Amphetamine d)LSD

227. Which does not produce psychotic effects -
a) Amphetamine b) Cocaine *(Punjab 11)*
c) Ketamine d) Marijuana

228. Incidence of schizophrenia in India- *(TN 99)*
a) 1-5 per 1000 b) 0.15-0.5 per 1000
c) 5-10 per 1000 d) 10-15 per 1000

229. Percentage of monozygotic twins with schizophrenia is - *(MP 04, WB 03, UP 01)*
a) 0.1% b) 1%
c) 10% d) 50%

230. Biochemical abnormalities in schizophemia -
a) Increased dopamine *(PGI 02)*
b) Increased dopamine and increased serotonin
c) Decreased dopamine
d) Increased dopamine and decreased serotonin

231. The most commonly implicated neurotransmitter in the etiology of schizophrenia is - *(SGPGI04)*
a) Norepinephrine b) Serotonin
c) Dopamine d)GABA

232. Neurotransmitter related to schizophrenia pathology is - *(PGI 9 7)*
a) Ach b) Dopamine
c) Serotonin d) NA

233. All of the following neurotransmitters are suspected of being involved in the pathophysiology of schizophrenia except - *(MAHE 95, UP 01)*
a) Prostaglandins E b) Norepinephrine
c) Ascorbic acid d) 5-HT

234. Schizophrenia mostly occurs˙m - *(DPG 08, AIIMS99)*
a) Adolescents b) Children
c) Middle age d) Old age

235. Which is more appropriate in a case of schizophrenia-
a) Low socioeconomic group *(PGI 2000)*
b) Seen in adolescents
c) Common in primitive societies
d) Affluent society influences the incidence

236. Expressed emotionality is related to - *(MH10)*
a) Depression b) Schizophrenia
c) Mania d) Somatiform disorder

237. Bleur's symptoms of schizophrenia include A/E -
a) Autism *(PGI Dec 05)*
b) Automatism
c) Affect disturbance
d) Loosening of association
e) Ambivalence

238. Eugene Bleuler's four 'A' of schizophrenia are all except- *(Maharashtra 10, 07)*
a) Autism b) Affect
c) Anhedonia d) Association

239. Schneider's first rank symptoms in schizophrenia include - *(NEET/DNB Pattern)*
a) Audible thoughts b) Somatic passivity
cj Ambivalence d) Depersonalization
e) Hallucinations

240. First rank symptoms of schizophrenia are all except - *(NEET/DNB Pattern)*
a) Ambivalence ; b)Runningcommentary
c) Primary delusion d) Somatic passivity

241. Which one of the following is not considered as first rank symptom of schizophrenia ?
a) Auditory hallucinations *(NEET/DNB Pattern)*
b) Insertion of thoughts
c) Delusional perceptions
d) Compulsive acts that relieve the tension

242. All of the following are schneider first symptoms except- *(MP 06)*
a) Hallucination b) Delusion
c) Passivity phenomenon d) Elation

243. The following is a Schneider's first rank symptom-
a) Persecutory delusion
b) Voices commenting on actions
c) Delusion of guilt
d) Incoherence

244. Which is first rank symptom described by - *(TN95)*
a) Echolalia b) Thought insertion
c) Autism d) Suicidal tendency

245. Which of following is not a Schneider's first rank symptom- *(Delhi 97)*
a) Passivity phenominon
b) Auditory hallucinations
c) Delusions of self reference
d) Delusional perception

246. Schneider's 1st rank symptoms seen *in-(PGIJune 04)*
a) Delusion b) Hallucination
c) Schizoid personality d) Schizophrenia

247. Which of the following is NOT a first rank symptom of schizophrenia? *(Kam. 11)*
a) Echo de la Pensee
b) Passivity experience
c) Delusions of persecution
d) Broadcasting of thoughts

248. Somatic passivity is a feature of - *(AIIMS Nov 11)*
a) Depressive illness b) Paranoid Schizophrenia
c) Hypochondriasis d) Panic disorder

249. True about schizophrenia - *(PGI 03)*
a) Thought broadcasting
b) Third person hallucination
c) Makes violence
d) Elated mood
e) Takes good self care

250. Delusions in clear consciousness are seen in -
a) Dementia b) Delirium *(AMU 98)*
c) Schizophrenia d) Neurosis

251. Auditory hallucinations, features of affect, delusion of persecution occur in - *(TN 95)*
a) Depression b) Hysteria
c) Schizophrenia d) Anxiety neurosis

252. Schizophrenia is a disorder of- *(TN 03)*
a) Thought b) Belief
c) Memory d) Perception

253. In schizophrenia, characteristic feature is -
a) Formal thought disorder b) Delusion *(PGI 97)*
c) Hallucination d) Apathy

254. Schizophrenia is characterized by - *(Bihar 03)*
a) Formed through disorder b) Hallucination
c) Delusion d)All

255. Schizophrenia is characterized by A/E -
a) Delusion *(AIIMS 00, 98)*
b) Auditory hallucination
c) Elation
d) Catatonia

256. Which of the following hallucinations is pathognomonic of schizophrenia - *(DPG 03)*
a) Auditory hallucinations commanding the patient
b) Auditory hallucinations giving running commentry
c) Auditory hallucinations criticizing the patient
d) Auditory hallucinations talking to patient

257. 18 years old male hears voices discussing him in 3rd person has - *(AIIMS 95)*
a) Obsession b) Depression
c) Mania d) Schizophrenia

258. Feature (s) suggestive of schizophrenia rather than organic psychosis is/are - *(PGI June 09)*
a) Third person hallucination b) Split personality
c) Visual hallucination d) Altered sensorium
e) Systemized delusion

259. Characteristic clinical manifestation of schizophrenia is - *(PGI 98)*
a) Confusion b) Anxiety
c) Auditory hallucinations d) Visual hallucinations

260. Most common hallucination in schizophrenia is -
a) Auditory b) Visual *(Jipmer 95, CMC 99)*
c) Olfactory d) Tactile

261. Schizophrenia false is - *(AIIMSNov 07)*
a) 3rd person auditory hallucination
b) Inappropriate emotions
c) Sustained mood changes
d) Formal thought disorder

262. Hallucinations in schizophrenia are characterized by all except - *(Maharashtra 02)*
a) Hallucinations commanding and controlling action of the person
b) Hallucinations as singing songs
c) Hallucinations almost always continuous
d) Hallucinations commenting on actions of the person

263. In a young male, history of firm unshakable belief of hands passing through the body & gripping his lungs indicates - *(Maharashtra 03)*
a) Schizophrenia b) Depression
c) Somatization d) Asthma

264. A 28 year old female presents with complains of reduced sleep with disorganized behaviour since 9 months. She feels there is a camera fixed behind her head which always follows her. Which of the following is likely diagnosis - *(MH-11)*
a) Psychotic depression
b) Paranoid schizophrenia
c) Delusional disorder
d) Insomnia

265. Most common type of schizophrenia - *(A1IMS 95, Jharkhand 04, Nimhans 01, PGIDec 04)*
a) Simple
b) Hebephrenic
c) Catatonic
d) Paranoid

266. In schizophrenia early onset with poor prognosis is seen in - *(AI96)*
a) Simple b)Hebephrenic
c) Catatonic d) Paranoid

267. Which subtype of schizophrenia carries the best prognosis- *(MP04)*
a) Undifferentiated b) Catatonic
c) Pranoid d)Hebephrenic

268. Which of the following is associated with bad prognosis - *(DPG09)*
a) Catatonic schizophrenia
b) Hebephrenic schizophrenis
d) Paranoid schizophrenia
c) Undifferentiated

269. Defect of conation is typically seen in -
a) Simple shcizophrenia *(PGI97, A1IMS96, UP 06)*
b) Hebephrenia schizophrenia
c) Catatonic schizophrenia
d) Paranoid schizophrenia

270. In catatonic schizophrenia which is not found -
a) Waxy flexibility *(PGI Dec 08)*
b) Automatic obedience
c) Somatic passivity
d) Gegenhalten
e) Hallucination

271. Patient presents with waxy flexibility, negativism & rigidity diagnosis is - *(Bihar 04, AI 01)*
a) Paranoid schizophrenia
b) Catatonic schizophrenia
c) Hebephrenic Schizophrenia
d) Simple Schizophrenia

272. Following are features of catatonic schizophrenia, except- *(MP 2000)*
a) Mutism
b) Echolalia
c) Waxy flexibility
d) Deep tendon reflexes are increased

273. Features like increased psychomotor activity, waxy flexibility at time are seen classically in - *(TN97)*
a) Simple schizophrenia
b) Hebephrenic schizophrenia
c) Catatonic schizophrenia
d) None of the above

274. In which type of schizophrenia is grimacing a feature of - *(Karnataka 98)*
a) Juvenile b) Hebephrenic
c) Paranoid d) Catatonic

275. All are features of catatonia except - *(Bihar 03)*
a) Automatic obedience b) Cataplexy
c) Catalepsy d) Negativism

276. Catatonia is associated with - *(Nimhans 01)*
a) Hebephemic b) Catatonic
c) Paranoid d)Undifferentiated

277. Waxy flexibility is characteristic of -
a) Excitatory catatonia *(Orissa 04, Jharkhand 06)*
b) Stuporous cataonia
c) OCD
d) All

278. All of the following are true about paranoid schizophrenia except - *(MP 97)*
a) Most common type of schizophrenia
b) Onset in 3rd / 4th decade
c) Delusions of grandeur
d) Rapid deterioration of personality

279. Delusions of control, persecution and self reference are seen in - *(PGI 97)*
a) Paranoia b) Paranoid schizophrenia
c) Mania d)OCD

280. Grossly disorganised, severe personality deterioration and worst prognosis is seen is -
a) Hebephrenic b) Catatonic *(Orissa 07)*
c) Simple d) Paranoid

281. Schizophrenia and depression both have A/E -
a) Formal thought disorder *(PGI 02)*
b) Social withdrawal
c) Poor personal care
d) Concrete thinking

282. Van Gogh syndrome is seen in - *(PGI 03)*
a) Mania b) Depression
c) Schizophrenia d) OCD

283. Type of schizophrenia with mental retardation - *(NEET/DNB Pattern)*
a) Von-Gogh syndrome
b) Paranoid schizophrenia
c) Catatonic schizophrenia
d) Pfropf schizophrenia

284. True about late onset schizophrenia-^/MS'*Nov 10)*
a) Onset after 45 yrs
b) Onset between 25-30 yrs
c) Prognosis is poor
d) Olfactory halucinations are common

285. All of the following are considered to be negative symptoms of Schizophrenia EXCEPT -*(COMED 09)*
a) Apathy b) Ambivalence
c) Auditory hallucinations d) Affective flattening

286. Type two schizophrenia is characterized by all except-
a) Negative symptoms *(A1IMS Nov 08)*
b) Poor response to TT
c) Disorganised behaviour
d) CT scan abnormal

287. All of the following are associated with better prognosis in schizophrenia except - *(A106)*
a) Late onset b) Married
c) Negative symptoms d) Acute onset

288. Bad prognostic indicator of Schizophrenia is -
a) Late onset *(AIIMS 97)*
b) Family history of Schizophrenia
c) Positive precipitating factors
d) Prominent affective symptoms

289. Bad prognostic factor for schizophrenia is -
a) Late onset of disease *(AIIMS 97)*
b) Catatonia
c) Presence of depression
d) Absence of family history

{HR _ Good prognosis in schizophrenia is indicated by -
a) Soft neurological signs ***m^I^^^N0P!attern)***
b) Affective symptoms
c) Emotional blun ting
§ft H djlnsidious .onset 181111:11

291. Schizophrenia is associated.....personalities -
a) Atheletic b) Psthesis *(AIIMS 97)*
c) Asthenic d)All

292. Which of the follwoing is the most common cause of premature death in schizophrenia - *(AI11)*
a) Homicide
b) Suicide
c) Toxicity of antipsychotic drug
d) Hospital acquired infection

293. A 23 year old engineering student is brought by his family to he hospital with history of gradual onset of suspiciousness, muttering and smiling without clear reason, decreased socialization, violent outbursts, and lack of interest in studies for 8 months. Mental status examination revealed a blunt affect, thought broadcast, a relatively preserved cognition, impaired judgment and insight. He is most likely to be suffering from - *(AIIMS May 04)*
a) Delusional disorder b) Depression
c) Schizophrenia d) Anxiety disorder

294. A patient is brought with 6 month history of odd behaviour. There is history of a family member having disappeared some years back. He seems to be talking to himself and sometimes muttering to himself loudly. The likely diagnosis is - *(AIIMSMay 02)*
a) Schizophrenia b) Conversion disorder
c) Major depression d) Delusion

295. Kallu a 24 year old occasional alcoholic had got a change in behaviour. He has become suspicious that people are trying to conspire against him, though his father states that there is no reason for his fears. He is getting hallucinations of voices commenting on his actions what is most probable diagnosis -
a) Delirium tremens *(CIP 01, AIIMS 00)*
b) Alcohol induced psychosis
c) Schizophrenia
d) Delusional disorder

296. A 60 year old male suffering from auditory hallucination says that people staying upwards are talking about him and conspiring against him. He dropped a police compliant against them but the allegations were proved to be wrong. The diagnosis is - *(AIIMS 01)*
a) Depression b) Dementia
c) Delusional disorder d) Schizophrenia

297. Lallu 40 years has recently started writing books. But the matter in this book could not be understood by anybody; since it contained words which were never there in any dictionary and the theme was very disjoint. Nowadays he has become very shy and self absorbed. When he addresses people, he speaks about metaphilosophical ideas. What is likely diagnosis -
a) Mania b) Schizophrenia *(AIIMS 00)*
c) A genius writer d) Delusional disorder

298. A patient complains that people living upstairs are always talking about him and conspires against him. His son complains about his weired behaviour like keeping shoes in Fridge and wearing vest over shirt. The likely diagnosis is - *(AIIMS 99)*
a) Depressionb) Delusional disorder
c) Dementia d) Schizophrenia

299. A 60 year old man is brought to a psychiatrist with a 10 year history, that he suspects his neighbours and he feels that whenever he passes by they sneeze and plan against behind his back. He feels that his wife has been replaced by a double and calls police for help. He is quite well groomed alert, occasionaly consumes alcohol, likely diagnosis *h-(AIIMSMay 02)*
a) Paranoid personality b) Paranoid schizophrenia
c) Alcohol withdrawal d) Conversion disorder

300. A 70 year old male, Babulal was brought to the hospital with the history of auditory hallucinations with third person hallucinations. He has no history of similar problems previously. The diagnosis is most likely to be - *(AIIMS 01)*
a) Dementia b) Delusional disorders
c) Schizophrenia d) Acute psychosis

301. A16 year old boy does not attend school because of the fear of being harmed by school mates. He thinks that his classmates laugh at and talk about him. He is even scared of going out to the market. He is most likely suffering from - *(AI04)*
a) Anxiety neurosis
b) Manic depressive psychosis
c) Adjustment reaction
d) Schizophrenia

302. A patient of schizophrenia on neuroleptics, his psychotic symptoms get relieved but developed sadness, talks less to others, remain on bed, all of following are likely causes except - *(AIIMS 2000)*
a) Parkinsonism
b) Major depression
c) Negative symptoms are still persisting
d) He is reacting to external stimuli

303. Drug treatment of schizophrenia are - *(PGI03)*
a) Chlordiazepoxide b) Trifluperazine
c) Clozapine d) Rivastigmine
e) Haloperidol

304. A patient of schizophrenia on CPZ (chlorpromazine) develops auditory hallucination again. The next drat to be given is - *(AI 2000)*
a) Haloperidol b) Clozapine
c) Sulpiride d)Tianeptin

305. A patient of depression is getting chlorpromazine, but his auditory hallucination are not controlled. The next drug given is - *(AIIMS 1999)*
a) Haloperidol b) Clozapine
c) Sulpiride d) Tianeptin

306. Drags used in schizophrenia include - *(PGI 02)*
a) Chlorpromazine b) Haloperidol
c) Olanzapine d) Imipramine
e) Risperidone

307. Schizophrenia can be treated with all of the following except- *(MP 04)*
a) Pemoline b) Olanzapine
c) Sulpiride d) Chlorpromazine

308. Atypical antipsychotic are all except?*(AIIMSMay 08)*
a) Olanzepine b) Clozapine
c) Risperidone d) Thioridazone

309. Antipsychotic drags are - *(Manipal 08)*
a) Clomipramine b) Carbamazepine
c) Sodium valproate d) Chlorpromazine

310. Resperidone is most commonly used to treat which of the following disorders ? *(DELHI PG Mar. 09)*
a) Dementia b) Depression
c) Schizophrenia d) Obsessive-compulsive disorder

311. A 30 year old man since 2 months suspects that his wife is having an affair with his boss. He thinks his friend is also involved from abroad and is providing technology support. He thinks people talk ill about him. His friends tried to convince him but he is not convinced at all. Otherwise he is normal, he doesn't have any thought disorder or any other inappropriate behavior. The most likely diagnosis is - *(AI 10)*
a) Paranoid personality disorder
b) Persistent delusion disorder
c) Schizophrenia
d) Acute and transient psychosis

312. A 41 year old woman working as an executive director is convinced that the management has denied her promotion by preparing false reports about her competence and have forged her signature on sensitive documents so as to convict her. She files a complaint in the police station and requests for security. Despite all this she attends to her work and manages the household. She is suffering from -
a) Paranoid schizophrenia *(AI 04)*
b) Late onset psychosis
c) Persistent delusional disorder
d) Obsessive compulsive disorder

313. A man hits his neighbour next day he feels that police is behind him and his brain is being controlled by radio waves by his neighbour. The probable diagnosis is - *(AI 2000)*
a) Personality disorder
b) Passivity feeling
c) Delusion of persecution
d) Organic brain syndrome

314. A 30 year old unmarried woman from a low socioeconomic status family believes that a rich boy staying in her neighbourhood is in deep love with her. The boy clearly denies his love towards this lady. Still the lady insists that his denial is a secret affirmation of his love towards her. She makes desperate attempts to meet the boy despite resistance from her family. She also develops sadness at times when her effort to meet the boy does not materialize. She is able to maintain her daily routine. She however, remains preoccupied with the thoughts of this boy. She is likely to be suffering from - *(AI 04)*
a) Delusional disorder b) Depression
c) Mania d) Schizophrenia

315. A 30 year old unmarried woman of average socio-economic background believes that her boss is in secretly love with her. She rings him up at odd hours and writes love letter to him despite his serious warning not to do so. She holds this belief despite contradiction from family members & his denial. However she is able to manage her daily activities as before. She is most likely to be suffering from -
a) Depression *(AIIMSNov 04)*
b) Shizophrenia
c) Delusional disorder
d) No psychatric ailment

316. Delusion that someone from high socio economic status is loving you is in - *(PGI 98)*
a) Othello syndrome b) Capgras syndrome
c) De clerambault syndrome d) Franklin syndrome

301)d 302)d 303)b,c,e 304)b 305)b 306)a,b,c,e 307)a 308)d 309)d 310)c 311)b 312)c 313)c 314)a 315)c 316)c

317. A person of 35 years is having firm belief about infidelity involving the spouse. And he never allow her to go out of home alone. He often locks his house, while going office. Inspite of all this he is persistantly suspicious about her character. The probable diagnosis is - *(AIMS 99)*
a) Schizophrenia
b) Delusional parasitosis
c) Clerambault's syndrome
d) Othello syndrome

318. Infidility & jealousy involving spouse is the thought content of which disorder - *(PGI99, AI98)*
a) Capgras syndrome
b) Othello syndrome
c) Hypochondrial paranomia
d) Declerambault's syndrome

319. A 25 year old housewife came to the Psychiatry out patient department (OPD) complaining that her nose was longer than usual. She felt that her husband did not like her because of the deformity and had developed relation-ship with the neighbouring girl. Further she complained that people made fun of her. It was not possible to convince her that there was no deform-ity. Her symptoms include - *(AI 04)*
a) Delusion b)Depersonalization
c) Depression d) Hallucination

320. A patient came with complaints of having a deformed nose and also complained that nobody takes him seriously because of the deformity of his nose. He has visited several cosmetic surgeons but they have sent him back saying that there is nothing wrong with his nose. He is probably suffering *from-(AHMS01)*
a) Hypochondriasis b) Somatization
c) Delusional disorder d) OCD

321. Basanti 27 years old female thinks her nose is ugly. Her idea is fixed and not shared by anyone else. Whenever she goes out of home she hides her face. She visits a surgeon for plastic surgery. Next step would be- *(AI 01)*
a) Investigate & then operate
b) Reassure the patient
c) Immediate operation
d) Refer to psychiatrist

322. Delusion of doubles is found in - *(AIMS 99)*
a) Schizo affective disorder
b) Capgras syndrome
c) Reactive psychosis
d) Paranoid schizophrenia

323. Ramu, a 22 year old single unmarried man is suffering from sudden onset of 3rd person hallucination for the past 2 weeks. He is suspicious of his family members and had decreased sleep and appetite. The diagnosis is - *(AIMS 01)*
a) Schizophrenia b) Acute Psychosis
c) Acute mania d) Acute delirium

324. A 20 year old boy c/o hearing of voices, aggressive behavior since 2 days. He has fever since 2 days. When asked to his family, they says that he has been muttering to self and gesticulating. There is no h/o of psychiatric illness. Likely diagnosis is- *(AIIMS*

a) Mania b) Depression
c) Alcohol dependence d) Schizophrenia

356. Suicidal tendencies are least coinpgQ^tlij *(NEET/ DNB Pattern)*
a) Alone b) Depression
c) Male d) Married person

357. Increase in suicidal behavior is due to - *(MP 06)*
a) Increase in serotonin
b) Decrease in serotonin
c) Increase in nor-adrenaline
d) Reactive depression

358. Increased suicidal tendency is associated with -
a) Noraderenaline b) Serotonin *(AIIMS May 08)*
c) Dopamine d)GABA

359. Suicidal tendencies are most common in -
a) Involutional depression *(SGPGI 00, PGI99)*
b) Reactive depression
c) Psychotic depression
d) Childhood depression

360. Suicidal risk is common with which type of depression-
a) Reactive depression *(PGI 99)*
b) Endogenous depression
c) Childhood depression
d) Depression in involution

361. Most common cause of suicide is - *(Karnataka 2000)*
a) Childhood depression
b) Depression in evolutional stage
c) Psychiatric depression
d) Reactive depression

362. Suicide is most commonly associated with which of the following disorders ? *(DELHI PG Mar. 09)*
a) Anxiety
b) Depression
c) Obsessive-compulsive disorder
d) Post-traumatic Stress disorder

363. Suicidal tendency seen in - *(PGI 2002)*
a) Schizophrenia b) PTSD
c) Depression d)OCD
e) Acetylcholine

364. Incidence of suicide is - *(PGI June 05)*
a) 8-10/100 population
b) 8-10/10000 population
c) 8-10/1 lac population
d) 8-10/1 billion population

365. Neurotransmittors involved in depression are -
a) GAB A and dopamine *(AI95)*
b) Serotonin and norepineprine
c) Serotonin and dopamine
d) Norepinephrine and GABA

366. In depressions! there is deficiency *of (NEET/DNB*
a) 5-HT p H ^\ rb)^cejyjchplin.e g *(^Pattern).*
c) Dopamine d) GABA

367. HIAA is a metabolite of - *(AIIMS May 06)*
a) Serotonin b) Dopamine
c) Epinephrine d) Histamine

368. Blood of 45 yrs old male shows -HVA. This patient is most likely to show - *(AIIMS Nov 08)*
a) PCC b) Schizophrenia
c) Depression d) Parkinson's ds

369. Depression is seen in - *(SRMC 02)*
a) Hyperthyroidism b) Hypoglycemia
c) Adrenal disorder d) Pheochromocytoma

370. Depression is a feature of which of the following condition- *(UP 01)*
a) Hypopituitarism b) Hyperthyroidism
c) Hypothyroidism d) Hypoglycemia

371. Depression is not caused by - *(UP 99)*
a) Clonazepam b) Levodopa
c) Metronidazole d) Corticosteroid

372. Depression is not a side effect of - *(MP 07)*
a) Propranolol b) Oral contraceptives
c) L-dopa d) Flupenthixol

373. Most common type of post puerperal psychosis is -
a) Depression b) Anxiety *(PGI 99)*
c) Mania d) Suicide

374. Commonest psychological feature of AIDS -
a) Depression b) Mania *(CUPGEE 95)*
c) Suicidal tendency d)None *(AIIMS 96)*

375. Most common type of postpartum psychosis is -
a) Manic b) Depressive *(DPGEE 08)*
c) Organic d) Hallucination

376. Not true about major depressive disorder - *(PGI 03)*
a) Commonly seen in female
b) Recovery is complete after treatment
c) Associated with hypothyroidism
d) Family H/O major depression

377. A 40 yr old female patient present with history of depressed mood, loss of appetite insomnia and no interest in surroundings for the past 1 yr. These symptoms followed soon after a business loss 1 yr back.Which of the following statements is true regarding the management of this patient - *(AI 11)*
a) No treatment is necessary as it is due to business loss
b) SSRI is the most efficacious of the available drugs
c) Antidepressant treatment based on the side effect profile of the durgs
d) Combination therapy of 2 antidepressant drugs

378. Drug of choice in depression in old person is -
a) Fluoxetine b) Buspirone *(AI96)*
c) Amitryptyline d)Imipramine

379. Rathi, 26 years old female diagnosed to be suffering from depression. Now for the past 2 days had suicidal tendency, thought & ideas. The best treatment is -
a) Amitryptiline b) Selegiline *(AIIMS 01)*
c) Haloperidol + CPZ d)ECT

380. A patient comes in stupor condition patient's parents give history of being continually sad and suicidal attempts, not eating and sleeping most of the time. The treatment is - *(AIIMS 2000)*
a) ECT b) Antidepressant

381. Treatment of choice for endogenous depression with suicidal tendency - *(MAHE 01)*
a) Lithium b) Chlorpromazine
c) ECT d) Psychoanalysis

382. Treatment of choice in severe depression is -
a) Fluoxetine b) Alprazolam *(MP 04)*
c) ECT d)None

383. A 60 year male is brought by his wife. He thinks that he had committed sins all through his life. He is very much depressed and has considered committing suicide but has not through hot do go about it. He had also attached sessions with a spiritual guru. He is not conviced by his wife that he has lead a pious life. He does not want to hear anything on the contrary. How will you treat him -
a) Antipsychotic+Antidepressant *(AI10)*
b) Antidepressant with cognitive behavioural therapy
c) Guidance & recounselling with guru + Antidepressant
d) Anti depressant alone

384. All of the following agents are antidepressants excepts- *(Jharkhand 03)*
a) Trazodone b)Amitryptiline
c) Fluoxetine d) Pimozide

385. Fluoxetine is a - *(SGPG103)*
a) Noradrenaline uptake inhibitor
b) Serotonin uptake enhancer
c) Serotonin uptake inhibitor
d) MAO

386. Drugs used for recurrant depressive episode -
a) Imipramine b) Carbamazepine *(PG1 June 09)*
c) Fluoxetine d) Na valproate

387. Repeated Transcranial Magnetic Stimulation (rTMS) of brain is used in the treatment of -
a) Depression *(AI 12)*
b) Resistant Schizophrenia
c) Obsessive-Compulsive Disorder
d) Acute Psychosis

388. Stimulation of which of the following nerve causes elevation in mood - *(AIIMS Nov 09)*
a) Olfactory N b) Optic N
c) Trigeminal N d) Vagus N

389. The clinical features of mania include - *(TGI June 06)*
a) Anhedoia b) Elated mood
c) Avolition d) Delusion of grandiosity
e) Distractibility

390. Flight of idea is seen in - *(TGI 03)*
a) Mania b) Schizophrenia
c) Depression d) Delirium
e) Neurosis

391. Mania is characterized by - *(TGI 99)*
a) Paranoid delusion b) Loss of orientation
c) High self esteem d) Loss of insight

392. Talkativeness and flight of ideas are suggestive of -
a) Schizophrenia b) Hysteria *(KA 96)*
c) Mania d) Tricyclic antidepressants

393. A clinical sign of mania is - *(MH-11)*
a) Neologism b) Perseveration
c) Echolalia d) Flights of ideas

394. All are features of Mania except- *(Rohtak 98)*
a) Insomnia b) Pressure of speech
c) Disorientation d) Granduer delusion

395. All of the following are true about mania except -
a) Elevated mood b) Flight of ideas
c) Delusions of grandeur d) Word salad *(J&K01)*

396. All of the following are feature of mania except -
a) Decreased need for sleep *(MT 05)*
b) Elated mood
c) Delusion of grandeur
d) Decreased motor activity

397. A 20 year old man has presented with increased alcohol consumption and sexual indulgence, irritability, lack of sleep, and not feeling fatigued even on prolonged periods of activity. All these changes have been present for 3 weeks. The most likely diagnosis is - *(AI 03)*
a) Alcohol dependence
b) Schizophrenia
c) Mania
d) Impulsive control disorder

398. A 67 year old lady is brought in by her 6 children saying that she has gone senile. Six months after her husband's death she has become more religious, spiritual and gives lot of money in donation. She is occupied in too many activities and sleep less. She now believes that she has a goal to change the society. She does not like being brought to the hospital and i s argumentative on being questioned on her doings. The diagnosis is - *(AIIMS May 02)*
a) Acute manic excitement b) Delusion
c) Schizophrenia d) Depression

399. Lallu a 22 yrs. old male suffers from decreased sleep, increased sexual activity, excitement and spending excessive money for last 8 days. The diagnosis is-
a) Confusion b) Mania *(AIIMSMay 01)*
c) Hyperactivity d) Loss of memory

400. Mania is a - *(TN 99)*
a) Mood disorder b) Psychological disorders
c) Obsessive disorder d) Neurotic disorder

401. BPAD includes - *(TGI 02)*
a) Recurrent depressive episodes
b) Recurrent manic episodes
c) Depressive episodes and hypomanic episodes
d) Manic episodes and dysthymia
e) Manic episodes and depressive episodes

402. Which of the following is/are included in bipolar disease- *(TGI Nov. 10)*
a) Hypomania b) Cyclothymia
c) Paranoid disorder d) Hyperthymia
e) Kleptomania

403. All of the following are included in diagnosis of Bipolar disorder except - *(AI0 7)*
a) Mania alone b) Depression alone
c) Mania and depression d) Mania and anxiety

404. Type II bipolar mood disorder includes a combination of which of the following - *(AIIMS Nov 11)*
a) Mania and subsyndromal depression
b) Hypomania and depression
c) Hypomania and subsyndromal depression
d) Hypomania and dysthymia

405. Bipolar II disorder includes -*(PG105, PGI02,Jipmer 03, AIIMS Nov. 11)*
a) Cyclothymic disorder
b) Dysthymia
c) Single manic episode
d) Major depression & hypomania

406. The period of normalsy is seen between two psychosis. The diagnosis is - *(AI 99)*
a) Schizophrenia
b) Manic depressive psyhosis (MDP)
c) Alcoholism
d) Depression

407. Chromosome associated with bipolar disease -
a) Chromosome 16 *(PGI Dec 05)*
b) Chromosome 13
c) Chromosome 18
d) Chromosome 11
e) Chromosome 23

408. All drugs are used in Treatment of Mania except -
a) Haloperidol b) Trithex phenidyl *(Jipmer98)*
c) Lithium d) Carbamazepine

409. A 42 year old male with a past history of a manic episode presents with an illness of 1 month duration characterized by depressed mood, anhedonia and profound psychomotor retardation. The most appropriate management strategy is prescribing a combination of - *(ARMS May 04)*
a) Antipsychotics and antidepressants
b) Antidepressants and mood stabilizers
c) Antipsychotics and mood stabilizers
d) Antidepressants and benzodiazepines

410. Not given in prophylaxis of BPD - *(PGI Nov. 10)*
a) Lithium b) Olanzapine
c) Valproate d) Lamotrigine
e) Carbamazepine

411. Drugs used for prophylaxis in BPD - *(PGI 02)*
a) Chlorpromazine b) Lithium
c) Carbamazepine d) Zolpidem
e) Sodium valproate

412. Drug not used in prophylaxis of MDP - *(ARMS 95)*
a) Haloperidol b) Lithium
c) Carbamazepine d) Valproate

413. In prophylaxic of Manic depressive psychosis, drug used is - *(AI 96)*
a) Lithium carbonate b) Carbamazepine
c) Valproate d) Haloperidol

414. Lithium is used in prophylaxis of - *(ARMS 9 7)*
a) Recurrent phobia
b) Alcohol dependence
c) Paranoid schizophrenia
d) Recurrent Manic depressive attacks

415. Lithium is used in the prophylactic treatment of -
a) Schizophrenia *(DELHI PG Feb. 09)*
b) MDP
c) Acute depression
d) Conversion reaction

416. Drug of choice for bipolar mood disorder -
a) Carbamazepine *(NEET/DNB Pattern)*
b) Lithium carbonate
c) Imipramine
d) Buspirone

417. Best use of lithium is in - *(SGPGI99)*
a) Treatment of schizophrenia
b) Treatment of recurrent depression
c) Treatment of first depressive episode
d) Prophylaxis of bipolar mood disorder

418. DOC for rapid cycling MDP- *(AI 99, ARMS 95)*
a) Ii b) Valproate
c) Calcium channel blocker d) Carbamazepine

419. Drug(s) used in bipolar disorder is/are- *(PGINov 09)*
a) $LiC0_3$ b) Na valproate
c) Phenytoin d) Lamotrigine
e) Carbamazepine

420. DOC for "rapid cyclers" type of bipolar disorder is-
a) Carbamazepine b) Valproate *(DPGEE 08)*
c) Phenytoin d) Lithium

421. Differential diagnosis of premenstrual tension includes all of the following except -*(ARMSNov 02)*
a) Psychiatric depressive disorder
b) Panic disorder
c) General anxiety disorder
d) Chronic fatigue syndrome

422. Cognitive model of depression is given by -
a) Ellis *(ARMS May 11, Nov 08)*
b) Beck
c) Godfrey
d) Meicheinbanon

423. A patient presents to the emergency department with self harm and indicates suicidal intent. Which of the following conditions does not warrant an immediate specialist assessment - *(AI 10)*
a) Formal thought disorder
b) Acute alcohol intoxication
c) Chronic severe physical illness
d) Social isolation

448. Claustrophobia means - *(Jipmer 95)*
a) Fear of heights b) Fear of lizards
c) Fear of closed spaces d) Fear of open spaces

449. Thanatophobia is fear of - *(UP 98)*
a) Closed spaces b) Flights
c) High places d) Death

450. A middle aged person reported to Psychiatric OPD with the complaints of fear of leaving home, fear of travelling alone and fear of being in a crowd. He develops marked anxiety with palpitations and sweating if he is in these situations. He often avoids public transport to go his place of work. The most likely diagnosis is - *(AIIMS May 06)*
a) Generalised anxiety disorder b) Schizophrenia
c) Personality disorder d) Agoraphobia

451. True about social phobia is - *(UP 01)*
a) Fear of closed spaces
b) Irrational fear of situation
c) Irrational fear of activities
d) Irrational fear of specified objects

452. A medical student could not deliver seminar, fearing seniors. He is aware of irrationality of his fear. Likely diagnosis is - *(Maharashtra 08, 07)*
a) Agoraphobia b) Social phobia
c) Claustrophobia d) Specific phobia

453. A person has poor performance in front of his seniors in public place, has tachycardia when he has to deliver a lecture, avoids going to parties. The diagnosis is - *(AIIMS 1999)*
a) Panic disorder b) Schizophrenia
c) Social phobia d) Avoidant personality

454. Agoraphobia treated with - *(PGI Dec 07)*
a) Systemic desensitization
b) Psychodynamic therapy
c) Exposure therapy
d) Relaxation therapy
e) Behaviour therapy

455. A fifty year old male feels uncomfortable in using lift, being in crowded places and traveling. The most appropriate line of treatment is -
a) Counselling *(AIIMS Nov 05)*
b) Relaxation therapy
c) Exposure and response prevention
d) Covert sensitization

456. Treatment of choice for phobic disorder is -
a) Psychotherapy *(PGI June 05, Jharkhand 05,*
b) Behaviour therapy *Assam 99, 97, AI97)*
c) SSRI
d) Benzodiazepam

457. Irresistable urge to do a thing repeatedly is seen in-
a) Obsessive - compulsive disorder *(MH 03)*
b) Schizophrenia
c) Schizoaffective disorder
d) Depression

458. True about obsession - compulsive disorder are A/E- *(MP 01, AI 95)*
a) Ego-alien b) Patient tries to resist against
c) Ego syntonic d) Insight is present

459. True statements about obsession - *(PGI 03)*
a) It is the repetitive thoughts or images
b) The patient thought that the images or thoughts are imposed by other's
c) Content about sex or God
d) The patient gets disturbed when unable to remove the ideas or thoughts

460. Features of obsessive-compulsive neurosis are -
a) Repetitiveness b) Irresistibility *(PGI 02)*
c) Unpleasantness d) Poor personal care

461. Repetitive times work doing for premonition of -
a) Obscession b) Compulsion *(NEET/DNB*
c) Anxiety d) None *Pattern)*

462. True about obsessive compulsive disorder is/are -
a) Irresistable desire to do a thing repeatedly
b) Is a dissociative disorder *(PGI 01)*
c) Denial is the defence mechanism against O.C.D.
d) Patient is conscious about the disorder
e) Can cause severe distress

463. Which of the following statements differentiates the obsessional idea from delusions - *(AIIMS Nov 05)*
a) The idea is not a conventional belief
b) The idea is held inspite of contrary evidence
c) The idea is regarded as senseless by patient
d) The idea is held on inadequate ground

464. A 35 year old man with an obsessive compulsive personality disorder is likely to exhibit all of the following features, except - *(AIIMSNov 04)*
a) Perfectionism interfering with performance
b) Compulsive checking behaviour
c) Preoccupation with rule
d) Indecisiveness

465. Obsessive compulsive neurosis is characterised by all except - *(DNB 95)*
a) Elaborate checking b) Repeated hand washing
c) Sexual thoughts d) Excessive slowness

466. Fear to contamination, counting behaviours, and having to check and recheck are features characteristic of - *(UPSC-109)*
a) Panic attacks
b) Agoraphobia
c) Obsessive-compulsive disorder
d) Generalized anxiety disorder

467. A15 year old boy feels that the dirt has hung onto him whenever he passes through the dirty street. This repetitive thought causes much distress and anxiety. He knows that there is actually no such thing after he has cleaned once but he is not satisfied and is compelled to think so. This has led to social withdrawal. He spends much of his time

448) c 449) d 450) d 451)b,c 452) b 453) c 454)All 455) c 456) b 457) a 458) c 459) a,d 460)a,b,c

thinking about the dirt and contamination. This has affected his studies also. The most likely diagnosis is -
a) Obsessive compulsive disorder *(AI 03)*
b) Conduct disorder
c) Agoraphobia
d) Adjustment disorder

468. A person going to temple gets irresistable sense of idea to abuse God which can't be resisted. Likely diagnosis is - *(AIIMS 99, UP 98)*
a) Mania
b) Obscessive-Compulsive disorder
c) Schizophrenia
d) Delusion

469. A patient with obsessive compulsive neurosis is more likely to develop - *(MP 01)*
a) Depression b) Schizophrenia
c) Delusional disorders d) Conversion symptom

470. Transmitters mainly involved in OCN is -
a) GABA b)NE *(AIIMS 95)*
c) Dopamine d) Serotonin

471. In OCD treatment is based on - *(Bihar 05)*
a) Serotonergic receptor
b) Dopaminergic receptor
c) NA receptor
d) Glutamate receptor

472. Treatment of choice for OCD - *(MP 06, AP 99)*
a) Behavior therapy
b) Drug therapy
c) Psychosurgery
d) Combination of behavior and drug therapy

473. Treatment of obscessive-compulsive disorder includes - *(PGI Dec 08)*
a) Exposure & response prevention
b) Flooding
c) Psychoanalytic therapy
d) Supportive psychotherapy involving family members
e) Systemic densensitization

474. A 25 year old female presents with 2 year history of repetitive, irresistible thoughts of contamination with dirt associated with repetitive hand washing. She reports these thoughts to be her own and distressing; but is not able to overcome them along with medication. She is most likely to benefit from which of the following therapies - **£4/** *05)*
a) Exposure and response prevention
b) Systematic desensitization
c) Assertiveness training
d) Sensate focusing

475. A lady washes her hands at least 40 times per day no apparent reason. Cognitive Behaviour Therapy for her treatment should include - *(AI 12)*
a) Response Prevention b) Exposure
c) Thought stopping d) Desensitization

476. The drug of choice for obsessive compulsive disorder - *(PGI Dec 05)*
a) Imipramine b) Fluoxetine
c) Chlorpromazine d) Benzodiazepine

477. Drug of choice for obsessive compulsive neurosis is - *(AI 98, 96, 95, 94, Jharkhand 05, Jipmer 95)*
a) Imipramine b)CPZ
c) Carbamazapine d) Clomipramine

478. Drug of choice in Obsessive compulsive disorder is - *(AIIMSMay 10)*
a) Imipramine b) Fluoxetine
c) Alprazolam d) Chlorpromazine

479. In obsessive compulsive disorder, which is not given - *(Jharkhand 06)*
a) Clomipramine b) Haloperidol
c) Sertaline d) Cabamazepine

480. All drugs are used for treatment of OCD except -
a) Carbamazapine *(PGI 99, Jipmer 02, MAHE 03)*
b) Lithium
c) Fluoxetine
d) Diazepam

481. All are treatment modalities of OCD except - *(AI 96)*
a) Exposure & response prevention
b) Psychoanalytic psychotherapy
c) Clomipramine
d) MAO inhibitors

482. The following modes of therapy may be useful for treatment of obsessive compulsive disorder EXCEPT-
a) Fluoxetine *(UPSC-109)*
b) Clomipramine
c) Behaviour therapy
d) Electroconvulsive therapy

483. Post traumatic stress syndrome is due to -
a) Head injury *(Jharkhand 05, AI 98)*
b) CVD
c) Minor stress
d) Major life threatening events

484. Which of the following is NOT a clinical feature of post-traumatic stress disorder *(FTSD)?(DPG 08, AI 08)*
a) Flashbacks b) Hyperarousal
c) Hallucinations d) Emotional numbing

485. Post traumatic stress-disorder is associated with all except - *(PGI 2000)*
a) Flashback
b) Severe traumatic injury
c) Re-experiencing stressful events
d) Anhedonia
e) It does't develop after 6 months of stress

486. All are true for PTSD except - *(PGI 02)*
a) Hippocampus & amygdala
b) Anhedonia
c) Depression and guilt
d) Insomnia & poor concentration
e) Anxiolytic is treatment of choice

487. True for PTSD are all except - *(PGI01)*
a) Past h/o psychiatric illness
b) Women are more predisposed
c) Occur in intellectuals
d) Numbness
e) Detachment

488. A lady while driving a car meets with an accident. She was admitted in an ICU for 6 months. After being discharged she often gets up in night and feels terrified. She is afraid to sit in a car again. The diagnosis is - *(AI01, 00, AIMS 99)*
a) Anxiety disorder
b) Phobia
c) Conversion disorder
d) Post traumatic stress disorder

489. Three years back a woman suffered during an earthquake and she was successfully saved. After recovery she has nightmares about the episode and she also gets up in the night and feels terrified. The most probable diagnosis is - *(AIIMS May 02)*
a) Major depression b) Post-traumatic stress disorder
c) Mania d) Schizophrenia

490. A victim of Tsunami has difficulty in overcoming the experience. She still recollects the happening in dreams and thoughts. The most likely diagnosis is -
a) Post traumatic stress disorder *(Maharashtra 07)*
b) Conversion disorder
c) Panic disorder
d) Phobia

491. Flashback is characteristic of - *(TN 02)*
a) Hypomania
b) Post traumatic stess disorder
c) Postnatal depression
d) Grief reaction

492. The diagnostic feature that differentiates PTSD from other disorders that occur following a stressful incident is - *(AIIMS May 12)*
a) Episodic occurrence of symptoms
b) Severe anxiety and autonomic arousal
c) Re-experiencing and avoidance of trauma
d) Nightmares about the event

493. True about posttraumatic stress disorder - *(PGI2000)*
a) Recall of traumatic events
b) Associated with major trauma like pelvic fracture
c) Treatment is ECT
d) Disturbed sleep

494. Which of the following is NOT TRUE about post traumatic stress disorder? *(Karn 11)*
a) The onset of illness may occur many months after the traumatic event
b) Individual debriefing and early counselling are most effective method of treatment
c) Eye movement desensitization and reprocessing is effective
d) There is high risk of alcohol abuse in patients suffering from this disorder

495. A man coming from mountain whose wife died 6 months prior says that his wife appeared to him and asked him to join her. The diagnosis is -
a) Normal grief *(AIIMS 2000)*
b) Grief psychosis
c) Berevement reaction
d) Supernatural phenomenon

496. An elderly house wife lost her husband who died suddenly of Myocardial infarction couple of years ago. They had been staying alone for almost a decade with infrequent visits from her son and grandchildren. About a week after the death she heard his voice clearly talking to her as he would in a routine manner from the next room. She went to check but saw nothing. Subsequently she often heard his voice conversing with her and she would also discuss her daily matters with him. This however, provoked anxiety and sadness of mood when she was preoccupied with his thought. She should be treated with - *(AIIMS May 03)*
a) Clomipramine b) Alprazolam
c) Electroconvulsive therapy d) Haloperidol

497. An elderly house wife lost her husband who died suddenly of Myocardial infarction couple of years ago. They had been staying alone for almost a decade with infrequent visits from her son and grandchildren. About a week after the death she heard his voice clearly talking to her as he would in routine manner from the next room. She went to check but saw nothing. Subsequently she often heard his voice conversing with her and she would also discuss her daily matters with him This however, provoked anxiety and sadness of mood when she was preoccupied with his thought. She should be treated with - *(AIIMS May 2003)*
a) Clomipramine b) Alprazolam
c) Electroconvulsive therapy d) Haloperidol

498. MS. B, a 27 year old nurse had extracurricular interest in trekking and painting. She broke up relationship with her boy friend. Two months later she lost interest in her hobbies and was convinced that she would not be able to work again. She thought life was not worth living and has consumed 60 tablets of phenobarbitone to end her life. She is most likely suffering from -
a) Adjustment disorder *(AI 04)*
b) Acute stress disorder
c) Depressive disorder
d) Post-traumatic stress disorder (PTSD)

499. Two months after knowing that his son was suffering from leukemia, a 45 year old father presents with sleep deprivation, lethargy, headache and low mood. He interacts reasonably well with others, but he absented himself from work. The most probable diagnosis is - *(AI 08)*
a) Depression b) Psychogenic headache
c) Adjustment disorder d) Somatization disorder

487) c 488) d 489) b 490) a 491)b 492) c 493) a,d 494) b 495) a,c 496) a 497) d 498) a 499) c

500. A 25 year old lady presented with sadness, palpitation, loss of appetite and insomnia. There is no complaint of hopelessness, suicidal thoughts and there is no past history of any precipitating event. She is remarkably well in other areas of life. She is doing her office job normally and her social life is also normal. What is the probable diagnosis in this case- *(AI10)*
a) GAD b) Mixed anxiety depression
c) Adjustment disorder d) Mild depressive episode

SOMATOFORM DISORDERS

501. Which one of the following is not a specific somatoform disorder - *(AIIMS Nov 11)*
a) Somatization disorder
b) Chronic fatigue syndrome
c) Irritable bowel syndrone
d) Fibromyalgia

502. All are true regarding somatization disorder except-
a) Maintain sick role *(PGI00, Jipmer 04, TN 00)*
b) 4-Pain symptoms
c) 1-Sexual symptom
d) 1 -Pseudo neurological symptom

503. Which of the following is FALSE about SOMATIZATION Syndrome- *(NEET/DNBPattern)*
a) Involves 2 sexual disturbance Symptoms
b) Two GI symptoms
c) Four pain symptoms
d) Multiple recurrent symptoms

504. A 45 year old male presents with history of headache, and vague body pains, off & on diarrhoea & constipation, impotence and tingling and parasthesia is glove stocking pattern. The probable diagnosis is- *(AI 00, Jipmer 02)*
a) Hypochondriasis b) Somatization disorder
c) Conversion disorder d) Factitious disorder

505. A 36 year old woman presents with headache, backache, epigastric fullness, and decreased sexual desire. She has lost ~2.5 kg over the past 3 years, and her appetite is otherwise normal. Her husband had a major vehicular accident 8 years back. Which of the following diagnoses best describe the mental status of this patient? *(Maharashtra 06)*
a) Depersonalization disorder
b) Adjustment disorder and depression
c) Somatization disorder
d) Posttraumatic stress disorder (PTSD)

506. Lalu prasad 45 yrs old male presents to OPD with complaining the continuous non-progresive headache from last 7 days. He believes that he has brain tumor, for that there is he consulting many neurologists in past even all of investigation have been with in normal limits. Patient requested for other investigation to reveal that he has brain tumor. Psychiatric evaluation shows the disease on the background of normal inves-tigation. The most probable diagnosis is - *(AI 02)*
a) Hypochondriasis
b) Somatization disorder
c) Somatoform pain disorder
d) Conversion disorder

507. A 35 years old male, with pre-morbid anxious traits & heavy smoker, believes that he has been suffering from 'lung carcinoma[9] for a year, No significant clinical finding is detected on examination and relevant investigation. He continues to stick to his belief despite evidence to the contrary. In the process, he has spent a huge amount of money, time and energy in getting himself unduly investigated. He is most likely suffering from - *(AIIMS Nov 04)*
a) Carcinoma lung
b) Hypochondriacal disorder
c) Delusional disorder
d) Malingering

508. A 41 year old married female presented with headache for the last 6 months. She had several consultations. All her investigations were found to be within normal limits. She still insists that there is something wrong in her head and seeks another consultation. The most likely diagnosis is -*(AI 03)*
a) Phobia b) Psychogenic headache
c) Hypochondriasis d) Depression

509. A 40 year old male is admitted with complaints of abdominal pain and headache. General physical examination revealed six scars on the abdomen from previous surgeries. He seems to maintain a sick role and seeks attention from the nurses. He demands multiple diagnostic tests including a liver biopsy. The treating team failed to diagnose any major physical illness in the patient. His mental status examination did not reveal any major psychopathology. One of the treating staff recognized him to have appeared in several other hospital with abdominal pain and some other vague complaints. He is most likely suffering from - *(AIIMS Nov 03)*
a) Schizophrenia b) Malingering
c) Somatisation disorder d) Factitious disorder

510. A 28 year old male admitted in the hospital with a history of vague pains. His examination revealed many scars of previous surgeries. He was very curious about knowing his diagnosis and was persistently asking for various diagnostic procedures and biopsy. He gave the past history of gall stone & appendicitis pain diagnosed by previous doctors, but the history regarding this was inappropriate and seemed to be manipulative. There were no previous records suggesting this diagnosis. The probable diagnosis is-*(Jipmer 00, J& K 02, MH03)*
a) Hypochondriasis
b) Somatization disorder
c) Conversion disorder
d) Factitious disorder

500)a 501)b,c,d 502)a 503)a 504)b 505)c 506)a 507)b 508)c 509)d 510)d

511. A patient has been seeking repeated admissions in various hospitals with a variety of symptoms. He had undergone appendicectomy, cholecystectomy, and other exploratory laparotomies on previous admissions. The most likely diagnosis is -
a) Conversion reaction *(UPSC 95)*
b) Hypochondriasis
c) Munchausen syndrome
d) Ganser's syndrome

512. A 30 years old lady presents to physician with complaints of hematuria. On evaluation RBCs were found in the urine but no cause is found on further enquiry it is found that she has gone to many doctors with the same complaint and demanding in patient care. She pricks her finger and mixes blood in the urine sample. Her diagnosis is - *(Karn 11)*
a) Malingering b) Factitious illness
c) Dissociative disorder d) Hypochondriasis

513. All are features of somatization disorder except -
a) Frequently changing pain sites
b) Sexual symptoms *(MH 05, Jipmer 03)*
c) Paresthesia
d) Professional patients

514. 20 years old female with complaints of nausea, vomiting and pain in the legs. Her physical examination and lab investigations are normal. What would be the most probable diagnosis ?
a) Generalized anxiety disorder *(AIIMSNov09)*
b) Conversion disorder
c) Somatoform pain disorder
d) Somatisation disorder

515. 45 years old Chandu is always preoccupied with feeling of illness. The diagnosis is - ***(AI00)***
a) Somatoform disorder
b) Hypochondriasis
c) Munchausen syndrome
d) Dissociative disorder

516. Person preoccupied by worries about ill health is -
a) Hypochondriac *(Punjab-11, PGI98)*
b) Maniac
c) Depressed
d) Delirium

517. Persistent preoccupation with serious illness and normal body function is called - *(UP 08)*
a) Obsession b) Somatization
c) Hypochondriasis d) Conversion disorder

518. One of the following usually differentiates hysterical symptoms from hypochondriacal symptoms - *(AI 05)*
a) Symptoms do not normally reflect understandable physiological or pathological mechanism
b) Physical symptoms are prominent which are not explained by organic factors
c) Personality traits are significant
d) Symptoms run a chronic course

519. By the term 'hypochondriasis' is meant -
a) Pathologic pre-occupation with the normality of the physical state & perception of normal bodily phenomena as disease *(CUPGEE 96)*
b) A complete disregard for physical ill being
c) Complete disregard for the feelings of other people
d) None

520. Maintaining sick role by any means is a characteristic feature of - *(Jipmer 02, Make 04, Rohtak 02)*
a) Hypochondriasis
b) Somatization disorder
c) Conversion disorder
d) Factitious disorder

521. Munchausen's syndrome by proxy involves-(M/7-77)
a) Drug abuse
b) Toxin-mediated neuropsychiatric
c) Illness caused by care giver
d) All of the above

522. Dissociative conversion disorder was previously described as- *(TN 02)*
a) Hysteria b) Dementia precox
c) Melancholiad) Hypochondriasis

523. In conversion disorder all are found except -
a) Jealousy b) Paralysis *(Bihar05)*
c) Anaesthesiad) Abnormal gait

524. All are true for conversion reaction except -
a) Secondary gain *(AIIMS 98)*
b) Onset in late age
c) Patient does not consciously produce symptoms
d) Relation with stress

525. Differentiation of hysterical fits from epileptic fit -
a) Occurs in sleep *(DPG 09, Calcutta 02)*
b) Injuries to person
c) Incontinence
d) Occurs when people are watching

526. Epileptic fits are distinguished from hysterical fits by-
a) Amnesia b) Sleep convulsion *(UP 96)*
c) Incontinence d) Injury

527. A female presented with history of episodes of altered sensorium, involuntary movements, memory deficits and headache since the last 6 months. 4 episodes occurred during the day and 2 during sleep. She has been married since 1 year. Most likely diagnosis is-
a) Epilepsy *(AIIMSMay 08)*
b) Somatization disorder
c) Somatoform disorder
d) Hypochondriasis

528. In Dissociative disorder all are seen except - *(AI 96)*
a) Fugue b) Amnesia
c) Multiple personality d) Hearing loss

529. Following are included in dissociative disorder -
a) Multiple personality disorder
b) Fugue *(PGI 03, June 07, Dec 07)*
c) Hypochondriasis
d) Somatization disorder
e) Obsession
f) Borderline personality

a) Fugue b) Amnesia *(Nimhans 01)*
c) Deafness d) Lack of insight

531. Commonest symptom of hysteria is - *(Kerala 96)*
a) Motor or sensory phenomena
b) Hypochondriasis
c) Irrelevant talk
d) Fugue
e) Insomina

532. The most common form of dissociation hysteria is -
a) Fugue b) Amnesia *(MH2K)*
c) Multiple personality d) Somnambulism

533. Psychogenic amnesia is characterized by -
a) Antegrade amnesia *(AIIMS97)*
b) Retrograde amnesia
c) Both with confabulation
d) Patchy impairment of personal memories

534. A young female presented with halo's, abdominal pain and amnesia she is likely to be suffering from-
a) Conversion disorder *(AI97)*
b) Dissociative disorder
c) Depresonalization disorder
d) Mania

535. Dissociative fugue occurs in - *(Jipmer03)*
a) Schizophrenia b) Mania
c) Hysteria d) Neurosis

536. Fugue state may be seen in - *(SGPGI99)*
a) Schizophrenia b) Hysteria
c) Epilepsy d) All of the above

537. A person is missing away from home and wandering with loss of recent memory with depersonalization. The diagnosis is - *(Maharashtra 08)*
a) Dissociative fugue
b) Dissociative amnesia
c) Dissociative personality
d) Any of the above

538. A person missing from home is found wandering purposefully. He is well groomed and denies of having any amnesia. Most likely diagnosis is- *(AI 01)*
a) Dementia b) Dissociative amnesia
c) Dissociative fugue d) Schizophrenia

539. derelation & depersonalisation seen in which type of disorder - *(1JEET/DNBPattern)*
a) Dissociative disorder b) Personality disorders
c) Mania d) None

540. An 18 year old boy came to the Psychiatry OPD with a complaint of feeling changed from inside. He described himself as feeling strange as if he is different from his normal self. He was very tense and anxious yet could not point out the precise change in him. This phenomena is best called as -
a) Delusional mood *(AI 05)*
b) Depersonalization
c) Autochthonous delusion
d) Over valued idea

541. A person has different multiple personality is suffering from - *(PGI9 7)*
a) Mania b) Personality disorder
c) Paranoid schizophrenia d) Dissociative disorder

542. All are seen in hysterical somatisation except -
a) Positive physical signs *(Kerala 96)*
b) Hemiplegia
c) Blindness
d) Fugue
e) Normal intelligence

543. All are true about Ganser's syndrome except -
a) Approximate answer *(PGI 99, Jipmer 00, UP 00)*
b) Apparent clouding of consciousness
c) Only found in prisoners
d) Hallucinations

544. Regarding Ganser's syndrome true is -
a) Repeated lying *(TN 95, A1IMS 98)*
b) Approximate answers
c) Unconscious episodes
d) Malingering

545. La belle indifference is seen in - *(AIIMS 98)*
a) Conversion reaction b) Schizophrenia
c) Mania d) Depression

546. La bella indifference is seen in - *(Kerala 98)*
a) Mania b) Depression
c) Delirium d) Dissociative disorders

547. La belle indifference, which is true - *(CUPGEE 96)*
a) Excessive occupation with minor ailments
b) Characterize by coprolalia
c) Disregard for symptoms despite apparent severity
d) None

PERSONALITY DISORDERS

548. Which is not included in personality trait?
a) Sensation seeking *(AIIMS Nov 09)*
b) Problem solving
c) Openness to experience
d) Neuroticism

549. All are cluster B disorders of personality except -
a) Antisocial b) Narcissistic *(PGI99)*
c) Avoidant d) Borderline

550. Type C personality disorder - *(NEET/DNB Pattern)*
a) Avoidant personality disorder
b) Histronic personality disorder
c) Paranoid personality disorder
d) Narcissistic personality disorder

551. Which personality disorder of DSM-IV is not classified as PD & is placed with schizophrenia in ICD10- *(WB98)*
a) Schizoid b) Paranoid
c) Narcissistic d) Schizotypal

552. True about personality disorder - *(PGI June 07)*
a) Onset in early childhood & adolescent

a) Typically onset of early childhood & adolescent
b) Matured around age 30-40 yrs
c) Egodystonic
d) Dramatic, emotional and erratic behaviour in paranoid PD
e) Pervasive and maladaptive behaviour

554. True about personality disorder - *(PGI June 08)*
a) It arises during childhood
b) It matures during adulthood
c) Suspiciousness is seen in paranoid personality disorder
d) Excessive preoccupation with fantasy seen in schizoid personality disorder

555. Markedly inappropriate sensitivity, self importance and suspiciousness are clinical features of -
a) Antisocial *(AMU 02, TN 99)*
b) Histrionic
c) Schizoid
d) Paranoid

556. Characteristic feature of schizoid personality is -
a) Conversion reaction *(AIIMS 99)*
b) Not concerned with disease
c) Checks details of all things
d) Emotional coldness

557. Schizoid personality disorder all are seen except-
a) Aloof & detached *(NEET/DNB Pattern)*
b) Prqne to fantasy
c) Suspicious
d) Introspective

558. Antisocial personality is seen with - *(PGI 99)*
a) Drug abuse b) Paranoid schizophrenia
c) OCN d)None

559. Oddities of speech, mannerism and clothing with magical thinking is seen in which type of personality disorder- *(Jipmer 2k)*
a) Schizoid b) Paranoid
c) Schizotype d) Borderline

560. A young lady was admitted after taking overdose of diazepam after broken affair. She has history of slitting her wrist previously. Most likely diagnosis is- *(AIIMS 00)*
a) Narcisstic personality disorder
b) Dependent PD
c) Borderline PD
d) Histrionic PD

561. A female presents with the history of slashed wrists and attempted suicide, now presents with similar history. The diagnosis is - *(AIIMS 01)*
a) Borderline personality
b) OCD
c) Conversion reaction
d) Histrionic personality

562. A 16 year old girl was brought to the psychiatric emergency after she slashed her wrist in an attempt to commit suicide. On enquiry her father revealed that she had made several such attempts of wrist slashing in the past, mostly in response to trivial fights in her house. Further she had marked fluctuations in her mood with a pervasive pattern of unable interpersonal relationship. The most probable diagnosis is - *(AIIMS Nov 02)*
a) Borderline personality disorder
b) Major depression
c) Histrionic personality disorder
d) Adjustment disorder

563. Pervasive pattern of instability of interpersonal relationship, self image, and affects, with marked impulsing that begins at early adulthood and present in varities of context is characteristic of -
a) Bipolar disorder *(Maharashtra 10, 07)*
b) Schizoaffective disorder
c) Borderline personality disorder
d) Schizotypal personality

564. A lady has very unstable relation with her husband, always threatening to suicide infact she one time eat some poison, then diagnosis is - *(Bihar 06)*
a) Borderline personality disorder
b) Depression
c) Avoident personality disorder
d) None

565. A lady has changed multiple boy friend in last 6 months and she breaks the relationship, she attempted suicide many time. Most likely diagnosis is ? *(MP 06)*
a) Borderline personality
b) Post traumatic stress
c) Acute depression
d) Acute panic attack

566. A person having the habit of repeated self inflicted injuries, what is the type of personality -
a) Borderline personality disorder *(PGI June 04)*
b) Schizoid personality disorder
c) Histrionic personality disorder
d) Narcissistic personality disorder
e) Depressive disorder

567. Most effective treatment in borderline personality disorders *(NEET/DNB Pattern)*
a) Pharmacotherapy
b) Behaviour-therapy
c) Combination of both pharmacotherapy and behavioural therapy
d) None

568. False regarding type A personality -*(AIIMSNov 07)*
a) Hostile b) Time pressure
c) Competitiveness d) Mood fluctuations

569. Type D personality has been recently found to be a risk factor for - *(AIIMS Nov 11)*
a) Coronary artery disease b) Depression
c) Personality disorder d) Schizophrenia

553) a,b,e 554)a,b,c,d 555) d 556) d 557) c 558) a 559) c 560) c 561) a 562) a 563) c 564) a 565) a 566) a 567) b 568) d 569) a

570. True about treatment of personality disorder -
a) Antipsychotic drugs are used *(PGI May 10)*
b) SSRI used in treatment
c) Behaviour therapy
d) No need of treatment

571. All of the following are impulse control disorders except- *(AI03)*
a) Pyromania b) Trichotillomania
c) Kleptomania d) Capgras syndrome

572. One of the following is not a compulsive and habit forming disorder - *(KA 95)*
a) Kleptomania b) Pyromania
c) Nymphomania d) Pathological gambling

573. Kleptomania is - *(Kerala 98)*
a) Delusion b) Obsession
c) Impulse d) Compulsion
e) Hallucination

574. Kleptomania means - *(KA 98, AI 99)*
a) Irresistable desire to set fire
b) Irresistable desire to steal things
c) Compulsive hair pulling
d) Pathological gambling

575. Oniomania is a disorder of compulsive -
a) Buying *(MAHE 03, Jipmer 00)*
b) Cellular phone use
c) Internet use
d) Selfmultilation

SLEEP DISORDERS AND EATING DISORDERS

576. Max duration of time spent is in NREM stage -
a) I b) *(NEET/DNBPattern)*
c) m d) IV

577. a-rhythm is seen in - *(PGI97)*
a) Sleep with eyes closed with mind wandering
b) Mental activity
c) Awake with eyes open
d) REM sleep

578. Sleep waves in hippo-campal area is - *(MP 00)*
a) Delta b) Theta
c) Beta d) Alpha

579. What are the EEG waves recored for parietooccipital region with subject awake & eye closed -*(Kerala 97)*
a) Alpha waves b) Beta waves
c) Delta waves d) Theta waves

580. The EEG recorded shown below is normally recordable during which stage of sleep ? *(AI 03)*
a) Stage I b) Stage II
c) Stage III d) Stage IV

581. False regarding REM sleep is - *(UP 99)*
a) Dreaming sleep
b) Slow eye movements present
c) Paradoxical sleep
d) Alpha waves are seen

582. Not a feature of paradoxical sleep is - *(PGI 99)*
a) Decreased muscle tone
b) Rapid eye movements
c) Brain shows increased metabolism
d) EEG shows decreased activity

583. Which one of the following phenomenon is closely associated with slow wave sleep - *(AIIMS Nov 04)*
a) Dreaming b) Sleep walking
c) Atonia d) Irregular heart rate

584. True about REM sleep is - *(NEET/DNB Pattern)*
a) Night mares b) Night terror
c) Somniloquy d) None -

585. -NREM Sleep true is - *(NEET/DNB Pattern)*
f, > ' a) Teeth grinding ^ V} *U)* **Narcolepsy; /^ , ' r' -**
1 c) ˢNight tpares'#\"#d)£ Sieep?paralysis - /f

586. The Non-REM (NREM) sleep is commonly associated with- *(AI04)*
a) Frequent dreaming
b) Frequent penile erections
c) Increased blood pressure
d) Night terrors

587. Sleepwalking occur in which stage of sleep -
a) REM *(PGI97)*
b) NREM stage
c) NREM stage 3 or 4
d) Can occur in any stage of NREM sleep

588. Pover nocturnus is - *(APPG97)*
a) Sleep terror b) Sleep apnea
c) Sleep bruxism d) Somnambulism

589. Not true about nocturnal penile tumerscence is -
a) Totals about 100 min / night *(AIIMS 95)*
b) Normal phenomenon
c) Occurs in NREM sleep
d) Can be used to distinguish between psychological or organic impotence

590. True about treatment of nocturnal enuresis -
a) Imipramine *(DPG 09, PGI June 05, AIIMS 96)*
b) CPZ
c) Alprazolam
d) Haloperidol

591. DOC of night terrors - *(PGI98)*
a) Meprobamate b) Tricyclic antidepressant
c) Clonazepam d) Diazepam

592. Not true about narcolepsy - *(PGI Dec 06)*
a) Sleep sudden b) Long duration (>3hrs) of sleep
c) Cataplexy d) Presents in Ilnd decade

593. Narcolepsy is due to abnormality in - *(NEET/DNB*
a) Hypothalamus b) Neocortex *Pattern)*
c) Cerebellum d) Medulla oblongata

594. Hallucinations which arises when a patient is falling asleep- *(Jipmer02)*
a) Hypnagogic hallucination
b) Hypnopompic hallucination
c) Non specific hallucinations
d) Jactatio noctuma capitis

570)a,b,c 571)d 572)c 573)c 574)b 575)a 576)b 577)b,d 578)b 579)a 580)b 581)b 582)d 583)b

595. Cataplexy is seen in - *(Jipmer 02)*
a) Catatonic schizophrenia
b) Narcolepsy
c) Chronic depression
d) Neuro - malignant syndrome

596. Naf^)le^ipy,not ttue - *?T/pm<mterrO*
a) Cataplexy
ft) Sleep ^architecture normal
c) Loss of muscle tone
d) Hallucination

597. Bruxism is - *(NEET/DNB Pattern)*
a) Walking dining sleep
b) .-Nocturnal enuresis
c) Grinding of teeth during sleep
d) Sleep apnoea

598. A homosexual person feels that he is imposed by a female body & persistent discomfort with his sex, diagnosis is - *(PGI03)*
a) Gender identity disorder b) Transvestism
c) Voyeurism d) Paraphillias

599. 20 years old girl Nelu enjoys wearing male clothes. Wearing male clothes gives her feeling of more confidence and after these episodes she is an absolutely normal girl. The likely diagnosis is -
a) Trans sexualism *(A1IMS 97)*
b) Fetishism
c) Dual role transvestism
d) Fetishistic transvestism

600. Excessive sexual desire in males is known as -
a) Nymphomania b) Satyriasis *(AIIMS May 08)*
c) Triabadism d) Sadism

601. Squeeze technique is used for - *(AI00)*
a) Impotence b) Premature ejaculation
c) Infertility d)Priaprism

602. IBHew to differentiate between psychological and organic erectile dysfunction - *(NEET/DNB Pattern)*
a) Noctufnal penile tumescence
b) PIPE therapy
c) Sildenafil inducederection
d) Squeeze technique

603. A 30 yr old male presents to the OPD with Erectile dysfunction. Basic screening evaluation is unremarkable. The next step in the evaluation / management should be ? *(AI 08)*
a) Oral sildenafil citrate trial b) Cavemosometry
c) Doppler study d)Neurological testing

604. Most accurate treatment of erectile dysfunction -
a) Sildenafil *(PGI 02)*
b) Master and Johnson technique
c) Beta blockers
d) Papaverine

605. The erectile disorder in males is more specifically treated with which of the following agent ?
a) Sildenafil b) Diazepam *(DPGMar. 09)*
c) Fluxetine d) Zolpidem

606. One of the following conditions the only means of sexual excitement are in inanimate objects -
a) Exhibitionism b) Fetishism *(Kerala 2 K)*
c) Sadism d) Masochism

607. Exhibitionism is - *(CUPGEE 02)*
a) Shameless exposure of genitals
b) Exhibiting one's possessions
c) A type of mania
d) Not a sexual persuasion

608. Which of the following is not a common feature of Anorexia nervosa ? *(AI 06)*
a) Binge eating b)Amenorrhoea
c) Self perception of being fat d) Under weight

609. False regarding Anorexia nervosa- *(Kerala 97)*
a) Psychiatric symptom b) Exercise
c) Weight loss d) Decreased appetite

610. Anorexia nervosa can be differentiated from bulimia by- *(AIIMS Nov 08)*
a) Intense fear of wt gain
b) Disturbance of body image
c) Adolescent age
d) Peculiar patterns of food handling

611. With regard to anorexia nervosa the following is true except- *(Kerala 2K)*
a) Phobic avoidance of normal weight
b) Overperception of body image
c) Self induced vomiting
d) Menorrhagia
e) Excessive exercise

612. A young lady is present with H/O repeated episode of over eating followed by purging using laxatives, she probably suffering from - *(AIIMS May 10, May 09, 07, AI 02)*
a) Bulimia nervosa
b) Schizophrenia *UP 04, J& K O I)*
c) Anorexia nervosa
d) Benign eating disorders

613. Which of the following is not true about bulimia nervosa ? *(UPSC-108)*
a) Invariable weight loss with endocrine disorders
b) Occurrence of both binge eating and inappropriate compensatory behaviour at least twice weekly, on an average, for 3 months
c) Recurrent episodes of eating binges
d) Recurrent self - induced vomiting

614. Which one of the following conditions is NOT correct in case of bulimia nervosa ? *(UPSC-109)*
a) Recurrent bouts of binge eating
b) Lack of self-control over eating during binges
c) Self-induced vomiting or dieting after binge
d) Weight gain

615. In Bulimia all are seen except - *(Jipmer 98)*
a) Parotitis b) Menorrhagia
c) Binge eating d) Carries teeth

595) b 596)b 597)c 598)a 599)c 600)a 601)b 602)a 603)a 604)a 605)a 606)b 607)a 608) a
609) d 610) d 611) d 612)a 613)a 614)d 615)b

616. Which of the following conditions characterised by episodes of excessive and uncontrolled eating -
a) Anorexia nervosa *(UP 06, Jharkhand 07, TN 05)*
b) Bulimia nervosa
c) Body dysmorphobia
d) All of the above
e) None of the above

617. Klein levin syndrome - *(NEET/DNB Pattern)*
a) Insomnia ? b) Anxiety
c) Depression . d)> Hypersomnia

CHILD PSYCHIATRY

618. Hyperkinetic disorder is characterised by all, except-
a) Impulsivity b) Distractibility *(IN 02)*
c) Hyperactivity d) Hallucinations

619. An eleven month old boy is all the time so restless that the rest of the class is unable to concentrate. He is hardly ever in his seat but roams around the hall. He has difficulty playing quietly. The most likely diagnosis is - *(AI02)*
a) Attention-deficit hyperactivity disorder
b) Conduct disorder
c) Depressive disorder
d) Schizophrenia

620. A 9 yr old child is restless. He is hyperactive and his teacher complains that he does not listen to the teachings. Disturbs other students, he also shows less interest in playing. The likely diagnosis is -
a) Cerebral palsy *(AIIMSMay02)*
b) Attention deficit hyperkinetic child
c) Delirium
d) Mania

621. A 9 year old child disturbs other people, is destructive, interferes when two people are talking, does not follow instructions and cannot wait for his turn while playing a game. He is likely to be suffering from -
a) Emotional disorders *(AlIMSNov05)*
b) Behavioural problems
c) No disorder
d) Attention deficit hyperactivity disorder

622. A 7 years old child has conservative behavior, not playing quietly with peers, and difficulty in organization. He also interrupts other in school and earily gets distracted. Which of the following is likely diagnosis - *(MH-11)*
a) Learning disorder
b) Autistic disorder
c) Attention deficit hyperactive disorder
d) Conduct disorder

623. ADHD in childhood can lead to what in future -
a) Schizophrenia b) Alcoholism *(PGI00)*
c) Intellectual changes d) Antisocial behaviour

624. A10 year old child is always restless, inattentive to study and always wants to play outsite. Parents are extremely distressed. What would you advise -
a) It is a normal behaviour *(AIIMS Nov 08)*
b) Behaviour therapy
c) It is a serious illness requires medical treatment
d) Needs change in environment

625. Treatment of hyperkinetic syndrome include -
a) Imipramine *(PGI June 06, PGI 01)*
b) Methylphenidate
c) Haloperidol
d) Clozapine
e) Amphetamine

626. The treatment of choice in Attention deficit hyperactivity disorder is - *(NEET/DNB Pattern,*
a) Haloperidol b) Imipramine *AIIMS May 03)*
c) Methylphenidate d) Alprazolam

627. Stimulant drug is given to child for -
a) Conduct disorder *(NEET/DNB Pattern)*
b) Speech developmental disorder
c) Pervasive disorder
d) ADHD

628. Drug(s) used in treatment of attention-deficit hyperactivity disorder - *(PGI Dec 08)*
a) Atomoxetine b) Methylphenidate
c) Dexmethylphenidate d) Quetiapine
e) Dextroamphetamine

629. Which of the following is not true about the autistic specific disorder - *(AI 10)*
a) Impaired communication
b) Impaired imagination
c) Language developmental delay
d) Vision problems

630. Autism is - *(PGI 01)*
a) Biological causation
b) Pervasive social and language communication problem
c) Metabolic disease
d) Mainly due to hypothalamus damage
e) Onset after 23 yrs. usually

631. Infantile autism is characterized by - *(PGIDec 04)*
a) Impaired vision
b) Impaired Neurobehavioural development
c) Impaired folate level
d) A socio-economic hazard
e) Parenting

632. Autism is - *(PGI 2000)*
a) Neurodevelopmental disorder
b) Social and language communication problem
c) Metabolic disease
d) Mainly due to hypothalamus damage

633. A 3 year old child developmental milestones normal with delayed speech, and difficulty in communication, concentration, not making friends - *(AIIMSNov 06)*
a) Autism b) ADHD
c) Specific learning disability d) Mental retardation

616) b 617) d 618) d 619) a 620)b 621) d 622)c 623)b,c,d 624)c 625)b,e 626)c 627)d 628)a,b,c,e 629) d 630) a,b 631)b,d 632) a,b 633) a

634. A3 year old girl has normal developmental milestones except delay in speech. She has difficuly in concentration communication and relating to others and does not make friends but plays with herself. Likely diagnosis is - *(AIIMS May 10, AI-12)*
a) ADHD
b) Autism
c) Specific learning disorder
d) Mental retardation

635. A 6 year old child has history of birth asphyxia does not communicate well has slow mental and physical growth, does not mix with people, has limited interests gets wildly agitated if distrubed. Diagnosis is -
a) Hyperkinetic child *(AIIMS 01)*
b) Autistic disorder
c) Attention defecit disorder
d) Mixed receptive - Expressive language disorder

636. A girl with normal milestones spend her time seeing her own hand, do not interact with others, what is the diagnosis ? *(Aiims May 08)*
a) ADHD b) Autism
c) Asperger's syndrome d) Rett's disorder

637. All are features of autistic disorder except - *(MP 06)*
a) Mental retardation b) Absent social smile
c) Onset before $2^{1}A$ years
d) Third person hallucination

638. A two years old girl child is brought to the out patient with features of hand wringing stereotype movements, impaired language and communication development, breath holding spells, poor social skills and deceleration of head growth after six months of age. The most likely diagnosis is - *(AIIMS Nov 03)*
a) Asperger syndrome b) Rett's syndrome
c) Fragile X syndrome d) Cottard syndrome

639. True about Autism - *(PGIMay 10)*
a) Persistent delusion
b) Persistent hallucination
c) Incoordinate social interaction
d) Defective reciprocal interaction
e) Onset after 5 yr

640. A14 year old boy has difficulty in expressing himself in writing and makes frequent spelling mistakes, does not follow instruction and cannot wait for his turn while playing a game. He is likely to be sufering from - *(AIIMS Nov 05)*
a) Mental retardation
b) Lack of interest in studies
c) Specific learning disability
d) Examination anxiety

641. Conduct disorder in a child manifests with -
a) Disregard for right of others *(PGI 01)*
b) Doesn't care for authority
c) Backward in studies
d) Decreased head circumference
e) Steals things

642. IQ is - *(DPG 09, Kerala 95)*
a) Mental age / chronological age x 100
b) Chronological age / mental age * 100
c) Mental age + chronological age x 100
d) Mental age - chronological age x 100

643. A16 year old male is found to have a mental age of 9 years on I.Q. testing. He has - *(AIIMS May 05)*
a) Mild mental retardation
b) Moderate mental retardation
c) Severe mental retardation
d) Profound mental retardation

644. Normal IQ is - *(PGI 02)*
a) 45 b) 85
c) 65 d) 100
e) 110

645. Which of the following I.Q. scores is indicative of a 'normal intelligence ? *(DPG Mar. 09)*
a) 85 b) 65
c) 45 d)25

646. IQ of 70- 75 denotes - *(Kerala 03)*
a) Borderline MR b) Moderate MR
c) Severe MR d) Normal intelligence

647. Severe mental retardation is - *(NEET/DNB Pattern)*
a) 50 - 70 b) 35 - 50
c) 20 - 35 d) < 20

648. Patient with IQ of 60 has - ...*(Aiims 95)*
a) Mild mental retardation b) Moderate M..R
c) Severe M.R. d) Profound M.R.

649. In a child of IQ 50, which of the following is true -
a) Can look after himself independently *(PGI 01)*
b) Can study upto 8th standard
c) Can follow simple verbal commands
d) Can handle money
e) Recognize family members

650. All of the following statements about 'Imbecile' are true- *(AI 11)*
a) IQ is 50 - 60
b) Intellectual capacity equivalent to a child of 3 -7 years of age
c) Impaired self care
d) Condition usually congenital or acquired at an early age

651. Second most common cause of chromosomal abnormality causing mental retardation - *(CIP 01)*
a) Down's syndrome b) Fragile X syndrome
c) Edward syndrome d) Patau syndrome

652. X-linked disease leading to mental retardation is -
a) Myotonic dystrophy *(PGI 2000)*
b) Fragile-X syndrome
c) Tuberous sclerosis
d) Phenylketonuria

653. X-linked recessive disorder with mental retardation and self multilation is seen in - *(Maharashtra 08)*
a) Lesch - Nyhan syndrome
b) Fragile X - syndrome
c) Down syndrome
d) All of the above

634)b 635)b 636)b 637)d 638)b 639)c,d 640)c 641)a,b,c,e 642)a 643)a 644)d 645)None>a 646)a

654. An 8 year old student complains of lack of interest in studies for last 6 months. He has frequent quarrels with his parents and has frequent headaches. The most appropriate clinical approach would be - *(Al05)*
a) Leave his as normal adolescent problem
b) Rule out depression
c) Rule out migraine
d) Rule out an oppositional defiant disorder

655. Best therapy suited to teach daily life skill to a mentally challenged child - *(AIMS May 01, AIIMS*
a) CBT (Cognitive Behavior therapy) *May 11, 09)*
b) Contingency
c) Cognitive reconstruction
d) Self instruction

656. Lack of development of speech in a child can be due to- *(PGI01)*
a) Tongue tie b) Deafness
c) Mental subnormality d) Laryngomalacia
e) Psychosocial

657. Patients suffering from which of the following disease as per ICD/DSM criteria are eligible for disability benefit as per National Trust Act ? *(Al 09)*
a) Schizophrenia b) Bipolar disorder
c) Dementia d) Mental retardation

658. According to disabilities ACT 1995. Seventh disability is usually referred to as ? *(AIIMS Nov 08)*
a) Neurological abnormality
b) Mental illness
c) Substance abuse
d) Diability due to road traffic accident

659. Acholastic performance is impaired in all of the following, Except - *(Al 12)*
a) Attention Defecit Hyperactivity Disorder (ADHD)
b) Specific Learning Disability (SLD)
c) Anxiety
d) PICA

TREATMENT IN PSYCHIATRY

660. Indications for ECT are - *(PG1 2000)*
a) Paranoid schizophrenia
b) Depression with suicidal tendency
c) Catatonic schizophrenia
d) Neurotic depression
e) Depression in involutional stage

661. Indications of ECT is/are - *(PGI May 10)*
a) Psychotic depression
b) Catatonic schizophrenia
c) Cyclothymia
d) Dysthymia
e) Post traumatic stress disorder

662. Maximum benefit of electro convulsive therapy is in- *(NEET/DNB Pattern)*
a) Hysteria
b) Depression with suicidal tendency
c) Chronic schizophrenia
d) Mania

663. ECT is indicated in - *(AIIMS 98)*
a) Neurotic depression b) Auditory hallucination
c) Schizophrenia d) Delusional depression

664. ECT is most useful in - *(PGI97, AIIMS97, UP 08)*
a) Mania b) Depression
c) OCD d) Schizophrenia

665. The indication for ECT is - *(DPG 08)*
a) Delirium tremens b) Alcohol withdrawal
c) Severe depression d) Thyrotoxic crisis

666. Electro convulsive therapy is currently advocated as a line of treatment in the following conditions except- *(UPSC-108)*
a) Catatonic schizophrenia
b) Severe depression with psychosis
c) Manic-depressive disorder
d) Obsessive-compulsive disorder

667. Electro convulsive therapy is indicated in - *(MP 03)*
a) Psychotic symptoms
b) Neurotic symptoms
c) Dissociative symptoms
d) Affective symptoms

668. ECT is useful in - *(AIIMS 97)*
a) Mania (Acute) b) Chronic schizophrenia
c) Acute depression d) Panic disorder

669. ECT is advocated in following except -
a) Chronic schizophrenia *(Maharashtra 06)*
b) Catatonic schizophrenia
c) Severe depression
d) Severe psychoses

670. The absolute contraindication for Electro-Convulsive Therapy (ECT) is- *(DPG Mar. 09)*
a) Raised Intra-Cranial Tension
b) Vascular Dementia
c) Diabetic Retinopathy
d) Peripheral Neuropathy

671. Absolute contraindication to ECT is -
a) Glaucoma *(DPG 09, AIIMS 95)*
b) Brain tumor
c) Aortic aneurysm
d) MI

672. Contraindication of ECT is - *(Maharashtra 03)*
a) Pregnancy b) Catatonic schizophrenia
c) Depression d) Acute schizophrenia

673. ECT causes - *(AIIMS 98)*
a) Antegrade amnesia b) Retrograde amnesia
c) Both d)None

674. Most common complication of ECT is- *(AIIMS 96)*
a) Antegrade amnesia b) Retrograde amnesia
c) Psychosis d) Depression

675. Memory disturbance of ECT recovers in - *(AIIMS 96)*
a) Few days to few weeks
b) Few weeks to few months
c) Few months to few year
d) Permanent

676. Which of the following increases on Electroconvulsive Therapy? *(AIIMS Nov 08)*
a) 5-hydroxy-indole-acetic acid
b) Dopamine
c) Serotonin
d) Brain derived neurotrophic factor

677. ECT in depressive phase of MDP is useful because it- *(PGI99)*
a) Produces recurrence
b) Reduces recurrence
c) Shortens duration
d) Increases drug effects

678. Behaviour therapy is useful in - *(PGI June 08)*
a) Psychosis b)OCD
c) Personality disorder d) Panic attack
e) Anxiety

679. In which behaviour therapy is helpful - *(AIIMS 95)*
a) Schizophrenia b) Agoraphobia
c) Personality disorder d) Neurotic depression

680. Systemic de-sensitization therapy is used for -
a) Phobia *(AIIMS 97, SGPGI03,*
b) Depression *Bihar 04,AI2000)*
c) Schizophrenia
d) Organic brain syndrome

681. Desensitizationisatypeof- *(NEET/DNBPattern)*
a) Psychotherapy b) Psychoahaiysisl 0
c) Behavioral therapy d) None

682. Therapeutic exposure is a form of- *(MH-11)*
a) Behavior therapy b) Psychoanalysis
c) Cognitive therapy d) Supportive therapy

683. Methods of learning in psychiatry are all except -
a) Modelling *(AIIMS Nov 07)*
b) Catharsis
c) Exposure
d) Response prevention

684. 'Reinforcement[5] is used in - *(AIIMS 94, 99)*
a) Psychoanalysis b) Hypnoanalysic
c) Abreaction d) Conditioned learning

685. Behaviour therapy to change maladaptive behaviour using response as reinforcer uses the principles of-
a) Classical conditioning *(AI 03)*
b) Modeling
c) Social learing
d) Operant conditioning

686. All of the following are done in behaviour therapy to increase a behaviour except - *(AI 10)*
a) Punishment
b) Operant conditioning
c) Negative reinforcement
d) Reward

687. Pavlov's experiment is an example of - *(AI 06)*
a) Operant conditioning b) Classical conditioning
c) Learned helplessness d) Modeling

688. Operant condition where paradigm pain stimulus are given to a child for decreasing a certain undesired behaviour can be classified as - *(AI 9 7)*
a) Positive reinforcement
b) Negative reinforcement
c) Punishment
d) Negotiation

689. Many of our bad habits of day to day life can be removed by - *(AIIMS Nov 04)*
a) Positive conditioning
b) Negative conditioning
c) Bio feed back
d) Generalization

690. Reciprocal inhibition is done by - *(SGPGI 2000)*
a) Systemic desensitization
b) Behaviour therapy
c) Flooding

691. Along a pleasant stimulus, noxious stimuli are given in treatment of alcohol dependece or sexual disorder is which of the following type of behaviour therapy -
a) Negative reinforcement *(Maharashtra 08)*
b) Aversive therapy
c) Punishment
d) Flooding

692. Cognitive behaviour deals with - *(PGI Nov 09)*
a) Unconscious motive
b) Maladaptive assumptions
c) Pseudodynamic conflict
d) Emotional consciousness of automatic thoughts

693. A fundamental technique used in psychoanalysis is -
a) Concentration *(Karn 96)*
b) Hypnosis
c) Empathy
d) Free association

694. Wrong statement about psychoanalysis is -
a) Parapraxes has meaning *(J & K 08, IN 06)*
b) Transference is patient's feeling for therapist
c) Counter transference is clinican's feeling for patient
d) Unguided communication has no meaning

695. Counter transference is - *(AIIMS Nov 11)*
a) Patient's feeling towards therapist
b) Doctor's feeling towards the patient
c) Psychic connection between patient and disease
d) Type of defence mechanism

696. Which condition doctor is passive -
a) Classical psychoanalysis *(NEET/DNB Pattern)*
b) Psychoanalytic psycoanalysis
c) Both
d) None * * |®§ g| g|

***697.* A patient can be taught to control his involuntary physiological responses by which of the following therapies-** *(Maharashtra 09)*
a) Breathing therapy
b) Stress modification
c) Biofeedback
d) Rational emotive therapy

676)d 677)c 678)b,c,d,e 679)b>c 680)a 681)c 682)a 683)b 684)d 685)d 686)a 687)b 688)c 689)b 690)a 691)b 692) b,d 693)d 694)d 695)b 696)a 697)c

698. Bright light treatment has been found to be most effective in treatment of - *(AI 06)*
a) Anorexia nervosa
b) Seasonal affective disorder
c) Schizophrenia
d) Obsessive compulsive disorder

699. A chronic smoker taking 20 cigaretters per day developed chronic cough. His family suggested quitting cigarettes. He is ready to qit but thinks that quitting will make him irritable. Which of the following option best describes the satge of behavour change - *(AI 11, AIIMS May 09)*
a) Precontemplation and preparation
b) Contemplation and Cost analysis
c) Persuasion
d) Belief

700. All of the following are parts of cognitive behaviour change technique except - *(AI 10)*
a) Pre-contemplatation b) Consolidation
c) Action d) Contemplation

701. EEG is used in the diagnosis of all except-
a) Intermittent expulsive disorder *(Jipmer-11)*
b) Panic disorder
c) Anxiety disorder
d) Bipolar disorder

COGNITIVE DEVELOPMENT AND DEFENSE MECHANISM

702. Which of the following is a stage of intuitive thought appearance in jean-Piaget scheme- *(PGI99)*
a) Sensorimotor b) Concrete
c) Preoperational stage d) Formal operations stage

703. Ability to form a concept & generalize is known as-
a) Concrete thinking *(Jipmer 11)*
b) Abstract thinking
c) Intellectual thinking
d) Delusional thinking

704. Psychodynamic theory of mental illness is based on -
a) Unconscious internal conflict *(AIIMSNov 07)*
b) Maladjusted reinforcement
c) Organic neurological problem
d) Focus on teaching patient to restrain absurd thoughts

705. Interpretation of dreams by Freud - *(UP 01, KA 02)*
a) 1990 b) 1900
c) 1956 d) 1919

706. The term 'id' was coined by- *(NEET/DNB Pattern)*
a) Freud b) Skinner
c) Wayker d)Blueler

707. That part of mind which is working on reality principle is- *(Karn. 01)*
a) ID b) Ego
c) Super ego d) Ego-ideal

708. True regarding mind theory is A/E - *(PGI Feb 08)*
a) Id is reservoir of instincts & drives
b) Ego is excutive organ of id
c) Superego predominantly consciously offers approval & disapproval
d) Conscious is common component of id, ego & super ego
e) Id works on pleasure principle

709. According to sigmund Freud, primary process thinking is - *(Jipmer11)*
a) Illogical & Bizarre
b) Rational
c) Absent during sleep
d) Logical & unconscious

710. All are mechanism of defence except - *(AIIMS 98)*
a) Repression b) Transference
c) Projection d) Anticipation

711. Which of the following is a mature defence mechanism- *(UP07)*
a) Projection b) Reaction formation
c) Anticipation d) Denial

712. One of the important defence mechanism is -
a) Alienation *(Karn01)*
b) Confabulation
c) Repression
d) Suppression

713. A reluctant child forced to bring suger from a shop spills half of it on the way. This is an example of -
a) Hysteria *(Jipmer 97, Delhi 02, Raj 04)*
b) Passive aggression
c) Disobedience
d) Active aggression

714. A chronic alcoholic blames the family environment as a cause of his alcoholism. This is phenomenon of -
a) Projection b) Denial *(AIIMS2000)*
c) Rationalization d) Sublimation

715. Which of the following is the psychological defense mechanism by the virtue of which an individual blames others for his mistake? *(Maharashtra 03)*
a) Rationalization b)Compensation
c) Projection d) Regression

716. Which of the following excludes painful stimuli from awareness - *(AIIMS 98)*
a) Repression b) Reaction formation
c) Projection d) Rationalization

717. Avoiding awareness of pain of reality by negative sensory data is in which of the following defence mechanism - *(MH-11)*
a) Distortion b) Denial
c) Displacement d) Dissociation

718. Postponing paying attention of conscious impulse or conflict is mature defence mechanism known as -
a) Sublimation b) Suppression
c) Humor d) Anticipation

698)b 699)c 700)b 701)a 702)c 703)b 704)a 705)b 706) a 707)b 708)c,d 709)a 710)b 711)c
712) c 713) b 714) c 715)c 716)a 717)b 718)b

719. Most important cause of neurotic reaction is the excessive use of - *(PGI98, Nihmans 01, MH 04)*
a) Projection b) Regression
c) Suppression d) Sublimation

720. Displacement reaction is characteristically seen in -
a) Mania b) Phobia *(MP98)*
c) Conversiondisorder d) Depression

721. Ego's defence mechanism "Undoing" is typically seen in - *(PGI 01, AIIMS 93,95)*
a) Depression
b) Schizophrenia
c) Obsessive compulsive neurosis
d) Hysteria

722. Defence mechanism in OCD - *(PGIDec 07)*
a) Repression b) Undoing
c) Rationalization d) Sublimate
e) Displacement

723. Defence mechanism in OCD - *(Maharashtra 10, 07)*
a) Progression b) Regression
c) Magical thinking d) Reaction formation

724. Mature defence mechanism is seen in -
a) Altruism *(Jipmer 95, WB 05, Assam 06)*
b) Repression
c) Regression
d) None

725. Which of the following is a mature defence mechanism - *(Maharashtra 09)*
a) Rationalization b) Humor
c) Denial d) Displacement

726. Which is not an ego defence mechanism - *(PGI99)*
a) Rationalization b) Repression
c) Identification d) Obsession

727. Not a defence mechanism - *(PGI 98)*
a) Derailment b)Represession
c) Distortion d) Undoing

728. Oedepius complex has been described by - *(UP 06,*
a) Plato b) Socartes *Bihar 05, AI98)*
c) Freud d) Huxley

729. Oedipus complex (given by sigmund freud) is seen in - *(PGI 98, Delhi 98, Assam 04)*
a) Boys of 1 - 3 years of age
b) Girls of 1 - 3 years of age
c) Boys of 3 - 5 years of age
d) Girls of 3 - 5 years of age

730. In psychoanalytic terms, obsessive compulsive disorder is fixed at - *(Delhi 98, TN 02, Mah 03)*
a) Oedipal stage b) Genital stage
c) Oral stage d) Anal stage

731. Fixation of Hysteria is - *(WB 02, J&K 04, PGI 05)*
a) Genital b) Anal
c) Oral d)Phallic

732. Psychoanalysis was founded by which of the following scientist- *(Karnataka 2000)*
a) Eysenck b) Freud
c) Jung d) Adler

733. Life span of sigmund freud was - *(Jipmer 2 K)*
a) 1856-39 and he passed most of his life in Austria
b) 1859-36 and he passed most of his life in Austria
c) 1859-36 and he passed most of his life in Germany
d) 1859-36 and he passed most of his life in France

734. Ther term 'free association' is coined by - *(Jipmer 01)*
a) Freud b) Adler
c) Erikson d) Juna

735. Who introduced cocaine in psychiatry - *(Kerala 98)*
a) Freud b) Jung
c) Milar d) Stanley

736. Sigmund Freud is associated with which of the following?
a) Group Psychotherapy *(DPGMar 09)*
b) Psychoanalysis
c) Sociogram
d) Cognitive Behavior Therapy

737. Who is the founder of school of psychoanalysis and psychotherapy is after the name of -*(Maharashtra 02)*
a) Bleuler b) Freud
c) Kraeplin d) Melanie klien

738. Moral treatment of mentally ill patient was first stressed by - *(AIIMS 95, CMC 98, KA 01, TN 04)*
a) Pinel b) Morel
c) Kraeplin d) Sigmund freud

739. Which of the following scientist propagated therapeutic community concept-*(Kam 2K, Bihar 03)*
a) JB Watson b) Maxwelljones
c) Freud d) Adler

740. Ross classified five stages of- *(MP 06)*
a) Schizophrenia b) Delusion
c) Death d)None

741. The eight stage classification of human life is proposed by - *(Burdwan 2K, WB 04, UP 05)*
a) Sigmund freud b) Pavel
c) Strauss d) Erikson

742. Term catatonia was used by - *(CUPGME 03)*
a) Karl kahlbaum b) Adolf meyer
c) Leo kanner d) Karen homey

743. The term "Ambivalence" was coined by - *(PGI 99,*
a) Hippocrates b) Eugen bleuler *AIIMS 95)*
c) Kraeplin d) Sigmund freud

744. Following name is associated with psychodynamic theory- *(PGINov 09)*
a) Carl Jung b) Sigmund Freud
c) Emilkraplein d) Eugen bleuler
e) Kurl schneider's

745. General Adaptation Syndrome (GAS) is seen in-
a) Panic Attacks b) Depression *(AI 12)*
c) Anxiety d) Stressful Situations

PHARMACOTHERAPY IN PSYCHIATRY

746. Features of serotonin syndrome associated with SSRI & MAOIs are - *(PGI May 10)*
a) Tremors b) Agitation
c) Cardiovascular collapse d) Hypothermia
e) Suicidal tendency

719)b 720)b 721)c 722)b,e 723)d 724)a 725)b 726)c,d 727)a 728)c 729)c 730)d 731)d 732)b

747. The following is not an atypical antipsychotic -
a) Thioridazine b) Clozapine *(ARMSNov 06)*
c) Olanzapine d) Risperidone

748. Atypical (Second generation or newer) antipsychotics are - *(PGI May 10)*
a) Aripiprazole b) Risperidone
c) Pimozide d) Penfluridol
e) Olanzapine

749 Antipsychotic drug with prolonged action - *(AI93)*
a) Trifluperazine b) Thioridazine
c) Penfluridol d)Fluphenazine

750. Depot preparation are available for - *(PGI Nov. 10)*
a) Haloperidol b) Risperidone
c) Olanzapine d) Imipramine
e) Fluphenazine

751. All the following statement about clozapine are true except- *(AI97)*
a) It is used in schizophrenia
b) May precipitate seizure
c) May cause agranulocytosis
d) Extrapyramidal side effects are seen

752. Adverse effect of clozapine - *(PGI 98)*
a) Hypertension
b) Sialorrhea
c) Extrapyramidal S/E
d) Neuroleptic malignant syndrome

753. Extrapyramidal side effects of antipsychotics -
a) Dystonia *(PGI June 02)*
b) Akathisia c) Seizures
d) Diarrhea e) Parkinsonism

754. Least extrapyrimidal S/E are seen in - *(AIIMS 98)*
a) Haloperidol b) Thioridazine
c) Clozapine d) CPZ

755. Antipsychotic drug with least extrapyramidal effects is- *(PGI 02)*
a) Clozapine b) Risperidone
c) Thioridazine d) Chlorpromazine
e) Haloperidol

756. Tardive dyskinesia is produced by following except -
a) Fluphenazine b) Haloperidol *(PGI98)*
c) Chlorpromazine d) Clozapine

757. Tardive dyskinesia is least common with - *(MH 08)*
a) Flupenthiol b) Penfluridol
c) Olanzapine d)None

758. Best drug therapy for paranoid schizophrenia in a thin built 21-years old young male would *be-(MH06)*
a) Chlorpromazine b) Risperidone
c) Olanzapne d) Quetiapne

759. Vasanthi 45 years, was brought to casualty with abnormal movements which included persistent deviation of neck to right side one day before she was prescribed Haloperidol 5 mgs three times daily from the psychiatry OPD. She also had an altercation with her husband recently. Which of the following is the most likely cause for her symptoms- *(AIIMS 2K)*
a) Acute drug dystonia b) Conversion reaction
c) Acute psychosis d) Cerebrovascular accident

760. A patient with acute psychosis, who is on haloperidol 20mg/day for last 2 days, has an episode characterized by tongue protrusion, oculogyric crisis, stiffness and abnormal posture of limbs and trunk without loss of consciousness for last 20 minutes before presenting to casualty. This improved within a few minutes after administration of diphenhydramine HC1. The most likely diagnosis is- *(AIIMS May 06, AI-11)*
a) Acute dystonia
b) Akathisia
c) Tardive dyskinesia
d) Neuroleptic malignant syndrome

761. Irresistable urge to move about with inner restlessness is called - *(AI 99)*
a) Akinesia b) Hyperkinesia
c) Dyskinesia d) Akathisia

762. A 30 year old manic patient was prescribed haloperidol one week back. For the last two days he has become restless and kept pacing in the room for a day. On examination he was found to have tremors of hand. He is most likely suffering from - *(AIIMS*
a) Anhedonia b) Dystonia *Nov 03)*
c) Restless leg syndrome d) Akathisia

763. A 19 year old boy suffering from chronic schizophrenia is put on haloperidol in the dose of 20 mg/day. A week after the initiation of medication the patient shows restlessness, fidgety, irritability and cannot sit still at one place. The most appropriate treatment strategy is - *(AIIMS May 04)*
a) Increase in the dose of haloperidol
b) Addition of anticholinergic drug
c) Addtion of beta blocker
d) Adding another antipsychotic drug

764. A 25 year old man with a psychotic illness, was treated with haloperidol 30mg/day. On the third day he developed pacing, and inability to sit still at one place. The medication likely to be helpful is -
a) Phenytoin *(AIIMS Nov 02)*
b) Propranolol
c) Methylphenidate
d) Trihexyphenedyl

765. Akathesia is treated by all except - *(DPG 05)*
a) Trihexyphenidyl b) Diazepam
c) Haloperidol d) Promethazine

766. An elderly woman suffering from schizophrenia is on antipsychotic medication. She developed purposeless involuntary facial and limb movements, constant chewing and puffing of cheeks. Which of the following drugs is least likely to be involved in this side effect - *(AIIMS Nov 03)*
a) Haloperidol b) Clozapine
c) Fluphenazine d)Loxapine

747) a 748) a,b,e 749) d 750)All 751)d 752) b 753)a,b,e 754) c 755) a 756) d 757) c 758) c 759) a 760) a 761) d 762) d 763) c 764) b 765) c 766) b

767. A patient of schizophrenia treated for 5 years developed perioral movements. Likely diagnosis is -
a) Tardive dyskinesia *(AI97)*
b) Muscular dystonia
c) Akathasia
d) Malignant neurolept syndrome

768. A 30 year old man who was recently started on haloperidol 30mg/day developed hyperpyrexia, muscle rigidity, akinesia, mutism, sweating, tachycardia and increased blood pressure. The investigations showed increased WBC count, increased creatinine phosphokinase. There is no history of any other drug intake or any signs of infection. The most likely diagnosis -
a) Drug overdose *(AllMS May 06)*
b) Neuroleptic malignant syndrome
c) Drug induce Parkinsonism
d) Tardive dyskinesia

769. A 31 year old male, with mood disorder, on 30 mg of haloperidol and 100 mg of lithium, is brought to the hospital emergency room with history of acute onset of fever, excessive sweating, confusion, rigidity of limbs and decreased communication for a day. Examination reveals tachycardia and labile blood pressure and investigations reveal increased CPK enzyme levels and leucocytosis. He is likely to have developed - *(AIIMS May 04)*
a) Lithium toxicity
b) Tardive dyskinesia
c) Neuroleptic malignant syndrome
d) Hypertensive encephalopathy

770. A patient on antipsychotic for past 4 weeks is brought to the emergency with complaint of acute onset of fever, excessive sweating, confusion, rigidity of limbs and decreased communication. Examination reveals temperature of 104°F; P/R - 120/min, BP-150/100 with disorientation. What is the most probable diagnosis - *(PGI Dec 05)*
a) Lithium toxicity b) Aggravation of psychosis
c) Dystonia d) Neurolept malignant syndrome
e) Akathesia

771. True about neurolept malignant syndrome -
a) General antipsychotics are more associated
b) Symptoms include rigidity, fever and palpitation
c) Dantrolene improves symptoms *(PGI June 08)*
d) Bromocriptine can be used

772. Malignant neurolept hyperthermia (NMS) seen in all except - *(AIIMS Nov 08)*
a) Haloperidol b) Metoclopramide
c) Domperidone d) Amantadine

773. A patient was on treatment with trifluperazine for some time. He presents with complaint of hyperthermia, lethargy and sweating. Needed investigations are - *(AIIMS 2000)*
a) CT Scan brain & hemogram
b) Hemogram, Electrolyte level and creatinine
c) ECG, Chest X-ray and hemogram
d) Hemogram, CPK and renal function test

774. Sedation as an adverse effect is MOST with which of the following atypical antipsychotics ? *(Kam 11)*
a) Risperidone b) Olanzapine
c) Quetiapine d)Aripiprazole

775. Antipsychotic drug with maximum hypotensive effect- *(Jipmer-11)*
a) Fluphenazine b) Trifluperazine
c) Thioridazine d) Haloperidol

776. All are Antidepressants except - *(AI 97)*
a) Trazodone b) Amitryptyline
c) Fluoxetine d) Pimozide

111. **Mode of action of fluoxetine -** *(AI 99, AIIMS 97, 96)*
a) GABA agonist b) GAB A antagonist
c) Inhibit uptake of 5-HT d) Increase uptake of 5-HT

778. Tianeptine acts by - *(AIIMS 98)*
a) MAO inhibitor
b) Serotonin uptake inhibitor
c) Serotonin uptake enhancer
d) 5-HT agonist

779. Tricyclic antidepressants have all of the following actions except - *(PGI 97)*
a) Anticholinergic action
b) MAO inhibition
c) Block 5-HT or NE reuptake
d) Causes sedation

780. A patient was treated with amitriptyline for depression, developed urinary retention, constipation & blurring of vision. Most likely cause is -
a) Symptoms of depression persisting *(AIIMS 00)*
b) Anticholinergic side effects
c) Depression medicamentosa
d) Any of above

781. A 60 year old male comes to casuality with acute retention of urine since 12 hours. On examination there was distended bladder. His son gives a history of taking some drug by the patient. Since 2 days as he is suffering from depression. The most likely drug is- *(AIIMS 01)*
a) CPZ b) Amitriptyline
c) Haloperidol d) Pimozide

782. A patient on t/t for psychiatric disorder takes overdose of a drug, develops bradycardia, hypotension, decreased sweating and salivation. The likely drug is - *(AIIMS 99)*
a) Amitryptilline b) Lithium
c) Selegiline d)Amphetamine

783. Tricyclic anti depressant are contraindicated in -
a) Glucoma b) Brain tumor *(AI 91)*
c) Bronchial asthma d) Hypertension

784. SSRI is first line treatment for - *(PGIMay 10)*
a) OCD b) Panic disorder
c) Social phobia d) Post traumatic stress disorder
e) Adjustment disorder

785. Side effect of SSRI - *(PGI Dec 07)*
a) Nausea b) Diarrhea
c) Weight gain d) Rash
e) Sexual dysfunction

767)a 768)b 769)c 770)d 771)a,b,c,d 772)d 773)d 774)c 775)c 776)d 777)c 778)c 779)b 780)b 781)b 782) a 783)a 784)a,b,c,d 785)A11

786. The common side effect with fluoxetine therapy is -
a) Seizure b) Anxiety *(AI06)*
c) Hypotension d) Loose stools

787. Side effects of fluoxetine are A/E - *(AI94)*
a) Weight gain b) Sweating
c) Urinary retention d) Diarrhoea

788. Non sedating antidepressant is - *(AIIMS 93)*
a) Fluoxetine b) Mianserine
c) Amoxapine d) Imipramine

789. The newest antidepressant is - *(AIIMS 93)*
a) Buspirone b) Fluoxetine
c) Penfluridol d) Clozapine

790. Following drugs have abuse liability except - *(AI 99)*
a) Buprenorphine b) Alprazolam
c) Fluoxetine d) Dextropropoxyphene

791. A patient on antidepressant therapy developed sudden hypertension on consuming cheese. The antidepressant is possibly - *(PGI99)*
a) Amitriptyline b) Tranylcypramine
c) Fluoxetine d) Sertraline

792. Antidepressant drug used in nocturnal eneuresis is - *(AI 11)*
a) Imipramine b) Fluoxetine
c) Trazdone d) Sertaline

793. Which drug acts through alpha subunit of GABA -
a) Benzodiazepine b) Barbiturate
c) Haloperidol d) TCA *(AIIMS Nov 08)*

794. All are anxiolytic except - *(AIIMS 93)*
a) Buspirone b) Fluoxetine
c) Diazepam d) Nitrazepam

795. P blockers are indicated in - *(AIIMS 95)*
a) Phobia b)Schizophrenia
c) Anxiety d) Mania

796. Li is best used in - *(AIIMS 92)*
a) MDP - Bipolar b) MDP - Unipolar
c) MDP - rapid cycles d) Depression

797. Lithium is treatment of choice for - *(AIIMS 91)*
a) Unipolar MDP prophylaxis
b) Bipolar MDP prophylaxis
c) Schizophrenia
d) Acute mania

798. Prophylactic maintenance serum level of lithium is-
a) 0.2 - 0.8 meq/L b) 0.7 -1.2 meq/L *(AI94)*
c) 1.2-2.0 meq/L d) 2.0 - 2.5 meq/L

799. Lithium levels —» normal therapeutic -*(PGIDec 06)*
a) 0.5 to 0.7 mEq/lit b) 0.7 to 1.1 mEq/lit
c) 0.1 to 0.3 mEq/lit d) 1.5 to 2mEq/lit
e) 2.5 to 3 mEq/lit

800. Prophylactic blood level of Li is - *(PGI May 10)*
a) 0.3mEq/L b)0.6mEq/L
c) 0.9 mEq/L d) 1.2 mEq/L
e) 1.5mEq/L

801. True about lithium treatment in mania -
a) Commonest neurological side effect is tremor
b) Toxic level is <1.5 mg/dl serum level *(PGINov 09)*
c) Amiloride is DOC for Li induced diabetes insipidus
d) Lithium is 90% protein bound
e) Tremor is treated with propranolol

802. A patient is brought to the casualty in the state of altered sensorium. He was on lithium treatment for affective fits. On examination he has tremors, increased DTK's and incontinence of urine. He has also undergone an episode of severe gastroenteritis 2 days ago. The serum lithium was found to be 1.95 meq/Lit. The probable cause for his present state is-
a) Lithium toxicity b) Dehydration *(AIIMS 01)*
c) Manic episode d) Depressive stupor

803. Congenital Anomaly produced by lithium therapy is- *(AI93)*
